With a bow he handed her his empty cup, and as he stirred his second cupful he cleverly turned the conversation. Miss Caswell bit her lips. She would not have him submit to her negative so calmly. She was really fond of Jimmie. He might have made a better fight. It simply went to prove what she had already said; that he was naturally indolent. She did not know Stetson.

Carmensville was the terminal of a two hundred mile branch road which had been built mainly by the elder Stetson. It opened a large section of country to the world, and now boasted two trains each way every day.

Miss Caswell was to leave on the morning train, but on her arrival at the station her departure seemed strongly problematical. The train stood before the platform, but the engine had not yet been coupled on and the general topic of discussion was the report that both the engineer of the passenger train and the man who ran the yard engine had been hurt the night before while some minor repairs

were being made in the house.

It was with a decided sense of relief that Letty presently beheld the engine slowly backing down to the train, and with a gasp she realized that the figure in blue on the engineer's seat was Stetson.

He slipped out of the cab when the coupling had been made and with raised cap approached the girl.

"I had expected to have the pleasure of running down to the junction with you,"

he said as he came up, "but I shall have to run the train down as far as Harding. If I can get a man down there when we change engines I shall come back then. At any rate you will wait for me at the junction, won't you?"

Letty's glance gave assent, and with another bow he was gone. A moment later the train pulled out, only ten minutes late.

As Letty settled herself for the five-hour run she thought half regretfully, of the chat of the previous afternoon. If Jimmie could run an engine, he must have known something of hard work. Perhaps she had been unjust. At any rate she had been hasty. There was nothing awkward about his handling of the train. He evidently knew his work.

Her confidence was not shared by her neighbor, a fussy woman who querulously besieged the conductor with questions as to whether there was any danger with an amateur engineer in charge of the train.

"Danger!" retorted the brass-buttoned one, "why, Mr. Stetson almost built the road. He made the preliminary survey, he had charge of the construction and was on a locomotive for three years. There isn't anything about railroading he doesn't know. That's why he runs this road since his father died and he gets his business all cleared up before noon. Why, when we had the blizzard back in '96 he bucked his way through the drifts when even Pete Howell didn't dare stay on the engine, and Pete began as a boy. Don't you be afraid."

He passed on and left his questioner comforted, but Letty was quietly crying into her handkerchief. She knew now that she loved Jimmie and would have married him anyhow had he urged her the day before.

When they had passed Harding two hours later Jimmie came into the car. Letty gasped. His hands were as clean and soft as though he had just come from his desk. His linen was spotless and his clothes immaculate.

"Want to change your mind now?" he asked, half laughingly, half seriously. A pressure of her hand was the only answer, but Jimmie was happy. "I can't blow

my own horn," he laughed, as the new engineer whistled for a crossing, "but I can blow my own whistle."

"I'm so glad it happened," whispered Letty.

"So are all three engineers," he laughed. "The other two got a day off."

"Then they are not hurt?" she asked. "You did this on purpose?"

"You didn't think I was quitting when I dried up yesterday, did you?" he asked, enigmatically.—*Philadelphia Inquirer.*

TUNNELS NO. 4 AND 5, MOFFET ROAD, COL.—F. J. FRANCIS, PHOT.

A Love Song.

Love, the moon is overhead,
All the misty woods are still!
What was that my lady said?—
"I will never wed until
Some great hero that I meet
Smith humbly at my feet."
Well-a-day! Well-a-day!
She would surely tell me nay,
I will wait some other day,
Once again the moon is new—
Like a broken band of gold

New or old my heart is true,
 But my lady seemeth cold.
 When the mellow planets shine,
 Shall I ask her to be mine?
 Well-a-day! Well-a-day!
 What if she should tell me nay?
 I will wait another day.

Sooth I think she'll drive me mad—
 Yet I thought, when passing by,
 That her blossom-face was sad,
 And a tear was in her eye.
 Can it be if I should sue
 I should find her heart was true?
 Well-a-day! Well-a-day!
 What if she should tell me nay?
 I will wait another day.

Not a shred of moon above,
 And of starlight there was none;

than talk; and in the second, because he would rather talk of some other than himself; so he said rather vaguely, "I sang."

"Ah," groaned Lee, "don't tell us you sang."

"But," said he, "Mrs. Weems said they must be amused, and begged me to help her, so what could I do?"

"You certainly took the surest way to amuse them," said Myrtle, lazily.

"I hope," said Lee, "it wasn't anything funny. You look so doleful over a comic song, as if it were a painful satire upon a heartrending fact. What did you sing? I am absolutely suffering to think what that poor crowd must have had to

BOULDER PARK, COL., MOFFET ROAD. A TUNNEL THROUGH THE MOUNTAINS IN THE DISTANCE IS CONTEMPLATED.—F. J. FRANCIS, PHOT'R.

But I met my lady-love,
 And I wooed her and I won.
 Shyly, sweetly, did she own
 That she cared for me alone.
 Well-a-day! Well-a-day!
 Yet she might have told me nay
 Had I asked her yesterday.

—Hattie Whitney, in Lippincott's.

Doctor Jack.

"Doctor Jack."

"Well!"

"Tell us about it. What did you do?"

Doctor Jack looked confused—in the first place, because he would rather listen

endure, and on a hot day it is so exhausting to pity one's neighbors."

Doctor Jack smiled. "I sang 'Si tu savais,'" said he.

"Better than I hoped," sighed Lee. "I was afraid you would try to wrestle with some particularly high note, and disgracefully be worsted: they were really fortunate. But here's smoke upon the wind. I see the end of a cigar and I know it is Hunt's."

With a slow tread Hunt Campbell approached. Doctor Jack looked silently at Myrtle, and a tired look passed over his face, but it was as quickly chased away by the

welcome smile he gave the new-comer.

"Well, Jack, old boy, how goes it?" said Hunt.

"Always well," replied Doctor Jack, in his quiet voice.

They formed a contrast, the two men, one tall, muscular, handsome; the other, with a head finely formed, full of intellect, but looking as if it had outgrown the body, which was pinched and insignificant.

"Hunt," said Lee, "what do you think Doctor Jack has been doing? He actually sang at Mrs. Weems's party."

Hunt laughed and walked round to the end of the porch where Myrtle Ware was sitting, the sunbeams flickering upon

other minute, and went into the house. Miss Ware sat idly pinning leaves together by their own stems, and Hunt Campbell sat watching her, now and then making a remark. Doctor Jack was left alone. Poor Doctor Jack! with his great heart and little body; his lovely soul and plain face; a heart mighty to conquer where many would fail; a soul great enough to find heaven. Among his books, in his quiet life, he had grown old too soon; reserved he always was, but ever at hand to do a hundred things that no other man would think of. His days had been lonely, save when brightened by the yearly visit of his cousins, Hunt and Lee Campbell, who came every summer to the old

A STREET IN ARROWHEAD.

ARROWHEAD, COL.—MAKING A TOWN IN THE TIMBER.—F. J. FRANCIS, PHOT'R.

her warm-hued hair, and chasing each other like gay gold butterflies over her white dress, so happy they all were—happy as the flowers who have no right to sorrow; happy as the wind that plays at kissing games with the blossoms, and yet, the flowers die and the wind gathers his cloak about him and howls and shrieks and moans. But now, it is rose-crowned Summer—the hour of Pan; the air is full of the warm breath from a thousand sweets; the birds are mute; the treetops sway too and fro more gently; the "little leaves clap their hands" more softly. Nature stands with a "Hush, hush" upon her lips while her children rest.

Soon Lee declared it too hot to stay an-

place to breathe the fresh air, tease Jack, and do a dozen other things to set him thinking when the long evenings come on, and he was alone. Within the last year there had blossomed in Jack's pathway a fair flower, whose fragrance intoxicated him, yet which he dared not touch. He was content that it bloomed. When Myrtle Ware came among them, he wondered what he had been doing all his life, and he loved her. This bright June day, however, crept over him a shadow. He saw Myrtle's face light up when his handsome cousin came near. He saw how Hunt first looked into Myrtle's eyes before he spoke to any one else. Now they were talking together as if the world held just

themselves, and for none others were made the June roses, the tender grasses, the soft island-flecked blue sky. Doctor Jack leaned back in the old flag-bottomed rocking-chair and rocked to and fro.

* * * * *

The days sped by, and finally, a morning came Myrtle felt more alone than ever before. A sudden illness of Hunt Campbell, Sr, called his son and daughter home; but a little note was left by each for Myrtle, Lee's merely a farewell—Hunt's something more—a question which took but one word to answer. "Do not write," said he, "and tell me No. I would rather get used to it little by little; but if it is Yes, I cannot wait one minute."

carried her small head higher; but there was a wistfulness in her blue eyes that only Doctor Jack saw and wondered at. He went to see her often, sent her books, took her to drive; as the autumn came on, searched the woods for brilliant leaves, and would almost break his neck climbing after some particular high-colored bit of vine. Myrtle came to look for his visits as the only good thing in life. He was always kind, ever studying her comfort and pleasure, amused her in a hundred ways. She plunged headlong into study, and found him always ready to help her over intricate questions with just the right book or paper. He seldom spoke of the summer past, for he

THE ARROWHEAD DEPOT, MOFFET ROAD, COL.—F. J. FRANCIS, PHOT'R.

Myrtle's letters lay upon the table, one to Lee, and the other that which she had written to Hunt—her little Yes.

She called the servant and bade him mail them, and then sat down on the porch, where she had lived so much of her summer dream, to dream it over again. The same roses, the same sky, the same green fields; but the best part of the dream was gone, and she shut her eyes and builded "castles in the air."

The days went on. Myrtle grew nervous as the time came for a letter and none arrived. Finally, word from Lee: "Father was better. They would all spend the winter South." Not a word from Hunt. Myrtle grew prouder and haughtier,

did not find her ready to talk of it. The memory was too sweet, too sad for her ever to speak of; but it haunted her continually.

"I wonder," said she, one day, "if there ever was anyone happy."

"I think we could be," said Doctor Jack; "but we will have to determine to reverse things, and call that life the real which is the inner, that the unreal which now appears."

"One would have to reach a climax of self-government before he could call his inner life the real one," said Myrtle. "I don't believe I care to call mine so," she sighed.

Doctor Jack looked at her slim hands

folded within one another, and longed to take them in his and tell her how strong he felt, and how he would love to hide her in his heart, where never a cold breath should touch her; but he did not then: he felt it would be no use, and thought the time might come when she would so know and understand him, so need him, that he could speak and she would listen.

The days grew shorter and shorter; the roof of the porch was covered with snow; the vines, that such a little time since had blown their blossoms into Myrtle's lap, were now dappled with snowflakes; the river was ice-bound, and the moon looked down on no fair lovers rocking on the water's breast. Myrtle could stand it bet-

And so the winter days dropped away and still Doctor Jack waited.

One day in early spring—one of those days that is like the sample page from some delightful book, only making us want to read the whole—Doctor Jack and Myrtle stood in the open doorway, breathing the air that had already a breath of sweetness in it. The trees had not ventured to put out their green finger-tips very far to shake hands with the wind; the crocuses and snowdrops were more fearless, simply, I think, because they were so small and knew they would only be patted on the head. Doctor Jack and Myrtle stepped out upon the damp ground, and made their way around the flower border. In one spot Myrtle's namesake,

MOFFET ROAD TUNNEL CONSTRUCTION AND TEMPORARY TRACK AROUND IT.—F. J. FRANCIS, PHOT'R.

ter. Hunt's foot had never trod this snow; she had never watched for him from between bare branches and winter-stripped vines. It was as if the summer had never been; it was even better than last winter, for here was Doctor Jack always to look for, appeal to and argue with. She was always thoroughly glad to see him. He knew it, and could have worshiped her; he did not know a girl friend would have been just as welcome. She never thought of his caring for her, it seemed so natural for him to be there just as he had been when Hunt's voice was the only one she cared to hear, and his hand the only one she cared to clasp.

which had kept alive all winter, had put out one new blossom. "Was it a good omen?" thought Doctor Jack.

"May I have it?" he said.

"Certainly," she replied.

"Will you give it to me, then?"

Myrtle looked at him; his voice sounded strangely low and intense, and the hand that he stretched out was unsteady; for the first time she understood him.

"Have you no other blossom to give me, Myrtle?" he went on—"one from the garden of your heart?"

"What do you mean?" she said hurriedly. "what other could I have? it is too soon for many to have blossomed."

"May I wait, then," said he, "and hope that spring's gentle hands will find me one after a while?"

"Yes," said Myrtle, "you must wait."

He held her two hands one moment at parting, smiled his good-by, and left her standing on the broad step of the porch, the April sunshine finding the gold in her hair, the April winds blowing about her. He did not look back; it was too sweet a picture to have vanished. Ere he reached home the capricious sky was clouded, and large drops began to fall. What did it signify to Doctor Jack? The precious little sprig of myrtle had bloomed for him, and the summer-time might bring him

mean? Like a flash it all came over him. It was a book he had loaned Myrtle; he remembered the man bringing it back to him that summer day after his cousins left—remembered with painful distinctness his taking out some letters and transferring them to his pocket; *this* had been left, and Myrtle—was here the cause of her distraught, languid air and dready eyes? Thoughts, like birds, white and black, flitted across his mind. A feeling of terrible anguish for himself, drowned in his pity for her, came over him. What should he do? It was hard, hard, he told himself. Why should he have taken down that book, of all others? He had not

SOME OF THE DIFFICULTIES OF CONSTRUCTION, MOFFET ROAD, COL.—F. J. FRANCIS, PHOT'R.

something. He could wait. When alone in his library, before the open wood fire that made it just warm enough, he gave himself up to dreams sweeter than he had ever dared to dream before. Her face to smile upon him, her hand to lie in his, her lips—he caught his breath; it was too much, and getting up, he walked rapidly across the room, took at random a book from the shelf, and sat down again. He opened the book; something fell out; he picked it up; it was a letter. Mechanically he read the address, and his heart stood still. In Myrtle's handwriting, fair and distinct, stood out the name and address of *Mr. Hunt Campbell*. What did it

touched it all these months, and now to want it. She might have learned to love him; she had said to wait. Then with a mighty effort he faced his duty. Sitting down he wrote a note, telling her he must go away for a few days. "I think you will be glad when I return," he said; "I hope so." His precious Myrtle blossom—it had bloomed too soon; those that came after others would take; his could not have the warm sunshine, the happy faces of sister flowers; it had been all alone, as he, too, must henceforth be. Night saw him speeding away to his cousin.

"Are you sick, Doctor Jack?" cried Lee, as she met him in the hall. "You

dear old fellow, you look as if you had been devoured by fever, or racked with chills. What is the matter?"

"I am well," said he, softly patting her two little tender palms together, and looking down into her brown eyes; you would cure anyone. Where is Hunt?"

"In his room, I suppose. He is a perfect bear—mopes all the time. It is only by a herculean effort that I can drag him out anywhere with me. Will you go up? Perhaps you can raise his spirits; I believe he is bilious; I tell him so, but he treats my suggestions of doctors, medicines, etc., with proud disdain."

"Perhaps I can cure him," said Doctor

denly struck in the face—"no; what right had I to expect it? Because I laid my heart at a woman's feet, had I any reason to suppose she would pick it up? Because I chose to make a fool of myself, had I any reason to suppose she would humor my idiocy? I thought I was clothed and in my right mind now, but I believe I am not. Doctor Jack, Doctor Jack, why did you ask me such a question? You might have waited until I had grown out of my fever, and could stand such things."

"Then you do love her?" said Doctor Jack slowly.

"Love her! I suppose I am a consummate idiot to do so, but I do. Aren't you

SNOW-SHEDS, ROLLINS PASS, MOFFET ROAD, 11,600 FEET ABOVE SEA-LEVEL—F. J. FRANCIS, PHOT.

Jack; "you know I am celebrated in difficult cases," the forlorn hope dying out in his heart that perhaps, after all, Hunt had found some new love, and he could go back to Myrtle with all his love for her in his hand, and not buried out of sight.

"Come in," said Hunt, in answer to his knock. "Why, Jack Forsyth—Doctor Jack, of all persons! How are you, my boy?" and the brown eyes looked down with genuine pleasure on Doctor Jack's five feet eight.

"Hunt," said Doctor Jack without a moment's preliminary—he must go through with it, or his brain would burst—"did you expect a letter from Miss Ware after you left us last summer?"

"Expect it," said Hunt, like one sud-

sorry for me?" with a poor attempt to be gay.

"No," said Doctor Jack; "this should have been yours long ago. I cannot say that it was my fault that it was not; but partly because it was, I determined not to rest until I saw it in your hands—" and he handed him the square white envelope.

Hunt snatched it like some hungry beast.

"What does it all mean," he said. "Good heavens! Doctor Jack, somebody must be mad."

"Perhaps so," said Doctor Jack. "It may be me. I am sure it is not you."

"Tell me about it, quick. My Myrtle—mine—mine!" he said exultingly.

Doctor Jack told him all he could guess, but Hunt only half heard.

"What will she think?" said he, then, in another tone. "Perhaps she had forgotten me—it is so long since. Why should I not think she has learned to despise me? Oh, Doctor Jack! It is too late—too late!" he groaned.

For one moment the thought, like a sheet of white light, dazzled Doctor Jack; but he resolutely shut his eyes to it, and so shut out his own heart and locked and barred the gate.

"You must go back with me," he said, "I think she will understand."

"And will you help me—make her see me—tell it was a mistake?" he asked, eagerly.

"Yes," said Doctor Jack, striving to smother his own heartache. "I will do anything you ask."

Meanwhile, Myrtle was alone. Doctor Jack's note was rather a relief to her. She wanted time to think. She had not awakened from her first love-dream, and he had disturbed her. She could think of him without Hunt, make up her mind to his goodness, hide his defects, bow to his nobleness, almost love him; but when she thought of Hunt she cowered down, and dared not face herself.

"If I could never meet him," she thought, "in time I might forget, but not now—it is too soon; I dare not trust myself." And after a night of indecision she awoke no nearer to making up her mind.

A week had passed since Doctor Jack went away. Myrtle, with trowel in hand, was busy in the garden. Looking around she spied Doctor Jack; then, in a moment, saw that he was not alone. All her woman's pride arose.

"How dare he!" she said to herself. "Has he no feeling? How could he come here?" She could not move, but stood like stone till they came up.

"Miss Myrtle," said Doctor Jack, taking her cold hand, "there has been a mistake, and Hunt was not to blame."

"A mistake?" she asked, looking beyond them both.

"Yes," said he, "a sad mistake; will you let Hunt tell you? I shall be very glad if you do."

"A mistake?" she said again, slowly, "if you say so it must be true."

He saw them walk away into the spring sunshine, into the new life that was opening around them and for them; he stood still with uncovered head, beneath the free fair sky, triumphant, victorious, with many a wound from the battle, but still victorious.

"For those that overcome the crowns are ready."

She would return to him with glad eyes, with happy heart, with fairest hopes; and

he was glad—glad for her, glad for himself. He stood with outstretched hands to meet them, and one of God's own angels could not have given them holier benediction.—*Frank Leslie's Illustrated Newspaper.*

The Blacksmith's Dinner.

"I have brought your dinner, father,"

The blacksmith's daughter said,
As she took from her arm a kettle
And lifted its shining lid.

"I haven't any pie or pudding,
So I will give you this."
And upon his toilworn forehead
She laid a childish kiss.

The blacksmith tore off his apron
And dined in happy mood,
Wondering much at the savor
Hid in his humble food,
While all about were visions
Full of prophetic bliss,
But he never thought of the magic
In his little daughter's kiss.

While she, with the kettle swinging,
Merrily trudged away,
Stopped at the sight of a squirrel
Catching some wild bird's lay.
And I thought of many a shadow
In life and fate we would miss
If all our frugal dinners
Were seasoned with a kiss.

—*Chicago Blacksmiths' Journal.*

For the Sake of Harmony—A Political Story.

BY THE HON. W. H. HENRICKSEN.

"Squire Burley died last night," said Mr. Hollingsworth at the breakfast table.

"You don't say," said Mrs. Hollingsworth, in her surprise suspending the coffee pouring. "How did you hear?"

"Why," said Mr. Hollingsworth, "Jeff Goacher passed here just now. He had just come from Burley's and was going to town to get the coffin. He said the squire died about 2 o'clock this morning."

"I had not heard he was seriously ill," said Martha, the eldest daughter. "He's been ailing for a year or so, but it was not thought to be serious."

"Well, it proved to be," said Mr. Hollingsworth. "Jeff said he was took bad yesterday morning and died this morning. Bright's disease, Dr. Hoagland said. Jeff said the doctor told him there was no cure for the trouble, though a man might have it and hang on a long time."

"We'll have to have another election for justice of the peace," said Andrew, Mr. Hollingsworth's son, aged 25.

His father nodded.

"Martha," said Mrs. Hollingsworth, "I'll leave you the dishes to do up. I

must go over and see if I can do anything for poor Mrs. Burley."

"Sartin," said her husband. "Andy can hitch up the spring wagon right after breakfast. You get ready and we'll drive over."

"How old was the squire?" said Martha.

"He must have been about 70, I reckon," said her father. "He was several years older than I be. The funeral will be about Friday, I guess."

As they rose from the table Martha said: "Now, ma, don't wait for anything else, but get ready to start right away. I'll take care of the work. When will you be home?"

cool air of the first days in December was invigorating and conducive to conversation, but the mission upon which they were bound being a solemn one, neither had much to say. Down the road the horses flew, past the plowed stubble and standing corn to the woods that bordered the creek. Through that stream and up the hill beyond the horses slowed down to a walk, and still Mr. Hollingsworth was silent, though he involuntarily held the lines in a firm grip.

Mrs. Hollingsworth having taken advantage of their slow pace to readjust her shawl and bonnet, broke the silence by saying: "Death is an awful thing, Jacob."

RIVIERE DU LOUP FALLS, CANADA. SEE UNION MEETING, LINK DEPARTMENT.—COURTESY F. W. RIOUX, SEC. COM.

"I don't know, child, but you had better have dinner ready by 12, for Andrew and the men will want theirs. You might churn too, and don't forget to feed the chickens. You might leave the sweeping till I come home."

"Don't think of anything here, ma. I know what to do, and I'll tend to things. You'd better wear your black shawl!"

"Yes, child, you think of everything," and Mrs. Hollingsworth hurried off to dress for the trip.

In a few minutes Mr. and Mrs. Hollingsworth were on their way to Burley's. Both were silent for a time. The crisp,

He assented with a nod, and taking a fresh chew of tobacco from a plug, which he drew from his trousers pocket, reached for his whip and again urged the horses into a rapid trot.

The four miles to Burley's was soon passed and Mr. Hollingsworth, guiding his horses through the vehicles of the neighbors already assembled, assisted his wife to alight at the front gate and then led his horses to the rack and mingled with the group of men assembled in the front yard. His wife, giving her bonnet a final adjustment, had already hurried into the house. After a few minutes

spent in solemn conversation he, with other men, also entered the house.

It was 11 o'clock when Mrs. Hollingsworth said to her husband: "Jacob, we had better go. We have done everything we can, and there will be so many here for dinner that the house will be over-full."

"I guess you're right, Margaret," he said, and they were soon on their way home.

Mr. Hollingsworth seemed in a good humor, but said nothing till they passed the creek. Then, turning to his wife, he said: "Margaret, some of the folks want me to be squire in place of Burley."

"They might let the man get cold in his grave before they begin to talk of another squire," said his wife, solemnly.

"That's just how much women know about such things," he said, petulantly. "Suppose someone steals a horse or shoots a neighbor's hog. Who will send him to jail, I'd like to know, and the squire lying dead in his house?"

"Oh, Jacob, it's awful to talk about such things before the funeral."

"Of course, Margaret, but public duty has to be performed. The squire was only elected six weeks ago, and another election will have to be called right away. It's just as well to settle such things soon—in a quiet sort of way, of course."

"You know best about such things, Jacob, but when will you begin?"

"Now, Margaret, that's it. I can't begin till the election, which must be a month off. But women never know anything about politics."

They drove up to their home. Dinner was nearly ready and they were soon at the table.

"How was poor Mrs. Burley?" asked Martha.

"She's resigned," said her mother, sadly, "though they say she did take on considerably for the first hour or so."

"He left her pretty well off, I guess," said Mr. Hollingsworth, passing the cabbage.

"Who will be elected squire in his place?" asked Andrew.

"Some of the neighbors said I ought to be," said his father.

"That's all right," said Andrew.

"Jim Baker stopped a minute down in the timber, where we was cutting wood," said Bud Larkin, one of the hired men, joining in the conversation, "and said as how they were already talking of Lem Ransford for squire. Jim was for him; said Lem had been to school in Batesville and knowed lots of things 'bout law."

"Lem Ransford, indeed," said Mr. Hollingsworth, indignantly. "He ain't 30 year old yet."

"That's what I told Jim," said Bud,

"but he 'lowed that Lem was smarter than lots of men twiceet his age."

"Pa can beat him easy enough," said Andrew, who was something of a politician. "Don't you think so, sis?"

"I don't know, I'm sure," answered Martha, looking at the pickled beets, which were no redder than her face.

"Of course I can beat him," said Mr. Hollingsworth, in that tone of conviction which brooked no contradiction in his own house. "What more did Jim Baker say, Bud?"

"Oh, not much," said Bud. "Only that he was tired of having some old foggy for squire who was always ready to fine the boys for running a little horse race on Sunday or taking a drink or two when they went to town."

"Umph!" said the head of the family. "I guess Lem has a sort of fellow feeling for them sort." And the conversation ended.

Squire Burley's funeral was over, and the Sunday evening following Lem Ransford was a guest at the home of Mr. Hollingsworth. This was no unusual occurrence, for Lem and Martha had been "keeping company" for a year. He was a well-built, clean-looking fellow of 27, who lived just across the creek, and Martha, a fresh, wholesome-looking girl of 20, seemed a fitting mate for the young farmer.

Heretofore Mr. Hollingsworth had made no objections to Lem's visit, but the fact that the name of his daughter's suitor had been mentioned as his probable opponent in the coming election for justice of the peace had aroused his ire, and he sat fidgeting by the kitchen fire while Martha was entertaining her company in the best room.

"Now, Jacob," said his wife as she bustled around the kitchen putting things in order, "I know what's on your mind. You are mad at Lem about that squire business. You have no call to say anything to him, and you just keep quiet; maybe there's nothing to it. Let Martha entertain her company. Poor child, she has enough to do week days."

Her husband spat into the wood box and made no reply.

"Now, promise me, Jacob, that you won't say anything to Lem or go near him. You know he's a good boy and sets lots of store by Martha."

"What business has he got wantin' to be squire?" retorted her husband.

"How do you know that he wants to be?"

"Everybody's talkin' about it, anyway."

"Oh, let Martha manage that," said his wife soothingly.

"Women's got no business meddling

with politics," said Mr. Hollingsworth. "They always spoil everything."

"Of course," said his wife, "but Martha's a smart girl, if she is our own."

The old man's only reply was a snort of disgust, and he left the room to walk up and down the front porch, chewing his tobacco and nursing his wrath.

"I do hope he won't say anything to Lem while he is in that humor," said his wife as she went on with her work.

In the meantime Martha and Lem were thinking of anything but elections or justices of the peace. He told her of the bunch of hogs he had sold that week and the new buggy he had ordered from Cincinnati.

"It's a side bar," he said, "with yellow wheels, and the first Sunday after it

It was 10 o'clock when Lem said good-by to Martha. On the front porch he encountered Mr. Hollingsworth, who in an angry voice greeted him with, "Hello, Squire Ransford."

The words were intended to be sarcastic, but to Lem, who in his exciting state of mind saw everything in the best guise, they appeared jocular, so he laughed and replied, "First rate, Squire Hollingsworth."

"I want to say to you, Lem Ransford," said the furious old man, "that I never want you to set foot in my house again."

"Why, what's the matter, Uncle Jake?" said Lem, surprised.

"Matter enough, you young upstart. You know what's the matter. Get off my place."

BAY OF TADOUSAC, CAN., WHICH WILL BE VISITED BY STEAMER BY THE DELEGATES TO UNION MEETING TO BE HELD AT RIVIERE DU LOUP, JULY 4, 5, 6. SEE LINK DEPARTMENT. — COURTESY OF F. W. RIOUX, SEC. COM.

comes I'll drive over and show it to you. If I come in the afternoon will you take a ride in it, just to see how it goes? The bay colt will take it spinning."

"I'll ask ma," said Martha. "She don't much believe in buggy riding Sunday."

"Oh, we'll get home early and I'll take good care of you."

"Well, come anyway, and if ma don't want me to go you can spend the evening."

"Oh, we'll talk her around, I guess," said Lem. "She's always good to me. And, say, Martha, I've got something to say to you when we won't be interrupted."

"Oh, Lem."

Now Lem was good-natured, but he was combative, and his retort was quick: "I don't have to visit your darned old farm," he said, and walked down to the front gate in a rage.

Martha and her mother watched him from the window. They had overheard the conversation, and Martha cried herself to sleep on her mother's bosom, while Mr. Hollingsworth fumed and lashed himself into a yet greater rage on the front porch.

Lem Ransford was angry, and he mounted his horse and rode away without once looking back. He knew, of course, to what Mr. Hollingsworth referred when he called him squire, for he had been repeatedly importuned to be a

candidate against the old man. He had never for an instant thought of such a thing, and had told his friends repeatedly that he had no idea of being a candidate. Now, filled with anger by his treatment, he was ready for revenge, and when he overtook Jim Baker going his way and was asked about the matter he announced that he would be a candidate, and would begin his campaign in the morning.

Jim was delighted and promised his assistance, and the two laid the plans for the campaign.

The next morning Lem was in the saddle early and from house to house he rode, asking for votes. Of course he received the usual number of promises, the usual number of refusals, and the usual number of doubtful answers.

In the meantime his opponent was not idle and the spring wagon carried him from house to house on his mission of vote getting.

A week later the township having been thoroughly canvassed, each candidate had to confess to himself that the election would be close. There was no particular issue at stake to confuse the voters. It was simply a choice of men. The older and more conservative men favored Hollingsworth; the younger people were enthusiastic for Ransford, but there was a certain number of voters, mainly small farmers, renters, and hired men, who were noncommittal, and it was evident that they held the balance of power and would decide the result.

There was a party at Mr. Golden's, only a couple of miles from the Hollingsworth farm, and Martha and Andrew were there. Mr. Hollingsworth thought of going, but the frivolity of the affair he thought in bad keeping with his ambition, so he remained at home, letting Andrew, his son, look after his interests.

Martha, in spite of the trouble between her father and her sweetheart, was more than willing to go. She thought she might meet Lem there, and she wanted to tell him how sorry she was that her father had treated him so. She did meet Lem at the party, but they had time for a few words only, and he was soon carried away by his political friends. But she had time to give him the assurance that the contest between him and her father had made no change in her feelings.

Now Lem was not the only young man who admired Martha. In addition to others there was Chris Stribling, the young editor of the *Banner*, the weekly paper published at the county seat. He had paid Martha marked attention, and her good qualities as well as the size of her father's farm had produced on his mind a profound impression. He was at Golden's party, and he came with an

object. His success with Martha was not marked, but he determined to play a certain card which he held, and thus produce a successful termination of his suit for Martha's hand, and with it a portion of her father's farm when the time came.

During the evening he managed to secure a few minutes alone with Martha, and for the third time asked her to be his wife. She refused him kindly but explicitly as she had before, and then he played what he thought was his winning card. He said nothing at first, but quietly handed her a letter with a request to read it.

She did so with some surprise. She found it to be a letter written by her father to their member of the Legislature, urging him to vote for a bill before the lawmaking body and generally known as "The Cow Law." It was a bill forbidding cows and other domestic animals from running at large, and compelling all fences to be at a certain height. Mr. Stribling had in some way become possessed of this letter, which was really never intended for the public eye.

"Well?" said Martha, after she had finished reading the letter.

"You must know that the publication of that letter in the *Banner* and its circulation in this neighborhood will defeat him for justice of the peace or any other office."

"Indeed?" said Martha.

"Yes," said Mr. Stribling, "a large majority of the people in this township are opposed to the cow law which your father in this letter advocates. You know they voted against Mr. Burns for voting for the law. They do not know, however, that he did it by your father's advice, and your father is smart enough to keep still about it while he is running for office."

"Well?" said Martha.

"I have a proposition to make," said Stribling. "Promise to marry me and you may destroy this letter. Do you understand?"

"And if I refuse?"

"I shall print this letter in the *Banner* day after tomorrow, circulate it freely among the voters in this township and your father will be defeated."

Martha's heart throbbed with a vague hope she could not yet clearly define. She tried to collect her thoughts and said, "Give me a few minutes to think about this matter, Mr. Stribling. I shall soon bring you an answer," and she glided from the room.

"Very well," said Mr. Stribling, pocketing the letter and making himself comfortable. "I've got her," he muttered, and waited coolly for her return.

In the meantime Martha had fled to the garden, where she walked up and down trying to collect her thoughts. She knew enough about politics and the sentiment of the neighborhood to understand that the publication of her father's letter would produce his defeat. Her father's defeat meant a victory for Lem. Martha was a good daughter, but she was in love, and she admitted that she would rejoice in Lem's victory.

"But will that ape Stribling print pa's letter?" she asked herself. "He would not if he knew about Lem." Then, after a moment of thought, she murmured, "I know how," and she returned to the house to find the editor.

He had not changed his position, and

concluded the better plan would be to work for her father's election, not realizing that Martha would prefer to have him publish the letter so as to insure Lem's success.

Lem, incensed at his treatment, not only went at the canvass with a will, but told some of his young friends why he had changed his mind and was anxious to succeed, and he and his friends appealed to each of the doubtful and Lem won by a handsome majority, much to the disgust of Hollingsworth, who was bitter against his opponent, saying that Lem Ransford should never step foot in his house again.

Martha was elated at Lem's success, but was too wise to show her feelings to any but her mother, whom she depended upon

walking up to him she said, "I have made up my mind to decline your offer."

"Do you remember the letter?"

"Of course I do," said Martha, "and you can print it as soon as you please. No one reads your musty old *Banner*, and no one cares for it. Pa can be elected in spite of it. Good evening," and she left him contemptuously.

The editor was very much chagrined at the failure of his threat to publish the letter, but his manner of obtaining it made him hesitate, and finally conclude not to do so, as it might reflect more upon him than Mr. Hollingsworth, and he still hoped to win Martha's good graces; so he

to pour oil on the troubled waters. Lem got his new buggy with the yellow wheels, and in spite of the antipathy, Martha found a way to take the promised ride, and eventually Squire Ransford found a way into the home of Hollingsworth, who came to think it was all right, so long as the office was in the Hollingsworth family.

The Blacklist in Practice.

BY M. A. HARGUS.

My troubles began all because of a little, cheap, one-sided strike of railroad

telegraph operators on one of the big railroads that traverse the middle sections of Ohio. I was in the strike, took an active share in it, as a matter of fact, and because of that, the trouble began.

Previous to the beginning of the strike my prospects were as bright and hopeful as I had any reason to hope for. I began to make my living as night operator at a little jerkwater station on a small line in Indiana. I got to be day operator in a few months. Then there followed two or three years in this capacity. At the end of them I was taken up by the head train dispatcher to work at a key in the division end office. And the operators who come to work in the division offices of a railroad are not the dubs of the road.

Things were going along so swimmingly and my assurances of success were so many that I got married when I got the promotion to the train dispatcher's office. I wasn't earning a great deal of money as an operator—\$65 a month was what the road I was with paid for operators at stations similar to mine—but I had saved a little out of it, and so had enough to fit up a nice home when we went to live in the larger town. After a few months I bought a home on the installment plan, and then I settled down to work my way up to a big success in the railroad business. I had ideas in those days, I firmly believed that it was only a question of working as hard and intelligently as one could, in fact, following the precepts for success laid down in the old-fashioned books, and one would in the end win success, if he merited it.

I made a hit in the train dispatcher's office. I got my promotion because one night, when the whole division was raving mad because a big wreck was apparently inevitable, I had kept my head and helped the chief dispatcher bring order out of chaos, and a cool head isn't a bad thing to have in a train dispatcher's office. Along with this I was a good man at the key. The chief dispatcher told me this, so there was no mistake about it. I got along well in the new office. My work was entirely satisfactory and my personal relations everywhere were the most pleasant. By industry I worked up within three years to be in a position where it was only a question of the dispatcher being promoted further up the ladder that I would step into his chair in that office. My pay as an operator there wasn't particularly high and the work was hard, but I saw the future looming up brightly before me, and I kept working harder and harder.

Then came the trouble. A nephew of the first vice-president of the road had been given a place as assistant to the

dispatcher. He was utterly incompetent as an operator, and hopelessly self-satisfied as a man. He knew nothing about railroading, but because he was a nephew of the first vice-president and was in authority, he had to make himself obnoxious to those that worked alongside of him. He was given the authority to reprimand and even discharge the men who were under him and he proceeded to put to use his power at the first opportunity.

They make the kind of men that that assistant dispatcher was in the place where none of us wants to go when we are dead. He was smallness and meanness typified. He had every man in the office ready to kill him before he had been there six months. Finally things became unbearable there and a delegation representing the entire office force went to the chief dispatcher with a complaint. The dispatcher could do nothing. We went higher with our complaint.

The assistant heard of it and discharged two of the men in the delegation. There was nothing to do then but for the rest of us to have a strike. It was impossible to work in the office with the assistant in authority, and nothing was done by the higher officers to relieve the condition of things there.

But the strike brought about the beginning of my trouble with the road. The details of the strike are not necessary. It was just a case of hold off, arbitrate, ruption, and arbitration for several strenuous days. Undoubtedly the railroad was put to much trouble, but it was its own fault, or rather the fault of the first vice-president, who persisted in backing his troublesome nephew. In the end we men lost, for the railroad spent a few thousand dollars and got men to fill our places.

It placed me in a hard position, that losing of my position. There was the home, about paid for, and a couple of children. We had been unable to save much during the years I had been working, so it was up to me to get another position in a hurry.

I went back to the railroad in Indiana. I got a job there right off the reel, because they needed a man right away to fill a gap. The position was a conditional one, conditional that the railroad I had just left would give me a clean sheet in my clearance papers. But here began my troubles in this respect. The old road wrote my new employers that I had left their employ on such a date and had failed to be taken on again. Just that, and the date of my leaving was the beginning of our little strike.

Innocent enough that letter was, but it was a most efficient blacklist. It did

the trick for me all right. The new road wouldn't take me on after that letter.

"We find that we do not need a man just now," was the gentle way in which they put it.

"But why?" I asked; "you know you said positively that you did need a man when I came here to apply for a position."

"We don't care to go into the matter and give reasons, Mr. Blank," was the reply; "but we don't need a man just now."

I went from there to another Indiana road, this time to take a temporary position as night operator at \$50 a month. My wife had begun to fail in health and I

reported on favorably if he is to be given work, I was just as much an outcast in railroad circles as if I had committed some heinous crime. All my bright hopes of success went glimmering. My trade, that which I had spent the best years in my life to learn thoroughly, was of no use whatever.

"Change your name and go out west some place where you can get a new start," was the advice given me by a dispatcher on the last road that threw me out.

"Isn't there any chance for me to get in here in this section of the country?" I asked.

He shrugged his shoulders. "I wouldn't waste my time trying," he said.

needed all the money I could earn to pay the doctor bills and keep even. I told this road in my application that I had had trouble with an assistant dispatcher on my first job, told them that there had been a strike, but they put me on temporarily, while they waited to get a report of the affair, from the railroad. The report came, and I was let out. The officer who discharged me said that it was against any railroad's policy to go against the report of another.

So I moved to Chicago to work on another road. The same thing happened in Chicago. I was blacklisted. That was all there is to it, and as an operator must be

Well, I didn't waste my time trying to get on with another road. I had to be making some money all the time to support my family, so I secured work in the telegraph room of a big institution that has its own system of wires. I was actually ousted from this position by the railroad's blacklist, for I had to give a complete list of my previous places of employment, but the head of this firm was a man with a heart. While he could not, for some mysterious reason, keep me at work in the telegraph room, he did give me employment in an obscure clerical position at \$13 a week. I am there yet, at \$14 a week now, for I had strained

all my energy and intelligence to making myself a competent operator and dispatcher, and clerical work has little attraction for me. But it yields a living for my family and myself, and I suppose there are a whole lot of poor devils who are not getting that.—*Plain Dealer.*

“Extra West 667.”

A MAD RIDE—BY MYRVIN DAVIS.

All day the snow had fallen, slowly, steadily, whispering into the long reed grass of the hollows, weighing down the branches of the bull pine and fir on the ridges; but the men on “Extra West 667” thought nothing of it, only to jerk it out of their collars and mittens, swearing picturesquely.

They were loaded with steel for the Clearwater extension; twenty-one cars, a full train, with a double-header. The cars, loaded to twenty, thirty, fifty per cent over their capacity, with the clinging, springing steel, were hard to draw and hard to hold, slipping a little on the down grades to loosen the dogs on the hard-set brakes, rocking a bit under the brakeman's feet as he passed back and forth to watch them. All trainmen know what steel is, and on the hills they are afraid of it.

“361” was the second engine, a trim-built Santa Fe, a half-breed Baldwin, high on her drivers, a sprinter of the old passenger service before the compounds came, fast, but light for freight. “667” was the head engine, and handled the air. She was a Baldwin standard. Dick ran 361. Burns was on 667. Cool men they were, who knew danger, but not fear.

Thus they went through the drowsy half-light of the snow-filled afternoon, and the children in the schoolhouses, far apart, watched them going, steaming easily, as they rolled with muffled wheels through the growing whiteness.

The early night came down quickly and caught them on the bench just below Moscow, before they reached Howell, at the top of the hill. They call it a hill, those careless railroad men, careless of word, but watchful of brake and signal. It drops a hundred feet to the mile, and a sled would run down between the rails on a winter's day like a scared coyote. But the boys were not paid for mountain work there, and will not honor it with the name. When they reached Vollmer, some three miles down the hill, they stopped for orders. The air whispered softly through to the stuttering brakes, the trainmen rolled out with their lanterns, sniffing for hot boxes, damning the snow and a soulless corporation. Then, signaling

each to each in answer to the high-sign from the platform, the engines puffed once or twice, and slid out on to the snow covered grade blinding white in the glare of the headlight, with the snow blown from the bench of a thousand feet above.

In the cupola of the caboose Gurtin watched the snow-dust following the light, dancing and leaping, mad with the rush and the tumult. Under the feet of the brakemen as they double-clubbed the brakes, the treacherous steel slipped and slid under its covering of snow. It was slippery work on a slippery track. At each stride they were going faster. Before they reached the flat they were making thirty miles an hour without a pound of steam. Ten miles is the limit. The “flat” is an easier grade with nothing flat about it; but they had thought to hold them there, should they get a start, and now the men on the engines knew they were in for it. Burns, on 667, clapped on the air hard, then let go for another charge, but the retainers were not turned up, and felt that he couldn't hold them. He tried again, then gave over the air to Dick, whistling change of air.

Then Dick gave it to them all he could send; the brakes gripped and ground on the steaming wheels, but they couldn't hold; nothing held. They were dropping straight into the canyon, fifty miles an hour now, and trains don't stop on a mountain grade when they once get started at that rate. Gurtin and his brakeman in the caboose knew it, and they cut her loose and held her with the hand brakes, as the unlighted cars lashed into the night, dropping straight as rain-drops, driving the straining engines. The snow was oil to their wheels as it ran in water from brake and rail. Nothing could stop them but the cessation of the force, that, swinging worlds, was drawing back to their mother's heart the drivers and the driven.

As they rounded a curve four rear cars snapped off, as a boy snaps the “popper” from his riding whip, and went whirling into the canyon below. Dick heard them go, and knowing he was lighter by sixty tons, shot the air into them, and sent his brakeman back to club the brakes again. It was a frightful task, but knuckling to it on hands and knees, he crept from car to car, calmly, fiercely, laying in with his brake club, fighting for his life, bravely, with those ahead in the steam-filled cabs.

Down, down they shot, rounding curve after curve on the winding track. At each they thought they were gone; as each was past, their hope would rise again, for they thought perhaps she would ride it out. Both engineers had thrown their engines over, and were working full steam with the great drivers, gleaming, gripping,

gliding over the slippery rails, dropping as a spun top drops from your hand.

The sleepers in the canyon a hundred feet below, waking, heard the roar of the train, and saw the light as the brakes, shooting and streaming fire, clutched and clutched again, lighting the blank walls above them—so near you could reach them with your hand—and throwing into shadow the sheer fall below. As a flash it was gone, and they wondered and slept again.

It was twelve miles from Vollmer to Kendrick, at the foot of the grade. They had started slowly. But it was only nine

whistle post for the county road crossing. Burns, blinded with the whirling, roaring torrent of steam and snow, did not see it, but Dick knew it was there, and when he felt the curve leap under him he whistled, one long, two short; his defiance to fear and death. For, just as 667 struck the point of the curve, the track melted from under them, the rails snapped and curled like broken hair, and out went ties and ballast, rails and braces, like dust beneath the mighty weight of the driven drivers. Oh! how they leaped to it; like lions at a hunting. There was no time for stumbling, nor noise of bumping cars or ring-

minutes after they had started until the watchers at Kendrick, hearing the roar of the train, came out to wait below the last curve. They heard Burns whistle for Pine Siding, three miles above, but before they had run the few feet from the station to the curve she was there.

Just above this last curve the road is straight for a ways. Hold your left arm out, half close your hand and you have it; the road makes a complete half-circle into the yards. Just above this curve is the

ing steel; but as one mighty burst of thunder, followed by the hissing of the rain, so they crashed. With one mighty bound, and sliding as they leaped, as greyhounds clear the hedges, the engines cleared the two hundred feet of rock-strewn slope down to the Potlatch and across it, and the flying, ringing steel came after, twisting, bending. As one would throw matches from a saucer, they left the cars and leaped upon the throbbing engines, heaped high in wild confusion, damming the

river in its course. Then over all came silence and the hissing of the engines.

The five men had fought through the fearful roaring blindness, calm to the last. Nobly had they fought, and as the wires clicked it east and west the crews of other trains and engines, waiting here for orders, there for trains, heard it and knew all that it meant, and were silent at the awfulness of it. Yet, as when soldiers hear of comrades slain in battles fought and won, they felt a fierce gladness mingled with the pain, and their work was a more sacred thing for the lives that it had taken.—*In the Pacific Monthly.*

Gleanings from the London R'y Review.

IRISH NOTES.

We have to record a serious collision between two goods trains at Newtownstewart on the G. N. about 1 a. m. on the 7th inst. The train from Enniskillen was standing outside the station when the Derry goods, which had been given the signal to enter the station and stop for the purpose of the two trains crossing at this station, ran through and collided with it on the single line. The Press reports state that the drivers had a narrow escape, but the driver of the Enniskillen train stuck to the footplate and reversed his engine in order to ease the force of the collision as soon as he saw the other train could not stop at the station. Many wagons were piled on the top of each other and broken, some almost into matchwood. The two engines were toppled over, and one of them was very badly damaged. The company's breakdown gang from Dundalk, assisted by Derry, arrived quickly on the scene, and had a temporary line put in for the traffic pending the clearance of the wreckage, which was strewn for some distance. It was anticipated that it would take at least two days to remove the engines and broken wagons. There is no authentic statement yet to hand with regard to the cause of the accident. Happily the Great Northern Company are pretty free from accidents of this kind, and we trust in this case the loss may not be so heavy as at first anticipated.

The question of expenses to the various grades of the men on the M. G. W. when sent to do temporary duty at distant stations, as we mentioned last week, has been varied by the officials in the acute form of a breach of agreement. It is rumoured that the manager is taking the responsibility for the action taken by the inspectors in cutting down these expenses from 20s. to 15s. per week of seven days, and 15s. to 12s. per week respectively to the several grades. If this is true, then the

company, through their responsible officers, are guilty of breach of contract, and why should they not be held quite as responsible for keeping an agreement as the men? The circulars are still in existence with instructions to stationmasters to pay £1 and 15s. per week to the respective grades, and the inspectors say verbally you must discontinue paying the scheduled scale and pay less. What an outcry there would be if the men refused to work until simple even-handed justice was meted out to them. The officials who are insisting upon these arbitrary methods of treatment to the employees should not forget that they are the aggressors. They have given a reprisal attack by reducing conditions without notice. They could not logically find fault if the men copied their example. There are many cases, and this is a notable one, where railway companies in their agreements with their men honour them more in the breach than the observance.

What the "Work-a-day Worker" in the *Evening Telegraph* says: "That people are saying":—

That the Cork District Council of the Land and Labour Association has approved of the suggested conference on the labourers' question.

That at last the Belfast City tramways have been taken possession of by their rightful owners, the citizens.

That Trade Unionism is the real remedy for low wages, combinations of toilers being able to make better bargains than individuals.

That through its influence, Sir Robert Giffen, the great statistical expert, estimates the organised worker has, in round figures, gained from 70 to 120 per cent. in 50 years in money return.

That the Trade Unionist gets from 50 to 100 per cent. more money for 20 per cent. less work.

That to-day Trade Unionism is not by any means the least amongst the forces that are working out a peaceful and bloodless revolution.

That it is the Trade Union which keeps up wages and keeps down hours, and which makes the employer respect his men and treat them like fellow creatures.

That any man who benefits by the better wages and shorter hours which the Trade Union has obtained, but refuses to contribute towards the cost of getting them, is sponging on his fellows.

GEORGE STEPHENSON ON THE 4 FT. 8½ IN. GAUGE.

Councillor Weidner, lecturing in Newcastle, told the story of how George Stephenson came to adopt the 4ft. 8½in. gauge for his railways. A venerable friend of the lecturer, long since dead, was one of

George Stephenson's principal men when he made his Newcastle and Carlisle Railway, about 1832. His informant asked the great engineer how he came to fix the gauge. George Stephenson told him that he got his idea from inspecting some portion of the Roman Wall through which the chariot used to be driven. Deep ruts were worn, and on measuring these he found their distance apart to be, as near as possible, 4 ft 8½ in. Stephenson thought that if a world power like the Romans had made such use of a measure for its chariots, he could not be wrong in adopting those measurements as a rule for his railway.

LOCO. MEN'S GRIEVANCES.

Under the auspices of the A. S. R. S.

H. Bailey, T. C. Osman, C. H. Alsopp, Usher, Potts, and Oxlade.

Mr. Dobson said they all knew as loco. men the unpleasant changes that had taken place in their work. They knew by bitter experience that work and rule was carried on at the utmost tension, that their mileage had been extended, and in many cases no extra pay given at all. They were dismissed or fined on most frivolous pretexts, and treated in the most arbitrary manner. When he compared the conditions with those days when his boyish eyes looked up to no finer specimens of humanity than engineers, men of character and ability, he asked himself how this degeneracy was to be counteracted. Mr. Dobson gave

BRO. DENNIS WRIGHT, SR., DIV. 97. BRO. EDWARD WRIGHT, DIV. 97. DENNIS WRIGHT, JR.

The father of Dennis Wright, Sr., was a locomotive engineer in the 40's, and ran the class of engines known as "Grasshopper," and "Mud Digger," and Bro. Dennis Wright, Sr., entered the service of the B. & O. in 1872 and is still in active service. Edward chose the same profession, and is now a member of Div. 97. Dennis Jr. is a member of the Telegraphers Order and Chairman of their local Committee of Adjustment.

and A. S. L. E. and F., a meeting of loco. men was held in the Masonic Hall of the Crown Hotel, Cricklewood, on Sunday night, when there was a crowded and representative attendance. The business was announced to be "To discuss the evolution that is taking place in the conditions of our labour," and "Have we a voice in its future?" Mr. A. G. Hales (King's Cross Branch) was called to the chair, and there were present supporting the chair Messrs. J. Dobson (organizing secretary, A. S. R. S.), A. Fox (general secretary, A. S. L. E. & F.), H. Savory,

examples of the conditions in the past which he said, went to prove that, like Paddy, they were advancing backwards. A man then was as proud of his engine as he was of his wife or of his home. Now they got an engine one day and saw it no more. The real downfall of the loco. men of the country was want of unity and the unhappy divisions that had taken place. Tracing the history of those societies and the action taken against the obnoxious circular of the Great Central Company, he said they were now agreed upon a scheme of federation and that

they would not take action without consulting each other working on the footplate, he wished them to join one or the other of the societies and work in harmony with each other, and with every other grade of the service in which they were. (Applause.) It was an unfortunate thing in railway work that they had to find fault with each other, but if a man made a mistake he should be always man enough to take it himself. Though the companies with their bad treatment knocked all the little bit of pride out of a man, they put him in charge of a piece of machinery costing £3,000 and make him responsible for hundreds of lives. They must retrieve their position as one great body, and let the officials of the Trades Union know that as they paid the piper they had a right to call a tune. (Applause.)

REMARKABLE STATEMENTS.

Mr. Fox, in stating that the first duty of non-members present was to join the society, said they were not successful before the Great Central directors because they were delegates from both societies, but because they were able to place before them signatures of the whole of the locomotive men, with the exception of ten. (Applause.) He wished to explain that at the time the Associated Society was started there was no protection benefit attached to the Amalgamated Society. A few of the locomotive men saw the necessity of this in their calling, and asked the society to adopt protection benefits, but they refused, and their only alternative was to form a society of their own. (Applause.) The reason why the men were in the present position was because they were not properly organized, and because they did not hold up the companies to the conditions that they agreed that the men should have. They were actually allowing them to break the guaranteed week on the Great Central at the present time. He said that the conditions of service that were imposed upon enginemen could not be carried out with safety to themselves or the public. (Hear! hear!) They found men working not 20 or 40 wagons, but 120, and on the Lancashire and Yorkshire some of the men who worked these monstres of engines were never tired of singing their praises. (Laughter.) But railway companies by manipulating the conditions make these men do work which keeps their fellow-men idle at home, and caused them to dispense with their services. They had a right to see to their fellow men's interests in this respect as well as their own. They were doing with one engine what two used to do. He advocated an eight-hour day on the footplates, because it would mean employ-

ment to something like 13,000 more men. It was not a question of finding employment for the street corner tramps, but for the men who were being pushed off the footplates. The companies were exacting from the men a 240 miles' run, and how much longer were they going to stretch it? (Laughter.) It was a wonder these men with a non-stop run from Paddington to Plymouth were not mesmerised before they got to the end of their journey. The mesmerist only required them to stare long enough to put them over, and a man for five hours continually staring at the signals would be very apt to see some that were not there. To drive five hours at a speed of from 55 to 60 miles an hour was a task that no human being should be asked to perform. (Applause.) It was not safe for the men themselves or the public. The public had been told that interlocking signals had made railway travelling perfectly safe, but had they put anything on the engine to tell them it had begun to rain and that there was frost on the rails, and that they had 400 tons behind them or 120 wagons to draw? The whole of the responsibility for safe travelling on the railways rested on the men on the footplates. They had no right to impose speed which could only be safely worked when things were normal, but must leave a margin for the changes in weather. (Applause.) They were worrying the men to death. He had been asked to make up a statement of the ages of their men who had died during 1904, and, including several old stagers, the average was considerably below 45. He thought the public should know something about it. One of the firemen on the Great Western today was shovelling ten tons of coal at 8s. a day, and the company was generous enough to promise that after three years' service he would get 8s. 6d. a day. ("Shame!") To talk of pensions at 65 amused him. The company could well afford to dangle that before their eyes when they knew they would never reach within 20 years of that age. (Laughter.) Then Dr. Forbes Winslow, the eminent expert on insanity, found the percentage 12.7, or the seventh highest on the list of 74 commercial trades of the country. In a note, Dr. Forbes Winslow said this might happen from high speeds being exacted from engine drivers and firemen of today. He did not blame the companies one iota, he blamed the men. Had they a voice in the future? He said that railway men should have absolute control and make what conditions of service they liked. (Applause.) Let them do their duty as self-respecting men and belong to their organization.

The chairman asked what was the pro-

posal in the programme, and Mr. Fox replied 120 miles was proposed as a day's work for all passenger trains, but when the delegates met the matter would be discussed.

TO NEGATIVE THE TAFF VALE DECISION.

The influence of organized labor in the politics of England was very sharply shown in March, when Mr. Whittaker brought in the Labor Disputes Bill and secured a majority of 123 to refer it to the Committee on Law. The bill is for the purpose of restoring the status quo of the Trade Unions before the delivery of the Taff Vale Judgment, which jeopardized the life of unionism and made it possible not only to loot their treasuries in damages, but subject individuals to fines and imprisonment on the slightest provocation.

Out of Sympathy with the Men.

We all know the fable of the fairy godmother who conferred all good gifts upon a child but withheld one which proved the undoing of all the other precious gifts. I have often thought of that story in connection with the failures of my friend, Samuel Short. Sam learned the machinist trade and no man surpassed him in skill in any shop he ever worked. He was an industrious student of the principles underlying the machinist business, he was very careful and methodical in his work and seemed to have the qualities of an ideal foreman. In due course Sam was appointed foreman, and from the first he made a failure. He had no capacity for handling men. From the first he was one-sided, and had no sympathy for the men under his charge. A good-natured man, he became a tyrant with those who did not perform up to his own ideal. While zealous for the good of the company, he never realized that he had responsibilities toward the workmen that were greater than merely seeing that the full pound of flesh was paid. No man can keep men doing their best who is not in constant sympathy with them.—*Railway and Locomotive Engineering.*

Open Shop a Failure.

After six months' trial of the "open shop" policy advocated by the Chicago Employers' Association, the Cole-Davis Shoe Co. has withdrawn from the Boot & Shoe Manufacturers' Association and signed a union shop agreement with the Boot & Shoe Workers' Union.

"We never had any serious trouble with the union," said Edward M. Cole, president of the company, "and we will

no longer tolerate interference with our business by those who have no idea or conception of its various workings."

In common with the other manufacturers in the city, we discontinued the use of the stamp six months ago. I find that many of our best customers demand the union stamp, and I do not propose to lose their trade through standing for an abstract principle that means nothing to me.

"In signing the agreement I was actuated by business motives, as many of my competitors in the east use the union stamp and there is a great demand for goods bearing that mark. I find no difference in doing business under the 'open' and 'closed' shop plans. Manufacturers and labor unions must go hand in hand, as trade unionism has come to stay and must be reckoned with.

"Out of the 200 shoe workers whom we employ, I do not suppose there are one dozen who are not paid up members of the union. These will have to get in line with the others or quit, as I have signed a union agreement and will carry out its provisions. I have no criticisms to make of the policy of my competitors. They can suit themselves, but I want the union stamp in my business and have taken the necessary steps to get it."—*The Million.*

Confidence Wins Confidence.

Gov Douglas, of Massachusetts, was able to end the great strike of cotton operatives at Fall River, Mass., simply because the strikers had confidence in him and believed he would do the fair thing by them. They went to work at the reduction of wages fixed by the manufacturers, but the governor will review the whole situation with a committee of the manufacturers, and they agree to abide by his decision as to wages; the operatives to have a wage dividend declared next summer. Gov. Douglas never had a higher compliment paid him than this action by the strikers.—*Plain Dealer.*

Hint to Eyeglass Wearers.

It is very necessary when fitting the pince-nez that care should be exercised to prevent it, when in wear, from dragging the tissues of each side of the nose to such an extent as to pull the lower eyelid out of position. The optician points out that a displacement of the lid by only two or three-tenths of a millimeter, which is an amount readily overlooked, may be amply sufficient to cause epiphora, or "watery eye." It becomes the refractonist to keep this warning prominently under his attention.—*London Globe.*

Correspondence.

All contributions to our Correspondence and Technical columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer to insure insertion.

We shall be glad to receive articles on any subject of general interest to the fraternity.

All communications are subject to revision or rejection, as the Editor may deem proper.

The Editor does not assume responsibility for the opinions expressed by contributors in this department. C. H. SALMONS, Editor and Manager.

Semper Fidelis.

TO DELOSS EVERETT.

Dear old Deacon, I read t'other night
A good common sense letter from you,
In the first JOURNAL out,
When mid danger and doubt,
Men were toiling to raise
Our old flag in those days,
Which now floats out in everyone's view.

You were then in the twenties, old friend,
Having hair just as black as a crow;
For your pulses were young,
And your eloquent tongue
Helped to nurture the seed
Men were struggling to breed,
And were anxious to witness it grow.

You're overjoyed how the order has thrived
Since the days of long gone 'sixty-three,
When the corporal's guard—
What remains, battle scarred—
To an army has grown,
In the years that have flown,
Just as fine as one ever could see.

On the firing line always you stood,
In defense of both justice and right;
"Bless your frosty old pow,"
You ne'er quailed in a row,
But you led the lads on,
Till the scrimmage was won,
And you fought in the front of each fight.

Three long decades of years have gone by
Since I first shook your honest old fist;
And it is with delight,
That I tell you tonight,
I am proud to enjoy
Such long friendship, my boy,
Without ever an hour of it missed.

You are yet in the prime of your years,
Tho' your once raven hair is like snow.
Round the circle you swing;
You make speeches and sing;
And to "Sambo's Delight"
You could dance every night,
Like a schoolboy in each place you go.

May you long live before you are called
To "The Land that Lies Starward," old friend,
Where you'll bloom evermore,
When life's journey is o'er,
Among souls who were true
To all things they should do,
In the life we are told has no end.

SHANDY MAGUIRE.

Troubles and Triumphs of Travel.

BY SHANDY MAGUIRE.

[Continued from May JOURNAL.]

We commented considerably on the symmetry of the little mounds alongside the track which were the homes of the prairie dogs. We also noted the skeletons of animals strewn alongside the way, and we were informed that there is no decay in the dry air of the clime, that owing to it, everything dries up. Pound expressed the wish to linger in such a paradise indefinitely, looking at Davis, but the tables were soon turned on himself, who was charged with a monopoly of the talk.

It was growing well into the afternoon and we were being wheeled along gaily. We were rapidly approaching the state line of California, and our supper station would be Needles, inside the line.

Miss Lape, who is an old California traveler, proved an interesting guide to us tenderfeet; and the lady is the first who pointed out to me the towering rocks which gave Needles its name, and was my fair sponsor at my California baptism.

We admired the splendid cantalever bridge spanning the Colorado River. We also feasted our delighted eyes on the bright fringes of green on its margin, and also on the water rolling along, it being the first we had seen of any volume since crossing the Mississippi.

A little later we were at supper, and also briskly fanning ourselves to keep from being dried up and blown away. The place is hot—or was on that particular evening. A native told us that eggs are cooked in the sand. We believed him when we saw the thermometer coquetting around the 119° mark, and we only wondered that the hens didn't furnish them cooked. However, don't think, my dear tramp, who have kept my company so long, that I am kicking at the first

taste I got of California. Not by a long shot. We frolicked about like young kids out on a lark, and my pulses were thumping delightedly.

Of the many enjoyable nights we were gathered together, this one seemed to be the most delightful. It must have been that the knowledge of the parting on the morrow had its influence over us, and lent zest to our conversation. The ladies all seemed to take kindly to Bryant, who was of a retiring nature and very seldom was anything but a listener in our talking circles. He being single, very pleasing in appearance, and gentlemanly in his deportment, easily stood in, to the displeasure of Pound and Sanderson. Mrs. Davis directed the talk toward him by saying, "Mr. Bryant, you have not told a story or sung a song while you've been with us, and I think it is time to begin." She struck the keynote, for we all thought that he should help to contribute to the general joy, one way or the other, and so insisted.

"Well," said Fred, "I've been thinking you would call on me before we'd arrive at the end of our journey so I have been preparing myself. I have been rehearsing with Davis and McGovern in the smoking room this afternoon, feeling I'd get the invite before retiring, so all I have to say is, 'Barkis is willin','" with a killer of a look at Miss Lape and her companion.

"I'm not much of a singer, which Davis and McGovern know, so they are not to forget helping out."

"We are aware of that," said McGovern, "and it will be more generally known after you begin."

"Here, here, no reflection on a willing man," said Pound. "If others of us had to sing for our supper at the Needles, we'd not even get forage enough to keep us from starving."

"Indeed, my dear friend and fellow-warbler, you tell the truth. Judging you by the occasional chant we heard you strike up in the smoking room, you have a voice as sweet as the little burros we saw down in Albuquerque when they Bray for grub."

"Are you going to cease your gab and listen to Bryant's song?" said one of the party, and if a fairy waved its wand over the heads of all, there could not be more perfect silence.

Bryant had his lines well rehearsed, and in a fine baritone voice, which was a revelation to us all, he sang most gloriously the following very appropriate lines:

"The sun is fast descending,
His slanting beams are blending
Along the way we're wending.
O'er mountain peak and vale;
To-morrow when he rises,
With joy he will surprise us,
Bereft of cloud disguises,
At flowers alongside the rail.

"I now give timely warning,
We'll cull you in the morning.
Grand bouquets for adorning
Your bosoms when you rise;
All rich and unassuming,
Most fragrant in their blooming,
And fresh from Nature's grooming,
'Neath California's skies.

"Tonight's the last we'll mingle,
Around our social angle,
We married folks and single,
Our journey soon shall end;
Los Angeles we're nearing,
Where other folks endearing,
Have salutations cheering
To give each well-known friend.

"We've been some days together,
With hearts as light as feather,
In fairest of fine weather,
As over states we sped;
We'll quaff from memory's treasure,
Full many a flowing measure,
Of all those hours of pleasure,
Till hoary grows each head."

At dawn the following morning I was first up, just as we were making the station stop at 4:45 at Summit. In a few brief moments there was not a member of our party who was not ready to take his or her place at the car windows to view the sights. We were surprised at the perfection of the toilet so early in the morning of Miss Lape and her friend; but when we recollected that they intended leaving us at San Bernardino, a place we were nearing rapidly, we had an explanation of their prim appearance. About fifteen minutes later the trainman sang out the station, and as the ladies picked up their dressing cases, willing

hands dispossessed them of their burdens. Then when we were standing in the aisle till the train came to a stop, Sanderson's voice was raised melodiously in the following strain of impromptu verses, which he was assisted in singing by the male quartette:

' Adieu, adieu, dear ladies, you
Are from our midst departing,
Ere taking leave your loss we grieve,
And tear-drops now are starting.

" Your pleasing smiles reduced the miles,
And made the time seem fleeting,
' Your honeyed words, like songs of birds,
Gave all a kindly greeting.

" We'll not forget the place we met,
Or pleasant hours together,
Where genial joy, without alloy,
Kept hearts like wind-blown feather.

" Once more adieu we say to you,
Now friendly ties must sever;
May love and health and boundless wealth
Your portions be forever."

Soon after the singing ceased we stepped off the train, it being the breakfast station. But did we go to dine? Yes! on one of the most sense and soul-ravishing menus of our whole existence. At San Bernardino station is a small oval inclosure of plants and flowers, growing in such luxuriance that it fairly stopped our breath gazing on the emparadised display. A fence of rose trees, overburdened with the flowers in their multicolored bloom, surrounded the whole, and palm trees fifty or sixty feet high added to our silent astonishment. I went to the hedge of roses and soon had two boutonnières of the choicest roses, one on each side of my coat, to celebrate the occasion, and a big bouquet in my hand to divide up with our ladies, and no one to say me nay. My lady love, like myself, was rendered speechless for a while at the sights which indulgent Nature spread out to astonish us on every hand. After we feasted our eyes on the beds of strange plants and flowers, the hedge of roses and the towering palm trees, she looked off in another direction and saw a tree of oranges, the fruit hanging in profusion, in the unfenced garden of a modest residence. I was at it in a jiffy, filling my pockets with the oranges, which only held one

each, and I whacked up with her, I doing the peeling and feeding her on every other out of the deliciously flavored navel darlings until we both were satisfied, and then went to the lunch counter for a slight collation, topping off with a good cup of tea. We did not devote many minutes to the gratification of our physical appetites, for a grander banquet from our hospitable hostess, Nature, was awaiting us outside the dining room. How we tenderfeet did revel in the luxuriance spread before us! From the valleys, where the groves of orange and lemon trees were delighting us with their yellow fruitage, we let our eyes wander until, taking in the witcheries along the way, they rested on the snow-capped peaks, nearly a mile above us! We would have got left, so absorbed were we in viewing the sights, if Sam Myers didn't have his watchful eyes on us, and say, "All aboard!" Again we were in motion, but instead of inside the car finding us food for conversation, we were going from side to side in speechless admiration at the panoramas unfolding themselves to us every mile of the way.

(To be continued.)

Letter From a Retired Engineer to a Friend.

PLEASANT VALLEY, N. Y., Jan. 2, 1905.

DEAR FRIEND: Your welcome letter came on time. Mother and I were pleased to learn that yourself and family were well. I read it over a number of times and each time it awakened pleasant recollections of the past. You recalled several incidents in which we were the leading characters in the old days on the Central. It is a wonder we ever pulled through it all. I recited some of our experiences to mother (not all, Dan), and as I reluctantly folded your letter an hour after our regular bed-time, mother remarked that she always knew I was wild, adding that if she had half as much sense when a girl as she has now she would have married someone else. I, of course, sympathized with her and we retired, to continue to talk of the old days until the Midnight Express warned us that it was time to go to sleep. Bill Cooper pulls that run on

Monday, but I'll bet he wasn't out last night, for Bill don't run an engine like that one was butchered. The station is but a stone's throw from our house, and the grade for six miles is about 70 feet to the mile, and with one of those Atlantic Type engines hauling nine cars an artist like Bill Cooper can make music that is a treat to hear. I have stood at the window and listened to him until he pitches over the summit six miles away. Every note so clear; just like you have heard the "double roll" played on a snare drum.

The fellow who went out last night started with his cylinder cocks open and I don't think he ever closed them, and if there is anything annoying, it is that. He worked her about half stroke as long as I cared to listen; oh, the murdering that engine got. Why, it pains me to think of it. What a difference there is in runners anyhow. I don't know who that engineer was, nor do I want to find out, for he might be a good fellow otherwise, and I am afraid I might think less of him after his performance last night. I have known some pretty good fellows that were very poor engineers, and some of the meanest that were top-notchers; but both these cases are the exceptions. For as a rule one having the qualities that make good fellowship possesses more than the average intelligence, which latter is the directing agent of the successful engineer.

I was pleased to learn from you that Mike Haggerty was still hale and hearty. Mike and I used to be close friends. I intend to call on him when mother and I visit you folks. Mike was a good fellow, and a first-class engineer; but, as a hunter, well I won't say any more about it, excepting to tell a little joke on him.

A good many years ago Mike agreed to join me for a day's hunting when the quail season would begin. Well, the appointed day arrived, and Mike (he was on the River Division then) met me at the appointed place, rigged up in a complete hunter's outfit. Noting that I was somewhat amused at his appearance he said, "I always believed that a poor workman needed the best of tools, also that a good front often won where real merit failed,

although I have grave doubts as to either being effective in a quail hunt."

Well, we went after the game and there was plenty of it. Mike was absolutely unable to hit a bird, but he had enough ammunition and willingness to kill all the game in the country if, as he said, it would only give him half a show; so he kept blazing away enjoying the sport hugely. Just about the time we had made up our minds to quit for the day Mike spied a wounded quail trying to disengage itself from a brush pile into which it had fallen. Here was Mike's opportunity, and being desperately anxious to have at least one bird to his credit, he determined to make the most of it. When he raised his gun I said, "Mike, stand back and give the bird a show." Without taking his eye off the gun barrel and moving towards the brush pile, he replied, "I've been giving them a show all day. It's my turn for a show now." When he got within twenty feet of the quail, and still moving nearer I said, "If you get any closer, Mike, you'll blow the bird to pieces." "Let me alone, Jason," said he. "I'll hit him as aisy as I can." Well, I guess Mike hit him all right, but a very faithful search on his part failed to discover anything but a few feathers. Mike looked puzzled, and after we had trudged along for quite a distance without speaking, he broke the silence by saying, "Jason, do you think the divil got away?" Before I could answer him he said, "Jason there is an old saying that a bird in the hand is worth two in the bush, but it's not half true. I believe a bird in the hand is worth more than all in the bush." The last thing Mike said to me before we parted was, "Jason, don't mention the joke to the boys."

I took a walk down to the roundhouse the other day for the first time since I hung up the shovel and the hoe, and such a handshaking as I received. Everybody was glad to see me, and I was just as pleased to see them. Even "Ab" Stickels, the roundhouse foreman, to whom I hadn't spoken a word for ten years or more, gave me a welcome that thawed me out completely. "Ab" and I fell out some years

ago about some matter so trifling that I cannot now recall it. I always thought he was a cross-grained fellow, but he showed a side of his nature the other day that surprised me. We make some mistakes in life, Dan, in our estimates of men. The kindest nature, capable of the most sincere and self-sacrificing friendship, is often hidden by a rough exterior that really belies the man. You can neither break down their guard nor penetrate their armor, but under the influence of a little sentiment they become kindness itself.

There was old Dick Sewall who ran an engine here for a good many years, "Skin-flint" the boys used to call him because he was never known to miss a trip nor spend a cent. Well, Dick took sick on his engine and died shortly after being brought to his room, and as he had no one to keep but himself, and it being known that he lived economically, the gossips, those vultures of society, awaited with eager anticipation the discovery of large bags of gold that they were sure were secreted about Dick's humble quarters, just to prove that he was the miser they said he was. Well, Dan, they were much disappointed, for the most diligent search revealed nothing but a bank account of \$50 and a large bundle of letters that showed the marks of much handling. Those letters were received from an Orphans' Home and were acknowledgments for liberal amounts contributed towards its support by Dick Sewall. The news of Dick's charity spread far and wide, and the word painting of the eloquent divine who preached the funeral sermon presented a picture of the life's work of Dick Sewall that was beautiful. He said that the life of this man was one of the grandest examples of "Charity for sweet charity's sake" that had ever come to his notice, and the very manner of his death was in itself a fitting finale to such a devoted and unselfish existence.

But I am drifting from my story. After returning home from the visit to the roundhouse, feeling more cheerful than usual, mother suggested that I take the same trip again soon. She said I needed

the company of those with whom I had been associated for so many years and that I was like a fish out of water when I stayed away from the railroad too long. Mother thinks if I could be kept busy the time would not hang so heavy on me, and thinking I can do anything in the machinery line, she told a neighbor's wife who complained of having a bad order lawn mower that I could fix it without the least trouble, and would be only too glad to have something to keep me busy. That's what mother thinks. Well, I examined the machine with a critical eye and concluded I would have to take it to some place where I could get the use of a vise in order to repair it. I took it to the "Little Dutchman's" around the corner and he fixed it up for a dollar. It amused me to hear mother tell the owner of the mower that it was just as good as new now, and it took me no time to fix it either. I did not say anything to mother about the dollar, partly for the reason that I value her good opinion and partly because she has heart trouble. While I pretend to like to be kept busy, I have cut out lawn mowers on the plea that the "Little Dutchman" ought to have a chance to earn his living, and mother complimented me by saying, "Jason, you are so thoughtful." I have been fooling her that way for about forty years. I don't think she has ever pulled the wool over my eyes, for if she did it seems to me I would know something about it. They don't know how foxy we are, do they, Dan? The idea that an old "rail" likes to be kept busy makes you laugh, I know. Old soldiers and old railroad men are about in the same class in that respect, neither being of much use except at his chosen calling, as "Deacon" White would say.

What a great difference there is between the engineers of today and those of thirty years ago. This is particularly true of the manner in which they spend their leisure time. The rollicking devil-may-care spirit he manifested in the old days is no more in evidence. The type that flocked in large numbers and worshiped at the "shrine of Bacchus" is about extinct. The swaggering, cowboy style of

fellow, who wore his cap with the peak behind and used language that would shame a drunken sailor, is but a memory of the distant past. The present type is a serious minded, thoughtful, almost unso- cial fellow. Increased responsibility and rigid discipline are in a measure responsible for the change, but the strongest influence for good has been the strict enforcement by the Brotherhood and the railroad companies of the eleventh commandment, "Thou shalt not drink."

Well, Dan, I hope you are having lots of steam in these cold days and colder nights. I cannot think of anything excepting good health that would contribute more to your happiness and I wish you abundance of that. You always had a habit of making the time under almost any conditions, but I know that when it is not in the engine it must come out of the man, and you are not as young as you used to be.

Mother joins me in sending kindest wishes to yourself and family.

JASON KELLEY.

Recollections of Lincoln.

AMERICAN CONSULATE,
NIAGARA FALLS, ONT., April 10, 1905. }

EDITOR JOURNAL: In looking over the files of this office I find a dispatch from the State Department at Washington with a black border, dated April 15, 1865, signed by William H. Seward, Secretary of State, notifying Albert A. Porter, Esq., the United States Consul at this port, of the death of Abraham Lincoln and directing him to observe the usual symbols of mourning thirty days. It recalled to my memory that forty years ago, the 14th of this month, Lincoln was shot by Wilkes Booth, and also recalled some recollections of President Lincoln and Wilkes Booth.

I think it was about the 1st of March, 1861, that Abraham Lincoln passed through Rochester on his way to Washington to be inaugurated President of the United States. I was employed as fireman on the New York Central road at that time and lived in Rochester, and, in company with Bros. E P. Shaffer, now an old retired engineer, went to the depot

to see the train, and, if possible, to see Lincoln. We were standing in front of Congress Hall at the west end of the depot when the train came in from Buffalo. The car in which Lincoln and his family rode was an ordinary day coach and had been fitted up in the Albany shops and sent to Buffalo to bring him east. It had his picture painted on the inside at each end of the car, with flags on either side. The car was newly painted and varnished, and was in use a few years ago on the Buffalo and Rochester accommodation as a smoker. The engine drawing the train was the Dean Richmond, with Len Ham at the throttle. The engine and the entire train were covered with flags and bunting. It was a regular train, not a special, and Lincoln's car was on the rear end. The train drew through the crowd into the depot, leaving Mr. Lincoln's car just outside and in front of Congress Hall, a few feet from where we stood. In a few moments the door opened and Mr. Lincoln came out with his hat in his hand, and I had a good look at him. He was a very tall man, thin as a rail and wore a black doe skin suit with a turn down collar. His face was pale and his mouth large, but he had a fine kindly look in his eye. He spoke for five or ten minutes, and I do not remember just what he said, but I remember him saying that the North would not coerce the South and that if the South were bound to have war they would have to fire the first gun. When the train started he stood on the platform, waving his stove pipe hat to the ladies on the two galleries in front of Congress Hall. This was the only time I saw Lincoln alive. Four years later I was in the depot at Buffalo when the funeral train came in bearing the body of Lincoln on its way to Springfield, drawn by the same engine and Len Ham still at the throttle. This time the engine was draped in black. The crowd in the depot were as quiet as they were in Rochester in 1861. I had met Wilkes Booth the year before in the cafe next to the theater in Buffalo, kept by Dan Bassett, my old school teacher, and after being in his company all the afternoon had attended

the theater in the evening to see him play Richard III., and could scarcely realize that he was the man who had murdered the great President.

The old engine Dean Richmond has long since been relegated to the scrap heap and Len Ham has been dead several years, but his daughter, now living at South Byron on the line of the Central road, has the time card which her father used for the funeral train. It is 6" by 9" with a black border. The train had the right of way and a flagman was stationed at every crossing with a flag draped in black, and the train passed all stations slowly tolling the bell. It is now forty years since the war closed and Lincoln sleeps in a granite tomb in his old home, and his mantle now covers the shoulders of the heroic Roosevelt, who now takes rank with Cæsar and Napoleon, and will go down in history as the greatest man of the age. Even now my memory often wanders back to the old Dean Richmond covered by brass and gold leaf with Richmond's picture painted on the headlight, and from Len Ham, the silent engineer, to the long lank figure of Abraham Lincoln and to the elegant figure and pleasing personality of Wilkes Booth and his fine acting in Shakespeare's grand play of Richard III. in the old Buffalo theater, then to the funeral train, the last scene in the great tragedy, but they all have passed away and left nothing but memory.

W. H. H. WEBSTER, Div. 328.

The Dark and Light in Life.

SPOONER, GA., April 15, 1905.

EDITOR JOURNAL: In passing by the mirror of time I take a sly glance at myself and find I am getting old, and by this I begin to think of myself in bygone days when I was of great service to myself and family; but alas! as sad as it may be, it is, however, true. My usefulness has passed and I am cast among the rest of the worn-out machinery in the scrap heap, waiting for the junk dealer. The condition I am now in has given me many an hour's thought while propelling one of the best equipped and finest trains in the United States through the plains of Texas.

I have oftentimes asked myself what would become of my family if by accident or otherwise I should lose my position; what could I do to preserve their happiness and comfort? I could not for my life tell wherein I could do anything, as running a locomotive was my only talent, and to lose it meant desolation, despair and suffering for myself and family; but alas! the time came, to my horror and sorrow, and I was made a sacrifice to my delusions by being whirled into the ditch of destination with my much loved engine. I was mangled and maimed, but never lost consciousness. The first thought that came to my mind was the loving wife and daughter I was to meet in another hour's time on the opposite train en route to Houston to attend a banquet given by the B. of L. E. at that place. I was taken in charge or care by the passengers of my unlucky train, especially three ladies. They hovered over me with their prayers and lamentations until I felt as if I wanted to die, as my suffering would end with the promised reward for those who believed; but when I met my heartbroken wife and daughter at the little town of Schulenburg, I began to revive and begged in my humble way to our most merciful God to let me live for the comfort of my loving family. I continued to beg, and at last it seemed to me my humble entreaties were made plain, that I would arise and be again a comfort to my distressed family. I began to sum up when able to scramble around home on my crutches, as to what I could do to make a living; hence, the idea struck me to come back to the home of my birth and see what could be done that I might make my home happy once more; and I am proud to announce to my Brothers that my circumstances have been reversed and my enthusiasm rewarded.

We have a beautiful home in Southern Georgia, and we have plenty and lots to spare to those who have to depend upon the market for their home supplies.

You see I became despondent before the climax came. I was troubled without provocation; still, it may be the means by which I made up my mind to follow some

other vocation outside the railroad world.

Last year was a bad year in this section of the country, for a beginner especially, on account of the summer and fall drought. I hope I may be able to tell you a different story next fall, if we all live. I will soon be in clover, as the boys say, as the fishing season is fast approaching and I have fine lakes near home of my own.

I find a great deal of comfort once a month when my JOURNAL comes; but I take issue with a great many articles, though I keep still merely to show my good Brothers I am as their law decrees, dead. The established laws of our Brotherhood forbid any Brother not in active service from holding or performing any official duties of the B. of L. E. Men serve out their days in the order in active service, and soon a circumstance forces them from active service. They themselves close the doors upon them, through some selfish motive, I presume, unknown to me; hence they are dead to the Brotherhood as soon as they come in possession of honorary membership. I have no desire to be in any way sarcastic, but if I am living I intend to try to represent myself in the insurance association at our next convention. I have that right if I can establish the proof of my membership, according to the laws of Ohio, yet I have no right to represent others without credentials.

Hoping I have not offended anyone I beg to be remembered among the many well-wishers for the future prosperity of our beloved Brotherhood.

Fraternally yours,

B. A. PICKREN.

Brother Pickren will certainly receive a hearty welcome from many of the older delegates who have served with him in conventions, if he puts in an appearance, as he was a vigorous representative, and made many friends among even those with whom he disagreed. EDITOR.

Montana Legislative Board.

GREAT FALLS, MONT., April 14, 1905.

EDITOR JOURNAL: At the meeting of the legislature of the State of Montana we had a State Legislative Board, and

they did some work we are all proud of. There was a bill introduced that limited the hours of work for a man that was in any way connected with the movement of trains to fifteen hours. Twelve hours were considered, and after considering the bill from a general standpoint, it was decided that fifteen hours would best suit the condition of everybody concerned in the state. This bill passed the lower house and went to the senate, to be defeated. Our representative informed us that some of our Brothers who are not working on the Central are responsible for its defeat, as they said that on their road they were making runs in eight hours and that they did not need any such law. If that is true and there was a law limiting the hours of work to fifteen hours, it would not interfere with them nor the road that gives them work; but a law of that kind would help in a great many cases, as it would have a strong tendency to stop engine and train failure, as these failures on the road do not make money for the company. Such matters would be looked after more closely and I believe that both men and company would be benefited the same as they were by the power brake and automatic coupler. Who is benefited by the appliance of such a device more than the company?

What Division 504 wants is to get all railroad men awakened to the present situation; a State Legislative Board, an International Joint Legislative Board, and see if the interests of the men and the traveling public cannot be looked after, before some of us are called upon to handle 100-ton cars with a 250-ton engine on a 6-foot track. Fraternally yours,

J. V. BLASDEL, Div. 504.

Shorter Hours.

DALHART, TEX., April 27, 1905.

EDITOR JOURNAL: In looking at the past history of our Brotherhood, it is not an unpleasant retrospect, for it tells of lessons learned, of victories won; but are we not prone to content ourselves by boasting of past achievements instead of working and planning for the present and the future? Let us reason together and

through the columns of our JOURNAL and in our meetings discuss and solve the problems that confront us. Let us get our bearings and locate ourselves correctly and when we do I think we will find ourselves working longer hours, getting less nights of sleep, less days of rest, less days at home, than any other class of the world's toilers.

I admit that when we reckon in cents and dollars there has been a slight increase in wages. When we take into consideration the purchasing power of a day's wages as compared with ten years ago, we will find the increase has been very slight; but when we reckon in comforts of home and days of pleasure (which I claim should be counted in the sum total of the wages of life's labor) we will find, and I think the most optimistic will be bound to admit, that wages have been decreased and woefully decreased.

It is needless for me to point out the cause of these greater hardships, as all our Brothers are familiar with the conditions which have brought them about, but will say that the present conditions and present prosperity have failed to benefit the railway trainmen or enginemen of today.

Now, while President Roosevelt may see the need of and earnestly desire shorter hours for railway men, I do not look for any strenuous and united effort on the part of railway presidents and managers until the men on their part evince an earnest desire for a short day.

Now, I would like to know of any class of laborers, either common or skilled, that put in the long hours of the railroad men, and while every other class has had its hours of toil shortened, the hours of the railway employees have been lengthened. Now, is there any Brother who thinks there is anything attainable more to be desired than shorter hours. If so, let us hear from him. Does any Brother think compulsory attendance at meetings or reduced representation at conventions more beneficial to our order? If so, let him "hold up his hand." Let us leave the question to be decided by a vote of our Brother-

hood, and then if a majority decide in favor of shorter hours, let us put forth a united, earnest and determined effort to accomplish the desired result. This can be done with profit to ourselves and with little additional cost to the railways.

Believing in a standard scale and shorter hours, I am Yours fraternally,
A. S. LONG.

The Non-Brotherhood Man.

At different times one sees in the newspapers the fact commented on that engineers who belong to the Brotherhood never refuse to work with non-Brotherhood men and their treatment of this element in their calling is always commented on very favorably and the Brotherhood praised for its very liberal spirit and its deep sense of justice, in allowing the non-Brotherhood man to be a free moral agent.

I have given some time to finding out what kind of men composed this element and for the sake of brevity I will put them in three classes: The first of these is composed of men who have been rejected by the B. of L. E., but have become fixtures on the road upon which they work before their method of life was found out. Many of this class have at some time belonged to the Brotherhood, but on account of their evil habits have been expelled.

The second class is made up of men who seek official favor by staying out of the Brotherhood. They always go to great pains to let the officials know that they do not belong and imagine that when they prostitute their manhood, their way will be smooth and promotion sure. If they would only reason the thing out right they could readily see why they miss in their calculations.

The average railroad official is an American or strongly imbued with the American spirit of independence and has no use for the man who has a dishrag for a backbone and they do respect a man who is fair, honorable, and just; one who only wants what is right and is willing to fight for it if necessary.

The third class are those with mercenary spirit, who do not get the right con-

ception of their natural duty, or men who are willing to take anything they can get without paying for it. They see the result of the constant work of their fellow engineers, see the improvement brought about by the good work of the Brotherhood and they accept everything but pay for nothing.

I will relate a couple of cases that came to my knowledge, engineers who thought they did not need the Brotherhood. One of them is the case of an engineer who had run an engine for a number of years and had been fairly successful. He had been asked several times if he did not think that he would need the Brotherhood at some time. He always offered some excuse and put the matter off from day to day. His death was very sudden; he left a wife and several children wholly unprovided for. At the time of his death I went to his home and found them without means to bury him and not enough money in the house to send telegrams to distant relatives and I had to guarantee the undertaker that his bill would be paid before he would take charge of the funeral. The suffering that this family had to endure on account of his indifference and carelessness I do not care to tell here for it makes one's heart ache to think about it.

The other case was that of an engineer who from dissolute habits broke down and for more than two years was a helpless invalid taken care of by those that he should have protected. He always claimed that he did not believe in the Brotherhood—that it did not do any good. He changed his mind in his last days, when too late. In this case the Brotherhood cared for him as a charity patient and laid him away in the best possible shape so that he did not sleep his last sleep in Potter's Field.

These are fair samples of the men running engines who can get along without the Brotherhood. I have only touched on their cases; to have told all about them would have sounded like a story from Dante. Our Brotherhood stands for the betterment of man. Its constant aim is to make men better, to improve their

condition in life in every way possible. The man who runs an engine and is not helping to do this is a burden to his fellow man and I think as much of him as I do of the man whose hand I find in my pocket and not one bit more. B.

Long Hours.

LITTLETOWN, PA., April 9, 1905.

EDITOR JOURNAL. I am reminded in your own kind way of my lack of composition for the past year. I have also been asked by my Brothers of 104 why articles do not appear more frequently signed Loughrea. One Brother whom I had not met for a long while, on meeting me, exclaimed, "Hello, I thought you were dead," which was almost true, as I am now on a run hard enough to kill a dog. Even now while I am penning these lines, I am off duty to recuperate. Imagine an engineer rising from his bed at 4:30 A. M. every day except Sunday, and going to bed at 10:30 P. M., without having a place during the whole day where he could catch the two hours' nap he don't get at home.

The trend of the railroad companies of late appears to me to get all the hours and miles out of the men they can for a day. What has become of the old agreement that one hundred miles constitutes a day's work or that ten or twelve hours away from home means an honest day rendered? True, the freight men on the great P. R. R. get overtime after a certain number of hours, but how about the passenger men? Each answers, not a penny. The hardship is felt most on the branch roads or layovers where there are no mechanics to do work that may be needed, this duty naturally falling to the lot of the overworked engineer, which at times keeps him out of bed one or two hours more. After all this lack of rest the traveling public insists on having an eagle-eyed engineer at the throttle, and if this engineer complains to the bosses, they appear to be paid for nothing else but to inform said engineer that he has a soft snap. We have some Brothers here who make 160, 170 and 190 miles per day, and away from home 14 and 16

hours, other Brothers who make but 70 and 75 miles per day and away from home 8 and 10 hours, which is not a good showing for the officers who arrange the runs.

Now, my Brothers, reflect on the above and then ask Loughrea if he is dead. However, we are promised better times after the spring change, when I will endeavor to do better.

LOUGHREA, Div. 104.

Oslerized.

EDITOR JOURNAL: Dr. Osler's statement regarding the age limit of a man has attracted considerable comment.

Personally, I consider that the remarks of this distinguished professor do mankind at large an immense amount of harm; I do not believe, I cannot believe, his remarks will improve the general standing of a single individual of this country.

There has been for some time a disposition on the part of the employers of labor to discriminate against men who have reached the age of 40 or 45 years: we have seen the practice gradually develop and we know its consequences; our Brotherhood suffers today for this blight put upon the lives of the "bread-winners."

It seems hardly credible in the face of history that a man of the reputed intelligence of Dr. Osler would tell the world that a man at the age of 40 had reached the apex of his usefulness, and that from the age of 40 until 60 he should rest and then be disposed of; his meaning may not be correctly interpreted, or understood, but it will add harm and a greater burden to great numbers of our brother laborers, and more mothers and babes will have cause to mourn.

The man who is ripe, the man who has learned every detail of his profession, the man who is thoroughly practical in every sense of the word, is being turned down to make way for the younger man, and the people like lambs are being led to slaughter without a protest that could consistently be called by that name.

Not long since a man reputed to be one

of the best mechanical engineers in the state of Illinois committed suicide in Chicago because he had been refused employment on account of his age, which was something over 50.

If intelligent men with good mental and physical health, having good sight and hearing, must be turned adrift, then the quicker that the chloroforming process is brought into vogue the better it will be at least for those who want to die bad enough to take their own lives.

We have in our city an institution called the Grand Rapids Medical College—pardon this advertisement. The president of this college, a physician of some repute locally, made an address before the Bible class of one of our prominent churches on a recent Sabbath; his "spouting" was in defense of the belief of Dr. Osler; I will quote some extracts from the speech of our local professor:

"I am glad Dr. Osler spoke as he did, he has declared a truth which has been repeated for ages. Dr. Osler desired to impress upon his class of college graduates the results of wasting their youth, for it is a fact that if a man fail to distinguish himself before the age of 40, he will fail to do so afterwards."

"Every man at birth is endowed with a certain amount of energy and if he wastes this energy in the morning of his existence, the closing of his days will be fruitless and useless."

"We see men about us who have passed their prime and who have lost all interest in life outside some narrow line of work, men who look forward to nothing but the daily grind of business; these men are *degenerates* and we are almost justified in saying that it would be better if they were out of the way so that their places might be filled by those who have *learned how to live.*"

What do you think of that? What do you think of the president of a "doctor foundry" calling the faithful old mechanics and other workmen *degenerates*? and that he feels almost justified in saying that it would be better if they were out of the way to make room for the men who have learned how to live. I will

quote further: "fortunately nature often removes such men at an opportune time and thus saves society the disagreeable task of becoming public executioners."

I will agree with this so-called professor in his claim that men have *not learned how to live* in the sense of taking proper care of themselves. Not long since I heard one of the brightest physicians in the state of Michigan make the remark, "If the people knew how to take care of their health, knew how to eat, when to eat and what to eat, knew how to breathe, and in other ways obeyed the laws of nature, fully one-half of the doctors of this country would be compelled to go into other business or starve to death."

If people *knew how to live*, moss and creeping vine would soon cover the walks and encircle the door knobs of the Grand Rapids Medical College. If men knew how to live and the public became executioners, they could find all kinds of so-called M. D.'s to practice upon.

We have another disciple of the pill box and knife who wanted a little free advertising and wrote an article for one of our daily papers, the title of which was "Man grows old when he ceases to develop." Among other things that this doctor said was, "the majority of men do reach the age limit at 40 and 45, and then they keep declining until 60 finds them very useless." This doctor says that the three greatest enemies of mankind are "ignorance, false beliefs and prejudice." I suppose he means by ignorance that men do *not know how to live*: neither of these men would dare to tell mankind how to live; both M. D.'s know well what would prevent disease to a large extent, and they know that to prevent degeneration in early life the laws of health must not be violated; they do not tell the people how to live, if they did so they would "cut off the hand that feeds them," and some of these "one hoss" doctor foundries would have to go out of business.

It seems to me that the doctors should be the very last of that class called professional men to advocate such ideas as

are inculcated in the sayings of Dr. Osler and the two learned professors from whom I have quoted. It would cut off an immense revenue to have the aged disposed of and if the men of 40 or 45 must be relegated to a life of idleness it would not be long until some of the parties relegated would not be able to buy a cubic foot of the smell in a doctor's office, if the price for the perfume was only three cents per cubic yard.

Grand Rapids has a population of about 85,000 and the city supports nearly 250 physicians, together with various kinds of healers, trained nurses, etc. I figure that the doctors, nurses, hospitals, drug stores and patent medicine venders take from the pockets of the people of this city anywhere from \$800,000 to \$1,000,000 a year, which foots up an annual tax of over \$10 for every man, woman and child in the city; inasmuch as we hardly ever see sickness in more than 10 per cent of the homes at any one time it does not take much of a mathematician to figure out what the citizen has to pay who is unfortunate enough to have any serious sickness in his family.

I agree with Brother Hansen, of Div. 344, that the charges of the doctors should be governed by law

The man who tries to raise a family and has much sickness won't have much trouble figuring out where his money has gone; this agitation against age comes with poor grace from the class who bleed us good and proper when they have the chance. When the "grimy-handed sons of toil" like an old horse are turned out to die, it may be a pastime for them to figure out how much of an interest they own in the fine turnout or automobile within which their doctor skips by.

J. W. READING, Div. 286.

Are We Not Attempting a Blind Siding?

HOQUIAM, WASH., Feb. 26, 1905.

EDITOR JOURNAL: Since my former articles advocating a special assessment to create a fund for endowment work, etc., I have had the advantage of the views of an acknowledged "master mind" upon such themes, and the force of his argu-

ment is so plausible, conservative and convincing that to longer prevail upon my former misguided idea would be at the most absurd.

Under the plain forcible argument and figures as set forth by the above mentioned "master mind" there is no possible room for doubt that increased assessments means a falling off in present membership and at least a partial stop of the influx of new members. *Forty* expelled members quoted in the February JOURNAL for forfeiting insurance surely means something; and if we increase assessments the list will probably reach sixty or eighty, and that doesn't look good to "yours truly." Why should we make the penalty for failure to carry insurance, expulsion from the Brotherhood. No railroad company cares whether we have one or a million insured members, *but they do want to know* whether every engineer in its employ is a member of the Brotherhood and loyal to it.

Our present insurance is among the best on earth, in so far as it meets the requirements of providing for those bereaved by the death of a member, or the providing for one totally disabled. As to an endowment insurance to be paid during the active life of the member, the fund necessary to carry out such idea should be provided by those desiring to benefit by such policy and not to saddle the extra expense on the membership at large, who do not desire to pay the extra necessary to create a fund to meet a maturing policy plan; and what is evidently not thought of by the advocates of an endowment feature is, to do such an insurance business a new charter would be necessary and deposits made in many of the states as a guarantee that the liabilities would be met when the policies matured.

There is another feature that should not be forgotten, and that is the Railroad Relief Associations, like the Pennsylvania, C. B. & Q., B. & O., and others. An engineer on the B. & O. must pay \$4 a month, work or play, and under the present law of the B. of L. E., if an engineer employed on one of these roads came into the order he must take out and carry at

least a \$1,500 policy in the B. of L. E. insurance, and he will have as much to pay as one who carries \$4,500 in the B. of L. E. alone, and practically compelled in both cases to carry the insurance; and hence, not in the best mental mood to stand for a special assessment for the purpose of paying of policies at thirty years, or any other period.

Quoting the "master mind" again, "We can do a certain amount of business on sympathy and loyalty, but it is a rope of sand when hitched to men's pocket-books, and cannot be pulled very hard without breaking." We cannot compel men to do just what we think they should, though we can compel them to comply with our law or expel them. There our power ends and, in my opinion, if there are any additional benefits attached to our insurance department, they should be entirely voluntary, so that if any member or number of members desired the new feature and its ultimate benefits, they should choose for themselves, with no legal pressure brought to bear upon them. Any other policy would be decidedly detrimental to the B. of L. E., and without that we would have neither. For the insurance is dependent entirely upon the parent order. L. S. WINTER, Div. 362.

Endowment Fund.

AUGUSTA, GA., April 3, 1905.

EDITOR JOURNAL: For some time I have been reading and thinking about the endowment fund as discussed by the Brothers through the JOURNAL, and the more I read and think about it the more favorably I think of it, until I thought I would contribute my plans and see what the Brothers think of it.

To begin with, it is a settled fact in my mind that the endowment fund would be a blessing to all concerned. It would give many of us homes who would otherwise be homeless; it would give us a capital in life which otherwise some of us would never obtain, and if properly handled would be a fair competency to protect us from want in our old age. It would also have other good effects; it would be something for a fellow to look forward to with

happy anticipations; to think that not only is his family protected to the stated amount but that he may live to enjoy the fruits of the stipulated amount himself; but now comes the issue. How are we to raise this endowment fund?

Some say our insurance is already too expensive, yet these same fellows will take out a policy in some accident company and pay very near twice as much premium as our assessments amount to, and then they must be killed accidentally for their families to get the insurance. They never take into consideration that a policy in our insurance is equivalent to three policies in other insurances, viz.: its death from natural causes, its death from accident or otherwise, and its payment from total disability; and if we can establish the endowment fund it will be payable at expiration of a set time.

Now, to establish this endowment will cost us something, but it will be only a small trifle when compared with the good that will arise from it, and while I said it will cost something, it will be a good investment because you get back just double the amount you pay in. That seems to be rather a broad assertion, doesn't it? But you just get your pencil and let's figure it up. We will say now that we propose to raise an endowment fund by putting 50c extra assessment on each \$750 policy per month; we have 42,265 members carrying 105,511 policies, \$750 each, assessable at 50c each per month. We will charge an additional \$3 on each \$750 new policy issued to new members. Now, let's see what we get from the present number of members, not to count on the new members just now, who are coming in at the rate of some 4,000 or more per year. 105,511 policies at 50c each per month, \$52,755.50, and for twelve months we have \$633,066. Now, say we propose to start paying off these policies sixty days from date from first assessment, taking up, of course, the oldest first, and pay up a certain number each month (always keeping a small reserve on hand at interest) until we get down to say the 18 or 20 year old policies: each policy after it becomes 18 or 20 years old will be taken

up in its turn. Then say I have a policy 20 years old and am paid the full amount of policy out of the endowment fund, I am still an active member of the B. of L. E.; let me take out a new policy subject to the rules of new members; in fact, I become a new member. Now, let's see the cost and the profit.

Say we carry a \$1,500 policy, which at present costs about \$30 per year, with the 50c endowment assessment on each of \$750 policies would be \$12 per year more or making a total of \$42 per year, and for 20 years it would amount to \$840 we pay on the \$1,500 policy; then we receive the \$1,500, besides we have been protected all these 20 years. Wouldn't that be a good investment? I am sure it is and see no good reason why this plan will not work to the satisfaction of all concerned and think we should interest ourselves enough in this matter to put it into operation. We could then, commencing sixty days after date of first endowment assessment, pay off annually about 450 of the \$1,500 policies, or its equivalent, which would brighten and make happy 450 homes each year, and it will soon only be a few years till it would reach our own home.

Now, if it is not asking too much of you, Brother Shay, will you please tell us through the JOURNAL, the number of members and the total amount of policies now 20 years and older in our insurance department. Also give us such comment and criticism on this as you see fit, and if you can suggest a better plan, let's have it.

W. T. H., Div. 840.

Every Subdivision Should be Represented, Etc.

CLEVELAND, OHIO, April 10, 1905.

EDITOR JOURNAL: So much has been said about reducing the number of delegates to our conventions, that it would seem unnecessary to say anything more, but this is a very deep subject and there is a great deal more in it than a question of dollars and cents. It involves the future success and welfare of the organization.

Patrick Henry said, "Taxation without representation is tyranny," local Divi-

sions not represented would soon become dissatisfied with this plan. Every member feels a certain pride in his own Division, and he wants a representative sent from *his* Division and not from some Division two or three hundred miles away.

It is all very well for us to say cut down the number of delegates, reduce expenses, but the ultimate result must be the paramount consideration. With a representative from each Division there is less chance of the many things which corrupt organizations creeping into it. Other plans can be devised for reducing expenses than reducing the number of delegates. A more thorough organization of our conventions, instruct our delegates that they are our agents, that they are going there to do business for us and that they must do it, and if there is any sight-seeing to be done it must be done after the convention is over. Expenses can be reduced by appointing committees to which certain issues shall be referred, after the same plan as congressional committees are appointed. This plan was acted upon at the last meeting of the G. C. of A. of the Pennsylvania Lines, and a great deal of time and expense saved and the work facilitated.

There are a great many chances for improvement in our organization and a great many plans advanced, but let us be sure they are improvements and not detriments.

The endowment idea of which I wrote in a former article is worthy of the most careful consideration. Like all great undertakings, it will take time to complete it. An assessment of \$30 on each policy would not be a hardship on any one if divided up into twenty-four monthly payments. By this plan almost \$1,000,000 could be raised in two years. This sum might be used in erecting a large building such as the Society for Savings Building in which the Grand Offices are now located. A building of this kind would provide a permanent home for the headquarters of our organization, a place to hold our conventions and bring in more than five per cent interest in rents, besides a saving of moneys paid out in rents at the present time. The income from such a building as this being applied to

the payment of claims due on endowment policies would soon make itself felt in the reduction of our monthly assessments. Brothers, figure this plan out carefully, and see if you do not conclude that it will be worthy all it will cost.

This plan, like all progressive movements, is bound to have its opponents, but it is my experience that the ones who are always pulling back and finding fault are the ones that never attend meetings, but stand around the roundhouse or on the street corners, growling about his assessment and finding fault with those who are doing the work and make it possible for him to enjoy the benefits of their labors. The B. of L. E. is worth all it costs, but the endowment plan and new building would make it worth a great deal more.

Our Grand Chief, by his prompt action in the New York strike on March 6, has demonstrated to the world the integrity of the Brotherhood. Railroad companies will no longer be afraid to sign contracts with an organization that never breaks its word and punishes those of its members who forget their obligation. Brother Stone is the right man in the right place and deserves our confidence, hearty cooperation and support.

CHAS. F. LOCKHART, Div. 170.

Astronomy—The Y. M. C. A.

BROCKVILLE, ONT., April 28, 1905.

EDITOR JOURNAL: Division 118 is rarely represented in the columns of the JOURNAL, and it may be well to break the silence, and although I do not propose taking up very much of your valuable space, a short sketch of my recent trip, lecturing on astronomy, under the auspices of the R. R. Y. M. C. A., at the various institutions throughout the country may be of interest to many of our engineers, for it will show what one can accomplish in his spare moments while off duty.

The desire to become better acquainted with the far reaching science of astronomy shown by the many engineers who attended my lectures at different points visited, contrasted with audiences from colleges and other institutions of learning, leads me to say that our men are just as

bright and intelligent as any I have met in my tour.

A word or two concerning the good the R. R. Y. M. C. A. is doing throughout the country would not be amiss. Their buildings are fitted up in the most modern style, where no improvement for the comfort of the railroad men is overlooked, and where painstaking efforts are made to elevate the social standard of our class, and when I look back to bygone days when at the end of our run nothing but a miserable bunk room, where comfort was unheard of, no literature save a daily paper and a pack of cards to engage a man's attention in his spare moments, what was the alternative? Nothing but to go to a hotel, which is the bane of all railroad men. Might I not say, then, that these institutions are a blessing to the railroad man, his family and the public at large, since they tend to elevate the morals of the men and make them useful members of society.

Yours fraternally,

JOHN RYAN, Div. 118.

B. of L. E. Better than Old Line Insurance.

MINNEAPOLIS, MINN., April 11, 1905.

EDITOR JOURNAL: After reading Bro. Geo. H. Connor's letter in the April JOURNAL, I cannot help taking my pen and writing a word in defense of our insurance which I think is one of the grandest features of our order and there are a good many good features in the order too. I would like to have Brother Connor name a better insurance than the B. of L. E. has, or one that gives more for the same money. I cannot see how he can compare old line with our insurance. We do not pay our insurance president thirty, forty or fifty thousand dollars a year, as do the old line companies. We are not building twenty-story buildings all over the country, as the old line companies are doing. We pay two moderate salaried men; the rest of the assessments go to pay the claims of the policy holders.

In regard to the order being better off by keeping the ten or twelve that are expelled every month for forfeiting insurance, I do not agree with Brother Connor in that, for if these same Brothers violate

their obligation by not paying the insurance assessments, they will violate it in anything else. From the number of wild-cat resolutions introduced at the Los Angeles Convention (if adopted would ruin any insurance company) it is very evident that there are a whole lot of delegates who know very little about insurance; but the majority listened to the good counsel of Brother Futch, and our insurance was not materially changed and, thank God, we have an insurance that stands second to none in the country.

I was very much pleased in reading Brother Nixon's letter, "Be prompt in every duty." That is something every member of our order should read and remember. It is the keynote of success in every organization; we need more of it in ours. I do not think anyone need fear any bad results if the insurance collector says he will live up to the law and pay no assessments for anyone, or run after the members and plead with them to pay their assessments. Any collector who does that will find that in a few months when the time comes to remit to the Grand Office all the members have paid. I think that the sooner Subdivisions have their members understand that each member must pay all dues and assessments on time without having insurance collector or F. A. E. chase them around, the better it will be for the order, even if you lose a few members; those who are left you will know are the right kind of stuff that can be depended on to do their duty. Pages could be written on the subject of being prompt in every duty. What would have been the result of the referendum vote if every member did his duty? What would our order be if every member did his duty? I think it is time that we awake to a realization of the sense of duty to our order, our employer, our families, and to ourselves.

Now, Mr. Editor, just another word along the line of insurance. I think the advice of our Grand Chief is bearing fruit by the number of Subdivisions that are having an accident insurance. As far as I can learn, wherever it has been tried it has proved a success. I would say, awa-

ken, Brothers; have these things in your own Division for one-half or less than you pay the old line companies. Organize and have your accident insurance and save your hard earned money for yourself when you have passed the age limit. And again, do your duty, from signing a referendum vote to paying your assessments on time and attending your Division whenever you possibly can.

Fraternally yours,
I. N. MORRILL.

—♦—
"Auld Lang Syne."

NEW YORK, April 16, 1905.

EDITOR JOURNAL: Have but recently returned from a visit to my native state and birthplace—Columbus, Ohio—where I enjoyed a few days of pleasant intercourse with my relatives and associates of early railroad life and work. I was born on what was known then as the "Mike Sullivan Farm," now the west side of the city and built up by many large business blocks, in fact one of the most imposing buildings of the state being located upon it. It was while living on this farm that I saw the first locomotive, it was running on a little road built by the state and was pulling the train which was taking the stone from the quarry to the city for use in the construction of the Capitol Building.

My first training in railway service began in Columbus, while riding around in the yards on an old hook motion engine, with two upright starting bars, called the "Milford" and belonging to the Little Miami Ry. Co. The engineer having charge of it was Charles Wiggins and the fireman Frederick Mull, Sr., now deceased, a cousin of mine, who took quite an interest in my future. One day he asked me to accompany him to the Piqua shops of the Indiana Central Ry., for the purpose of getting me a place as fireman. We went to the office of Mr. William Roman, master mechanic, where I was engaged on trial. He gave me a letter to Mr. Charles Rice, roundhouse foreman. I called on Mr. Rice the following morning. He wanted to know what experience I had had as a fireman.

I told him, "none." He gave me four sheets of emery paper and told me to go out in the yard and clean and scour the "Piqua"—an old switch engine. It certainly was a discouraging looking job. I asked a fireman who was present how I should go about it and he told me to rub it with the emery paper on all parts above the running board. I went to work on the hand rail, bell and dome, etc., with the dry emery paper, determined to improve the looks of the engine if possible, thinking my future success depended upon the result of my work. About 11 A. M. he came out where I was at work. The first glance at it convinced him of the truth of my answer when I applied for work—the old "Piqua" looked as though it had passed through a St. Louis cyclone. He gazed at it in consternation, murmuring something in an undertone, but finally remarked that he would send me out on the road, as he turned and walked back to the roundhouse, bidding me come to his office, where he assigned me to engine No. 6, an old wood burner, running on passenger train between Columbus and Indianapolis, with engineer James Gornerly, changing engine crews at Piqua. As time rolled by the old Indiana Central came under the control of the P. R. R., forming part of the Southwestern Division of the system.

Many of those associated together as firemen and engineers in those days on the old Indiana Central have passed on to that "undiscovered country from whose bourne no weary traveler returns."

I continued in the service of the company as fireman for some time, taking a leave of absence for an indefinite length of time. When I returned to service was placed on engine No. 194, firing for an engineer by name of Frank Gregory, who, by the way, was a particularly bright man. When off duty he could always be found in the library at the Capitol Building. I continued with him until I left the service of the company. While away on my leave of absence the business of the road increased to such an extent that during this time there had been additional power and enginemen put into service.

Bro. Phil Chase, now running passenger engine with the same company, was one of the men then employed as firemen, and my first recollection of him dates back to the time when I walked in to the Hover House at Bradford Junction at 2 o'clock in the morning and found him leaning against the lunch counter playing "Home Sweet Home" on a French harp to an audience of two or three. If my memory serves me correctly Bro. John Cassell (who is still running passenger train with them), Isaac Butterworth, B. Mason, Thomas Humphrey and Charles Chase were among the new force at that time. I think John Pontas, who is now road foreman of engines, was one of the old force—the "kid" engineers of the present generation call him "Old John Pontas." Had they known him in the days I have mentioned they would have known a very "slick article." My memory does not serve me who the fireman was that instructed me how to scour the old engine, Piqua, but it might have been John Pontas, for when he fired engine No. 27 for George Spade, now deceased, it was the cleanest engine, as I remember it, running out from Columbus.

During my stay at Columbus I had the pleasure of visiting Div. 34, Sunday, April 2, where I found a large attendance, with my esteemed friend and Bro. Thomas Humphrey in the chair. It was truly a very enjoyable meeting for me, meeting my old friends and associates after such a lapse of time. Brother Hutchings, of the Westinghouse Co., was present and made a reduction in train line pressure, which Brother Sam is quite capable of doing, also Brother Nelson, of 155, was present, and was keyed for the occasion, his remarks being appreciated. One of the Brothers made a motion, which was unanimously carried, that I be given a present to bring back with me to New York. As they did not produce the goods I was obliged to return without it. I appreciate the Brothers' generosity, however, and no doubt Bro. Frank Mull, of Div. 480, will forward it. I was much interested and amused during my stay in the exhibit of fancy-bred fowls owned

by Brother Frederick and David Mull, the cultivation of which fills in their leisure moments while off duty. The following Sunday, April 9, a delegation of Brothers escorted me to Div. 79, where I passed another enjoyable day, meeting some of the old boys as well as the younger ones. Regretted not having the company of Bro. John Mull on our way from the Division, his duties of "pool"-ing engines detaining him until a late hour.

On the evening of the 9th a delightful surprise birthday party, an enjoyable event, was given in honor of Bro. Charles Mull at his home on Long street by his wife to his brother and sisters, and as I happened to be a visitor I was included. The "Anniversary Chimes" were rendered by Frederick, David and Frank Mull; piano solo by Mrs. Ida Callahan; duet by Mrs. Frederick and David Mull; recitation by Mrs. Frank Mull; dialogue between sister Lizzie and Frank Mull; specialty by Mrs. Charles Mull, the hostess, being the climax of the evening. In the dining room we found the table spread with all the good things imaginable to appease the dainty appetite. After partaking of the refreshments the guest of honor, Mr. Charles Mull, made a few appropriate remarks in appreciation of the occasion. When the good nights were said all expressed their delight, including the writer, in having passed such an enjoyable evening in a small family gathering. May you have many happy returns of the evening.

I wish to extend my thanks to all who contributed so generously to my many enjoyments and gave me so many kind attentions while sojourning in my native city.

On my way home I made a short stop at Cleveland, enjoying the privilege of paying my respects to the Grand Officers, regretting I did not have the pleasure of seeing our Grand Chief, Brother Stone, and President of the Insurance Association, Brother Futch, who were absent. I found Brother Salmons seated at his desk, with a pile of mail before him. The longer I remained the higher it grew. From here I made a tour of inspection

through the Grand Offices. I called on our Third Grand Engineer, Bro. Deloss Everett, where I found this genial Brother and his stenographer busily engaged at their duties. However, he took time to make my call a pleasant one and I wish to mention right here that I had a very pleasant visit with himself and wife at his home the evening previous. My next call was on Brother Prenter, our First Grand Engineer, who like the preceding Brother was engrossed in business matters. I glanced in Brother Stone's office and the committee room adjoining, and wish to say that no member of the Brotherhood need feel ashamed to have any railway officer or any other man of prominence visit the Grand Officers at their respective stations and departments, for they certainly present an attractive appearance. I noticed particularly that they have the tact of surrounding themselves with attractive and competent help, which from the fact that they did not introduce me proves they wish to keep faithfully at their duties. On the eighth floor I found Bro. M. H. Shay, Secretary of the Insurance Association, who, like the others, made my call a pleasant one, notwithstanding he was as busily engaged as they. In my short stay I could not but observe that there was not much time for play among the Grand Officers, and to fulfill the requirements of same was no easy cinch.

Yours fraternally,
J. PUFFENBERGER.

Back in the Fifties.

NORWALK, O., May 8, 1905.

EDITOR JOURNAL: I occasionally read the JOURNAL, and in the May edition an article by H. G. Rust regarding the naming of engines carries me back to the early 50's. I have been in railroad service constantly since March 1853, and never was an engineer. I worked for the M. C. continuously for twenty-four years, the greater part of the time on the Middle Division between Marshall and Michigan City. I worked for the Canada Southern for six years, and twenty-two years for the W. & L. E. I do not think I ever knew Mr. Rust, but he reminds me of old-timers I had not thought of for years.

He speaks of a Mr. Nixon. I wonder if it is Thomas Nixon—if it is, put him on the "America," where he was at home.

The M. C. named their engines until names ran short. I remember well the Swallow, Alert, Pigeon, and a few others; a good-sized Teakettle, with one pair of drivers, the Comet, Gazelle, Reindeer, Mayflower and Hurricane. The later Gazelle was hauled by John McCurdy.

Freight engines were: Vesuvius, Ætna, Peninsular, Salamander, Rocky Mountain, Washington; soon after came the Ajax, Ceres, Atlas, Stranger, the Tiger with Samuel Hill, the Lion, Samson, Challenger, the Defiance, the Grampus with Dad Robins, the Porpoise with Levi Sutliff, the Dolphin with Pony Cooley, the Jupiter with Levi Hancock, Pluto, Saturn, Mars, the Four Eagles, the Six Winds, Four Hounds, the Corsair, Arab, Mamaluke, Persian, Egyptian, Saxon, Forynor, Twilight, Guttenberg, Storm, Ranger, Racer, Rover, Rattler, Rambler, Rusher. I think the Lightfoot and Quick Stop were the first coal burners on the M. C.—this all within a few years. Mr. Rust gives a few, but I presume I could give a hundred more. Is it not a wonder the M. C. ran out of names? I nearly forgot the Six Seas and the Atlantic, Arctic, Baltic and Pacific.

I often wonder if there will be as much improvement in locomotives in the next fifty years as there has been in the past fifty. It does not seem possible.

Yours respectfully,
N. A. SOMERS.

Endowment Plan.

FOND DU LAC, Wis., May 4, 1905.

EDITOR JOURNAL: Please permit me space to answer Brother Tinkham, Div. 176, page 390, May JOURNAL. His understanding of my endowment plan is certainly correct, but his idea of having to live 1,500 years in order to get our money back is a delusion. I do not claim that we will get our money back, that is, through the endowment feature, but he admits that annually seventeen of the oldest policy holders get their policies paid by this plan, which we will concede. Now he admits new members would have to pay the same amount, which is \$20 per policy. Of course, that would swell the capital. Every member becomes a stockholder of capital and when he becomes the oldest policy holder receives his insurance to use during his declining years. That feature has cost him but \$20.

I never did claim that we could figure on a certain age of expectancy as old line companies do, but look at the difference in the cost. I do not plead this from a personal motive, as I am a young man yet, but am willing to invest \$20 per policy for the benefit of the old members because I have something to look forward to should I live to be the oldest policy holder some day.

I know well that insurance is a business proposition and must be conducted on business principles, or it can't stand the

test, but the suggestion of having to live 1,500 years is a delusion and misleading in the extreme. The capital is always there and every member in good standing a stockholder, but if you die before you get to be the oldest policy holder your insurance is paid from the mortuary fund and your relatives receive the benefit. If you live, the endowment feature of which I speak will pay the money to you in your old age. I cannot see wherein that is a hardship to young members to lay away \$20 to provide for themselves practically a paid up policy for old age. The money is only loaned the older members and their money will stay in the same fund for the younger man when it comes his turn. The old member certainly cannot participate unless he pays his share into the fund, and that at once, should such a plan be adopted.

Perhaps I am a crank, but it takes a crank to start anything that is outside of the ordinary. To make it plain to E. P. S., page 898, May JOURNAL, I would say that it would be impossible to exempt any policy holder from paying his portion of the fund since it is only a business proposition, and as such must use all alike. I firmly believe the feature could be successfully adopted and would enhance our insurance and our order. I am informed that other orders have a similar feature, at least one, officers of which I have spoken to.

Brother Tinkham seems to be selling endowment insurance, and of course has a revenue coming in from that quarter, perhaps enough to keep up his premiums, but for one that has to pay them, that luxury comes high, which he will admit. It is all right if you can afford it, but when you cry against the assessments of our present plan, how can you carry endowment in old line companies? For that reason it has been my aim to adopt some plan which will give the oldest policy holders their money without actually dying or becoming disabled. I hope more of our members will give this their earnest consideration. Meanwhile I remain,

Fraternally yours,

J. F. FREENOR, Div. 372.

Sign Your Own Name, Etc.

HATTIESBURG, MISS., April 5, 1905.

EDITOR JOURNAL: I have been silent about one year, but I read the JOURNAL next to my Bible and prayer book, and I am much interested in the discussions that are going on among the Brothers and it seems like a move in the right direction, but here is a thing Brothers ought to be ashamed of. A Brother from my

native city, Altoona, Pa., calls himself "Bolivar;" this must be somewhere on the Alleghany Mountains. Also a Brother from Div. 23 calls himself "Side Track." Does he mean the whole Division is sidetracked, or what sidetrack, pray tell? Also another Brother from Hillyard, Wash., calls himself "Johnny." Johnny who?

Now, Brothers, what you have to say, say out under your full name, so we can all know who you are, and do not be hiding behind the Editor's desk, as he has quite enough to stand for as Editor, and when he speaks through the JOURNAL you all know it is C. H. Salmon.

I heartily agree with Bro. J. F. Freenor, of Div. 372, in having a centrally located city for the Grand Office and the convention, as well; then Divisions located everywhere could figure on about what the delegates' expenses would amount to. The time has more than come to have a located convention city, and I do not know of any more reason to wheel the convention from one part of the country to the other, than it would be to require the United States Senate to change every year from city to city, or the House of Commons in England to do the same. And to say that every Division must have a delegate would be to say that every township must have a man in the Legislature or in Congress. Every thoughtful Brother knows if he will admit it that we could better our insurance and this should be done. What couldn't we do if all the money that is spent every year by Brothers with the old line companies if made use of in the B. of L. E. Insurance? I say, make policies which will mature in ten, twenty, or thirty years, and let all take out and carry such policy, providing they pass the necessary practical examination, such as is required by the old line companies.

Fraternally yours,

J. O. DETWEILER, Div. 336.

Representation at Our Conventions.

PHILIPSBURG, PA. April 5, 1905.

EDITOR JOURNAL: The many good points in Bro. W. J. Boothby's letter in the April JOURNAL I appreciate, and in some things differ with him and give my opinion. I do not agree that it will be the chairman of or a member of the Board of Adjustment that must represent us in a convention of 100 members, and even if it should be and that would be the choice of the majority on any system, there would be nothing wrong about that. To set myself right, first, I am not a member of a G. O. of A. and never expect to be, but

if any system say of 4,000 engineers elect one man to represent them in the convention, who is a member of the G. C. of A., I naturally would think he would be the very best man on that board and even if he were not at the convention he would be a member and a Brother of the B. of L. E., and his capacity for voting for that system in the convention would be forty votes on any question, cut up as he had been instructed by those whom he represented, and if the measures as the Brother states had been submitted some time before to the Division to talk about, it would take a much smaller and few mathematical experts to count for one hundred delegates, than it does now with a convention of over 600 delegates. The trouble in our voting now is everything goes but the aye and nay.

I think it was the animals that had a convention once and the question came up as to how they would vote. The dog said, "Mr. President, I move that we vote yes, with tails up; no. tails down."

"I object," said the wolf.

"State your objections," said the president.

"Well, my objections are that the goat would be voting yes all the time."

Just as soon as this remark was made the fight began; and so it does seem with us. We are so many we have never been able to agree. Like the goat, our tails are up all the time.

I cannot agree with the Brother in cutting the big Divisions up, but I do believe that their voting capacity should be according to membership; for instance, a Division that has 200 members should have as big a voting power as any 200 members that it takes to make six Divisions; but the convention says no. That means that six little Divisions with all told 200 members have always had six votes against the other Division's one, and of necessity it is often the goat—but to no purpose.

I heartily agree with the Brother in reducing the time for the convention to be in session, but it will never be done by increasing the number of delegates, by cutting the larger Divisions up. It will have to come by the honest determination of every member of the Brotherhood that this has got to grow worse or grow better.

I have no axes to grind; all I desire is our betterment. I believe we, our conventions, are too big and that the best interest to the B. of L. E. cannot be accomplished by them. In a sense, I am glad of their size—it denotes we have grown, but the result is no better. Our engines on the railroads have also grown and they run faster and pull more and give more satisfaction for money invested, but the

men are no bigger—no stronger than twenty years ago.

I have known of an order that it took 150 men in Pennsylvania to represent 80,000 men and it took 80 men to represent the United States. Now, it takes nine men to represent the United States, but it was accomplished by good honest effort to give every man in the United States the full value of money spent and all of the dollars saved. I go back to the records of our organization of the past to hunt up her sins and mistakes to profit by them, to discard the foolishness and the vices of some of them. Her virtue it is wise to emulate. It is human to make mistakes.

Take your constitution after conventions for twenty-five years and count the cost and you will agree if you keep it up until 1969, you will have an army something like Napoleon's, of which the song says, "He marched them up the hill and marched them down again, to his Waterloo." Don't put the Grand Chief of 1969 in the same position.

Fraternally yours,

C. B. NIXON.

My Summer Rose.

What flower can rival my full-blown rose.

That sits, June's queen, upon its slender stem?
Upon its damask leaf the sunlight glows,
It wears morn's dewdrops as a diadem.

No trimmer's art has ever caught its hue

Of sunlight mingled with the crimson tide,
The rich red tint that stains it through and
through,
The soft glow radiant as a flush of pride.

No sculptor hand has ever moulded yet—

With all his wondrous aid of skill and art—
A form on which such gracefulness is set,
Soft petals blushing o'er a crimson heart.

No trick of man has caught the sweet perfume.

Trembling upon the south wind's passing sigh
The breath from out the chalice in its bloom,
That wafts like incense to the summer sky.

The Month of June.

The poets long ago fell in love with the month of June, and have never been weary singing its praises.

One calls it the "leafy month," another, "the month of roses," thousands have called it balmy, and one great poet has asked, "What is so rare as a day in June?"

In the sense in which Mr. Lowell meant we can agree that a day in June is rare indeed.

May is a pleasant month, but not reliable. The temperature is liable to drop to the freezing point with hardly any warning, and when a fine warm day does come we cannot enjoy it as much as we might because we are still encumbered with our winter clothing, which we have not dared to lay aside.

But June changes the complexion of affairs completely. With the coming of June comes summer in all its glory. The very last trace of winter has disappeared, and we no more look for frost than we do for an earthquake. Every green thing that grows is growing and every flower is in bloom. The earth is one great garden of green and gold and crimson, the scent of roses pervades the air and all nature seems to be in holiday attire. It is warm, yet not too warm. The hot July and the sweltering August are still in the future and the air is balmy without being enervating.

June is essentially the month of sports—that is, out-of-door sports, since no one wants to stay indoors during this delightful month.

Campers out who generally choose August, would do well to try June for a change. Mosquitoes, gnats, sand flies and the hundred and one insect pests which mar the enjoyment of the trip have barely made their appearance in June, and cool, comfortable sleeping nights are assured. Any camper who has passed an August night wrapped up in a heavy blanket, as the only protection against mosquitoes, knows how to appreciate unbroken slumber. The seashore affords many attractions in June to the boatman, the shell and weed collector and the one who can indulge in a dashing drive or gallop on the smooth and solid beach. But, above all, June is the month for picnics in the woods, for exploring parties up among the hills or down in the valleys to find something new in the way of a waterfall or bit of scenery and give you something to talk about and remember.

The one who cannot extract some en-

joyment from a June day ramble must be very blind or very dull. All this applies of course to this season in the temperate zone of the Northern Hemisphere.

It is hard to realize that our antipodean brothers are in the depths of winter while we are having such delightful out-of-door weather, and we feel like extending to them our sympathy. It must be strange to people born in Australia, for instance, to read about our June; although not any more so perhaps than for us to read of an Australian Christmas celebrated with the thermometer at 90 degrees in the shade. We are thoroughly satisfied with our arrangement.

We want Christmas to come 'mid ice and snow, like the youth who bore aloft the banner with the strange device, and we want the month of June to stay right where it is in the calendar and continue to be the best month in all the year.

What to Teach a Daughter.

Teach her, says the *Ladies' Home Journal*, that not only must she love her father and mother, but honor them in word and deed.

That work is worthy always when it is well done.

That the value of money is just the good it will do in life, but that she ought to know and appreciate this value.

That the man who wishes to marry her is the one who tells her so and is willing to work for her, and not the one who whispers silly love speeches and forget that men cease to be men when they have no object in life.

That her best confidant is always her mother, and that no one sympathizes with her in her pleasures and joys as you do.

Teach her to think well before she says no or yes, but to mean it when she does.

Teach her to avoid men who speak lightly of any of the great duties of life, who show in their appearance that their habits are bad.

Teach her that her own room is her nest, and that to make it sweet and attractive is a duty as well as a pleasure.

Teach her that if she can sing or read or draw, or give pleasure in any way by

her accomplishments, she is selfish and unkind if she does not do this gladly.

Teach her to be a woman self-respecting, honest, loving and kind, and then you will have a daughter who will be a pleasure to you always and a blessing to the man fortunate enough to win her.

Appreciative.

[Dedicated to my dear friends, the members of the W. D. Robinson Division, 349, G. I. A., at Washington, Ind., with my earnest wishes for their success.]

There is a merry little band they named the G.I.A.,
They live in Indiana at Washington so gay;
And tho' they are just starting in I very well can see

For earnest willing workers, no better can there be.
Their names I will endeavor to write up in this song,

But should I tell their qualities, the rhyme would be too long;
And Mesdames—as I start with sufficient too must be—

To answer then for all time—I couldn't—Mrs.—each you see,

There are Robinson and Nimnicht, Miller, Borders, Schwab and Guth;

And perfect in their manners, these ladies are in truth.

Again, there's Stump and Sullivan, also Albertie
(The last named married my son-in-law), now guess who he can be,

There's Boas and Haag and Muster, McKinster, and then Day,

When it comes to speaking up in Lodge they are hard to beat they say,

There's Conaty and Donnels and Markel, also Lynch.

Of all our Lady Orders this Lodge has got a cinch,
There's Gilley, and there's Wagoner tho' last they are not least

To encourage on the Order they do their very best;
And so Dear Mrs. Cassell how I wish that you could come

And see what welcome you would get at every Lady's home,

The worse halves of these dear friends work for the B. & O.

And also are dear friends of mine of twenty years ago;

God keep these jolly fellows while they are out upon the Line,

God bring them back in safety to their families every time.

Could I but have the power to waft a Wizard's Magic Hand

What wonders would I not perform upon this little band,

But a higher power than mine will hold them in His care.

Success to W. D. Robinson Lodge shall be my daily prayer.

MRS. HENRY B. JONES, Washington, Ind.,

Div. No. 349—First Ball.

WASHINGTON, IND., May 3, 1905.

On the 21st ult. being Easter Monday night, Div. 349, of the G. I. A., gave their first ball and entertainment at the Masonic Hall and lodge room in this city. This Division has only been organized by Sister Sursa of Evansville a few months ago, and has been named the W. D. Robinson, in honor of the late W. D. Robinson, one of the founders of the noble order of the B. of L. E., and father of Engineer Byron Robinson of the B. & O. S. W.

On the above night the hall was beautifully decorated with bunting and B. of L. E. mottoes, also a large picture of W. D. Robinson hung in a conspicuous position on the wall. Although the tickets were sold at \$1 each it is surprising how quickly the ladies succeeded in disposing of them, clearing \$123.

An orchestra composed of the best talent in the city rendered sweet music, and such entrancing strains of waltzes, schottisches, etc., were so deftly performed that those who had only meant to be onlookers, found it impossible to resist the temptation of a whirl on the floor. It is possible that a greater number could have been present, but the public fully understood that none but the *crème de la crème* would be admitted, so there was a very select party in attendance. The beautifully dressed ladies, the smiling faces of their manly escorts, and the light-heartedness of the participants made a spectacle that could not be excelled in any community. Those not wishing to dance were entertained at finch in the lodge room; two beautiful prizes given the fortunate winners; Mrs. Lon Helphenshine won the silver punch ladle, and Mr. William Kramer a toilet brush of equal value. Fruit drinks of the most delicious flavors were furnished free, and as I am a connoisseur of those things I can attest to the quality and quantity.

At 9 P. M., sharp, Sister Hartman of Evansville and Bro. Will Borders of this city led the grand march, in which all took part. About twenty years ago, at Evansville, I had the pleasure of follow-

ing Sister Hartman in a similar march, and she certainly has not lost any of her old-time energy. Brother Hartman was also present. I should very much like to give a more personal description of each one present, but I see Sister Cassell's eyebrows lifting just a little bit so I will stop, ere a frown will appear on her usually smiling countenance.

I notice in this month's issue where B. K. M. remembers Mother Jones. Well, dear B. K. M., I am just the same as ever, but I think you owe me a personal letter. With kindest regards to all my old friends in general and Sister Cassell and Shandy Maguire in particular,

I am as ever, the R. R. boys' friend,

MRS. HENRY B. JONES.

Beautiful Flowers.

INDIANAPOLIS, IND., April 20, 1905.

Officers and Members of Monumental Div. 128:

KIND SISTERS: I trust that not one of you will ever know how grateful I was for your kind expression of sympathy in flowers; for to realize such gratitude would be its experience, which would bring sadness and sorrow to your homes, but when unfortunately such environments do exist those beautiful bouquets are a wonderful source of pleasure and comfort to the sad hearts, for in their beauty they give such a vivid expression of the mighty thought of "sympathy" that always beams in the hearts of the good. Such pleasures and comforts having for their source the best of friends the same today and at all times like my esteemed Sisters of Monumental Division are as sunshine to a home, and productive of happiness, for kindness is the sweet solace of our daily life.

Man is not given that Godlike unselfishness that thinks of another's good as do the members of the G. I. A., for the Sisters when working for themselves are working for us all. Each progressive blow they strike helps to mold the B. of L. E. Our dear departed Sister Mrs. Frazier, who was too ill to write, requested me when acknowledging your kindness to express her gratitude for a like favor, and

I assure you she was not indifferent to your kindness. Having been so closely associated with her I can realize how you will miss that beautiful white head from your midst, and the sadness of heart you each will experience to be deprived of that sweet companionship and sisterly affection. But our loss was her gain.

J. M. WILLIAMS.

Organizers and Inspectors for Term Ending May 30, 1906.

Divisions have been assigned as follows:
To Mrs. T. C. Clark, No. 11 Hakes Av., Hornellsville, N. Y.—6, 11, 23, 56, 66, 78, 120, 145, 204, 232, 275, 276 and 153.

Mrs. F. E. Johnson, No. 3308 E. Broad St., Richmond, Va.—87, 115, 124, 211, 222, 277, 71, 105 and 203.

Mrs. T. C. Smith, 675 N. 34th St., W. Philadelphia, Pa.—42, 95, 137, 109, 310, 307, 141, 321, 60, 340, 326, 80 and 226.

Mrs. Kate Ford, 545 S. Fourth Av., Tucson, Ariz.—243 and 104.

Mrs. W. A. Murdock, No. 1560 Fulton St., Chicago, Ill.—241, 10, 309, 261, 230, 168, 99, 357, 49, 348 and 79.

Mrs. J. J. Dorsey, No. 822 N. Sixth St., Springfield, Ill.—16, 47, 50, 55, 58, 86, 136, 174, 179, 252, 306 and 342.

Mrs. Geo. Riley, E. Mauch Chunk, Carbon Co., Pa.—72, 121, 27, 112, 253, 335, 332 and 323.

Mrs. J. A. Morton, No. 381 Case St., St. Paul, Minn.—185, 209, 248, 298, 299, 53, 125, 173, 187, 247, 338, 175 and 347.

Mrs. J. H. Riple, No. 1406 18th St., Altoona, Pa.—20, 28, 32, 59, 67, 70, 97, 139, 319, 217, 147, 157 and 334.

Mrs. R. M. Mays, No. 700 W. Texas St., Denison, Tex.—194, 90, 251, 196, 296, 206, 301, 286, 314, 354 and 335.

Mrs. J. H. Peek, No. 538 Central Av., Albany, N. Y.—100, 198 and 214.

Mrs. Mary A. Mead, No. 131 E. Fifth St., Peru, Ind.—4, 18, 19, 26, 57, 126, 345 and 263.

Mrs. Hugh McFee, Ossawatomie, Kan.—148, 150, 235, 152 and 329.

Mrs. Geo. Wilson, No. 1317 Adams St., Allegheny, Pa.—64, 82, 89, 280, 41, 52, 116, 334, 122, 219 and 291.

Mrs. Wm. McBride, Valley Junction,

Ia.—69, 74, 24, 266, 220, 164, 166, 343, 341, 127 and 149.

Mrs. F. A. Spronle, No. 77 Louisa St., Toronto Junction, Ont., Can.—92, 213, 202, 161, 131, 324, 337, 346, 171, 297 and 352.

Mrs. John Crotty, No. 711 Chestnut St., Denison, Tex.—227, 197, 300 and 302.

Mrs. J. Frank Cook, No. 110 S. State St., Concord, N. H.—61, 81, 107, 114, 118, 119, 155, 177, 205, 224, 233, 256, 259, 281 and 353.

Mrs. J. Carlin, Crewe, Va.—68 and 331.

Mrs. O. E. Hawkins, No. 1211 S. 11th St., Denver, Col.—330, 242, 268 and 273.

Mrs. J. G. Bailey, No. 259 Swan St., Buffalo, N. Y.—38, 201, 244, 264, 234, 250, 73, 75, 134, 215, 249, 272, 292, 315 and 351.

Mrs. H. M. Stetler, No. 2264 Gladys Av., Chicago, Ill.—1, 113, 182, 190, 216, 218, 290, 304 and 320.

Mrs. C. D. Sursa, No. 126 Cumberland Av., Howell, Ind.—14, 91, 103, 130, 132, 159, 169, 186, 207, 221, 239, 225, 313, 71, 123 and 349.

Mrs. J. Balz, No. 2286 N. Hermitage Av., Ravenswood, Ill.—5, 40, 96, 165, 236, 245, 246, 262, 231, 255 and 238.

Mrs. P. J. Culkun, No. 211 N. Hamlin Av., Chicago, Ill.—31, 35, 36, 54, 135, 146, 229, 274 and 193.

Mrs. Frank Howard, No. 19 Clinton St., Newark, O.—88, 110, 111, 117, 172, 2, 7, 333, 228, 12, 76, 178 and 192.

Mrs. J. R. Crittenden, No. 1111 W. Fifth Av., Knoxville, Tenn.—21, 45, 129, 176, 210, 265, 270, 308, 257 and 258.

Mrs. B. Lightener, No. 914 E St., Sacramento, Cal.—48, 180 and 163.

Mrs. Lizzie D. Armstrong, No. 2109½ Howard St., San Francisco, Cal.—156, 106, 339 and 350.

Mrs. F. M. Simms, No. 1521 E. Washington St., Indianapolis, Ind.—29, 93, 316, 344, 143, 62, 65, 167, 273 and 303.

Mrs. Amos Beeler, No. 823 Madison St., Topeka, Kan.—3, 39, 34, 46, 77, 83, 98, 184, 232 and 293.

Mrs. R. Button, No. 601 Campbell Av., Detroit, Mich.—13, 17, 22, 63, 234, 8, 9, 25 and 294.

Mrs. W. B. Horstman, No. 812 Market

Av., E. St. Louis, Ill.—43, 322, 188, 305, 208, 191, 199 and 160.

Mrs. J. B. Reed, No. 913 Lincoln Av., E. Las Vegas, N. Mex.—123, 138, 162, 170 and 94.

Mrs. Carrie B. Downs, No. 1603 Washington Av., Parsons, Kan.—254, 15, 33, 44, 80 and 158.

Mrs. W. A. Noleman, No. 1838 Robertson Av., Springfield, Mo.—30, 37, 240, 295 and 311.

Mrs. C. M. Goodrich, No. 681 Tenth Av., Clinton, Ia.—51, 151, 183 and 195.

Mrs. Lydia Douglas, N. Platte, Neb.—85, 102, 108, 144, 237 and 301.

Mrs. J. Haley, No. 161 Charles St., St. Paul, Minn.—101, 154, 267, 285, 312, 318, 323, 325 and 327.

Mrs. J. B. Libby, No. 1920 Maxwell St., Cheyenne, Wyo.—200.

Mrs. C. H. Weekley, No. 14 Osmond st.—Atlanta, Ga.—260, 283 and 140.

Mrs. J. H. Sims, No. 800 W. Reed St., Moberly, Mo.—171.

Mrs. H. C. Moore, No. 207 S. Wilhite St., Cleburne, Tex.—181.

Mrs. Susie Wood, No. 223 S. Broad St., Ft. Scott, Kan.—212, 287, 133 and 228.

Mrs. Anna Horning, No. 242 E. Williams St., Ft. Wayne, Ind.—279 and 289.

MRS. W. A. MURDOCK, G. P.

New Divisions.

Div. 349 ORGANIZED.

The W. D. Robinson, Div. 349, was organized in Washington, Ind., Wednesday, March 1, with eighteen or more charter members. This Division was organized by Mrs. Chas. Sursa of Div. 136; she was assisted in the work by Sisters Fitzsimons, Hartman and Clark of Div. 174, who accompanied her from Evansville, Ind.

Div. 349 was launched under most favorable auspices; composed of a bright, intelligent and much interested band of ladies, and best of all the hearty co-operation of the brothers.

On my arrival at Masonic Hall for organization, I found thirteen ladies waiting to assume the obligation and receive instruction in the secret work. After which followed election and installa-

tion of officers. We adjourned to meet the following afternoon for further instruction in ritual work.

Sister Borders entertained the Sisters in the evening, cards and finch being the evening's amusement. Dainty refreshments were served, after which we bid our hostess good night, with best wishes for Div. 349.

This Division bears the name of W. D. Robinson, the founder and first Grand Chief of the B. of L. E., and as we look back over the early history of the order, then known as the Brotherhood of the Footboard, we learn of the trials and hardships which he and his followers were subjected to and of his firmness and determination to advance the cause which was for the betterment and protection of the Locomotive Engineer. These men, whose only glory was the conscientiousness of duty, have given us this Brotherhood, which has culminated in such grand results. In the spirit of justice and appreciation, we do honor and reverence them whose names are not found on the pages of history, nor engraved on memorial shafts.

Mr. Robinson was for a time a resident of Washington, and his remains rest in Oak Grove Cemetery at that place. He has two sons in active service on the B. & O. While in that city I was the guest of Mr. and Mrs. Byron Robinson. Sister Stump, who has taken a withdrawal from Div. 41, to join this Division, deserves great praise for her unflinching and never tiring efforts in working up this Division. ORGANIZED.

The Climax.

[Courtesy of Brother Joseph Wilber Horstrant, of Division 542.]

Editha was a cautious little maid,
Whose motto was the single word, "Beware."
She never lost a chance to be afraid,
And spent a deal of time in "taking care;"
Yet all the while her natural timidity
She hid beneath a mask of intrepidity.

Obliged one day upon a railway train
To sit beside a grave, sedate young man,
A sudden terror filled Editha's brain,
He'll surely pick my pocket if he can.
'Tis true he looks respectable, but then
The worst of sharpers pose as gentlemen.

They reached a tunnel in another minute,
 And Editha, with her customary care,
 To guard her pocket slipped her hand within it,
 But found another hand already there;
 To show her fortitude and hide her fright
 She grasped the villain's fist and held it tight

Until they reached the open track again,
 And as the train into the daylight rushed
 As if it fain would break its record,
 Then no wonder that the modest maiden blushed,
 No wonder that the villain smiled a smile:
 Her hand was in his pocket all the while.

Mongrel Gets Half Column Paid Obituary in Louisville, Ky., Newspaper.

LOUISVILLE, KY., May 2.—In memory of "Billy" Hansbrough, a half column paid notice appears today in a Louisville newspaper. Billy was a dog, a mongrel. His master and mistress were Captain and Mrs. William Y. Hansbrough, of 740 Fifth street, the Captain being a passenger conductor on the Louisville & Nashville railroad. One hundred and twenty-four lines of nonpareil type are devoted to the sad tale of Billy's career, or how, when a pup, he was picked up on the street, in Paducah, Ky., by his master; how, in time, master and mistress "forgot that he was a brown-eyed, sweet-faced dog, and became their little child and sunbeam. The suddenness of Billy's death," the memorial will say, "has left desolation in its path."

Captain and Mrs. Hansbrough tell how, after Billy had been stricken with stomach trouble, Sunday, April 16, "they sat up all that night and kept warm flannels to his little cold body. When the morning came he seemed better and took his usual little walk with his master, came back and had his feet bathed and then got up in his chair at the table."

The memorial concludes with a description of the ride to the cemetery, and "while a little bird in a tree above them was singing they laid their darling to rest in the family graveyard in a space between that which is reserved for his master and mistress, and as they turned from that little grave they knew it would be their only comfort while they lived."

Mrs. Hansbrough, almost on the verge of nervous prostration, talked about Billy.

"I believe his death will kill me. People may think it strange that we loved our dog so, but he was almost human."

When I read this article in our daily newspaper I was filled with disgust, and my first thought was, "I am glad it was not an engineer and wife who made such fools of themselves." Dear Sister, if you have no dear children of your own, and feel the need of something upon which to lavish your mother instincts and affection, look about you and find some poor, neglected child, one of God's creatures,

take it into you heart and home, and watch it expand and blossom into beautiful childhood; see what love and nourishment will do for one of these little ones that are actually suffering for the want of just such affection and care as was lavished upon this miserable dog. We can love and care for a faithful dog in the proper way, but to give a dog a place in our hearts and homes that a child should occupy, seems to me a thing worthy of contempt. There are so many of God's little ones that could be saved to good and useful lives if such people as this Mr. and Mrs. Hansbrough would only take them in place of a dog, and give them the same attention. I trust this couple may now "wash" the feet of some weary child and give it the vacant chair at the table, and see if a smiling childish face will not repay them a thousand-fold more than the whinings of a spoiled dog.

God has said, "Inasmuch as ye have done it unto the least of one of these, my children, ye have done it unto me."

M. E. CASSELL.

A Definition of Pluck.

A London paper asked for a definition of "pluck" and the following are some of the best answers sent in:

Silent endurance coupled with cheerful energy.

The bow from which are shot the arrows of heroism.

Pluck is that spirit in man which fails to understand the meaning of despair.

Fearlessness free from foolhardiness.

That which enables one when fighting against adverse circumstances and knocked down, to rise and try another round.

Honest daring without caring.

The absence of fear in the presence of danger.

The stuff that heroes are made of.

The courage to do the right thing at the right moment.

The indomitable "I will," before which the mountains of fear become molehills.

That which keeps a man up when he's down.

The offspring of courage and the mother of success.

Music a Recreation.

The effect of music upon health and disease is incalculable. No home should be without some instrument, for it is better than medicine. For installing ambition in the lazy and indifferent it is almost magical. I have stirred phlegmatic and careless boys to sudden enthusiasm by the playing of a stirring march, and individuals who had lost heart were found with a sudden determination to again go into the fight and win.

Harmony has a magical effect on the mind. Who has not seen himself surmounting all obstacles and reaching the very pinnacle of fame during the rendition of a march like "Tannhäuser," for instance, or the beautiful duet in the second act of "Cavalleria Rusticana?"

How much brighter the world appears when you get up from your seat after a fine concert. Music seems to clear away all the clouds; it borders on the divine. The part it has played in the religion of the world, particularly in the efforts of Christianity, is seldom taken into consideration; and yet a beautiful fugue or a grand oratorio possesses great power to instill religion into the heart than all the sermons in the world.

Notice.

There will be a School of Instruction on June 20, in New York City, in the 12th Ward Bank Building, 125th St. and Lexington Av., under the auspices of Div. 264. The Grand President will be with us and a cordial invitation is extended to all sister Divisions to be present.

Division News.

ONE of the most brilliant and successful social functions given in South Philadelphia for some time was the supper tendered on March 23, by Philadelphia Div., 832, G. I. A., to Div. 51, B. of L. E., at Federal Hall, 17th and Federal streets.

The supper was given in grateful recognition and appreciation of the generosity on the part of Div. 51, B. of L. E., in supplying Div. 832 all necessary parapher-

nal, etc., when the latter Division was organized. Speeches eulogistic of the good to be accomplished by co-operation of the two organizations were delivered by Chief Engineer Kyle, L. M. Genay and Harry M. Cooper. The affair was enlivened by the rendition of solos by Messrs. Muldoon and Lynch, who are prime favorites, and who added much enjoyment to the occasion.

Too much praise cannot be given the committee, of which Mrs. J. Ray was chairlady, for the efficient manner in which the affair was conducted from beginning to end.

The members of Div. 332 as well as their numerous friends were extremely delighted with the success of the supper, inasmuch as the Division is a comparatively new one and after surmounting many difficulties is now in a flourishing condition.

MRS. R. COOPER.

THE Mrs. John Henney Div. 351, New York City, New York, has had to be silent as we have only been organized since February 8, 1905. This being our first introduction we hope it will appear in print to the readers of the JOURNAL and our Sister Divisions.

We have a very congenial Division, each one working in harmony with the other and meeting regularly. At present we have 23 members, and expect to initiate more at our next regular meeting. On April 26 we held our first social function in the form of a progressive euchre party, which increased our treasury several dollars. It was largely attended by members and friends of our Brother Div. 589, B. of L. E., who also assisted us in managing and entertaining. There were about 40 prizes, all very kindly donated, and although a vote of thanks was sent to each one who so kindly donated we wish to again thank each one through the JOURNAL. About 11 o'clock the floor was cleared for dancing and the grand march occurred headed by Bro. W. R. Marley, Chief of Div. 589, B. of L. E., and Sister Geo. D. Cook, our Vice President and Chairman of Committee, followed by about fifty couples.

The committee having charge of the affair were untiring in their efforts for all to have a good time and that they succeeded was very evident, for it was enjoyed by all there.

Wishing all sister divisions prosperity to cultivate the grand principles of our order in their daily lives is the earnest wish of
Yours in F. L. and P.,

MRS. G. A. MORNHNWEG, Sec. 351.

Div. 70 G. I. A., Connellsville, Pa., comes again before the readers. Our Auxiliary has been quite lively since installation. We've had quite a number of socials which were a success. Visiting day we had a large delegation of ladies, Sisters from Glenwood, Pa. We had an enjoyable meeting when they were with us; and refreshments were served in the early evening at the hospitable home of Brother and Sister Kerns. Our Brother Division from appearances is flourishing. The Division gave a ball April 18, and the Auxiliary ladies served refreshments. The ball was a success both socially and financially; a large crowd was in attendance. A lovely hand-painted picture; painted and given by our President, Sister Graham, was raffled and was won by Mr. Putnam.

We hope to have many more than our usual attendance as the nice weather comes. Our meetings are very interesting, and for Sisters that are kept at home with cares of a family two afternoons in the month are like good medicine. Try it and see.

Sisters, please let more of us try and attend. Make No. 70 to the front both in work and in numbers, in the lovely summer months that are coming. With best wishes to all Sisters,

I am in Friendship and Love,
ANNIE CORVIN.

PERHAPS the readers of the JOURNAL would once more like to hear from Lake Ontario Div. 315, Oswego, N. Y. We have been organized just one year, and we are congratulating ourselves continually on our success. We have thirty-seven members, and each vies with the other in being helpful. The best feeling of fellowship exists between the Sisters,

and all seem to be of one mind, having the good of our order at heart, and seeking in every possible way to promote the comfort of the Brothers. Everything we do seems to bring us some good, and personally, I am sure, that so long as the present feeling of conscientiousness, fidelity and love exists, every undertaking must be a complete success.

March the 10th being the first anniversary of our organization, we celebrated the event by having a birthday party in the evening in the B. of L. E. rooms, to which the Brothers and their wives were invited. The rooms were tastefully decorated with pink carnations and green, and presented a very pleasing appearance. Favors were given the guests in the form of buttonhole bouquets of pink carnations. The members wore their badges. To defray the expenses of the evening each sister contributed as many cents as she was years old, and as we are all of age, at least, this paid our expenses of the evening, and left a small balance for the treasury. The Brothers were asked to guess on the combined ages of the Sisters, and the one who gave the most nearly correct answer was to receive a prize. Bro. Chas. Miller was the lucky one, guessing within four years of the correct number. This afforded not a little amusement.

The remainder of the evening was spent in listening to music, talks from a few of the Brothers visiting, and last but not least the serving of a lunch, to which forty were served at one time. A pleasing feature of the luncheon was the mysterious appearance of a birthday cake with one candle. It was a happy thought of Brother Cahill, whose wife was in the secret, and managed it very cleverly.

At a late hour we wended our way homeward, tired but happy at the apparent success of our birthday party.

Some time in April we anticipate having a sale of useful and fancy articles to raise a little money to have in time of need. MRS. W. E. COLE, Sec., Div. 315.

SINCE being introduced to our JOURNAL friends, I have thought 337 Bellville,

Ont., should say a little in a modest way about themselves and what they are doing. Mrs. Sproule came the first of December, and we were duly organized. By holding our charter open for a short time we registered nineteen members; a pleasant event taking place in repairing to the home of Brother Taylor to initiate Mrs. Taylor, the ceremony being very impressive, as this worthy couple have spent their lives in railway service and with something akin to devotion to the B. of L. E.

After looking up our finances we decided to give a literary and musical entertainment, which added considerably to our treasury, and all enjoyed very much. Many selections being contributed by members' children, the ladies working in perfect harmony, that everything might prove a success.

BUCKEYE Div. 65 of Cleveland, O., were received and entertained by Sister W. E. Futch at her home, 192 Harkness Av., on Wednesday afternoon, April 8.

Those present mutually agreed that a more pleasant afternoon was never spent by the crowd. And that Sister Futch cannot be excelled for her delightful manner of entertaining. The hostess was assisted in receiving by her friends Mrs. J. F. Walker, wife of Bro. J. F. Walker of Div. 16, Galion, O., and Mrs. A. B. Greshen of 28 Edmund St. Mrs. Futch and her two friends were suitably attired in dainty white gowns. The nature of the entertainment was purely social and a short program was rendered in the early part of the afternoon.

Miss Goss, daughter of Brother Goss, rendered a beautiful vocal solo. Miss Ethel, the accomplished daughter of Brother and Sister Futch, gave a beautiful recitation in her delightful manner.

Then the real enjoyment began when paper and pencils were passed and the task of naming ten cities which were veiled in rhymes.

This required considerable time and amusement, as none were allowed to tell, but once in a while two enthusiasts would slyly hint to each other and set

the others on fire with excitement to guess that one city.

Sister Price was the recipient of the first prize, a handsome hand-painted jeweled comb. Sister Salmons and Sister Roff cut the cards for second, Sister Roff being the lucky one to receive a handsome leather hand-bag. Most delicious refreshments were served and then each one was favored with carnations. To those who were deprived of being present, we must say, you missed an immense treat, and one that will be happily remembered.

ONE WHO WAS THERE.

G. I. A. Voluntary Relief Association.

TOLEDO, O., June 1, 1905.

To Division Insurance Secretaries, V. R. A.:

You are hereby notified of the death of the following members, and for the payment of these claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for same was dated later than April 30, 1905.

ASSESSMENT No. 216.

Died April 30, 1905. Sister Josephine Nelson, aged 69, of Div. 98, Topeka, Kan. Cause of death, jaundice. Carried two certificates, dated August, 1902, payable to Thomas Nelson, husband, and Wm. Nelson, son.

ASSESSMENT No. 217.

Died May 7, 1905. Sister M. E. Brantner, aged 57, of Div. 111, Martinsburg, W. Va. Cause of death, Bright's disease. Carried two certificates, dated March, 1892, and March, 1900, payable to F. T. Brantner, husband, and Carrie Dorn, daughter.

ASSESSMENT No. 218.

Died May 10, 1905. Sister Elizabeth Eversole, aged 68, of Div. 152, Argentine, Kan. Cause of death, sarcoma. Carried one certificate, dated March, 1899, payable to Jacob T. Eversole, husband.

Members will pay their Insurance Secretaries on or before June 30, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than July 10, or stand delinquent till remittance is made.

Members in good standing April 30, 1905, forty-nine hundred and fifty-seven in the first class; two thousand and sixty-one in the second class.

Blank notices of transfers have been mailed to every Insurance Secretary. If they were not received, notify the General Secretary and Treasurer.

MRS. GEO. WILSON, Pres. V. R. A.

M. L. ROBERTSON, Gen'l Sec'y and Treas.

Twelfth Annual Convention of the Air Brake Association.

BY R. H. BLACKALL.

The Twelfth Annual Convention of the Air Brake Association was called to order by President Hume, at New Orleans.

After the address of the President the Secretary reported, showing the association to be in a very prosperous condition owing to a large number of members having been taken in during the past year.

The report of the treasurer showed that the financial condition of the association was on a par with the membership, there being almost \$1,100 in the treasury.

The following committees were appointed:

Thanks—Otto Best, Henry Wahlert, W. R. Garrabrant.

Obituary—H. S. Draper, C. B. Conger, Geo. R. Parker.

The following paper was then read by Mr Langan in place of the Chairman, C. H. Larimer, who was not present.

OIL CUPS AND AIR STRAINERS.

This paper called attention to the severe conditions under which an air pump had to operate, and the necessity that something should be done to better the conditions under which it worked was pointed out.

It is now necessary for a pump, in the long train service of today, to frequently work at its maximum capacity for long periods of time. This cannot be done successfully unless the air cylinder, as well as the steam, be given proper lubrication. This can only be done by the introduction of an automatic oil cup.

The necessity of using a means of withholding as much dirt and grit as possible from the air cylinder was pointed out, and experience showed that the present style of strainer was not adequate and that a better form should be supplied.

Where efficient automatic lubrication

of the air cylinder is employed there has resulted a much greater increase in life to piston packing rings and cylinders, doing away with groaning and reducing the heating to a minimum, with a less accumulation of gum among the parts of the engineer's brake valve.

As a necessary adjunct to proper lubrication of the air cylinder of the pump, is the matter of a strainer with sufficient sized openings to allow the free passage of the air. With the type of strainers in present use, the perforations are so small that the free area opening is restricted compared to air cylinder inlets, and, as the strainer becomes clogged, this area is reduced at the expense of the pump. A strainer should have ample area opening, enough so that if half of the perforations are clogged the opening will still be in excess of the inlet area to cylinder. It should be located where the air will be as free from dirt as possible.

One form of strainer that is used to some extent consists of a cylinder filled with curled hair, in addition to the perforated plate. The hair is oiled, and, as the air passes through, the dirt is caught by the oil, allowing the air to pass to the pump pure.

On one road this device was applied to helping engines that were used in tunnel work, and it was found that in four days' time there was a collection of carbon and grit equal to a tablespoonful, showing the necessity for improved strainers.

DISCUSSION.

L. M. Carlton.—Experimented through the winter with curled hair strainer $5\frac{1}{2}$ in. in diameter, and was very much surprised to note the amount of dirt, ashes and filth collected, due to cleaning fires over ash pits. Upon examining the cylinder after five months of service he found it in excellent condition.

T. L. Borton.—Referred to the good results obtained by the use of a hair strainer in shop plants, and thought it the proper thing but did not consider it necessary to put oil on the hair. He also favored the use of the automatic oil cup.

P. J. Langan.—Spoke of strainers filled with wool which, if packed perfectly

tight, still allows the air to pass through freely and thinks wool could be used to good advantage. He believed the question of lubrication most important and thought that proper lubrication increased the life of the pump 50 per cent.

C. B. Conger.—Referred to the fact that compressor people lubricated their machines at the middle of the stroke and believed this to be the proper place.

W. Daly.—Believed that the top of the air cylinder was the proper place to oil as he had found that there was then plenty of oil at the lower end of the cylinder.

O. Best.—Believed in a strainer 6 in. wide and 4 in. deep, but was not in favor of an oil cup as he thought that they did most of their feeding at one time and that they stopped up the ports.

F. B. Farmer.—Thought it preferable to use an oil cup and run the chance of its stopping up, rather than cut the cylinder.

E. G. Desoe.—Was not in favor of the strainer as they are most likely to stop up where they would be of the most service. He thought better results would be obtained by running the suction to the front end of the engine.

H. S. Draper —Has used a strainer for a year with good results; best results were obtained by oiling the hair.

Geo Frederick.—Put a rod oil cup holding about three tablespoonfuls of oil on the middle of an 8-inch pump on a switch engine and found that the oil would last about four days. The plunger had a lift of 1-64 in.

W. R. Garrabrant.—Has experimented recently with the ball and also the spindle type of the Westinghouse Oil Cup and obtained good results.

J. P. Kelly.—Stated that his company had been making oil cups for two years, and believed that automatic oiling was the proper method.

TRAIN PIPE LEAKAGE IN FREIGHT SERVICE; EFFECTS, CAUSES, AND HOW TO REDUCE.

P. J. Langan.

Train-pipe leakage has manifested itself much more since the greater tonnage per train has been in vogue. The transportation speaks of the tonnage, the engineer and the air brake man speak of

the number of cars as each additional car means a greater amount of air for the pump to supply, due to leakage.

The effort to do away with yard blockades tends to increase the amount of train-pipe leakage, as the cars are not always held a sufficient time to remedy this defect.

Railroads make a great mistake in allowing outside firms to inspect their cars as men in the employ of these companies are not always aware of the importance of tight train pipes, proper clamping, etc., and they do not insist on the rigid inspection that a railroad inspector would.

Engineers are sometimes blamed for rough handling of trains for which the train-pipe leakage, instead of the engineer, is to blame. An engineer may make the proper amount of reduction by the air gauge, but the additional amount obtained by the train-pipe leakage is sufficient to cause the slack to act in an objectionable manner, especially when the train is a mixed one of loads and empties.

A case is cited where an engineer shut off one mile before reaching a passing siding when he had a train of 100 cars, and where train-pipe leakage was such that he did not wish to use the brakes owing to the roughness of the response in previous applications of the brake. He was also afraid of stuck brakes in the event of his making a brake application.

The committee also thinks that due to the poor care given the brakes on some roads train-pipe leakage is likely to be excessive after emergency applications due to break-in-twos, on account of the dirt and scale blown on to the emergency valve seat when the train parts.

Heavily loaded trains cannot be controlled safely on heavy grades unless the train-pipe leakage is kept down. The committee state it as their opinion that fifty-car trains cannot be handled successfully on a $1\frac{3}{4}$ per cent grade unless the train-pipe leakage is kept down to four pounds per minute.

Attention is called to the poor pipe and fittings employed, poor pipe work due to the use of poor tools and the large amount of inferior quality of hose used on

account of its cheaper first cost. Many hose are in bad condition, that to the naked eye are in good condition. The importance of testing the hose by soaping the surface is emphasized, and it is claimed that this practice is of the greatest value in keeping down train-pipe leakage, but this only applies to such tests made in moderate weather.

The spongy hose permit air to leak through in warm and moderate weather, and while this is not true in cold weather an equally bad effect is produced. The moisture in the hose freezes and causes the hose to become practically rigid, thus causing a great amount of leakage at the coupling, and in many cases the hose have actually been known to separate on account of the rigidity. Proper hose specifications is believed to be the best preventative for all kinds of leakage for which the hose is responsible.

Leakage between the face of the couplings has several very common and well known causes, that of distorted couplings being probably the most common. The remedy for this is the use of a template in making hose repairs and doing away with the practice of striking the coupling to cause the leak to cease.

Poor and improperly applied packing rings are the next most important cause of leakage.

The amount of slack between the cars when bunched or stretched has also an important bearing on this matter. To reduce trouble from this cause to a minimum the location of the angle cocks should be as near standard as possible.

Some interesting tests were made to show the effect that an increase in train-pipe leakage of one pound will have on the time it takes the pump to raise the pressure ten pounds in accomplishing a recharge.

The pump used charged a main reservoir having a capacity of 2,100 cubic inches, from 0 to 100 pounds in 1 minute and 54 seconds. Coupled into a train of 55 cars it took 5 minutes for the pressure on the engine to reach 40 pounds; 9 minutes to reach 55 pounds; 11 to reach 60 pounds; 13 to reach 65 pounds, and 16 minutes to reach 70 pounds.

A ten pound reduction was then made and the leakage found to be $4\frac{1}{2}$ pounds per minute. When the train-pipe pressure had reached 50 pounds a recharge pressure was made. The train pipe was charged to 70 pounds in $8\frac{1}{2}$ minutes.

The train-pipe pressure was then increased to 9 pounds per minute and it required 12 minutes to recharge from 45 to 65 pounds and 6 minutes to charge from 65 to 70 pounds. This shows that it is not practical to handle trains on a $1\frac{3}{4}$ to 2 per cent. grade where only from 2 to $2\frac{1}{2}$ minutes elapse between the release and application of the brakes.

The leakage that exists clearly demonstrates the necessity for yard testing plants if it is desired to maintain the brakes with the least possible detentions to trains after the engines have been coupled on.

The following methods are suggested to reduce this objectionable leakage:

Use not less than four clamps per car for the train pipe. Use as few ells as possible. Use heavier pipes and fittings. Install yard testing plants and provide a sufficient number of men to do the work. Use more hose and coupling gaskets. Apply pipes and release valves so that they are accessible for tightening and repairs. Eliminate piece work in piping and testing cars. Remove hose when cars are on the rip track for repairs that require the removal of the trucks. Separate hose by hand in the yards. Permit repairs to be made when defects are found.

AIR HOSE.

Robert Burgess.

The following was brought out in this connection:

Rear-end collisions are caused on account of hose failures; the cost of maintenance is large, and this latter point is proven by the following figures that were obtained from one of the leading railroads, the figures submitted covering the cost of maintaining 25,000 cars.

Cost, \$30,000, although this is acknowledged to be high.

27,600 hose were fitted up. Only 19,750 coupling gaskets were purchased. This shows that the supply of gaskets to the

repair men must have been limited. Tracing the effect still further the lack of coupling rings would encourage employees to wedge up the coupling, which in turn would cause a great number of hose to be ruptured when hose are not uncoupled by hand, this at the expense of saving the price of a gasket that costs but 4 cents, list price.

6,500 new hose couplings were purchased, showing that new couplings were applied to 25 per cent of the new hose fitted up. Over 1,200 hose nipples were ordered, showing that when a hose was apart it was customary to throw the nipple end away.

8,700 new hose clamps were ordered, showing that the clamps were invariably thrown away.

Investigation showed that the new hose was stored in a loft, the idea being apparently that heat helped hose instead of destroying it.

The money spent in maintaining the hose represents 5 per cent interest on \$300,000.

DISCUSSION.

The question of air hose and train-pipe leakage, being so nearly allied, it was decided to combine the discussion of the two subjects.

P. J. Langan.—Thought that as a brakeman had been taken off of long trains by many roads, and as the responsibility of handling the long trains devolved upon the engineer, it was very necessary to get the trains into as good condition as possible to procure the best results.

He did not think that 100 brakes could be operated successfully; he thought they should be coupled up in order to have them operative in case of emergency, and in case a hose should burst.

E. G. Desoe.—Asked Mr. Langan why he did not think it practical to operate 100 brakes in a train.

P. J. Langan—It is not practical to make over a 10 or 12-pound reduction in a train of this length, and this amount of reduction will not apply to all of the brakes in such a long train.

I believe, though, that we should keep them coupled up from the standpoint of safety.

He stated that his road had tried some kind of a liquid hose protector with good results.

C. D. Getchell.—Had found a great amount of train-pipe leakage due to stiff hose and his road had reduced this difficulty greatly by lengthening the train pipe.

G. B. Culver.—Was afraid that lengthening the train pipe would tend toward broken train pipes when the couplers passed each other. Mr. Getchell said that they had not experienced any such difficulty.

G. R. Parker.—During the past year we removed 1,200 hose, 50 per cent spongy, 40 per cent bursted and 10 per cent torn off. I believe in the soapuds test all right as the yard is the proper place to locate bad hose; but the question is, if we use the soapuds test will we be able to get the hose for replacements, there being so many condemned.

F. B. Farmer.—I believe the soapuds test a good thing, but would suggest that it be taken up gradually in order to give the general storekeeper a chance to supply hose and not swamp him; start the test first in the shop, then the repair tracks and finally out in the yard, and you will find you won't meet nearly the opposition that you will if you go in too heavy on the start.

STANDARD REQUIREMENTS FOR HIGH-SPEED FOUNDATION BRAKE GEAR FOR PASSENGER SERVICE.

Geo. R. Parker.

This paper presented a very important subject which is of more special importance and interest to the mechanical department and to the air brake inspector. The report was discussed fully and the recommendations of the committee voted upon singly. All were eventually adopted and these recommendations will be presented to the M. C. B. Convention.

These recommendations were as follows:

1. Proportion of truck lever not to exceed 4 to 1 instead of 5 to 1.
2. Length of slot in the strut of metallic brake beams to be of sufficient length to permit of desired movement of lever.

3. Total leverage not to exceed 9 to 1.
4. Ample provision for taking up slack on four and six-wheel trucks.
5. With new shoes and tires, as in the case of a new car, and all slack let out, that rods will be of such length as will give between 6" and 7" piston travel and cause all levers to stand correctly with brake fully applied.

INTERSTATE COMMERCE COMMISSION.

Mr. Moseley, Secretary of the Interstate Commerce Commission, was unable to be present, but was represented by Mr. W. P. Borland, who gave a pleasing and instructive talk to the members of the association.

He conveyed an idea of the work the Commission and its corps of inspectors were trying to do, and asked the aid of the members in bringing about a condition of brakes that would result in the greatest good to all. He stated that for an inspector to secure a position with the Commission, it was necessary for him to be thoroughly in touch with the rules and recommendations of the Air Brake Association. The last inspector they had appointed was a member of the association and they expected to draw from their members from time to time.

It is their aim to have brakes in such a condition that it will not be necessary for the crew to have to go on deck, but that the brakes will be in such shape that the engineer will feel and know that he has a reliable power with which to control the train.

He called attention to the fact that there was less confidence in themselves and the brakes on the part of the engineers in the East, due to the greater number of defects found on the cars of the Eastern roads. "To what is this lack of confidence due? Leaky train pipes, improper piston travel, dirty and inoperative triple valves, or air pumps that are not of sufficient capacity to furnish air for the number of brakes used, and as stated by the Commission in its last annual report, failure of the roads to properly educate their employees in the use of air brakes."

Twelve thousand fewer cars were in-

spected in 1904 than in 1903, but 3,000 more cars were found on which the cylinders and triple valves had not been cleaned. The number of defects found were greater, but a part of this is due to the closer inspection to which the brakes have been subjected.

He thinks that the railroads do not keep a sufficient repair force to keep up the running repairs, but is of the opinion that they will do better in the matter of keeping safety appliances in proper condition since the recent decisions in the Johnson case and that of the United States vs. the Southern Railway Co., in both of which cases the law was clearly defined and construed and the contentions of the government fully sustained.

Many of the important roads, such as the Southern, Pennsylvania and N. Y. C., have issued notices that they will not receive cars unless their equipment complies with the safety appliance laws.

BEST BRAKE DESIGN TO ACCOMPLISH HARMONIOUS ACTION OF AIR AND HAND BRAKES ON PASSENGER AND FREIGHT CARS.

L. M. Carlton.

The practice of today, in general, consists in having the air and hand brakes work together in freight service, but the opposite is true in passenger service. There are many brakes in both kinds of service in which the hand brake on one end may work with the air, while on the other end it may work opposite.

The following are some of the main objections to having the two brakes not working in harmony:

1. Injury to trainmen likely to result if he is setting the hand brake when the air is used.
2. With two or three notches, or more, taken up on the hand brake the piston travel is shortened, thus causing a higher equalization of pressure. This increases the liability of wheel sliding, and if the stop on the hand brake rod is pulled away from its seat there is a chance for the chain to be broken.
3. With hand brakes applied first the piston in the brake cylinder will not pass the leakage groove when the air is applied

and the air will blow to the atmosphere and be wasted without any return.

4. If train is stopped by air it is necessary to release the brake before applying the hand brake; otherwise the leakage of air will release the hand brake. This is productive of unnecessary accidents.

The following are some of the reasons why the air and hand brakes should be designed to operate together:

1. Air and hand brakes can be used at the same time without liability of harm to the brakeman.

2. The use of the hand brake will not shorten the piston travel.

3. Where cars stopped on grade the hand brake can be applied immediately without first bleeding off the air.

DISCUSSION

The discussion resulted in the following recommendations:

That the hand and air brakes be so arranged that they work in harmony with each other.

That when using the automatic slack adjuster, it be so arranged in the rigging that it would take up the slack in the hand brake at the same time it did in the air brake.

That the hand brake be so designed as to give the same braking power on each truck instead of having more on one than the other as is often the case.

That the hand brake connection to the brake staff be so arranged that it will not foul when being wound up.

CONDUCTOR'S VALVE.

One of the questions discussed under the head of topical discussion was the removal of the cord connected with the conductor's valve by some railroads.

This was not considered good practice by the members and it was recommended that a cord should be used, but that where this was found to be impracticable, a conductor's valve should be placed at either end of the car.

MAXIMUM BRAKE FORCE AS REGARDS FOUNDATION BRAKE FOR PASSENGER AND FREIGHT CARS.

F. M. Nellis.

This paper sets forth a scheme which suggests the idea of braking the vehicles of a train, not to a certain per cent of the light

weight, but so that there will be a certain protecting weight per axle, regardless of the percentage of braking power that may result. It is shown that this is not a case of theorizing as this practice has been followed on several trains for a period of two years with very gratifying results.

In conceiving and developing this method it was believed that in a passenger train of mixed cars, both light and heavy, the heavier cars carrying a larger amount of unbraked weight, would thrust their burden of unbraked weight, during the brake application, onto the unprotected and lighter cars carrying less unbraked weight, causing the wheels on the lighter cars to slide and flatten.

In this scheme the braking power on the car is based on a cylinder pressure of 50 pounds, instead of the usual 60 pounds, which is obtained with the emergency application of the brake. This is done because practically the same cylinder pressure results with both the small and the large cylinders in a service application, while in an emergency application, the pressure in the large cylinder is somewhat less. This being true the percentage of braking power on the car with the large cylinder, while figured to be 90 per cent, is actually less than this, while on the car with the small cylinder the braking power actually developed is the same as was intended.

In the new plan the emergency application is given a secondary consideration.

To show that the move made is in the right direction it is pointed out that the trouble in the past, that of wheel sliding, has been confined almost entirely to the light cars. The reason for this is as follows:

Designing the braking power to be 90 per cent of the light weight of the car gives a different protecting weight as shown by the following.

Take two cars, one weighing 100,000 and the other 50,000 pounds.

Braked at 90 per cent of their weight the heavy car would have a braking power of 90,000 pounds, while the braking power on the lighter car would be but 45,000 pounds. It will thus be seen that the

weight that protects the wheels on the light car is but 5,000 pounds, while the heavy car has 10,000 pounds to protect the wheels.

Two years ago a train of passenger cars was equipped based upon the foregoing scheme. The weight of the cars ranged from 46,000 to 103,000 pounds, and the size of the different cylinders varied from 10 to 16 inches in diameter. The braking power was designed for a cylinder pressure of 50 pounds and a protecting weight of 1,500 pounds per axle was allowed, regardless of the weight of the car.

This scheme is also productive of good results when considering the ordinary service application of the brake since the calculations for braking power, being based on a cylinder pressure of 50 pounds, a greater braking power is developed for a given train-pipe reduction. The gain in the percentage of braking power that results in the new scheme, when making a 10-pound service reduction, approximates 26 per cent, this with the car weighing 103,000 pounds. In a full service application this car is braked at 87 per cent of its light weight; the braking power in an emergency application is 109 per cent, as compared with the usual 90 per cent which it is estimated will be obtained but which, as a matter of fact, is not. With this car in a high-speed train the maximum percentage of braking power, with an emergency application of the brake, is approximately 150 per cent, this being gradually reduced by the high-speed reducing valve to about 90 per cent.

It has been suggested that the braking power be increased by raising the train-pipe pressure; also by lowering the train-pipe pressure and raising the total leverage. The committee does not think well of either of these schemes. The first gives no more power without a correspondingly heavy reduction of train-pipe pressure, while the latter would result in very coarse graduations in the braking power in service applications of the brake, due to an equalization being obtained between the auxiliary reservoir and the brake cylinder, with a less reduction of pressure in the train pipe than is the case where a

train-pipe pressure of 70 pounds is used.

Owing to the freight cars running at slower speeds, which results in the coefficient of friction being higher, it was deemed advisable to omit the consideration of the proper braking power of freight cars from this paper and have this treated as a separate subject.

DISCUSSION.

F. M. Nellis.—Thinks that while good results have been obtained, he would not like to have the Association go on record as recommending this method of designing the braking power. He thinks it is worthy of a wider and more general trial in more varied sections of the country. He says there is no doubt but that the capacity of the 16-inch cylinder will be exceeded if a total leverage of 9 to 1 is not exceeded; this will mean the use of a larger cylinder or the use of a separate cylinder for each truck.

With the exception of J. P. Kelly this method of braking the cars met with general approval. Mr. Kelly was not convinced that this was the best thing.

Mr. Conger.—Wanted to go on record as believing that this was "the truth and nothing but the truth."

The Executive Committee voted that, hereafter, each member would receive but one copy of the proceedings; this will be leather-bound.

That no member will receive a copy who is in arrears with dues for two years; when in arrears for four years he will be dropped from the list of membership.

That members who have lost their badges will be supplied with same at a cost to the member of \$1.25.

That corrected remarks must be returned to the secretary within 15 days, or the original copy will be used in the proceedings.

The following were elected to hold office for the ensuing year:

L. M. Carlton, President; W. P. Carrabrant, 1st Vice President; G. R. Parker, 2d Vice President; P. J. Langan, 3d Vice President; F. M. Nellis, Secretary; Otto Best, Treasurer; W. E. Hunter, Executive Committee.

The meeting was entirely successful

and all agreed that their trip to New Orleans was one of the pleasantest, and their stay there one of the most gratifying of the many pleasant conventions that this association has held.

QUESTIONS AND ANSWERS.

Q.—S. M.—There seems to be considerable objection raised to oiling the pump through the strainer. What special harm does this do as long as the pump gets the oil? I have always found when there is any trouble with the valves sticking that the trouble is with the discharge valves and not with the receiving valves.

A.—It is true, as you say, that the trouble with sticking air valves is with the discharge valves. The usual cause of these valves sticking is that the oil burns and clogs the passages about the valves. The cause of the oil burning is that an improper oil is used. Valve instead of engine oil should be used, and it is the latter that is most frequently used when an engineer oils through the strainer.

When a pump is given lubrication it should be in small quantities, and not in "doses" as is the case when oiling through the air strainer.

Another bad feature of oiling through the strainer is that the chambers from the strainer to the receiving valves are kept moist thus tending to catch all the particles of dirt, or at least a great deal of the dirt, with the result that the strainer is partially closed and the air has not free access to the air cylinder. This practice finally results in a filthy condition that causes the receiving valves to leak, thus reducing the efficiency of the pump.

Q.—W. M. N.—Can you tell me how high the pressure in the brake cylinder gets when service application of the brakes is made if a train is equipped with the high-speed reducing valves and a train-line pressure of 110 pounds is carried? Does the reducing valve keep the pressure down to 60 pounds or does it run up higher than this?

A.—If the piston travel approximates the customary eight inches, and the brake-pipe pressure is 70 pounds, the pressure in the brake cylinder and auxiliary reservoir will equalize at about 50 pounds. With a

train-pipe pressure of 110 pounds an equalization will take place finally at about 79 pounds if there is no high-speed reducing valve, and a continued service reduction is made. With a reducing valve a discharge of brake cylinder pressure to the atmosphere takes place as soon as the brake cylinder pressure is a little over 60 pounds. If the brake-valve handle is allowed to remain in service position the brake cylinder pressure will run up somewhat temporarily and then bleed down to 60 pounds, at which time the reducing valves will close and the balance of the pressure will have to escape to the atmosphere in the usual way. In practice the brake valve handle is placed in service position but a few seconds. So operated, as in practice, the pressure may reach 85 pounds, but this is quickly reduced to 60 pounds when the brake valve handle is returned to lap position.

With the usual handling of the brake valve it is not necessary that the reducing valve should be called upon to reduce the cylinder pressure since a brake pipe reduction of fifteen to twenty pounds stops the train without obtaining a cylinder pressure in excess of 60 pounds, that for which the reducing valve is adjusted.

Q.—T. G. H.—I pulled a train one day last winter and the inspectors found some flat wheels on two cars when we pulled into the yard. We made some tests to see if the triples worked all right on these cars. As far as we could see they were all right and they took them off and tested them in the shop and they found them O. K. there. They also released all right on the train by putting the brake valve in running position, so they didn't blame the slid wheels on me and, in fact, they didn't know what was the cause nor I didn't either. The crew didn't notice they were sliding as it was early in the morning and the sliding probably took place before daylight. Can you give any cause for this if the triples were in good shape?

A.—On the road where the writer was employed we practically never had any trouble with flat wheels except on one division, and we had some difficulty in lo-

cating the cause. This was finally located and no further trouble resulted after the superintendent issued instructions for the train crew to always examine the wheels just after or rather while passing a certain point. This was a trestle which was over some quicksand, and there was an order to cross this trestle at a speed not to exceed four miles per hour. The engineers tried to live up to the rule. They tried to release when the train was rounding a sharp curve just before reaching the trestle but often found that, due to poor retaining valves, the speed would pick up too much before reaching the bridge. This necessitated another brake pipe reduction when the speed of the train was moving very slowly and before the cylinder pressure had reduced to 15 pounds on the cars with good retaining valves. The high cylinder pressure on the cars with the good retainers would occasionally cause the wheels to pick up, but this only took place with a bad rail, and especially on a frosty morning. It may be that a similar condition exists on some part of the road on which you are employed. In a case like this the entire elimination of wheel sliding is hardly possible without vigilance on the part of the crew.

Q.—H. K.—Our air brake inspectors are beginning to use a new scheme for picking out poor brakes. We have heavy grades and the brakes are tested before we start down the hill. Sometimes the inspector at the top of the grade says that a certain number of the brakes, all of them in some cases, are working all right. At the bottom of the hill the inspectors say that there are four or five brakes which are no good, when we know they were working at the top of the grade. They say they are not in good condition because the wheels are warm or hot on the good brakes and cold on the others. I can see why this would be so if the retaining valves did not hold on these cars, but don't think the wheels would be cold just because the retaining valves did not make the brakes do their share of the work. This seems so to me because from what I can see the retainers, as a rule, are not in very good shape any way. Can you

throw any light on any other cause that would account for the wheels being cold?

A.—The test to which you refer is known as the thermal or heat test and is very valuable for the reason that you give, namely, that it picks out poor brakes which, under the ordinary test, are apparently all right.

When an engine couples to a train it takes some time to compress the necessary air to charge all the auxiliary reservoirs. This may require ten minutes and many of the triple valves, if they had no feed grooves at all, would charge the auxiliary reservoirs with the leakage by the packing rings of the piston. This is what takes place on a triple valve in which the feed groove is filled with dirt. If the charging takes place with the feed groove closed the brake will apply properly when the test is made at the top of the hill.

The condition is entirely different when the train is being handled on the grade. At this time the interval during which a recharge is accomplished is but short at best, when the grade is steep. This being true the auxiliaries will not become recharged on the cars with triples having closed feed grooves and the proper response will not ensue following a reduction of brake pipe pressure. As a result the brakes on these cars do not perform their share of work, with the result that the wheels are cool when the train reaches the foot of the grade. If the brakes operate at the top of the grade and the wheels are cool at the foot, the triple should be examined to insure a proper condition of the feed port.

Q.—G. W.—Our air brake instructor told the class the other day that we never ought to make a release of the brakes when the train-pipe exhaust was still open, after a reduction had been started but not completed. I guess we got off the track, or got him off, for he didn't explain why it wasn't a good thing to do. Will you tell us why it is not a good practice?

A.—There are reasons why the best results will not be obtained if this practice is followed.

It is generally conceded that it is not good practice to make a release on a long

air train after making a five-pound reduction, if conditions are such that it is practical to make a further reduction. If a long train is brought to a standstill with a light reduction a more prompt and sure release will result if a total reduction of fifteen pounds is made. This gives a greater excess with which to accomplish a release and the wave of increased pressure will be more positive under these conditions. Supposing the fifteen pound reduction had been started but that pressure was still issuing at the exhaust port of the brake valve, at which time the brake valve was placed in release position. The wave of increased pressure starting back through the train would encounter a higher pressure as it traveled back than it encountered at the head end, thus tending to reduce the suddenness of the effect, with the result that the release would not be as prompt.

If on a train of twelve or fourteen passenger cars, as on a milk train, a release is made at a speed of eight or ten miles per hour, and this done when air is issuing from the train-pipe exhaust, a decided jerk is likely to result and the train may be jerked in two. Under these conditions it often happens that the rear brakes are applying harder just at the time that the front brakes are released. It is not necessary to state what will be the effect if these conditions exist, for this is one of the things we always try to avoid as we know what must happen if they are allowed to be present in a train.

As your instructor stated, it is always a good point not to start a release while the brake-pipe exhaust is still open.

Electricity—Motors.

BY ELWOOD A. GRISSINGER, E. E.

In the previous papers, it has been the aim to explain the dynamo, how a current was generated by it and the care such apparatus should receive. We now begin the study of the electric motor. In the dynamo, energy in the form of mechanical power is converted into electric energy. In the motor is found the converse of that proposition. As a matter of fact,

any dynamo that will generate a current can, by suitable arrangements, be made a motor. This is true, no matter whether the dynamo be capable of furnishing a direct or an alternating current.

The north pole of any magnet will attract the south pole of any other magnet. If one magnet be fixed and the other free to move, the latter will be moved toward the former in proportion to their relative strengths and the distance they may be from one another. The tendency will be to set themselves in such a way that their respective lines of force will join one another and move in the same direction. What happens, therefore, in an electric motor is, that there are a number of magnets on the armature whose lines of force, endeavoring to work into and in the same direction as the magnetic field, turn the armature about upon its axis.

If the simplest form of dynamo, illustrated in a previous paper, is recalled, it will be remembered that it consisted of two field poles, a single coil of wire fastened to a two-part commutator. If a current of electricity were sent through such a coil, the passage of the current through the wire would produce lines of force circulating about it, and would make of that coil a form of magnet. There being already lines of force passing through the coil from the north pole to the south pole of the magnetic field, those lines of the coil would endeavor to set themselves along the other lines; and if the coil were free to move about an axis, it would move until those lines coincided and acted in the same direction. A part of a revolution is therefore made. If now, by means of the commutator, the current in the coil is reversed, the direction of its lines will be reversed, and it will move again into a new position. This movement would continue as long as current was supplied. In the regular motor, the number of coils are multiplied just the same as in the dynamo. What really makes a motor go is the attraction of one magnet for another; the fixed magnets of the motor field constituting one magnet and the ever-changing magnets on the armature forming the others. The function

of the field magnets on a motor is the same as on a dynamo; that is, they form the magnetic field. The commutator receives current through the brushes from the source of supply, and automatically changes the direction of the current in the armature coils. The armature of a motor is of the same type as a generator—rotates on an axis and carries the movable conductors. A motor and generator will look alike, and weigh about the same for equal output, but when running there will be some difference between the strengths of armature field and fixed field. The elements of design are the same all the way through. In the design of a dynamo, the first point to be attained is uniform voltage; in the motor, uniform speed, when receiving a current at a uniform pressure. Both are analogous.

There are as many forms of motors as there are dynamos. In the issue of this JOURNAL for April, drawings were presented outlining the windings of different forms of dynamos. Those drawings will suffice to illustrate the different styles of motors. First, we will consider the shunt-wound motor, the armature and field of which can be seen in Fig. 4 of the April number of the JOURNAL.

The shunt motor is so called because its field circuit is in shunt relation to the main circuit, from which the motor derives its supply. The shunt winding on the fields consists of a large number of turns of fine wire. It may or may not have a field rheostat in series with it. Usually, on motors of ten horse-power capacity or under, no field rheostat is used, but motors of larger size should be so equipped. The function of a field rheostat in such a motor is to regulate the speed; as with the dynamo, inserting a resistance in the field circuit will weaken the field. When the field of a motor is weakened from any cause whatever, the armature will rotate faster, irrespective of the load. Therefore, by using the rheostat the speed of the motor can be changed by hand regulation. Any variation in the voltage applied to a motor will produce a corresponding variation in the speed of same. This variation of speed is

almost directly proportional to the variation of voltage; *i. e.*, if the voltage varies up or down 10 per cent, the speed of the motor will change through about the same range.

Shunt motors are used for all general power purposes, such as are found in machine shops and other industrial establishments where may be found general manufacturing. They are always used where uniform speed is required. The latter feature is very important, and is possessed by the shunt motor in distinction to all other forms of direct-current motors made. Throughout the range of load of such a motor, the variation in speed from no load to full load should not exceed a few per cent of normal speed. Such a motor is safe to handle and easily controlled. It will run just as well at no load as at full load, and whatever may be the load upon it, the power taken from the supply circuit is only that necessary to do the work at the pulley plus the internal losses in the machine. The reason the motor runs at nearly uniform speed is because its field is excited independent of the armature current. If the pressure of supply is constant the field current will be constant, and hence the strength of field magnetism will remain nearly constant. Any difference of same will be due to the demagnetizing effect of the armature magnetism upon that of the field. In well-designed motors, the field is so proportioned as to overpower the armature reaction, reducing speed variation to a minimum.

Motors should have the same care as dynamos. They should be installed with the same precaution. To start a shunt motor, it is necessary to know that the voltage of the circuit to supply the motor is of the proper dimension. It is not pleasant to try to run a 110-volt motor on a 500-volt circuit. The wiring to the motor should lead first to a two-pole switch which is equipped with fuses. From the switch the wires should run to the shunt-field winding first. A second set should run to the armature, one lead going direct to a brush and the other passing through the starting device, thence to the other

brush on the armature. The starting device is known as an automatic starting and stopping rheostat. This is built very similar to a field rheostat, but having less resistance and able to carry more current. This device is made of iron, the resistance consisting of iron wire in some cases and german silver in others. The wire is made up in spirals and connected together through buttons on top of the box. Over these buttons a blade is made to pass by means of a handle. When the handle is at the off position no current can flow through it, and hence none can get into the armature. When the apparatus is set up and wired in, see that the starting device is at the off position. If it is, throw in the switch. If the wiring is correct the motor fields will now be excited, and can be tested by approaching them closely with a piece of iron or steel. If the field is there, it is safe to put current into the armature. This is done by turning the handle of the starting device so that the blade covers the first button, and then as the motor starts and gets speeding up, pass successively and gradually over the remaining buttons until all are cut out, when the motor will at once acquire running speed and is ready for business. To stop the same, pull the switch quickly. To reverse the direction of rotation of a motor, change the armature connections from one side to the other, or do the same thing with the terminals of the field windings. Of course, in doing such, it is necessary to throw the current off. The starting device should be kept clean. It corresponds to the throttle on a steam engine, and is equally important. A motor cannot be started unless a resistance is temporarily placed in series with the armature circuit.

Another form of motor, less in use, corresponds to Fig. 3 in the April issue of the JOURNAL. It is known as the compound-wound motor, by virtue of having a shunt and series winding on the fields. In this motor the speed will drop off as the load increases, provided the series and shunt fields are working in the same direction. If they are working in the opposite directions—differently—the motor would in-

crease in speed as the load increased. The speed drops in the first case because the main current passing through the series field makes it stronger, hence slower speed. In the second case, the main current again passes through the series coils, but in an opposite direction to the shunt, and, therefore, the field will be weakened in proportion to the load and the armature will speed up accordingly. A field rheostat can also be used in a motor of this type, and a starting device is a necessity. Wiring and connecting in should be arranged the same as with the shunt motor. Compound-wound motors have a narrow field of service. Their present use is almost limited to elevator service, although there was a time when the same were advocated for street car service.

We come now to a consideration of the third class of motors, known as a series motor, and shown in Fig. 2 of the April issue of the JOURNAL. This is the most interesting, perhaps, because it is the type in use almost exclusively on all electric cars in existence, and for many other classes of service. As in the dynamo, all current passing through the armature passes through the field windings. The field strength, therefore, will vary with the amount of current flowing through the armature, which latter depends upon the amount of work the motor is doing. With every change of current there will be a change of speed, and such change will, therefore, extend over a very wide range.

We have all been on a street car and noted how much slower it ran when overloaded. A shunt motor would have drawn the car at almost uniform speed. The question is asked, perhaps, why use the series motor? It has other advantages which are paramount. Chief among them is its starting torque, or starting effort. It is capable of developing much more power at the start than the shunt motor; will do it with less fuss; is less liable to get out of order, and will attain running speed quicker. With a series motor a starting device is also employed, and this starting device is at once a combination of starting rheostat and field

rheostat, for the reason that the current which passes through the armature also passes through the rheostat and the field.

The series motor for street car service is an inclosed motor, and water-tight. The speed of the armature is too high to make it a part of a car axle, so it is necessary to reduce the speed through the medium of gearing. Upon the end of the armature shaft a pinion is mounted which plays into a split steel gear fastened upon the car axle. Both gears are best-cut gears, and are also inclosed in a cast steel case, which is water-tight. This gear case must always contain enough heavy grease so that the larger gear wheel revolves in it and keeps the teeth thoroughly lubricated, thereby minimizing wear and noise. Rawhide pinions are used to some extent. It is an open question which is the better. All motors now used are of the single reduction type, four-pole field. Other types had two poles, and a double reduction, necessitating two sets of gears.

The street car motor is suspended from the truck of the car, and has one side of the frame fitted with bearings in which an axle of the truck revolves. The other side of the frame may or may not have a projection, or nose, which has a coil steel spring above and below it. These springs rest upon an angle iron extending across the truck. Such suspension is called a *nose suspension*—the springs permitting a limited movement up or down when starting or stopping the motor, and also giving some protection to the motor when the car passes over rough track. If the nose suspension is not used, it will probably be the cradle suspension, in which case parallel bars support the motor from each end, running at right angles to the shaft, these bars resting at each end upon springs, which latter rest upon the truck proper.

Ordinarily, a street car equipment consists of the following apparatus: Two motors of equal size, two gears, two pinions, two controllers (one for each end of the car), one diverter (rheostat or resistance box), one lightning arrester, one choke coil, two canopy switches, one fuse

box, one trolley hose containing wires which are to connect the controllers, motors and resistance box, car lighting circuits with snap switches.

Two controllers are used, because it has been found by experience that a single controller to be operated from either end of the car was not practical. A controller is of as much importance as the motors. It corresponds to the steam engine throttle—is a starting device. Controllers are of different design, depending upon whether they are to operate one or more motors, and what capacity. Controllers in use in two-motor equipments are of the series-multiple type, which permit of the motor starting in series with one another and the rheostat, and gradually increasing in speed and power until they are in multiple with each other and with the line—all resistance in the rheostat having been cut out.

The controller, in general, consists of a rectangular metal case, three feet or more in height, eighteen inches in width and about eight inches in depth. The front of the case can always be removed. Within the case is mounted vertically a cylinder, the shaft of which rests in a conical bearing in the bottom, and, projecting through the case, terminates at the top in a short, heavy brass handle. Upon this cylinder are mounted copper segments, carefully insulated from one another, and so placed that when the cylinder is turned a portion of a revolution some one or more segments will make contact with fingers on opposite sides, thereby permitting some current to flow through a path temporarily provided. The function of the cylinder and fingers is virtually that of a large number of switches. There are usually seven different positions for the controller, and hence the cylinder. This enables the car to be started gradually. A smaller number of notches would cause the car to jerk unpleasantly. In stopping a car, the controller must pass back over the same course. In early forms of the device, vicious sparking ensued at the contacts and caused much trouble. Then it was discovered that an electric arc could not maintain itself in a magnetic

field. Subsequently, the magnetic blow-out principle was incorporated in controllers, and a great source of trouble removed.

Breakdowns.

J. W. READING.

When a locomotive from any cause quits doing business, the first and most important duty for the engineer is to try and prevent getting "rattled." The man that can "keep his head" makes far the best showing. To the young engineer and even to some of the older ones possessing a highly strung nervous temperament a breakdown is a trying position, particularly if in passenger service or at some point along the line where it does not take long for an audience to congregate.

The engineer on these occasions will begin to wonder if there are any mechanical experts watching his movements, and the more he thinks about it the more he becomes unfitted for the work incumbent upon him. If, about "this stage of the game," some outsider ventures a suggestion it's "dollars to doughnuts" the offer will be rejected and language may be used not noted for its elegance.

The letter from Brother "Con. Troller" in the March number describing the mistakes of an engineer leads me to believe that he simply got "rattled" and would undoubtedly have done better if his audience had remained inside the coaches.

While young in service as a locomotive engineer I had some experience of the kind referred to which I will relate.

The train was a passenger, the time about noon one hot day in June, the engine stripped follower bolt in right piston head which resulted in the breaking of the cylinder head and cylinder, bending piston rod and partly shearing bolts in both ends of the main rod.

Before I could get the necessary tools and begin work the train crew and male passengers began to congregate around the damaged cylinder, effectually shutting out any air that might be in circulation. I had hard work trying to start rod bolts and the disconnecting was considerably delayed in consequence. No

one offered to show me just how easy they could get those bolts out, but my ears were more or less sensitive to considerable comment. I finally got hot mentally as well as physically and swear words began to escape in profusion. A very impolite request was made to the spectators to move back and give me a chance to breathe, as I wanted to live long enough to get those bolts out. Had some one attempted to "butt in" about that time there would undoubtedly have been an explosion.

After getting to terminal, the conductor came up to the engine and handed me a "tract" entitled, "A kind word to Swearers." Conductor said that a passenger who looked like a preacher gave it to him to hand to me. I said to my conductor, "Why did this man not present the tract himself?" Conductor said the man's excuse was that he did not have time.

Thirty years have elapsed since the incident related, and I still retain the "tract" as a memento of that occasion.

Not long since I had some experience on the audience side of the question and it was a case very much like the one described by Brother "Con. Troller." I was riding on a passenger train when we quite suddenly made a "rural" stop. I did not leave my seat to investigate cause of delay, the sound of the exhaust told me as plain as words what had occurred when engine started train again. We moved along a few miles further when "rural" stop number two was made and my curiosity got the better of my judgment to an extent that prompted me to go forward and help make a wind-break, as quite a goodly sized audience was already upon the scene. The day was a hot one and the time about noon and like Brother "Con." we were hungry and getting close to our dinner that we could almost smell it.

When I reached the engine I found the enginemen trying to reset a slipped eccentric. I did not like their manner of procedure. I was convinced at once that they were not adepts in the manner of eccentric setting, and I finally lost my self-control to an extent that prompted

me to ask the engineer if I might be allowed to make a suggestion. I was not so diplomatic, however, as Brother "Con." tells us he was, I did not present my card first and possibly there was where I put my "foot in it." I got the "turkey down the bottle look." I was sat upon so hard it took away my breath. I can feel the jar yet. The answer I received was very brief and right to the point. It was this: "I have been running a locomotive for twenty-three years and know my business." Of course I made a "sneak" and wondered if I should ask some one to kick me.

There are numerous books on locomotive running and management and the most of those that I have read give the same old rule in the same old way, namely, "Place engine on head center," or "preferably the forward center of disabled side; put reverse lever in back motion; make a mark on valve stem close to stuffing box, then place lever in forward motion and move eccentric around on driving shaft until the mark on valve stem gets back to the place it started." When this plan is followed with an indirect motion engine—and far the largest majority of locomotives in service in America are of the indirect motion pattern—it brings the eccentric to a position pointing skyward, or on top of driving axle; of course, I am referring to a slipped go-ahead eccentric. If the eccentric is free on the axle it is a difficult matter to move it to a position where it must go, if engine is placed on forward center; the heavier the eccentric rods and straps the more difficult is the adjustment.

Every writer who has advised the placing of an indirect motion engine on forward center to set a go-ahead eccentric has been in error. The eccentric of an indirect motion locomotive follows the crank pin one fourth of a turn, less the advance of the eccentric to overcome the outside lap and lead. When the crank pin is on back center the eccentric, without consideration for lap and lead, will point directly to the earth; when in this position the valve is in the center of its

travel and eccentric at a right angle to the main pin. In this position if an engineer knows the amount of outside lap and lead he can make a mark on valve stem the required distance away from stuffing box and then move eccentric toward crank pin enough to bring mark flush with face of stuffing box. For illustration we will suppose a case where the engine goes suddenly lame and quits business. Engineer looks for cause and finds right go-ahead eccentric loose on axle and cam pointing down while crank pin is on forward center. Which would be the common-sense remedy? Try to get eccentric to top of axle or move engine back until main pin was on back center, thereby turning axle nearly to position desired inside eccentric. Engines can be moved backward with a loose go-ahead eccentric. In this case the engineer immediately moves his engine to back center, notes if cam of eccentric points straight down, makes a mark $\frac{1}{8}$ of an inch from stuffing box, $\frac{3}{4}$ of an inch is allowed for outside lap and $\frac{1}{8}$ for lead. Fireman is requested to move the eccentric towards crank pin, or ash-pan, if you please, until valve has traveled ahead far enough to bring mark flush with stuffing box.

Supposing this engineer does not know the amount of outside lap and lead, with lubricator open on that side, or by a slight opening of the throttle he will have eccentric moved as stated until steam shows through the back cylinder cock. If it should happen to be one of the back-up eccentrics, engine is moved ahead to forward center, which position brings back-up eccentric pointing to the earth. Eccentric in this case must be moved toward the links to bring it nearer to the pin enough to overcome lap and lead, valve in this case is moved back to slightly uncover forward steam port.

Where eccentrics have been keyed and key lost, the key seat in driving axle and eccentric will designate, without further effort, the proper location of eccentric, but little moving of same will be necessary if engine is placed right.

In the case heretofore mentioned of my experience as a looker-on, the first thing

I looked for when I reached the engine was to see what eccentric had slipped and at once noted position of crank pin on that side. It was not where I would have wanted it. Fireman was trying to move eccentric toward top of axle and was seemingly up against a hard proposition, and the suggestion I wanted to make to that engineer was to move his engine back far enough to bring crank pin on back center when the rest would be easy.

With the present mode of keying eccentrics to shaft, a slipped eccentric is not nearly so common as in "ye olden time," yet they get away occasionally and it is well that enginemen should be posted as to best methods of getting out of the trouble.

I wish to say a few words to the two Brothers who have taken issue with me regarding the "Model Engineer." In those articles, while advocating loyalty and good service to the employing company, I endeavored all the way through to show that it was no small part of an engineer's duty to prevent as far as possible bringing upon himself the extra and disagreeable labors which are a necessity when engine failures occur, saying nothing of the long hours on duty, or some charge brought against his ability by parties in authority who know but little about an engineer's duties.

I cannot believe it possible that a man called in the night only one hour before his leaving time, can do what Brother Stewart has designated and do it right; everything must go with a rush, even the food, and this food rush is responsible for more evils than anything else on earth, unless perhaps it might be the quality and quantity of the provender.

I should insist on being called earlier by at least one-half hour, unless I was fortunate enough to work for a company who furnished hostlers for taking out as well as putting away the locomotive.

I have in almost every issue of the JOURNAL read complaints of long hours on duty, and it is a fact that on our single track railways the men in low class, heavy freight service see more sidetrack delays as time and business advances.

High class freight service was not described nor intended in the articles which depicted a model engineer in "heavy freight service." I have no use, nor ever had, for the man who is always monkeying around his engine. It is a good thing to "leave well enough alone." I cannot agree with Brother Stewart that articles on lines given can injure our cause; intelligent officials will approve of it.

Effect of Counterbalance.

BELLEVUE, O., May 1, 1905.

EDITOR JOURNAL: The opinion prevails among those who have received a theoretical education in railway mechanics, that locomotive engineers have little knowledge of the finest points of the working of the locomotive, and are simply "runners" or "drivers," as they have it in England, and yet with all their superior opportunities for education these collegians often pin their faith to theories regarding the operation of the locomotive that are, to say the least, impracticable. The naturalist studies the habits of animals in their native haunts, and in doing so sacrifices convenience for fact. The mechanical investigator studies the locomotive in his native haunt, and in doing so sacrifices fact for convenience.

There are some things we are asked to believe that appeal to our reason, but when they tell us that at 59 miles an hour or over our driving wheels are raised from the rail by the centrifugal force of counterweights, they are simply proving a lack of close acquaintance with that contrary machine which so persistently refuses to perform in the manner claimed by some of our technical educators.

Several years ago one of the leading universities installed what is known as a locomotive testing plant, for the purpose of demonstrating in a practical way the operation of the locomotive. Much good information no doubt was imparted to the students in this way, but when the question of counterbalance was considered, a mistake was evidently made, for a locomotive held stationary and

worked on rollers, insofar as the counterbalance is concerned, is very different from the one we ride on over the road.

This test proved that when the wheels revolved at a velocity equal to 60 miles an hour the driving wheels raised from the rollers, and we are asked by those who are regarded as authorities, to accept that claim as a mechanical truth, and that the driving wheels of our locomotives raise from the rail once during each revolution as the result of the centrifugal force of the counterweight. Does it not seem strange that if such is the case we should need to be told of it, and is it not still more wonderful that anyone can believe such a thing takes place after giving the matter any thought? Just consider for a moment what it means to have the driving wheels leave the rail once during each revolution. It is supposed to occur when the counterweight is up, and as those of the left side follow those of the right side one quarter revolution, the effect of both, as we are asked to believe it, would furnish a nerve racking experience indeed for the men who ride the engine. We certainly have our share of troubles in the railroad service, riding flat wheels and pounding boxes, and we are made of pretty tough material or we could not stand it all as long as we do. We have our Wild Irishman, our Flying Dutchman and other freak types of runners. We have even here and there a cowboy engineer, but the broncho locomotive, such as they have been experimenting with in some of our institutions of learning, is a refinement of locomotive development that as yet has not appeared upon the stage of practical railroading.

There is no doubt that any of our locomotives in service today will, when held stationary and working on rollers, lift her driving wheels from the rail, if wheels are revolved at a high velocity, but in this operation we have a purely rotary motion. When an engine is passing through space at a speed of 60 miles an hour, the counterweight has a horizontal movement that is not taken into account by the student who observes the machine

operated on rollers, and he therefore loses sight of the fact that the movement of the counterweight in the direction the engine is going does not raise from the rail to its highest point at the same angle as when the motion is purely a rotary one, and the influence of the horizontal movement modifies the lifting tendency of counterweight to an extent that precludes any possibility of the driving wheel of a locomotive raising from the rail when operated as a locomotive in actual service. Fraternally yours,

T. P. WHELAN.

Defective Balance Strips, Etc.

ELMIRA, N. Y., April 12, 1905.

EDITOR JOURNAL: In reading the different publications devoted to matters of general interest to motive power men, we frequently see an article regarding broken and blowing balance strips, used with the balanced slide valve. This is a very common defect, but many times there seems to be more or less guesswork on the part of the "engineer" as to which side of the engine the balance strip is blowing on.

I have known of instances where the trouble, was not reported at the end of the trip, because the engineer was uncertain which side was defective and was afraid he would report the wrong side. On the other hand, also, both sides have been reported when only one side was blowing, in order to be sure to have the matter remedied. This, besides entailing a useless expense and delay, often fails of its object. The chances are if the good side is taken up first, and of course, nothing found amiss, the foreman will conclude the engineer has had a pipe dream and the other steam chest will not be taken up.

The method of locating this blow advocated by some writers is to feel the valve stems when the engine is working, on the principle that the broken strip destroys the balance of the valve, causing it to drag on the seat, the excessive friction resulting, causing a trembling motion in the valve stem, which is easily detected.

This is a good way, provided every part of the valve gear is in good order and the valves are well lubricated; but if the valves are dry, the rocker box loose on frame, or too large for the rocker shaft, worn link blocks or any derangement of the valve gear, the effect on the valve stem will be the same as from the broken strip and one is apt to report the wrong side.

Another method I read of is to place the engine on the quarter on one side and after opening the throttle enough to cause the strip to blow, place the reverse lever first in one corner then in the other, then place the engine on the quarter on the other side and repeat the reversing act, and the side which handles the harder when on the quarter is the defective side.

But in giving these directions the writer forgot one very important part: he didn't tell us what power we are to use to reverse the engine with; certainly no human power can handle a battleship with the throttle open unless they handle very different than the ones running in this section of the country.

The blow which accompanies a broken balance strip is, as every engineer knows, unlike any other blow about a locomotive. The steam passing between the balance strips and the pressure plate, passes down through the hole in the top of the valve, into the cavity of the valve, and so on out the exhaust port to the stack. It is very evident that the sound from this blow will only be heard when the exhaust cavity is free from steam, as when the exhaust opens the cavity of the valve is filled with steam from the cylinder and the small amount of steam blowing through the top of the valve can make no sound. For example, suppose the balance strips are blowing on the right side. Now, with the engine on forward center and moving ahead, the blow will be heard during the time the crank pin is moving from the forward center to the lower back eight, which is the point of exhaust for the front end of the cylinder. No blow will be heard from this point to the back center, but will again be heard from the back center

to the top forward eight, thus giving two distinct blows for each revolution of the drivers. If the engine is moving slowly it will be found an easy matter to locate this blow in the above manner.

Fraternally yours,

S. B. MORRIS.

Color Blindness, Etc.

FRUITVALE, CAL., April 16, 1905.

EDITOR JOURNAL: In these days when examination is the shibboleth to a railroad job, there is an examination that is just as important to the man as examination for color blindness. I refer to a phrenological examination. A good phrenologist will discover any tendency to color blindness in the candidate for railroad honors about as quickly as some of the so-called experts on rainbow threads of wool. If railroad companies want only the best men, and no doubt they do, it is only fair to the young man to know in the beginning if he is to be a successful railroad man. Many young men meet with disappointment after they have passed through the first degrees of the business by being turned down for deficiencies on different points in their examination for advancement. Men often fail in their examination for advancement not for lack of study, rather lack of comprehension. In fact, it is not in them to master the details of the business. In my younger days I knew boys who went into a machine shop with myself; some made a success of the business, others were total failures. A phrenological examination in the first place would have said, "Smith, you are a natural mechanic. Jones, go and study law. Brown, you stay on the farm." The above are not at all imaginary, but facts, and if he had told Bill Green to get out of the shop and play poker for a living, the case would have fitted exactly. Here were three out of four who mistook their calling and saved their credit by drifting into their natural channels.

A man to be a good modern locomotive engineer should not be deficient in the organs of color, form, constructiveness, caution. We find color, order, calcula-

tion, form, weight, size, all around the eye and all good things to have, and right in the forehead we find casualty, just the thing to have large, and with large constructiveness you will not be in a hole when the old mill breaks down on the road, and right under casualty is locality, and having it large you will not lose your land marks on a dark night. These organs come under the head of perceptive faculties, and to be a careful, cautious, level-headed, prudent engineer, they are a good stock to have on hand as a starter, but they must be born in the man.

Yes, I believe the first thing a candidate for railroad honors should do would be to get a chart of his head carefully marked by a reliable phrenologist.

Now, in regard to color blindness, why not test the eyes frequently and know for a fact whether color blindness increases or decreases as the candidate progresses in his work. You boys all know that in switching at night it is impossible to see signals of any kind immediately after putting in a fire. What effect does it have on the eye to change instantly from a bright fire to the blackness of night? Careful experiments on these lines should be made. Stand right up in meeting, my good Brother, and tell us what you think.

W. DESANNO.

Answer to Brother Keating—Handling Air, Etc.

GLENN'S FERRY, IDA., April 19, 1905.

That was a daisy Brother Keating gave about his engine stopping. I am going to make a try for the cause. Eliminating any possible defect from steampipe entering chest to eccentric and main pipe, it looks to me as if the trouble was between chest and dome; that being so, the throttle valve itself may become loose on stem and would have a tendency to open and close frequently without moving throttle lever, until finally it was loose on stem and nuts worked off so that valve remained on seat regardless of moving throttle lever. The moving of valve up and down would cause engine to sound lame.

The Rock Island used to have the throttle valve at the port end. Perhaps

something was in dry pipe or standpipe having some movement till finally it closed passage.

The other day I had a compound consolidated pulling 14 loads and 44 empties, loads ahead. At the last moment just as we stopped we felt a jerk and found a drawbar out. We did this twice, then conditions were such as we could stop afterwards with a few hand brakes and the driver brakes.

I have handled air since 1889, from the straight air to F 6 slide valve feed valve attachment on mountains and plains, but couldn't cut the mustard with that train. There was a bad leak in train line on engine, pipe split. I claim it was a very unusual and bad train to handle by air.

I tried keeping train stretched, first time making two reductions of about 7 pounds and 3 or 4 pounds just before or the moment of stopping. Away she went, drawbar out between empties and loads. The next time I tried bunching the head end, same sudden stoppage and jerk as before, drawbar out second car from empties, percentage of braking power greatly in excess on empties than on loads, straight track, slightly rising both places. I realized from make-up of train it would be hard to brake, but didn't expect to get a drawbar every time we stopped, New York equipment.

One more matter, I am a crank on examination. I believe in it. I am also a crank on discussion of technical subjects and train orders in the Division. That's the place to discuss those subjects for the enlightenment of all present. Get through with the order of business, don't dwell on grievances or financial grievances too long, then start on various incidents occurred on the road. It will help some of the Brothers and give all a chance to form opinions. The truth is, too many Brothers hesitate to start a discussion about different events happening on the road for fear they will be thought ignorant. That is just what causes lack of knowledge—that very reticence. I agree with Brother Craig of Div. 89.

A. S. ERSKINE, Div. 564.

Technical Engineer vs. Promoted Fireman.

LOS ANGELES, CAL., April 7, 1905.

EDITOR JOURNAL: A graduate of polytechnic school, above average intelligence and about twenty-five years of age, came west in '91 to look for a soft job. Through marriage he had a pull with the third vice president of a certain railroad. He was made gang boss in a shop over men who were better qualified for the position. It caused friction, but he kept his job, as all he had to do was to look wise and work by blue-prints; practical men did the work (if let alone) O. K. It was impressed on him, from his point of view, the ignorance of the old fogies that were on the best runs, averaging from \$150 to \$175 per month. He thought one of those runs would just fit him, but the master mechanic informed him that owing to a contract with engineers and firemen, to become an engineer he would have to start in as fireman. Engineers holding those good runs were less than 10 per cent of the total number, and record proved that only one out of every thirty-five entering service as engineers could ever hope to get one of those runs. This should have made it plain to Mr. Wiseman that with his pull and diploma his chances for master mechanic were much better (from engineers' standpoint a better job). He used to ride on the engines whenever he had an opportunity to get information. He learned the road and many other things he had not learned at college—one, that engineers and firemen did not do their work according to the up-to-date methods taught him by experts (in theory only). The master mechanic was ever ready to hear his tales, and when engineers were called in for something a little hard for the master mechanic to prove them guilty, Mr. Wiseman was usually called in to give expert opinions that would help to convict and prove on paper how it could be avoided. His experience gained by riding on engines, in addition to his technical training, carried great weight with the master mechanic. The engineers often wondered if it was the grudge against the engineers' contract

or Mr. Wiseman's pull, that shaped this course.

Some trouble over an engine overhauled under his charge caused him to remark that engines overhauled by him were as perfect as up-to-date mechanical skill could make them, but were ruined through ignorance of engineers who had no mechanical or technical training. (Now will you old fogies be good?) He should have known that text-books were supposed to be theory gained in practice, exaggerated to give a standard better than could be worked out in practice.

The A. R. U. strike caused many of the engineers to be governed by local conditions instead of B. of L. E. laws and terms of contract that they were duty bound to obey and protect. Results: lost contract and many good engineers lost out, officials ran things to suit themselves, favored whom they pleased, the engineers who remained were given an object lesson of the value of a contract. Mr. Wiseman was examined on rules and sent out to learn the road same as any engineer, although he knew the road pretty well.

I will give you a few of his troubles that he knew better than to get into, but did not have practical training that enabled him to think of and do the right thing at the right time.

He started on an 80-mile run with freight train. The engine had one non-lifting injector. When he tried injector before starting, he failed to close foot-cock; when injector failed, he tried every way he could remember to get them to work. He had not learned to look in tank, pulled fire, towed in.

The next trip on same run he would shut off where train would roll, only use steam where he had to; uniform sheet received no attention from engineers he had been riding with, he avoided such mistakes. As it was all up and down hill, injector failed; he learned from last trip to look in tank. The water was gone but he could get to next water station with engine. After three or four applications to stop at water tank, he had little pressure left in auxiliary reservoirs. He left brake valve on lap. In looking over time

table he discovered 15 was due in 30 minutes; he would have to hustle. The fireman was an experienced fireman and suggested he would stay and flag, that head brakeman would fire that distance O. K. He agreed and started back to the train alone. There was about one-half mile of straight track where he left train daylight. He kept up a 40-mile an hour gait until he came in sight of train. As he had left brake valve on lap he had no air to set brakes. He was getting quite close to the train and nervous. He reversed engine, did not open throttle, blowed off steam chest; nothing to check speed now. He had to learn another lesson not taught in college—how to jump. A barbed wire fence to guard cattle checked his momentum, relieved him of most of his clothes and scratched him up some. When he got to the engine there were two cars on fire. (This is an amusing incident to show how inexperienced men get rattled.) The brakeman was sure fireman did not jump and was under the wreck, and called to the conductor and engineer to help find him. After all three had looked until the heat of the fire had driven them away from the wreck, the engineer remembered about leaving the fireman to flag No. 15. The conductor showed him a footnote on time table that 15 only ran to Junction 13 from where fireman was flagging on Sunday. This was Sunday—no day for what the conductor said about Mr. Wiseman and college engineers in general. But for his pull this would have ended his railroad career. The conductor and head brakeman were discharged for not protecting head end of the train.

His next trip was on a 70-mile local freight run, card time 10 hours. After 15 hours he made 50 miles, and was out of coal. They sent a car by a passenger train and section men shoveled on all the tender would hold, but the conductor lost confidence in him and had car put next to engine. He made 15 miles further to a blind siding on hard pull. When he stopped to head in he could not start train. In taking slack he pulled the truck from under chained up car, made a delay getting truck back under car, and flues leak-

ing used up all the water in the tank, and had to pull the fire out and be towed in; time on trip 23 hours. The night express that he was taking siding for had delay of four hours. The night express engine could have done wrecking while he ran four miles for water. A fireman made engineer would have thought of this. The fireman was discharged; pull saved Mr. Wiseman.

When the fireman was asked why he did not try to help out, as it was a duty he owed the company, his answer was that these kind of engineers were robbing him of the promotion he aspired to and was daily trying to qualify himself to fill, and that it was an unwritten law with firemen to give such men a fair field and no favors, as when they were promoted they were not given old firemen to show them how to cut the mustard; and that firemen never married the niece of the third vice president, that coal dust shut out their beauty to such an extent that only poor girls would notice them. The master mechanic claimed this speech was what fired him.

Some years ago I helped to make this fireman a B. of L. E. man and he is now chief of a division.

Mr. Wiseman was now put on a light local passenger run and he made nearly every blunder that was possible to cover up. After he could get over the division after a fashion, he started to make an oil record; 500 miles to a pint of valve oil, 200 miles to a pint of engine oil was his mark. On bad water and sandy dry country he ruined on an average an engine a week. The engines were given to good men to run, and in some instances engineers did time to keep the blame off Mr. Wiseman.

His last offense was getting valves so dry that when he shut off he could not drop lever; valves stuck fast to seat and engine would not start train. He disconnected and was towed in. This ended his career as an engineer. Valves act this way on bad water, but real live engineers take out relief valves, and while fireman pulls on reverse lever they jar valves with small end of pinch bar until valves move;

put back relief valves and as soon as possible give good oiling through relief valves. But sound of exhaust is to the fireman made engineer what heart beats are to the good doctor—tells him what is wrong and remedy to apply.

Four months convinced Mr. Wiseman, as he admitted, that on the engine was the only place to make engineers and technical graduates would have to fire just the same as others to unlearn some things they are taught at college, and to learn to think and act quickly; to learn by force of intuition to do the right thing at the right time when the unexpected happens.

This dry valve experience of Mr. Wiseman may be answer to the question of Bro. T. S. Keating of Div. 467, page 838, April JOURNAL, if question is to be taken as it reads.

Mr. Wiseman is master mechanic on a big trunk line, and frankly says his experience as an engineer was just what he needed, and when he looks back he is surprised he did as well as he did, and that he would not take upon himself the responsibility of putting men on the road as engineers until they fired at least two years after graduation from technical college.

Mr. Wiseman was well versed in the theory of locomotives and appliances, air brake drawing, shop practice, and had he taken a course as fireman, he would have made a good engineer.

There are several good business colleges. Do students from them become heads of business concerns? Do doctors from medical colleges start out to practice when they graduate? In no business would a mistake be as expensive as the one an engineer may make. No incompetent doctor could jeopardize life to the extent that an incompetent engineer can. Our best marksmen are not gunsmiths; our best surgeons do not make surgical instruments, or even know how to sharpen or repair them. It is as difficult to learn to successfully run a locomotive at college as it would be to teach a student to swim by theory. He must go into the water. The engineer must learn the essential part on the road. If some trunk lines

would fill the places of their fireman made engineers with technical graduates, the traveling public and Congress would do the rest. The old fogies would soon be put back with radical laws to protect them from absurd and dangerous experiments.

I want to say a word to some of our firemen who are following false prophets who fill them up with the rot about how railways want to get rid of their old engineers and want engineers who are up to date on technical knowledge. If railways wanted engineers to possess more technical knowledge it would cost less to post their present engineers on a few topics while they are giving good service, than to put on untried men who are top-heavy through being crammed with all kinds of theory, and would have to be taught practical duties at greater cost. How many of our firemen have technical educations? Some of you could not explain scientific problems relative to firing. When you learned how to do your sum at school you did not need the rule. Engineers have learned their problems and do not need to know all the rules. Learn all you can, but keep one thing in mind, that being crammed with theory is no guarantee you will be a success as an engineer. We want you to become good engineers to fill our places better than we did in our day. We do not want you to be handicapped by those who are after your dollars. It is your duty to protect engineer's position for your future. If we were indifferent about your future we would not care whether engineers were made in college or on the rail.

In another letter I will try to prove that engineers are not recipients of unearned salary, as many seem to think.

Fraternally yours,

R. W. KELLY, Div. 662.

Answer to Brother Smith's Question.

BIRMINGHAM, ALA., May 2, 1905.

EDITOR JOURNAL: Please allow me space to answer Bro. C. I. Smith's question in the May number, page 484, which relates to air brakes applying and releasing intermittingly while brake valve is in

running position. Train line and auxiliaries being charged to 70 pounds, the feed valve stops charging train line, and the leak in train line Brother Smith found before he repaired it, would reduce the train line before the feed valve could open and allow sufficient air to get in train line to overcome the leak to a point below 70 pounds. That being auxiliary pressure when feed valve stopped feeding, would force equalizing piston in triple out and put brakes on, which would reduce auxiliary to less than 70 pounds, and as auxiliaries cannot charge up while equalizing piston is out and train line can charge up while brake handle is in running position, the pump would soon charge train line up against the leak to 70 pounds, which is now greater than the pressure remaining in the auxiliary, which would force equalizing piston in triple back to release position, again allowing train line and auxiliary pressure to get back to 70 pounds, when the feed valve will stop feeding and the brakes will go on again to pressure. This makes same kind of a leak three or four cars back and put brake valve in full release; charge train up to 90 pounds or whatever your excess pressure is and watch cars in rear or close to leak and see when governor stops pump if these brakes don't go on before pump starts up again.

Hoping to see some other Brother's opinion on this, and thanking you for your space and time, I remain

Yours fraternally,

W. C. BROWN, Div. 156.

PORTSMOUTH, OHIO, May 5, 1905.

EDITOR JOURNAL: In answer to C. I. Smith's question of Division 359 will say, that there was a bad leak in the train line and that with the brake valve in full release position and the train line being charged direct from the main reservoir the leak was kept up and the auxiliaries charged up to say 65 pounds before the brake valve was placed in running position, then as the feed valve starts to close the feed to the train line at about 45 pounds and the opening is gradually made smaller until at 70 pounds it is

entirely closed. This opening through the feed valve at 65 pounds being too small to supply the leak, the train line pressure was reduced and causing the brakes to apply, then when the brake valve was placed in full release position the direct communication between the train line and the main reservoir, the train line is again recharged against the leak and the brakes released.

Yours fraternally,

E. A. LINDSEY, Div. 584.

Answer to R. H. Foreman.

S. CONNELLSVILLE, PA., May 5, 1905.

EDITOR JOURNAL: In answer to Round House Foreman's question on page 434, May number of the JOURNAL, he says there were no leaks in train line, no leaks in auxiliary connections. I presume he meant equalizing connections. The trouble was in pipe running from train line to pump governor. I would consider this a leak in train line, as train line pressure controls the pump with this style of brake valve.

Will some of the Brothers answer the following question through the JOURNAL?

Set a car out of train with train line and auxiliary charged to 70 pounds, open angle cock, drain train line, then go to auxiliary bleeder and release brake. How does the last 12 pounds get out of brake cylinder?

Yours fraternally,

W. F. HETRICK, Div. 50.

CONWAY SPRINGS, May 9, 1905.

EDITOR JOURNAL: In answer to the question asked by Portsmouth Round House Foreman in the May JOURNAL, I would say there was a leak in small equalizing reservoir or pipe connections between it and chamber D of brake valve, which caused train line pressure to unseat equalizing piston and make service application.

Your statement about main reservoir pressure running up to steam pressure sounds peculiar. The main reservoir pressure will not run up to exceed 20 pounds more than train line pressure unless the brake handle is left on lap position with a D 8 valve.

In answer to E. A. L.'s question in the May JOURNAL, would say, special passenger could not leave Rich Hill after 7:30 P. M. for this reason:

The special is running on a schedule which is or should be a supplement to the current time card on that Division, and in consequence of this the passenger becomes a regular train and is affected by the 12 hour rule. H. D. K.

Effect of Hot Driving Box.

RIVIERE DU LOUP, P. Q., April 15, 1905.

EDITOR JOURNAL: During the summer of 1898 I was running an old Grand Trunk engine on a ballast train over the Drummond Division Intercolonial Railroad. One night after leaving Carmel pit and coming in at Ashton Junction the engine got lame by degrees and so bad I had to stop to locate trouble. The first defect I found was right driving box hot and stuck up against top of wedge. I let down wedge, packed box and not finding any other defect, I started out and had no more trouble. C. J., Div. 204.

RAT PORTAGE, ONT., April 22, 1905.

EDITOR JOURNAL: In reply to T. S. Keating, Div. 467, concerning the mysterious stoppage of engine with nothing wrong with machinery or boiler, would say that a broken frame between the cylinder and main driving wheel would cause a similar action to the one mentioned in letter. Of course, when engine was at rest and the parted rail frame had closed up again, it would be very hard to locate, especially when the puzzled searcher was looking for something else.

ROBERT WILLIAMSON, Div. 535.

Several Questions.

VICTORIA, TEX., April 21, 1905.

EDITOR JOURNAL: Will some Brother make reply to the following:

How would you repair a broken stem on release valve on steam chest so it could be held on seat? Stem broken off valve in this manner will allow it to get cocked.

Supposing you were on No. 1 inferior train and receive the following order: "No. 2, Engine 674, will meet No. 1, Engine 673, at C. No. 2, Engine 674, will run one hour late from A. to M." When you arrive at C you see you can make B on the hour late. What are you going to do? E. A. KRAUSE, Div. 866.

Rights of Trains.

AURORA, ILL., May 7, 1905.

EDITOR JOURNAL: In the May number of the JOURNAL we are asked to discuss

the rights of trains affected by the following order after a certain time:

Engine 352 will run as passenger special, leaving Pulaskia on the following schedule, having right of track over all trains except first-class. Leaves Pulaskia 6 A. M., Draper 6:25 A. M., Allisonia 7 A. M., Rich Hill 7:30 A. M., arriving at Chestnut Yard 8 A. M.

In the discussion of train rights we presume it is to be done under Standard Rules. It would be impossible to discuss intelligently the train rights under rules made by and wholly a part of the timetable of an individual railroad. In Standard Code a rule says train orders must be in the prescribed form when applicable.

According to this rule the above order is wrong and a proper order would read thus:

Engine 352 will run extra, leaving Pulaskia on Monday, May 9, as follows, with right over second and inferior class trains. Then follows schedule.

In definitions we find—Extra, for any extra except work extra; Work Extra, for work train extra.

The question is, would Extra 352 lose its rights when 12 hours behind schedule time? The rule governing in this case reads thus: Regular trains twelve hours behind their schedule time lose both right and class, and can thereafter proceed only by train order. Orders held by or issued for a regular train become void when such train loses both right and class.

It will be observed that this refers to regular trains only. It follows that the order held by and the superiority given in the order to Extra 352 remain in effect until arrival at Chestnut Yard, unless annulled by a subsequent order.

The answers given to my question in the March number of the JOURNAL are all very good and correct except that Brother Swank is a little "off" in sidetracking No. 8 at L.

JAMES LENAHAN, Div. 32.

NORFOLK & WESTERN RAILWAY COMPANY.

31 Telegraphic Train Order No. 54. 31 Superintendent's Office, 4-26, 1905.

For Glenvar, Va. To all concerned:

Engine No. 90 will run Extra, leaving Roanoke on Thursday, Feb. 17th, on the following schedule, and will have the right over all trains.

Leave Roanoke 10:10 A. M.

Elliston 10:45 A. M.

Arrive at East Radford 11:35 A. M.

According to Standard Code of Rules, how should first-class trains clear this train?

Please answer and oblige,

R. L. EVANS.

JUNE, 1905.

Consistency.

The National Association of Manufacturers met in Atlanta on May 16, and Pres. D. M. Parry, as usual, devoted the most of his address to the labor question. He condemned the eight-hour day, is happy in the thought that the influence of the Manufacturers Association defeated the anti-injunction law in Congress, and abhors Socialism and its tendencies, but does not seem to realize that his attitude toward labor breeds that which he so much abhors. Turning to organized labor he says: "We have organized labor and its sympathizers supporting the idea that organizations of men may dictate to a large extent the management of enterprises which they do not own, determining the rate of wages and fixing the hours of employment, and say the Manufacturers Association demand that organized labor recognize the individualistic principles of our government. This of course means that individuals must stand alone to be plucked by the Parryites and Postites, and that the Manufacturers Association shall be allowed to run their own business in their own way, regardless

of the moral or legal rights of others. But the Parrys and Posts may as well understand that organized labor is a permanent factor, and that they will have them to deal with directly or indirectly, and that those who demand protection for themselves and free trade for all others are the manufactures of socialistic tendencies, and that their selfish aims will be held in subjection by both organized labor and public opinion. Which believes in fair dealing?

B. of R. T. Convention.

The Brotherhood of Railway Trainmen met in convention in Buffalo, N. Y., on Monday, May 15, with something over 700 delegates representing over 76,000 members, and with their wives and visiting friends. Their headquarters, Hotel Brozelle, presented a lively appearance.

Invitations were extended to be guests of the Grand Officers at the opening and accepted by the Grand Chief Engineer and Second Grand Engineer. Their Convention Hall, a relic of the exposition, is of immense proportions, but when the delegates and friends were seated, there was a great sea of faces estimated at four thousand, a decided honor to the Trainmen. A. W. Putnam presided and introduced Rt. Rev. C. H. Coulton, Bishop of Buffalo, who opened the meeting, and after a musical selection Gov. Frank W. Higgins was introduced, as one of the staunchest friends of labor when in the legislative body of the state. The Governor delivered a splendid address, in which he said:

"The State of New York welcomes the International Brotherhood of Railway Trainmen. It looks to you to curb on the one hand the reckless and discontented employee and on the other the selfishness of the employer. Long study of the labor problem leads me to the conclusion that the outrages, which have at times disgraced our industrial wars, in the first place are to be condemned—but no more than the injustice of the short-sighted capitalists, and in the second place are abuses of a beneficial system. To the perfection and development of your organizations and to a better understanding of your purposes, I look for a solution of the labor question. Every good citizen strives to make this country of ours a better place to live in and a place where rights are respected and duties are insisted upon. A spirit of mutual under-

standing and regard and readiness to act with reasonableness, have manifested themselves among the leaders of labor and the captains of industry. And the day is not far distant when the unhappy struggles between employee and employer will cease to disturb industry. Our free institutions cannot long endure if the rights of capital become the wrongs of labor, or if the rights of labor carry no reciprocal duties of decency, fairness and good order.

"Gentlemen, I cordially welcome you to the Empire State."

In the absence of Mayor Knight of Buffalo, Comptroller F. T. Gilbert welcomed the guests to Buffalo in a very felicitous manner, saying in part:

"You will find our people most hospitable.

"In your travels about town, stick to the main line and do not allow yourselves to be shunted onto a siding. Do not let any dead engine get hold of you. Do not always slake your thirst at the water cooler, nor depend entirely for subsistence on the spoonful of pecans the newsboy gives you. In the strenuous life you will lead while in Buffalo, should you at any time be unable to procure a sleeper, you will find all of the hotels plentifully supplied with chair cars.

"Your experience in railroading will undoubtedly enable you to successfully dodge the automobiles. While some generous citizens may invite you to take a bumper with them, remember that if you get caught between the bumpers, it is all day with you. If anyone attempts to flag you, be well satisfied that it is no con game or ho'dup before you respond to their signals. You will find the roadbed well ballasted, with no ugly curves in the track and the commissary car well stocked. Everything has been provided for your comfort which human ingenuity and long experience could suggest, and if you do not enjoy yourselves in this city it will be your own fault.

"But above all things, be sure of your conductor. Should you find that you are in the hands of the wrong one, at once put on the brakes and change cars. It is to be hoped that your experience here will be so pleasant that in the future when you travel east, west, north or south you will always say to the conductor, 'Put me off at Buffalo.'"

Grand Chief Engineer W. S. Stone was then introduced, and as he arose was greeted with applause, and, among other things, expressed his appreciation of the general good feeling existing between the various railroad organizations, and complimented the Trainmen, saying that though the youngest order, it was one of the most progressive, and yet avoided trials and tribulations by its fairness in dealing with others. "The successful unions," said he, "are those which recognize the rights of both capital and labor."

John Lundergan, of the State Board of Mediation and Arbitration, paid a high compliment to the Trainmen and organized labor in general.

When Grand Master Morrissey rose to speak the cheers were deafening, and he was obliged to wait for quiet, when he delivered a masterly address, in which he made a telling point against the foolish 35 year age limit; that instead of such men being industriously dead, they were in the very prime of life. He said the Brotherhood stood for fairness between the employer and employee, but "we will resolutely defend our rights when we believe they are encroached upon."

"We believe in honesty and sobriety, and while difficulties may arise between us and our employers, we believe that a contract-breaker is just as despicable as the strike-breaker. We believe in publicity and desire the public to know just what we stand for, feeling assured that better knowledge of us will be to our advantage."

Edward A. Moseley, Sec'y of Interstate Commerce Commission, was then introduced and delivered an excellent address on safety appliances, etc., and paid a high compliment to the Trainmen.

Hon. L. S. Coffin, of Des Moines, Ia., President of the Railroad Men's Home, and who was the pioneer in the advocacy of the safety appliance law, made an excellent address and resumed his seat midst rousing applause. Representative Ryan spoke at some length, an excellent band and the great organ interspersed music, and, as a whole, the open meeting was a decided success and a great compliment to the Order of Railroad Trainmen.

O. R. C. Convention.

The Order of Railway Conductors convened in their thirtieth session of the Grand Division in Portland, Oregon, May 9, with 470 delegates, of which we glean the following from the *Oregonian*:

Four thousand persons crowded the Marquam Grand Theater last night to witness the public reception to the Order of Railway Conductors. The building was crowded from pit to gallery, the stage wings were filled and the aisles were com-

pletely blocked. The theater was dressed in palms and roses and presented a beautiful appearance.

It is estimated that there are more than 3,500 strangers in the city attending the convention. Five special trains have arrived, carrying the delegates and their friends. Yesterday morning the registration of the delegates began, and was not completed until evening. Yesterday afternoon the Ladies' Auxiliary of Mount Hood Division, No. 91, entertained the delegates at the Elks' Hall, but the real reception took place at the Marquam last night.

The delegates were welcomed to Oregon by Governor Chamberlain, who, in a few witty remarks, made them and their friends feel at home and told them they might take anything in sight, and if they got caught he would be ready with a pardon. He was followed by Mayor George H. Williams, who welcomed the conductors and their wives to the city of Portland. Both speakers were loudly applauded.

The addresses of welcome were responded to by Grand Chief Conductor E. E. Clark, who accepted the hospitality of the state and the city in the name of the order, and thereafter traced the development of the order during the last twenty years, showing what benefits the conductors themselves, the railroads and the public in general had received because of the organization.

"Twenty years ago," he said, "had this many conductors come to Portland they would not have been told to take anything in sight; instead the Oregon people would have chained down Mount Hood and placed over it a guard of militia. Things have changed in these twenty years and the organization has been conducted on such strict lines of discipline that much benefit has resulted to the members, their employers and the people of the country."

B. A. Worthington also addressed the assemblage, and was followed by Mrs. J. H. Moore, Grand President of the Ladies' Auxiliary, who spoke of the work and development of that branch of the order. Tom Richardson, manager of the Portland Commercial Club, made a rousing address, introducing the visitors to Oregon's great resources, which, he declared, were becoming better known through the railroads and the trainmen.

A Business Presentation.

We have been favored with a roster of Subdivision No. 804, Saginaw, Mich., which includes, besides the list of 148 names, a complete financial statement for the year 1904, which shows receipts of \$1,775.98 and disbursements of \$1,735.47, which covered all their liabilities and left a balance in the treasury. Their fifteen new members for the year indicates an interest in the order that is catching and their success as a whole is very creditable,

and to the officers in particular. Possibly a note found in this roster under the heading, "Some Things to Remember," has much to do with the financial success. Among these are, "Remember that the F. A. E. is only a hired man and has no authority except that given him by the Division. If you are in arrears do not ask him to carry you. That all members will be treated alike and promptly reported to the Division when delinquent."

If more F. A. E.'s would adopt Brother Moore's things to be remembered in the conduct of his business, it would not be long before all the members would remember that punctuality in the payment of dues was not only necessary, but much more satisfactory to themselves. If this were practiced, the settling of accounts with the Grand Office would not drag along for months after the date fixed by our law, and would obviate the disagreeable necessity of withholding needed information they would otherwise be entitled to.

Organized labor is a business proposition and should be conducted on business lines, and no member has a right to ask a Division official to carry his responsibilities. If he is in trouble and needs help the place to look for it is the Subdivision itself, and not to impose upon an officer by asking him to use his money month after month to keep you in good standing. The most of the reward of the officers of our Subdivisions comes in the consciousness of having done their duty and they deserve to have those duties made as light as possible, by each and every member doing promptly that which he has obligated himself to do. Punctuality in the business of our Subdivisions will cure many of the evils and add materially to the personal interest in the meeting, and all will feel better and accomplish more.

Books Received.

Rights of Train on Single Track, by Harry W. Foreman, 477 pages, 4½ x 7 inches, pocket book bound in leather with round corners. The *Railroad Gazette*, New York City. Price \$2.50.

This book is an exhaustive commentary on the Standard Code of Train Rules of the American Railway Association, and is in advance of any other publication on the subject.

Questions and Answers, based upon the Standard Code of Train Rules for use in the examination of trainmen, edited by C. E. Collingwood, published by Train Dispatchers' Bulletin, Toledo, O., price \$1.00, is a book of some 80 pages, handy for the pocket, and very convenient for reference.

The Woman's Home Companion comes to us with a cover which reminds us of our visit to Los Angeles in convention in 1904, and the home of Paul de Longpre. It is a reproduction of his best painting, "The Three Most Beautiful Roses," and calls to mind the beautiful home, the wonderful display of every known variety of God's beautiful flowers, and last but not least, the genial and hospitable Paul de Longpre and his interesting family standing on the porch of his beautiful home, as seen in a group picture, surrounded by several hundred wives, daughters and lady friends of engineers in attendance at the convention. The whole book is a work of art, but the cover will be particularly fascinating to those of the party on May 17, 1904.

The Green Signal, or Life on the Rail, comes to us from the author, Frank Beers, Conductor, A. T. & S. F. R. R., Lock Box 1063, Kansas City, Mo. It is a book of 240 pages, price \$1.25, and treats of the lives of the men in the four departments of the train service, a chapter being devoted to the brakeman, the conductor, the fireman, the engineer, and the fifth part to the train dispatcher and operator; a part addressed to the public, in which are portrayed the many phases of character met with in the traveling public—the true gentleman, gentlewoman, and the other extreme, who he says "Might get their just dues at the water tank with the rest of his kind," and in conclusion devotes a few pages to asking all members associated in train service, "What are we doing to advance our

moral standing, so that at the end we may hear the welcome mandate, 'Well, done,' and find the signal white?'"

LINKS.

THE Union Meeting of the Canadian Divisions of the B. of L. E. will be held in Riviere du Loup, the celebrated summer seaside resort, on July 4, 5 and 6, 1905, and all members of the Canadian Divisions and our brethren from the United States are heartily invited to attend and we will endeavor to give them an enjoyable and profitable time.

The hotels have promised to furnish a good table, with plenty of fresh salmon, trout and other salt-water fish, and comfortable rooms at the following rates: The Ophir, Victoria, Vendome, Fraser-ville, Chateau Grandville, Commercial, Park, Bellevue, White House and Pinze Hotel, \$1.50 per day.

The first day will be devoted to secret and public meetings, and a drive for the ladies in the afternoon.

On the second day there will be a picnic by the Temiscouata Railway to Temiscouata Lake, where there is good trout fishing, a steam launch and boats for those who desire to use them, and an orchestra for those who like to "trip the light fantastic."

For the third day the committee have hired one of the Richelieu and Ontario Navigation Co.'s splendid steamboats for a trip across the St. Lawrence and up the far-famed Saguenay River to Ha Ha Bay and return, a trip which thousands of people coming from all parts of the world always make to see one of the renowned beauty spots of the world. The orchestra will also accompany us on board to make the pleasant hours all too short. Come along Brothers, and enjoy yourselves.

Transportation via Steamer.—The Richelieu and Ontario Navigation Co. will grant half rates, including cabin and meals, going and returning from all points between Toronto and Montreal; Montreal, Quebec and Riviere du Loup.

Railroad Transportation.—The following railroads will furnish passes on re-

quest made by operating officer of road on which applicant is employed: Canadian Pacific Railway, Grand Trunk Railway, Intercolonial Railway; address application to D. Pottinger, General Manager.

The Quebec Central Railway will grant transportation by applying through the Secretary of Union Meeting Committee, Bro. F. A. Rioux, Box 10, Riviere du Loup.

THERE will be a Union Meeting of the B. of L. E. held in Cedar Rapids, Ia., under the auspices of Cedar Rapids Div. 159, for all Divisions adjacent to this point, on Sunday, June 25, 1905.

All Divisions of the B. of L. E. are cordially invited to attend. Grand Officers will be present.

Yours fraternally,

F. A. DAVIS, F. A. E. Div. 159.

THE Fifth Sunday Union Meeting of the members of the B. of L. E. will be held on Sunday, July 30, under the auspices of Div. No. 414, Lebanon, Pa. (Philadelphia & Reading Ry.) Connection with the P. R. R. will be made at Conewago.

R. S. MALSBERGER, F. A. E. Div. 414.

BROTHERS Jos. Thorne of Div. 5, G. G. Mason of Div. 660, R. W. Kelly of Div. 662, represent their Divisions as a committee to entertain B. of L. E. engineers visiting Los Angeles during the Knights of Columbus Convention. The Knights of Columbus Committee have arranged a program for every day and evening during the convention week. Whatever entertainment the B. of L. E. will give our Brothers will be on Sunday afternoon, June 4. We want all Brothers to write us the route they come by and members of family with them. Please attend to this and oblige,
COMMITTEE.

BRO. FRED KIRBY, member of Div. No. 424, has been honored with promotion to the position of Air Brake Instructor and Inspector, B. & O. System, with headquarters in Baltimore.

F. E. BAKER, an engineer, is traveling over the country soliciting favors on a

traveling card, claiming to be a member of the B. of L. E. in good standing. The record in the Grand Office shows that he was expelled in February, 1904, from Sub-division 232, Livingston, Mont. Suspicion that the card had been changed in date caused correspondence with the Grand Office. Every member traveling should have in his possession a certificate of membership of equal date with his card, good for three months from date. Every member traveling should have this certificate whether looking for work or not, if he expects to ask for favors of other members.

ON APRIL 16, Bro. E. W. Hurley, A. G. C. E., paid F. H. Goodyear Div., 429, a call, which has long been looked for by the members. Although Div. 429 is a small Division with only forty-nine members, twenty-two were present. Brother Hurley gave us a very interesting talk on subjects of interest to the order. It is hoped by the members of Div. 429 to again have one of the Grand Officers meet with them.

DIVISION 364 held a special meeting April 23. Assistant Grand Chief Engineer Cadle was present and exemplified the work and gave us a very interesting talk on subjects of interest to the order. The train being late, his time was limited. It was his first visit as a Grand Officer, but he is well known to all the Brothers here.

Yours fraternally,

WM. LEDGERWOOD, F. A. E.

BRO. H. E. WILLS, A. G. C. E., visited the Gateway City of the South, Louisville, Ky., Saturday, May 6. The four B. of L. E. Divisions, 78, 165, 365 and 485, of Louisville, Ky., arranged for a joint meeting which was held in the hall of Adair Div., 365, with the following Divisions represented: 11, 39, 78, 165, 365, 455 and 485, this being the first time we had the pleasure of meeting with a Grand Officer in Div. 365 since the Division was organized in 1886. While we did not have as large an attendance as we would like to have had, under such short notice and disagreeable weather, we had a fair representation.

The meeting was quite interesting. Assistant Grand Chief Engineer H. E. Wills was introduced to the meeting by Bro Geo. Heffner, C. E. Div. 865, and made quite a lengthy talk on the financial and general conditions of the B. of L. E. since our last biennial convention at Los Angeles. We have every reason to believe the delegates attending the Los Angeles Convention did not make any mistake in giving our Grand Chief Engineer, W. S. Stone, three assistants, as we fully realize the conditions of the organization at the present time where it exists. Brother Wills also took up and made very impressive the question of non-attendance at meeting and showed very plainly the bad effect it had, which the members of the order who do not attend meeting do not fully realize. Brother Wills was followed by Brother Gabriel, of Div. 89, who made a lengthy talk on points of interest to the B. of L. E., which was quite interesting and gave us all some information on system federation as it was discussed and made it clear to all who did not fully understand it before. Brother Burgess, of Div. 78, spoke quite interestingly on the general welfare of the order, as did also Brother Phillips, C. E. Div. 165, Brother Craig, of Div. 89, and Brother Rae, of Div. 78. Brother Wills promised us another visit in the near future and would make his visit longer, which will be appreciated by all.

Fraternally yours,

G. L. SCOTT, F. A. E. Div. 865.

BRO. J. W. WORRELL, who has been holding the position of District Foreman for the past two years on the K. C. S. R. R., with headquarters at Mena, Ark., has tendered his resignation for the purpose of resuming his passenger run between Mena, Ark., and Stilwell, I. T. While Bro. Worrell held the position of foreman he insisted on everyone doing his duty, but never failed to do a favor whenever a chance presented itself, and many a time has put himself to considerable inconvenience to accommodate those working under him.

Bro. T. J. Clayton has been appointed to fill the vacancy made by Bro. Worrell's resignation. Bro. Clayton held the position of Traveling Air Brake Inspector between Kansas City and Port Arthur for some time, but resigned that position and took an engine to run again and up to the time of his late appointment was pulling local between Mena, Ark., and Spiro, I. T.

Bro. Bert Worrell was appointed Traveling Engineer between Kansas City and Mena about two years ago and still holds the position, and by strict attention to his duties, courteous and kind treatment, has

endeared himself to all with whom he has to deal.

Another Brother, Bro. R. F. Estes (Uncle Bob), for some time night foreman at Mena, afterwards transferred to Stilwell, I. T., where he is filling the position of Night Foreman with credit to himself and consequently satisfaction to the company and all concerned.

We are also in receipt of a letter from Bro. E. G. Bostwick who, up to a short time ago, was running an engine between Mena, Ark., and Shreveport, La., saying he has been appointed General Foreman and acting Traveling Engineer for the Montana R. R. Co., with headquarters at Lombard, Mont.

The above Brothers are all members in good standing of Div. 569, and Div. 569 feels justly proud at having so many of its members called to fill the above mentioned responsible positions.

Fraternally,
A Member of Div. 569.

BRO. JOHN BRUNTON, member of Div. No. 29, one of the old veterans in the B. of L. E., having joined the order in 1868, now 79 years of age, has retired from active service and has gone to the mountain home and loving care of his daughter, Mrs. Lehan, in Gunnison, Colo. Bro. Brunton worked for the Lake Erie, Pennsylvania Central and Big Four, going to Colorado 18 years ago, where he has since been employed.

In the harmony, peace and love of his new home, may his declining days be full of sunshine, a fitting culmination of a life faithful to duties and obligations, that have worked for the good of those who remain in the service he retires from.

EDITOR.

THE members of Marshall Pass Div. 199, Salida, Colo., feel justly proud that they are in a position to say they can duplicate Div. 290 in the way of promotions. Within the last three months three of its members were promoted to official positions on the Denver & Rio Grande Railroad. On March 1, 1905, Bro. E. G. Haskins was promoted from road foreman of engines to the office of master mechanic for the second and third divisions of the D. & R. G. R. R., with headquarters at Salida, Colo.

On March 1, 1905, Bro. F. K. Martenis was promoted to the position of road foreman of engines for the third and fourth divisions, comprising the whole Narrow Gauge System, with headquarters at Salida, Colo.

On March 1, 1905, Bro. J. O. Lasswell was promoted to the position of road foreman of engines for the second division, with headquarters at Salida, Colo.

Division 109 feels highly gratified, and is of the firm belief that the management has made no mistake in selecting these three engineers who are in every way qualified and fitted to fill the above positions to the satisfaction of both the company and the men. And while we, the members of Div. 199, extend to the management our appreciation for their kindness in promoting three of our members, we also extend to our Bros. Haekins, Martenis and Laeswell, our congratulations and support.

Fraternally yours,
GEO. E. Baldwin, F. A. E. Div. 199.

BRO. JOSEPH LILLY, a member of Div. 196, Macomb, Miss., has demonstrated his mechanical genius and fruitful application of his spare time by building an automobile. As would be natural the power of propulsion is steam. With a pressure of 250 pounds, five horse-power is developed. The *Summit, Miss., Sentinel*, says: "Mr. Lilly built it entirely with his own hands, guided by his ingenuity and mechanical knowledge. Everything about it except a few patent affairs are of his own make, but he possesses an automobile that in point of comfort, strength, endurance and elegance of equipment is equal to any auto in this section, and he is certainly to be congratulated upon the gratifying results of his genius and skill."

BEING located at Wilmington, Del., about thirty miles from my own Division, and not being able to get to Div. 109's meetings regularly, I frequently drop in on Div. 342's meetings, which as a rule are always entertaining, and no Brother who visits 342 will be able to say that he has not only been entertained, but instructed. This Division is officered by men who wear a crown of honor and live strictly up to the laws. Each and every position is filled with marked ability. Bro. Henderson, the Chief Engineer, is a man whose appearance would attract attention anywhere. He presides in a dignified and impartial manner. He has the hearty support of his members.

I would like to mention each officer, but our JOURNAL space is too valuable; however, I must say that it is easier for a camel to pass through the eye of a needle than it is to pass 342's guide, Bro. Randolph, if you are not entitled to do so.

The business of the Division is transacted in a businesslike manner; good order and decorum is the rule without constant admonitions from the Chief. It is indeed a pleasure to attend 342's meetings, principally on account of the cordial

reception extended not alone to visitors, but to the members.

Yours fraternally,
GEO. M. KERN, C. E., Div. 109.

ON May 1st, Bro. Sylvester G. Canney of Boston Div. No. 61, formally tendered his resignation as engineer on the Boston & Maine R. R., and retired after a continual service on the footboard dating from Oct. 1848, when he was employed as fireman, and from May 1, 1850, as engineer.

With the passing from active service of Bro. Canney, there recur many things, some of which deserve more than passing notice. Several different times in the columns of the JOURNAL there have appeared data in regard to him that bring out more or less tribute to his personality and respect which all who personally know him, hold in such high esteem. One of which we believe is none too good is that of May 5, 1900, when a reception was tendered him on his anniversary of fifty years of service as an engineer, at Ames Memorial Hall, Salem, Mass., and is given almost in full in the July number of the JOURNAL of that year. It might almost be said that all Salem turned loose to make the event a good one. The audience numbered among its constituents many of the officials of the road, the city government of Salem, and a large delegation of Brothers of our order, and the event has now become a part of the historic page in the annals of Salem.

We all wish Brother Canney all that is good, and that he may be with us for many years to come, to enjoy in good health his declining years, and we, his worthy acquaintances. Div. 61.

ODD FELLOWS' HALL, Ludlow, Ky., was the scene of a great bunch of amusement on the evening of April 26th, the occasion being the first annual ball given by B. of L. E. Div. 603. That every one present enjoyed himself does not begin to describe the merriment which will long remain in the memory of all present. A beautiful program was rendered, composed of twenty-five numbers, the last "Home, Sweet Home." Committee, F. W. Cleave, W. A. Saylor and Wm. Fleming. The above gentlemen deserve great praise for the untiring zeal and energy which they displayed to make the event a success.

Bro. Leighnor led the grand march and made quite a hit. Bro. Lenahan, from "The Jungles," was present, and performed several acrobatic stunts. Joe is very popular with the ladies. Bro. T. Sullivan couldn't deliver the goods; time was too fast, he claimed. He was given one year to limber up. Bro. Bohan was

one bunch of smiles. No wonder! A boy would tickle any of the Brothers. What say you, Bro Clause? Bro. J. Sullivan sold the highest number of tickets and will receive a fine gold watch and chain—aber nit. Bro. Gordon secured the medal for being the best dancer on the floor.

Viewed from a social and financial standpoint, the ball was a success in every detail. The floor managers, Bros Horn, Rohan, Drohan and Moore, weighing respectively 290, 280, 275 and 295, were all that could be desired. No, they do not belong to the Big Four; they are "home talent."

Although Div. 603 is in its infancy, it promises to be a full-grown helpmate to the Brotherhood, as the Brothers keep on a "hookin'." The meetings are now held Mondays at 1:30 P. M. All Brothers are cordially invited to partake of genuine Kentucky hospitality. **HICKENLOOPER.**

AMONG the many happy events that have occurred recently to brighten the pathway of our Brotherhood was that of the Union Meeting of Div. 520, held at East Toronto, Ontario, Canada, Wednesday April 19. The meeting was called to order promptly at 2:30 P. M., with Bro. Joseph W. Lamb, of the above Division, as presiding officer, who in a few well chosen words explained the object and aims for which the meeting was called, namely to consider the interests of the Brotherhood on the Grand Trunk Railway, and particularly so of their own immediate locality. After concluding his remarks, he introduced Bro. Deloss Everett, T. G. E., who was delegated to represent the Grand Office on this occasion, who responded in a well directed line of thought as to the present needs of the passing hour in our history. He gave a graphic description of the principles which we have adopted as the guiding star of our organization and said there was no fear of our future prosperity so long as we strictly adhere to the same.

Bro. George Mills, the veteran Chief Engineer of Div. 70, was then called upon and in a manner that stirred the hearts of all present, spoke of the achievements of the Brotherhood, both in the hours of adversity as well as those of prosperity. In listening to him, the writer was carried back to the days of long ago when Brother Mills with the early founders of the B. of L. E. were kindling the fires on the pioneer altars of that day, when it required hearts of oak to breast the storms of opposition that surrounded us at that time. When he closed he received an ovation that a Demosthenes might well be proud of.

The meeting was fortunate in having the pleasure of listening to Bro. Thomas Charton, of the C. P. R., who has been a delegate to some of our Conventions. He took up the question of what was necessary at this present time to perpetuate the interests of our association. That he handled it in a masterly manner was evident from the approval it met with at the hands of his hearers.

It would be a pleasure to mention all that were present. Notable among the gathering were Bro. T. S. Looney, the efficient F. A. E. of Div. 520, and Bros. Walter Caruthers, Peter MacLuckie and George Brown. The meeting was certainly an interesting one, which no doubt will be the beginning of a new and brighter history in our organization on the Grand Trunk.

In the evening, at 7:30, we were given a banquet in Snell's Hall, by the ladies of East Toronto, who comprise the mothers, wives and daughters of our Brothers at that place. As usual they covered themselves with glory, for the feast of good things they spread before us would have done honor to King Edward or President Roosevelt, and was thoroughly enjoyed by all who had the pleasure of being present. After the banquet, we were entertained by the following program, with Bro. Joseph W. Lamb as master of ceremonies; but this sketch would be incomplete without paying our tribute of respect to Mr. E. M. Cook, the very efficient Secretary of the Railway Y. M. C. A. at this point. His address on this occasion was not only a credit to himself, but an honor to the cause he represents. It was simply full of those thoughts that lead to a higher and better manhood, and he made a hit about the Imaginary Line between Canada and the United States that is worth remembering.

Opening Address Deloss Everett, T. G. E.
 Piano Selection... Miss Bertha J. Davidson, A. T. C. M.
 Reading..... Miss Jennie McKibbin.
 Scotch Song..... Bro. Peter MacLuckie.
 Song..... Mrs. W. Pettigrew.
 Recital..... Miss A. Frett.
 Duet..... Misses Mary and Florence Lamb.
 Piano Selection..... Miss I. Westlake.
 Song..... Mr. Joe Lenord.
 Reading..... Miss I. Sands.
 Song..... Miss M. Thompson.
 Address..... E. M. Cook, Y. M. C. A. Secretary.
 Recital..... Miss A. Frett.
 Song..... Miss Lou Blaylock.
 Reading..... Miss Ida Modeland.
 Song..... Mr. Thomas Davidsou.
 Life's Railway to Heaven (Duet—by request)
 Misses Mary and Florence Lamb.
 God Save the King..... The Whole Audience.
 A VISITOR.

ON SUNDAY, May 14, the usual semi-annual Union Meeting of the B. of L. E. on the N. Y. C. & H. R. R. was held

in Syracuse Every Division on the system was represented at the morning session by 175 members, and the afternoon session by 255, many Brothers in the west end not being able to get to the meeting in the morning.

The Grand Chief Engineer was with us. General Chairman Watson was chosen presiding officer. Brother Wanner was secretary. The meeting got to business at 10 o'clock, with the question of the pensioning of the old or disabled men. Different views and ideas from as many different Brothers were presented and fully discussed, and the matter finally referred to the Standing Committee on Pensions.

A second proposition of importance came up: the hours and rate of pay for engineers on switching engines in yard service. The matter was fully and ably discussed by the Brothers, each from his own standpoint, and from the diversity of opinions, a conclusion was reached and, by a vote, referred to the General Committee of Adjustment to present to the company at the next convening of the committee.

Many subjects were brought forward by Brothers and discussed more or less. Whilst nothing came out of these discussions, they helped to produce the very effect for which Union meetings are and should be called; that is, an exchange of ideas and the bringing out just what the "other fellow" wants. Time devoted to Union Meetings is well spent. The Pennsylvania Railroad Brothers hold one every fifth Sunday at some point on their system; each meeting takes in territory within 100 miles' radius of place of meeting.

As the hour of noon approached, Bro. Jim Delaney, of Div. 145, seemed to be on the anxious seat, and just about when he arrived at the point of slopping over with the fullness of his thoughts, a messenger handed a card to the chairman, who brought down the gavel. The silence was—well! it was silence visible. The chairman announced that dinner, prepared by the Sisters of the G. I. A. of Syracuse, would be ready for inspection at 12:30 in the banquet hall of the building. Bro. Jim lost his inspiration in his desire for inspection, and we don't know what we lost.

Shortly after the opening of the afternoon session, at 1:30 o'clock, the Grand Chief Engineer spent nearly two hours (and well spent withal) in making plain the matter on the N. H. & H. R. R., and the end of it; also, why the charter of Division 105 was suspended, and what would be done to protect the interests of the members of that Division, who were only *passive* actors in the affair.

The Grand Chief was listened to with interest and frequent applause. At the conclusion of his remarks, a resolution was offered and seconded by half a score to approve of and indorse his course in the two cases, but he objected to the adoption of the resolution on the grounds that the matter would be fully brought out at the next convention, and he was willing to await the action of that body.

Bro. Shandy Maguire was present and gave the meeting his usual sendoff. He did not talk long, but, oh dear! Well, what is the use of saying anything about Shandy? Suffice it to say, the janitor's wife will not have to buy any suspender buttons some time to come.

The Ladies' Auxiliary are about in the same boat as Bro. Shandy, or, a better comparison, the "Queen of Sheba" in her replies about King Solomon, "The half of his glories have not been told me."

The sleeping car company furnished one of their latest up-to-date coaches to the New York delegation at nominal rates.

Mr. Editor, I'm going to stop.

Faternally, E. J. RAUCH.

ON May 9th the members of Collinwood Div. No 3, assisted by the ladies of the G. I. A., gave a grand ball, which proved an unqualified success. The Grand Officers had been favored with complimentary tickets and Grand Chief W. S. Stone and wife, F. G. E. W. B. Prenter, wife and daughter, S. G. E. C. H. Salmons and wife, and the President of the Insurance Department, W. E. Futch, wife and daughter, were present and had considerable share in the prize contest to decide which was the best looking young lady, the measure of beauty being decided by the number of dollars for tickets sold.

The hall is quite spacious and it was estimated that there were more than 600 dancers present, Toledo, Buffalo and intermediate towns on the Lake Shore being represented. The music was excellent and the grand march made an imposing spectacle. There were twenty-four numbers on the program and of a diversified character to suit all present, and the ladies and gentlemen present were so well balanced that sets were quickly formed and little time lost.

The ladies provided an excellent supper, which they began to serve at 10 P. M. and continued until all hunger was appeased; supper tickets, 50 cents a couple.

The prizes were given out after the twelfth number on the program, and of course there was great interest, for there had been earnest work for each candidate.

The first prize, a beautiful diamond ring, was awarded to Miss Nellie Roof; the second, a handsome gold watch, to

Miss Bathia Watson; the third, a diamond ring, to Miss Ruby Wankey. The financial result of the ball was a net gain of \$285 to the treasury of Div. No. 3.

The dancers continued to enjoy themselves until the last number, all seeming exceedingly well pleased with the evening's entertainment, and the members of Div. No. 3 and the ladies of the auxiliary may well feel proud of the result, and of their committees who made it possible. This credit is due to Bro. R. G. Shepard and the following committees:

Reception Committee, C. J. Pinckney, Adam Hoffman, C. P. Rowley, W. H. Green, L. B. Hall, Geo. Clemens, D. A. Carver, Jesse Wolf, Jack Corlett. Master of Ceremonies, J. H. Du Ross. Floor Director, J. C. Griffin. Floor Managers, F. Rosecrans, W. F. Storey. Prize Committee, J. R. Garner, W. T. Wade, C. E. Rush. S. H. C.

Now, Brothers, do not stare at the word Creston just because you have never heard anything from Creston before, for I can assure you if you ever come here once you will never forget us. Creston is located on the main line of the C. B. & Q., and is the division point of the West Iowa, and also the home of B. of L. E. Div. 642, and Auxiliary Div. 841, the two liveliest Divisions in the state. Our Division is young in age, but old in experience. We have only been organized a little over a year and our goat has performed his labor so successfully that we now have a strong Division.

On the first of May Div. 642 and Div. 841, G. I. A., gave their first annual ball and the decided social success of the event is a guarantee as to the future success of annual parties to be given by these orders. The decorations were something unique and magnificent. From every available point were suspended clusters of bunting and flags. In each of the windows were white, red and green flags. In the northwest corner of the hall was a most realistic representation of the fore part of an engine, No. 642, equipped with an actual engine bell, and on the pilot were green lights and flags indicating that another ball would follow next season.

At 9 P. M. Bro. Geo. Hawker took charge of engine 642 and by the ringing of the bell, warned all to clear the track for the dancing of the May pole by twelve little Brotherhood boys and girls. The little folks certainly did themselves proud. The perfect drilling of the children was due to Brother Davis, Abbott and Yant. The performance was greeted by much applause. The grand march, led by Mr. and Mrs. L. C. Abbott and Mr. and Mrs. M. J. Miller, followed, at the conclusion

of which the children were again repeatedly called for and again gave their performance of wrapping the May pole.

The orchestra consisted of seven pieces and was directed by Bro. Ed Davis, and the music was everything that could be desired; and when it is known that the music was fine and the floor perfect, it is easily understood why the first annual ball of the B. of L. E. was pronounced such a decided success.

Among the out-of-town guests were Mr and Mrs. J. Dalton, Ottumwa, Ia., Bro. J. L. Kelsey, Galesburg, Ill., and Bro. A. Fitzpatrick of El Paso, Tex.

Fraternally yours,
M. J. MILLER, Cor. Sec. Div. 642.

THE Legislative Board of the state of Wisconsin, while convened at the Capitol in Madison, in May, after an afternoon's session with the Senate Committee, and on our return to the Avenue Hotel, were told by the clerk that a few wives of engineers would like to have us call at the G. A. R. Hall, which adjoins the hotel. Not knowing what was in store for us we went to the hall in question, and you may know how surprised we were on entering to see a long table loaded down with strawberries and cream, cakes and coffee, and all things that go to make one of those most enjoyable joys that there are, and the smiling faces of seventeen sisters, members of Monona Div. No. 238, as follows: President, Mrs. H. Johnson, Mesdames J. Dunn, L. Lamphere, J. F. Mills, J. F. Wilson, T. Scott, F. Rodger, McDermott, McShane, J. Lewis, L. Torgerson, M. Comeford, M. Standard, M. Lynne, J. Culbertson, J. Harrington and C. S. Wilber. We were seated at the table and many were the kind things that were said. After the sumptuous meal was over and the Brothers had helped the Sisters wash the dishes, in their good old way, we were invited up to their hall. The gathering was called to order by the president, Mrs. H. Johnson, and the Brothers called upon to make some remarks and they responded as best they could, and then the Sisters were called on in turn and many words of kind advice and encouragement were uttered by them, and such words as only can be said by our co-partners in life and wives and sisters of the G. I. A. How sweet it is to think that we have a sister organization, to plan and bring about such enjoyable features as this. We are in want of words to express our sincere thanks to the Sisters for this so unexpected pleasure of all. After all had their say, dancing was enjoyed in, in the good old-fashioned way. Therefore be it

Resolved, By the Legislative Board of Wisconsin, in session, that a vote of thanks be sent to Monona Division, No. 238, and

that this be sent to the JOURNAL, to be given a place in the good events of the season, and we hope that more things of this kind will follow.

C. S. WILBER,
JOHN MARKS,
R. C. MILLER,
JAS. O'LEARY, Com.

A VERY impressive union memorial service was held in Worcester, Mass., on Sunday, May 14, under the auspices of B. of L. E. Div. 64, and G. I. A. Div. 224, B. of L. F. Lodge 73 and L. S. to the B. of L. F. 94, the Committee of Arrangements being made up of an equal number from each order. For the B. of L. E., Bros. T. B. Wardwell, E. C. Smith, C. G. Chaffin; B. of L. F., F. A. Symonds, A. E. Abbott, E. J. Saxby, with Bros. T. B. Wardwell, B. of L. E., Chairman and F. A. Symonds, B. of L. F., Secretary Joint Committee.

More than 300 people were present by invitation. Including the families of the members of the organization and of the dead members, also invited friends of members.

The service consisted of songs, piano and violin music and an address by Hon. A. S. Roe. At the opening "The Dead March" was played by Miss Emily Wardwell on the piano.

The Chaplain of the B. of L. F. read the opening prayer. Then the Chairman, Theodore B. Wardwell, explained the purpose of the meeting and gave a brief history of the two brotherhoods, and then called the names of the 23 members of Div. 64, who have died since January 1876, and Bro. F. A. Symonds, Master of Lodge 73, called the roll of the 10 members deceased since the beginning of 1886, which indicates the period of their organization in Worcester.

The Chairman then introduced Mr. Roe, who said:

"I wonder if our friends here have ever considered how little is thought or known about the engineers and firemen except by the men within their own circle. They are the men who put the life into the locomotive, the engine of all others that moves civilization, and without which civilization would go back to the darkness of the early ages. Take the locomotive out of the world and there would come a stygian darkness, fearful to contemplate.

"I want to recall with you that roll call. Do you remember how many were recorded as killed? All of us are apt to die. It is natural for men to die. But to be killed, to die before, in the natural state of affairs, we would; not all of us are apt to meet such a fate, and none of us court it. These men by the very nature of their work face it in the execution of their duty, for what great dangers lurk in the path of him who runs a locomotive

and of him who fires it. Of that list of 33 names seven met death at duty. Seven were killed. Think of it. More than one in five, if you please, came to an untimely death. If this is true of their work are they not fit subjects for the esteem, our respect, yes, the love of their fellow men?

"I expect neither the army, the navy, the police nor any other class of people. There is not a better disciplined set of men on earth today than the engineers and firemen."

Mr. Roe made a splendid address highly complimenting both the engineer and fireman, and in closing paid a tribute to the memory of the former Grand Chief Engineer of the National Brotherhood, Chief Arthur of Cleveland, whom he classed as one of the greatest leaders the country has produced.

The chaplain read the closing prayer and Chairman Wardwell adjourned the meeting.

The decorations consisted of the colors of the two orders and three handsome bouquets. The colors were placed about the charters, and a bouquet was placed on each charter and a piece of mourning crepe was draped about the charter frame. The engineers' charter was to the right of the presiding officer's chair, and the firemen's to the left, with the representative of the firemen's brotherhood, F. A. Symonds, sitting at the left of Chief Engineer Wardwell, just as they would work on an engine.

ADOPTED at the regular meeting of Div. 512, B. of L. E., East St. Louis, Ill., Sunday, May 7, 1905:

WHEREAS, Our former Trainmaster, Mr. F. M. Jones, of the Centralia District, having been promoted to Superintendent of the Omaha Division, at Fort Dodge we, the Committee appointed by the engineers of Division 512, B. of L. E., wish to express our high appreciation of his valuable service and pleasant relationship which existed between Mr. Jones and the engineers, believing that we have lost a friend, and the community a citizen of deserving respect.

Resolved, That we heartily commend Mr. Jones to all with whom he may come in contact in his duties as Superintendent, as we have always found him to be a gentleman of the highest integrity. Therefore, we wish for him the greatest success in his upward path of life.

Resolved, That a copy of these resolutions be furnished Mr. Jones, and a copy inserted in the B. of L. E. JOURNAL.

Signed,
J. C. RADSPINNER,
E. H. POPE,
G. WINNING, Committee.

ON APRIL 20, at a regular meeting held by Div. 563, Cranbrook, B. O., a vote of thanks was extended to Brothers J. A. Miller, C. E. and C. F. Hobart, F. A. E. of Div. 147, Spokane, Wash., for the kindness shown Bro. H. R. Heath, of Div. 563, during the sickness and death of his son.

Fraternally yours,
THOS. WARDMAN, F. A. E. Div. 563.

SPECIAL NOTICES.

The traveling card of Bro. C. W. Hyde has been lost. If presented please take up and forward to Bro. Robert Skinner, F. A. E. Div. 246, 604 William street, Evansville, Ind.

If Edward McClintick, who was employed on the U. P. in Wyoming in 1886-87, will correspond with Mr. James Vine, 600 20th street, Denver, Colo., he will hear something to his advantage.

Will Mr. J. C. Jones, who when last heard from was running an engine in North Dakota, please correspond with his brother, Mr. E. S. Jones, Lexa, Ark.?

The traveling card issued to Bro. M. Murray, May 1, 1905, was lost on his way to Cleveland, O. If presented for favors, it should be taken up and forwarded to Bro. J. F. Freeman, F. A. E. Div. 372.

The traveling card issued to Bro. Andrew Milon, member of Div. 434, April 15, has been lost. If, presented please take up and forward to Bro. J. H. Evans, C. E. Div. 434.

Will George Tice, who was running an engine in Louisiana a year or so ago, please correspond with his father, Bro. Chas. Tice, member of Div. 332, care J. T. Zimmerman, 610 Wright avenue, Augusta, Ga.?

NASH'S RHEUMATIC CURE

\$1.00 a Bottle—Three Weeks' Medicine

This preparation is not set forth as a panacea for every ill, but is a specific for and a radical cure for all forms of Rheumatism, Lumbago, Neuralgia of the Stomach, Bowels, or any part of the body. It is unequalled for the cure of Kidney Disease, Gravel, Catarrh of the Bladder, and for neutralizing and expelling all sediment or albumen from the urinary channels, and to eradicate all impurities of the blood. It is purely a vegetable compound, free from all drugs, acids and alcohol, and can be taken with perfect safety by all regardless of any conditions as to diet, or exposure to all kinds of weather.

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION.

Official Notice of Assessments 907-910.

SERIES F.

OFFICE OF ASSOCIATION, Room 803, SOCIETY FOR SAVINGS BUILDING, }
CLEVELAND, OHIO, June 1, 1905. }

To the Division Secretaries L. E. M. L. and A. I. A.:

DEAR SIRS AND BROS. :—You are hereby notified of the death or disability of the following members of the Association :

Five Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.00 from all who are insured for \$750, \$2.00 from all who are insured for \$1,500, \$4.00 from all who are insured for \$3,000, and \$6.00 from all members insured for \$4,500, and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25, page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries located in Canada will please remit by draft or express money order. We will not accept packages of

money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

An Open Letter to Engineers—No. 3

Telling The Truth.

There is **no** excuse for **lying** in **print**.

A **salesman** may unconsciously exaggerate the facts in his enthusiasm to effect a sale.

But we employ **no** salesmen.

When a firm—like ours—prints the description of an article in an advertisement or in a catalogue, that description is written **deliberately**.

It is honest or lying, according as the man who writes it is truthful or a story-teller.

A false description of an article, written in glowing language, intended to deceive, may fool you—once.

But no matter what rhetorical gymnastics may be employed afterwards by the firm that fooled you—**once**—you are going to put that concern down at its **own** valuation forevermore.

The serpent didn't fool Eve **twice**.

We could not **afford** to deviate from the truth, or to misrepresent the facts, even

To take advantage of our bargains you must have our catalogue, No. 73 (1200 large pages), illustrating and quoting **lowest prices** on **125,000** articles—everything you eat, wear or use.

While it costs us one dollar to print and distribute each one, we will send any B. of L. E. man a copy, all charges prepaid, who sends us 15c to partly pay postage, which amount we agree to refund if at any time you are not satisfied that you have your money's worth and that it will save you many dollars. Do not compare our wonderful catalogue with the incomplete **partial** lists advertised by some as being free. Ours is the highest standard and most complete catalogue and buyers' guide issued, and the authority on price, style and quality. We impose a mere 15c charge for this dollar book as a guaranty of your good faith, and will refund it upon request as agreed above.

if we know that to do so would catch a few dollars from the unwary.

Our reputation for honesty and square dealing is known to every railroad man in the country.

They **know** the merchandise they buy of us is of the absolute **quality** represented.

We **tell the truth** about our goods in simple, plain, straightforward language; without bombast, exaggeration or false statements.

Truthful descriptions and honest values, coupled with the **lowest prices** at which goods of quality have ever been sold, have distinguished our business career of a **third of a century**.

And we are going to keep right on that path of honesty and truth telling, always, let others do as they may.

Those railroad men who are our customers **value** our truthfulness.

Others who **value truthfulness** in business are invited to **become** our customers.

JULY, 1905.

NUMBER 7.

Cuba.

CAMAGUEY, CUBA, May 1, 1905.

EDITOR JOURNAL: As per promise I send some pictures of Cuban scenes, and add a little in reference to them.

Camaguey dates from 1514, when the city was first started at what is now Nuevitas on the coast, where Columbus is supposed to have landed in 1492, but the inhabitants were driven back by the British and sea pirates. The name was recently changed by law from Puerto Principe to Camaguey on account of being the same name as the province in which it is located.

This is a quaint old city. The sidewalks are not more than two feet wide. I recently asked an aged Spaniard why they were made so narrow. He answered that this was an antebellum city, and "no gentleman or lady was supposed to walk, and the street was good enough for slaves." There is no need for a fire department here; the houses are built of brick and cement, even the roofs are tiling. Hotel accommodations are excellent, and of Hotel Camaguey it is said the service

cannot be excelled, and that sixteen millionaires from the States recently stopped there and were given such good service and felt so good they went down town and spent \$30,000 for souvenirs. A. Grossman, a Mississippian, is the manager. "Pete" Zimet, an old O. R. C. man from California, also runs an American hotel, which is the "hang-out place" for railroad men.

The Mercedes Church (Catholic) is three and one-half centuries old and still in good condition.

I also inclose a picture of Soledad Church, four centuries old, where the same bells have called its members to mass all these long years.

The Cuba Co.'s road runs through a deep canyon, approaching the city, where the mountains look like they are about to fall down and block the road.

The picture of the three-wheeled omnibus is the kind used at Ciego de Avila. This old town is in the center and in the narrowest part of the island. Here Weyler's "tracks" may still be seen, consisting of wire fences, ditches and block houses one kilometer apart, still

STREET SCENE IN CAMAGUEY, CUBA.

MERCEDES CHURCH, CAMAGUEY, CUBA, 3½ CENTURIES OLD.

standing like silent sentinels, slapped in the face by the hand of Uncle Sam and left as monuments to the barbarous cruelty

CUBANS HAULING MAHOGANY LOGS TO MARKET.

of Spain. Having some time at my disposal, I recently saw the various battlefields where so many of our boys lost their lives and I took off my hat in honor of their memory and my heart went out in sympathy to their parents and sweethearts, and I felt proud that I was an American. I also saw where our own Hobson sunk the Merrimac that caused him to get so many kisses, and wondered where the eleven of his "crew" were going to come in for their share.

Cuba's history would make a sad story, but now under a protectorate from the strong arm of the United States, with the most uniform climate in the world, and her streams of pure water and plains of fertile soil, where frost is unknown, her future destiny must be one of peace and plenty.

As to opportunities for railroad work here, I have had many inquiries, but little can be said of an encouraging nature. All roads except the Cuba Company employ Cuban engineers and it is

but fair to say that there are no vacancies, few die, none resign, and that it is seldom one is discharged. Anyone desiring to address the officials of the Cuban Railroad Companies can find their name and address in the *Standard Official Railroad Guide*. An American coming to Cuba who cannot speak Spanish is likely to get very hungry for the sound of his mother tongue. Santa Clara is the terminal of the Cuba and Cuban Central Railroads, and also the terminal of the English language to a large degree. As an example of how pleasing the English language may sound, there recently arrived from Chicago a meek and lowly minister of the Gospel who traveled all the way from Havana to Santa Clara without meeting anyone that could speak English, and he of course felt lonely and longed to see or hear some one that could speak "Americano." Here engines were changed and the "Americano maquinista" lost his temper and used some ugly "cuss words" on account of some trouble with his "ma-

quina." The divine recognized the language and rushed up to the maquinista, introduced himself and said, "Brother,

STREET PEDDLER, CAMAGUEY, CUBA.

you cuss in the same language in which I pray." The maquinista of course apologized for the language used, but the minister would not accept it and said, "It sounds good to me; there is a time for all things."

To those inquiring about investments, unimproved land is worth on an average of \$25 per acre, in large tracts, but few would succeed here without capital. Fifteen hundred Americans came here during the past year and are making their homes. The immigration from Spain was double the number. As a rule, the Spaniards flock to the cities, Americans buy land in the country.

P. O. RICKMAN.

The Guest of Pastor Penfield.

BY W. R. ROSE.

It was not a pleasant evening. The clouds were lowering, the air was humid. The man in the long storm coat, who paced uneasily up and down the depot platform, scowled up at the sky and shook his head in a way that indicated great dissatisfaction.

Then he paused for a moment at the telegraph operator's window and asked that official a question. The answer he received made him shake his head again.

"Got to stay all night, eh?" he grumbled, and looked about him as if seeking

POST-OFFICE AND PLAZA, CAMAGUEY.

some object on which to vent his displeasure. "Hotel a mile away, and probably no good when I get there. It is enough to rile a saint." And being no saint the stranger rudely kicked at a

OLD CEMETERY, CAMAGUEY, CUBA.

THREE-WHEELED OMNIBUS AT CIEGO DE AVILA.

baggage truck, and then was glad that he missed it.

A little later he was on the road that led up to the village, pushing his way ahead through the misty dusk and humming a little song as an accompaniment to his brisk gait. He was a well formed man of perhaps seven-and-twenty, with square shoulders and a gracefully poised head. His hair was light and curly, his face clean shaven, his eyes blue and very bright. He was dressed in plain black, his derby hat was black, and he wore a turn-down collar with a black tie.

As he pushed along he noticed a tall slender man just ahead of him. The tall man had slackened his pace and was evidently awaiting his approach.

"Good evening, friend," he said to the broad shouldered man. His voice was gentle and his manner attractive.

"Not as good an evening as I should wish," said the stranger. "But I fancy it makes little difference either way. I find I have to stay over night here owing to some wretched railroad arrangement, and I doubt if the attractions of the neighborhood could be improved any by fair weather."

"We haven't many attractions, it is true," said the tall man as he caught the stranger's step. "It's a rather dull town at the best. But we try to make the best of it."

The stranger looked up at the tall man. "I guess you try to make the best of everything," he said.

"Why not?" laughed the tall man. "I find it's a sort of philosophy that is wonderfully helpful at times."

"Pity that more of us don't practice it," said the stranger as he thought of his recent loss of temper. Then he half turned and looked at the tall man again. "You preached at Jim Linscomb's funeral this afternoon," he said.

"Yes," said the tall man, "and I believe I saw you there."

"Very likely," said the stranger. "May I shake hands with you?"

"Why, certainly," replied the tall pastor, and their hands met in a warm clasp.

"I want to say to you," explained the stranger, "that your little sermon was all right. It was gentle, and kindly, and just the sort that Jim would have liked."

"Thank you," said the pastor. "He was your friend?"

"Yes," replied the stranger. "Jim and I were together a good deal. I brought him home from Chicago."

OLD CHURCH SOLEDAD, CUBA, 4 CENTURIES OLD.

CUBA RAILROAD DERRICK CAR.

There was a little pause. "He was in the amusement business, I believe?" said the pastor.

"He was a circus tumbler. There was none better."

"That, I think, is considered a hard life, isn't it?" "Hard from one point of view, yes. But not, as I fancy you mean, from the moral point. Jim was clean and straight as any man of his years could be. He never drank, he never used tobacco. He couldn't. He had to keep himself in the pink of condition. And you know what he did with his money. Sent that younger brother away to school and bought a house for his mother. Paid every dollar on it in less than five years. Hurt his chest in a fall at Springfield, and was dead of quick consumption in three months. Jim lived a clean life, and a useful life, and he's all right." He spoke with warmth and a strong emphasis.

But he met with no contradiction from the tall pastor.

"Yes," the latter gently said, "I believe with you that he is all right." He paused a little. "And

now," he said, "let me ask you to be my guest tonight. Wait, please. You will scarcely find the hotel to your liking. They are a little careless there. And I can at least give you two fair meals and a clean bed. Besides, it would be a pleasure to have you for my guest. There are few men of my age about here, and I would greatly enjoy the society, even for so brief a time, of some one from the outside world."

The stranger hesitated a moment.

"But you don't know me," he said.

"You were a friend of James Linscomb," said the pastor, "and that is quite enough."

"Very well," said the stranger with a little laugh, "but you must understand that you are taking great chances."

So he went home with the pastor and found a very comfortable lodging. The dinner was good and the viands plentiful, the landlady gracious, and the young parson's conversation pleasant and always entertaining.

"I am under heavy obligation to you,"

BRIDGE OVER THE ZAZA RIVER, CUBA R. R. CO.

BRO. W. WIKLE, DIV. 224. AT THE RIGHT, THE PIONEER AMERICAN ENGINEER IN CUBA.

the stranger said after they retired to the cozy study. "That's the most like a real home dinner that I have eaten in a good many years."

"Then you have no home?"

"No. Ran away when I was a boy and became a vagabond. Been a vagabond ever since. Parents dead, kith and kin all scattered. Quite alone."

The young pastor looked at him with commiseration.

"That's bad," he said. "There's nothing like home ties for keeping a man contented. I'll confess that if it wasn't for my dear mother and sister I should find my life a little monotonous."

"But they are not with you," said the stranger.

"No, but they are coming to visit me. And when my vacation time comes I visit them. They are in my mind a great deal, too. I wish they were both here now to make your little visit more agreeable."

"Parson," said the stranger, "you're a very good sort. You take me in without knowing anything about me. You are even willing to have me meet your mother and sister. Why, you don't know my name. It's John Andrews."

"I am Charles Penfield,"

said the pastor, and they shook hands again.

"And now," said the host, "I must ask you to excuse me for a little while. Here are plenty of books to select from and a good light. I will be back in about an hour. The fact is, I hold a Friday evening service and informal meeting, where we sing and have a prayer, and I talk a little in an extemporaneous way on some general subject of interest. Tonight it is temperance."

The stranger laughed.

"You can't use me for a horrible example," he said, "because I never touched a glass of liquor in my life. At the same time I would like to go with you. I haven't been to a Friday evening meeting since I was a country boy."

The preacher hesitated.

"I would a little rather you wouldn't go with me tonight," he said; "there may be some trouble."

"Trouble! What kind of trouble?"

"It's the boys from the lower end of the town, you know," said the pastor. "They don't mean any real harm, I suppose. But they like to annoy me. They are noisy, and—and sometimes they throw things. I understand they mean to break up the meeting tonight, but, of course, it wouldn't do for me to show the white feather and postpone the gathering."

"I should say not," said the stranger with great emphasis. "Got a ringleader, haven't they?"

"Yes," replied the pastor, "and I believe he is the root of most of the trouble. He is a big fellow and fancies because he has never been conquered that he is an autocrat in his way. I know that the other boys look up to him

BRO. WIKLE AND HIS PET ENGINE, CUBAN RAILROAD.

ENGINE NO. 1, CUBA CENTRAL RAILROAD, WITH SPANISH CREW.

and follow implicitly where he leads." "And where are the police all this time?"

"We have but one policeman in our part of the town, and I'm afraid discretion outweighs valor with him. At least he has earnestly advised me to give up these meetings for a while and not irritate the boys."

The stranger laughed and following the parson's example picked up his hat.

"I'm going with you," he said. "I'm just aching for a little vigorous exercise."

The parson looked at his new friend with surprise in his glance, but he offered no objection.

There were more people in the assembly room of the modest church than the stranger had anticipated. There were at least 100, but a large proportion were women and girls, with here and there an elderly man. The stranger looked around for the disorderly element, but it had not arrived.

The pastor took his new friend to the very front row of seats and left him there, and the stranger at once discovered that he was the only occupant of this somewhat prominent tier. But his attention was quickly taken up by the simple service. He bowed his head reverently and he sang the

familiar hymn in a loud strong voice that had considerable music in it. Then he presently settled himself back to listen to the young pastor's talk.

It was at this point that the first interruption occurred. There was a rude and noisy shuffling of feet at the rear of the room, and some irreverent talking. This was followed by a laugh, and then came more talking and scraping of feet and presently an imitation of the tramp, tramp of a company of passing soldiers.

At the first indication of a disturbance the pastor had slightly frowned. As the noise increased the pastor frowned again, and presently laid down his book and looked about in an almost helpless way. His eye caught that of the stranger, and the stranger smiled and

nodded in a manner that evidently meant to go ahead.

The pastor picked up his book and resumed his reading. As he did so the stranger very deliberately arose and carefully buttoning his coat, started down the nearer side aisle. The noise had increased in volume until it quite drowned the pastor's voice, but the pastor read on.

Then the noise suddenly ceased. It was only for a moment, though. It broke forth again louder than before. At this there was the added sound of a struggle, a very brief struggle, and when it ended the noise ended, too.

IN THE FIELD OF CONSTRUCTION.

A moment later the more or less frightened congregation were treated to a peculiar sight. A very neat appearing stranger walked down the aisle, and leaning on his right arm was the town bully. The bully's face was very pale and there were tears in his eyes. Yet he did not appear to go unwillingly. On the contrary he seemed to be anxious to keep up with the steady stride of the stranger. No doubt this desire was strengthened by a somewhat singular twist that the stranger had secured on the bully's left arm. The bully was a younger and considerably bigger man than the stranger, but this apparently did not suggest any scheme for parting company with his escort.

He walked beside him, to quote one of the elderly men of the congregation, as meek as Moses. When they reached the front row, the stranger released the bully and pointed to a seat. He accompanied the gesture with a welcoming smile and a polite bow. The bully sat down. Then the stranger retraced his steps.

Almost immediately he came back with three more of the gang, big boys who were almost men in size. One boy walked before him, he had a firm grasp on the other two. On the way down the aisle, one of the two tried to squirm away. Without losing a stride the stranger caught the lad by the back of his coat and lifted him off his feet, and so carried him almost at arm's length the rest of the way. When they reached the front row he gave them seats beside the conquered bully. Then he turned again and went back for more. This time he was successful in corralling but one, the others having ignominiously fled. The latest victim was a stubborn youth, and the stranger had tucked him under his arm and so bore him down to his fellows.

When the last arrival had been seated, the stranger resumed his seat and the services suffered no further interruption.

When the final hymn was reached the stranger signaled the gang to rise and they all stood during the singing, one or two of them actually joining in. They turned to go when the benediction was pronounced, but the stranger stopped them.

"The parson wants to welcome you, boys," he said. "Hold fast a minute."

And sure enough the young pastor came down and told them all how glad he was to see them there, and shook hands with each and cordially invited them to come again.

"And now let me say a word," remarked the stranger. "I want you to understand, parson, that if there's any more disturbance at your meetings it won't be these boys who are a party to it.

They are not that kind of rowdies, and, besides, our big friend here is going to keep them all straight. Ain't you, my boy?" And he tapped the bully on his broad shoulder. "You'll look after things when I can't be here, won't you?"

There was a sickly grin on the big fellow's face.

"I'll promise," he said.

"He'll do it, parson," said the stranger. "He's one of the lads who when they make a promise always keep it. Good night, boys," and he passed along the line giving each of the lads a hand clasp that made him wince.

"Say, you're a blooming wonder," murmured the admiring bully, as he straightened out his cramped fingers, and then they all fled out.

"Did you hear what somebody at the door called me as we passed?" inquired the stranger as he and the pastor leisurely strolled towards the latter's lodgings.

"No. What was it?"

"The parson's bouncer."

"And what, pray, is a bouncer?"

"A bouncer is a man who is engaged to throw out visitors that are not welcome."

"Ah, but that doesn't apply to you. You hold fast to them and do your best to make them acceptable." The pastor paused and looked at the stranger admiringly. "What wonderful strength you have!" he said.

"It's the biggest part of my business," the stranger laughingly remarked. "I'm the strong man of the show, you understand. Been gathering muscle for almost twenty years. Trapeze, leaping, tumbling, weight lifting—it has been a part of my training. And now I'm 'The New Hercules' on the posters and the small bills."

The pastor paused again.

"What a wonderful amount of good you might accomplish if your strength were only applied in some useful direction," he said.

"Perhaps so," said the stranger, "but I'm very much afraid that a change of occupation would serve me in the same way that the scissors of Delilah served my predecessor, Samson, when they snipped away his strength."

The young parson laughed and linked his arm in his new friend's.

"Perhaps so," he said. "But there's one thing very certain, I will never forget this latest labor of Hercules."

And they laughed together.—*Cleveland Plain Dealer.*

The Lightning Express.

Down grandmother's banister rail
Swift as the wind I slide;
I'm the engineer that never knows fear,
And I travel far and wide.

Each time I rush upstairs,
Grandmother cries "Don't fall!"
When, whiz! I drop without any stop
Between Boston and Montreal.

I hurry again to the top,
Oh, my! it is such fun!
And then, I'm off again
And arrive at Washington.

Once more I am off like a flash,
To carry the New York mail;
I am sure you would guess 'tis the lightning express
On grandmother's banister rail.

—*Youth's Companion.*

The Lady of the Red House.

BY MRS. CORNELIA BAKER.

"I don't reckon that anybody that ever
come to the town created more of an

Bowen, the housekeeper, come along in a few days bringin' some help with her. She hired Mandy Ross to help put things to rights, and the things Mandy told when she got through her work and dropped into first one house and then another made us all open our eyes, I can tell you. Wild roses on the ceilin' of one room, with pink satin—yes, ma'am, pink satin—on the walls instead of paper, and the beds with silk curtains and silk comfortable. Among the other expensive things there was the picture of a king painted on ivory that Mrs. Bowen said was worth a mint of money, and I call that foolishness, for if you are goin' to pay so much for a portrait it's better to have one of some member of your own family and not of some old king that's been dead for hundreds of years and

ENGINE NO. 15, COLORADO MIDLAND, COLORADO CITY, COL., DECORATED FOR PRESIDENT ROOSEVELT'S SPECIAL, APRIL 14, '05. MISS DAISY E. WALKER, PHOT.

excitement than Mrs. Armand did," observed Mrs. Mason, as she deftly quartered and cored an apple and dropped the pieces with a sharp clatter into the tin pan on the floor at her side.

"The excitement commenced before she got here, for she had bought the red house—that place on the hill south of town that's got so many trees around it. Nobody had lived there for years; the house is too big and expensive for anybody around here, and some even said it was ha'nted, though I don't take no stock in such stories myself.

"But one day a lot of painters and carpenters went up the hill, opened the house and went to work at it, and Mrs.

mebby didn't amount to much when he was alive.

"Mandy told us that the owner of the house was a wealthy widder who had traveled all over the word and seen everything worth seein', and had concluded to buy a home and be quiet for a while. We made up our minds that she'd be old, and I thought she would be tall and thin, but Mrs. Stevens, next door, said Mrs. Armand was sure to be fat; fat women, she said, always seemed to have the most money. Mrs. Stevens is thin.

"Well, we was both mistaken, for Mrs. Armand wasn't old, or fat or thin, just tall and graceful and as handsome as a picture, though the first glance I got of

her face I said, 'Though that woman ain't over 25, she has seen trouble, and I know it.'

"This is a sociable town, and there wasn't a woman who considered herself anybody at all that didn't go to see Mrs. Armand, who always treated them polite, had a girl in a white cap pass around tea and cake, but told 'em she never made calls herself. There was only one thing that she seemed to take any interest in, and that was circuses. I didn't b'lieve this when I first heard it, for Mrs. Armand was so ca'm and cold that I didn't think she'd care for a fool thing like a circus. But it was a fact, and this fad was first noticed by Betty Leonard that keeps the little store where you buy embroidery silks and such things. .

"There were some circus posters on the fence opposite Betty Leonard's store and Mrs. Armand come down the street and stopped before them posters, and studied every one of them as if she'd never seen a show in her life. When she went into Betty's store there was one of these 'dodgers,' they call 'em, on the counter, tellin' still more about the show, and Mrs. Armand picked it up and read it from top to bottom.

"'Are you fond of circuses?' asks Betty, to be polite.

"'No, I detest them!' answers Mrs. Armand, droppin' the dodger as if it had been a snake, which Betty thought was awful queer, seein' she'd been so killin' anxious to know just what kind of a show it was to be.

"Betty told me afterward that you could 'a' knocked her down with a peanut shell when she saw Mrs. Armand come to that very show and stay through the whole performance! 'It's only human nature,' says I to Betty. 'There ain't many people honest enough to own that they like a circus. As for me I ain't ashamed to say I like the whole thing from the grand entry to the concert, and the clown just tickles me to death.'

"There ain't a town anywheres that's visited by more shows than this one is. There's so many miners and workmen in the blast furnaces, and every one of 'em turn out for a circus and take their fam'lies. The biggest show of the season come along in August and Betty Leonard and her mother stopped at my gate on their way to the 2 o'clock performance and we all went together. After we'd been waitin' for some time, for we went early, Betty pinched my right arm, and there passin' in front of us was Mrs. Armand all in white, for the day was hot, and she went to her place amongst the reserved seats like a queen mountin' a throne. The grand entry come prancin' in about this time, a fine sight all a

glitter with gold and spangles, and Mrs. Armand put up a pair of little opery glasses, which she kept to her eyes till she'd seen the procession pass around once, then dropped 'em and didn't look again till the next act begun.

"The bills had said there would be a Signor Rudini, the finest bareback rider in the world, and his son, a mere child, that could ride wonderful, and that the child had had the crowned heads of furrin countries on their knees at his feet. There was a big crash of music when these two come in, for I reckon they was considered the cream of the show. Siner Rudini was an awful handsome man in blue and silver, and his little boy was dressed just like him, and I heard some women sayin', 'Oh, ain't he just the image of his pa?' The ringmaster said that the boy was just 3 years old, and he didn't look over that, and he was the prettiest little mortal you ever set eyes on. The clown says, 'Listen at the ladies say, Oh-h-h, how sweet! They didn't say that when I come in,' and everybody laughed. Rudini mounted his horse with one skip, and the ringmaster picked up the child and tossed him to his father as you would toss a ball. The little one stood on his father's shoulder and threw kisses to the audience with his little hands, the cutest you ever saw. Then he climbed to his father's head and stood there with his chubby arms folded as cool and unconcerned as if he'd been on the floor, and Rudini jumped over banners and cut all kinds of capers with that baby on his head.

"Suddenly, and I don't know to this day how it happened, the child lost his balance and fell to the ground. The women screamed and some of 'em fainted, everybody stood up and some rushed to the ring. The clown carried the child out, and the little face was like wax, and looked so pitiful that I cried, and I guess I wasn't the only one that did. The ringmaster asked the audience to be seated, as the child, he said, was only stunned and would soon be all right, while Rudini mounted his horse again and pranced around as if nothin' had happened.

"But I couldn't get the thought of that little white face out of my mind, and I was bound I'd see if I couldn't be of some use to the child, for I'm a good nurse, though not perfessional. We was on the top row, and it made me nervous climbin' down them ticklish seats, specially as so many looked cross at havin' to move. I went around to the part of the tent they used as a dressin' room and a man at the door tried to keep me out. But I says 'I'm a nurse,' and shoved my way in. Mrs. Armand was there before me, and I guess she hadn't no trouble about gettin' in, for it would be hard for a man to say

no to a grand, commandin' woman like her. The child was stretched on a bunch of hay that I expect had been left from the elephant's dinner, and one of the banners Rudini had jumped over was spread over him. He looked taller and older than he did in the ring, and I found out afterward that he was really over 6 years old. On the ground by his head was seated an old woman, wrinkled terrible, with her arms clasped around her knees. Young Dr. Crane, that knows about as much about sick folks as a mole does about astronomy, was sayin', in that pompous voice of his'n, 'I think, madam, the child will recover, but there will be no more equestrian performances.'

"Let me take the little fellow to my

ought to dote on the baby, showin' no more feelin' than a catfish.'

"Rudini is not her father, and she has not a drop of my blood in her veins,' says the old woman in a snappish voice.

"She? Who are you talking about?' says I.

"Oh, I've told everybody she was a boy, so she wouldn't be found. I needed her myself, but I don't care who knows it now. She was left with me to take care of her, and no money was ever paid me, and I had to make her work.'

"At this Mrs. Armand turned as white as her dress. She touched the old woman on the shoulder and said, 'Come, I must speak to you,' and she crushed a bill (I didn't see the size of it) into her hand.

JOINT COMMITTEE BANGOR & AROOSTOOK RAILWAY.

Firemen :	J. F. Corbett.	P. B. Gerry.	D. F. Champlon.
Engineers :	D. A. Jacobs.	Thos. Conway.	John Curlison.

house,' says Mrs. Armand in her clear, cool voice. 'I will see that he has the best of care.' But the old woman didn't seem to hear, for she kept sayin': 'No more ridin'! Then how can I make a livin'?' I couldn't stand it any longer, and I says: 'I reckon you're his grandma, and a nice one you are! Instead of thankin' the Lord that the child ain't goin' to die you go to worryin' about the money you're goin' to lose by the accident! This boy has a fine set of relations, I must say! There's his father cavortin' a-horseback this minute as if nothin' had happened, and you, his grandma, that

The two went into a corner of the tent and talked a long time. At last the old woman took a letter or a folded paper out of the bosom of her dress, and Mrs. Armand snatched it, and after she'd read it she went over and knelt down by the pile of hay as if it had been an altar, and there was a light in her eyes that told me this was her own child.

"I can't talk much longer, for it's time to bake this pie, but it seemed that Mrs. Armand, the only child of a very rich man, had ran away and married a good-for-nothin' scamp and was cast off by her father. Her husband deserted her and

took the baby away with him for spite, or because he thought he'd get some money for it from the grandfather. But he died down South somewhere from the fever, and she was led to think that the child was dead as well. Then her father died, leavin' her all his money, and after she had traveled all over the world she heard that her child was alive and had been taken by some one connected with a circus. She advertised for the little girl, and put detectives on the track, and finally found the little one herself. Oh, yes, the child got over the accident. She is well and strong now, and her mother is the happiest woman you ever saw."

Never too Late to Mend.

BY GUY R. EDSON.

"Never too late to mend" has been worked, along with other trite common-aces, until, generally speaking, it no longer possesses any direct sense or meaning. But if the quotation be slightly altered to something like "Never too late to win success," it is beautifully appropriate to the story of Brown. His name isn't Brown, but it might have been if it hadn't been something altogether different, and, as he needs a name, and Brown is delightfully simple and vague, Brown it shall be.

Up to four years ago Brown was a horrible example of a misspent life. He had betaken himself to the ways of the bum. He worked occasionally, just enough to enable him to have some excuse for laying off whenever he felt like it. But when he did work he was always paid for it, and money in the hands of Brown spelled ruin. He should have worked regularly, for he was an expert pressman, and his services were much in demand at a good rate of salary. But until he was forty years old Brown had vague ideas of his duty toward himself and his family. Then, when people were calling him a wreck, he suddenly braced up and "made a man of himself." He is now foreman of a printing shop, and he works regularly. His career proves the truth of the never too late theory conclusively.

Brown came to Chicago from a neighboring state while still in his teens. He had a good common school and high school education. In the small town where he originated he had worked as printer's devil on the weekly paper, so when he came to the city he sought employment where this experience would be most likely to be of service to him. He secured work in a printing shop. Here he learned the pressman's trade complete, and other things. Up to the time when he reached his twenty-fourth year Brown

was a fairly steady worker. Drink had always had some attraction for him, and his career suffered some from the beginning because of this, but he was not a "booze fighter" until he was about twenty-four.

Then—and he was married and had two children—he began to look across the bar when it was doing business with altogether too great a frequency. He went on sprees that lasted for days. He came to his work more than half intoxicated on several different occasions. Generally he showed that he was not a man to be trusted in any position of importance. So his employers, who had seriously considered making him foreman of their present room, suddenly let him know that he must reform or suffer discharge. Apparently he couldn't reform, for a few weeks later found him walking the streets looking for work.

The sight of his family suffering actual want because of his faults apparently sobered Brown to some extent. He stopped drinking, secured employment in another shop, and swore that his days of foolishness were over. Brown wasn't what could be called a hard drinker. He was not a victim of the drink habit. He didn't drink because he needed a drink, but the conviviality of his companions was irresistible to him. He was weak, so he got drunk frequently.

He held the second position for something like two years. He never made any progress there, for his habits continually prevented him from being regarded as a valuable employee. His work was in every way satisfactory, when he worked, but he was dreadfully irregular. Employers have little use for irregular workmen. They need dependability rather than brilliancy in the conduct of their business, so Brown did not go far up the road of success as he grew older.

Instead he went back, for his habits grew stronger on him each year. His employers could never depend absolutely upon his being at work any morning. He averaged, possibly, five days' regular work a week. At the end of two years he was let out, and he was told the why and the wherefore in no uncertain terms.

"You'd be a good man, Brown, if you'd brace up," the boss told him, as he was discharging him, "but you're not worth a cent the way you're going now."

Brown became worthless after his second discharge. He concluded that the easiest way to get rid of his troubles was to drown them, and he decided upon whisky as the liquid to do the drowning.

But troubles are many-lived when one tries to submerge them, and Brown found that they always came back the morning after. There was a whole year then that

he worked but little. So soon as he found employment he was discharged, so what was the use of looking for work.

Then came another spasm of reform. His wife pleaded with him to brace up, and Brown, for he was not a bad fellow at heart, only weak, promised to make a new start. He did not swear off drinking, but he swore to begin working regularly as other men and to do his best to win some kind of a success. He easily found enough work, but he just as easily lost it. Habits which have been years in forming are not to be discarded in a moment, and Brown was still careless. He went from one job to another, never staying in one place long enough to prove that he was of any real worth.

He made several brilliant starts toward

Finally one of his old employers heard of his plight during one of his periods of reformation. He sent for him and listened to his new plans. So impressed was he by Brown's earnestness that he again took him on the pay roll. He gave him some good advice and let him know that a few more years of the life he was leading would place him entirely without the pale of decency.

Brown went to work with the determination to stick to his place until he had won some kind of success. He lasted less than a year. Old friends found him out and with them came the call of the old habits, and it was the same thing over again as it had been so many times before. When he was discharged this time his benefactor spoke to him harshly.

ILLINOIS CENTRAL ENGINE NO. 1017, EXHIBITED AT THE ST. LOUIS WORLD'S FAIR.

It is now in through passenger service, and crew shown are A. B. Hanks, B. of L. F. 364; B. B. Ford, O. R. C. 304; C. J. Barnett, B. of L. E. 23; E. Wagner B. of R. T. 347.

a hard working career, and once or twice he lost his position only after having risen to where a promotion would have been a question of only a few months. But always he managed to fall down and lose when victory was nearest. The man was perilously near to what must be called a wreck at this time of his life. He made resolves nobly, and then weakly went and broke them. He swore by all that he revered that dissipations or irregularities of any nature no longer should hold him a slave, and that from now on he would "attend strictly to business." But it never did any good, and Brown was not much better than the helpless, unnerved, will-lacking bum of the streets.

"Brown, you're no man; you couldn't amount to anything if you wanted to," he said. "You haven't got the backbone to stick to your promise for a week. You'll keep on getting lower and lower, and the first thing you know you'll be a professional bum and your family will be without support of any kind. You're no good. Don't let me see you around the shop again."

That was four years ago. Brown took the rough words to heart and went home to think over them. He wondered if it were true that he was no man. He wondered if he didn't have the backbone to keep a promise for a week. He wondered if he really was going to become a pro-

fessional bum and his family suffer want because of him. All these things he thought over after his last discharge. Then he set his lips in a firm, straight line that is seldom seen in men who fail, and went out to seek employment in a new shop where he would be unknown.

The writer met Brown a month ago, and he was then foreman of the press-room. He had been working steadily for four years and had made himself invaluable to his employers. He had saved money, and there was no doubt that he is a real success in his line. The man who discharged him the last time was wrong; Brown did have a will and a backbone, but it took him a long time to find it. However, this helps along considerably the argument that it is never too late to succeed.—*Plain Dealer*.

Parry and Parryism.

The *Wall Street Journal* which occasionally says some sharp things to organized labor, and is not particularly friendly to it, in fact takes an independent position, and hits what it thinks amiss in economic life, severely punctures Parryism in the following:

The less interference with economic law the better. More freedom of trade, less tariff restrictions; more competition, less monopoly; more liberty, less legislation and governmental interference—those are ideals to strive for and work towards. But we are always in danger of going to an extreme in the advocacy of any principle. Freedom is so desirable that we must have it at any cost, but too much freedom means anarchy. Law is essential to public order and justice, but too much law becomes tyranny. The highest human happiness lies somewhere between the two extremes of tyranny and anarchy. Mr. Parry pleads for industrial freedom. To that we say "Amen." But too much industrial freedom would lead to industrial anarchy.

Order and justice must rule in our industrial relations. The danger is that measures taken to secure order and justice may lead to industrial tyranny. Somewhere between monopoly and unrestricted competition lies the point of highest "economic" efficiency and national prosperity.

But the thing that we would especially call attention to is that Mr. Parry in his appeal for "industrial freedom" limits that beneficent principle to labor. He wants freedom of labor. But how about freedom for capital? He is much concerned about economic law in its relation to labor, but how about economic law and capital? What is sauce

for the goose is sauce for the gander.

One of the mightiest developments now going on in the world of business is concentration of capital. We are told that concentration is a result of natural economic law, and that any interference with it would be followed by the penalties which always visit violation of law. This concentration, however, is working toward the wiping out or reduction of competition which is freedom. It is working for regulation of production, and maintenance of stable rates and prices, and such regulation is interference with the law of supply and demand.

What is trades unionism but another phase of concentration? May not labor copy capital? When we begin to talk about law and freedom, let us be sure that we mean law and freedom for everybody alike, both master and servant, employer and employee, capital and labor.

Incidentally we may remark that Mr. Parry is doing the cause he advocates more harm than good, and the labor unions might help themselves by contributing to Mr. Parry's campaign expenses.—*Labor Journal*.

An Employer's Liberality.

The following advertisement is a good example of that class of men who are fiercely clamoring for individual liberty to work for whom and for what price they please. This advertiser may not be a Parryite, but his initials spell the right thing—H. O. G. EDITOR.

Here is the ad and a reply from a well known stenographer, which bears evidence that he could earn the \$3:

WANTED—A young man for office; must be an experienced stenographer and typewriter and able to correspond in English and German; salary to start, \$3 per week. Address H. O. G., 711, The Ledger.

"H. O. G. Dear Sir: I beg to offer myself as an applicant for the position advertised this morning. I am a young man thirty-seven years of age, have had twenty-three years' business experience, being connected with the United States embassy at Madagascar, and feel confident if you will give me a trial I can prove my worth to you. I am not only an expert bookkeeper, proficient stenographer and typewriter, excellent telegrapher and erudite college graduate, but have several other accomplishments which may make me desirable. I am an experienced snow shoveler, a first-class peanut roaster, I have some knowledge of removing superfluous hair and clipping puppy dogs' ears, and have a medal for reciting 'Curfew Shall Not Ring Tonight,' am a skilled chiropodist and a practical farmer, can cook, take care of horses, crease trousers, open oysters and repair umbrellas, and am also the champion plug tobacco chewer of Pennsylvania, my spitting record being thirty-eight feet.

"Being possessed of great physical beauty, I would not only be useful but would be ornamental

as well, lending to the sacred precincts of your office that delightful charm that a Satsuma vase or a stuffed billy goat would. My beard being quite extensive and luxuriant, my face could be used for a pen wiper and feather duster.

"I can furnish high recommendations from Chauncey Depew, Jacob J. Coxey, Kaiser Wilhelm, Captain Clark, the prime minister of Dahomey, and Akhoon of Swat.

"As to salary, I would feel that I was robbing the widowed and swiping sponge cake from the orphaned if I were to take advantage of your munificence by accepting the fabulous sum of \$3 per week, and would be entirely willing to give my services for less, and by accepting the sum of \$1.30 per week would give you an opportunity of not only increasing your donation to the church, paying your butcher and keeping your life insured, but also to found a home for indigent fly-paper salesmen and endow a free bed or so in the cats' home. Really, old man, your unheard of bounty borders on the supernatural, and to the unophisticated must appear like reckless extravagance.

"Can call any night after 10 o'clock, or can be seen Sunday morning in the loft of the church, Broad and Dock streets, where I am employed as first assistant organ blower and understudy to the janitor. Respectfully, Louis —"

Discipline of Trainmen and Block Signals.

The adoption of automatic block signals by the railroads has a very important bearing on the discipline of trainmen, as is pointed out by R. G. Kenly, trainmaster of the Lehigh Valley Railroad. In a paper presented last week before the Railway Signal Association, Mr. Kenly says:

The first thought on this question of discipline, in connection with automatic block signals is, there is no record nor check on their observance or proper interpretation by trainmen. Compare, for instance, the non-observance of a stop indication at an isolated automatic signal, with the observance of a positive signal governing a derail switch, or even of a manual block signal where a report of its non-observance would be promptly made. Does it not occur to many of us that there is a (mentally) careless class of men, who might disregard the automatic indication, and trust to their imagination as to track conditions, who would not dare to do so where a check on their action would be indisputable.

There is another class of men who draw on their imagination as to train movements, in connection with automatic signals, and are disposed to assume rights totally at variance with good railroad practice; for instance, there is on record a case of a freight train pulling from a passing siding, following a passenger train which passed at a high rate of speed, freight engineman assumed that passenger train was miles ahead before he got under way; result, the freight train be-

yond control, passed next automatic signal indicating stop and collided with passenger train. How shall we regard the action of the freight engineman? Was it ignorance, carelessness, or lack of judgment?

Again, cases are frequently noted where the caution indication is not properly observed—the indication may have been noted, but there is a tendency (erroneous, it is too true), after passing two or more caution indications, for an engineman to conclude that he has gauged the speed of a preceding train, and to imagine that he can maintain this speed indefinitely, wrongly expecting that at each succeeding signal he will get a proceed and a caution indication. Many conditions are liable to get such enginemen into very serious trouble, a burst air hose, a car or engine failure, or an outlet switch or main line crossover in use by some yard crew or work train, in fact the unexpected, but possible, conditions must be guarded against, and the railroad man, in whatever capacity, responsible for passing a signal in the stop position with a proper caution indication having been displayed, cannot be too severely dealt with. Dismissal appears to be the only proper discipline for passing a signal at stop. The result of the error should have little or no bearing in the decision.

There is another question of *esprit de corps* worthy of consideration, in connection with this subject. Does the protection afforded by automatic block signals in connection with the many other safeguards introduced in the movement and handling of trains, induce carelessness and lack of initiative among the trainmen? To quote from some recent remarks of our "Strenuous Teddy:" "The vigor and effort, without which the manlier and hardier virtues wither away," give us a key to good service—we must have strenuous men, drones and laggards must be weeded out; when the withering stage begins, there are no positions in railroad operation big enough or small enough to hold such. Enormous sums have been spent by railroads in safety appliances; not the least of which by any means have been the expenditures for block signal protection; the wages of trainmen are very good, and the service nothing like so burdensome as a decade ago—it is but reasonable, therefore, that the very best results are demanded, and discipline should be administered with these facts in mind. This opens the way to a discussion of what is Discipline.

Discipline, in the opinion of 90 per cent of railroad employees, means punishment for errors, and at long intervals to a favored few, recognition of good work by credit marks in the archives which are

promptly forgotten on the later advent of misfortune. Webster says it means "correction, chastisement, punishment intended to correct errors," but if we are going to assume this is the only meaning of discipline, then the best discipline would be reckoned by the number and severity of the sentences inflicted on erring employees, and the best disciplinarian would be the one who could best ferret out errors, who could best tangle up some poor unfortunate, and tell him how and when and why he ought to have done exactly right (easy enough after one has had time to think and review). Does this appeal to us as good discipline? Rather let us take another "Webster" definition, discipline means "education, instruction and government, comprehending the communication of knowledge and the regulation of practice," and tell me, do we not all agree that here is the essence of good discipline and loyal service, does it not cover the subject in hand? It will more quickly give us best results for the outlay of money in signal installation than all the punishment that can be devised.

Punishment for errors is a necessary evil—just as necessary as it is evil. There is a class of men (as well as school boys) who simply will not be educated; most of them are pushing wheelbarrows; if one should get into railroad service, it is necessary to punish him—his family unfortunately generally suffers all the evil. To conclude, let us devote our time to education and regulation of practice, and by this interpretation of discipline, reduce to a minimum the necessary evil.—*Railway World.*

Strike Responsibility.

Hon. W. Bourke Cockran, in a recent address on "The Conflict Between Capital and Labor," said in part:

Comparatively few strikes are due to disputes over wages. They are fixed by immutable laws. To my mind where there is a suspension of industry the employer should be held responsible. He is the captain to whom all others must look. The man in charge of an industry, no matter what it may be, who lacks the skill to deal successfully with the men employed under him, shows by his impotency that he was never fit to have been placed in charge of it. I did not say that he lacks anything in morals or honesty, but he lacks skill.

The responsibility for most of the strikes lies with our captains of industry. It is true that capitalists realize in a general way that they and the laboring men are partners, but in the breasts of many still lingers the old prejudice imbued into

humanity in the early Roman and feudal days when labor was servile. They seem to forget that the term "service" does not apply to labor now, that there is a real partnership between the capitalist and the man who works and that together they must prosper or decline.

If we look over all these strikes we do not find that they have arisen through disputes over wages, but were due to disputes with the men whom the employer dealt with. I don't see what difference it makes whether the employer deals with A, B, C or somebody else. Yet against that we have seen whole industries paralyzed, conditions of society threatened, because the employer would not settle with some outside person. That is no reason for causing a disruption. What concerns the employer and the laborer is what should he pay and what should he be paid.—*Progress.*

Only Wreck Safeguard, a Cool Head.

In discussing mechanical devices for safety of trains Mr. P. H. Honlahan, General Supt. Toledo, St. Louis & Western, said:

"You can labor from now till you are 100 years old in trying to equip railroads with every conceivable device to secure safety and yet you will have disaster unless you realize the great fundamental requirement of judgment—brains.

"No invention, however efficient, will take the place of a man with a cool head, who can reason rapidly and accurately in times when lives are hanging on seconds. Block signals may become clogged and fail to work, a telegraphic order may have a doubtful meaning, a switch lamp may be turned wrong, or a hundred other things may happen that would furnish an excuse for a man to say, 'It wasn't my fault.' But going down to the bottom of railroading, you want to impress upon men who have to do the running of trains that their judgment is the real reliance; their knowledge of what to do when the emergency arises. You will notice from reading accounts of railroad wrecks last winter that some of them were on lines equipped with every known device to prevent just such accidents as happened.

"I am not one of those who believe men should be retired from active service when they have passed 40 or 45 years. It requires from 35 to 40 years to ripen some intellects into perfect judgment. The man of 40 generally has been tried by fire, and he thereafter avoids the conflagration. Like the general on the battlefield, he knows what's best to do. A younger man might take his chances on a sharp curve or over a yard full of

switches. The veteran will begin to cut off steam at the proper moment and reduce his speed, making up the time on the next fair stretch.

"Brains are a matter of development in railroading as in everything else. You can't find any mechanical substitute though you line the track from beginning to end with automatic devices. Just as you come to rely on mechanics instead of men, just in proportion will accidents increase. When I'm riding in a sleeper I rest easier if I know there's a man of nerve and judgment in the cab than were the way sparkling with signals. I'm a friend to every possible appliance for safety, but I'm a greater believer in a system that relies upon human agencies as the chief safeguard. The reason? Why, God made man, and man made the inventions. The Master's work is the better."—*Brookfield Gazette*.

Man's Service to Man.

The service that a man does to his fellow-men does not bring down their gratitude upon him. And what then? There is a blessing which may come to him even out of the withholding of the legitimate completion of his service. It may throw him back upon the nature of the act itself and compel him to find his satisfaction there. Many a man who, having served his brethren in public or in private, has looked up from his work with a true human longing that his work should be recognized, and heard no sound of gratitude, has then retreated to the self-sacrifice itself, and found, in the mere doing of that, even deeper, even keener joy than he could have gathered from most spontaneous and hearty thanks. That has been support, the inner triumph, of many a despaired reformer, and misunderstood friend. Men have found a joy which they could not have had in a world undisturbed, and whose moral order was perfect.—*Phillips Brooks*.

A Little Sarcastic.

The statement is made that the Douglas shoe factory is turning out 10,000 pairs of shoes a day. This statement seems impossible, in the face of the assertions of our friends of the Manufacturers' Association that the use of the union label renders goods unsalable. Surely it is impossible to sell that many pairs of union-labeled shoes in a day. And then, too, Mr. Douglas pays union wages, which, according to these same gentlemen, must inevitably result in bankruptcy. With the terrible drain upon his resources from the payment of extortionate wages and

the loss of business resulting from the use of the label, it is no wonder Mr. Douglas made such a race for a job as governor of Massachusetts. He needed the salary to keep the wolf from the door.—*Trades Union Advocate*.

Fraternal Fellowship.

One of the cardinal principles of unionism is brotherly love. Strive as you may, no matter how just your cause, half of your failures can be attributed to a lack of that feeling which should predominate the being of every man with the welfare of unionism next his heart. Be a union man and be a brother at the same time.—*The Federationist, New Brunswick, N. J.*

The Reason Why.

Why have we over 8,000,000 men who have thought it worth their while to join trades unions? It is because the conditions of modern industry today have forced them into organization.

With unions they have come to enjoy those rights and conditions which have ever been denied them as individuals. Take the case of shoemakers in the factories of Massachusetts. In those factories not one man, but 88, are employed in the manufacture of a single shoe; so that the individual shoemaker all day, and the whole year round, is confined working upon one eighty-eighth of a shoe. In order for him to have a say in raising his wages he must combine with 87 other men before he can, in any sense, modify the conditions of employment.—*The Union Herald*.

Be Careful About Panama.

It ought not to be necessary for newspapers in this part of the United States, at least, to direct the attention of their readers to the warning given by Mr. John Barrett, American minister to Panama, before his transfer to the United States of Colombia, against seeking work on the Isthmian canal without fully understanding all climatic and other conditions which must be faced there, and without the security afforded by employment guaranteed before leaving the United States. As Minister Barrett very sensibly says, it is folly for Americans expecting to live by heavy manual labor to undertake to compete in the tropics with Jamaicans and other natives of regions so hot that the average white man is unable to dig much with pickax or shovel, or subject himself to any other like physical strain. It appears that numerous victims of misplaced hopes are now stranded on

the Isthmus, dependent upon charity for scanty means of existence and without reasonable hope of earning enough to pay for steerage passage back to their own country.—*Cleveland Leader.*

Railway Life in South Africa.

In our last issue we gave some particulars of working on the railways in the Gold Coast Colony. We have this week received a letter in respect to the conditions of service now obtaining on the Central South African Government Railways, which include the Orange River Colony and Transvaal. Our correspondent says:

All trains on these railways are worked on the trip system, and, needless to say, we are two and three hours working for nothing almost every day, also they have taken our guaranteed day from us and pay us only for the hours we work. Fancy, if you happen to be on the passenger trains between Johannesburg and Pretoria, you only make six and seven hours a day, and when you consider the cost of living out here it is enough to stagger a man. We have been in front of the railway board, which includes several mine owners whom they have called in to help them to crush us now the war is over. These are the men that we risked our lives for, and this is the treatment we get for it. The profits of these railways last half-year was three-quarters of a million sterling. We got no satisfaction from them, only the old story, "If you don't like it you are at liberty to leave the service; we can get plenty of men from home," add it is just to let old friends at home know the facts that I pen these few lines to you. Wherever it has been possible to do away with white labour they have done so and put a nigger in his place.

We have no doubt that our correspondent's warning will have its due effect.—*London Railway Review.*

Queer Epitaph.

In the *London Railway Magazine* there appears a curious graveyard inscription. On November 10, 1840, Thomas Scaife, an engineer, lost his life at Bromsgrove through an explosion. His fellow workmen erected a tombstone with the following home-made ode:

My engine now is cold and still,
No water does my boiler fill;
My coke affords its flame no more,
My days of usefulness are o'er.
My wheels deny their wonted speed,
No more my guiding hand they need.
My whistle, too, has lost its tone,
Its shrill and thrilling sounds are gone.
My valves are now thrown open wide;
My flanges all refuse to guide.
My clacks, also, though once so strong,
Refuse to aid the busy throng.
No more I feel each urging breath;
My steam is now condens'd in death.
Life's railway's o'er, each station's past,
In death I'm stopp'd, and rest at last.
Farewell, dear friends, and cease to weep;
In Christ I'm SAFE, in Him I sleep.

London Whitehall.

Old Westminster Palace was the London residence of the archbishops of York and was known as York House or York Place down to the reign of Henry VIII. On the downfall of Cardinal Wolsey, 1529, York House was delivered and confirmed by charter to the King, who changed its name to Whitehall.

There were already several Whitehalls in the country, and the choice of the name in this instance may have been due to new buildings of white stone, added by Henry VIII., which contrasted with the red brick in general use. Another conjecture is that the king wished to emphasize the depth of the cardinal's fall by erasing the very name of the palace so clearly associated with his elevation to power and position.

This appears to have been Shakespeare's view, for in Henry VIII. we read:

Sir, you must no more call it York Place; that's past.

For, since the cardinal fell, that title's lost.
'Tis now the the king's and called Whitehall.

—*London Telegraph.*

Origin of Lloyds.

Two centuries ago a man who had a cargo to send to the Mediterranean contrived to get rid of some of the risk by inducing a friend to take an interest with him. It was necessary to write out a statement of contract to which the guarantors subscribed. This was the first underwriting. These two men happened to be frequenters of Lloyd's coffee house in London, which was a favorite place for the merchants of the town to gather to discuss business or to gossip.

Others immediately saw the advantage of the scheme which their colleagues had devised, and on the next voyage the risk was parceled out among a larger number of the patrons of the coffee house.

Out of this small beginning has grown the great European maritime agency, still bearing the name of the humble coffee house proprietor, and which not only writes risks on vessels, but rates them and publishes their arrivals at every port the world over, no matter how small or how remotely situated.—From "*The Annals of the American Academy.*"

Ruler of Russia's Title.

The general allusion to the ruler of Russia as the czar is, strictly speaking, incorrect. His official title is "emperor and autocrat." Czar is the old Russian word for lord or prince and was abandoned by Peter the Great on his triumphal return

from Poltava, his crowning victory over Charles XII. of Sweden. Since then the Russian monarch has been officially entitled emperor, and at the congress of Vienna in 1815 his right to the imperial term was admitted by the powers, with the proviso that, though he was emperor, he had no precedence over the kings of western Europe.

Thrown Aside to Wait.

On a sidetrack, cold and drear,
In these wintry winds I stand;
Not a sound to reach the ear,
Not a touch of human hand.

Once I was so strong and bright—
All my brasses round me shone,
Now with rust I've lost my might,
And I stand here all alone.

Long, long years I've traveled on,
Working with my might and main,
Hauling loads of freight upon
Slippery rails by frost and rain.

Once I saw a headlight flash,—
On I hurried just the same,—
And I heard a fearful crash;
Like a thunderbolt it came.

In the midst of hissing steam,
I could hear the moans and cries
'Neath the frame and pilot beam,
Where my wounded hero lies.

By the guidance of his arm
I was driven to my fate;
Whom to blame for all the harm
Is not in my part to state.

Many years since then I've spent
Flodding on with heavy freight;
Discarded now, I'm never sent,
But left alone in this sad state.

Like an old and tattered coat,
I am thrown aside to wait
Till some hand will come and tote
All this scrap iron to its fate.

BROWNIE.

The Moon and the Weather.

The moon is the most powerful agent in producing the tides on the earth; it also produces some light variations in the earth's magnetism. So far as science has been able to investigate there is absolutely no change in the weather which can be attributed to the moon, although half or more of mankind seem to believe that the moon does have some control over the weather. All such beliefs, including the time for planting gardens and for going fishing, are mere superstitions—the survivals of an age of ignorance.—*St. Nicholas.*

The Printer's Devil.

Aldus Manutius, a printer in Venice to the holy church and the doge, employed a negro boy to help him in his office. The boy was believed to be an imp of Satan and went by the name of the "printer's devil." In order to protect him from persecution and confute a foolish superstition Manutius made a public exhibition of the boy and announced that any one who doubted him to be flesh and blood might come forward and pinch him to make sure. The mistaken impression was removed, but before this time the name "printer's devil" had been attached to the boy and was thenceforth applied generally to the boyish assistants in a printing office.

Great Distances.

From San Francisco to Yokohama the distance is 6,960 miles in an air line. From that city to Melbourne is 6,000 miles in round numbers. Manila is over 1,800 miles from Yokohama and 2,800 miles from Peking. Manila and Melbourne are over 4,200 miles apart, while from Manila to New Zealand is nearly 7,000 miles. Bangkok is distant 1,600 miles from Manila. Canton is 800 miles and Hong-Kong 700. Singapore is 1,500 miles from Manila, and the chief city of Borneo, Banjermassin, is distant over 2,000 miles.

When Washington Was Inaugrated.

On the occasion of Washington's second inaugural many of the members of Congress were desirous of waiting on him in testimony of respect as chief magistrate. A motion was made to adjourn for half an hour for the purpose, which, however, met with great opposition as a species of homage—"it was setting up an idol dangerous to liberty; it had a bias toward monarchy."

Radium Energy.

It has been calculated that the energy stored up in fifteen grains of radium is sufficient to raise 500 tons weight a mile high. An ounce would, therefore, suffice to drive a fifty-horse power motor car at the rate of thirty miles an hour around the world.

It is just as wicked to intrust some men with large amounts of money as it would be to put an idiot in charge of an express train.

Intelligence, industry, honesty and thrift produce wealth, and those who possess such qualities are best fitted for its custody.—*Exchange.*

Correspondence.

All contributions to our Correspondence columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer as a guarantee of good faith, and to insure insertion.

While the Editor does not assume responsibility for opinions expressed by contributors to this department, he is held responsible in both law and moral ethics for admitting that which will injure or create ill feeling. Hence all communications are subject to revision and rejection if the Editor deems it necessary.

C. H. SALMONS, Editor and Manager.

Syracuse Union Meeting.

TO J. W. WATSON.

Dear Joe, I traveled back the years,
That day I faced your mighty throng
Of New York Central engineers,
The first to woo me into song,
To tell about our joys and woes,
Our pleasures and our hours of pain,
In summer's suns, and winter's snows,
Before full many a hard-pulled train.

I saw the heads of whitened hair,
That once could shame the raven's wing,
Of scores of dear old-timers there,
Who often made me gaily sing,
Who did my quaint old jingles raise,
In accents of unmeasured glee,
And were the first to lavish praise
On each crude effort made by me.

It was not always sunshine then,
We had a spell or two of woe;
Bouquets were scarce with railroad men,
Some five and thirty years ago.
We lived on hope, 'twas airy food,
We pounded Hinkleys and McQueens,
And oft on wintry grades we chewed
Our frozen hash or pork and beans.

We had no air in those old days,
To save us from the crash ahead,
I often had to croon my lays
Above the bier of heroes dead,
Who, like the adamantine rock,
Reversed and stood with bated breath,
The first to feel the dreadful shock,
Which crushed or scalded them to death.

We linger yet. We've better times,
And much more pay than years ago.
Roast beef and pie run through my rhymes
More than they did of old, dear Joe;
And to such brainy lads as you,
Who curb the rash, reprove the wrong,
Is all the honor justly due,
Which is the burden of my song.

SHANDY MAGUIRE.

Troubles and Triumphs of Travel.

BY SHANDY MAGUIRE.

[Continued from June JOURNAL.]

At Pomona we saw the streams of water running between the rows of orange trees, for the purpose of irrigating their roots. Many questions were asked relating to the system of watering them and the replies were very interesting to us. We showed our astonishment in our faces at each new piece of information, and some of us came near mobbing Pound for saying, "God bless the country where you can raise a flock of ducks in every barnyard, and have plenty of water, clear as crystal, for them to wobble about in if you so wish." Between himself and Davis we were continually nagged when we'd award any praise to the beautiful land we were passing through, which was fit to be the lost Paradise of Adam and Eve.

Birmingham was the garden spot of the world with Pound; and Davis blew his bazoo about Denver and the foothills, until we refused to listen to them.

Davis said to me on one occasion after we made him dry up quicker than the climate would, "You seem to have a poor memory. I remember the time when your feet were much more tender out in Denver than they are today; but we took you carefully by the hand and led you along until we felt you could walk alone. I don't think it is gratitude on your part to forget Miss Maggie McGill and the day she knocked you out in the opening round in the Tabor Grand Opera House with a floral harp just as big as herself, made of flowers just as beautiful and fragrant as any in California. It would be well for you to remember," to "be sure, you are off with the old love before you are on with the new."

I did not think I deserved the rebuke, as I have recollections of Denver in the very sunniest niche of my heart; but Pound was a sower of discord. I told him so, and Davis accepted my excuses.

By the way, dear Mrs. Pound, there is an old girl sitting near to where I am scribbling, who has told me a score of times, when the opportunity to give you

her kind regards in these lucubrations would occur to do so, and also to express the wish that you and herself may meet in Memphis next year, till she renews the endearing friendship begun on this memorable trip; and as we are now nearing the home stretch I have done so ere we part, and I also add my own hopes for such a meeting.

The next stop from Poinona seemed to be a meeting point. I noticed us taking the siding. About two hundred feet from our train was a big yellow pile of what some called California poppies, and others oranges. I solved the question by going to the place and finding them oranges. I made a bag of my coat and brought a peck of them back to our car.

From the train we passed we got Los Angeles papers of two and three days old. "Listen, boys and girls," sings out Sanderson, "to what we've missed." He then read to us the report of the trip around the Kite and the banquet at San Bernardino, where the multitude was deluged with rose leaves which fell from above as the banqueters dined, together with a very fine report of the day and evening in general.

"It is too bad we were not with them. We are like a cow's tail, always behind," said McGovern.

"You don't want a cow to carry her tail ahead, do you? The paper said they came one thousand strong. How much provender would you get to consume if you were there? You'd have to keep your mouth open and fill up on rose leaves as they'd fall," said the arch disturber, Pound.

"You'd not get up from the table hungry if gall would get you waited on," said Sanderson, who did not like the interruption. Davis then dipped in his oar and said:

"I don't much marvel at the banqueters being pelted with roses, and showered with their leaves. If they cost one dollar or maybe two a dozen they wouldn't have to look skyward to see where they fell from; not that I am disparaging the big-hearted hospitality of the citizens of San Bernardino, but look out on each side

of the track and you will note that the very choicest brands are as plentiful as are the buttercups and daisies in our own country.

"Never desire to be in any crowd of big proportions, for you only are an insignificant unit in the great crush all about you. If any of you were at the Atlanta Convention, and accompanied the crowd to Chattanooga, you yet remember the very miraculous escape the load had going up the incline railway, when the cable broke and —"

"Oh, give us a rest and don't be conjuring up painful things past and gone. Here was a banquet hall where 73 baskets of lilies, roses and date palms shed their fragrance around until the banqueters enjoyed the deliciousness of an epicurean feast and partook of it amid the dense perfume of an unsurpassed display of the adorning surroundings," said Sanderson.

"Does it tell of the bill of fare anywhere in the description?" says Davis.

"Yes, a full description."

"Was there any tongue served?" said Mrs. Davis.

"Yes, plenty."

"There is one man in our party who would not have to be furnished with any, for Nature made a generous presentation of the article to him at birth."

We were on the point of making inquiries whom the lady meant the moment she ceased speaking, but the train slowed down, the train door was opened by a trainman, and in a clear tenor voice he sang out "Pasadena."

The name was like an electric shock to me. I've heard it so often, and read of the beauties of the place so much, that I wanted to see if my glimpse from the car window would bring it up to my preconceived ideas of what it was, and after a glimpse of brief rapturous duration I exclaimed in the opening lines of the Battle Hymn of the Republic, "Mine eyes have seen the glory of the coming of our Lord!" All became full of enthusiasm at the sight of the beautiful place, and it looked as if we could make the few remaining miles in harmony, without any jarring chord of discord, but the hope was a de-

lusion. Birmingham had the call, and our admiration which was silently bestowed on the peerless panorama we were viewing was taken by the son of the place, either by nativity or adoption, to be giving consent to his description of some villas in that city's suburbs. The trainman came to our rescue by singing out "Raymond," and indeed, we could not find words to praise its beauties. Such a profusion of flowers, palms and trees as symmetrical as if the Arboriculturist of the Universe did the pruning and trimming, and set them in the various places to make observers bend their knees upon the artistically trimmed verdure, to send thanks to Him for His glories.

"Who is Raymond, anyway?" said the nagger.

"He must have been the founder of this place," said McGovern, "and never was there a butcher whose statue is erected in marble or bronze for the admiration of observers, from Samson who slew the Philistines with the jawbone of an ass—with a quick glance at Pound's jaw—down to the last one erected, gets one-hundredth part the pleasurable ejaculations than does the founder of this place, be his name Raymond or Dennis."

"Hear, hear," said Sanderson.

"That's English, you know," chimed in Bryant.

"And it's truth just the same," said Davis.

The trainman came in at this time and, addressing the ladies, pointed to a peak midway between the valley which we were running through and the snow-capped summit, and said, "That peak is known as 'The Lover's Nest.'"

"Why did it get that name?" said Mrs. Davis. "It is quite a job to get up there to nest. There are many more convenient ones nearer home."

"When this road was building," said the trainman, "there was as fine a specimen of a young man working on one of the construction trains as one's eyes ever saw. He was loading ties here one day as a young lady came along with her carriage, and holding a baby in her arms. She sat the child down on a robe and left it in

charge of the driver while she went picking flowers. It was about six months old. The horses being restive, they occupied the attention of the driver on account of the blowing off of an engine standing a little way beyond. With the rapidity of a dart of lightning an eagle swooped down from the peak where it had its nest, and took the child up in its talons. The news spread with the speed of thought. The young mother fainted away, and the men working on the construction train all ran to the place where she fell, with their features blanched at the terrible happening. No one seemed to know what to do till young Maybery—his name was Arthur Maybery—sang out in a commanding voice to assist him in making an effort to rescue the child. A score of men responded. He ordered them to get out and unreeve two of the falls in the caboose, which made over a thousand feet of rope; then dividing it into 15 coils of about 75 feet each, he had 15 men shoulder it and climb the mountain by a roundabout way until he got to the summit, about 600 feet above the nest. He made it fast and by a dexterous heave he sent the end flying out beyond the breast of the hill, paid out rapidly, and fortunately it all ran clearly down, hanging about 20 feet out from where the eagle flew with the babe. He made the end securely fast to a tree and told them to hold it in one of their hands, so that if a tugging at it was felt to let it go. He then slid down, and when abreast of the nest he began an oscillating motion in and out until he caught a limb of a tree and swung in. He found the babe sleeping as gently as if in the arms of its handsome mother. He allayed the tremendous anxiety of the spectators below for its fate by swinging his hat. It called forth a mighty cheer. The old marauder of an eagle feared to come near its eyrie on account of the screaming of the locomotive's whistle and popping of guns to keep him away. Maybery then tugged the rope. It was let go above. It was again fastened to a tree and paid out until caught by the men below. He fastened the babe on his back and slid down, occasionally resting in the manner of a sailor,

by twisting his leg between the knee and ankle around the rope, and making the descent as carefully as safety demanded.

When he was half way down the mother was restored to consciousness and informed that her babe was safe. She saw it coming down against the back of its noble rescuer, and no sooner did he touch the ground than a lusty cheer went up for him. In an instant the mother had it in her arms, and after her motherly feelings were soothed by hugging her child, she hugged and kissed Maybery also.

We are now nearing Los Angeles or I would give you the particulars of how the lady married Maybery. She was the wife of a millionaire about 75 years old. He won her in the East by asking her if she'd do him the honor of becoming his widow. She did. He then came here to get his health restored. Our climate will do most anything but renew the youth of an old man with a young wife. He died six months after the rescue, and after the mourning was over, the widow asked the rescuer of her child if he'd do her the honor of becoming her husband, he being bashful and entirely above being a money hunter. He consented. That fine mansion so luxuriously situated in that orange grove is their summer residence. You will note that it is fronting the 'Lovers' Nest.' "

"Are you any relation to a chap named Tom Pepper?" said McGovern; but the trainman was out of hearing.

(To be continued.)

B. of L. E. Men for Panama.

CULEBRA CANAL ZONE, REP. OF PANAMA, {
May 4, 1905. }

EDITOR JOURNAL: As I have been requested by several Brothers to give them some idea of the work here, I know of no better way than through the columns of the JOURNAL.

Briefly speaking, eight American steam shovels and two French excavators are at work here. There are three more steam shovels to be put to work in the near future. There are scattered along the canal millions of dollars worth of machinery, which is practically useless. There are

more than two hundred large excavators, between four and five hundred Belgian locomotives, about one hundred steam cranes and thousands of cars; all these are made of the best material and put up in the most expensive manner. The locomotives have 15½x23 in. cylinders with copper fire boxes and copper tubes. They have six wheels connected with no front trucks and have outside connected valve gear. There are several Roger engines of about the same size, but as far out of date as the French machines. Practically, these engines have no brake, lubricators or injectors. The boilers are supplied with water by an independent or a cross-head pump. As yet everything seems disorganized and there is much dissatisfaction among the men.

There are five rates of pay for the same work. The pay is from \$83.33 to \$145 per month. This alone is sufficient to make men dissatisfied. Enginemen are expected to be at their engines at 5:50 A. M. and work until 5:30 P. M., with an hour off for dinner. No overtime is allowed and if called for Sunday, work is expected without additional pay. Taking everything into consideration, the wages paid will not warrant men coming here. All B. of L. E. and B. of L. F. men will do well to stay away from the Canal Zone. It is my opinion that it will take at least two years time to get the work thoroughly organized. Men are not staying here longer than it takes them to get away. There is much to contend with here, aside from the unhealthfulness of the zone. The conveniences given up by men coming here from the States are worth far more than the salary amounts to. While the temperature is not high in the shade and cool nights make a low average, yet the heat from the sun is excessive. Drinking water is very scarce; a small sterilizing plant is installed here for the benefit of the white men. As the capacity of the plant is only about 200 gallons per day, and there are 300 white men, you can readily see the 1,700 colored men must drink unfiltered water or not drink. Taking all together, conditions are bad here for enginemen and were it not for the fact

that Mr. L. B. Murray understands men as well as engines, it would be much worse. The Isthmian Canal Commission made a wise choice in selecting Mr. Murray for this position. He does all he can to contribute to the comfort of his men, and he never fails to recognize a B. of L. E. man. Mr. Murray has run engines on twenty-six different railroads in the States, and was connected with the Motive Power Department of the Norfolk & Western R. R. in the capacity of Road Foreman of Engines for more than four years before coming here. Still neither Mr. Murray nor the Isthmian Canal Commission can overcome yellow fever and malaria, which are the worst things a man could possibly come in contact with, both of which now exist on the Isthmus and in all probabilities will be here for some time to come.

The air is so damp that clothing can be kept dry only by putting in the sunlight each day. Clothes that are allowed to remain in the house for any length of time become mouldy and will rot in about four weeks.

When I came here I expected to see many mosquitoes, but as yet have seen very few. They are not nearly so large and so ferocious as the mosquitoes at home.

Returning to the work of digging the canal, what has been done is scarcely noticeable. The Culebra Cut, the deepest on the canal, will be something like 600 feet deep, about 180 feet deeper than it is now. This one cut will take at least 20 years to finish. There are between forty and fifty engines working here; about half the engineers are white and the rest are colored. The colored men do fairly well, being not nearly as ambitious as white men, they are better satisfied at half the pay and do not complain at anything.

I would say in conclusion, that no Brotherhood men should come here unless they have at least sufficient money to pay a first-class steamer passage back to New York or New Orleans (which is about \$35), as steerage passage is not being sold, owing to yellow fever being prevalent on the Isthmus.

Men coming here in the near future will find few quarters. There are from two to ten cots in each room, but the board is as good as could be expected, costing \$25 per month or 27c per meal.

With best wishes for the fraternity, I am,

Fraternally yours,
JAS. J. RICHARDSON, Div. 523.

Back to the Land.

NAPA, CAL., May 1905.

EDITOR JOURNAL: I think we "have beans" will have to ask you to set aside a portion of the JOURNAL for our special use. The section might be called the "superannuated corner," or the "side track." A considerable portion of your constituency are no longer interested in, or competent to write of matters concerning locomotive or train service. The contributions to the Technical Department are becoming more and more a mystery to us. Although in full sympathy with our old associates, a long term of years spent in other life pursuits has dulled our interest in much that is of lively interest to those who stand on the footboard today. So I think that if you would give us one of those pages in the back part of the book, lately vacated, we ex-railroaders might herd together there and not feel that we are intruding. For instance, I want to tell you what a terrible tussle I had recently plowing under "burr-clover" in my orchard, but I am mindful of the fact that our organization is an international one, and that the readers of the JOURNAL are widely scattered; so while my experiences might interest a few I realize that there are many running out of Quebec, for instance, or the City of Mexico, who may not be interested in a recital of the trials of a California horticulturist, even though he once ran a locomotive, which suggests the idea of tucking us away near the advertisements. The large number of letters received in response to my letter in the JOURNAL a year or so ago, is evidence that there are many engineers who have a longing to follow my example and "get back to the land." It is a natural desire. First of all, we tilled the soil. Life on

the land is the natural life; all other pursuits are artificial, and the natural outlives the artificial. Among the earliest recorded utterances of man was that of Cicero, the great Roman orator who lived a hundred years before Christ; delivered at a time, one would think, when there was little else to engage man's attention but agriculture, except, perhaps, war. He gives a fine picture of the Roman enthusiasm for agriculture.

"I come now to the pleasures of husbandry, in which I vastly delight. They are not interrupted by old age, and they seem to me to be pursuits in which a wise

wealth; it abounds in kids, in pigs, in lambs, in poultry, in milk, in cheese, in honey. Nothing can be more profitable, nothing more beautiful, than a well cultivated farm."

It will be noticed that the author of this enthusiastic outburst was not a farmer, but an orator. He was the prototype of that splendid American, W. J. Bryan, who is an agriculturist as well as an orator. Mr. Bryan defines an agriculturist as one who makes his money in town and spends it on the farm; a farmer as one who makes his money on the farm and spends it in town. Mr. Bryan belongs to

BRO. D. J. BROWN, AS A CALIFORNIA FARMER.

man's life should be spent. The earth does not rebel against authority; it never gives back but with usury what it receives. The gains of husbandry are not what exclusively commend it. I am charmed with the nature and productive virtues of the soil. Can those old men be called unhappy who delight in the cultivation of the soil? In my opinion there can be no happier life, not only because the tillage of the earth is salutary to all but from the pleasure it yields.

"The whole establishment of a good and assiduous husbandman is stored with

the former genus. There have been many eminent agriculturists between Cincinnatus and Bryan, including Washington, Jefferson and Horace Greeley, and now in these latter days must be added to the list Joaquin Miller, the "Poet of the Sierras." This is his song: "Get land, get land, and never let go a handful of sand." Joaquin got land down in Texas—land at the time of purchase supposed to be of little value—so he was enabled to indulge his passion to the utmost, becoming the possessor of leagues of it. That land is now part of a territory covering one of the

richest oil reservoirs on earth. As the poet is far past three-score he may now feel safe from want during the five or ten years that remain to him on this sphere.

The agriculturist is much more enthusiastic than the farmer. Enthusiasm abates somewhat when one has to get in and do his own plowing, especially such plowing as fell to the lot of the writer in the spring work of 1905. In California we have two grasses which make a rank growth in the winter and early spring. As the season advances they die out from lack of moisture. These are "burr-clover" and "alfillera." The stems or vines of the clover are at times six to eight feet long and so interlaced as to make plowing through them next to impossible, without the aid of an appliance called the "rolling coulter." This device is a steel disk 12 or 14 inches in diameter, which is suspended from the plow beam and revolves in its frame, just ahead of the plowshare. All ordinary vegetation is overcome by the coulter, but the continuous rains and absence of frost during the past winter have produced an excessive growth, a growth that has almost baffled the best plowman with the sharpest coulter. In the open field the coulter wins, but dodging around trees is another proposition. It is the work of this kind that destroys enthusiasm and makes the *farmer* a different type from the *agriculturist*. Providentially the labors of the farmer are interrupted occasionally by a storm, or by an order of the court to attend as a juror, the elements, the law, sickness or death—these are the only interruptions to the daily round of the husbandman.

Your correspondent never took part in civil government and has kept clear of the courts, until recent years, except when he had to appear occasionally before the coroner. Now, however, having a certain abiding place and being a freeholder, he is called to serve on grand and trial juries. The change from the field to the court room where one can listen to the war of words and the eloquence of the lawyers, and where one can for a time mingle with his fellow citizens, is an agreeable change

and gives needed rest and relaxation. This is the farmer's vacation.

A six days' rest came to me recently on a murder trial and the honor of being foreman of the jury, and the satisfaction of announcing a verdict which set two unfortunates free. In this case the dead man's neck was broken and a dozen of his ribs. The work of the defense was to convince the jury that these injuries came in the course of a desperate struggle and not by foul means. One of the ablest lawyers in the state representing the defense in a heart searching address to the jury suddenly approached my chair and leveling his finger at me, said, "You are a locomotive engineer. You know what impact is. You have seen great bodies crashing together." Now, I had long since made up my mind to vote for acquittal, but had it been otherwise, this flattering reference to my *expert knowledge of dynamics* would have settled it anyway in favor of the defense. In fifteen minutes we found a verdict of acquittal and settled a contention which had consumed six days' time and had brought from the uttermost bounds of the country a panel of sixty citizens. But what of the "victims of acquittal?" Under our system of jurisprudence they cannot obtain redress from the state for failing to make good the charge. These defendants had suffered three months imprisonment awaiting trial, and were subjected to heavy legal expenses in their defense. When we turned them loose they *received the congratulations of their friends*. Is this the square deal? I think not. I agree with the author of a magazine article recently published, that when the "people" fail to establish guilt, *the accused should be indemnified* at least to the amount of their counsel fees and lost time.

Now, Mr. Editor, I only have time to write when it rains. I see the sun is coming out and it may not rain again until next fall, so I must drop the pen and resume my labors. The prime object of this rambling letter is to give the readers of the JOURNAL a glimpse of the daily life of the engineer farmer. The pleasures and trials of rural life are here

impartially set forth side by side. What is written may perhaps be read with some interest and profit by those poor souls who yearn for the trees and the flowers and the grass and the wild birds—who long to “*get back to the land.*”

D. J. BROWN.

Reaped as He Sowed.

DETROIT, MICH., May 12, 1905.

EDITOR JOURNAL: Our late Grand Chief Arthur claimed that capital has

we laid him away there were none whom he had tried to serve in earlier days present at the end; but Brother Webster simply went up against the wrong man.

At that time there were some of the best men running out of Marshall that ever stepped on a locomotive, and among them were Geo. Watrus, John McCurdy, Jud Thompson, Tom Faulkner, Tom Nixon, and others, who helped organize the B. of L. E., and if they could not assist a man would not do an unmanly act behind his back; but Division No. 2

THE EGYPTIAN. MICHIGAN CENTRAL ENGINE BUILT IN THE 50'S.

never defeated labor, that labor has always defeated itself.

In his letter in the March JOURNAL, Brother Webster, of Div. 328, gives a good idea of the unfriendly feeling of some engineers towards each other. The writer fired for Mr. Priest about two years and knew him as long as he lived thereafter, and heard the experience of the N. Y. C. engineers talked over, and am sure that he did not feel proud of his part in the affair during later years, and when

has an old footboard minute book in which a motion was carried that members were not to speak to nor recognize men who were not members; and to illustrate how grievances were presented, Mr. Sweete received a box from Chicago by express containing a dead pup, her tail cut off and a card which said, “Cut me closer;” also half a loaf of bread, a card saying, “Half a loaf is better than no bread,” which remark he was said to have made after cutting the pay. But

grievances are handled differently now, and the railroad officials have much more confidence in the Grand Chief of the B. of L. E.

As Brother Reading, Div. 286, requested, will send a picture of one of the passenger engines built at the Detroit Locomotive Works in the fifties, which were hook motion when new.

THE EGYPTIAN.

APOLOGY TO MR. GEO. R. WILLIS.

Oh, for dear Shandy's magic power
To awaken the strain sublime,
And trace the long years' changeful course
Down the rusty rails of time.

Oh, for a master's hand to grave
Each name so 'twill ever be seen,
Of the men who labored but not in vain
When this Brotherhood was but a dream.

We read in the songs of the old Norse bards
That the warriors who battle here,
After crossing the dreary gulf of death
Fight on in another sphere.

These strange wild songs haunt the brain today,
As these pages are unfurled,
And in fancy we hear her sharp exhaust
Echoed far in the spirit world.

Her whistle calls the brakemen to quarters again,
The lever is pulled back as of yore,
And the sands of time run on the fading rails,
As she glides along the echoless shore.

There Arthur now gathers his shadowy band,
Beyond Eternity's fathomless tide,
And Ingraham stands with his work approved,
As of old by the chieftain's side.

Oppression has crumbled and fallen since then,
Opposition is melting away,
The JOURNAL still reigns and factions' waves
Shall beat harmless against its way.

Our mottoes that have weathered these forty odd
years,

From the snows to the souther's green sod,
Shall not be dishonored by Brotherhood men
Nor abandoned by liberty's God.

Fraternally yours,

C. A. HARKINS, Div. 1.

Letter from a Retired Engineer to a Friend.

PLEASANT VALLEY, N. Y., June 1, 1905.

FRIEND DAN: Your favor of the 23rd inst. containing biographical sketches of old timers I have known is at hand. Many changes take place in twenty years, and I have heard little news from your

section in that time. Mother and I are well and pleased to learn that yourself and yours are similarly blessed. Just previous to the arrival of your letter I had a little spell of the blues. Mother insisted on a trip to the roundhouse and that, together with your newsy letter, put me right again. Yes, I went down to the engine house, took the same old route I used for nearly a lifetime. Knew everybody on the way, especially the kids, and they have always known me. When I passed the *Tribunal* office, the usual gang of newsboys were about, waiting for the late editions of the morning paper, some shooting "craps," others playing catch and all apparently talking at the same time. A hardy, bright and busy lot of lads. They used to greet me whenever I passed, and being posted on the arrival of trains, they would sometimes say, "The 'Flyer' is twenty minutes late. You'll have to line her out today, Jace," or some other cheery remark; but today when I passed it was different. It was simply "Good morning, Mr. Kelley." No jolly, no flippant remark from any of them. They just gazed at me much the same as they would at a passing funeral. Their very politeness sent a chill to my heart. Yes, Dan, I feel I am losing prestige. I had hardly gone a block further when I saw a frouzy-haired though unusually fat mule hitched to an express wagon, and doing some stunts in the kicking line that were, to say the least, amusing. He would kick with one leg at a time, then let go with both, and he really seemed to enjoy it. I asked the sleepy-looking driver who leaned unconcernedly against a convenient post if there was anything the matter with the animal, but he answered, "It's just his way; there's no harm in him." I had heard a like expression before and it reminded me of something. Just then it occurred to me I had often heard that when old railroad men die they return to earth in the form of some animal that best represented the peculiarities they had developed during their stay on earth.

Of course, Dan, I don't offer you this as a theological truth, but if there is any-

thing in it, that mule was nobody but old "Buck" Hunkins. If you knew "Buck" you would have known one of the most persistent kickers in this country. Such a trifling thing as cause did not concern him. It was his privilege to kick, and like many other railroad men he exercised that prerogative to the limit. His friends would excuse him by saying it was just his way, as the teamster did his mule, and it was that very familiar remark which I had so often heard that caused me to recall old "Buck" Hunkins. I fired for him on the fourth division. He was a pretty old man then. We did not get along well together. I was as full of tricks as a monkey in those days, and "Buck" simply went into a spasm when any one played a joke on him, so you may believe he had spasms frequently. The last joke they say hastened his death.

One day we pulled into Watson's siding on short time ahead of a passenger train to meet another train. "Buck" neglected to call in the flag, and there being nothing in sight he sauntered down street to "oil around." When about a quarter of a mile away he thought about the flagman, and attracted the attention of the head man who asked me what kind of signs the engineer was giving. "Buck" had just been kicking about something that put us on the outs, so I did not pretend to understand the signs, but told the head man to go and see what he wanted. He did so, and soon returned, telling me to whistle in the flag. Now this head man was making his maiden trip, and was extremely willing to do anything and everything he was told to do, as is the rule with new men, and had also, as is usually the case with beginners, a decidedly exaggerated idea of the serious importance of everything pertaining to the railroad business, and being a big, overgrown, innocent country chap, with decidedly short sleeves and shorter pants, I could not resist the temptation to have a little fun with him and get even with "Buck" at the same time; so when he said to whistle in the flag, I asked him to please do it for me. When

he said he didn't know how, I told him to just blow fourteen long whistles, also to take his time to it and make no mistake. Like "Casabianca" he obeyed, as with a serious expression on his face he proceeded to perform his really first important duty. He was faithful to a fault, for every blast was extremely loud and long. When he reached the ninth the whole town seemed to be yelling "Fire" and old "Buck" hove in sight, making the most frantic motions with his arms, and as much headway as his 240 pounds would permit on such a hot day. He reached the cab just as the echo of the last fierce blast died on the evening air. Words fail to convey any idea of the intensity of his wrath. He was completely out of wind and gasping like a fresh hooked fish. When he finally regained his wind, he seemed to have utterly lost the power of speech, for instead of expressing himself in the manner I had expected he would, and for which he had become famous, he ignored the "Corn Husker" altogether, gave me one long withering look, but maintained a dignified silence, and thus, as they say at Washington, the "incident closed." From that day they said that he was a changed man. I couldn't say as to that because for some reason or other I never fired for him again, nor did we ever mix in a social way.

The performance of the aforesaid mule, whose antics so strongly suggested the character of old "Buck," touched a tender spot on my heart, for I had wronged him. As I turned my footsteps in the direction of the roundhouse again, in spite of my deep sympathy for poor old "Buck" I must confess that my faith in the "eternal fitness of things" was much strengthened. Arriving at the roundhouse, I witnessed the setting of the valves on one of our passenger engines. The engineer was strongly insisting on giving her "lots of lead." Of course, the eccentrics were keyed on, and the engineer knew it, but didn't seem to know that it made any difference. I wanted to tell him, but was afraid he would not like it. Such things should be told to a

man in the Division room. That so many of our men are lame on some points regarding the operation of the locomotive is no credit to us as a class, but rather supports the charge that while insisting on better conditions and increased compensation, we, as an organization, do not make the effort to improve our service in a corresponding degree.

The engine I have just referred to has a new kind of counterbalance, that is, the weight instead of being directly opposite the pin is divided into two weights set at some distance each side of a point directly opposite the pin. They expect great results from it just as they do from every fad tried. The claim is it will ride smoother, the wheels will not wear flat and it will be easier on the rail. It is wonderful, Dan, what groping in the dark there is even in this twentieth century. Our scientific men seem to be up against it all the time in locomotive designing. Some years ago they took an engine into one of the leading technical universities, put her on rollers, like a horse in a treadmill, and worked her at a 60-mile clip; and lo and behold! they discovered that she jumped her driving wheels clear off the rails. They were sure they had discovered something and in all seriousness the news was spread broadcast that at 60 miles an hour, or over, our driving wheels are lifted clear off the rail at each revolution by the counterbalance weights. The engineers throughout the country, at least this part of it, did not get panicky over that wonderful discovery, they simply continued in the old way. The very decided unconcern manifested by them I can only compare to that shown by a teamster when a mischievous boy says, "Mister, your wheels are not turning around."

They don't seem to think we know where we are at on a locomotive, Dan, but I notice that as yet they have not invented any incubating system of developing a substitute for us. Of course, I am out of the game now, but I take as much interest in railway matters as ever since I have become resigned to my fate, as they say in the novels.

Eph Wiggins called on me the other evening. Was just going by and thought he would "look in for a minute." Wouldn't take off his overcoat, also hung on to his hat and umbrella. Glad to find me contented and happy, and mother so well. Arose to go, in spite of some mild, very mild protests on the part of mother and myself. Everything looked good for mother and me as we were going to attend the Sunday school picnic on the following day; but alas! in an evil moment I lost my head and asked Eph how the new ten-wheeler was doing.

That settled it for mother and me. Up to this time Eph, as already intimated, was going right, but that question touched a responsive chord in him and although his hand was on the door knob, he bolted back into the room and mother unceremoniously bolted for bed. She knows Eph. He has as many hobbies as one of those merry-go-rounds, and after he had ridden them all two or three times it was—well, it wasn't exactly late. I told mother how hard I tried to get rid of him, but she said, "Oh, shucks! I could hear your voice above his all the time." She hasn't yet discovered where Ephraim punched a hole in the wall when trying to demonstrate the thrust of the main rod.

Mother met Mrs. Wiggins in the grocery shortly after, and Mrs. Wiggins said to mother that "Ephraim likes to go to your house awfully well, but it is impossible to get away from Mr. Kelley when he got to talking about machinery." I believe mother just made that up, Dan. Wiggins is, of course, welcome to visit us again, but I have firmly resolved to make every effort to hasten his departure. Well, we didn't go to the picnic anyhow.

Mother has just returned from the store and interrupted me by saying she met Mrs. Wiggins again and that she's an awfully tiresome person. Screws her mouth up trying to talk like a high school girl, and don't say anything worth listening to. I believe now Mrs. Wiggins did say that about Eph not being able to get away from me when I commenced to talk machinery. Mother likes to give me a

little dig now and then herself, but don't want any one else to do it. I suppose all wives are alike in that respect.

I am getting to be a privileged character, Dan. I am given access to every department here, and even the Superintendent's office is open to me. The old man called me in the other day and asked some questions of me regarding changes in a new time card they are figuring on. He thanked me for some suggestion I offered. It pleased me to find that I was still of some practical use to my old employers, and mother, who always watches for me about meal times, said she noticed an awful change in me, for she said I came along the street with my old familiar stride as if I had business on my mind. When a fellow is in service, Dan, he kind of keeps himself keyed up, but when retired, is much like an old engine that is laid aside; he soon gets to looking useless, however good he may have been just prior to his retirement.

Mother announces supper and says, "Don't forget to tell Dan about the superintendent calling you into the office to show him how to make out the time card. I knew just as sure as anything they couldn't get along without you altogether after being there so long." That's what mother thinks.

Please accept our kindest regards for yourself and family.

Faternally yours,
JASON KELLEY.

Can a Railroader be a Christian?

Can I live and be a Christian
On the railroad with its care;
With its thousand frets and worries,
Aggravations here and there?

Can I live and be a Christian,
With so much to make me sad?
Can I keep my heart uncalledous
With no Sabbath to be had?

Yes, though there be temptations
Turn whatever way I will,
I can surely be a Christian
Working on the railroad still.

If my purpose is to follow
Jesus who was crucified,
I can live and still be faithful,
Though I may be sorely tried.

But 'tis hard to have no Sabbath,
God's appointed day of rest,
Yet He put me on the railroad
And He knows what is best.

I can't tell you why He did it,
But for His sake, I'll suffer loss,
And He will keep me faithful,
Leading Brothers to the cross.

And some day mid awful crashings,
Some stout-hearted engineer,
Or some worthy, faithful fireman
May just need a word of cheer.

Or may be a brave conductor,
Or a hero at the brake,
Will need my hurried whisper
Father, save for Jesus' sake.

So I'll work upon the railroad,
Taking all things as they come,
Serving Christ and hoping daily
I may be a help to some.

Till that day when he shall call me
To that glorious land of rest,
Then if I have done but little,
Christ will know I've done my best.

E. A. LINDSEY, 524.

Railroading in the 50's.

EDITOR JOURNAL: The writer read with intense interest the article in the May number entitled, "Letter from a Retired Engineer to a Friend." Without any fulsome flattery it is certainly a very unique contribution to the pages of our JOURNAL, and very few of our members have the ability to paint literary pictures of this description, and Brother Jason Kelley needs no vindication at our hands for his splendid effort in writing of "The Days of Auld Lang Syne." There is a charm connected with the life of the old-time railway man that cannot be obliterated from his memory. It is written indelibly in the inmost recesses of his very soul, and like the old soldier who recalls with pride the days of the long ago, when he marched to battle for his country, so does the old railway man love to indulge in the memory of the past. The writer has often regretted that he did not keep a daily diary of all his experiences in his thirty years of railroading.

I was connected with the great Pennsylvania Railroad for over thirty years, and began my career on that system in

1851 as water boy on one of their passenger trains that ran from Harrisburg to Philadelphia on what is now known as the Philadelphia division of that road, and it is of this particular part of the line that I would write, for it has a peculiar history of its own, both political and otherwise, which is not associated with the original Pennsylvania Railroad. Very few who ride over this magnificent piece of track and view the beautiful scenery between these two cities ever dream of its historical relations to the great Keystone State. It will be well to remember that the present great Pennsylvania Railroad was originally begun in 1847, whose charter called for a road to be constructed from Harrisburg to Pittsburg, Pa., a distance of about 245 miles, and therefore the eastern link of 105 miles from Harrisburg to Philadelphia had no relations whatever with the birth of the present mighty corporation. At that time the first piece of track running east from Harrisburg to Philadelphia was the old Harrisburg, Portsmouth, Mount Joy and Lancaster Railroad, a strap iron road which terminated at Lancaster City, Pa., a distance from the former point of thirty-seven miles. Colonel Wm. B. Wilson in his celebrated history of the great Pennsylvania Railroad says this link was approved by an act of the Pennsylvania Legislature June 9, 1832, that the farmers were bitterly opposed to the road and that it was leased to the Pennsylvania Railroad December 29, 1860, and that it is yet a leased line. From Lancaster to Philadelphia was what was known as the State road, which was owned and operated by the State of Pennsylvania. This road was chartered in 1829 to run from Philadelphia to Columbia on the Susquehanna River, twelve miles west of Lancaster, Pa., length of track about 81 miles. This was a political piece of railway, pure and simple, the management of which would change every time there would be a change of government in the state. These were the days of what was known as the Democrats and the old line Whigs, and each in their turn would manage this line as they succeeded each other in

power, and many strange stories are told of the corrupt practices which characterized both parties in the management of this property, enriching their own individual interests at the expense of the state. Whether that be true we know not, but it may be of interest to the railway man of the present day to read of some of the practices that were in vogue at that time, connected with this piece of political machinery. In a large measure it was run on a sort of a go-as-you-please system, and that was every fellow for himself and the devil take the hindmost. One peculiar thing was that between Columbia and Philadelphia you would see two or three different companies represented in one passenger train, similar to what you see in our freight trains of today, where you see Armour, Swift & Company, Merchants Line, etc., so in that day you would see the Miller line, and a couple of other lines, as well as the Pennsylvania Railroad cars, all mixed up in one passenger train, and each one of these lines would compete for the passenger traffic over this particular eighty-one miles of track, and many strange stories are told about how the different conductors of these lines manipulated the passenger traffic in those days in the matter of cutting rates, etc., in order to see who could secure the greatest amount of patronage. Then there was what was known as the State Agent on every passenger train, whose duty it was to keep a correct account of the number of people carried and report the same to the State officials. It was a common thing in those days to travel, to use a slang phrase, on your face, for if you were a jolly good fellow and had the confidence of the State Agent all you had to do was to get on board and your passage was assured.

The freight service of that day was a novel one of its kind. The commission merchants had their own individual cars, and trains would be made up, for illustration, with Johnson & Company, Chambersburg, Pa., Wunderlick & Company, Shippensburg, Pa., Pipher Line, Harrisburg, Pa., etc., and as stated before, it was a sort of go-as-you-please system

and that was very forcibly demonstrated in this department. For instance, in a great many places, particularly at some small station where a freight did not stop unless signaled to do so, the man who wanted his cars taken on had no other way of attracting the attention of the engineer but to stand along the side of the track and waving a flag or his hat or something of that sort in order to stop the train, but this all depended upon the engineer, for if he did not feel like taking on your cars, he would simply wave his hand and point back, saying in so many words, "Stop the next train," and you were left to ponder as to what train would stop for your cars. That was one specimen of political management of a railway. It is a known fact that favoritism prevailed to a large extent, and in many cases if the shipper was a hale fellow well met, and stood in, as we say, with the engineers, he would have no trouble about getting his cars taken on any train, for the locomotive engineer and the train crew virtually controlled the road, from the simple fact that in many cases they did as they pleased and that ended the matter. Brother Jason Kelley's reminiscences remind the writer of some of the railway talk of the times of which I write. There was what was known as the Gap Grade, and Byer's Grade, so as a general thing about all you heard was up the Gap and down the Gap, and up Byer's and down Byer's, and who was the jolliest tavernkeeper along the line, for the wood stations were only about twelve miles apart, as that was the only fuel of those days and we had to stop at about every one of them "to wood up," as we called it, and every station had its country tavern with refreshments for both man and beast, and the rail-roader of that day never suffered for refreshments, for a goodly number used to take a certain thing in winter to warm them up, and in summer to make them cool. As to what particular kind of refreshment this was the reader can draw his own conclusions.

My lifelong friend, Colonel Wm. B. Wilson, in his history of the Pennsyl-

vania Railroad, says: A trip from Philadelphia to Lancaster was one of pleasure and accommodations. What stops, Paoli with its pie and milk, Downingtown, coffee and big fat doughnuts, and Lancaster, where Owen Hopple, one of our old-time tavernkeepers, dealt out pretzels, gingerbread and a glass of the city's brew. Of the practices of those days chapters could be written. If you were running freight and you wanted to buy some butter or eggs at a certain farm house along the road, all you had to do was to tell the engineer on the following train to look for you at that certain place, for the fellow that wanted to purchase these things would deliberately stop his train, as if ordered by a modern trainmaster, go across the field to a farm house, buy his eggs and come back when he got ready, and the writer pleads guilty to the same charge, for things of this kind were done even after the Pennsylvania Railroad had bought this piece of track in the year 1857. These were the days when passenger crews were entertained free of charge at all places where their trains stopped for meals, and even if a passenger conductor, engineer, or any one of the train crew offered payment for anything at a lunch counter at these places his money would be refused, but gradually as time became more valuable, eating places were abandoned one by one until they finally disappeared, and in due time, after years of discipline, by gradually correcting the evils of that day, we have the magnificent management as represented in the great Pennsylvania railway, made up by the consolidation of more than 190 different properties, whose interests now extend from the Atlantic to Chicago and St. Louis, with direct connections westward to where the waters of the Pacific play upon the golden sand of California's distant shore.

D. EVERETT.

Better Than Old Line Insurance.

FOND DU LAC, WIS., April 10, 1905.

EDITOR JOURNAL: I am here in reply to Bro. Geo. H. Conner. In the April number, page 305, he says the B. of L. E.

made a mistake when they adopted the compulsory insurance clause.

Up to Sept. 1, 1904, we have paid widows and orphans the sum of \$18,398,-088.71. How can anyone say aught against such noble work? I hope the Brother will retract.

Cheaper fraternal insurance is not in existence. Ours is beyond doubt the cheapest and best and it has been my legitimate aim to improve on it, subject to the voice of the majority. The clause needs no figuring, as I intend to pay off the oldest as far as the interest on the principal will reach, but it is just such members that are afraid of everything they are called on to undertake that makes it impossible to make a good meeting point and consequently lay out the other fellow. He speaks of taking out fraternal insurance. We have just as good a fraternal organization as you could wish to belong to in conjunction with the protective feature, can't you see it? I am not kicking against existing affairs, all I aim is to improve on them and many minds might make changes for the better.

I want to say right here that my friends outside of the order have expressed themselves to me regarding our insurance feature, and say it is certainly all right. Perhaps Brother Conner would rather pay the president \$50,000 per annum and the secretary and treasurer \$25,000, as old line companies do. He would be getting it cheaper than if there were a lot of fat offices.

I have in mind the subject of collection of assessments and dues. Now, there is no reasonable excuse for members being delinquent in paying their assessments or dues. They have got to be paid or you have to get out, and anyone who enters our Brotherhood goes into it with a knowledge that dues must be paid or we have got to close. You are getting more money by reason of the Brotherhood, your dues are only a small per cent of what you get, you get better usage by reason of being a Brotherhood man. If that did not exist you would get dismissed without cause. You would get

what some petty official had a mind to give you.

Now, how to collect dues and assessments. I have been secretary of insurance for about twelve years, but I do not claim this credit myself, as my predecessor, Bro. Ed Thiell, was conducting the collection in the same way, to wit: As soon as I get my JOURNAL and find out what the assessments are I make out receipts for each member; those out of town I keep at home, those that run into the terminal where the Division is located I select a business house, charge them with the amount of receipts and when I come to make remittance I go to the firm and they either give me the amount in cash or return receipts unpaid. Every member knows just where the receipts are on pay day, which occurs about the middle of the month. The first thing they do is to go and pay their insurance. Having been chosen F. A. E. owing to the death of my predecessor, I have adopted his method and up to the present it seems to be very satisfactory. It is impossible to see all the members and this makes it convenient for both. The business houses are glad to do this gratis. I have two in my place here because we have a settlement near the roundhouse, besides I collect on the road and make a duplicate receipt should anyone wish to pay me. Of course, those on branch lines have to send their dues and assessments.

I believe that is the best method because you get them where they can get change and when they have money.

Please don't throw this away because I think this will do lots of good if adopted. My insurance remittance is made promptly, according to law, and we have not had a forfeiture caused accidentally. I write every new member when they first join, as they are slack about reading the constitution and the B. of L. F. insurance is embodied in dues, for that reason some of them think when dues are paid all is well.

With best wishes to all, I remain,

Fraternally yours,
J. F. FRENOR, Div. 372.

Don't Make Our Brother Beg Charity.

BIRMINGHAM, ALA., May 2, 1905.

EDITOR JOURNAL: I hope you will allow me a little space for a few remarks. I don't want to rebuke or chastise our Brothers, but I was in a Division not long ago and there was a traveling Brother present and looking for work, who had been out of work for two months, and none seemed to think but what he had plenty of money; and after meeting was over and seeing no one else was going to say anything, I approached the Brother to find out his financial condition, which I tried to make known before the crowd was gone, but I was surprised to see Brothers walk right out after the facts had been made known who I knew were working every day and had money in their pockets, without offering to help the Brother in a strange place without a cent, some wanting to know why he didn't call for help. We all hate to have to ask our Brother for something to eat and a place to sleep when common sense shows our condition.

Dear Brothers, we ought to be more thoughtful of our Brothers' conditions and more thankful for our good fortune. We can't tell when we will be placed in the same predicament, and don't think for a moment that you won't reap your reward, or that you would miss twenty-five or fifty cents now so much as it would do the Brother good you gave it to; and my dear Brothers, the C. E. and other officers of our Divisions have to look out and care for our traveling Brothers, thereby having to carry a burden when each and every member should help, and I hope we all will be more thoughtful in the future for our less fortunate Brothers' conditions and not put our hand into our pockets and hold our change and walk out as though we were afraid our Brother would take some of it away from us if we didn't hold on to it. Dear Brothers, I hope I will never again witness such actions from our Brothers, and none of you will ever have to feel as I know this Brother must have felt.

Yours fraternally,

A BROTHER.

Representation by Jurisdiction.

MISSOURI VALLEY, IA., May 28, 1905.

EDITOR JOURNAL: The question of reducing the number of delegates to the B. of L. E. conventions is an important one and is a move in the right direction. According to the directory, there are at the present time 667 Subdivisions of the B. of L. E. and a membership of about 50,000. If each Subdivision sent a delegate to the convention, there would be one representative for about every 75 members. Under the present law one delegate may represent two Divisions; yet it will be safe to say there will be at least 600 delegates in the next convention, which would be too large a body for the presiding officer to control and do business without considerable delay. Every delegate has a right to discuss each question that comes up for consideration, and if all delegates took this opportunity, the convention would remain in session all summer. Three hundred delegates could dispose of the business in less time and more satisfactory to all concerned than 600 can, and it would save a large expense to the Brotherhood, both in the number of delegates and the length of time the convention would be in session.

There have been different plans suggested by writers through the JOURNAL toward reducing the number of delegates, but I will ask permission to present the following:

Divide the Subdivisions of the B. of L. E. into jurisdictions; a jurisdiction to consist of all Subdivisions located on one system of railroad in each state, territory, or province. Each jurisdiction elect one delegate, such delegate to be known as Jurisdiction Delegate and to have as many votes in the convention as there are Subdivisions in his jurisdiction. The Subdivisions in each jurisdiction to elect the delegate numerically, commencing at the lowest numbered Division. This would save having a jurisdiction meeting for the purpose of holding an election. Under such a plan a system of road like the C. & N. W. would have seven jurisdiction delegates, as there are nineteen Subdi-

visions on the system located in seven different states.

In addition to the jurisdiction delegates the Chairman of the G. C. of A. to be a delegate at large from the system of road that he is General Chairman of; this would bring all the General Chairmen (of whom there are 108) together at each convention, where they could confer one with another upon questions of interest to the Brotherhood, also have an opportunity to meet with the Grand Officers. It would be of great benefit to the organization if the Grand Chief and his assistants could meet with all the General Chairmen during the sitting of the convention and discuss questions of interest to all concerned.

The delegate at large to be paid the same salary as when acting as Chairman of the G. C. of A., and \$3 per day for expenses while attending the convention; each system of road to pay the expense of the delegate at large and he to have one vote in the convention.

The jurisdiction delegates to be paid by an equal assessment of all active members of the B. of L. E., and to be allowed pay for all time lost, and \$3 per day for expenses from one day before leaving home for the convention until one day after arriving home.

GEO. H. CONNER.

Convention Representation.

COVINGTON, KY., May 17, 1905.

EDITOR JOURNAL: I see a number of the Brothers airing their views on the very important questions of reducing representation in conventions, non-attendance at Subdivision meetings, non-payment of dues and assessments, and so on, all of which I consider very worthy subjects for discussion through our JOURNAL.

When we consider the fact that there are in the neighborhood of 700 subordinate Divisions at an average cost of about \$150 to each Subdivision with the additional expense to the Grand Division, we find the cost of our conventions will reach something near the enormous sum of \$150,000.

Now, suppose we reduce this representation to say one delegate for each system of road having a mileage of 1,000 or less; over 1,000 miles or less than 2,000, two delegates; over 2,000 and less than 4,000, three delegates; and so on in the same ratio. Think what a vast financial saving this would be to the Brotherhood at large if the difference in cost of such an arrangement as this could be taken from the present system and turned into a fund for the relief of our old and disabled members. What a blessing and relief it would be.

This subject has been before each convention for a number of years, but with the same result of nothing doing, and I am of the opinion that the Divisions do not take the proper interest in these important questions. My idea would be to bring them up in the Division meetings to be thoroughly discussed and voted on by the members and the delegate instructed to act accordingly. Great care should be taken in selecting our representatives; it should always be our aim to nominate and elect our most worthy and competent Brothers to represent us, one we can be proud of and feel doubly sure he will represent us honorably and wisely. This should be our sole object when choosing him, and not for any mercenary or selfish motive. When we know we have such a man tried and true, who has represented us with credit and honor, let us reward his good services by returning him to the next convention, knowing that our interests will be well guarded and that we will be kept in the front ranks of the procession. In this way we can soon hope for our conventions to legislate laws conforming with the views of a greater number of our noble order.

When we show a disposition to do the greatest amount of good to the greatest number, we will soon experience a more brotherly feeling and be the means of bringing out a better attendance at Division meetings.

The question of non-attendance is becoming a very serious matter. I know of cases where Subdivisions with a membership of from 75 to 100 have on several

occasions failed to hold meeting on account of being unable to get members enough together to constitute a quorum, and this at times when business on the road was only normal. You could see some of the Brothers lounging around the roundhouse and meet them on the street corners, and if you ask them why they were not at the meeting they will stumble over some lame excuse. Possibly some may say they had forgotten it was meeting day; others say, "What is the use of my going? You can get along very well without me."

I have had some to say they didn't derive any pleasures or benefits from the Division meetings. Just so they keep within the law and paid their dues, the Division ought to be satisfied.

I had a Brother tell me one time that he had become thoroughly disgusted and tired sitting in the Division room listening to the Brothers quarreling with each other over some trivial matter or imaginary grievance, taking up the time of the Division that is necessary for the transaction of the regular routine business; possibly keeping some Brothers from their much needed rest. I was loath to admit such conditions and used every effort in my power to dissuade the Brother from that way of thinking. Nevertheless, it remains that there are to a great extent petty jealousies existing among the Brothers.

In a number of subordinate Divisions one Brother imagines some one else has a little better run than he has, and another thinks his grievance has not been given due attention. Probably the decision rendered in his case was not to his liking and he thinks the committee threw him down. Then the extra men imagine they are wrongfully treated, because they do not share the same rights as the senior men. They don't believe the senior men in the service should enjoy any privileges not granted to them. At least until they become seniors, then they want that right as bad as anybody.

Now, all these little things have a tendency to cause jealousy, and may influence some Brothers not to attend the

meetings. Why not make an effort to eliminate such discords? Let us all put on our thinking caps, put our shoulder to the wheel, and see if we cannot solve the problem. I see some Divisions have adopted a sort of school of instruction in conjunction with their meetings, which I consider a step in the right direction.

I would suggest a course of lectures, one for each meeting. Say we allow one hour at each meeting for this purpose. Let there be a committee appointed to select the questions to be discussed—for instance, take two or three questions on the air brake at one meeting, at the next something on different parts of machinery, another, valve motion, and once in a while for a change, let the subject be something for the good of the order. The committee can announce at one meeting the question to be discussed at the next. This will give members the advantage in the interval to study questions and prepare themselves to handle subjects intelligently.

I should think something of this kind would soon create interest in the meetings that would secure good attendance, and would be beneficial and instructive, and the little talks on the good of the order would chase away these little ill feelings between us and create a more brotherly love among us, and when the F. A. E. notifies us that it is time to pay our dues and assessments it would not seem like a hardship or burden, but that it is money well spent, and we will cheerfully meet all demands made upon us.

There is always an element of happy-go-lucky good fellows well met in almost every Division, who believe in letting every day provide for itself, and never a thought of tomorrow. It is this class who generally give the F. A. E. his troubles. He sends them a bill of their indebtedness to the Division; it may be small. He looks at it and says, "Oh, I won't bother about paying that this month. They don't need it very badly. Then it is small, that little mite would do them no good." The next notice he gets is laid away and forgotten. Probably next month there is levied a rather

heavy committee or convention assessment and when he gets his next notice he goes straight up in the air and declares he does not owe so much. He gets after the F. A. E. and is made to understand that there is no mistake and the bill is really correct, then he says he can't see how he can pay it. Perhaps he is told to pay a few dollars at a time; that will not be hard on him and will keep him in good standing until he can pay it up. He promises to do this but forgets again. The F. A. E. waits a month or two, maybe three, then he is compelled to turn him in delinquent.

The Brother is notified that he has been expelled for non-payment. In the meantime he meets with some little accident on the road and can't understand why the chairman don't take up his grievance and have him put to work. He has been off for twenty or thirty days and no prospects of getting to work. About this time some good, kind-hearted Brother comes along and puts him next, then he gets anxious and very busy and wants to be reinstated at once. It is then that he begins to appreciate the benefits he has derived from the Brotherhood.

I wonder if he ever asks himself what sustains this grand order, and if there are many as careless and thoughtless as he? Many there are, I am very sorry to inform you, my Brother, and the surest way I know of to prove it to you is to invite you to look through the JOURNAL each month and see the long list of suspensions and expulsions for non-payment.

I have always observed that nine times out of ten it is these same careless and delinquent Brothers who are always in trouble on the road, and causing committee assessments and always complaining about the Division having no money in the treasury.

My Brother, you will please remember this is not intended for you, but for the other fellow. Yours fraternally, DUOUT.

Shorter Hours on Railroads.

ST. LOUIS, MO., May 28, 1905.

EDITOR JOURNAL: I have read with much interest the editorial in the May

issue of the JOURNAL relative to the ten-hour bake shop law in New York, but I see nothing in it to in any way discourage us in our cause for shorter hours on railroads, which to my mind is the burning grievance today, and I think a little reflection and comparison with other wage-earners will bring us all fully to that conclusion. Before I go further into the subject I want to say that I have no time or thought to lend to a senseless agitator; neither have I an ax to grind. Having given thirty years of service to one company, there is little benefit coming to me if the hours were shortened now; but I love the Brotherhood for what it has done for me, and it is my great pleasure to stand by its best interests, and my observations have brought me to a keen conviction that our greatest foe is overwork. If a man is continually overworked he becomes a machine, and worse than that, he becomes narrow and selfish, and stands in his own light, I think.

Our Grand Officers who travel through our Brotherhood will tell us they are confronted with this spirit. No man or his family can be fascinated with a position that requires him to be on duty twelve hours a day seven days in the week, and to do that he must eat his breakfast at 5 and his supper at 7. Now, that is what a small army of men are doing at all our large terminal points where the work never stops, to say nothing about men who are on the road more than those hours. If we give eight hours a day seven days in the week of the high tension service we must give these days, we are giving all there is in us to give with profit.

Organized Labor and Organized Capital are two great forces in the railroad world. Organized Capital has on its side plenty of able men whose energies are diligently at work getting the great tonnage over the road at the least cost; and the relation between the two great forces is in the main mechanical; and while I do not advocate that to shorten the hours would bridge the chasm that stands between Organized Capital and Organized Labor on railroads, it would be a big step in that direction on the part of labor, because we

would have time to be sociable at home and abroad, and we could inform our minds.

I do not believe that Andrew Carnegie would be planting libraries today if it were not for what happened at Homestead. He is striking a hard blow at labor strikes; he wants the young man who is coming up to broaden out as he grows, so that he may develop and use all of his energies instead of just the one; and now I trust that although my thoughts are awkwardly put into words those who may chance to read them will come to the conclusion that our greatest need is shorter hours, and this brings us to the point: How are we to achieve so great a blessing to the railroad men?

To my mind, it can be done by the most honorable and legitimate means. None have a better right within the avenues of the legislature than we, and none are more welcome, at least for the next four years. It will mean something to have the head of the nation back of our cause, a man whose heart reaches to every man. It was his love of justice that swayed a nation. Let every delegate to the next convention be sent home with a petition to Congress for an eight hour day, setting forth the great need and benefit of it for the welfare of the railroad men and safety to the people of America. Let every man, whether he be a railroad man or not, sign it and we will bring such an overwhelming pressure to bear that it will bring us success. Let us be as shrewd as other organizations. Let the wage question rest until we have established a short hour basis.

I realize that our delegates are composed mainly of those who would not have so much to gain if the hours were shortened, but let us think of the welfare of the whole, and work to that end. Let us not lose faith in one another, for to lose faith in one another and to lose faith in God, means that our usefulness is at an end.

GEO. A. CLARK.

Behind the Age.

PHILADELPHIA, PA., April 5, 1905.

EDITOR JOURNAL: "I had not been at the convention two days before I realized

that it was a G. C. of A. convention." Such a remark was made in my presence by a delegate to the last convention, and now comes Brother Freenor's letter on "Who Rules the Convention," in the March JOURNAL. I have, like every other Brother, a certain opinion about conventions, and it is natural that we young fellows want the convention left as it is—that we do not have the conventions for any other purpose than to have a jolly time—to have a big crowd—and if we have that we are satisfied. The good of the order can be read in the newspapers in the good things said about us such as heroes, and so forth. One thing I do know, that is that our mode of collecting local dues is about all that keeps the convention going. The expense of the delegate and other things is done on the small monthly plan, and not directly felt; but did 90 per cent of our members once see a convention in session ten days and the little done for the order's good, who have to rawhide it from twelve to twenty hours on a trip to make a living, one hand to go down at once, for the expense of the same, that would be the last big convention I will assure you.

No doubt there are some old men there. No doubt in a delegation of 600 there are possibly twenty leaders, and they are foxy enough, as Brother Freenor says, to let some smooth-tongued delegate mislead the large majority. That is no fault of the old men, but the fault of the young delegates who in all due respect mean well to the order, but are led away from the right path by the plans of older heads. Let me cite an instance.

Nineteen years ago in the city of New York a long-haired, hayseed looking farmer delegate from a country Division, appeared as a delegate to the convention, and after three or four years' hard study brought with him a resolution relative to a financial policy which he would like the delegates to adopt. After careful examination by many members he presented it to the Grand Chief, who, after careful study, admitted that it was good, but that it would not do to present it at this time; and that ended it, for the young man had

sense enough to see that the bars or fence rails were all up and the gates locked on the inside. Had that policy been adopted at that time not a member at this time, who was a member twenty-five years ago, but would have a paid up policy in the life insurance, which would be payable at his disability or death, and not costing him one cent now.

The Grand Office and expenses of the conventions assumed by them would have been paid by the interest of the surplus fund, and today the B. of L. E. would be a money power at a much less cost per member than it has cost per year, to those who have belonged to it twenty-five years. Its financial policy would be such that the life insurance would have a stability that no man would be forfeited and every policy would be worth its face value. These were not worth half that in 1877.

This brings me now to Brother Freenor's plan on the endowment clause. Young members, what do you think about it? If you doubt the result, take your pencil and figure it out yourself. If you want to reduce the cost to you within the next fifteen years, advocate and connect yourself with it without regard to the ancient old foggy who has always been afraid some one will run away with our money. But to be brief, our association is mutual, so much so that we have always been in the one rut. A man comes in, pays a few dollars, unfortunately dies, takes out hundreds and leaves nothing to help along the rest.

Just take your March assessment and you will find about 21 deaths, at a cost of about \$37,600, of members who have belonged some a year, others two, none over five. With Brother Freenor's plan you could have from that one month \$420 to draw interest for the man that went in yesterday. I favor the plan, but I am satisfied that our members will not adopt it. Too long our old fellows have gone up the road to the creek, crossed over the bridge and gone up to the top of the hill; after looking at the sun, noted the direction of the wind, have exclaimed when they returned, "Yes, begosh, Maria, it

will rain tomorrow," and the young members are following in the same old way, and all the relief they make is to give their advice to the secretary when he says, "You are behind in your payments." Ah, boys, you are more than that; you are far behind the age.

Fraternally yours,

C. B. NIXON.

"The Land of Discontent."

"Discontentment must come before reform," says the *Panama Star and Herald*.

It would perhaps be difficult to find any spot on the face of the globe, with the possible exception of Russia, where discontent reigns so supreme as on the Isthmus of Panama.

Converse with any of the employees of the Canal Commission, no matter what position he occupies, and he will begin at once to recite to you his grievances.

At the present moment, unfortunately, there appears to be no remedy. The retiring commission leave without a single good word said in its favor.

All hopes are now centered on the three men, Messrs. Shonts, Wallace and Magoon, whose arrival upon the Isthmus we trust will take place with the least possible delay.

We feel confident that these men, who have been chosen by the President of the United States, will be found able to clear up the apparently hopeless mess and muddle that now exists.

One of the difficulties appears to be that the American makes no effort to understand the foreigner abroad or respect his ideas and custom. In this respect, for instance, the Americans have not made themselves popular with the natives here. The Panamanians have given them every opportunity and facility to carry out the gigantic project they have in hand and naturally expect that they be treated with ordinary courtesy and consideration in return.

Thus it is that the discontent has spread to others than their own race.

It should be realized by those sitting in the office that the canal will have to be

built with something else besides the pen and the typewriter. Thousands of able-bodied men are needed and, in order to get the greatest amount of energy out of these, they must be treated in other ways than as animals ill-fed, under-paid, and badly housed. To do so is not only foolish from an economic standpoint, but is a violation of the laws of humanity.

The Jamaican laborer has been of great use in the constructing of improvements in countries in which the white man is practically useless for manual labor, but in order to get the greatest benefit from his labor it is necessary to treat him with that consideration which is given to him in his own country. Once the seeds of discontent are sown his usefulness is sadly impaired.

The successful contractor usually finds it to his interests to make his men contented, as by doing so, although it may cost a little more, he obtains a far greater amount of work from them. Therefore he takes care that his men are properly housed and fed and properly paid when their week's work is done.

The men here, however, have nothing but grievances against their employers. They are left to the tender mercies of the contractors who desire only to make as much profit as they can at the expense of the poor worker, and when pay-day arrives no money is forthcoming. It is a most shameful act on the part of those responsible to keep these men waiting two or three weeks for the small wages due them. Many have a wife and children in their native country dependent upon a portion of their earnings here. We understand that it has several times occurred that the pay rolls, owing to a lot of useless red tape, have not been completed until another payment had become due.

In the United States and in other countries there are hundreds of concerns employing more men than there are engaged on the Isthmus and at twelve o'clock on Saturdays, when their work is over, they form in line and receive their pay either up to the hour of leaving or at any rate up to the previous day.

Surely what hundreds of private con-

cerns are able to do a rich and powerful country, like the United States, could do. And it could be done if competent men were employed at a reasonable remuneration and if all the useless and senseless red tape, which is the primary cause of the trouble, were removed.

The new commission, on its arrival here, has a lot to do and a great deal to undo. It will be its principal duty to organize a machine where every wheel will be in the right place, the whole turning smoothly and silently.

Incompetent men must be removed and the right ones put in their place; but the American Government will make the greatest mistake of its life if it expects competent men to remain here unless properly compensated.

In India men employed by the government receive high salaries and a retiring pension after fourteen years. In Sierra Leone the salaries are still higher and a pension for life is given after seven years, owing to the unhealthiness of the climate.

The number of deaths which have recently occurred will surely awaken the American people to the fact that the climate here is far from a healthy one.

The ever-present danger which exists here and the life one is compelled to lead, owing to the want of those common luxuries that one is accustomed to at home, ought surely to be properly compensated.

Let us hope, then, that the new commission will get to work as soon as possible and commence a series of reforms based upon the consideration of the people of Panama, fair play to the hard working laborers, prompt payment of salaries each week and a careful examination into the grievances of the men upon whom the bulk of the work rests and we may then be able to live in a land no longer one of discontent and disorder.

[The above article from the *Panama Star and Herald* indicates great discontent among the employees on the canal, and a member of the B. of L. E. on the ground thinks it correctly represents the general sentiment.—EDITOR.]

Shorter Hours for Switch Engineers.

NEW YORK CITY, June 1, 1905.

EDITOR JOURNAL: I noticed that some one has started the subject of a shorter day, and it ought to be pushed. Brothers, the 12-hour day in these modern times at practically the same pay that you got thirty years ago, with all the necessities of life advanced, something should be done to better our cause. You all know that there is no trade or profession where so many good qualities are demanded of a man as of the engineer of today; it does not matter whether he is a switch engineer or a passenger engineer, he must be sober and reliable and intelligent. Switch engine service is not what it was even ten years ago. Then it was considered a good job, and it was, and a man had little cause for complaining, but it is vastly different today. It was not a constant routine of work all day and he did not have to stand on his feet for 12 long hours, if he got tired he could sit down and run the engine just the same, but the switch engines today are different and it is absolutely impossible to sit down and operate the engine, and I want to say that after a man puts in 12 hours pulling reverse levers and stretching half his body out the cab window to catch a signal and watch switches and be held responsible for all that occurs, when 6 o'clock comes he is beginning to look for relief.

The President of the United States has recommended to Congress that the railroad man's hours of service should be shortened, and in view of these facts, let us recommend to the railroad companies—the shorter work day.

Through the advantages and opportunities secured to the workers by reducing the daily hours of excessive toil, education and good government have progressed. The shorter work day has made the individual worker better and more healthful, morally and physically; it has given to the workers the opportunity to avail themselves of the advantages of our modern facilities for knowledge; but so far, railroad men are not enjoying these advantages.

Reduce the daily hours of labor of the railroad man and it will give him time and opportunity for self development along higher and useful lines; it will give him opportunity to enjoy the comforts of home and his family, and the home will be happier and more healthful and the environment of his children improved.

Brother, don't stand back of the round-house and in the oil room, and say that you can't see what the Brotherhood has ever done. Don't blame the Brotherhood, but blame yourself, and let me say that if you will all do less talking in these places, and more in the Division room, our labors will be crowned with success, and a shorter day will come.

Believing in a standard scale and shorter hours, I am,

Fraternally yours,

VANDERBILT DIV. 145.

The Inglewood Club—Echo of the Convention.

BOSTON, MASS., May 29, 1905.

EDITOR JOURNAL: On Saturday evening, May 20, in Engineers' Hall, Boston, was held the First Annual Reunion of the Inglewood Club, composed of the Brothers, Sisters, and their families who made the trip from Boston and vicinity to Los Angeles to attend the convention of last year. Thirty-two of the members were present, and with the invited guests made a party of thirty-six, who at eight o'clock sat down to an excellent supper furnished by Dill & Co. of Boston. After the Divine blessing had been asked by Grand Chaplain Dority, all did ample justice to the varied and abundant menu which only Dill can furnish with his gentlemanly and attentive staff of waiters. The table laid with forty covers was beautifully and profusely decorated with flowers by Feinstein of Boston, who also furnished roses for the ladies and boutonnières for the gentlemen, and also music for the occasion.

After the supper remarks were made by Brother Dority, and after a poem written for the occasion by the Corresponding Secretary was read, each one related some pleasant incident of the trip to the

"Golden State." The remainder of the evening was spent in renewing acquaintances of a year ago and pleasant exchange of greetings, and after a vote to hold our next reunion early in next year, the club adjourned with many a hearty handclasp and "God bless you," with a vote of thanks to President Mitchell for his efforts in making the reunion the success it was.

We were sorry that all of the party who made the trip to California could not be present, five being absent, and also that Mr. Furgeson of General Manager Barr's office, Mr. Batchelder of the Pullman Co., and Mr. Robinson of the General Ticket office, with their ladies (our invited guests), were prevented by sickness and other causes from being with us.

The officers of the Club elected for the coming year were Brother Mitchell, Pres.; Vice-Pres., Sister Chase; Sec., Sister Getchell; re-elected Chaplain, Bro. Dority, Cor. Sec., Bro. Wardwell.

Fraternally yours,

N. H. B. WARDWELL, Cor. Sec. Inglewood Club.

A National Legislative Board.

GREAT FALLS, MONT., May 3, 1905.

EDITOR JOURNAL: In these times of agitation for so many and such radical reforms of government, it is not reasonable to presume that railway employees will be awake to their interests and use their influence in a way that will secure and maintain legislation that will give them adequate protection, both from cunning politicians and railway corporations. The present agitation by politicians for increasing the powers of the Interstate Commerce Commission should be carefully studied by all railway employees.

Before giving that commission further power would it not be well to look to the use they are making of the power they now have? As railway employees, would it not be reasonable to expect a decrease in the number of railway men killed and injured? Each year adds an increase in number to the already appalling list. Would increasing the powers of the com-

mission so they may make rates, reduce the number of railway men killed and injured? I do not think that it will appeal to railway men in that light. Five per cent. of the men killed and injured in railway accidents on American railways can be traced to two causes—an over desire by the railway companies to reduce expense and the long hours engine and trainmen are required to remain on duty without rest.

The rates upon American railways are one-half lower than the rates upon railways in Europe. Their death and injury is a mite when compared with that suffered upon American railways. The question now confronts us: What should our line of action be?

I am of the opinion we should have a legislative board in every state. At present there are only twelve. Should we stop there? A National Board should be perfected whereby every congressman and federal senator could be reached. It appears to me that our Assistant Grand Chief Engineers could lend valuable aid along these lines in organizing state legislative boards in their respective districts.

The agitation to clothe the Interstate Commerce Commission with authority to make rates is dangerous in the extreme—an incentive to graft, which now dominates with the finished politicians. If railway rates are reduced, railway companies will try to meet the cut by a further reduction of expense in the operating of railway, which is now below the danger line and has caused many a disastrous wreck to railway property and railway employees.

If any reform along these lines is feasible, the government ownership of railways is the solution of the problem. That politicians should be vested with such powers is a proposition that every railway man should use his ballot against.

The first report of the Railroad Brotherhood Joint Legislative Board of Montana has recently been distributed to members in Montana; a copy has been sent the Grand Divisions and Grand Lodges. They are of some length and speak for them-

selves. However, I believe a brief outline here will be fitting.

In pursuance to call by Divisions and lodges of Great Falls, a board was organized in Helena, May 18, 1904. T. F. Richardson, a member of O. R. C. Div. No. 356, Great Falls, was elected Chairman. Brother Richardson was the prime mover in the cause, and the railway employees in Montana can never repay Brother Richardson for what he has done for them in this cause.

Many attempts were made by individual members to have an adequate liability law passed for railway employees in Montana. Failure in securing one led up to the organizing of the board. Early in the campaign union meetings were held. At some points railway employees' Non-Partisan Clubs were organized. All railway employees joined clubs and rendered much valuable assistance. Primary and party conventions were attended, nominations for seven members of our orders for state legislators were secured and six were elected.

A liability bill as drafted and approved by the legislative board was the first bill to become a law at the Ninth Session of the Montana Legislature. A bill providing protection to trainmen who are required to give bonds was also enacted into law. A bill providing for rest for engine and trainmen after fifteen hours on duty, also a bill providing for the maintaining of teltales for all structures in close proximity to tracks and restricting future construction of obstructions in close proximity to tracks were killed. The fifteen hour bill was killed by opposition of Brotherhood men on the N. P. Ry. This bill was not approved by the board, as vote was tie in board.

The members of the Joint Board are satisfied that were it not for the action of conducting the campaign on the non-partisan plan and having our members on the floor of the house, all efforts of the board would have been defeated. That the non-partisan plan is a remedy whereby the railway men can secure such legislation as will give them a square deal from all, if they will by their

ballot proclaim to the finished politician and railway managers alike that voting the machine-made ballot is a dead number with them.

The man who is friendly to their interests is the man who will receive their united support, regardless of party affiliations.

Fraternally yours,
JIM O'RILEY, Vice Chr. R. R. Bro. J. L.
B. of Montana.

A Social and Citizenship Unit.

It has been a long time since the writer has attempted to furnish anything for the columns of the JOURNAL, but in looking over a recent *Railroad Telegrapher*, I was attracted by an article entitled, "The Social or Citizenship Unit," wherein the author says:

"Joy becomes more difficult to obtain, less handy in proportion to the luxury and comfort brought by the increased complexities of our modern civilization and modern refinement brings discontent, a craving for more luxuries and wealth."

It is an old saying, "Our fathers builded better than they knew," and that is certainly true of the founders of our Brotherhood, for there is not a shadow of doubt that our organization has exceeded their wildest dreams as regards its future prosperity when they laid the cornerstone upon which was to be reared the Brotherhood of Locomotive Engineers. That there was associated with this movement a feeling of real joy, no sane man will attempt to deny, for they were actuated by the very motive that would prompt just such a sense of pleasure, and if it had been devoid of this sentiment there would have been no incentive to attempt to establish or maintain the object they had in view, namely: "The elevation of their particular profession." It would appear in a large degree that we are drifting away from the highest motive that should govern and control our actions as members of an organization we all profess to love and admire. What we want to avoid is the spirit of commercialism that is largely disrupting our modern home life; and what effects that

is just as surely to run into the other conditions concerning our every-day business life.

The spirit of greed and avarice largely predominates to the exclusion of every other virtue, where true love, joy and respect for each other's welfare should be the object of every member of the Brotherhood. If increased wealth and prosperity are going to drive out all our old-time devotion, then it is time to return to the first principle that attended the founding of our organization, when every one felt an individual interest in the future welfare of each other and the association they were attempting to create. The matter of real and sincere affection for our Brotherhood should be paramount to every other issue. It should never be forgotten that this is the one immutable bond that should hold us together and guide and control us in all that pertains to our interests as locomotive engineers and our families.

The writer, in regard to the Social Unit, speaks very clearly as to the increased wealth and the so-called modern refinement of the day in certain circles, where true joy is driven out of the home, where the little folks dare not do this and dare not do that, must not sit on this or that chair,—everything in the home is more valuable than the glittering sunbeams of a holy and rapturous joy that should illumine every nook and corner of the home. God grant the day will never come in our grand old home of the B. of L. E. when increased pay, preferred runs and seniority will extinguish the old-time flame of true joy that should burn day and night, not only on every consecrated altar of our different divisions, but in the heart of every true lover of our fraternity. Let the principle of genuine fellowship control our every action; let the highest and best possible standard of manhood be maintained, then every mercenary and unbrotherly motive will disappear like the mist before the morning sun, and in their place we will find that joy which is essential to true happiness in all conditions of life.

D. EVERETT, T. G. E.

At the Launching of the Milwaukee.

When I went to see the launching of the cruiser "Milwaukee" at the Union Iron Works in San Francisco, last September, I met young Orlando Skimpton of Punkin Hollow, Tulare County, who was seeing the sights of a large city for the first time. Some of us mountaineers are pretty verdant, but Orlando was very unsophisticated indeed. And for the sake of old recollections of Punkin Hollow, I truly hope that during his stay in the city he was not lassoed by the mountain police of Golden Gate Park and turned into a paddock along with the deer and the elk and the buffalo.

We met by chance. Half an hour or so before the launching took place Orlando wandered into the shipyard to where I was standing on the wharf and boldly accosted me. His face wore a puzzled expression. "Say, what's goin' on in here?" he inquired. "I jumped off a street car and followed the crowd in to see the excitement, but I don't see nothin' in here to get in a sweat about. Look at all the people on them steamboat ships out in the ocean yonder,"—Orlando thought the bay was the ocean—"what did they come here fur?"

"Wait a few moments and you'll see," I replied. "Maybe there'll be a boat race."

"Oh, I guess they've come to watch 'em build that big ship over there," said Orlando shrewdly. "My! they're doin' a lot of hammerin' and maulin' on it, ain't they? I'll bet it'll take 'em all day to build that ship. By the time they put on the masts and smokestacks and a house for the passengers it'll be night."

During the wait Orlando told me all about himself, and wound up with the information that he expected to be married within two weeks—in fact, that was the reason why he had taken a trip to San Francisco. The fact is, however paradoxical it may seem, Orlando was taking his wedding trip before he was married. He said he had long contemplated going on a wedding tour after his marriage, but as time rolled around and

the happy day drew nigh he realized that if he waited until after the wedding his prospective bride, Melindy, might want to go with him, and he was afraid that he wouldn't have enough money to pay the expenses of both, so he thought he'd better skip out and go alone while he was still single and had the money to pay his own way.

"Won't Melindy think it kind of mean of you not to share with her the pleasures of your trip?" I asked.

"Oh, she won't keer," said Orlando. "She'll be glad to hear I've had a good time. Why, I expect after I go home her and her folks'll want me to stay to their house a week to hear me give an account of my journey. Her paw and maw has often said they could sit up all night listenin' to me tell of my adventures."

Then the "Milwaukee" started down her ways, the fair maiden from Wisconsin performed the christening ceremony, and—to quote the daily newspapers—amid the waving of flags, the blowing of sirens and the cheering of the assembled thousands, the huge fighting machine glided gracefully and majestically into the bay—thus adding to our glorious navy one more brave defender of a nation's honor and prestige.

It was a thrilling sight. Yet among all the vast through there was one person who didn't appreciate the event. The "Milwaukee" no sooner struck the water than Orlando grabbed me by the arm and exclaimed:

"Hey! look at that, will you: If them blamed fools hain't let that ship git away from 'em into the ocean before it's half finished! Ain't that too bad? Now they'll have the job of their lives pullin' it back up onto them skids again!"

Orlando walked away in disgust.

FRED W. CLOUGH.

A Stormy Night's Ride and Its Ending.

Rumbling down the mountain grade at a high rate of speed, the rays from the electric light trying hard to penetrate the darkness of the terrible night, the rain was falling in torrents, the water was rushing down the steep mountain side like mad demons that had burst their bonds, leaping and roaring as though seeking whatsoever they might devour, emptying into mountain gorges, the angry plunging of which could be heard above the clatter of the train. The passengers back in their steam and electrically equipped palace cars, some dreaming of loved ones whom they anticipated seeing in a few short hours; others quietly reading, smoking and otherwise enjoying themselves; few, if any, giving a thought to the night

or the two men of nerve on the head end, with eyes opened, strained to the uttermost to detect the slightest signal of danger—their modern equipped monster ploughing into the blackness of the night, heeding not the storm or its noise. Rounding sharp curves, over deep ravines, now buried in deep cuts, through high mountains, the brakes being touched just enough to steady the train around curves, sounding the whistle, receiving the white light, plunging by little way stations, mile after mile is traversed. Three miles more and the foot is reached, then out through a beautiful valley that leads them to their journey's end.

For a moment their minds stray to the bright fireside of home and happy faces of loved ones to welcome them when the few short miles are covered. But, Ah! my God—*what is that? A red light on the curve and just around the bend the high bridge over a maddening mountain stream. The brakes are thrown into emergency, the engine is reversed, the sand applied. A plunge, a shriek, I awake! It is only a dream—I have fallen out of bed.*

 One box of books from Bro. J. E. Simpson, of Div. 122, O. R. C.

Respectfully submitted.

JOHN O'KEEFE, Sec. & Treas.

An Old-Time "Fourth."

There seems to be a division of opinion about the celebration of Independence Day. One class holds that patriotism is dying out, because the day is not celebrated with so much noise as formerly, while the other class contends that we are just as patriotic but more sensible. Whichever is right, it is certain that the day is not celebrated with the enthusiasm of forty or fifty years ago.

In the "fifties" the Revolutionary war did not seem so far away as it does now, and a survivor of the war was not an unusual sight.

The first thing on the program for an old-time celebration was the morning salute. Cannons were scarce articles in those days, so anvils were utilized. Anvils have a sunken recess in the base, and when two anvils are placed so that the recesses come together it makes a "box." These boxes were filled with powder, and when the appointed sentinels saw the first flush of dawn they applied the match, and bang! went the improvised cannon with an explosion that threw the upper anvil in the air and a concussion that rattled every window in town.

Then every church bell rang out, and the court house bell joined in the clamor, while the anvils were successively fired until the number of reports equaled that of the States of the Union. By this time everyone was up and out in the streets. In those days some people kept Christmas, and others Thanksgiving Day, but everybody celebrated Fourth of July.

It was a great day for boys—the only day in all the year, likely as not, when they were allowed to enjoy themselves. It was also the one day in the year when they could spend their money on ginger pop, soda water and peanuts without question. Firecrackers and fireworks were almost unknown outside of the large cities. At about 10 o'clock the "parade" began to form, generally starting from the court house. The marshal of the day on the shiniest and most spirited horse in town was the leader, and he usually had four to six "aids-de-camp" wearing pat-

Noms de plume are always permissible, but to receive consideration must be signed by the full name and address of the author, and addressed to the Editress, Mrs. M. E. CASSELL, 922 Dennison Av., Columbus, Ohio, not later than the 8th of the month.

The Editress reserves the right to revise, reject or use matter sent in, governed entirely on its merits.

Our Country's Birthday.

If all the birthdays in the land
Were kept with celebration,
We'd have our fill of holidays
When bells would ring and fireworks blaze
Throughout the mighty nation.

For many thousands every day,
If each one should remember,
Might join to hold a jubilee
And then what jollity there'd be
From New Year's till December.

But should these birthdays be forgot,
Our country's still we'd honor;
We're children of one mother dear,
The country loyal hearts revere—
May blessings rest upon her.

For this each year we usher in
With bell and cannon's voicing;
The day that gave our country birth
We dedicate the hours to mirth
And fill them with rejoicing.

The flag we love unfurls its stars
From ocean unto ocean,
And patriotic sons attest
Thro' north and south, thro' east and west,
A people's deep devotion.

Then let us join, with three times three,
Give cheers that end in laughter.
Be glad and gay—we'll make the day
So bright and glorious all should say
None better can come after.

riotic regalia, generally red, white and blue sashes and immense rosettes. Then came the "survivors" in carriages. If any Revolutionary heroes were present they took precedence; if not, the veterans of the War of 1812 or the heroes of Scott's campaign in Mexico. Next came a buggy with the orator of the day—generally the village lawyer—accompanied by the mayor or sheriff of the county. Then came the old settlers in carriages, and after them came the militia company, and all sorts of other companies. Behind the companies came anybody who wanted to march in procession, and as bands were not to be had, almost invariably a big wagon was crowded with girls dressed in white, each wearing a broad blue or white ribbon, marked in red with the name of the State she represented.

This feature of the parade was always sure of uproarious applause, and it was a pretty sight to look upon the bright young girls waving the stars and stripes as they passed along. This procession moved to somebody's grove, where a stand had been erected, the militia grounded arms, the marshals and committee took the stand, the multitude were seated or otherwise arranged, and the exercises began. First there was a miscellaneous salute, and then the band of girls sang the "Star Spangled Banner." Next the schoolmaster read the Declaration of Independence with a deep voice and appropriate gestures, the girls sang "My Country 'Tis of Thee," and finally, the orator of the day made his speech, about an hour in length, and you may be sure it was full of patriotic fire, denunciation of foreign nations, laudation of the Union, and more than one declaration that we were the greatest nation on earth. He was always sure of generous applause, and the oration the "best ever delivered." This ended the exercises, and after that came the informal festivities.

There was always a barbecue, an ox roasted whole, and perhaps one or two sheep. As for the minor fixings—bread and butter, cheese and pickles, pies and cakes—there was a general contribution, and more than enough for all mouths.

Sometimes there was a dance in the grove, a foot race, a wrestling match or perhaps a horse race; at night a big bonfire in front of the court house, at which the small boy held high carnival.

By the way, this was about the only night in the year he could stay up after 9 o'clock, and he enjoyed the privilege so much that he generally had to be hauled in by his parents or big sister sometime near midnight.

And so the celebration ended, and everybody went to bed tired, but so full of patriotism that they wondered how the other benighted nations of the world managed to exist without a Fourth of July.

In Old Virginia.

Early in the beautiful month of May I had the pleasure of greeting my Sisters in the city of Roanoke, Va., where I had been invited just for a social meeting. Sister Adams, our Past Grand Sentinel, and Sister Nichols, President of Div. 68, who took me in her carriage to the home of Sister Adams where I was entertained during my stay there.

It was a beautiful sight all around Roanoke, for the roses were in bloom and the mountains were so fresh and green it seemed that all nature gave me a cordial welcome. A Sister has told in Division News about the meeting, which we all enjoyed, but she failed to state that Div. 68, through President Nichols, presented me with a most exquisite lace and ivory fan, which I prize greatly. The hospitality of the Sisters of both Divisions, as shown by the delightful receptions given at the homes of Sisters Simpson and Adams, and the enjoyable tallyho ride by Div. 331, will long be remembered. If you want to take lessons or to enjoy true genuine hospitality just pack your grip and go to Virginia. You may get sick if you go over the N. & W. road while swinging around the curves, but they will land you there all right, a little pale perhaps, but with recollections of having passed through some magnificent scenery and you will find loyal hearts awaiting you.

M. E. CASSELL,

A Careless Word.

'Twas but a word, a careless word ;
As thistle-down it seemed as light ;
It paused a moment on the air,
Then onward winged its flight.

Another lip caught up the word,
And breathed it with a haughty sneer ;
It gathered weight as on it sped—
That careless word—in its career.

Then rumor caught the flying word,
And busy gossip gave it weight,
Until that little word became
A vehicle of angry hate.

And then that word was winged with fire,
Its mission was a thing of pain ;
For soon it fell like lava drops
Upon a wildly tortured brain.

And then another page of life
With burning, scalding tears was blurred ;
A load of care was heavier made,
It added weight, that careless word.

That careless word, oh, how it scorched
A fainting, bleeding, quivering heart!
'Twas like a hungry fire that searched
Through every tender-vital part.

How wildly throbbed that aching heart!
Deep agony its fountain stirred.
It calmed—but bitter ashes mark
The pathway of that careless word.

FRANCES R. FOGG.

The Insurance Question.

I have read quite a number of articles on our present plan of insurance and I am sorry to find some recommendations for a change to a graded age system, but glad they are few, as it would only be a clear declaration that each one of us in our declining years had outlived our usefulness, and you must pay for the enormous risk you are to the V. R. A. or get out; you are only in the way. We have raised your rent, we want you to move, we want young blood, we want members that will not die. Of course the young members will get old some time, but then they can go where all the good old Sisters have gone before them. Until some one can recommend some improvement in the present plan, we wish it would remain as it is, the same as the Brotherhood, except it is not compulsory, and the B. of L. E. plan was considered at a convention of numerous insurance

orders to be the best plan of insurance in the world. It is unselfish, broad-minded, fraternal, and one of the grandest works that the human mind has been able to plan up to the present time. You are not required to pay any more than what is needed to meet the demand. The burden of expense is equalized on all members; no one because they are too old or too young, ugly or beautiful will have to pay more. We are all considered equal, and that is the one noble, sisterly principle that we all love. In years to come if we should ever have any old Sisters among us we will consider ourselves honored and never consider them a burden, and make it so warm for them that they could not remain. What we give in this case will be like bread cast upon the water; it will return after many days, and I do hope that every one of us will merit good treatment in our declining years. We consider the change that is recommended to the graded age plan the most uncharitable thing that could possibly be recommended, and at our next convention No. 227 will be represented by a delegate who will vote on the question intelligently and for the good of the order.

INSURANCE SEC. 227.

Insurance.

SISTERS: For several months past I have read in our department the different suggestions to alter our insurance laws. If certain diseases are barred by a thorough medical examination what better or cheaper insurance could we ask for? Reverse the case. Your husband has been a member for 25 years. Would you like to have his assessments increased because he is now 25 years older? I certainly would not care to have my engineer's raised. I joined you in 1897, carry two policies, have never regretted joining and we never miss the amount we pay for insurance. What a comfort and help it may some day bring to those who are left when we are gone. Let us all try to get more to join and carry this worthy insurance instead of seeking to alter it.

Yours, ARIZONA.

Insurance.

Not having noticed any article in the JOURNAL regarding our insurance from any of our Sisters in the East, I wish to state Div. 27, of Philadelphia, Pa., is still very active and seriously considering the question of insurance.

I have been giving the question of age rating much deliberation since the convention at Los Angeles, Cal., and I cannot conceive of any appreciable benefits accruing therefrom. Our Insurance has always been prosperous in the past, promptly and satisfactorily discharging all obligations, and until 1901 received members without consideration as to their physical condition. We prospered. We have since drawn the line in that respect and required a physician's certificate with application; consequently the mortality basis has been raised to a most conservative standard, which in itself is, and has proven, an advantage of inestimable value in safeguarding the perpetuity and financial strength of the Insurance Department.

I think if age rating were adopted, our insurance would be secured by so many members from fifty-five years of age upwards, that the barriers of previous conservatism would be ruthlessly torn down by a deluge of liabilities, to the detriment of all parties in interest. As an illustration:

	Years.
Estimated age at death.....	70
Estimated age at time of insurance.....	55
<hr/>	
Life of insurance.....	15
Estimated policy (average).....	\$500 00
Estimated assessment \$1.00 per month, or	
\$12.00 per annum, for 15 years.....	180 00
<hr/>	
Net loss on policy to Department.....	\$320 00

While a credit for interest would be due this policy, yet the difference is so great, after charging expenses, as not to appear reasonable or equitable to the Insurance Department, or the more favorable risks, whose assessments are identical. The disadvantage and inequality of the age rating are obvious.

Sister Robertson reports we have nearly 7,000 certificates and 5,000 members. With so large a membership, I think our

present plan would amply suffice for all time, and Sister Robertson also reports that the treasury is seriously depleted, which is certainly good authority; we should create a surplus in some manner, and evolve a plan whereby we can keep the fund well invested as a reserve for our liabilities.

I think every member who has joined the Insurance Department has done so under certain conditions; she has fulfilled all the obligations incumbent upon her; has directly or indirectly contributed to its present success and high standing. I am satisfied that these faithful Sisters, who have enthusiastically supported the Insurance Department during adverse conditions, cannot remain idle with the knowledge that the treasury is now depleted, after paying its policies and approved current expenses.

"In time of peace, prepare for war," an old saying, well exemplified by President Roosevelt, can well apply to the present situation. We must create a surplus fund, to be available to meet emergencies, for who can foretell the coming or foresee the resulting havoc of an epidemic or great mortality from any cause. Our only alternative is to anticipate such conditions by safeguarding our financial resources with the creation of a Surplus Fund.

The assessment for May was 75 cents for three assessments, and there were eight deaths.

In order to create a Surplus Fund, many plans are probably feasible, but the one which would probably best serve the purpose, with the least expense to the members, would be an assessment of our 5,000 policy-holders at \$1 per annum for a period of two years, payable quarterly, or say 25 cents every three months. At the expiration of the second year, without allowance for interest earned, the principal of the fund would amount to at least \$10,000, which would be available for the liabilities which are ever likely to beset our treasury, but for which, as a body, our very existence is responsible.

I trust many opinions will be forthcoming on this important subject, that it may be ably, judiciously and finally determined

for the future success of the Insurance Department, and the permanent advantage of the insured and their dependents.

MRS. GEO. McMAHON, Div. 27, Phila.

Hall of Fame for Women.

When one starts to adorn his library or study walls with portraits of American heroes, certain names inevitably are suggested as appropriate, but strange to say there are no American women whose portraits are commonly seen on the walls of our home with anything like the frequency of Washington, Lincoln, Longfellow, Whittier, Phillips Brooks and other men who might be mentioned.

In 1900, when the balloting for names to adorn the Hall of Fame in New York City was done, no woman received a sufficient number of ballots to make the place; but it may be interesting, in view of the proposition now to have a hall of fame for women, to know who the women were who, in competition with men, were deemed worthy to be considered as candidates for the place. They were Mary Lyon and Emma Willard among the educators, Dorothea Lynde Dix and Lucretia Mott among philanthropists, Charlotte Cushman among actors, Helen Hunt Jackson among authors, Maria Mitchell among scientists, and Martha Washington, and of these Mary Lyon received the most votes and Martha Washington the next largest number.

In 1903 a ballot, among the readers of a widely circulated religious newspaper, for the twenty foremost American women, resulted in the choice of Frances E. Willard, Martha Washington, Harriet Beecher Stowe, Lucretia Mott, Phoebe Cary, Margaret Fuller, Louisa May Alcott, Mary Lyon, Maria Mitchell, Alice Cary, Helen Hunt Jackson, Emma C. Willard, Abigail Adams, Dolly Madison, Dorothea Dix, Mary Washington, Pocahontas, Betsy Ross, Harriet G. Hosmer and Lydia H. Sigourney.

Apparently it will be from among the list of names included in these two groups that those selected for the new Hall of Fame for Women are likely to be chosen by the judges named for that task by the

University of New York, which announces that funds have been given for the erection of a Hall of Fame for Women, adjoining and connected with the present Hall of Fame for Men, in which ultimately there will be tablets commemorating fifty American-born women of note and ten foreign-born women conspicuous in our national history.

A board of 100 electors will be requested to elect ten women of American birth and two American women of foreign birth. The women electors in the contest of 1900 were Presidents Hazard, of Wellesley, and Thomas, of Bryn Mawr, and Mrs. Alice Freeman Palmer. The electors in 1905 doubtless will represent a wider range of calling among women.

Presumably the donor of the Women's Hall of Fame will be the same person—Miss Helen Gould—who is reputed to have given the present Hall of Fame. The entire architectural scheme when carried out calls for a very imposing group of structures, on a commanding site on the upper end of Manhattan Island.—*World's Events.*

Bargains.

It has become a standing joke about women haunting the bargain counters, and if one is ever tempted to attend the one hour sale in the early morning they will no longer wonder that those of the sterner sex make sport of this love for bargains that is manifest in nearly every woman's make-up. In the first place you will see a crowd around the door eagerly anxious for it to open, then a rush is made for the counter that holds the wonderful bargain.

Sometimes they forget they are ladies and will snatch the goods from each other, every one wanting first choice. Those in the rear get frantic and will take most anything before it is all gone, because it is "such a bargain." When the hour is up you will see them coming out, some flushed and triumphant, others disappointed and indignant.

When they reach home and go to display the purchase made at a cost of nerve

force that almost leaves them prostrated for the rest of the day, they too often find that they have received just what they paid for and the "bargain" was not such a bargain after all.

Relative to this matter I beg leave to quote the following and then a verse from Nixon Waterman proving that men like bargains also.

SHE GOT A BARGAIN.

A woman who does her own shopping "for the house" went into a local drug store to buy soap. It was 8 cents per cake. She looked it over carefully and asked the surprised clerk:

"Do you give three cakes for a quarter?"

After he had recovered from his daze he replied:

"We do not as a rule, madam, but we will let you have them for that price."

She bore them away in triumph, and not until the shouts of joy from the rest of the house arose as she told of her bargain did the awful fact dawn upon her consciousness.

A GENUINE BARGAIN.

The "mark-downs"—so he always said—at a department store

Were never really genuine—"just fakes and nothing more!"

But one glad day a "lady clerk" of whom he chanced to buy

A bill of goods quite won him by the sparkle of her eye.

She told him she was "twenty-three," and they were married soon,

But by the time the happy pair had spent their honeymoon

He deemed a bargain he had found at that department store;

He'd got a bride for "twenty-three, marked down from thirty-four!" —*Nixon Waterman.*

The Merry Face.

There is an advertising poster that I look at whenever I see it upon wall, sign-board or fence. It represents a young woman holding in her hand something a dozen other hands are reaching for and all want at once. What the thing is that the girl has in her hand does not matter. That thing is not the thing at all. Whatever it is, even as she holds it, so her face holds me. It is so merry, bright and alert, so

radiant with fun and happiness! A dozen hands are stretched for what she can give only to one, and she is laughing while she considers which shall have it. Her white teeth gleam, her mouth is spread into the broadest sort of a smile.

The poster is only a rough thing, probably. Probably when the artist made it he or she never thought of contributing anything to high art, but the face of that merry maid is just the most successful high art work I have seen since—well, since the Paris Exposition. Somehow the sourest minded person smiles every time he sees the poster maid; at least I pity him if he does not. It is so mirth-provoking, so full of sunlight and of that joy of living we each ought to carry from cradle to grave. A child would shout with laughter the first time he saw it, an infant in arms would crow and stretch its fat fists toward it.

The merry poster maid ought to be printed large and in fast colors and placed along town and city streets where millions of sad-faced ones would see her every day and laugh, laugh till the aching facial muscles that tell of discouragement and suffering relax and soften and assume for the time the happy child look that should never have gone out of them. The dearest boon one can bestow on this world is to present to it always a merry face. It will thank you and bless you forevermore, for it has much trouble of its own.

A young lady often goes down town in the morning when I do. She is perhaps a stenographer—I don't know—but she has the same merry, radiant face as the poster maid, except that her face, being that of a real girl, is far more beautiful. There is the same lightning, merry look, the same arch, happy smile. The line of humor about her mouth is decided, the softly closed lips tell of sweet temper, the lustrous eyes shine with merry thoughts. I always watch her as long as I can without making her think I am staring at her. I never see her that I do not say to her mentally, "Bless you for keeping a merry face, my girl!" I never think of her either that I don't relax my face, eyes, and forehead and try to have them as-

sume the bright, sunny, merry look this sister of benediction always wears.

But one can't do it continually, you say. The pain and botheration of life are too much. Well, I don't know. That girl manages it somehow, and she has to get up very early and go to the office when the thermometer is at zero and has to work all day, I am sure. The merry face is much more within our control than we imagine it to be. Then, too, it is certain if we make ourselves wear this bright, hopeful expression, rain or shine, that our troubles will not strike in so deep and that they will be over sooner, so that by and by they will hardly touch us at all.

—*Mary Gould Lytle, in Los Angeles Herald.*

Liner Out for the Parson.

The Hen club of the village
Got together and began
To assert, preempt and pillage
The prerogative of man,
And they did him good and soundly
From his pedals to his crown,
Trowned him and berated*roundly—
All but Miss Matilda Brown.

Ah! the troublesome dilemma
And the object of attack
Was the parson—got a blimmer
In the middle of his back,
"Seems to us he ought to marry—
'Leven months he's been in town;
And the speaker paused to tarry
With her eyes on Tildy Brown.

"We have given seven parties
In the parlor of the church,
Maple sugars, a-la-carties,
But he don't come off the perch,
Mite societies we've handed,
Social teas—he must come down!"
Said the club; and then demanded
A response from Tildy Brown.

"Needs a wife, and needs her badly;
Myl his cuffs are awful frayed,"
Joined the chorus in and gladly,
All undaunted, undismayed.
Then the spoons began to rattle
And the tea began to flow;
Poor Matilda! How their prattle
Makes her blushes come and go.

Now they fix her with their glances,
Now they stab her to the heart,
Now each teaspoon gaily dances,
Now each saucer plays a part.
"It's reported you've been walking—"
"It's reported true, I guess—"
"And there's been a lot of talking—"
"And last night I told him Yes."

—*New York Sun.*

Our National Hymn.

"My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing."

How these words have thrilled us!
And yet how few are familiar with the
story of the origin of our National Hymn.

The author was Samuel Francis Smith and only a few years ago he passed away at his home in Newton Center, Mass. He was born in 1808, was a graduate of Harvard College and a classmate of Oliver Wendell Homes. He was a Baptist minister for some years and a journalist of prominence. The missionary hymn, "The Morning Light is Breaking," was written by him; but his name is immortalized by virtue of our National Hymn and in a tour of Europe some years before his death he received signal honors from many rulers and in numerous courts. Mrs. Smith died last spring.

For years Memorial day processions halted in front of the Smith cottage home to do honor to the aged wife; now the veterans will pass in silence and lay their tribute on two graves.

Some one has said, "Let me write a nation's song, and I care not who makes its laws." It would be difficult to estimate the influence of this beautiful national hymn.

"Till the day dawn," is the inscription on Dr. Smith's tomb, and while with his life's companion he sleeps, waiting for the dawning of the resurrection day, through all the ages, generation after generation will take up the thrilling words:

"My country 'tis of thee,
Sweet land of liberty,
Of thee I sing."

Academy of Art in Berlin.

Women have been refused admittance to the Academy of Art in Berlin by Director Von Werner.

In a petition to the Prussian minister of education the women demand admission on terms similar to those now accorded them at the universities. The decision is of considerable importance, as it will establish a precedent in other state art academies in Germany that still exclude women.

Use of Lemons.

Gargle a bad sore throat with a strong solution of lemon juice and water.

The juice of half a lemon in a cup of black coffee without any sugar will cure sick headache.

Lemon juice and salt will remove iron rust.

Wash fruit-stained hands in lemon juice to take off the stains.

A strong, unsweetened lemonade taken before breakfast will prevent and cure a bilious attack.

Lemon juice added to milk until it curds and these curds then bound upon parts swollen from rheumatism will bring relief.

Lemon juice mixed very thick with sugar will relieve that tickling cough that is so annoying.

A hot lemonade, taken before going to bed, will cure a cold on the lungs.

A cloth saturated in lemon juice and bound about a cut or wound will stop its bleeding.

Lemon juice added to fruit juices that do not jell readily, such as cherry, strawberries, etc., will cause them to jell.

Lemon Extract. Let stand the rind of four grated lemons in half pint of alcohol for about three weeks. Drain off the fluid, bottle and cork and you have finer extract than that which you buy at the stores.

Lemon Icing. Put half a pound of sugar in a bowl, add grated rind and juice of one lemon and half cup boiling water. Whip stiff and spread between cake layers.

A slice of lemon added to a glass of tea makes Russian Tea.

Garnish fish, oyster and crab dishes or salads with slices of lemons.

Lemon juice is much nicer for salads than vinegar. This is especially true of fruit salads.

Squeeze the juice of half a lemon in the rinse water after you have shampooed your hair. It will cut all grease.

To keep lemons fresh a long time invert over them a glass dish that fits closely.

For recipes of lemon pies, custards, cookies, cakes, ices, sherbets, candies and candied peel see any good cook book.

Division News.

EAST SYRACUSE, N. Y., May 29, 1905.

DEAR EDITRESS: It has been a long time since Eventide Div. 75 rendered an account of its stewardship of the charge which was placed in its keeping by the Grand Division eight years ago.

We are endeavoring to carry out the instructions taught by the Grand President at the school of instruction, where we have sent a delegate at all opportunities. We are growing in numbers, and general prosperity and harmony prevail.

Three of our Sisters this year have each been presented with a testimonial of regard which has been fraught with good will and loving kindness. One was a birthday gift, another was a wedding anniversary present and the third to a Sister who moved out of town. These were presented at the Division rooms, where a feast and a royal good time followed.

More than two-thirds of our members carry the insurance, and the communication from Sister Barber of Div. 34, found in the May number of the JOURNAL, expresses exactly our sentiments in regard to grading the insurance rates. We, too, think it an injustice to the Sisters who have maintained it from its infancy. In conclusion would say that we are making strenuous efforts to add to our numbers. Ten names have been added to our roll-call within the past few months. We as a Division are doing all that we can for the promotion and prosperity of the V. R. A. and I sincerely hope that there will be no contention in regard to its insurance, but that all of our labors be so performed that they will redound to the good of our order and promote happiness to every Sister of the G. I. A.

CORA PHELPS, Cor. Sec.,
East Syracuse, N. Y.

ON Tuesday evening, May 9, Div. 8, of Collinwood, Ohio, gave a grand "May Party" at Gunn's Hall. The hall was beautifully decorated with colors of the order. Several grand officers were in attendance. Grand Chief Stone and wife, Mr. and Mrs. Prenter, Mr. and Mrs. C. H. Salmons, and Mr. and Mrs. Futch and

daughter. When the orchestra struck up their music, fully 200 couples danced to their hearts' delight. Through the kind assistance of T. S. Ingraham Division, No. 62, of Collinwood, an elegant supper was served in the dining hall, where the tables were bounteously laden, and decorated with beautiful cut flowers, carnations and roses. Great credit is due to the committees in general at their untiring efforts to make this occasion a most successful event, financially and socially, reaping a benefit of \$284.45 taken in from admission fees, supper and prize contest. This occasion will be a glad remembrance to all who participated, and many thanks are expressed to all who so kindly assisted.

MRS. GEO. F. DAVIS, Div. 62,
Collinwood, Ohio.

THE 18th day of May was "Crotty Day" in Hiawatha Division, G. I. A., to B. of L. E., Denison, Tex., and the members and invited guests of the Auxiliary met at their hall to do honor to the past President of the G. I. A., Mrs. J. Crotty.

In days of old "whom the gods seek to destroy, they first make mad," and it was the custom to invite to a banquet him whom you most despised or feared, and in a glittering chalice of choicest nectar concealing distilled insidious poison toast that one who would soon recline upon his silken couch clasped in the arms of Death. But here, instead of a feast with Hate as the guest of honor, was a Banquet of Love, planned by hearts with whom "Thou Shalt Love Thy Neighbor as Thyself" is no idle byword, but the command of a living God, which has become to them a golden chain set with the jewels of charity, faithfulness, friendship and kindness, binding each to each.

The program of music, recitations, and a drill by the members of the Auxiliary, was exceptionally fine, and when Mrs. D. T. Reece stepped forward and presented to Mrs. Crotty with the love and in the name of the Division a magnificent cut glass vase, the culminating point of good feeling and fellowship was reached. Mrs. Crotty accepted the gift, in her usual graceful and gracious manner telling something

of the history of the Division and thanking them for the high honor conferred upon her. The guests then repaired to the dining-rooms in great good humor, and while here were no dissolved pearls, ambrosia, or nectar, the menu would have tempted an anchorite.

The occasion was a delightful one, and all felt glad that "Crotty Day" had been made an institution, and that next year would bring such another delightful day.

JAS. BRUCE.

As it has been some time since Cotton State Div. 43, Meridian, Miss., was heard from through the JOURNAL, I am afraid our Sisters will think we have gone out of existence, but we assure you that we are far from it yet. Our Division is small, but we work in harmony, and over half of our members are insured, and quite a number of us are opposed to age rating, too. We are doing nicely, financially as well as socially. On May 15th last, at B. of L. E. Hall, we entertained the Brothers of Stephenson Div. 230, and their wives. A large number was present, and at 10 o'clock our President asked the Chief of Div. 230 to step to the altar, and in behalf of Div. 43 presented 230 with a handsome regalia. The Chief was so surprised he hardly felt equal to the occasion, but at last rallied and thanked the Sisters for their beautiful offering of good will. All of the Brothers were surprised, indeed, but I think more so at finding their wives could keep a secret. After they recovered from their shock we repaired to the parlor and indulged in progressive euchre. Mrs. Wm. Perry won the ladies' first prize, a beautiful centerpiece, and Bro. Frank Maxwell the gentlemen's, a lovely pair of suspenders. After all had partaken of an elegant luncheon, we separated for the night, feeling that our effort had been appreciated by our Brothers.

Our Division being invited to a school of instruction at Knoxville, Tenn., four of our Sisters accepted and attended the school. They returned home full of praise for the hospitality of the Sisters of Div. 71, and they were greatly benefited by the school. They also stopped over and vis-

ited the Sisters of Chattanooga Div. 176, and enjoyed their stay with them very much.

Hoping that Sister Editress will not consign this to the wastebasket because I have consumed so much space, I will close by wishing all Sister Divisions success.

Yours in F. L. & P. A. V. M.

It has been some time since I saw an article in the JOURNAL from Division 68, Roanoke, Va., so I decided to say something about our work.

Happy to say we are getting along nicely. It is true we lost heavily to organize Venna Adams Division 331. Some 23 or 24 got transfer cards to organize the sister Division, which is doing nicely. And I feel proud of our work, as Division 68 is the parent Division on the N. & W. system.

May 11, we had our Grand Vice President with us and had an all day session in our hall. Venna Adams Division was invited, and many familiar faces were seen among them, as most of them were once members of Division 68.

Our meeting was both pleasant and instructive as our Grand Vice President went through the ritual work with us and explained it thoroughly. She gave us a talk on insurance, which I hope will do much good. We held a social at Sister Simson's in the evening. Owing to the inclement weather, only one sister of Division 331 was present, Sister Adams; sorry more could not risk the storm.

At a late hour Division 68 bade Sister Cassell goodbye. Sorry she could not give us more of her time while in our city.

She was entertained the rest of her stay in our city by Venna Adams Division 331, which ended in a tallyho ride Saturday.

May the 13th had a social at the R. R. Y. M. C. A. entitled, Aunt Dinah's quilting party, which was quite a success in every respect.

At our regular meeting today it was decided to have a school of instruction Oct. 18 and 19, to which all divisions on N. & W. system are invited, as well as all our Grand Officers.

Trusting this will not ind its way to the trash basket. DIVISION 68.

Div. 145, Buffalo, N. Y., sends greetings to sister Divisions and breaks a long silence by now appearing in the JOURNAL.

Our membership is large and growing. We have held a number of card parties in our hall, which were successful and enjoyable.

On the evening of April 24 we entertained Div. 421, B. of L. E., at cards. A banquet was served, at which time our President, Sister Cooper, in behalf of the Division, presented our musician, Sister DeWitt, with an Easter egg containing a recognition pin. She was completely surprised and could only say "Thank you." Brother Luff spoke to us in well-chosen words, and the evening was full of enjoyment. We hope for many more with the same spirit of harmony. SEC. 145.

G. I. A. Voluntary Relief Association.

TOLEDO, O., July 1, 1905.

To Division Insurance Secretaries, V. R. A.:

You are hereby notified of the death of the following members, and for the payment of the following claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for same was dated later than May 31, 1905.

ASSESSMENT No. 219.

Died May 24, 1905. Sister Lena Kingston, aged 27, of Div. 17, Detroit, Mich. Cause of death, tubercular phthisis. Carried one certificate, dated April, 1902, payable to T. P. Kingston, husband.

ASSESSMENT No. 220.

Died May 16, 1905. Sister Mary Beasley, aged 35, of Div. 84, Springfield, Mo. Cause of death, septic infection. Carried one certificate, dated February 6, 1903, payable to Orin, Ethel, Mamie, Eva and Carroll Beasley, children.

ASSESSMENT No. 221.

Died May 26, 1905. Sister Minnie Crosby, aged 36, of Div. 132, Louisville, Ky. Cause of death, peritonitis. Carried two certificates, dated May, 1902, payable to John Crosby, husband.

Assessment No. 221 will be paid from the Assessment fund.

Members will pay their Insurance Secretaries on or before July 31, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than August 10, or stand delinquent till remittance is made.

Members in good standing May 30, 1905, forty-nine hundred and sixty-five in the first class; two thousand and seventy-five in the second class.

An error of the General Secretary made the date of Sister Nelson's certificate 1902. It should have read 1892. (See JUNE JOURNAL, Assesmer No. 216.)

MRS. GEO. WILSON, Pres. V. R. A.

Stuck Brakes.

BY R. H. BLACKALL.

The problem of freeing ourselves from stuck brakes is one deserving of considerable thought on the part of the engineer, since there are many times that brakes stick when the trouble results directly from the improper handling of the brakes.

Leaky train pipes and poor fitting triple piston packing rings, of course, are responsible for considerable of this trouble, but there are more cases where the sticking is because of the improper use of the brakes by the engineer. Engines are often on the road in a condition in which they will not do their best work, and while we would very much dislike to see a triple valve in service in the condition we sometimes see locomotives, nevertheless we can not expect that the valves are to be in prime condition always, and must so handle the brakes that the best results may be obtained under practical and not ideal conditions.

It is a comparatively simple matter to operate the brakes on short trains so that no trouble of this nature will result, but an extra amount of thought and care must be used in the long train service encountered on some roads.

With the many duties and responsibilities of the engineer of today it is impossible for him to be constantly thinking of the best way to handle the brakes while on the road. We are all creatures of habit, more or less, and the proper way to obtain the best results is to school ourselves originally as to the proper methods to pursue. When these are once established it will be a case of habit and second nature, and the right moves will be made under the various conditions, without the necessity for special consideration in each case, and when the thought should be directed in other channels.

Some of the chief causes for stuck brakes are embodied in the following: Backing on to a string of cars that are not charged with a portion of the train that is already charged, this without depleting the pressure in the auxiliary reservoirs on the part of the train attached to the engine before so doing; overcharging, and then bringing the brake valve to running position; releasing after a light reduction has been made; releasing by placing the brake valve in running position; trying to release while the air is still discharging from the brake pipe exhaust, in response to a reduction; improper bleeding of brakes which are stuck, by the brakeman; this latter is, of course, not within the control of the engineer except as he may impart information to the train crews as to how this should be done.

In backing an engine on to an uncharged train, or in backing a portion of a train on to another and uncharged portion, the auxiliary reservoir pressure should be reduced, a release made, and the brake valve handle returned to lap position before coupling to the train. By so doing the equalization between the auxiliary reservoirs and brake cylinders, when the hose is connected between the two sections, will be approximately 35 pounds, and the excess pressure in the main reservoir will then be sufficient to raise the pressure in the brake pipe so that it will insure a prompt release of the brakes on the front portion of the train.

If the engineer simply places the brake valve on "lap" when he backs against the train, or if he makes a 20-pound reduction and leaves his brake valve on "lap," without first releasing the brakes, practically no gain is made as there is a pressure of 50 pounds in the auxiliaries on the head cars that must be overcome before the brakes can be released. With the brake pipe pressure greatly depleted, due to the air that flows back into the empty portion of the train, the main reservoir pressure will be depleted to such an extent, to charge the empty part of the train, that it may not be sufficient to start all of the brakes that were set to releasing. It then remains for the pump to compress

the air with which to recharge, as well as to release the brakes which are applied. The slow rise in pressure permits the air to feed by the packing rings which may be a poor fit, charge the auxiliary reservoirs on these cars, and the brakes are stuck. When it is discovered that there are stuck brakes the engineer generally makes a heavy reduction which, with the air already in the brake cylinders, causes a high equalization of pressures. This makes it very difficult to accomplish a release from the engine. Whenever it is known that an application of the brakes is expected, due to the coupling up of other cars, it is always well to get the pressure in the auxiliary reservoirs so reduced that a release can be accomplished readily by the engineer.

Overcharging: this is accomplished by placing the brake valve in release position and allowing it to remain in this position until all, or a part of the train, is charged above that for which the feed valve is adjusted to close. It may be that only the front portion of the train is overcharged, in which case the front brakes will apply as soon as the brake valve handle is returned to running position. This is due to the fact that the rear brakes are still drawing air from the brake pipe in an effort to equalize the pressure throughout. The resultant reduction of pressure at the head end caused the brakes to apply. After they have applied, a movement of the brake valve handle to release position momentarily may obtain the desired release. If, however, this is not accomplished, it will be necessary to first make a full service reduction. The overcharging of the head brakes is better understood when we consider that in recharging the brakes on a 50-car train, with the brake valve in release position, the pressure in the brake pipe on the first car is approximately 10 pounds higher than that on the last car. This is due, primarily, to the fact that the feed grooves are taking air from the brake pipe about as fast as it comes back, also to the friction of the piping which acts to retard the flow.

Release after a light reduction: when this is done we are trying to obtain a

prompt action in releasing, with a depleted excess, the excess always being the difference in pressure in the brake pipe and main reservoir. It is difficult to obtain a quick rise in brake pipe pressure if there is an insufficient driving head.

If a train is brought to rest with a light reduction, and it is of considerable length, it is advisable to make a further reduction before starting the release. It is a matter of wonder to note the engineers who fail to follow this practice, and where an engineer is found who fails to do this, it invariably follows that this is one of the men who is troubled with stuck brakes.

Releasing in "running" position: while this is a practice occasionally encountered, it is, fortunately, confined mostly to passenger service, as the engineers on freight trains have found that trouble is certain if this is done. In making a release the results desired are only assured by so manipulating the brake valve that a sudden rise of pressure results. This cannot be obtained in running position owing to the restricted portage, as well as to the action of the feed valve which gradually closes as the pressure is approached for which it is adjusted to close. A release in running position is especially likely to cause trouble after a light reduction, in which case the feed valve does not open to the full extent. The writer has seen brakes stuck on a three-car train by the use of this objectionable method of release. No trouble whatever was experienced when the brake valve was properly handled.

Releasing when the brake pipe exhaust is open: this is a bad practice not only because it has an objectionable effect on the release, but it produces severe strains on the draft gear as well, thus tending to increase the chances for breaking the train in two.

If a release is made when the air from the rear of the train is still flowing toward the brake valve, the increase wave pressure which is started back meets an opposition which tends to destroy the sudden effect desired.

Stuck brakes due to improper bleeding of reservoirs: if a stuck brake is discovered at the rear of a long train by a brake-

man, it is a very easy matter for him to cause several brakes to apply if he is ignorant of the proper way to bleed off a brake. The proper way is to pull on the release rod only until such time as the triple valve "pops," and best results are obtained if the brake is released by short jerks at the bleed rod. In many cases the brakeman holds on to the rod until the reservoir pressure is very considerably depleted. This causes air from the train-pipe to feed into the reservoir, the resultant depletion in the brake pipe acting to cause the adjacent brakes to apply before the reduction made has an opportunity to affect the feed valve and supply the reduced pressure. When it does open it raises the pressure so slowly that it may not release the brakes that are applied at the rear. As a result, the brakeman in his effort to release the additional brakes that are now stuck, applies others, and, if on a hard pull, the train is stalled, it is then necessary for the engineer to make a heavy reduction before he can release the brakes properly.

If brakemen would exercise more judgment in bleeding off brakes and opening angle cocks, so that the brakes would not apply, there would be very much less trouble from stuck brakes.

QUESTIONS AND ANSWERS.

Q.—D. G. N.—Our road is beginning to put on larger air pumps than the nine and one-half inch. I suppose this is done so that it will be easier to keep up the leaks. It seems to me that it would be much better to leave the old pump on and take better care of the train pipe. If the capacity of the pump is increased it will simply mean that finally the leaks will be so bad that we can't handle the trains. Do you think the use of a larger pump will help us out for a short time?

A.—There is no doubt that much better results would be obtained if the train pipe were kept in better condition; but, as you say, the deciding point is, how much leakage can trains stand and still have them in shape for operating on grades? If this is the deciding point, it matters not how large the compressor is; the increased size of the machine simply

means that the work can be accomplished so much sooner, and it hastens a recharge on grades. A quick recharge is, of course, very desirable.

While there is no reason why a larger compressor should not be used, we do not think that the good results from its use will equal the use of two smaller pumps, by means of which engine failures are practically done away with.

Q.—W. H.—I would like to know what causes the whistle to screech; I mean the one that works with the whistle signal. The one on my engine has been working all right until lately. Once in a while now it also blows twice when the crew says they only pull it once.

A.—The cause of the action described is undoubtedly dirt in the signal reducing valve. This dirt permits the pressure in the signal pipe to become equal with that in the main reservoir. The whistle is adjusted to sound properly when the signal pressure is 40 pounds, hence the poor response with the higher pressure.

This high pressure is also responsible for the double response when the signal cord is pulled but once. When the cord is pulled the signal valve responds due to the reduction made above the diaphragm. In order to cause the diaphragm to seat the valve it is necessary for the pressure above same to be greater. The greater pressure is obtained from the opening of the reducing valve. This valve will not open until the signal pipe pressure is below 40 pounds; as a result, there is a strong tendency for the signal pipe pressure to fluctuate after the car discharge has been opened. This fluctuation of pressure is responsible for the double action of the whistle when the cord is pulled but once.

Whenever the whistle screeches the reducing valve should be cleaned; otherwise the whistle will screech, and is likely to blow twice when the cord is pulled but once, and an unnecessary strain is placed on the hose.

Q.—W. M. M.—We had an argument the other day as to why the feed ports in the triples were not made larger. Most of us thought that it was because the

small groove made all of the triples recharge their auxiliaries in about the same time. We also thought there would be a waste of air when the overcharged brakes at the head end reapplied after the brake valve was returned to running position when trying to make a quick recharge. We decided these were the main reasons but wanted to ask the JOURNAL if it could add anything to our understanding of the case.

A.—Your view of the case is correct as far as you have gone, but there are other reasons why it should not be advisable to make these grooves any larger.

In a long train it is common to have the front portion of the train pipe ten pounds higher than that at the rear when recharging; with the present equipment this means that the auxiliary reservoirs at the front are charged this amount in excess of those at the rear. This being true, the front brakes, as you say, will apply when the brake valve handle is returned to running position; to release them it is necessary to allow the brake valve to remain in running position until the pressures have had an opportunity to settle throughout the train, at which time the front brakes may be released by moving the brake valve handle to release position momentarily. This means that there is a waste of air which is represented by the amount the auxiliaries at the front have charged in excess of those at the rear. If instead of permitting the pressure in the train pipe at the front and rear to equalize and then accomplishing a release, the brake valve be moved from release to service position, another objectionable result is produced. In this case the train-pipe pressure is not reduced below the auxiliary reservoir pressures back in the train, and as a result, only a few of the brakes are applied. The result of this is that the brakes at the front do much more than their share of the work and there is a strong tendency to overheating the wheels on the head cars.

If anything should be done to the feed grooves it should be to reduce rather than to increase them in size. A point can be reached where the grooves can be made so

large that the brakes can not be applied with the service application; the longer the train the greater bearing this condition will have upon the action of the brakes.

Another point that should be borne in mind concerning the use of a large feed groove is that in most trains the combined area of the feed grooves is such as will permit the air to escape through them much faster than the air can be compressed by the pump.

In isolated cases, where, for instance, a very small number of cars are handled on very heavy grades, it might be advantageous to have a larger groove. This represents the exception, however, and there would seem to be no reason for using a larger groove than the ones employed at present.

Q.—F. G.—I am working on a road that has several grades where we have to hold the train with air and once in a while a train gets started because a brakeman forgets to open an angle cock after we have stopped for water or leave a car. I would like to have the JOURNAL suggest the best way to protect myself from things like this.

A.—There are several ways to check such a possibility. The safest way is to make a test after coupling to the train. Another way is to always apply the brakes before the train comes to a full stop and leave them applied, not moving the brake valve handle from lap position until the brakeman swings you ahead. If, on again coupling to the train, the angle cocks are not turned properly, it will not be possible for you to release the brakes until such time as all cocks are turned properly.

Another means of checking up the condition of the cocks and the action of the brakes is to make a running test, where possible, at some convenient point before the hill is reached.

Another good practice is to apply the brakes as soon as possible after tipping over the summit. If the brakes are not holding properly there will be time for the crew to set the hand brakes before the speed of the train is too great; by so doing it can be told also by the sound of

the train pipe exhaust, whether or not the angle cocks are all open. A short exhaust at the brake valve indicates a small volume of air. Practice should enable an engineer to tell approximately the number of cars coupled up by the length of the exhaust through the brake valve.

Electricity—The Street Car Equipment.

BY ELWOOD A. GRISSINGER, E. E.

To obtain the magnetic field in a controller, a coil of copper wire is placed upon an iron core. Through the coil, the same current that operates the motors passes. Such current, therefore, produces the magnet which, by proper shape of pole piece, throws its lines of force across and around all the sliding contacts of the controller. Consequently, when the controller is on, the motors are taking current from the line, which also passes through the controller coil. When any circuit is opened or contact broken by shifting the controller handle, the arc, which would otherwise tend to form, is immediately snuffed out. To the inexperienced, it might be well to state that an arc formed and maintained with a 500-volt current is the most destructive thing on the list. It will instantly vaporize a metal, or most anything else in its path. Its flash is blinding in its intensity and heat, the greatest of artificial heats. Exhaustive experiments had to be made, therefore, to develop detail apparatus that would rupture the arc when attempting to form, and thereby protect other apparatus. The magnetic blow-out on the controller occupies just such a position. It was not an uncommon sight in early days to see a motorman enveloped in flame from a controller, a car load of panic-stricken people and a crippled car. Such accidents are rare with controllers nowadays, but now and then we read of flames breaking through a car floor. This is usually because a motor has bucked from an unusual circumstance.

Within the controller case, there are a number of terminals to which the wires are fastened when the apparatus is in-

stalled on a car. These terminals are stamped so as to show what wires are to be fastened to them. Similarly are the motor terminals stamped, the diverter terminals, the cut-out or circuit-breaker terminals, and small tags attached to the wires in the drum hose. Such tags should not be removed. A plus (+) sign signifies a positive terminal, a minus (-) sign a negative terminal, F a field terminal, A an armature terminal, G a ground terminal, T a trolley terminal, R a resistance or diverter terminal, B a brake terminal. When the letter F or A is followed by the figure 1 or 2, etc., the number of the motor is referred to; that is, F2+ and A1- mean respectively positive terminal of field on motor No. 2 and negative terminal of armature on motor No. 1. When the letters F and A are not followed by figures, they are understood as referring to all the motors. Diverter or resistance terminals are marked to distinguish them apart, as R1, R2, etc.

The controllers in use today are the series-parallel types. Such have two handles on top, one of which is used in turning current on and off, and the other, the smaller one, for reversing the direction of motors. Both handles are removable. The larger handle, for operating the car, is provided with a pointer traveling with it, and which points to the notch marked on top of the case and at which the controller is then standing. Controllers of different makes and sizes will differ as to the number of notches, but of these there are usually seven. Whatever the number of notches, there are usually but two running positions for the handle—at the last notch and the third or fourth. Running notches are those where the diverter resistance is not in use and such as when the motors are in series with each other and the line, or when in parallel with each other and the line. Resistance should not be in when running steady, as diverters not being built for that purpose will not stand it, and, moreover, it is not economical.

To start the car, make sure the controller handles are at off position. Then place trolley to wire and close the switch

in the cut-out box. Next, move the small reversing switch to the position desired—that is, forward or backward, as is desired to operate the car. Then throw the operating handle to the first position. The car should start and run at very slow speed. Using this notch on and off is good practice in running cars slowly through crowded streets. After throwing to first notch, and seeing the motors have acquired good motion, pass to next notch, and so on along the range. Movement from one notch to another should be positive; that is, do not permit the handle to leave a notch and then hesitate between notches, but pass from one notch to another in a positive manner. In going from first notch to last, however, or over any number of notches, care should be exercised so as not to go too rapidly, for the safety of the equipment and for the comfort of the passengers. Motors can be made to acquire speed more rapidly than steam engines, and with consequently unpleasant effects. To stop the car, bring the controller handle to the off position. Do this with a continuous movement or sweep, and as quickly as circumstances warrant. At the same time apply the brakes, but do not touch the reversing handle, unless dire circumstances; in which event the method would be to bring the controller handle to off position, throw the reversing handle clear over, and then turn operating handle to first notch, throwing to off position when object is accomplished. Such an operation is rarely necessary, unless to avoid collision or to save life. Danger to equipment is great when an effort is made to reverse a car's direction when in motion, and should be tried by experienced and cool-headed men only. Under ordinary circumstances, to reverse a car the current should be cut off at controller, car brought to a stop, trolley reversed, the reversing handle thrown over and operating handle started as before. If it becomes necessary to run with one motor only, the case of controller can be removed and a plug changed inside of same. This plug is marked, and it will be seen that it can be inserted so as to cut out one motor or

the other. Replace the case and operate as before.

Within a short time, another form of controller has come into use. This form has, in addition to the usual features, a handle and cylinder for operating the electric brake. Some forms operate the brake with the same handle that is used in starting the car. With this form, when the handle is brought to the off position, if the motion is continued backward, there will be five notches that can be covered. These notches regulate the amount of current that passes into the braking mechanism just as the forward motion controls the amount of current going into the motors. The action of an electric brake is such, that when the current is cut off from the motors the latter then become series generators, and the current generated by them passes through the same diverters or resistances belonging to the equipment and thence to the brake coil, which is stationary. The core of the brake coil is magnetized, and exerts a powerful pull upon an armature fastened to the car axle and traveling in front of the coil. The amount of pull is regulated by the current flowing, which, in turn, depends upon the position of controller handle and speed of car. Electric brakes will not work when a car is not in motion, and the faster a car moves the more powerful the brake action can be made. The reason is that the motors must revolve to generate a current and the more rapidly they revolve the higher the voltage they will produce; consequently, a stronger current will be pushed through the brake coils. The later form of electric brake controller has three handles, one for controlling current to the motors, one for reversing the motors and one for operating the brakes.

The lightning arrester, choke coil and fuse block, are usually connected up as shown in the accompanying sketch, Fig. 1.

The fuse block is usually a block of lignum vitæ, upon which two terminals are mounted. Between these terminals is fastened the fuse, which in some cases is copper wire and in others a lead or soft

alloy strip. Suitable binding screws are provided for clamping the fuse. To one of the fuse terminals is brought the wire leading direct from the trolley, and the other terminal leads to one end of the choke coil. This coil is for the purpose indicated by its name. Lightning is peculiar, and in the present instance will follow a straight path in preference to passing through a coil. The coil in this case is of heavy insulated copper wire placed in series with the motors and the trolley, so that all current from the trolley passes through it; but it will choke lightning and force it to pass through another path, and one which the street car current cannot travel over. Near the end nearest the trolley a terminal is made on the choke coil, to which is connected one side of the lightning arrester, the other side of the latter being connected to the truck of the car and hence to the ground. The lightning arresters provided for this purpose are simply an air gap inclosed in porcelain in some cases and lignum vitæ in others. The lightning will jump across this air gap in preference to going through a coil of wire, but a current at 500 volts pressure cannot pass across the same gap. Therefore, if lightning traverses the trolley wire to a car, down the trolley pole to the fuse box, thence to the choke coil, it will pass through the lightning arrester to the ground and the car equipment be uninjured.

The canopy switch, which I have referred to as a cut out, may be either in the form of a switch or a circuit breaker. The latter is more modern, and preferable. There are two of these, one mounted overhead on each platform of a car. They are connected in series with each other and to the trolley. In reality the side of one goes to the trolley and the side of the second to the fuse box. In emergency cases, opening either

switch or circuit breaker opens the main circuit. A circuit breaker is virtually an automatic switch. It can be opened and closed manually, and will open automatically. If too much current passes through them, they will open, thereby protecting the motors. They are better than fuses for motor protection, because they act quicker. The same circuit breaker can also be set for different strengths of current.

The lightning circuit of a car will usually comprise five or ten lamps of 100 or 50 volts, respectively. They are connected in series with one another; that is, five 100-volt lamps in series to make the 500 volts of the circuit, or ten 50-volt

FIG. 1.

lamps. Since they are in series, when any one gives out, all will be inoperative. Turning the current into one must do the same to the others. A low-efficiency lamp is employed because of the usual variations in voltage, which is bound to occur because of the intermittent and heavy demands for current made by the motors—the lamps getting their current from the same source. A small switch is mounted in each end of the car, so that the lights can be turned on and off. The trolley is purely mechanical, and is so familiar to everyone that a detail description of it is not thought necessary.

General instructions for operation are very similar to what might be said of any form of traction. Surface railways are so

built that very slow speed can only be maintained in running around curves, crossing streets and railroads, and when passing over rough track. The current should be cut off at the controller as the trolley passes an overhead switch. The passing of such a switch can be detected by the sound. It is advisable to run slowly through all flooded places. When examining the motors, water should not be allowed to drop on them from wet clothing or other source. Electrical trouble that might arise and persist can be quickly stopped by opening the canopy switch or circuit breaker, or pulling the trolley down. In going down a grade, great care should be exercised to keep the car under control; also to keep the trolley on the wire, as it may be necessary in an emergency to stop suddenly, when, if the brakes fail, the motors could be reversed. If the power is shut off from the trolley wire, from any cause whatsoever, bring the controller at once to the off position, then turn on lamp switch and wait for the lamp to light up, after which start the car as usual.

The trolley should never be placed to the wire unless both controllers are at off position. If, from any cause, the trolley leaves the wire, car should stop as quickly as possible and trolley replaced, the controller in the meantime having been thrown to the off position. If the trolley leaves the wire frequently, if loose motion is noticed, or if there be flashing at the trolley wheel when running, the facts should be reported at once, because such defects are very destructive to the overhead construction. A car should not be run with the trolley pole in the wrong direction, as there is great danger of bending the pole or of tearing down overhead construction. When a car is run into a barn, the canopy switch should be opened, and if possible, trolley pole should be thrown up, so as to relieve the springs from tension. When handling any of the car apparatus, it is always good policy to pull the trolley down from the wire. The lamps in the car may sometimes refuse to light. The trouble may be due to a broken or burned-out lamp, poor connec-

tion between one of the lamps and its socket, poor connections in the lamp switch, a loose or broken wire, or a blown fuse. A lamp should never be removed while current is on, as an arc is liable to be formed, burning out the socket. This is not true of a single lamp burning on a 110-volt circuit.

When Memory Fails.

BY J. W. READING.

With the many different types of engines now doing service on our American railroads it has become a serious problem for the engineer out of employment to secure a situation, especially when he runs up against a questioner who has encompassed more theory than good common sense. A great many engineers who might be experts in getting out of trouble would find considerable difficulty in answering satisfactorily the many questions which some of our railway managements demand before giving engineers employment.

The human mind is prone to forget and that man does not live who can remember every detail of his profession or calling unless something is continually transpiring to keep his memory fresh on the subject; the doctor, the lawyer, and other professional men could not do a successful business if their text-books were taken from them; their reference libraries are about as essential as the air they breathe. How quickly will the doctor or lawyer, who try to master their profession, read up on a disease not treated for a long time, or on some court decision in the past of a case, the like of which the lawyer has not had for some considerable period. These same things confront the locomotive engineer; he breaks something about his engine today, something that has tried his ingenuity to fix up, and may not for years thereafter have another accident of the kind, and he is but human if after a long period of time he has forgotten just what method he adopted for getting out of his difficulty on the previous occasion. Herein the professional men have a decided advan-

tage as they can at once turn to their library and refresh their memory. The engineer can not do that and could not take the time to read up if he carried a locomotive text-book in the seat box. It would be a most ridiculous proceeding for the locomotive engineer to take his book on "breakdowns" and look up the remedy for a fractured driving tire, especially should there be one or more important trains about due. The engineer's "bumb of constructiveness," the mechanical ingenuity born in him, the talent that may be latent, will show up to a greater or less degree on such an occasion and his skill in mastering the situation measures his ability.

It might be a good thing for the average locomotive engineer if he could each day before beginning his journey read up. There are only a thousand or two different affairs in the way of breakdowns, train rules, etc., that the modern engineer is supposed to remedy and as he has neither the time nor convenience of posting up when the occasion most urgently demands it, he might take the little time he is supposed to rest and get next to his job. (Nit!)

The vast majority of enginemen spend too much time in getting over the road to have the necessary amount of sleep required by nature, saying nothing of a little time to visit with their families when off duty. It is not consistency to think these men can take up a line of study and follow it up; the weary mind and body cannot satisfactorily wrestle with problems, man must be at his best when he reads if he expects to remember it as long as it took him to read it. Here again I repeat, that unless the daily routine of the business of the various vocations of mankind take in every detail of their profession constantly, there are bound to be lapses of memory on items that may prove of considerable importance.

Inasmuch as a large following of our calling has not the time, and a goodly number of those who might but will not take the time, to profit by reading of the experience of others, it brings the issue

down to the natural mechanical ability and all around good judgment of the enginemen when any of the many mishaps occur.

Some years ago I found my right of way obstructed by a train with a disabled engine. I went ahead to see what was the difficulty and my Brother engineer was trying to put in a spring hanger. Jacks were under the engine and to the casual observer everything seemed to be all right. I asked the Brother how long he had been there. His answer was "About two hours and to save my neck I cannot get this hanger in." About that time I noticed his driver brake had lifted drivers quite a distance from the rail. I said to the Brother, "Why didn't you disconnect your driver brake before jacking up your engine?" The expression that came over his face was a very comical one as he said, "I guess it was because I was a damn fool." I asked his permission to fix her up and he was only too glad to give it.

I took pinch bar and threw out spring and spring saddle, put as much oil on top of box as the oil recess would permit, fitted block between frame and top of driving box, put another block under end of equalizer, all of which did not consume over fifteen minutes of time. I advised him not to hurry and give that particular box plenty of oil.

This affair occurred only twenty miles from the terminal. At this terminal at that time there were no regular machinists and the car repairers were expected to do such work as putting in springs, wheels, brasses, etc., when it was absolutely necessary that it should be done. This repair gang was called that night to put in the spring hanger. Early the following morning I found the "wheel tunkers" trying to put in the hanger. They said they had worked nearly all night. I advised that they let her down, disconnect the driver brake and then jack her up again and the rest would be easy.

The engineer on this occasion was a well posted man; it had been some time since he had had that kind of trouble, and a very important item was over-

looked—a lapse of memory, so to speak. He was in error trying to put in a hanger when the distance to the terminal was so short.

The company kept extra hangers on their locomotives, and he was one of that kind of men who considered it a duty to always put in springs, hangers, etc., because the company expected it, although better results might be obtained by fixing things up temporarily and getting promptly out of the way, if not able to reach their destination.

Not long since, an engineer of my acquaintance broke a driving tire. He had never broken one before; in fact, had never witnessed methods pursued by others; when this particular accident had occurred, however, he had *read up* and considered that he would be equal to an occasion of the kind, but when it happened he could not remember the methods recommended. His “bump of constructiveness” was small, and, having no particular mechanical ability, a ruined wheel center was the result.

When the mechanical departments of our American railroads spend more time in looking up the natural mechanical ability of the young men hired as firemen and spend less time trying by a lot of technical “rot” to puzzle the old experienced runner, then and not until then will the standard of efficiency in the management of the locomotive be raised.

Technical Education.

CONWAY SPRINGS, KAN., June 8, 1905.

EDITOR JOURNAL: Brother Kelly's letter in the June JOURNAL was very interesting, and contained lots of good common sense, but I believe Brother Kelly's intimate acquaintance with Mr. Wiseman has prejudiced him against technical education.

I believe that a technical education is a very valuable asset in an engineer's stock of knowledge; but at the same time I think that the young man starting firing would be better off if he had never heard of technology until he had learned to fire an engine in the usual manner. The proper time to begin a technical course is

as soon as a fireman can do his work in an economical and intelligent manner; then he can mix theory and practice in such a manner that they will neutralize, and he can then use judgment of the highest order.

Another reason I believe in technical education is this: Engineers receive first-class pay, and in return for this pay should render first-class service, not only between terminals but at all times when called upon by their employing company; for instance, in lawsuits. It is a well-known fact that the large railroad centers in this country are overstocked with lawyer, whose principal business is “bleeding” railroad companies. Every time a person is injured they flock around him like buzzards around a dead animal and secure consent from the injured party to sue the company for damages, and damages to an amount in excess of the intrinsic value of the injured party and all his forefathers.

Now, a great many of these lawyers can talk automatic air faster than a Westinghouse expert, and at the same time, if shown a quick-action triple and a brake valve couldn't tell which was which, but they can talk scientific railroading till the ordinary railroad man was black in the face.

Let an engineer who has never kept up to date or had any technical training stand before the crossfire examination of one of these men and the result would probably be a body blow to the defendant's interests, while if the engineer had had a technical course and had always kept up to date he could explain circumstances in an intelligent manner, and would make a very favorable impression on a judge and jury. A man's brain is like his muscle in this respect. Allow it to become weak from disuse, and when you are called upon to use it, you can't get it to exert the force required of it. Technology is a fine brain hardener. Intelligent railroad officials, though, know that a man can't be taught to run an engine in the class-room of an institute of technology any more successfully than a man could be taught to swim in the middle of the Sahara Desert. So, I am in no fear of seeing the positions of

our practical men of today being taken by students.

I anticipate Brother Kelly's next letter and probably agree with him that engineers are by no means overpaid. One of my arguments in talking of this matter is this: It requires more brains and better judgment to run an engine one trip than it does to teach a school a whole year, or keep the books of the largest corporation in this country. The school teacher can retract any misstatement he may have made, and the bookkeeper can erase his mistake with a rubber and no one but himself know it; but let an engineer make a mistake and the Associated Press tells the whole world inside of twenty-four hours. Fraternaly yours,

H. D. KINSELLA, Div. 83.

Bro. Hetrick, Air Brake Question.

LOS ANGELES, CAL., June 7, 1905.

EDITOR JOURNAL: On page 532, June JOURNAL, Bro. W. F. Hetrick of Div. 50, states, "Set a car out of train with train line and auxiliary charged to 70 pounds, open angle cock, drain train line, open bleeder in auxiliary reservoir to release brake. How do the last 12 pounds get out of brake cylinder?"

We will suppose that this triplet is O. K.; train line side of triplet piston seated against gasket; no air leaking by train line check; ports used in emergency are in register with port to brake cylinder. Air from brake cylinder passes back through those ports to auxiliary and out at open bleed cock (or release valve). When auxiliary pressure is less than tension of graduating spring (now compressed to full limit) the energy of spring forces triplet towards the release position with the low pressure in auxiliary. There is very little frictional resistance; momentum triple piston gained from the graduating spring will move it to full release position, and air from brake cylinder will escape through exhaust port.

I would infer from Brother Hetrick quoting last 12 pounds, that if we close bleeder as soon as exhaust opens we should have about 12 pounds in auxiliary. Bro. Hetrick may have put this 12 pounds in

question purposely. If so he will note one point I left out. As I want to have this fully impressed on the minds of our Brothers, will state that under above conditions brake can be released with exhaust port plugged. How is it done? Hope some Brother will answer.

Fraternaly yours,

R. W. KELLY, Div. 663.

BROOK, PA., June 3, 1905.

EDITOR JOURNAL: In replying to Bro. Hetrick of Div. 50, will say that it depends on how brake is applied. If angle cock is opened slowly and brake applied in *service* application, the triple piston and slide valve will travel over against the graduating stem and remain in that position while being bled through auxiliary bleeder, there being no pressure in train pipe to force it back to release position, and the air will pass out of brake cylinder through the same course it entered; but if angle cock is opened suddenly and the brakes applied in emergency, then the triple piston and slide valve will travel over to emergency position and compress the graduating spring and will remain there until the pressure in brake cylinder (passing through port S in slide valve) and auxiliary reservoir becomes slightly lower than the tension of graduating spring, the spring will then push triple piston and slide valve back to service position, and in doing so will close graduating port in slide valve, and the air pressure remaining in brake cylinder, if greater than the combined weight of slide valve and tension of slide valve spring, will unseat the slide valve and pass out between the slide valve and seat; but when the pressure in the brake cylinder becomes less than the weight of slide valve and spring, the slide valve will seat and retain whatever pressure remains in the brake cylinder.

Yours fraternaly,

J. E. MCGOUGH, Div. 325.

Bro. Reading's Model Out of Reach.

S. PORTLAND, ME., May 18, 1905.

EDITOR JOURNAL: I quite agree with Brothers Keating and Stewart that Bro. Reading's "Model Engineer" cannot pos-

sibly exist where pooling is practiced; that is, pooling as it is generally carried out today. When I was in railroad service I ran up against it hard, and know what it means; and now while I am out of the service I see and hear pooled engines, and I assure you the pool engineer has my sincere sympathy.

In the *Railroad Gazette* of May 5 is quite a long article on the pros and cons of pooling engines by Mr. A. M. Waitt, formerly of the N. Y. C. R. R. I wish all of the boys could read Mr. Waitt's article, as it deals with the matter very fully, presenting the matter from all sides. It gives the motives for pooling, its advantages to the crews, to the companies, the arguments against it, and so forth. Mr. Waitt closes with a general résumé of what he considers necessary to make pooling a success, which if carried out would make it such; that is, it would have more friends than it can claim at the present time, and no doubt it would save money for the companies. Mr. Waitt says the engines should be kept clean, a sufficient roundhouse force being provided for that purpose, which force should also fill and clean headlights. The engines should be kept in thorough repair, a sufficient number of trained inspectors and repair men being employed to that end, the former supplementing the inspection of the engineer, who is not to be relieved of his share of the responsibility. I can readily agree with Mr. Waitt that pooling would not be so bad if his ideas were carried out, and possibly they are in some localities. Does any Brother know of any locality? If so, he is to be congratulated. The principal trouble is, that allowing engines are inspected, there is generally an insufficient force of repair men to do the work. Again, most roundhouses haven't kept up with the times, and are out of date in the way of tools and other facilities for expediting the work on the large modern engines. How often do we see these engines in (or rather, partly in) houses built twenty-five years ago, the pilot up against the wall, the tender standing out of doors. Imagine a man trying to do work on this engine in the winter time under such condi-

tions. I have been there and know what it is. These conditions are not calculated to make model engineers, though I must say that at times our Brothers do not do all that is required of them in the way of keeping the engines in good condition, the standing excuse being, "she ain't my engine." I have known Brothers who would worry along trip after trip, with a sticky brake valve on the same excuse—had plenty of time to oil it, but—"she ain't my engine." The next man taking the engine out has no claim on it, so he worries over the road with it; and so it goes, and "nobody's engine" soon becomes a scrap. The company apparently doesn't care—the men are careless; so much for pooling and model engineers.

Our electric Brother of Brooklyn seems to have put his foot in it, but what he says in the *May JOURNAL* is often true, and one is apt to feel sore if his good intentions are turned down in such a way. It is often the case that the man on the fence sees more than the man in the thick of the fight. We are all apt to make mistakes in the hurry of a breakdown, though that is just the time we need all our wits.

I quite agree with Brother Stroup that lubrication is quite an important factor in the running and sounding of engines. I had one in particular which would in short out-off, go on three legs, if the valves were allowed to get dry, but on hurrying the lubricator for a little while, it would come down to business with four as good legs as one could wish. I found that it took power to drag dry valves; but when one is limited on oil, he must make the best of it; yet I do not approve of making records on oil at the expense of coal and machinery, or making time over the road.

Possibly this feature had something to do with Brother Keating's puzzle. Some of the Brothers advance the theory of a turned cylinder bushing. I have seen many cylinders bushed, but the bushings were always short enough to go between the ports, so it would have to go endwise to cover even one port at a time; but this could not be the case with this engine, as Brother Keating says there was

nothing the matter with the cylinders, valves, or the machinery of this engine, and any one looking for trouble, especially at long range, should know if a cylinder had been bushed and how the bushing was applied.

This asking cause of trouble is a very frequent occurrence, it being a common thing for engineers to send in an indicated diagram, asking what is wrong with the engine; at the same time they neglect to say what style of an engine it is, whether plain or balanced, or single valve, or a throttling engine. They even forget to add the atmospheric line, say what the boiler pressure is and the spring used. In fact, want to be doctored and fail to give the doctor full particulars of the case.

Fraternally yours,
J. V. N. CHENEY.

To Set Eccentric.

SPRINGFIELD, MO., June 5, 1905.

EDITOR JOURNAL: I notice in the June number of the JOURNAL an article written by J. W. Reading giving some instructions on how to set a slipped eccentric. He says: "There are numerous books on locomotive running and management and the most of those that I have read give the same rule."

I thought perhaps his article might be a little misleading, especially to young engineers; hence, I wish to say a few words in order to make matters more clear.

The correct way to set a slipped eccentric on the road if you have plenty of time is by the valve stem; it makes no difference on which center the engine is placed, only for convenience in doing the work, hence, if a back-up eccentric slips, place the engine on forward dead center, and if a go-ahead eccentric slips, place the engine on back center, reverse lever in back notch, mark the valve stem as before at gland, then place the reverse lever in forward notch and move the eccentric on axle until mark shows up at gland. This is a correct way and if the lost motion is all pried up with a pinch-bar the valve will be as square as the machinist can do in the roundhouse. With the valve trams, most of our enginemen do

not know just how much outside lap the valve has or amount of lead, if any; consequently it would be pretty difficult to mark the valve stem, as Mr. Reading suggests, $\frac{3}{4}$ of an inch for outside lap and 1-16 of an inch for lead. If one eccentric can be set by the valve stem they certainly can both be set in this manner.

This way of doing takes considerable time, and as every engineer knows that the engine will have to be placed on center with a pinch-bar and often a hard thing to do, and he is anxious to get out of the way of other trains as quickly as possible, I would suggest that the eccentric be set in this manner. As both eccentrics are at right angles to the crank minus lap and lead, why not note the position of crank pin and move the slipped eccentric to right angle position to pin, then advance some towards pin for lead, tighten it, set screws and go. If engine is not square, set it by valve stem when you reach a siding.

This refers to indirect motion engines. I would like to ask Brother Reading if a direct motion engine's eccentric could not be set by the valve stem the same as indirect motion?

Before closing I will ask this question. If the valve has three-fourths of an inch outside lap and line and line inside, how much lead will the valve have on the exhaust?

Yours fraternally,
J. C. NASH, Div. 287.

Eccentric—Defective Exhaust Balance Strips.

COCOMB CITY, MISS., June 3, 1905.

EDITOR JOURNAL: In the June number of the JOURNAL Brother Reading describes a plan of setting slipped eccentrics, which, with a slight modification, I have used with unvarying success for quite a number of years, although it is at variance with the mode of procedure advocated by all the books I have read dealing with this subject; and to those of our Brothers who find themselves facing difficulty, I would say follow Brother Reading's plan if you are fortunate enough to have a foot rule; but if you have no foot rule, then you can proceed as follows: If

you are running an indirect motion engine and find you have a slipped eccentric, locate it as described by Brother Reading, and if the trouble is in the go-ahead eccentric, move your engine back until the crank pin on the disabled side is slightly above the back bottom eighth, in which position the cam of eccentric should point straight down. Now slacken your setscrews and give your eccentric a shake, when the weight of eccentric will cause it to move to its proper place. Now see that your eccentric is in line with your links, tighten up your setscrews and you will find that inside of five or ten minutes your eccentric is set, perhaps not accurately, but sufficiently so as to enable you to handle your train without further delay.

For back-up eccentric, place crank pin on disabled side slightly above forward bottom eighth and proceed as before.

In regard to the problem presented by Brother Keating some time ago, an exactly similar case occurred here quite lately, which, when I have described it, may prove a solution. In the case to which I refer, the engine was going along doing its work all right, when it gradually began to sound lame. A close inspection by the engineer failed to locate any trouble and he kept on until at last she became unable to handle her train and had to be taken to the shops. Roundhouse inspection showed that one of the cylinders had been bushed, and bushing becoming loose had gradually worked around slowly closing the ports, thus causing engine to sound lame on account of weak exhaust on defective side until at last it entirely closed ports and engine being caught on center on good side, went out of business.

Brother Morris has a very interesting article on defective balance strips, and while his reasoning is correct throughout, his test is very apt to fail, as unfortunately the blow from defective cylinder packing starts and terminates at exactly the same points he describes for balance strips; and when I hear a blow which starts when engine is passing over the center and continues until near end of stroke, I generally book it as defective packing on that side and seldom go astray in my diagnosis.

In addition to the two tests for defective strips which he quotes, which are good ones, I would suggest that by placing your ear close to the steam chest when throttle is slightly open, you can generally tell by the sound which side the defect is on.

There are two probable solutions to Brother Erskine's air problem, either one of which might apply: First, there may have been a dirty triple valve amongst the empties in back part of train, and when his first application was made, the piston of triple valve only moved sufficiently to close feed port without letting any air into brake cylinder. When his second application was made, however, there being now about twelve pounds difference between the respective pressures in train line and auxiliary reservoir, the higher pressure overcoming the lesser, the triple valve moved so rapidly that the emergency port was opened to the atmosphere and thus by the sudden lowering of train-line pressure in its vicinity, caused the brakes to set with too much power, causing the accident.

Second, if the cars were of the large pressed steel class, which the O. S. L. have had in use for some years, the percentage of braking power is so much greater on empty cars than on cars of the class when loaded, that an application of the air when going slow in conjunction with the leak from his burst train pipe would practically bring his empties to a stand, while his loads drifted ahead, causing the trouble complained of.

In conclusion, I will say that I am delighted to see the continued improvement in the Technical Department, and I sincerely trust it will continue to advance, until its pages become a standard authority on all technical subjects pertaining to our calling.

Fraternally yours,
ALEX. M. STEWART, Div. 196.

Questions and Answers.

PORTSMOUTH, OHIO, June 5, 1905.
EDITOR JOURNAL: Please allow me space to answer some questions asked in the June number of our JOURNAL.

In reply to Bro. W. F. Hetrick's question, of Div. 50, will say that the last 12 pounds of air from the brake cylinder passes out at the bleed cock to the auxiliary reservoir, or the leakage groove in the brake cylinder and the bleed cock together; it cannot pass out at the exhaust port to the triple when all the air is out of the train line. The air in the auxiliary will hold the triple valve in lap position, so it has to pass out at the bleed cock to the auxiliary reservoir and the leakage groove in the brake cylinder.

In reply to train order question asked by Bro. A. E. Krause, will say that if I were on No. 1, I would not leave C until No. 2 arrived there, as No. 1 has a positive meet; if No. 1 had right of track to C against No. 2, then I would make as far as I could and clear No. 2 in the required time.

In reply to Bro. R. L. Evans' train order question No. 54, will say that all trains must clear the passenger special 5 minutes.

Questions.—How would you clear the main line, if you were to break a back-motion eccentric strap on the right side of your engine, and when you got the engine prepared ready to go you did not have time to make the station ahead for a first class train and you were close to a station back, but you could not back the train up with one side, how would you get train back into clear?

(1) Why is the hole in a link block not in the center of the block?

(2) Why when you break a link hanger, is it better to just block one link?

(3) I would like some of the Brothers to explain the slip of the link, and also explain why the link must slip on the block.

(4) What will make an engine's valves sound out of square when the valve gear is perfectly adjusted? There are eleven in all, how many can find them? I know this many, some of the Brothers may know of more.

(5) Which is the best packing for a piston valve, wide or narrow packing rings, and why?

In case an air pump should stop instantly while on the road how would you test by means of the reversing valve rod whether it was due to either the reversing valve plate, loose or broken or the nuts loose on the piston rod of the air end of the piston, not taking anything down on the pump to make the test?

In case you receive an engine out of the roundhouse and you open the pump throttle and the pump makes an up stroke and stops, say nothing's wrong with the reversing plate cap screws, what is the trouble?
E. A. LINDSEY, Div. 584.

Unequal Braking Power.

CHANNING, MICH., JUNE 15, 1905.

EDITOR JOURNAL: Referring to the pulling out of draft irons as experienced by Brother Erskine on page 528 of June number will say that if all of Brother Erskine's equipment was New York the only reason I can see for the trouble was, as he says, the greater braking powers on the empties, but if all or the majority of his loads were Westinghouse and the rest New York he might have had a defective triple valve in the loads that would go into emergency on the second reduction, and as the New York triples on rear end would not, on account of air being evacuated from between main piston and main vent piston by first reduction, the Westinghouse triple would reduce the train line in their immediate vicinity, and as soon as the train line check valve would seat and the air would flow ahead from the New York brakes and raise the pressure by the Westinghouse triples releasing them and the New York brakes would stay set, causing the damage spoken of by Brother Erskine.

My reason for thinking that perhaps this is the cause of his trouble is that he seemed to experience his difficulty after the second reduction.

Now I would like to ask if we had a train of 50 cars, the first 10 Westinghouse brakes, and the next 10 New York and the remainder Westinghouse and made an 8 pound service reduction and after that made an emergency application, would we get an emergency action back of the first

10 cars? I think the 10 New York brakes would act as 10 plain triples or piped cars and that it would be impossible to get an emergency action back of them after first service reduction.

ROY MEAD, Green Bay Div. 297.

Mail Crane.

CLINTON, IA., March 27, 1905.

EDITOR JOURNAL: I invented some time ago a mail crane, which has proven to be absolutely the best thing on the market, and I can easily substantiate this by the testimonials of eighteen of the best roads in the country, including such

the lever is down, and the car door is free for the throwing in and out of mail. When the lever is raised part way, the catcher is thrown out to operating position. When the lever is thrown clear up, the catcher is thrown up in front of the door and the pouch is delivered to the hand of the postal clerk. Outside of providing an absolute catcher that never fails to get a pouch, and the simple, easy means to operate the same, I am enabled to build my crane 6 ft. 6 in. high, instead of 10 ft. 8 in., which makes them perfectly safe. A man can lean out of the gangway on an engine as far as he

roads as the C. & N. W., C. M. & St. P., L. S. & M. S., and a good many others. Last August there was an editorial in the LOCOMOTIVE ENGINEERS' JOURNAL entitled "Dangerous Mail Cranes," and owing to the great number of engineers and firemen continually being injured on account of the operating arm on mail cranes being so high that it comes alongside of a cab window. I have, since reading that article, been working on a safe mail crane, and have devised a new catcher, which I place below the door of a standard mail car. It is operated by a lever, as will be seen by the examination of the cut. and when the catcher is down

pleases and the upper arm of the crane will still be under him, and he cannot be injured. It is also safe for postal clerks, as the breaking of the catcher either from striking some obstruction, or some weakness in the catcher, cannot injure them. It also makes it comparatively safe for a man on the side of a freight car in case a freight train runs through ahead of a mail train after a pouch has been hung up. I think I have just what the engineers are very anxious to have put in operation, and I believe this will be especially interesting to our Brothers.

Fraternally yours,

L. W. BARKER, Div. 125.

Sand Blower.

HUNTINGTON, IND., May 5, 1905.

EDITOR JOURNAL: For the benefit of engineers, who have had more or less trouble on account of stalling on grades, due to failure of sand device, we wish to call your attention to the simplest and best sand blower made. This sand blower has been placed on eight engines on the C. & E. Division of the Erie by Messrs. Knight & Heath, owners.

These blowers have been in service for two years and have not cost one cent for repairs, and have never failed to work under adverse conditions. This is a matter well worthy of investigation. Full particulars on application to Knight & Heath, Proprietors, Huntington, Ind.

H. H. HEATH, Div. 221.

Train Line Leaks.

ROCK, PA., May 21, 1905.

EDITOR JOURNAL: In reply to question of Bro. C. I. Smith, of Div. 359, on page 494, May JOURNAL, "What defect acting in conjunction with train-line leak will cause brakes to continuously set and release?" will say, that vent port in pump governor being stopped up and insufficient excess pressure in conjunction with train-line leak, will cause brakes to set and release continuously. When the pump governor supplies the main reservoir with maximum pressure and governor stops the pump, the vent port in the governor being stopped up, the air below the diaphragm cannot escape except by leakage past the packing rings and will not allow the pump to start promptly; in the meantime train-line leakage has reduced the pressure considerably and not having sufficient excess pressure to supply the leak the brakes will apply and remain applied until the air has leaked out of pump governor and the pump starts supplying maximum pressure, when the brakes will release and pump will again stop and brakes will again apply and so on continuously.

Fraternally yours,
J. E. MCGOUGH, Div. 325.

Broken Release Valve.

CANTON, O., June 3, 1905.

EDITOR JOURNAL: In reply to Bro. E. A. Krause, of Div. 366, page 533, June JOURNAL, would take out broken release valve and put ball candle wick in hole, then put valve on seat and screw cap down and you are done.

Would stay at C for No. 2, as order makes positive meet at C.

The one hour might be to help other trains, and the dispatcher made the meet at C to avoid a block.

Fraternally yours,
E. W. B., Div. 360.

PORTLAND, ME., June 2, 1905.

EDITOR JOURNAL: In answer to the questions by E. A. Krause, I should say slack up the cage and put a small block on top of the valve.

As to question number two, if I had an order to meet No. 2, engine 674, at C, I should stop at C and ask for orders if No. 2 was not at C when I arrived, as I should not consider that the latter part of the order gave me any right to violate the first clause. Fraternally yours,

J. V. N. CHENEY.

CONWAY SPRINGS KAN., June 8, 1905.

EDITOR JOURNAL: In answer to Brother Krause's broken release valve stem, place a nut under valve.

In answering his second question, would say, train orders mean exactly the way they read. No. 1 and No. 2 would meet at C. The second part of the train order is entirely superfluous as far as the meeting point of No. 1 and No. 2 is concerned and was probably put there by the train dispatcher to keep some inferior class train ahead or against No. 2 between A and M.

Fraternally yours,
H. D. KINSELLA, Div. 82.

TIPTON, IND., June 5, 1905.

EDITOR JOURNAL: In answer to Brother Krause, would say, put a $\frac{3}{4}$ -inch nut in bottom of casing.

In answer to question number two, would say, having a positive meeting order would stay at C. Fraternally yours,

A. H. KELLEY, Div. 584.

SALT LAKE CITY, UTAH, JUNE 5, 1905.

EDITOR JOURNAL: In answer to question by E. A. Krause, broken release valve stem, would say take a nut or more if one is not enough; put on bottom of cup.

I am on train No. 1, will take siding at O and meet No. 2. As I have a positive meet at O with No. 2, that part of the order reading, "No. 2 will run one hour late," is for other trains that have no meet only the time order.

In answer to R. L. Evans, in June number of the JOURNAL, Telegraphic Train Order No. 54, Extra Engine 90 has right over all trains. First-class trains are inferior to Extra Engine 90. As such you must clear her ten minutes at whatever place you may meet her.

CHAS. A. STANDROD, Div. 222.

Rights of Trains.

AURORA, ILL., JUNE 7, 1905.

EDITOR JOURNAL: When issuing and executing train orders the rights of all trains affected by such orders must be considered.

Brother Krause asks this question: "Suppose you were on No. 1, an inferior train, and received the following order: 'No. 2 will meet No. 1 at C. No. 2 will run one hour late A to M.' On arrival at C you have time to make B on the hour late. What are you going to do?"

It would be perfectly safe and I think right for No. 1 to proceed to B on the second specific movement in the order, but it would be necessary for the dispatcher to annul the first specific movement to allow No. 2 to leave C. It is not at all probable that the order would be issued as one order. It could be used as two separate orders to advantage.

In reply to Bro. R. L. Evans will say the order issued for Extra 90 makes it as much superior over first-class as it does over second and inferior class trains. Right is superior to class or direction. It follows that first and all classes of trains will clear Extra 90 five minutes.

I wish to have some of the Brothers express their opinion in regard to the execution of a certain train order that caused considerable discussion on the division at

the time. No. 6 is an eastbound first-class train. No. 15 a westbound second-class train. At M No. 6 and at F No. 15 received an order reading thus: "No. 6 will run one hour and forty minutes late M to I and one hour and thirty minutes late I to A."

On arrival of No. 15 at H, it had time to make I on the hour and forty minutes, but not on the hour and thirty minutes. The engineer and conductor considered they had a right to go to I, but one of the trainmen took issue with them. The result was a discussion, some money bet, and the train proceeded to I.

JAMES LENAHAN, Div. 82.

EASTON, PA., MAY 15, 1905.

EDITOR JOURNAL: In reply to E. A. L.'s train order in the May JOURNAL, would say that he would not have the right to leave Rich Hill until the arrival of Engine 352 Passenger Special. Note Rule 82 of Book of Rules, Standard Code, May 17, 1903, which reads: "Regular trains twelve hours behind their schedule time lose both right and class, and can thereafter proceed only by train order."

The Brother will perceive that the rule just quoted refers to schedule trains only; this order refers to passenger special, therefore he should remain at Rich Hill until passenger special arrives. E. R. W.

PORTLAND, ORE., MAY 8, 1905.

EDITOR JOURNAL: In answer to E. A. L. in the May JOURNAL, I would say the working of this order is not according to Standard Rules. You certainly could not leave Rich Hill until Engine 352 arrived, for this train could run only as an extra. Orders are good until fulfilled, superseded or annulled, so the 12-hour rule would make no difference in the case. The proper form for this train should be:

Engine 352 will run Extra, leaving Pulaskia, Sunday, May 7th, as follows, with right over all except first-class trains:

Leave Pulaskia, 6 A. M. Leave Draper 6:25 A. M. Leave Alisionia 7 A. M. Leave Rich Hill 7:30 A. M. Arrive Chestnut Yard 8:00 A. M.

B. L. LUCAS, Div. 277.

FRANKFORT, IND., June 2, 1905.

EDITOR JOURNAL: In answer to Bro. R. L. Evans, according to Standard Rules, first-class trains are required to clear leaving time of opposing first-class trains. Also extras must clear superior class trains 10 minutes, and where extra is given right over superior class trains superior train must clear extra as many minutes as required to clear first-class train. Therefore, since there is nothing in class superior to first-class trains, and by order Extra 90 is given right over all, first-class trains should clear leaving time of Extra 90.

Fraternally yours,
J. G. DECKER, Div. 550.

Long Hours.

PORTLAND, ME., June 2, 1905.

EDITOR JOURNAL: The June JOURNAL is before me with its variety of subjects, all of which are of interest to the order. Long hours has quite a place and it is a vital question—one which needs more attention than it receives—one which should be not only discussed but acted on, and not next year or next month, but *now*.

In the list of accidents during the month of April last, as published in the *Railroad Gazette*, one of the most prominent is that which occurred at Branchville, S. C., on the Southern Railway. The investigation by the State Railway Commission brought out the following facts: The crew had been on the road 40 hours and over 29 hours without a bite to eat. At this time they got something to eat and were then asked if they felt like taking the train through to Charleston, and as they preferred for one reason to get to Charleston to spend Sunday and did not want to hang the train up over Sunday, etc., they concluded to go. About 4:30 A. M. on the second morning after starting out they collided with a passenger train, killing both engine crews and injuring a trainman. On looking at the watch of the engineer of the freight, the conductor saw it was 28 minutes slow, while there was but 10 seconds difference in their time when comparing at 11 P. M. It is quite evident that the engineer's watch stopped

and he wound it mechanically, being too tired to observe the face of it at the time. There were a few cars without air on the tail end, and when the conductor found they were going by their meeting point he attempted to get over ahead to signal the head-end, but was trying to get over a flat loaded with a mixed up lot when the collision came. No one knows whether the hand brakes were set on the tail end, but it is very evident that had the entire train been air braked, there would have been a better chance of stopping the train in time to prevent the collision.

Any comment on the above is unnecessary; the moral is easily applied. Out of 230 other accidents reported, nine were due to misplaced switches, possibly some of them were maliciously misplaced; five were butting and rear-end collisions; the account does not say where the fault lay, with the crews or dispatchers; eight were due wholly to carelessness of the crews, and resulted in the killing and injuring of twenty-five people.

Brothers, cannot we exert our influence toward reducing the collisions and other accidents due to the head end? If long hours is responsible for any of these accidents, let us attack that evil in a systematic manner and thus lessen these accidents that to some extent reflect on our Brotherhood.

Fraternally yours,
J. V. N. CHENEY.

Emergency in Running Position.

HATTIESBURG, MISS., June 7, 1905.

EDITOR JOURNAL: I have a question to ask through our JOURNAL. Will some Brother please tell me what is the cause of my brake working as it does? I am handling freight train on the Mississippi Central Railroad, a train of twenty-three freight cars, air on all cars. The air pump would pump up 70 and 90, the brakes would set every two or three minutes and about every ten minutes they would go in emergency with the engineer's valve in running position or in full release and then brakes would release at once, without any move of the engineer's valve.

A. S. TRIGG, Div. 552.

Advertising Department matter and all correspondence relating thereto should be addressed to W. N. GATES, 409 Garfield Bldg., Cleveland, O.

JULY, 1905.

Graft.

We have become quite used to the subject of "Graft;" our great cities have been shocked by the number and character of men who have been caught red-handed. Our prisons have a distressing quota of inmates who gravitated from respectable society, bank officials and others who have abused the confidence of the public, and have been convicted of graft, a term which when applied to some poor man spells thief; and, it is not uncommon to hear a more severe sentence pronounced against a poor man for stealing \$60 than is given to the rich one who steals \$6,000,000, and there seems to be more general discussion of modes of procedure and taint of associations by the graft of a labor leader who gets \$10,000, than of the mode of procedure and influence upon society, of a Milwaukee bank president who passes the million mark.

That there are opportunities for labor leaders to graft, there is little question, but, that the proportion who have been charged with it is exceedingly small is very gratifying. That it takes two to make a graft bargain, and that one is a

labor leader we cannot offer as any excuse for the representative of organized labor. What was proven true in New York, and what is now charged in Chicago in this direction, and which directly or indirectly involves labor representatives, is truly distressing, for there is no class of men who are chosen as leaders who are vested with greater confidence, and to abuse it is a crime that goes deeper into moral ethics than statutory law can reach. Evidence is plentiful that some men, whatever their social station, are too weak to resist temptation when confronted with it, and in the interest of good morals and in protection of the reputation of organized labor, the possibility of being tempted to graft by any party who may find it to his interest to feel for the weak leader with a golden bait, should be as far removed as possible.

We realize that there are some classes of labor not yet well Americanized, which some employers are very willing to both use and abuse to break the ranks of labor, where individual leadership is absolutely necessary to protect that class from rapacity and greed; and, incidentally, protect the general wage scale; but there remains a great field of organized labor where personal autonomy within the scope of his obligation to his fellow workman should, in our opinion, always obtain, and when a section or the whole is affected by violations of contract, or abuses that need the application of a cure, the voice of the majority of all affected should decide the course of action. Committeemen, under whatever name they may be designated, are a necessity—their legitimate business, listening to complaints and adjusting them in accordance with a voice of the majority affected as demonstrated by a vote of the whole. Holding close to this method, few unjustified strikes would occur, confidence in the stability of contracts would grow in the public mind, and grafters in organized labor associations would find no buyer to whom they could deliver the goods; hence, no grafting. We have had little to complain of in this direction, while the public has much, but to demon-

strate honesty of purpose, and of an order so high that a grafter could not find a place in organized labor, should be the constant aim of all.

Semi-annual Report.

The Grand Chief has just sent out the report of duties performed by the Grand Officers, in conformity with the action of the Norfolk Convention, and as there have been many inquiries as to how their time is occupied, it is hoped that the report will get a good reading, so that all may know that they are continuously occupied with the work of the order that ramifies a continent. A little study of this report will show how extensive the work is, and how impossible it is to get to every subdivision within any prescribed limit.

Division Addresses.

The Division Addresses will appear in the August number, and we hope all Sub-division officials will see that desired changes are sent in so they will be sure to be at this office as early as the 18th of July, otherwise they will be too late. We desire to have it absolutely correct and hope for the prompt assistance of all concerned.

General Manager Honored.

"Real worth requires no interpreter," and it would seem that all the employees of the B. & O. Railroad from President Murray to the water boy had discovered for themselves the true worth of Mr. Thomas Fitzgerald, recently advanced to the responsible position of general manager. That he is fully qualified for the position and that he has the best wishes of the thousands under his jurisdiction, was abundantly manifest on May 27, 1905, when a banquet was tendered him by several hundred in his native town of Fairmont, W. Va., in which demonstration members had a very large share, they composing 85 per cent. of the Committee of Arrangements, and a like percentage of all the participants who were present from Baltimore, Rockville, Frederick, Reels Mill, Brunswick and

Cumberland, Md.; Washington, D. C.; Wilmington, Del.; Philadelphia, Chambersburg, Connellsville, Johnstown, New Castle, Foxburg, and Pittsburg, Pa.; Manchester, Va.; Harpers Ferry, Fairmont, Grafton, Wheeling, Parkersburg, Farmington, Monongah, Mannington and Glover Gap, W. Va.; Newark, Cleveland, Lorain and St. Clairsville, Ohio; and Garrett, Ind., composed of engineers, firemen, conductors, brakemen, officials and citizens, all bent on doing honor to the man who had climbed the ladder from water boy to general manager.

A special train elaborately decorated with engine No. 1478 in gilt and bronze, with Bro. Hand at the throttle, T. E. Massey at the scoop and T. T. Allen as conductor, was run from Baltimore loaded with officials and employees, and at each division point on the way the employees were out to give the General Manager evidence of their esteem. Of what happened at Fairmont we glean from the *Baltimore American*:

The new General Manager knows more men personally in the service of the road, from the track-walker to the highest official, than a number of the officials combined. To all employees he always has been and always will be known as plain "Tom" Fitzgerald. Starting as a boy carrying water to workmen on a bridge, in 1866, he began making friends, until now the number includes practically everyone in the service of the Baltimore & Ohio system. While he is a strict disciplinarian, he has always believed that the men are entitled to consideration and kindness.

The men all over the system praise President Murray for promoting Mr. Fitzgerald to general manager and rejoice over having such a good and capable man in the position. With this general good feeling, a movement was started some time ago by the employees on the Baltimore Division where Mr. Fitzgerald was formerly superintendent, to tender him a banquet, but this plan was soon swept out of their hands by the men all over the system insisting upon having a part in the celebration and showing the esteem for the man. In order to do this it was necessary to hold the banquet at some central point on the system in order that none of the men would be away from work over 24 hours. Fairmont was thus selected.

Upon the arrival of Mr. Fitzgerald in the town he was received with great affection by the people. With an address of welcome Mayor Kinsey presented Mr. Fitzgerald with a silver key to the city, and the General Manager paid this (his native city) a glowing tribute in responding to the welcome. After thanking the people for the demonstration, Mr. Fitzgerald ended by declaring that

it was "more than any poor Irish boy might expect." Mr. Fitzgerald was heartily applauded throughout his talk.

The committee that had charge of the arrangement of the banquet worked very hard to make it one of the greatest demonstrations of its kind ever known in the history of the road and deserve much credit for their success. This committee consisted of the following:

W. A. Tribby, Baltimore, chairman; T. V. Reynolds, Fairmont, assistant chairman; E. T. Parlett, Baltimore, treasurer; M. V. Prendergast, Fairmont, assistant treasurer, and E. W. Young, Baltimore, secretary. J. F. Dowden, P. J. Collins, J. Everhart, of Washington; N. S. Brooks, W. E. Burwell, W. E. Cavey, J. O. Covell, C. W. Galloway, C. C. Gardner, J. V. Hess, F. V. Hossefross, J. F. Houch, F. P. Kratz, E. C. Johnson, W. T. Lechluder, W. E. Lowes, J. T. Mercer, H. S. Peddicord, M. V. Prendergast and J. J. Tatum, of Baltimore; C. E. Bryan, Parkersburg; T. B. Burgess, Cleveland; E. B. Chambers, Harpers Ferry; P. J. Coughlin, Mt. Airy; W. J. Duffy, Wheeling; J. J. Driscoll, O. H. Hobbs and T. J. Harrigan of Conneville; Howard A. Fleming, A. D. Heffner, J. W. Harrington, John Lemon, Walton Miller, C. H. Orr and R. W. Riggs of Fairmont; D. E. Fisher and T. R. Stewart of Cumberland; C. B. Gorsuch and T. E. Newman of Pittsburg; J. M. Garbey, Newark, Ohio; E. A. Peck, New Castle, Pa.; O. J. Kelly and L. J. Willmoth of Grafton; R. M. Sheats, Foxburg, W. Va.; W. Sinnott and George W. Sturmer of Philadelphia; J. E. Spurrier, Winchester, Va.; Z. T. Bratner, W. E. Evans and M. W. Phelan of Brunswick.

There were over 400 people seated at the tables, including Prea. Oscar G. Murray, Gov. Edwin Warfield of Maryland; Gov. W. M. O. Dawson of West Virginia; ex-Gov. A. B. Fleming of West Virginia; First Vice-President George F. Randolph, Second Vice-President Hugh L. Bond, Jr., Third Vice-President George L. Potter, Fourth Vice-President J. V. McNeal, Assistant to the President Geo. M. Shriver, General Superintendent of Transportation Arthur Hale, Chief Engineer D. D. Carothers, General Superintendent of Motive Power J. E. Muhlfield and others.

The menu was handsomely gotten up and bound in leather, with an oil painting of the Capitol at Washington, and the words, "Banquet to Mr. Thomas Fitzgerald by the Employees of the B. & O. R. R., May 27, 1905," in gold on the front. On the first page was an excellent picture of Mr. Fitzgerald, and down in the corner was another picture of a little barefoot boy, walking along the railroad track carrying a bucket of water, intended to represent Mr. Fitzgerald when he started railroading. The next page contained pictures of the President, Assistant to the President and four Vice-Presidents of the road.

On the page with the menu was a picture of a signal post, showing the signals in position, indicating that the track was clear. The coat-of-arms of Maryland appeared on the next page, with the list of toasts. On other pages appeared the coat-of-arms of West Virginia and of the United States.

K. D. Walker was toastmaster, and the list of toasts was as follows:

"Welcome to Fairmont," Hon. A. B. Fleming.

"Railroads and the Development of Our State," Hon. W. M. O. Dawson, Governor of West Virginia.

"Why We Are Here," W. A. Tribby.

"The Lad We Knew; The Man That Is," Rev. Isaac A. Barnes of Pittsburg, Pa.

"As We Knew Him in Newark," Mr. Dennis Kearney, Newark, O.

"Maryland and the B. & O.," Hon. Edwin Warfield, Governor of Maryland.

"Possibilities in Railroad Service," Judge W. S. Haymond of Fairmont, W. Va.

"Railroads and Their Relation to Journalism," O. S. McKinney.

Presentation of Resolutions, F. V. Hossefross, C. W. Galloway, G. W. Sturmer.

Response, Mr. Fitzgerald.

The menu was as follows:

Little Neck Clams.		
Green Turtle, clear.	Young Radishes.	
Salted Nuts.	Olives.	Soft Shell Crabs.
Tomatoes, French Dressing.		
Fried Spring Chicken, Cream Gravy.		
Fresh Asparagus. New Potatoes.		
Roman Punch.		
Roast Squab.	Currant Jelly.	
Smithfield Ham.	Lettuce.	
Strawberry Ice Cream.	Assorted Cake.	
Roquefort Cheese.	Toasted Crackers.	
Cafe Noir.	Cocktails.	Haut Sauterne.
Moet & Chandon.	White Seal.	
Cigarettes.	Pony Brandy.	Cigars.

Hon. A. B. Fleming welcomed the guests to the city.

Governor Dawson, of West Virginia, who was to respond to the first toast, said that there was one better qualified than he, and suggested Judge Goff, who at the time of the receivership of the B. & O. had appointed Oscar G. Murray as receiver, and said that he was proud that he had done so. He paid elegant tribute to the men of the cab, the scoop, the punch and the brake beam, and said if it had not been for the faithful service of these, the receiver and his assistants could not have been successful.

Bro. W. A. Tribby, of Division 97, in response to "Why we are here," feelingly expressed the affection of the employees for the new General Manager and told of Mr. Fitzgerald's solicitude for their welfare.

Rev. I. A. Barnes in answer to the toast "The Lad we Knew—The Man That Is," asked the assembly to forget their titles while he went back to the days of boyhood. He then told of some incidents in Tom's youth which brought roars of laughter and applause.

In answer to the toast, "Maryland and the B. O.," Governor Warfield said in part:

"Fifty-two years ago the first engine drawing a train of cars from Baltimore climbed the Alleghany Mountains, passed through this then hamlet to Wheeling, thus connecting with a chain of iron the waters of the Chesapeake with those of the Ohio River.

"That event was celebrated by a marked demonstration and banquet given by the people of Wheeling, which was attended by the Governors of Maryland and Virginia, the officials and legislators of each state, the municipal officers of Baltimore and the stockholders of the company. It is inspiring to read the speeches delivered on that occasion. They were hopeful and optimistic. Governor Lowe, the brilliant chief executive of Maryland, was especially prophetic in his allusions to Baltimore, and pictured her as she is today, with her progressive spirit alert and her pride aroused. He said that Baltimore could then say to New York and Philadelphia: 'I am prepared for the race. Beat me if you can. A new life is infused into and a new era has commenced for Baltimore City. She now stretches out one arm to the Ohio and shakes hands with Wheeling, and she will soon stretch the other through Pennsylvania and offer a friendly grasp to the Lakes. She will become the seaboard terminus to a vast network of railways. Who can measure her destiny?'

"How truly have those predictions come to pass, and how applicable today are they to our Greater Baltimore! This, the most remarkable gathering of railroad men assembled for many years, illustrates the fraternal feeling existing between the rank and file and their superior officers and the loyalty of the men to the management of this great railroad system. The man we have assembled around this festive board to honor was, by a strange coincidence, born on the very day (January 1, 1853) that the first train over the road, to which I referred at the beginning of my remarks, made the trip through to Wheeling. He has grown up with this great corporation, and has seen the consummation predicted by Maryland's Governor on the 12th day of January, 1853. His career has been a remarkable one, full of inspiration and example for the youth of the land. During his 39 years of service, all of which has been in the employ of the Baltimore & Ohio Railroad Company, he has seen marvelous developments in railway construction and in the mechanical devices and appliances by which transportation is effected. He has, by demonstration of his ability and by faithful, hard work, risen from a water boy to the responsible post of General Manager of this great system, embracing today 4,409 miles, as compared with 379 miles completed 53 years ago.

"Mr. Fitzgerald has served under seven presidents of the company, and he has suffered the mortification of having juniors and strangers advanced over him. But, true to his manly character, he bided his time, well knowing that when he should have a chief who recognized faithful services, fitness and ability, he would receive his reward. That time came when Oscar G. Murray was placed at the helm. His policy is one that appeals to the manhood, the brotherhood of the men serving this

great corporation. Length of service, merit, efficiency count much with him when promotions are to be made.

"As the completion of the railroad to Wheeling marked a new era for Baltimore and the West, so the administration of President Murray marks a new era in the history of the Baltimore & Ohio Railroad. He will stand out as one of its great presidents. No act of his has better shown his true discernment of what is best for his company than your promotion, Mr. Fitzgerald, to the post you now hold. You have won your spurs and earned the recognition you have received.

"This should be a proud day for you, sir. I have never witnessed a more touching tribute to a man by his fellow-workers. The sweetest memories of life are those connected with our youth. How doubly dear, then, must be this occasion, when you are surrounded by your business associates and brought face to face with the friends of your boyhood. We join in honoring you in this hour of your greatest success.

"Governor Lowe, in 1853, carried to the people of Wheeling and the West greetings from the people of Maryland, and I, 53 years afterwards, come to bring congratulations and good wishes from the same people to the man who has helped in the development of the great railroad system which has contributed so much to the welfare of our state.

"Maryland is keenly interested in the growth and stability of this corporation, and stands ready to encourage the men who are working out its future. She has the honor of having been the first state in the Union to incorporate a company for the construction of a railroad, and the first state to contribute of the public resources for the building of a railroad system. The history of the Baltimore & Ohio Railroad reads like a romance, and its growth during your connection with it, Mr. Fitzgerald, has been marvelous.

The Governor referred particularly to the character of the employees of the Baltimore & Ohio Railroad, and spoke of the manly appearance of those who participated in the banquet. He also mentioned with pride the young men from his own county who had become identified with the operations of the road as engineers and in the mechanical and physical departments of the same, and referred especially to the Caveys, five of whom are now employed as engineers in the service of the company. Three of these young men were appointed upon Governor Warfield's recommendation, and are brothers. William E. Cavey, who entered the service of the company 19 years ago as a foreman, was promoted to engineer, and finally to the position he now holds, that of road foreman of engines. His two brothers—Charles W. and James S. Cavey—have been in the service 17 and 9 years, respectively. This Cavey family, of Howard county, Maryland, has furnished a large number of employees in the various departments of the Baltimore & Ohio Railroad Company. It is a family which has adopted railroading as its vocation in life, and the sons have taken up the work of their fathers.

The Governor also mentioned the Peddicord

family and the Hobbs family, both of which have furnished valuable employees to the Baltimore & Ohio service.

The Governor was glad to see that the employees generally, especially the engineers, were such a high class of men, and that their sons were following in their fathers' footsteps, taking up their occupations with fidelity and pride. The Governor spoke also of the great responsibility of a locomotive engineer, how it required nerve and quick perception and manly qualities to make a successful and efficient engineer.

Referring again to Mr. Fitzgerald, he paid a tribute to his wife, and said his success was largely due to her, saying that a man without a wife was not worth much, and closed his remarks by calling on President Murray.

President Murray was cheered as soon as he was on his feet. The first thing he said was that the Governor of Maryland had not been overly polite in saying that a man without a wife is not worth much, as he was a bachelor. Whereupon the Governor arose and said, "Present company is always excepted." The little incident created much laughter. He said that he was glad to be one of the company of men who gathered to do honor to Tom Fitzgerald. He closed by making the statement often heard and made more pointed by the promotion of Mr. Fitzgerald: "The Baltimore & Ohio is for Baltimore & Ohio men."

Judge W. S. Haymond delivered an eloquent address on the possibilities in railroad service, and closed by saying that through faithful work the success of Mr. Fitzgerald was possible for others.

A committee, consisting of Engineer W. A. Tribby, Supt. C. W. Galloway, Master Mechanic A. T. Prendergast, General Foreman Z. T. Brantner, General Foreman J. J. Tatum, Road Foreman of Engines W. E. Cavey, Supervisor P. J. Coughlin, Engineer G. W. Sturmer, Conductor A. Willson, Fireman C. W. Riding, Chief Clerks C. C. Gardner and J. P. Hess, drafted the following resolutions to Mr. Fitzgerald.

G. W. Sturmer presented the resolutions adopted by the above committee. He paid an eloquent tribute to the General Manager and the road. The resolutions were in a magnificently bound volume and were read aloud:

"Whereas, The merits of our former esteemed superintendent of the main line system of the Baltimore & Ohio Railroad, Thomas Fitzgerald, having been recognized by our worthy President, Oscar G. Murray, by his selection as General Manager of the Baltimore & Ohio Railroad; therefore be it

"Resolved, That we, the undersigned committee, representing the various departments of the Baltimore & Ohio, do hereby express our appreciation of this appointment on the part of our president in advancing one from the ranks to the most exalted position within his gift; be it therefore further

"Resolved, That we, as representatives of all departments in meeting assembled, do hereby pledge our continued loyalty and fidelity to our esteemed General Manager, Thomas Fitzgerald,

and his administration, and as a further testimonial of our regard we unite in presenting these resolutions at Fairmont, W. Va., his birthplace, where he first entered the service of the Baltimore & Ohio Railroad Company.

"These resolutions shall ever stand as a proof of our high esteem and affection for Thomas Fitzgerald for his fair and impartial treatment to all employees, who will ever strive to retain the same relations and confidence in the future as in the past."

Mr. Fitzgerald then responded, and said that he did not take the credit of his success as due only to his own ability, but that he owed it to the men. He said that the best and most faithful employees of any railroad or any other corporation were found in the service of the Baltimore & Ohio. The reception and banquet and the trip back to this city were the happiest moments of his life. Again thanking the citizens of Fairmont and the railroad men for the reception and consequent pleasure and happiness resulting from it, Mr. Fitzgerald took his seat.

Cheers were then given for all the officials, and the guests then filed by the banquet table and shook Mr. Fitzgerald by the hand. It was in the wee sma' hours that the guests departed.

The employees and the committee that represented them may well feel proud of the success of the banquet and tribute to Tom as they delight in calling him. May that fellowship expressed in the endearing term of Tom never change, and that duties well performed may always tend to further develop peace and good will on the B. & O.

EDITOR.

Sunbury, Pa., Union Meeting.

The twenty-first anniversary of Div. No. 250, B. of L. E., Sunbury, Pa., was celebrated on Wednesday and Thursday, May 17 and 18, which resulted in a very successful secret meeting, public meeting and a banquet and ball. Of these proceedings we glean the following from the *Sunbury Item*:

The Thursday afternoon session in the Court House filled the capacious auditorium, and though the program lasted four hours it was of such great interest to those present that but few left until its close.

The proceedings were opened with the entrance of Superintendent Lincoln, Mr. Mengley Potts, and other railroad notables, who were given a hearty greeting. Bro. P. J. Hays, of Pottsville, as Master of Ceremonies, made a lively speech and announced the program, a feature of which was a number of inspiring selections by Gaskin's popular orchestra. The Grand Secretary of the R. R. Y. M. C. A. invoked the throne of grace, after

which Col. C. M. Clement was announced as the principal speaker of the occasion, and his appearance elicited the heartiest applause.

Mr. Clement spoke in part as follows :

"Ladies and Gentlemen : I shall leave to others all words of praise for the great work done by the Brotherhood of Locomotive Engineers in this community for the uplifting of manhood and the dignifying of labor, and proceed to discuss with you the great part which, in my judgment, is to be played by your order and kindred bodies, in the social development of this country.

"In the intelligent consideration of the question it is of first importance that we fully recognize and accept certain fundamental, historic and sociological truths. The principles of Anglo-Saxon growth have always been equality of opportunity and a stern and fierce protest against every form of paternalism and State absolutism, whether of one or many. The right of the individual, rather than of the class, has always been the mainspring of English progress. Hence it is we have moved so rapidly and attained so great a development in so short time, as compared with the centuries required in the growth of other races.

"We have developed a rivalry which extends to the very recesses of our private life. How to obtain success, how to avoid failure is the question that underlies all this determined strife of vigorous men and more equal conditions of life. While the barriers of all old-time distinctions have been broken through, the pulses have not slackened, rather rivalry is keener, stress severe, the race swifter than ever before. We have humanized conditions, but we cannot alter them and the condition of racial life is that we must struggle for individual advancement, for if we stop we perish. It is not selfishness that impels this activity, it is rather the extreme sensitiveness of the human mind to stimulus from altruistic motives; with apparent contradiction, the more we strive to elevate ourselves and advance our own concerns, the more responsibility we feel to each other; this is the key to our times, the explanation of all the political and social movement of the age. Stirred by ambition, every man is striving earnestly to better his own condition, politically, financially, socially, impelled by altruistic feelings he likely cannot explain; because they are supernatural and from without, he wants to help those around him. If we have fought the fight of equality of political opportunity its victories are now complete, social enfranchisement will occupy the next period in civilization and equality of educational and social opportunity is the pressing duty of the hour. We have broken down every other distinction and class barrier, these are still less defensible and must be outgrown, but in doing so we must not lose sight of the philosophic truth, that the process of evolution and selection, in other words, rivalry to outdo and outstrip, must go on and we must reject all platforms of social economy, based on any form of paternalism, State ownership or repression of output, which would check enlightened and progressive rivalry.

"It is our duty then to accomplish the shortening of the hours of labor, that man may be better educated, to increase the basis of wages, that man may be healthier and happier; how best to do this is the problem of the hour. In my opinion your society is destined to play a great part in this work. Largely and chiefly through the wise counsel and strong leadership of P. M. Arthur, this Brotherhood has shunned all false social economy and stands for sturdy, honest Anglo-Saxon principles.

"First and foremost in your platform has always been the strengthening of individual character, the advancement of personal morality and civil righteousness. Under his leadership you entered into the rivalry and struggle of the age, determined to advance yourselves in every way, standing up for and defending your rights at all times, and yet always recognizing and conceding the just rights of others, you have succeeded to a wonderful degree in uplifting yourselves and in acquiring for you and yours higher and better social opportunities than ever were accorded to any set of working people in any age of the world.

"We are told the conflict of the age is between capital and labor, between corporations and the public.

"The great difficulty about the wage question to my mind has always been this: Both the seller of labor and the buyer of it, have always looked upon wages as all earnings, hence the constant effort of capital to absorb all the surplus value of labor and to cut down wages.

"If both, labor and capital so called, can be brought to realize that some proportion of that which is paid to labor stands for the exhaustion of principle, for the wear and tear of the machinery of the man, and that the actual earnings are only the excess over that sum, then I think both capital and labor will have a better understanding of the true ground upon which rests the claim of labor to more liberal compensation.

"No thinking man will deny that every business must make good its depreciation, its wear and tear, before it has any profit. Precisely so it is with labor: its capital is the bone and sinew of the man, the muscle and fibre, the energy and brain power, which day by day are being worn out and consumed in daily toil, eventually to perish in the using as an old locomotive goes on the scrap heap. We all realize enough must be saved to buy the new locomotive; what we must learn is that labor must save enough to make good this worn-out life and exhausted earning power, and that until this is done, labor has not earned its dividend, so to speak.

"What then is this capital of the laboring man; how shall it be preserved and replaced; on what should labor earn its dividend, its interest coupon so to speak? Like other capital it varies; there are large and small men, just as there are large and small business enterprises. Can one rule apply to both things? I think to a large degree it can. When it comes to moneyed capital, we measure its dividend by percentage, and custom has fixed five per cent. as a fair return upon money en-

gaged in business. Why should it not represent the fair return on labor engaged in business? If we can only realize that it does, then the battle for better wages is fought out.

"Let me explain my point. We hear it said that a man cannot live on less than a dollar a day, therefore that stands for the cheapest form of wages. Now I don't believe any man can live on so small a sum, he only hangs on because he can't afford to die, but it will serve the purpose of my argument. If a bare living can be had for a dollar a day, then such a living costs \$350 a year, this at five per cent. is the interest on \$7,000, and that is the capital represented by the muscle and skill of the man. It wears out like any other machine, and if his heirs are to inherit his estate, as they would inherit if it were bonds, it must be made good and replaced, not with a new man, because it is impossible, but by accumulating a saving which will equal that amount in course of a lifetime. The insurance people tell us a young man of twenty may reasonably count on forty years of a working life. In these forty years then he must save up \$7,000, that those who come after him, to say nothing of himself in old age, may enjoy the fruits of his labor. Now, roughly speaking, it will take fifty cents a day to do this. Therefore, if a man live on a dollar a day, he must get a dollar and a half or he'll go on the scrap heap worn out and not replaced. As this rule will apply to any rate of wages, a man must set aside one-third of his wages as the exhaustion of his principle or he is squandering his estate, consequently the basis of the lowest wage must be \$1.50 and not \$1.00 per day. This is the due capital owes to labor; there is no surplus of wages until a man gets enough to live and enough to save, so that when he quits work the interest on his savings equals the reasonable cost of living.

"This is the gospel we must preach. If a man can live and keep his little family on \$2 a day, then he should get \$3 a day in order that he may accumulate a capital to stand for and make up for his exhausted powers. By the same rule he must learn to so economize, that he does save his third.

"My proposition is, therefore, that one-third of a man's wages stands for the wear and tear of the human machine and two-thirds is the dividend. Convince the world of this and it will compel a just return for a fair day's work and that equality of opportunity for which we must contend, will give to every man a living plus a chance to save a moneyed capital equal to his brain and muscle capital, which thus is shown to have a fixed value. Labor is not just to itself because it does not recognize this truth, but looks on the human system as self-oiling and indestructible.

"You have secured for yourself equality of social opportunity with every man—you have always striven to advance and so to live as to dignify your chosen profession. In the economic struggle of this Twentieth Century, you can do much to bring to others this equality of social opportunity, which is as certainly the problem of this age as that equality of political opportunity was of the last century. Strength that comes of unity of purpose

and harmony of counsel, free from those conflicts which seem to be marking the ordinary forms of corporation capital, not torn asunder by personal rivalry and jealousy, you are taking up the work of this age in a high patriotic spirit.

"You will, I feel sure, wield these vast powers for the good of mankind—you will continue to be the example to every form of labor—you teach the benefits of organization and you show the basis of its successful accomplishment. Keep ever before you this great power, for which you stand—continue to uplift and dignify labor and in a short time you will teach the world there is no barrier between labor and capital, and in this free land each has an equal chance for success. This equal chance, the square deal as the President calls it, is that all must work for. We must not prey on the rich, nor the rich prey on us, but we must join forces for the good of our land and the expansion and maintenance of American liberties. Separate the one from the other and all must fall together; harmonize and humanize their interests and they will not conflict. You have stood for all these things, stand on, and thousands will come to help you."

Following Colonel Clement's address, Miss Clara Wheeler and Mrs. Haas sang a pleasing duet. Rev. O. G. Morton was the next speaker, and in an interesting address reviewed, eulogistically, the organization of the Engineers' Brotherhood, and enlarged on their commendable basic principles—Sobriety, Truth, Justice, Morality.

Mrs. Wilson, Grand Secretary of the Ladies' Auxiliary to the Brotherhood, in a brief and entertaining discourse, gave a history of the auxiliary organization and the splendid work of the insurance feature.

"Hail to the Chief" announced the next speaker, Grand Chief W. S. Stone, the young brilliant successor to the aged and departed Chief Arthur. The ovation the Chief received as he arose to speak showed the esteem in which he was held by the local organization. He had to speak but a moment until he had won the hearts of the large audience. A synopsis of what he said was about as follows:

"I am a man of the West and glad to greet you Brothers and Sisters of the East. In the East you ask of a man what is his family history, what his social lineage, what his descent. In the West we care and ask not whence he came. Little curiosity have we as to what stock he sprang from. But is he a man? And has he pure red blood in his veins? If so, he is one with us socially and on a level with the rest of us. I have been asked many times since in Sunbury where were you born, and I answer now to all, in the Great West on a farm, February 1, 1860, and during all my mature life I have railroaded, 5 years as fireman, 19 years as engineer, and most of the time freight engineer, and all my life on one division, running through the farm I was born on. But two years ago I left the engineer's cab." He referred to the dignity of labor and the principles that organized labor stands for, and said the B. of L. E. does not believe in forcing any man to join the order against his will, as such

a man is not likely to be a good member. Nor does the organization interfere with a man's creed or his politics. He then discussed the eight-hour day, and said we often work 16 hours or more, and something will have to be done to modify these conditions in the interest of both safety and humanity.

"We believe in arbitration, but when capital refuses to arbitrate then we must quit, or in other words strike, but not until every other expedient fails. Then must come peace with honor." To the younger members of the Brotherhood he said: "Aim to succeed and remember luck is but another name for pluck." On the drink question he did not think the officers of any road should employ a man that gets drunk on or off duty. (Great applause.)

Superintendent Lincoln and Third Grade Engineer Deloss Everett briefly and pleasantly addressed the Brotherhood, their remarks which were more in the form of appropriate anecdotes being greatly appreciated.

Miss Beattie Morgan then sweetly sang a solo, and Miss Lulu Bowen, daughter of Representative Bowen, proved herself to be a reader of more than ordinary ability, her selection being full of humor and admirably rendered. Chief R. F. Krohn followed in an entertaining style with a brief history of local Division 250. Hon. B. F. Bowersox followed with one of his eloquent oratorical efforts, in which he paid a glowing tribute to the Brotherhood, every word of which was as true as it was eloquently delivered. A very touching song, "The Man Behind the Throttle," was charmingly sung by eight-year-old Miss Pearl Wolfe, of Sunbury, and twelve-year-old Miss Graer of Newberry.

The speaking was closed by Mr. H. Wilson, of Division 90, with an able analysis of the principles of the order, and touchingly referred to the noble life of Brother Conser, lately departed, who was a member of the Committee of Arrangements, but was now enjoying the banquet of Heaven. After singing "God be With You Till We Meet Again," the meeting was dismissed with benediction by Rev. Morton.

At the evening banquet Armory Hall was most beautifully and artistically decorated for the occasion. An engine, cab and tender, in miniature, hung on the end wall, lighted with green light signal in front, indicating that another banquet section would follow. Above it Old Glory hung draped, and in large electrically lit letters "Welcome" greeted the coming guests. The sides and ceiling of the hall were luminous with electric lights and Japanese lanterns. Evergreen wreaths beautifully contributed to the decoration of the large room. Large electric letters announced the "21st Anniversary of the B. of L. E., 1884-1905." Linen covered tables extending the entire length of the hall were burdened with the choicest things to eat. Flowers in profusion were a delight to the eye, and fruits, foreign and domestic, were abundant. There was everything requisite to feast the 500 happy engineers, their families and friends. As an improvement on roast pig, and more in season, a "fatted calf" was stuffed and barbecued, and was a unique

but reliable feature of the feast. After keen appetites were satisfied by a most abundant menu the tables were cleared and the grand march began to the exhilarating music of Gaskins' orchestra. Grand Chief Stone and lady, and Third Grade Engineer Everett and lady, in full dress, led the march, and then the happy assemblage danced until approaching morning gave notice to disperse. This was indeed a happy climax to one of the greatest days that the local Brotherhood have ever had, and too much praise cannot be accorded to Sunbury Division 250, for the splendid manner in which this anniversary of their noble order was celebrated. Long may they serve with their usual courage and fidelity their employing companies and the traveling public. Long may they live and prosper.

A SIDE TRIP AT SUNBURY, PA.

The writer and Grand Chief, Bro. Warren S. Stone, left Cleveland Tuesday to attend the celebration of Div. 250. We arrived in Sunbury the next morning at 9:30 and were most cordially greeted at the depot by the committee who escorted us to the city hotel.

After dinner we were invited to take this famous "side trip." We soon found ourselves seated in a splendid two-horse carriage and we were politely informed by the committee in charge that Brother Stone and I were selected as victims for the rest of the day, to be placed at the mercy of the following crew, who were to conduct this adventure, namely, Bro. George Washington Abraham Lincoln Campbell, engineer; Bro. Reuben T. Krohn, conductor; Bro. P. J. Hays, brakeman, and Bro. Henry Longacker as flagman. At a given signal the engineer drew the throttle of his double-header and we were off to take a view of this historic city, which is so grandly situated at the confluence of the North and West branches of the beautiful and majestic Susquehanna. Here this splendid inland town of the old Keystone State with a history dating back to the days of 1776, sits enthroned like a queen on the eastern bank of this river, whose rippling dancing waters, clear as crystal, which flash like diamonds in the morning sun, flow out from her very feet, until they are lost among the wavelets of the ever memorable Chesapeake Bay, whose waters surge along the coast of Maryland, one hundred and thirty (130) miles away. After driving through the principal streets and viewing its prominent buildings, and its various industries, our conductor and engineer concluded they would show the Grand Chief and your humble servant some of the surrounding country that occupies so conspicuous a place in the commonwealth of Pennsylvania. Bidding the town farewell for a short time, our double-header was turned in the direction

of what is known as Gowell's Hill, and it was not long until we found ourselves ascending its steep and rugged sides, whose wagon trail, only wide enough for one vehicle, wound its serpentine way in and out and around the seemingly dangerous edge of this place until we finally reached its summit, about a thousand feet above the rippling waters of the Susquehanna. To describe the real genuine fun and pleasure we had in making this ascent would fill a volume. We simply made the very side of the old hill rejoice in response to the stories and jokes that were told and between our conductor, Bro. R. T. Krohn, and the writer it is yet a question as to who came out ahead, although our party thought the honors were about even. The Grand Chief admonished the contestants and told them to behave, yet the rivalry went on as long as the thread of a single story remained. Sometimes the brakeman or flagman would chip in with a yarn, but they were completely lost amid the grape and canister of side-splitting stories that came from the batteries of the contesting forces.

The view from the top of this miniature mountain must be seen to be appreciated. From this point you can look into three different counties. Looking west you see the county of Snyder whose eastern boundary line is marked by the western bank of the Susquehanna, and then far away to the west beyond the hills of Snyder along the sky line you see the dim outlines of Union and then Northumberland in which you are standing. One interesting feature connected with this affair was that at about three-fourths of the way up the hillside, something like seven hundred (700) feet above the valley below, perched as it were in mid-air, is the home of Jakey Arnold, a switch tender in the Northern Central Yard. Like the eagle he has his nest built as it were on the mountain crest, but why he chooses such a lonely spot is a puzzle, yet he seems to enjoy this isolated place. We had the pleasure of an introduction to this unique character, who is a member of the Trainmen's Brotherhood, but he enjoys the distinction of living on one of the most beautiful spots in America. From here you have an unobstructed view of the country for miles around you. Here is a spot that would charm the heart of the poet, the historian or the painter. Here the poet could bring into play his wildest imaginations on poetical lines of mountains, valleys, rivers, hills and dales. Here the historian could write the history of the enchanted view. Here the painter would find a scene which the most gifted artist would find worthy of his best efforts to portray. From here

you see the West branch of the Susquehanna stretching like a silver thread far to the westward until lost to view, amid the unparalleled scenery through which it flows. Looking to your right you see the North branch coming as it were from its mountain home and joining its waters with that of the West branch, form the main stream of the Susquehanna; yonder in the distance you see the old town of Northumberland, situated immediately at the junction of these two branches, a town around which cluster many historical reminiscences of the early struggles of the pioneers who opened this country to civilization when the Indians roamed this beautiful valley, but time will not permit us to linger at this enchanted spot, so we enter our carriage, and soon find ourselves on the crest of the hill, from where we behold another of nature's magnificent scenes. With his finger pointing eastward, our conductor says, "This is Irish Valley;" then looking north he said, "Yonder you can see the dim outlines of the town of Shamokin forty (40) miles away." The writer will never forget this inspiring scene, with the bright blue heavens above, the beautiful valley stretching far away northward, and its green hillsides, quaint old farm houses, with here and there a sparkling rivulet, cattle grazing in the fields, and in the distance the farmer with his team, wending his way along the road to his country home. Here is a spot where the true lover of nature can drink to his heart's content the full glory of the woods, the meadows, the nook and dale, the babbling brook, the song of the bird, and everything that goes to make old Dame Nature a veritable paradise on earth, so beautifully described by Alice May Douglas in the following verse:

Nature I love with all her charms,
Her beauty rich and rare;
I love her clouds of matchless light,
I love her blossoms fair.
But more I love the God who hath
Painted her every scene
And granted to her sky its blue
And to the fields its green.

But the day is waning and the sun is sinking adown the western sky, and with a parting glance we bid adieu to this magnificent panorama and began our descent into the valley below. Fortunately, our engineer knew how to handle the brake in order to steady his doubleheader, for some parts of the road were so steep that if he had used poor judgment we might have landed in the valley ahead of schedule time. As it was we reached the valley in safety; but right here began a squabble between the engineer and conductor, for neither one seemed to know the road back to Sunbury. One said,

"This is the way," while the other said, "You don't know what you're talking about; don't you suppose I know the road home?" Sometimes we were in a quandary as to what would become of the passengers, for the engineer and conductor could not settle on which was the main track to Sunbury. One laughable incident occurred in this connection. Our engineer, by the way, is a bachelor, and he stopped our carriage to ask a country maiden which was the way to Sunbury, and being a bachelor he became embarrassed and instead of saying Sunbury, he asked her which was the way to the Poorhouse. Of course this was one of the jokes of the trip, and he had to stand it, but in due time we turned our double-header into a road leading to the west, and in a short time we beheld the silvery waters of the North branch of the Susquehanna, and to our left were seen the suburbs of Sunbury, where a few moments later we drew our double-header up at the hotel where we started.

Thus ended our never-to-be-forgotten side trip, but the Grand Chief said, they were the most unruly set of passengers he ever traveled with.

D. EVERETT.

St. Paul Union Meeting.

A Union Meeting of the locomotive engineers employed on the Chicago, St. Paul, Minneapolis & Omaha Railway, representing the membership of Divisions 82, 241, 369, and 516, B. of L. E., was held in St. Paul, at K. of P. Hall, Sunday, May 28, 1905, at 1:30 p. m. Invitations were sent to our General Manager, A. W. Trenholm; General Superintendent, S. G. Strickland; Superintendent M. P. and M. John J. Ellis, Division Superintendents Kennedy, Slaker and Nicoles, Assistant Superintendents Nash and O'Neil, Train Master Deagle, Assistant Superintendents M. P. and M. Moore, Turner and Marshal, and Division M. M. Wright, Enockson, Bruggeman, Collinson and Naylor, all of whom were present, also representatives of the O. R. C., B. of L. F., B. of R. T. and O. R. T.

The meeting was called to order by Bro. Hall, Chairman G. C. of A., stating the meeting was for the purpose of discussing questions of mutual interest to all; to promote harmony and good fellowship and create a closer relationship between the officers of railway companies and employees. He called attention to the good that had resulted from previous union meetings between the engineers and officers of railway companies, "this being the fifth meeting of this kind," and in the opinion of the Brothers of the B. of L. E., further good would result by extending an

invitation to members of the other railway organizations. He then introduced our General Manager, who prefaced his remarks by stating he had attended several union meetings previous to this with the engineers, and had met so many of them that he felt perfectly at home, in fact, was a full-fledged member, and was very grateful to them for affording him the opportunity to meet with them. He then took up the question of "Mutual Interests," discussing it at great length, endeavoring to show that the officials' interests and the employees' interests in many ways were mutual, and the successful railway manager should have the confidence and respect of the men, and it was his desire to work in harmony with all. If in any way he could improve the service, or existing conditions, he desired to do so, and urged all present to speak out and let him know in what way he could be of service to them. That his remarks were well received and approved by all was manifested by hearty applause when he concluded.

After short remarks from many present on the question of "Mutual Interests," Mr. Trenholm stated he desired to say a few words to the firemen present. He urged them to work in harmony with the engineers, pointing out to them the necessity for so doing; explaining the relationship that should exist between them. The engineer should and must be in full control of the engine. He stated he was afraid the question of competency was being lost sight of. Seniority on the list and opportunities for posting up to pass the necessary examination for promotion, seemed to be the paramount question, or all that was necessary. This did not meet with his approval, and he urged them to remember their interests and the engineers' were mutual. The fireman of today would be the engineer of tomorrow.

In conclusion he called their attention to the question of committee representation, alluding to the firemen's desire to have members of their organization represent the fireman after being promoted, and stated that the only committee recognized as the representative of the engineers was the engineers' committee of the B. of L. E. At the conclusion of Mr. Trenholm's remarks, which were quite lengthy, General Superintendent Strickland was introduced, and took for his subject "The Standard Rules and Regulation for Employees," and urged on all the necessity of a strict compliance with the same, and not allow themselves to lose interest, but keep posted up and maintain their past record for excellence.

Our Superintendent of M. P. & M., Mr. Ellis, gave a very interesting talk on the care of engines and equipment. His re-

marks showed he had given the question a great deal of consideration and were well received. He thanked the engineers for their efforts in the past, assuring them of his hearty approval of the record made. His remarks to the younger engineers were especially kind and encouraging.

After remarks on various topics from the Division Superintendent and Brothers Fitzgerald, Sharpless, Hammer and Buxton, members of the G. C. of A., Bro. Doolittle, of Division 82, was called on by the Chair and gave us one of the most pleasing and interesting talks of the meeting.

In response to a call for something from the firemen, Mr. McDonald responded and gave us an exchange of ideas in a very able and pleasing manner, and was heartily applauded.

A vote of thanks was returned to officers of the railway company for special train and other courtesies extended, and at 7:20 p. m. the meeting adjourned, every one pleased and satisfied that meetings of this kind were thoroughly enjoyable and would result in accomplishing much good.

Thanks are due Bro. J. F. Collins, Chief Engineer of Division 369, and other members of the Division who acted as a Committee of Arrangements. Nothing was lacking to make the meeting a successful one. In point of attendance and enthusiasm it was a record breaker.

ONE WHO IS PLEASED.

LINKS.

TUSCARAWAS DIV. 255, Brotherhood of Locomotive Engineers, Dennison, O., will celebrate the 21st anniversary of their organization on Tuesday, July 11, 1905. Grand Chief Engineer Bro. W. S. Stone, and Bro. W. E. Futch, President of the Insurance, will be present and will address the meeting. A cordial invitation is extended to the Brothers of all neighboring Divisions to come and help us celebrate this occasion, and meet our Grand Officers, and we earnestly request that any Brother who has ever run an engine on the "Pan Handle" Railroad since 1870 will endeavor to be present, especially those who are now employed on the Nickel Plate Railroad. Come and be assured of a hearty welcome and renew old friendships.

Division 291, Ladies' Auxiliary to the B. of L. E., Dennison, O., will join with us and assist in making this occasion both pleasing and interesting. Mrs. W. A. Murdock, Grand President, and other Grand Lodge officers are expected to be present.

A secret meeting of Division 255 will be held in their Division room at 1 o'clock

P. M., at which all members are most earnestly requested to attend.

Division 291, Ladies' Auxiliary, will hold a secret meeting in their Division room at 1 o'clock P. M., also, at which all members of the Ladies' Auxiliary are requested to be present.

A public meeting will be held in the Dennison Opera House at 7:30 P. M., at which a program will be rendered, consisting of music, recitations and addresses by our Grand Officers and prominent men in business and railway circles.

The following committees ought to insure both success and a good social time. They are, viz:

Committee of Arrangements—J. C. McGuire, Edward Englehard, M. T. Brown, W. A. Gloyd, James Reidy, Chas. W. McCollough, Wm. T. Pickard, David Richey.

Reception Committee—Thos. W. Burke, chairman; P. C. Hartigan, John Carmody, James A. Nelson, William Killilea, Thos. Kane, J. C. McGuire, I. S. Bell, John C. Englehard, Eli Millison, Wm. Bell, D. C. Mahon, Sam Brown, W. H. Stump, D. C. Jobe, Joshua Griffith, Matt Cahaney, Thos. Caniff, Mile Gildau, Ellwood Moore, Thomas Agnew.

J. C. MCGUIRE, Chr. Com. of Arr.

EDWARD ENGLEHARD, Sec.

BRO. M. C. DINKEL, member of Div. 453, has been honored with appointment to the position of S. M. & M., Ixtlahuaca, Nani & Nijini Railroad, Mexico.

BRO. F. M. VANHOOPER, F. A. E. of Div. 585, has been honored with promotion to the position of Traveling Engineer for the St. Louis, Iron Mountain & Southern Ry., Valley Division.

R. M. BUCKALEW.

It pleases me to advise you of the fact that Bro. J. D. Collins of Div. 368, of Atlanta, Ga., and Bro. Sam Ferguson, of Div. 423, Memphis, Tenn., have been appointed Air Brake Instructors of the Southern Railroad. Brother Collins has been Traveling Engineer on the Atlanta Division for two or three years, and has given perfect satisfaction to the company and the men. He is the oldest engineer on the Atlanta Division, and has always been a staunch Brotherhood man, and will be remembered as Grand Guide at three conventions.

Brother Ferguson is one of the oldest engineers on the Memphis Division. He was reared on that Division and has an unquestionable record. I do not think the company could have made any better selection from the ranks of the engineers on

the Southern Road, and I certainly feel proud of the honor to the Brotherhood. They are to instruct the engineers on the Air Brakes according to the Westinghouse teachings, and they will use a Westinghouse car for several months with two of the Westinghouse's instructors with them. After that they will take the Southern's car.

Fraternally yours,
J. I. WHIDDON, Gen. Chr.

AGAIN our Brotherhood has been recognized and honored, by the promotion of Bro. Albert Jones of Div. 441. Brother Jones, who for many years has been night dispatcher for the New York Central System at DeWitt, N. Y., has been honored by a more important and lucrative position as General Foreman of Engines of the New York Central System at Rochester, N. Y.

Bro. Wm. Smith, our worthy master mechanic, recognizing in Brother Jones the ability of further promotion, made no mistake in placing him in charge of one of his most important jurisdictions, where his interest and those of his men will be well cared for under Brother Jones, who in his long years of railroad service has climbed the ladder step by step and will prove himself worthy of the confidence and trust placed upon him by his superior officers.

The elegant diamond presented to him by his many friends whose respect he has enjoyed so many years was but a slight token of the high esteem in which he is held by all who came under his charge, and who now wish him unbounded success in his new field of a most worthy promotion.

T. F. F., Div. 441.

It is with much pleasure that we announce to the Brotherhood at large that our Bro. L. A. Gilbert has been appointed Traveling Engineer of the Maine Central R. R., on line east of Waterville. Bro. Gilbert went running as engineer on the European & North American R. R. in 1876, for a period of six years, and since that time has been in passenger service on the Maine Central R. R., making a total of 29 years as locomotive engineer. Bro. Gilbert has been in the B. of L. E. ranks for about 28 years. He has filled the office of Chief Engineer with entire satisfaction, and was elected as delegate to the St. Louis Convention in 1898. He is well qualified for his new position, and the members of Div. 508 not only wish him success, but feel honored by his good fortune in being selected from among them by the officials of the Maine Central Railroad.

Yours fraternally,
Div. 508.

DIVISION 535, Rat Portage, Ont., was honored by a visit from Assistant Grand Chief Engineer Cadle, who gave us a very instructive talk on the order in general, and we received information from him of great good to us all. This is the first time a Grand officer has given us a call, and we greatly enjoyed it. I feel sure we are now in closer sympathy with our Grand officers in their good work of putting our order in the front, and will always look forward to another visit from our Grand officers with pleasure. Yours fraternally,

T. O. Y., Div. 535.

BRO. L. S. COMER, member of Div. 210, has been elected General Manager of the Moler Lead and Zinc Co., with headquarters in Webb City, Mo. The company is incorporated and capitalized with \$100,000. It is fair to assume that energy and ability caused his selection for so responsible a position, and his many friends

will be glad to know of his good fortune. Bro. Comer evidently has other qualities to commend him, as the little girl whose picture is presented with this, is an orphan, and we present it because Brother Comer named one of the company's mines the "Lela," and calls her the mascot of the Lela Lead and Zinc Mine.

Brother Comer was recently employed on the C. C. & L. Ry., and left that service to accept the management of the Moler Company. The JOURNAL wishes him success.

EDITOR.

BRO. GEO. T. HORTON, member of Div. 302, Chicago, Ill., whose picture accompanies this article, was born in England, in July, 1819, and commenced his railroad life as a fireman in 1837 at the age of 17, and was promoted to engineer in 1840, in London, went to France in 1846, and ran a construction engine until the French Revolution of 1848, when he returned to London and was employed on the London and South-Western. He came to Canada in 1852, having been engaged to work for three years for the Great Western of

Canada, and moved to Chicago, where he now resides, in 1867. He was initiated into Div. No. 19, Bloomington, Ill., in February, 1872, 33 years ago.

Brother Horton has certainly had wide experience in his 68 years since beginning his railroad life in England, and in his 53 years in this country has seen the greater part of the great railroad systems developed. It is natural that he should feel his age, but we trust he will be with us in fair health many years to come.

EDITOR.

Div. 191, Fitchburg, Mass., held one of the largest meetings in its history June 11th. Brother Mitchell, our General Chairman B. & M., member of Div. 61, being present, gave us some good advice. Brothers Barkley, Spencer, Dudley and Brigham, of Div. 312, and Brother Clifford, of Div. 106, were present and by their friendly remarks added to the good of the cause.

After the meeting the seats, altar, and so forth were cleared away and the ladies of the G. I. A., W. S. Stone Div., 353, which was recently organized here, took charge of the hall, set tables and filled them to overflowing with good things to eat, when thirty members and their wives sat down to one of the best dinners furnished by the ladies we have ever sat down to, which was most heartily relished by all.

After dinner the ladies furnished cigars as a finishing touch, then came good words and praise for them.

Brother Abbott, our Insurance Secretary, was appointed toastmaster, and he filled his position to a T. Bro. John Thompson, the oldest member of the Division in years, although now retired on account of old age, and although quite feeble, was in attendance, and seemed to enjoy the event as well as any. Bro. Joe Bacon entertained all with songs and funny stories. Remarks were made by Brothers Woodworth, Chief Engineer, Rich, Crowther and others; then the ladies were called on. Mrs. Mulany, President, made a few very pleasant remarks, thanking the Brothers for being present and hoped this was only the beginning of the happy and family-like gatherings. Vice-President Hewes, a widow of one of our members, also thanked the Brothers, and Sister Crowther, in a few well pointed remarks, finished the speeches for the day.

These happy gatherings show the good feeling and interest taken by members of both orders in the welfare of the other. The next gathering will be a basket picnic held soon on the farm of Brother Winchester.

ONE WHO WAS THERE.

At the regular Sunday meeting June 11 of Boston Div. 61, we were treated to an exhibition of the method used by the Boston & Maine Railroad motive power department in examining the firemen for promotion in the service on breakdowns, etc., by Brothers Lorimer and Rickeman, members of Div. 64, who have been for some time in charge of the air brake car. Their services were solicited by some of the officers of our Division, and it was also a pleasure for them to extend to us all the knowledge they could impart, and at the same time any points not fully understood were gone over for the benefit of any who did not understand and wished for more light. It was especially interesting to the listeners who are running small engines, when the instructors particularly bore upon points relating to the larger and new types of the road's equipment, making it plain how to handle a disabled engine where the running parts

were too heavy to be handled as on the old and lighter engines.

While your humble servant had to go home before the instruction was completed, I can say that those who were not there do not know what they missed, and Brothers Lorimer and Rickeman are deserving of the heartfelt thanks of every member of Division 61 for the able manner in which they imparted their knowledge of the perfections and imperfections of the locomotive, coupled with the "haps and mishaps" the iron horse is heir to.

While the attendance at the meeting was fair, there would have been many more if they had realized just what they would have had for an "entertainment."

Among our number were former Bro. A. G. Alexander, now member and Chief of Bay State Div. 439, and Bro. Williams of the same Division.

Brother Alexander favored us with a few able remarks, adding that he did not like to see his name in the JOURNAL "every time he came over here." Let's hope he does not see this part of it, for we consider it an esteemed favor to have such as him visit us.

To the Brothers at large I would like to say, are your Divisions growing? Div. 61 has very few meetings without initiations of candidates, and generally something "in the wind" to improve our conditions. Last meeting besides the above, we were favored with a collation by the entertainment committee.

W. F. BUCKNAM, Cor. Sec. Div. 61.

SUNDAY, May 21, Div. 358, Dayton, O., was favored by a visit from Brother Wills, A. G. O. E., who very kindly told us in a plain but forcible manner of what we owed the Brotherhood of Locomotive Engineers and how best to further the interests of our noble order in an honorable way. Bro. Oscar Jackson of Div. 208, with a delegation of Brothers from that Division, was also present.

Brother Wills made an impression that will be helpful to all who were privileged to hear him, and we feel sure the interests of our order are being safely guarded by our Grand Officers. Div. 358.

BRO. H. E. WILLS, A. G. O. E., visited Gulf City Div. No. 140, Mobile, Ala., May 21, 1905. The meeting was called to order by our Chief J. H. Trachy. There were about seventeen or eighteen members present, as most of the boys were out on the road, there being a rush on at the time and we only had a few hours notice previous to Brothers Wills' coming.

Brother Wills gave Div. 140 an interesting talk and this I know will be good for the order. This was the first time Div.

140 had any of the Grand Officers to visit them in twelve or thirteen years. Come again, Brother Wills. Brother Wills left that same night on the M. & O. 8:25 train for Meridian, Miss. He was presented at the depot a few minutes before the train pulled out with a little souvenir of old Mobile from Div. 140. The only fault found with Brother Wills was that his visit and talk were not long enough. Come again soon and stay a while with us and enjoy the sunny South, Old Mobile.

E. A. BOLLING, Div. 140.

A SPECIAL meeting on Monday June 5, was the banner day of Div. 260, Ashtabula, O., it being the occasion for the initiation of nineteen candidates into the mysteries of the B. of L. E., all of which were old and prominent members of Lodge 248, B. of L. F., of this city.

The initiations were conducted by our Past Chief Engineer H. F. Bates, assisted by a team of his own selection, who did their work in a very creditable and satisfactory manner to all concerned. Brother Bates is a veteran at initiatory and ritual work and his equal is difficult to find.

The candidates were divided into two classes and were conducted by Bro. Geo. Moore as guide and three assistants.

To make the occasion more enjoyable to us all, Brother Prenter, F. G. E., responded to an invitation to be present, favoring us with a very eloquent and pleasing address which was very instructive and interesting to all.

At 7 P. M. we adjourned to meet at Good's Hall to partake of a sumptuous banquet given by the ladies of Div. 147, G. I. A., the newly elected members and their wives being the guests of honor. I think Brother Prenter will bear me out in the statement that the ladies of 147 cannot be excelled in the preparation of good eatables to appease the wants of the inner man. The tables, four in number, seating about one hundred, were filled nearly twice. After doing justice to the good things to eat, which were made still more enjoyable by music rendered by the High School Mandolin Club, we were favored by a brief address by Brother Prenter, which was appreciated by all present, especially by the ladies of the G. I. A., as he made some very complimentary remarks regarding their skill in the culinary art and on their charming appearance, which made an everlasting favorable impression in their minds, so that he has paved the way for a very cordial reception should he again come our way. Come again, Brother Prenter, and the ladies will assure you a hearty welcome.

Div. 260 has in contemplation an anni-

versary celebration on Sept. 19. There will be a public meeting in the afternoon and a banquet in the evening, concluding with a grand ball later. Our plans are not thoroughly made, and will advise you later.

"FUDGE."

IN THE Advertising Department will be found an advertisement for rheumatism accompanied by a picture of our Grand Chaplain, Bro. Geo. R. Dority. Brother Dority's first connection with this remedy came from a desire to help his friend, Dr. Nash, who was in financial difficulties, and in doing this concluded he could honestly recommend the medicine, and took the agency for New England.

If any one shall feel disposed to try this remedy, write Brother Dority and be sure to mention the JOURNAL. The value of our advertising space is based upon the number of inquiries the ad brings, and whoever writes to any advertisers who patronize the JOURNAL will do a favor by mentioning the JOURNAL. EDITOR.

BRO. CHARLES E. NORTON, member of Bay State Div. No. 439, Boston, Mass., engine dispatcher for the Boston & Albany, concluded to retire from his twenty-four years connection with the road and embark in other business, received a demonstration of good will that will probably be laid away in memory's store-house to be recalled with pleasure in years to come, for it is not only a mark of high esteem voiced by all with whom he had to deal, but an evidence of duties rightly performed in which the brotherhood of man always had place, for such demonstrations do not come to the undeserved.

The extra engineers and firemen presented him with a Masonic charm, accompanied with expressions of good will, but in the larger demonstration Brother Norton was evidently taken by surprise, as were many others not in the secret. At 8:30 P. M. an alarm signal was sounded on an engine at the turntable, and the officials rushed out, Brother Norton with them and, of course, all the men in the shop who knew what the call meant. Brother Norton beside the engine faced the crowd for an explanation. Bro. A. J. Desoe, of Div. 439, explained matters in the following presentation address:

"We are here this afternoon, Brother Norton, for the purpose of "getting square" with you for some of the inconveniences which you have made us suffer in your capacity as foreman—that is, inconvenienced from our point of view, and to express to you the esteem in which you are held by all of those who have worked under you as foreman. My part in the program is simply to be the mouth-

piece of the engineers, firemen, wipers, machinists, boiler-makers, and in fact, the whole roundhouse force who have each had a share in bringing about this occasion. In severing your connection with the office you have filled so honorably, and with such ability, we feel that we have lost a good friend and a just officer, and whether you remain on the road or leave the service entirely, you take with you the hearty good-will and best wishes for your future prosperity, of all who have served under you. We have watched your career from fireman to engineer, and from engineer to engine dispatcher, during all of which time you have shown

yourself square and upright, doing your duty faithfully and conscientiously. In the position you are now leaving, we have found you a good friend, standing by us when we were right, and not afraid to remonstrate with us when we were in the wrong, in either case in no uncertain manner.

"The value of the articles which we ask you to accept from us is small when we compare them with the feelings of love and kindness in which you are held by all.

"Brother Norton, these articles have been purchased by the contributions, not of any one group of employees, but by all who have served under you from the

\$1.50 a day to the \$5.00 a day man, and this should show to you how universally you are loved by all. I, therefore, in their behalf, take great pleasure in presenting to you this chain—may its golden links serve as a reminder of the golden opinion in which you are held by its donors—also, this silver pitcher and goblet, and as your eyes rest upon its shining surface, may you remember that your friends hold in their hearts bright memories of the days when you were our superior officer.

"In conclusion, let me say as coming from the bottom of all our hearts, God bless and be with you."

The whistles then filled the air with a salute of honor, while the men cheered. Brother Norton made a feeling response, and the scene ended with a grasp of the hand and good wishes expressed by all.

Where such incidents as described happen, the gulf between employer and employee, boss and workman, has been bridged, and peace and good will has become master of all—and the labor question is solved.

EDITOR.

SUNDAY, May 14th, Div. 468, Corbin, Ky., had the honor of a visit from our worthy and distinguished Brother, H. E. Wills, Assistant Grand Chief. A large number of Brothers were present and after the regular business of the meeting had been disposed of, the Brothers were treated to an excellent speech from our eloquent visitor. Brother Wills is an apostle of brotherly love and harmony, those principles being practically the theme of his discourse.

Before the Division closed the following resolutions were adopted, a copy to be spread upon the minutes, a copy to be sent to the JOURNAL, and a copy to be sent to Brother Wills at his office in Cleveland:

WHEREAS, In the election of Brother Wills to his present office, the Los Angeles Convention exhibited keen judgment and admirable discrimination, and

WHEREAS, It appears that it is the intention of the Grand Office to keep in closer touch with all Subdivisions in the future; therefore, be it

Resolved, That we heartily commend this policy, believing that it is one calculated to cement still closer the fraternal bonds that unite Brotherhood Locomotive Engineers everywhere; that it is one calculated to create more widespread interest in B. of L. E. affairs; that it will arouse the dormant spirit, and inspire the listless energies wherever such may unfortunately exist; that we are convinced our Grand Officers are laboring faithfully and intelligently for the upbuilding of the Brotherhood, and that it is our bounden duty to aid and assist them in every way possible, for a little ex-

ertion on the part of many will, in the aggregate, result in tremendous achievement; that we urge Brotherhood men to permit no trifling reason to keep them away from Division meeting when a Grand Officer has arranged to be present. We can vouch for his appreciation of a large attendance, and the advantage to each Brother present is incalculable.

Yours fraternally,
H. H. LEARY, C. E.

At a regular meeting of Wm. Renshaw Div. 23, held on May 22, it was decided to present Ass't Gen'l Supt. King of the Y. & M. V. Ry. and Mrs. King with a set of resolutions as an expression of our gratitude for their great kindness and consideration shown our late Chief, Bro. Joseph O'Leary, at the time of his accident on the 24th of April, 1906. Following is a copy of the resolutions:

At a regular meeting of Wm. Renshaw Div. 23, Brotherhood of Locomotive Engineers, held on May 22, 1905, the following resolutions were unanimously adopted:

Resolved, That the engineers of the Memphis Division of the Y. & M. V. Ry., tender Assistant General Superintendent W. S. King and his estimable wife their sincere thanks for their kind assistance in taking our beloved Brother Joseph O'Leary in their private car to bring home after he was so severely scalded in an accident on the 24th of April, 1905, that he lost his life.

Resolved, That a copy of these resolutions be spread upon the minutes, a copy be presented to Mr. and Mrs. King, and a copy sent to the B. of L. E. JOURNAL for publication.

H. E. BRADFORD,
T. H. HINER,
E. T. DATE, Com.

Div. 522 is located at Chicago Junction, just 99 miles from the Grand Office, and we have a rich growing town of about 8,500 nice people. We have between sixty and seventy members in good standing, and have had fairly good attendance until of late, when for some reason the attendance has fallen off; and I want to call the attention of these absent members to two articles which appeared in the April JOURNAL, one on page 806, from Hilliard, Wash., and the other on page 807, from Altoona, Pa. They are well worth reading and I am sure if these Brothers would read the JOURNAL a little closer and remember what were their promises when they first entered the Division room, they would not be in want for attendance, unless business was so pressing that but few could attend; and I hope the Brothers will make up their minds to give better attention to Division business, do their share of what there is to be done, and help to see that it is done

in the right manner. We have a right to know that you are sufficiently interested not to leave any question of loyalty and to know that whatever action is taken in the Division will be sustained; and if you are to know what is going on in the Division, then you must attend the meetings, for no loyal member is going to peddle the news.

If we had more in our Division like our F. A. E. we would not only have better attendance, but would have more money in the treasury and more interest in all things pertaining to the B. of L. E.

Fraternally yours,
MEMBER DIV. 522.

MEMORIAL SERVICES were held in St. Paul's M. E. Church, Wilmington, Del., under the auspices of the Diamond State Division No. 842, B. of L. E., Sunday evening, May 21, 1905, at 7:30 P. M.

The committee, with the assistance of a committee of the Guiding Light Division No. 810, G. I. A., decorated the altar with palms and placed fourteen vacant chairs in front of the chancel rail to represent the deceased members. Each chair was handsomely decorated with smilax and about eight carnations. The white showing up among the green made a beautiful sight for one to look upon.

Just previous to the sermon our Chairman, Bro. T. A. Weatherby, read the names of the deceased members. As each name was read a little girl dressed in white arose and placed a wreath on the chair representing the Brother. The little girls, fourteen in number, were daughters of the members of the Ladies' Auxiliary. After reading the names, Rev. W. L. S. Murray, D. D., preached a very able sermon and the choir furnished excellent music for the occasion under the direction of the organist, Mr. N. F. Hadley.

We had a very good service, as the church was filled. Chairs had to be placed for quite a number. After the service the wreaths were sent to the deceased members' families to be placed on their graves, and the carnations, fourteen dozen in all, were distributed to the sick Brothers who were unable to attend the service. Thanks to the Ladies' Auxiliary, Guiding Light Division No. 810.

Yours fraternally,
C. H. STEVENS,
Sec'y Memorial Service Committee.

MEMORIAL SERVICES were held in Atlanta, Ga., under the auspices of Divisions 207 and 368, joined by the O. R. C. and B. of R. T., each marching to the meeting in a body. It is estimated that

fully 8,000 gathered at the Baptist Tabernacle to attend this imposing sympathetic and beautiful service of which we glean the following from the *Atlanta Constitution* sent us by Bro. C. F. Adams, Secretary of Division 207:

Long before the hour of the meeting, the Tabernacle was crowded with people, the majority being railroad men, and when Dr. Broughton called the meeting to order, there were few vacant seats in the hall.

After a few beautiful musical selections were rendered, Dr. Broughton delivered a brief address, in which he paid a glowing tribute not only to the deceased railroad men in whose honor the meeting was held, but to all railroad men. He declared that, in his opinion, railroad men as a whole were the best men in all the world. He knew few of them who were not sober, Christian gentlemen, and said that in their hours of great danger, when with steady hands on the throttle they drove their engines through the darkness, knowing not what was ahead, they looked only to God for protection from all possible dangers and always put their faith and trust in Him.

After the conclusion of Dr. Broughton's address, T. C. Watters, Chief Engineer Div. 368, read the death roll; the following names were read: J. C. Adamson, J. F. Renard, H. L. Dobbs and J. M. Smith, of Atlanta Div. 207, and R. C. Wilhelm, of Gate City Div. 368.

Rev. Sam P. Jones, who delivered the chief address of the afternoon, sustained his reputation as a memorial orator, his tributes to each one of the departed members of the Brotherhood of Locomotive Engineers were beautiful word paintings. Mr. Jones has gained the most fame, perhaps, as an evangelist, whose frank sayings and direct manner of appealing to men have stirred the country. But those who heard his short address yesterday afternoon were impressed with the fact that he is a master of word painting. Mr. Jones said he agreed with Dr. Broughton that railroad men were among the best people in the world. He knew of no life that required more faith in God, than the life lived by the engineer. He knew more Christians among engineers than among any other people, whose temptations to do wrong were so strong. The temptations that came to the engineer were many, said he, in that he was away from home most all the time, and in great danger all the while, and was often tempted to do things that would make him forget his cares and dangers. Mr. Jones said that time was when a sober engineer was a rare man to find, but that nowadays the engineers are as sober a lot of Christian gentlemen as can be found in any trade or profession.

In paying tribute to the dead members of the Brotherhood, in whose honor the meeting was held, Mr. Jones said that he was well acquainted with each one of them, and loved them all for their many excellent qualities. He paid an especial tribute to Engineer J. F. Renard, who died recently. Mr. Renard had been the friend of his boyhood; often had he sat beside him in the en-

gine cab, and watched him pull the great throttle and move the giant engine, and how little he then thought that some day he would be called on as a preacher to speak for him words of praise after his departure, to the God whom he had served so well in life.

After the conclusion of Mr. Jones' address the meeting adjourned.

SPECIAL NOTICES.

Wanted—To know the whereabouts of Robert McGrath, last address Ralston, Wyo. Supposed to have gone to Salt Lake City, Utah. Any information will be gladly received by Bro. H. S. Ryder, 331 North St., Middletown, N. Y.

The traveling card of Bro. Royal E. Snyder, member of Div. 462, has been lost. If presented, please take up and forward to Bro. John Bienfang, F. A. E. Div. 462, 517 South D St., Arkansas City, Kan.

Wanted—To know the whereabouts of J. J. Ginn. When last heard from was running out of Sapulpa, O. T. Anyone having any information please notify Bro. R. B. Herring, F. A. E. Div. 672, 919 Kansas avenue, Memphis, Tenn.

Information is wanted of the whereabouts of Bro. J. M. Beaghan, member of Div. 550. When last heard from was in Herrington, Kan. Address his daughter, Miss Sara Beigham, 2837 Lucas avenue, St. Louis, Mo.

Wanted—The addresses of George Victor Smithson, last heard of in Oregon, and Charles Collin Smithson, last heard of in Wisconsin. Address sister, Miss Alice C. Smithson, 2337 Chouteau avenue, St. Louis, Mo.

Wanted—The address of Oscar Rice, who was firing on the St. L., M. & S. E. R. R., in 1904. Address W. M. Gilland, Good Hope Drug Store, Cape Girardeau, Mo.

Bro. C. B. Lumsden, member of Div. 5, an invalid, while on his way to the Railway Men's Home, lost his traveling card and letter of identification. If either are presented for favors, please take them up and return to Bro. J. J. Norton, F. A. E. Div. 5.

Information is wanted of the whereabouts of Jack Snyder, machinist, formerly of New Albany, Ind. Address J. F. Kurfess, 1215 Elm street, New Albany, Ind.

The traveling card and annual pass of Bro. E. T. Henderson have been stolen. A reward of \$5 will be given for return of same to Bro. Henderson. If presented, please take up and forward to Bro. A. G. Archer, F. A. E. Div. 522.

The traveling card of Bro. Edward Shelton has been lost. If presented for favors, please take up and forward to Bro. F. M. Shields, F. A. E. Div. 460.

Wanted—The address of Harry F. Pointon, formerly engineer on the C., M. & St. P. R. R. Please address S. Glassey, Staff Captain Salvation Army, 395 State street, Chicago, Ill.

Members of the following Divisions will correspond with the F. A. E. of their Divisions immediately:

<i>Division—</i>	<i>Division—</i>
7—Harry Pimlott, Wm. A. Goltra.	210—H. F. Ledbetter, Robert Pate.
539—J. F. Larkins, W. F. Mayo.	386—J. T. Alexander, Richard Bergin, J. P. Anderson.
163—C. F. Berry, Robert Innis.	596—James Hutson.
448—J. I. Harvey.	

OBITUARIES.

[In accordance with the action of the Ottawa Convention, no resolutions of condolence, obituary letters or poems will be published in the JOURNAL. All deaths will be listed under obituary heading only, with cause and date of death.]

Louisville, Ky., May 15, killed in wreck, Bro. W. H. Thomas, member of Div. 78.

Derry, Pa., March 30, Mrs. P. H. Dell, wife of Bro. P. H. Dell, member of Div. 310.

Otterbein, Ind., May 15, killed in wreck, Bro. H. G. Haller, member of Div. 492.

Providence, R. I., May 14, Bro. L. M. Butler, member of Div. 61.

Hadlow, P. Q., May 8, Bro. W. Kelly, member of Div. 558.

Louisville, Ky., May 14, appendicitis, Arthur M. Smith, son-in-law of Bro. E. W. Marriott, member of Div. 78.

Dickeyville, Md., May 16, hemorrhage, Bro. A. P. Clayton, member of Div. 439.

Portland, Ore., May 5, Bro. T. C. Boorn, member of Div. 181.

New York, N. Y., April 19, Bro. R. K. Hammond, member of Div. 599.

Chicago, Ill., April 29, suicide, Bro. Wm. I. Palmer, member of Div. 10.

Chicago, Ill., May 7, Bro. Nicholas Stuber, member of Div. 10.

Crocketts, Va., May 15, kidney and heart trouble, Bro. John S. Mays, member of Div. 401.

Savanna, Ill., March 2, apoplexy, Bro. A. Peterson, member of Div. 200.

Chicago, Ill., May 23, Bro. Orville T. Stearna, member of Div. 294.

Texarkana, Tex., May 22, apoplexy, Bro. D. C. Lasley, member of Div. 496.

St. Paul, Minn., May 21, Bro. Wm. Dressen, member of Div. 333.

Pine Bluff, Ark., May 20, Mrs. J. W. Tague, wife of Bro. J. W. Tague, member of Div. 216.

Battle Creek, Mich., May 29, Bro. A. F. Emburry, member of Div. 33.

Denver, Colo., May 25, pneumonia, Bro. M. W. Burke, member of Div. 186.

Citronelle, Ala., May 25, Bro. T. P. Darling, member of Div. 537.

Cedar Rapids, Ia., May 20, cancer of the bowels, Bro. F. E. Averill, member of Div. 159.

Lang, Cal., May 23, injuries received in wreck, Bro. James Canty, member of Div. 126.

Elkhart, Ind., May 28, surgical operation, Bro. John Schuler, member of Div. 248.

Wilmington, Del., May 1, Bro. H. E. Sherwood member of Div. 342.

Louisville, Ky., May 18, killed in collision, Bro. W. H. English, member of Div. 485.

Buffalo, N. Y., May 10, Bro. Jerry Cronyr, member of Div. 15.

Garrett, Ind., May 31, cancer of the stomach, Bro. L. C. Lavelle, member of Div. 153.

Albany, N. Y., May 23, Bro. Geo. Hickman, member of Div. 46.

Louisville, Ky., May 29, apoplexy, Bro. Pierce McCarthy, member of Div. 39.

Pittsburg, Pa., May 15, paralysis, Bro. J. Miles Shoup, member of Div. 472. Brother Shoup commenced his railroad career as a fireman in 1870, and was promoted to engineer in 1872.

Mobile, Ala., March 22, Mrs. A. C. Smith, wife of Bro. A. C. Smith, member of Div. 426.

Danville, Ill., June 2, killed in wreck, Bro. V. A. Barlow, member of Div. 400.

South Portland, Me., June 2, Bro. J. A. Pillsbury, member of Div. 40.

Columbia, S. C., May 11, injuries received in wreck, Bro. E. D. McChesney, member of Div. 85.

Tyler, Tex., June 4, Margarette, daughter of Bro. B. J. Cooney, member of Div. 201.

Philadelphia, Pa., June 3, Bro. Henry Walton, member of Div. 45.

Terre Haute, Ind., June 4, Bro. Daniel Warren, member of Div. 25.

Niagara Falls, N. Y., June 8, old age, Bro. Albert Naah, member of Div. 18.

Philadelphia, Pa., May 17, Bro. D. H. Fowler, member of Div. 71.

Columbus, O., June 1, killed on engine, Bro. Edward S. Ginbey, member of Div. 79.

Mexico City, Mex., June 2, killed in wreck, Bro. E. S. Rutledge, member of Div. 669.

Punxsutawney, Pa., May 27, apoplexy, Bro. David A. Harris, member of Div. 626.

Port Jervis, N. Y., June 12, Bro. John Karg, member of Div. 54.

Portland, Me., June 11, Bro. W. Stinchfield, member of Div. 40.

Abbotsford, Wis., June 7, drowned in wreck, Bro. Chas. Phipps, member of Div. 80.

Kansas City, Kan., June 2, Bright's disease, Bro. G. W. Cooper, member of Div. 491.

Kansas City, Kan., June 12, killed in wreck, Bro. Daniel Fapp, member of Div. 491.

Louisville, Ky., May 26, peritonitis, Mrs. Minnie Crosby, wife of Bro. John Crosby, member of Div. 485.

Princeton, Ind., June 13, killed in wreck, Bro. Otto Greatz.

Champaign, Ill., June 12, Bro. J. P. Michael, member of Div. 127.

Cleveland, O., May 23, Bro. H. K. Stephenson, member of Div. 31.

Huron, S. D., April 8, softening of the brain, Bro. John Nezzaer, member of Div. 213.

Clifton Forge, Va., June 9, diabetes insipidus, Bro. A. M. Snyder, member of Div. 38.

Syracuse, N. Y., June 10, Bro. Greg. Andrews, member of Div. 169.

Dunsmuir, Cal., April 25, heart failure, Bro. E. T. Rosette, member of Div. 425.

Mt. Pleasant, Pa., June 6, Bro. Harry H. Page, member of Div. 148.

Houston, Tex., June 9, killed in wreck, Bro. J. E. Brown, member of Div. 366.

Pittsburg, Pa., June 6, paralysis, Bro. Harry H. Page, member of Div. 148.

Jackson, Tenn., June 2, killed by being caught between engine and tank, Bro. E. J. Emmons, member of Div. 666.

McDonoghville, La., June 17, Bro. G. B. Israel, member of Div. 193.

Smith's Falls, Ont., June 11, Bro. Fred Hudson, member of Div. 381.

Smith's Falls, Ont., June 11, Bro. Edward J. Pennett, member of Div. 381.

Providence, R. I., June 15, killed in collision, Bro. Joseph A. Oldham, member of Div. 57.

Baltimore, Md., June 16, killed in wreck, Bro. Geo. B. Covell, member of Div. 52.

Monroe, N. C., April 20, J. H. Shepherd, father of Bro. J. W. Shepherd, member of Div. 498.

Roanoke, Va., June 13, killed in wreck, Bro. R. B. Adam, C. E. Div. 301.

Milwaukee, Wis., June 1, diabetes, Bro. N. Rhine, C. E. Div. 66. Brother Rhine joined Div. 66 in 1869, and has held the position of Chief Engineer for more than twenty years. He was widely known and will be remembered by the Milwaukee delegates as Chairman of the Committee of Arrangements, which for the first time in the history of the order presented no bill to the convention. For 35 years he gave his best efforts for the good of the order, a pioneer whose demise will be felt far beyond the environs of Milwaukee.

Peru, Ind., May 24, heart failure, Bro. John Hale, member of Div. 548. Brother Hale was the oldest engineer in active service on the Wabash road, and among the oldest in the United States, he having begun service with the Wabash in 1857. He became a member of the B. of L. E. in its early stages and was a part of its troubled times, and gave his personal influence toward its upbuilding, always faithful in adversity or prosperity. He lived to see it honored as a necessary adjunct to the success of both its members and the companies employing them. These pioneers deserve special tribute, having been loyal when loyalty meant jeopardizing personal interests, and we may say of Brother Hale, "Faithful unto Death."

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION.

Official Notice of Assessments 962-967.

SERIES F.

OFFICE OF ASSOCIATION, ROOM 803, SOCIETY FOR SAVINGS BUILDING, }
CLEVELAND, OHIO, July 1, 1905. }

To the Division Secretaries L. E. M. L. and A. I. A. :

DEAR SIRS AND BROS. :—You are hereby notified of the death or disability of the following members of the Association :

Six Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.50 from all who are insured for \$750, \$3.00 from all who are insured for \$1,500, \$6.00 from all who are insured for \$3,000, and \$9.00 from all members insured for \$4,500, and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25, page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries located in Canada will please remit by draft or express money order. We will not accept packages of money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

NUMBER 8.

El Yaqui.

EDITOR JOURNAL: I know there has been much written about the Yaqui Indian and Mexican wars, but I feel inclined as well as see the necessity of adding a little to accompany the illustrations.

Cajeme was a noted Indian chief who generated the greatest battle in 1884 ever fought by the Yaqui Indians. The Mexicans fought with such persistence and Cajeme resisted with such bulldog tenacity, that whole regiments were mowed

down, and as many warriors perished, and other regiments were so pressed they had to bury their artillery to save it from capture and it has not been recovered to this day, though rewards have been offered well worth the search.

The Yaquis were victorious at the start, but could not withstand the reinforcements of Mexican soldiers in the days following. Cajeme was seriously wounded and his followers were scattered and driven into the mountains and have not since been able to regain their loss by

THE OLD YAQUI INDIAN TRAIL, NEAR THE YAQUI RIVER,
On which Chief Cajeme was killed. Now used for a military road.

force of arms. Every effort was made to capture Cajeme, but he was successfully spirited away and escaped. Many Indians lived in Guaymas where the prisoners were taken, and an old squaw seeing her son among them, immediately offered to give information of Cajeme's hiding place for the boy's freedom. This agreed to, the Mexican authorities were greatly surprised to learn that Cajeme was there in the city, where he no doubt could hear the wailing of mothers whose loved ones he had slain. Yet it was true; Cajeme was among friends being nursed and was almost ready for the front. He was easily taken and marched back to his last battle-

on the Yaqui River near the three crosses. We became so familiar with some of the numerous skulls we gave them names, and used them to blaze the way to camp; also in telling of our day's experience we would give locations by mentioning a certain group of skulls.

In 1897 a treaty was signed by the Yaqui Indians and Mexican Government, if we admit "To the victors belong the spoils." All they asked for was peace. In return for this good will they would be allowed to return to their native resorts, and would be given land and all the necessaries to take advantage of the excellent agricultural resources such as the

THE SPOT WHERE INDIAN CHIEF CAJEME WAS KILLED.

ground on the Yaqui River; led back over an Indian trail, now used for a military road (picture number one) winding through the Mosquet forest with the bleached bones of a thousand warriors strewn on either side, until he came to the crosses shown above. There he was shot. The remains were taken to Corcorit for burial.

The three crosses in picture number two mark the spot where Chief Cajeme was shot; not ambushed as many writers have stated.

In 1895 the writer, with a few friends on a hunting trip, camped several weeks

Yaqui River valley is noted for, and where they wished to reside; also stock, goats, sheep and chickens. It was not known as to the number that might take advantage of these liberal terms and surrender, though it was generally supposed there were about 700, judging from the small war parties and raiders that came down into the valley from time to time in the last few years. Consequently, it was no little surprise to the government, when as many thousands came in and were registered. There was not enough land to go around without purchasing from private owners. This was an enormous

unforeseen expense, but it was secured and the contract cheerfully carried out, and the Indians were immediately allowed to go upon the land and settle according to their own wish; and in a few weeks when the brush was cleared away, you could see houses up and down the river so numerous you would think you had just dropped in on an old settlement. Indians were everywhere—and busy, for they were good workers. Perhaps there are no people in the known world that can surpass the Yaqui Indians in successfully raising good crops every year on land overflowed by the river in the rainy season. As the water recedes they plant, and with the one irrigation they raise corn, beans, wheat and garavances (chick-pea).

Though the many were satisfied, things did not go smoothly with the Indians. Tetibite, their chief, who was given the title of major in the army, and a hundred Yaqui Indians well armed as a bodyguard, under whose guardianship they were to live in peace, had them all under his charge, and had from time to time to shoot a few of the unruly ones, broncos they called them, a few who came in under the protection of the treaty grudgingly. The killing of these few irritated the good feeling of those more content with their chief, which eventually grew into mistrust, and many complaints were made against him, whose only answer was a threat of like treatment if they rebelled, but as there were but few, the many were too busy and too happy with future prospects, and for a time did not listen to the few.

Time moved on with its unerring pace, and the harvest came, and such a harvest. All were abundantly supplied. The forest was full of goats and sheep, browsing and grazing the rich buds, foliage and grasses. All that an Indian's imagination could wish to fill their hearts and souls were theirs. They were intoxicated with their creation. There was no thought of tomorrow or anything else except an endless chain of fiestas. They did nothing but eat, sing and dance. Citizens visited these fiestas with much pleasure at first, but later on they were pushed to the background and eventually ordered off the reservation. The broncos were the cause; they went from one village to another with evil forebodings, and soon had many followers; as they wandered from one village to another they killed cattle belonging to citizens,

and these made complaint to the proper authorities who requested them not to complain, as they were at peace and would soon go back to work; a time of feasting was necessary after such a harvest, but the broncos used the time to their utmost advantage, and the fiestas were transformed into war dances and councils.

Both old and young warriors who had come into the fold half starved and naked, were now full, fat and strong. They donned their beads and quills and danced to the music of the tom-toms until their blood got warm, then orated with gesture of war clubs. They were filled with a new life, as it were, with strength and hope of a new future, and not under the coercion of their chief and under military discipline. The true situation was not known by the authorities until a large body of warriors were secretly organized and ready for revolt. In fact, such was

MEXICAN YAQUI INDIANS SENTENCED TO BE SHOT.

the confidence of the government that they were allowed to retain their arms and their successful creation of more than enough for a good living increased the confidence that they would never again take chances of being driven back to the desert plain and barren mountain trails.

Having learned to their sorrow and distress that too much confidence in these wild and untamed people had been misplaced kindness, they forthwith called a council to take place in Bacum, headquarters of Tetibite. A committee of citizens was sent so as not to look too formidable, to learn their grievances and adjust them, and above all to disarm them if possible. When the committee arrived they were requested by Tetibite to stack their arms as an evidence of their peaceful intentions, then he would order his Indians to do the same. The committee did as requested, but when the Indians

INSPECTION AFTER THE VOLLEY IS FIRED.

were ordered to do likewise they immediately possessed themselves of the arms already stacked, and then turned upon the committee and killed them to the last man and took their chief prisoner. This was a declaration of war with a vengeance, with no excuse except a gluttonous intoxication of too good a thing, for there were hundreds of Indians still peacefully working here and there over the country that knew nothing about the massacre until it was reported as having occurred; though it was afterward learned they had been told that war was imminent, and if they did not fight with them and keep it quiet they would cut their soles off their feet and punch out their eyes. This horrible torture was perpetrated on many.

Such complicated and pitiful conditions as these needed much time and consideration to do anything like justice to all concerned, if at all; but time could not be considered. Like a flash of lightning over the wires came the news that necessitated action at once, for there were thousands of citizens and many Americans living on ranches in isolated places in the country which were now exposed to these wild, savage, unprincipled broncos, who cared for naught but to ravage, pillage, kill and torture.

A force of soldiers were immediately sent to Bacum to punish the guilty ones. On arrival there they found the Indians fortified in an old church. Refusing to surrender they were attacked; though the walls were from two to four feet thick they killed forty-eight and forced the rest to retreat into the

forest. In the meantime the Indians were not idle. Immediately after the massacre they sent out runners to every village with their orders for action. It meant to many the frying pan and fire; to others it was a match that set fire to the music that smouldered in their souls which exploded into a wild war whoop that sent the women and children screaming into the brush, while they with what arms they could secure headed for Bacum.

The news spread and swept over the country with the rapidity of a cyclone and caused fear and distress amongst

both whites and Indians, for none knew who was friend or foe. Over all the roads and trails leading to the forts and towns was a continuous stream of frightened people of all descriptions; men, women and children; all night long following the outbreak the flow of human stampedes continuously passed our ranch on their way to Corcorit, a strongly fortified town some twelve miles up the river. None failed to notify us of the danger of remaining. Some begged us as they hurried along to fly with them. All kinds of vehicles and beasts of burden were employed in this great rush, and pushed to their utmost efforts to get away. Oxen were gored as they poked along in their slow side-swinging gait until the blood flowed down to their feet. Burros were beaten with clubs until you could hear it a quarter of a mile away; but the burro was the only one that seemed to have no sense of fear or feeling, for beneath the blows, curses and burdens forced upon

MEXICANS AND INDIANS CONTEMPLATING THE RESULT OF INTRACIONS OF MEXICAN LAW.

him, he waved his ears sublimely, with slow short steps according to his own sweet will, and only stopping when they ceased to beat him, not because it hurts, but because they think they are tired, and time is nothing to him. The scene was laughable were it not so extremely pitiful, for there were a few mothers on foot with babes in their arms, following and screaming with fear. Being in time of peace, there were not enough soldiers to put a force in the field sufficient to be effective until reinforcements could be sent in, and as it was the beginning of the rainy season, it was a task that could not be successfully carried out until dry and cooler weather. They made the attempt several times to run them down, but when they penetrated the dense forest, made more dense by a netting of running vines, they were stricken down by heat and fever and with difficulty returned to await a more opportune time.

The Indians, on the other hand, were as immune from heat, fever and death, save by a bullet, as an Egyptian mummy. They were as completely at home as a coyote. They wallowed in the streams and lay around under the dense foliage and sweat and slept in perfect safety all day. Then during the night they would take one of the numerous trails known only to themselves, and in a single file on a dog trot, pass out into the outer world, and among the settlers, to steal, destroy and murder those with whom they came in contact, unless it be a too formidable foe; in that case they would retreat to the trail just fast enough to lead them to their destruction by an ambush, for they are experts in the knowledge of how to "fight and run away, and live to fight another day." So when he takes to his honeycomb jungle you had better wait until he comes out again and then get him.

That is about what they did during the wet season. They fortified the towns and villages, patrolled the roads, captured a few occasionally and punished them according to evidence against them. Some were shot, some were hung, and others were exported to a distant state.

When it was cold enough for a campaign, the Indians were either killed, captured or driven back into the mountains, where a remnant is still in hiding and occasionally causes some trouble. The great majority are scattered over the country, as they were before the treaty, working on ranches and in mines and in mining towns. These have been located and a close watch is kept on them; they are not molested so long as they remain at work and act as good citizens should. On the other hand, if they at any time absent themselves from their place of residence

or post of duty, they are arrested, and if it is proven they in any way communicated or gave assistance to the broncos, they are treated as spies and punished accordingly. The task has been and is still difficult for the officers in this district to weed out the guilty and protect the innocent. Under these circumstances it would be impossible to avoid doing injury to innocent ones; but they certainly did not wantonly and cruelly kill innocent people as many writers have stated; and suppose some of them did wantonly and cruelly kill? Do not all countries at times wantonly and cruelly kill, and is it any wonder when all civilized nations, as well as Mexico, drill their children with

WHAT THEY DO WITH BAD YAQUI INDIANS IN MEXICO.

staff or stick, and are told by their smiling teachers it is necessary because some day they may be called upon to defend their country, and if not told in place of staff or stick they will have a real gun with which they must kill, it is no secret to them that that is the real object; and when they volunteer or are forced into the army and an officer gives an order to charge or fire it often means death to those guilty of no crime against the law. General Sherman said, "War is hell," and so it is, but Mexico is as considerate in war as other countries are, and in saying this I believe I am doing simple justice to Mexico and its rulers.

JAMES TOWNEND, Div. 208.

SONORA, MEX., May 7, 1905.

The Bride of the Pueblo.

Tell you about an interesting incident in my career as a justice of the peace? Why, certainly, I'll be glad to. Let me see—I have had so many experiences that I hardly know which one to choose. Would you like to hear a little romance that occurred many years ago in one of the Mexican districts of San Antonio? Very well, then.

One sleepy afternoon in August, while I was sitting at my desk in the courthouse, almost nodding, a stalwart young Mexican came up to me. He told me that he had come to ask me to perform the wedding ceremony for him and a

A TREE THAT BEARS THE RESULTS OF THE EVIL DEEDS OF TWO YAQUI INDIANS.

little *senorita* who lived in the "pueblo." The pueblo, as you no doubt know, was a Mexican settlement in the vicinity of Alazan creek. Upon my consenting to his request, he led me to a "hack" which stood at the door and in a short time we were at the bride's home.

If you have never seen a Mexican jacal, you will probably relish a description of this one. It was a tiny, squalid hut, scarcely tall enough for one to stand erect in, and was made entirely of tin, which had long since become battered and rusty. There was no floor to the building (if such it might be termed), nothing—save the bare ground. In the

little room there were several pieces of wretched furniture.

Young Jose, the groom, presented me to the bride, a perfect example of the Mexican type of beauty. She blushed prettily as he led her, half hesitatingly, up to me, and when we were introduced she hardly raised her eyes.

Then I began the ceremony, using, of course, the Spanish language. As I finished speaking the words, "If there is any one present who knows any reason why this ceremony shall not proceed, let him state it now, or forever after hold his peace," a shriveled old woman with gleaming eyes, exclaimed wrathfully, "I object to this marriage."

"State your reason, *senora*," I said.

"I say my daughter shall marry *Senor Juan Rodriguez*, her cousin," the old woman replied.

"How old is your daughter," I then asked.

"Between 18 and 19," was the sullen answer.

"Then in the eyes of the law she is her own mistress and may marry whomever she chooses."

"*Senorita*," I said, turning to the young girl, who was trembling violently, "is it your desire to marry this young *senor*, Jose, or do you prefer your cousin, Juan?"

"I—I do not love Juan, *senor*. I want Jose for my husband," she answered.

"Since that is the case, *senora*," I said to her mother, "you can do nothing in this matter."

As we started to proceed with the service, the old woman seized the girl's wrist and before we knew her intention was running with her towards the creek. Jose and I followed in pursuit, but the old woman and her captive outran us and when we reached the old house, she had barred and locked the doors.

I called the young lady to a window and there, with the bride inside and the groom outside the house, started to continue the marriage service, but the old woman snatched the girl away by her hair and dragged her, weeping, from the window.

I saw I could accomplish nothing at that time, so advised the young man to bide his time, and as soon as he got an opportunity to marry the girl to come for me. I was determined that the young couple should be married, and I was equally determined that I should be the one to perform the ceremony.

A few weeks went by. Then one night young Jose rode up to my house in hot haste. "*Senor, senior*," he cried breathlessly, "come quickly. The old woman is not at home. Everything is ready. Come, let us hurry."

And hurry we did. In a few moments after our arrival at the bride's home the happy lovers were man and wife. Jose had just given his bride her first marital kiss, when the old mother came in.

When she learned what had taken place, she became furiously angry. She raved and tore her hair, and abused every one in the room. And you may be sure I did not escape my share of her abuse.

"Now, senora," I said to her, in what I tried to make a soothing tone, "your daughter is married. Your storming will do no good now. Be wise, and give your son and daughter your blessing."

In a little while she was won over and told her children to kneel and receive her blessing. She even wanted to bless me, but I very gracefully declined the honor.

I wish I might stop at this, the happiest point in my whole story, but as this is fact, not fiction, I must continue to the end. About a month after the wedding, I saw in a newspaper an account of the murder of Jose Gonzales, a sheep herder.

"Jose Gonzales!" I said to myself. "Jose Gonzales! Why, that's the young man that had such a hard time to get married. I'll wager that rascal Juan Rodriguez knows something of this."

I went to the officers of the law and told them all I knew of Juan's jealousy, and hatred of Jose. They found that he had disappeared about the time of the murder. This and other suspicious acts fixed the guilt upon him, but as he had several days' start the officers never caught him.

So this was the tragic end of a beautiful little Mexican bride's romance.—*Julia M. Barnes, in the Sanantonio Dispatch.*

An Old Elegy.

These anonymous lines were found on the walls of the above church about 1841:

Thou art crumbling to the dust, old pile,
Thou art hastening to thy fall,
And 'round thee in thy loneliness
Clings the ivy to thy wall.
The worshippers are scattered now
Who knelt before thy shrine,
And silence reigns where anthems rose,
In days of "Auld Lang Syne."

And sadly sighs the wandering wind
Where oft in years gone by,
Prayers rose from many hearts to Him,
The Highest of the High;
The tramp of many a busy foot
That sought thy aisles is o'er,
And many a weary heart around
Is still forever more.

How doth ambition's hope take wing,
How droops the spirit now!
We hear the distant city's din,
The dead are mute below.
The sun that shone upon their paths
Now gilds their lonely graves;
The sephyr's which once fanned their brows,
The grass above them waves.

O! could we call the many back
Who've gathered here in vain—
Who've careless roved where we do now,
Who'll never meet again:
How would our weary souls be stirred,
To meet the earnest gaze
Of the lovely and the beautiful,
The lights of other days.

Greer, Disciplinarian.

Roxana's dog was an ill conditioned brute. He was a surly bull pup that had never met his master and delighted in making it most uncomfortable for those who sought Roxana's company. He was

OLD BLANFORD CHURCH, PETERSBURG, VA., BUILT IN 1735.—COURTESY BRO. FRANK BELL, 401.

not often docile, even with her, but she was so proud of his blue ribbon and ugliness that she endeavored to hide his delinquencies. Nevertheless, there were times when she would not have gone near him for the world.

One day he snarled at her before Goddard Greer, and that was the beginning of trouble. Greer was a college bred athlete who feared nothing on earth except perhaps Roxana. Enraged, he seized the luckless prize winner by the collar and bore him to the hallway, where he administered a strong argument, after which he turned the amazed animal loose down the back stairs. Goddard returned to the parlor, arranging his cuffs, but otherwise as usual. He stopped short as he faced Roxana, who looked like an outraged empress.

"A truly fine performance," she declared scathingly. "There is your ring. I never wish to see you again."

"What's up? I don't understand"—

NEGROES LOADING TIES C. O. & G. RY. NEAR NEWPORT, ARK.—
COURTESY G. C. MOORE, DIV. 554.

"If you think you can abuse my dog or any animal and keep my regard you are greatly in error. It is fortunate I discovered your true character before it was too late."

An amused twinkle lighted Greer's eyes. "Do you think if I let a dog snarl and snap at you I'd be better fitted to take care of you? The beast has been hunting trouble. Come, don't let us quarrel!"—

"I shall never quarrel with you again," asserted Roxana sternly, as though depriving him of some pleasant pastime. "Can't you accept a hint that I wish to be alone?"

Greer stood his ground. He tried to laugh, but not very successfully.

"Come, Roxie, forgive me. You know the old proverb: 'A dog, a woman and a walnut tree. The more they be beaten the better they be.'"

Roxana's eyes blazed as though she already felt the suggested chastisement. "Oh, is that your theory? Well, I decline to be the woman!" And she left him to meditate on the ingratitude of woman-kind. They had quarreled before, but never with what appeared to be such finality. When Greer called again Roxana was not at home.

He wrote, and his letter was returned unopened. About a week later Roxana, having passed a day shopping and dining with her friend, Mrs. Vining, decided not to wait Mr. Vining's delayed return, though he had promised to escort her home.

"I'll jump on a car, I'm not afraid," she declared.

"But, dear, it's nearly 10. Phil can't be long now," urged her hostess. But Roxana was obdurate.

"No, I shall be all right."

There seemed to be a delay on the line, for she had stood at the corner some minutes. Then a man joined her. Without looking she knew it was Goddard Greer. She was incensed. Had he followed her? Would he have the presumption to ride on the same car? As the headlight shot into sight she decided to wait for another car rather than risk his unwelcome proximity. Greer glanced inquiringly at her, but seeing that she made no move he likewise retained his position on the curbing. Roxana tapped her foot impatiently. It was absurd! Why had he not taken his car? When the next car appeared as one of them must make a move, Roxana hailed the motorman, mounted the step

COUNTRY HOME NEAR TUPELO, ARK., C. O. & G. RY.—COURTESY G. C. MOORE, DIV. 554.

PUBLIC SCHOOL BUILDING, ARGENTA, ARK.—COURTESY C. G. MOORE, DIV. 554.

and took her seat. From beneath her lowered lids she saw Greer standing sentinel on the platform. The car was empty, with the exception of a negro, and Roxana had traveled several blocks before the conductor came to collect her fare.

She opened her purse and looked hurriedly from one compartment to another. It was empty. Evidently she had spent every penny during the shopping expedition. But there remained her wrist bag, into which she frequently dropped small change. The conductor went forward to speak to the motorman. Roxana pursued the search. In vain she emptied out her belongings from the satchel. She found no coin. Then she unfastened her coat. Surely in the change pocket she would find a nickel. But the pocket was as bare as Mother Hubbard's cupboard. The conductor returned. Roxana was frightened. It was late, and she had quite a trip before her.

"I seem to have no change," she commenced nervously.

"Allow me." Greer handed the fare to the official, who looked questioningly at Roxana.

"No! I'll get off! Please

stop!" she decided promptly. Not for worlds would she accept assistance from Greer. She had dismissed him. He had no right to intrude in any way.

Heroically Roxana left the car and walked north. She had never been alone on the street so late, and, remembering the distance, the darkness and the loneliness of the blocks, she was really alarmed. She did not fear the pedestrians she met as much as those who overtook her. She dreaded the sound of footsteps behind, conjuring up all sorts of horrors. As she hurried up the deserted thoroughfare it seemed to her that some one followed. If she hastened, the pursuing footsteps quickened. When she slackened speed, the other did the same. It frightened her, and she became breathless. With the passing minutes her terror gained. She began to run. Then the dread became

a certainty. The other one would soon overtake her. What if that negro had seen her gold purse?

Across the avenue she saw an alley. She had heard that thieves often evaded arrest by disappearing in the darkness of such places. If she cut through might not she, too, escape? Desperate, half hysterical, Roxana made a sudden rush

C. O. & G. RY. STATION, HOT SPRINGS, ARK.—COURTESY C. G. MOORE, DIV. 554.

across the road. A street car grazed her shoulder, the motorman cursed as he reversed the lever. Terrified, she had all but reached the desired shelter when a strong hand grasped her suddenly by the arm. She tried to scream, but no sound came. Lifting her eyes, her glance met Greer's, looking sternly at her.

"I guess that will do for one night," he remarked coldly. "Come over to the drug store while I phone for a cab."

Completely unnerved, Roxana followed. The reaction had been sudden. She tried to remember what they had quarreled about, but could only feel relief in his presence. Greer ordered the cab, then went outside to wait.

"Come," he commanded tersely on its arrival.

Gratefully Roxana obeyed. Then as he was about to close the door she found her voice. "Don't leave me."

"I've no intention of doing so." And he mounted by the driver. When they reached her home Roxana's eyes were suspiciously red.

"Well?" said Greer. The bull pup sniffed respectfully at his boots. Greer stooped and patted him on the head. "The dog forgives me"—

"Then its mistress can do no less," she admitted.

"A dog, a woman and a walnut tree"—began Greer, teasingly.

"Hush, hush!" whispered Roxana, with her hand on his lips. "You know I never really believed"—

"Of course not," he agreed promptly.

Then, as his arms tightened about her, "But, oh, Roxie, don't let us play that game again."—*B. Hayden.*

A Lackawanna Lochinvar.

It was Eager's first vacation in ten years, and he had started out with a deliberate determination to make the most of it. None the less, when he went back into sleeper No. 2 to gather up his belongings for the stop at Buffalo, he had a feeling that fate had been distinctly unkind to him. Miss Brazelton had been his fellow passenger all the way across from Omaha; and it was only at breakfast in the dining-car, on this second morning, that he had become aware of the fact.

"That's what I call beastly hard luck!" he growled, jamming the loose things into his suit-case with an utter disregard for his usual orderly habit. "It was the chance of a lifetime—a chance that I'll never get again if I live to be a hundred. And I missed it!"

Not to miss anything else, he hurried through his own preparations for debar-

ation, and so earned a minute or two to go back to her in sleeper No. 1.

"It's rather an eleventh hour offering, Miss Brazelton, but can I be of any assistance to you here?" he asked. "I believe you said you were not going through?"

"Oh, no, thank you," said Miss Alicia, smiling sweetly up at him. "I am to stay over until Tuesday morning with Aunt Van Alstine, and there will be some one at the station to meet me—Cousin Percy, perhaps."

He wondered if she added Mr. Percy Van Alstine's name with malice. Out in Red Mountain, Wyoming, she was the reigning princess, and she took tribute from all; not because her father, the copper king, owned that particular portion of the earth and the reversion of it, but in right of her wit and beauty. Eager had built the railroad which had opened up the copper king's bonanza, but he did not presume upon that. He was well aware of the social distances lying between a mere builder of railroads and Jasper Brazelton's daughter—if Miss Brazelton cared to insist upon them. But he tried manfully to forget the Brazelton millions when he said:

"I'm awfully sorry I didn't know you were on the train. To think that we've been riding within a car-length of each other since yesterday morning!"

She made a bewitching little mouth at him. "Isn't it perfectly harrowing! And now you are going on to New York—"

"No," he hastened to say; "I'm stopping over, too. It's a vacation trip for me—my first in ten years—and I am going to do it thoroughly. There is a little old worn-out farm up on the north side of Ontario where all the Eagers began; I mean to run over and have a look at it."

"Oh," she said; "I wish I had some reminiscences."

He laughed. "I've promised myself a lot of them on this trip. After the Canadian episode I shall come back here and make a daylight run over my old home road, the Delaware, Lackawanna & Western. You didn't know I started out as a plug operator, studying engineering on the side, away back here in the effete East, did you?"

She made room for him on the seat beside her. "Sit down for the few minutes we have left," she commanded. "I am beginning to think I don't know you at all, Mr. Eager. Are you really the person they call 'The Big Boss' out on the Red Mountain Extension?"

He laughed again. "I suppose so; only I'm trying to forget it for a few days. There isn't much room for sentiment in keeping that depraved piece of track

alive, summer and winter. But now I am going to turn back some of the leaves and be young and irresponsible for a little while. Don't you envy me?"

"I wish I might be there to see," she said, enthusiastically. "You'd never be able to give me little shivers of awe again, as you did that day when I wanted to ride down Red Mountain on the engine and you wouldn't let me."

"I wish you might," he echoed; and then the train came to a stand in the station, and he took her to the entrance to turn her over to Mr. Percy Van Alstine, who was waiting with his automobile, purposely dodging an introduction to that gilded son of fortune.

This was how it came about that

trusting Van Alstine's present opportunities with his own, and the contrast threatened to spoil his holiday.

All things considered, he was in no very joyous frame of mind when he went to the Buffalo station on the Tuesday morning to take the train for New York. He was a few minutes early, and while he was glancing over his copy of the *Express* and waiting for his train call, there was a bustle at the entrance, a soft *frou-frou* of feminine draperies, and he was suddenly accosted by a well-groomed little lady who was calmly surveying him through a pair of ivory handled eye glasses.

"H'm; you are Mr. Percy Van Alstine's man, I suppose," she said, with

Eager's Canadian side trip was marred by a picture of the New York yachtsman and man-about-town helping Miss Alicia up to a seat in the tonneau of the big Panhard. He knew the Van Alstines by hearsay. They were relatives by marriage on the Brazelton side, and they were made of money; at least, that is the way Eager phrased it. Percy, the son of the railroad president, had visited the Brazeltons at Red Mountain, and his good-natured contempt for all things western remained a proverb in the copper camp. Rumor had it that Miss Alicia meant to keep the copper millions in the family by marrying Percy. Eager refused to believe this, but he could not help con-

trasting Van Alstine's present opportunities with his own, and the contrast threatened to spoil his holiday.

Percy has found, to be sure! I understood him to say that his new paragon was English; but that bow was certainly Louis Quatorze French."

"Y—yes," murmured Alicia, struggling desperately with her emotions; "or— or Wyoming French, as we'd say at Red Mountain. Isn't he fine looking?" "Much too fine looking for a servant, I should say. Why, he must be six feet, and Percy would have to take two steps to his one." The Van Alstines were all small.

Alicia pinched herself furtively. She had not felt so utterly and abandonedly schoolgirlish in years. By a supreme

prompted the chaperon— "Will Miss Brazelton also have a cup of tea?" he asked, gravely; and when he was gone to fetch it, Alicia had symptoms of a violent return of the emotions.

"He is certainly a treasure," sighed Miss Van Alstine, sipping her tea contentedly. "So deferential, and— and so, you might say, anticipative. You can hardly think your wish before he has set about gratifying it. He says his name is James, but I can't begin to make him tell me where he has been in service. I'm sure it must have been an earl's household, though, at the very least."

"Thank you—James," said Miss

ENGINE NO. 3, DEERING & SOUTHWESTERN RAILWAY, BRO. W. H. GREER AT THE THROTTLE.

effort she managed to suppress the wild desire to shriek when Eager came deferentially to put them on the train; but once safely in the parlor car she fled to the retiring room to have it out with her emotions. To think of the dignified, manmastering chief engineer of the Red Mountain Extension posing as her aunt's lackey!

When she emerged, the train was swinging along on its way to Mount Morris, and Eager was bringing Aunt Van Alstine a cup of tea from the buffet. "Will Miss—er—a—" "Brazelton,"

Brazelton, when he came with the second cup of tea, and her eyes were dancing.

It was just then that the train conductor came through. For one moment he stared open-mouthed at the big figure standing at the back of Miss Janet's chair. Then, with a mighty hand-grasp: "Why, Jim, old man!"

Eager hurried him off out of earshot, and Miss Van Alstine put up her eyeglasses.

"How very odd!" she murmured.

"Isn't it?" gasped Alicia. "Do you suppose the conductor has also been a

member of an earl's family—below stairs?"

When he could break away from the conductor, Eager came back to ask if there was anything else he could do for the ladies; and being given a recess by Miss Van Alstine he disappeared. From her post at the window Alicia saw him dropping off at each station to be welcomed with shoulder clappings and hand wringings by the men of his old service, and it moved her curiously. Ten years intervened, so he had told her, and it was quite impossible that he should have kept up his connection with his old time work fellows. Yet the welcomings

After which he disappeared, as a servant should; and Miss Brazelton pouted prettily and thought the play had gone on long enough.

After dinner Miss Van Alstine composed herself for a nap, and Miss Alicia changed her seat and waited. He came, after the proper interval, and she motioned him to a seat in the reversed chair opposite her own.

"Don't you think you have kept it up quite long enough?" she asked.

"The little comedy, you mean? It was none of my play writing. Your aunt merely took me for granted, and I couldn't do less than help her out, could

DEERING & SOUTHWESTERN RY., CONSTRUCTION THROUGH SINK LANDS IN MISSOURI.

—Courtesy Bro. W. H. Greer, Div. 595.

were hearty and unfeigned, and out of them she picked a new point of view. Beneath the outward and conventionally social shell, which was all she had ever seen of him, there dwelt a man in the deeper, truer sense of the word; a man who could make friends and keep them. She had never known a true "man's man," and the glimpse was very satisfying.

When the dining car dinner was announced, Eager was punctiliously at hand to take his charges into the car, to see them seated, and to bespeak their service.

"I? But tell me, how did it happen?"

"Oh, it was simple enough. Cousin Percy—Mr. Van Alstine—had to go to New York last night; some yacht club meeting, I believe. He was to leave his man to go down with us today, and the man was to meet us at the station. Just why Aunt Janet should pounce upon you—"

"That's easy," interrupted Eager. "I doubtless looked the part. Have I played it decently well—for an understudy?"

"So well that you'll have a lot of trouble in convincing Aunt Janet that

you are not really the prince of serving men, and an ex-member of an earl's household, I'm afraid."

He laughed as one whose troubles are light.

"Why must I try to convince her?"

Miss Alicia drew herself up with a little air of wounded *amour propre*. "Don't you think you owe it to me?"

That was a point of view which had not occurred to Eager. The thought that she cared warmed him suddenly. Still, he would have temporized; was temporizing when she cut him short.

"No, you must tell her, or there will be consequences. Mr. Van Alstine will leave New York on the 1 o'clock train and come out to meet us—somewhere about Delaware Water Gap, isn't it? And then things will become impossible all at once, won't they?"

"Rather," he admitted; then he had a flash of inspiration, or at least of premonition. Van Alstine's air of proprietorship, his solicitous care for his aunt and Miss Brazelton, his doubling out from the city to have a few hours en route with them, the Red Mountain rumor of his wooing—all these things pointed to one of two conclusions; he either had his answer, or he was expecting it *pronto!* as the Red Mountaineers would phrase it.

Eager glanced at his watch. It was 2:30. The train would reach Stroudsburg, the farthest westward point Van Alstine could make at 4:51. Therefore he, James Eager, had two hours and twenty-one minutes in which to make up all the time lost since it had begun to dawn upon him that life without Alicia was going to be a barren desert. He gathered himself for the race. If Miss Van Alstine would only be good enough to sleep soundly and long!

"Would you like to go out on the observation platform for a while?" he asked.

Alicia said yes, and he got two of the porter's little camp stools and led the way, edging past Miss Janet's chair as if it held all the sleeping babies in Lackawanna County.

Happily, the rear platform was otherwise unoccupied; but now the man who had never found himself lacking words to command or persuade other men, discovered that he had suddenly become tongue-tied. So they sat in such silence as the drumming wheels permitted, looking out upon mile after mile of the beautifully aligned track as it reeled away into the perspective of the golden summer afternoon; and when at length speech came to him it was the speech of the engineer instead of the lover.

"Do you know enough about practical railroading to appreciate this, Miss Brazelton?" he asked, wishing from the bottom of his soul that he could think of

something more pertinent to the unspeakable subject.

"I suppose I don't," she admitted. "I only know when I'm cozy and comfortable."

"You will never be more comfortable on a railroad train, I think," he said, musingly; adding, as an afterthought: "not even on the Red Mountain Extension."

She smiled encouragement. "I'm sure you couldn't say more than that for the D. L. & W.—loyalty itself couldn't say any more. But really, Mr. Eager, isn't one railroad a good bit like another?"

It was a terrible temptation to go off at a tangent among the technical details—to prove by length and breadth why some roads were exactly like others, only a great deal more so. But a furtive glance at his watch put that fire out with a blink. Thirty-one minutes of the precious interval were gone, and he had not yet made a beginning.

"For pity's sake don't make me talk shop!" he entreated. "I've lived it so long that it has become second nature; an ingrained habit."

She looked up quickly. "It is a good habit, isn't it?—the working habit, I mean. I like men who do things, and I haven't known very many of them."

Eager thought of Mr. Percy Van Alstine who was a conscientious idler, and took courage.

"Do you really mean that, Miss Alicia? But I'm afraid a working man wouldn't make a very satisfactory husband, from your point of view," he ventured.

"What makes you say that?" she demanded. He was not prepared to go very deeply into details, with time pressing so sharply, and Aunt Van Alstine likely to awaken any moment and put an end to the *tete-a-tete* between her niece and a serving man. But he blundered through some sort of an outset of the facts as they appeared to him: the man's work must necessarily divide time with sentiment; he might love in every fibre of him, but there would be times when he would have to break away from the charmed circle and go out to do battle with men and things.

The sweet lips were almost scornful when he had made an end. Miss Alicia was her father's daughter; and Jasper Brazelton had fought his way up from mediocrity to the million mark by sheer force of character, and an unlimited capacity for hard work.

"How little you know about women!" she exclaimed. "Are we, indeed, so contemptible in your eyes as to figure only as spoiled children to be petted and indulged and amused? Has it never occurred to you that the vicarious ambition of a wife

for her husband's success might be as strong and enduring as his own ambition to win that success for her sake?"

Her retort braced him like a cool blast from the hills. How miserably he had been misjudging her! Her words bit deeply. He had been thinking of her as a child to be petted and loved and shielded: and instead she was a woman, pure, true and noble, unspoiled by her father's millions—untouched by them in any part. His love caught instantly among these new and unsuspected fagots and flamed up like a beacon fire on the heights.

"Alicia!" His voice was low and impassioned, and there were words enough now to come torrent-wise from heart to

he was so tall and big and masterful that she did not feel equal to attacking him on his feet.

"I am greatly disappointed in you, James," she began frostily. "I understood you came to Mr. Van Alstine well recommended. I should like to know in what service you learned to place yourself upon terms of equality, not to say of intimacy, with the young ladies of the household?"

A slow smile wrinkled about the eyes of the young man under fire.

"I hope you didn't scold Miss Brazelton," he said, mildly.

"We will leave Miss Brazelton by name out of the conversation, if you please,"

AN INTERESTING STUDY, A MISFORTUNE IN WHICH NO ONE WAS HURT. But the margin of safety was narrow as will be seen.—Courtesy A. I., Div. 435.

lip. But before he could say one of them: "Alicia" said an austere, and icily austere, voice above and behind them.

They both started guiltily, and Alicia rose with more haste than dignity. Her aunt was standing in the car doorway, and there was plain horror in her face.

"James," she said severely, "I will thank you for a cup of tea." And when he was gone: "Alicia, my dear, I am positively—shocked!"

Miss Brazelton was invisible when Eager came from the buffet with the cup of tea. Miss Van Alstine took it gingerly and motioned to the vacant chair in front of her. There were things to be said, and

declared Miss Van Alstine, loftily.

"Oh, but we can't, don't you know," he protested, with imperturbable good-nature. If you had given me one minute more I should have asked her to marry me."

If he had taken a bomb from his pocket, lighted the fuse and laid it in her lap, Miss Van Alstine would not have shrieked more sincerely. To be sure, it was a decorous little shriek, not calculated to alarm the car; but it was none the less eloquently expressive.

"Mercy on us!" she cried. "Is the world coming to an end?"

"We are credibly informed that it is,

in the fullness of time," he remarked; but she went on without heeding him.

"I'm glad your — your master is coming to meet us!" she gasped. "He will know what to do with you. You really ought to be arrested!"

Eager laughed outright. The little glimpse Alicia had given him of her true self made him very daring. He looked at his watch. In twenty minutes the speeding train would reach Stroudsburg, and he knew the service of his old line well enough to be sure it would be on time to the second.

"Listen a moment, Miss Van Alstine," he said, quietly. "A few hours ago you

"She — she dared you? — a — a serving man?"

He laughed again. "You forget," he insisted amiably; "I am Mr. Percy Van Alstine's valet only in your imagination. Permit me," and he gave her his card.

She examined the bit of bristol board through her eye-glasses as if it might be a thing explosive. The address, "Red Mountain, Wyoming," explained something, but not all.

"So you knew Alicia out West?" she said, and her tone was still unfriendly.

"I have known her ever since she went home from Bryn Mawr. I built the railroad to her father's mines," he rejoined.

ENGINE 501, MARRISSEY, FERNIE & MICHEL RAILROAD, B. C.

Bro. W. C. Cavanaugh, Div. 241, Engineer; John Garbutt, Fireman; Fred Clifton, Conductor; A. Clark, Brakeman.—W. C. C.

did me the honor to place yourself and your niece in my charge for the journey to New York, under the impression that I was your nephew's serving man. I suppose I should have declared myself at once, and I apologize most heartily for having done so. But Miss Alicia dared me —"

Now there is a limit to the number of shocks which even a well-balanced chaperon can endure in a given number of minutes, and Miss Van Alstine hastily gave him the tea-cup to keep from dropping it.

"Well," she said; "my niece is as good as engaged to Mr. Percy Van Alstine. I still think you have taken most unwarrantable liberties, Mr. Eager."

He suddenly became aware that Alicia was standing at one of the broad windows in the observation end of the car, and he rose and bowed.

"If you will excuse me, Miss Van Alstine, I will take another. My time is growing rather limited. And I thank you for that word 'as good as.' I was a little afraid I might be too late, after all." Whereupon he gave the cup and saucer to

the porter and went openly to join Miss Brazelton.

"Will you come out on the platform again, just for a little while?" he begged. "The—the scenery is very beautiful from this on down to the Gap."

She went with him, not unwillingly as he remarked with thrillings of joy, and together they stood under the "umbrella roof" looking back upon the reaches of the track swinging rhythmically to right and left with the sweeping curves.

"In ten minutes we shall reach Stroudsburg and Mr. Van Alstine," he said, when he had given her time to recover her poise. "By all the rules of the game, I suppose I ought to give him his next move,

shall do bigger things and better things, I hope."

She gave a quick glance over her shoulder at the plate glass window behind them. "Do you suppose any one is looking?" she murmured.

He bent quickly and took her face between his palms.

"I don't care if all the world is looking," he asserted; but only a track-walker, stepping back to his place between the rails on the passing of the train, saw the sentimental little tableau on the rear platform of the parlor car.

"See there, now!" he said, appreciatively. "Well, well; I was young wance, meself. 'Tis little the gran' scenery av

TRAIN SHED, UNION DEPOT, TORONTO, CAN.—C. L. DEO, PHOT.

but it isn't in human nature. I love you, Alicia; that's the short of it. There wouldn't be time between here and New York to tell it the other way."

She made a charming little face at him.

"In spite of my father's money?"

"Leave your father's money entirely out of it. It is you—you—you, Alicia."

She drew a long breath that ran into a little shuddering sigh of contentment, and for a purely imaginary lurch of the car slipped her arm through his.

"And you won't be afraid that I shall spoil your work?"

"You will be my inspiration, dear; I

the Wather Gap'll be troublin' thim two!"

Truth to tell nothing troubled them from that on; neither the qualified approval of Aunt Janet, which they instantly sought, nor the advent of Mr. Percy Van Alstine, promptly on hand and waiting for the train at Stroudsburg.

Yet it is only fair to say that Cousin Percy sat upon his disappointment like a man and a gentleman, even going the length of offering the "Nautilus" for the wedding cruise. But Alicia laughingly declined.

"No," she said; "we are going to make our wedding journey over the D. L. & W.,

stopping off at all places where Mr. Eager used to dispatch trains and things, and I am to meet all his old friends. I can't think of anything more delightful than that."

"By Jove, now! that's the most original idea for a wedding trip I ever heard of," said the defeated one.

But it was precisely what they did.

FRANCIS LYNDE,
(St. Elmo Station) Chattanooga, Tenn.

Blackmail.

BY H. B. M. WATSON.

"I never give my photographs away," said Miss Moreton, primly, the dimple displaying itself almost ostentatiously in her cheek.

"But I am an old friend," said I. "Surely an old friend doesn't count?"

"It's not the same thing," said Miss Moreton, vaguely. "Of course, it would be different if——" She ceased, apparently not knowing how to go on.

"Oh, very well," said I, with a sigh. "At any rate, I've got something to go on with."

She glanced at me swiftly, and then looked down the room, where the people were chattering.

"If one gave to one, one would have to give all," she said, oracularly.

"I'm thankful I have that snapshot, at any rate," I said.

"Snapshot?" she asked, looking at me suspiciously.

"Why, yes," said I. "You remember, in the boat at Goring last July. I took one of you then."

"I have no recollection of it," she said, coldly.

"It was rather a good one, but, of course, not well developed, and, naturally, not one of you at your best. But, at any rate, it's something."

"What sort of one was it?" she inquired, with interest. "You've no right to take photographs without telling one."

"On the contrary," I replied, "it has been held in law that you may take what photographs you will; only you mustn't sell them. I'm not going to sell yours."

"What is it like?" she inquired, ignoring this.

For answer I dived into my frock coat pocket. "I have a print here," I said. "I've not fixed it properly, but you can get an idea. It was when you were laughing at a story of Travers."

Miss Moreton almost plucked the photograph out of my fingers, and examined it. "How abominable of you!" she said.

"It's perfectly ridiculous. Good gracious, I don't open my mouth like that!"

"It's a pretty mouth," said I.

"It's a detestable grimace, and all out of drawing," she declared, with visible annoyance. "Amateur photography is all like that. People have no right to be let loose with cameras they don't understand."

"It's all I have," I pleaded. "If you would let me have a real one of you, I would willingly sacrifice it."

Miss Moreton appeared to hesitate. "Certainly not," said she at last, with decision. "And you must please destroy these."

"That's the only print I have," I said, meekly.

She eyed me for a moment, and then suddenly stooped and thrust it into the fire.

"I'm glad to hear it," she said, shortly.

I made no attempt at rescue, but watched the poor thing burn.

"Then you are going to let me have one of yours?" I said.

"Indeed, no such thing!" she replied, and walked off towards a group who were discussing Mr. Beerbohm Tree. I sat down beside a young lady in furs, and entered into a disquisition on motor cars, of which I knew nothing. Presently, Miss Moreton passed us.

"Do you prefer a Panhard or a Mercedes?" I asked her. She paused. "I don't know the difference," she said.

"Oh, do you motor?" asked the young lady in the fur coat, with enthusiasm.

"Miss Moreton rows," said I. "She punts very well, but she's not a first-rate hand with the sculls."

"Indeed?" said Miss Moreton to me distantly.

"At least she's unconventional in her style," I went on. "Sometimes she catches 'crabs.'"

The young lady in the fur coat tittered, but Miss Moreton looked at me with displeasure.

"I don't pretend to all the accomplishments," she said.

"Nor do I," I replied. "But I can take a sort of photograph. I have one of a 'crab.'"

She was going on, but hesitated. It was I who rose and bade my motoring acquaintance good-by. I walked towards my hostess and the door, but ere I reached the former I found Miss Moreton at my heels.

"What do you mean, Mr. Mallison?" she asked quickly. "Why do you talk about 'crabs' and photographs?"

"Oh, I only remembered that I took another snapshot last year," I replied.

She was silent for a moment, and then, "Please explain," she said.

"Don't you remember when you went over and Travers picked you up?" I asked. "I was just going to take a beau-

tiful picture of your head, and it turned out—"

"Yes," she said, now quite rosy-red "and what did it turn out?"

"Oh, it was a picture of your heels and your—"

"How abominable of you!" she interrupted, hastily.

"But you can see your head also," I assured her. "Your falling—I mean, leaning—backwards, with a terrified but fascinating smile on your face, and your skirt is—"

"Of course you will destroy it at once," she interrupted with her former haste.

I demurred. It really is a very good

handsomely flushed now, and her eyes bright with anger. "It's monstrous that I—that one hasn't any command over one's own—own person."

"You hadn't any command at that moment," I said.

She cast me a fiery glance and bit her lip as if on something she had decided to suppress. I think she determined at that moment to try diplomacy.

"Tell me," she said, in a milder voice, "tell me exactly what it's like, and how I'm—how I came out, I mean."

"Well, you know what happens when you catch a 'crab,'" I said, evasively.

"Yes," she said, doubtfully. "You

ENGINE 822 PACIFIC TYPE LOCOMOTIVE, C. R. I. & P. RY.—Courtesy Bro. J. Smith, Div. 60.

one of you; at least, of part of you. If you could see it—"

"I don't want to see it," she broke in. "You must destroy it at once."

"But it's the only thing I have of you, now that you've burnt that," and I indicated the fire.

"You've no right to any of me. I don't see why you want one at all," said Miss Moreton, hotly.

"I don't say I have any right," I replied, meekly; "but I'm going to stick to what I have. After all, it's mine. I took it."

"It's perfectly disgraceful of you, and—and—the law," declared she, her face

mean—am I—do I—?" She hesitated almost wistfully.

"Well, you do, rather," I answered reluctantly.

"Mr. Mallison," she said earnestly and very persuasively, putting a hand on my arm, "you will destroy it, won't you?"

It was pretty; it was pathetic; it almost succeeded.

But I hardened my heart. "On one condition," I said, slowly, "and it's a very easy condition. I might make much better terms."

Miss Moreton flounced away indignantly, and I proceeded on my way to her mother to make my adieux. The room

was fairly empty now, and I was following a little knot of departing guests into the hall when I heard my name reiterated earnestly and softly. I turned.

"Mr. Mallison, I wish you would stay just one moment," said Miss Moreton. "I—" She hesitated, glanced about the emptying room and then moved towards the back of it, where a little antechamber gave upon it through wide folding doors. I followed.

"You really mean what you say?" she asked suddenly, confronting me. I said that I did. "Very well," she said bitterly. "It's the most atrocious conduct of you, and I'll never forget or forgive it. But—"

She angrily tossed open an album on the table and at last stopped. I bent down and a beautiful face on fair shoulders, crowning a pretty evening gown, looked at me with a charming smile. I looked at my companion. I wished she would smile like that at me, but even in her anger she was wonderful. Her gaze expressed coldness, distance * * * contempt.

"It's a most magnificent likeness," I breathed fervently. "It's—it's divine."

"It's said to be good," said Miss Moreton, indifferently.

"It's the most beautiful picture I've ever seen," I said.

"Do you think so, really?" asked Miss Moreton.

"It's your living, breathing image that looks out on me," I continued.

"They do take very well, as a rule, those people," said Miss Moreton, affably.

"You can't wonder that I want it!" I exclaimed. "I'd give anything for—"

"Well, you can take it, if you'll give me your word to destroy the—that other thing," said she, in a not unfriendly voice.

I promised, and she graciously helped me to extract the photograph from the album. I buttoned it safely over my heart in my pocket, but Miss Moreton, having completed the bargain, of course, took no more interest in the matter. She was gazing down the room at someone else. But a thought occurred to her.

"You haven't shown that—that absurd snapshot to anyone?" she asked anxiously.

"Oh, no," I said. "I've never printed it."

"Oh!" she said; "but you said—"

"Well, you see, I could make out some patches and a foot, but I broke it, unfortunately, as I was developing it."

Miss Moreton's mouth was firm. "Mr. Mallison, give me back that photograph," she demanded.

"But I'm going to finish the breakage," I protested.

"Give it to me back at once," she insisted, advancing on me. I was driven to

bay. Besides, the rest of the room might hear us.

"I'll give it back if you'll give me the original," I said, boldly, but quite low.

Miss Moreton paused; she was taken aback. Her face flushed warmly.

"I—you—oh!" she stammered. "Mr. Mallison!"

"Is it a bargain?" I asked anxiously, holding out the photograph towards her.

She hesitated, the pretty glow still on her face, and she was not looking at me.

"You are—oh, you are dreadful!" she said with a tiny, troubled laugh. "But, in that case, perhaps you'd better keep the photograph."

"On second thoughts, I'll take both," I said.—*London Sketch.*

Labor Unions and Trusts Compared by a Minister.

If Lawson and Folk and Steffens and Miss Tarbell keep up the race, the only clean, respectable institution left in the country will be trade unionism.

By the time Miss Tarbell got through with the Standard Oil Trust, it hadn't a shred of decency left. The criminal word "plunder" was written all over it. She proved it to be a gigantic pyramid of wreckage. The popular opinion of Rockefeller today is not that he is an organizer but a conspirator.

Where she dropped the story Lawson has picked it up. He doesn't write from the outside, like Miss Tarbell. He is an insider, and knows more about the tricks of monopoly. According to him the whole gang of Wall street millionaires, from Morgan down to Addicks, is nothing but a crowd of "sure thing" gamblers and gold brick swindlers.

Even the semi-gods of insurance, who have been sitting on the topmost peak of respectability, wearing halos and pretending to be protectors of widows and orphans, are accused of being runners of Wall street gambling concerns.

Folk and Steffens are busy painting the word "graft" on the leading business men of American cities. If what they say is true our corrupt politicians are only the hired burglars of our chamber of commerce. They are sent into public offices to hand out special privileges just as a boy is sent into a back window by a housebreaker to hand out the silverware.

Now, what do you think would happen if all those charges had been against labor unions? Give Gompers the reputation of Addicks, and how long would he be at liberty? Give John Mitchell the black record of John D. Rockefeller, and what would the coal trust do to him in its righteous wrath?

If what is now being proved against the beef trust were proved against the American Federation of Labor, Congress would hold a special session and wipe it out of existence. Every pulpiter in our forty-seven States would roar his indignation, and the W. C. T. U. would send in petitions against unionism ten miles long.

Suppose that the criminals who were dug up in St. Louis by Folk had all been trade union officials, do you think that they would have escaped punishment so easily? Every one of them would be today behind the bars.

Suppose that the death-ship "General Slocum" had belonged to the Shipbuilders' Union, don't you think that someone would have been punished for those 1,020 deaths? Suppose the Iroquois Theater had belonged to the Carpenters' Union, do you think such a tragedy would have ended up in a general whitewashing?

The fact is that trade unionists have to live up to a higher standard of morality than any other class of citizens. They are under the law, not over it like the trusts and the judges and the lawyers and the politicians. If they make one slip, down goes the net and they are caught. You may be sure that when labor leaders are at large, it is because they have a right to be left alone. The same cannot be said of any millionaires.

Do you know that union officials handle millions of dollars every year, yet how seldom do you hear of any dishonesty? The Moulders' Union alone last year had an income of over \$650,000, and everything right to the penny.

The present treasurer of the Bricklayers' Union has held the job since before most of the members were born, and never had a cent go astray. These are not exceptions, but simply show the general rule.

In money matters the record of trade unionism is better than that of the banks or the insurance companies. Did you ever hear of a union losing its funds by backing a Wall street game? Did you ever hear of one labor organization that lost money on "Steel Preferred" or "Amalgamated Copper?" Did you ever hear of a trade union capitalizing itself at \$50,000,000, and selling the stock to its members? Can you name one prominent labor leader who has ever been caught in such dirty and disreputable finance as the shipbuilding trust, promoted by that anti-unionist, Charles M. Schwab?

In all the probing of political corruption that has been going on in the past few years, have you heard of any trade union that has been bribing legislatures and stealing franchises? Not one. There isn't a church in the United States that

has a cleaner reputation in this respect. Have you even read of a divorce scandal in true union circles?

There is no cleaner, or more honorable piece of cardboard in the country than a paid-up union card. No corporation charter or professional diploma can compare with it. The man who belongs to a union can hold his head high and say, "I belong to a straight crowd of men, who want nothing but what belongs to them."

Both mentally and morally the skilled worker of America can take his stand with the best. Nothing but modesty keeps him down. A few days before he died, John Swinton, that noble champion of wage-workers, said in a public meeting:

"I am free to say, after mingling for a lifetime with men of all sorts and conditions from Wall street and Herald Square to the Santa Fe River and Pike's Peak, that the workingmen's union contains plenty of members whose mental caliber is equal to that of the most prominent men in business or finance."

I am not saying that labor leaders are stained glass angels, or that trade unions never make mistakes, and never do wrong. But I do say that when you compare unions and their leaders with capitalism and its leaders, unionism will take the prize from any fair-minded jury. And long after capitalism has toppled to its fall, unionism will be on top of the earth and carrying on better business in a better way. That's all.—*Rev. Herbert N. Casson, in San Antonio Weekly Dispatch.*

Amalgamation in England.

The Associated Society of Railroad Servants, which includes all classes from trackmen to engineers, and the Associated Society of Locomotive Engineers and Firemen are having a rather heated discussion over the subject of amalgamation, the former evidently desirous of absorbing the latter, but the engineers would have all the engineers join the A. S. L. E. & F. and federate whenever that was necessary to produce results. The *London Railway Review*, representing the A. S. R. S., has presented seven leading articles contending for amalgamation, in which have appeared some sharp paragraphs which induced sharp answers from the A. S. L. E., an evidence that they are wide apart in some things, and the surprising information given in the debate is the number of engineers in proportion to the whole which belongs to either society.

The *Railway Review* of June 16 contains the following:

THE A. S. R. S. AND ENGINEMEN.—VI.

IN the discussion of any question it is necessary to find some common ground of

agreement; some fundamental point from which it is possible to start together; some solid foundation on which to build. Is it possible to find such a foundation in the present case? We believe it is. That common ground may be found in the fact that there are 27,000 enginemen in the United Kingdom who believe in organisation, and who have given effect to their faith by joining one or other of the two societies to which they are eligible. That is a great and important factor in any discussion of the conditions and prospects of Trade Union organisation for this grade. Twenty-seven thousand organised out of 55,000, or nearly 50 per cent., and most of these, doubtless, those in the higher and more responsible positions. But it is possible to carry the agreement still further. These 27,000 men ought to be in one society. Mr. Fox says so. A writer in the *Journal* whom we quoted last week says so. And we say so, too. They ought to be in one society. We say it with all the earnestness, with all the persuasiveness, of which we are capable. Being in two societies spells division, impotence, and despair. Being in two societies is responsible for the want of progress which has marked enginemen and firemen during the last 25 to 30 years. It is responsible for the actual retrogression which has taken place on many lines, and especially on the Great Western and London and North-Western. It is responsible for the impotence of the men in face of the very serious dangers which are now taking place on our railways today, and against which—so long as the men are divided into two societies—it is difficult to contend. It is not the principle of combination which is at fault, but the want of it. Imperfect organisation, while better than nothing, is not and cannot be so effective as perfect organisation. "Divide and conquer" has ever been the policy of the employer, but here it is the folly of the men which gives them their opportunity, which wantonly and wilfully destroys the effectiveness of their Trade Union faith. On this point, then, we are all agreed—all loco. men should be in one society. But which society? That, we submit, is a most important question, and one not so easily settled. It is where the difficulties have always arisen, largely, we fear, because the subject has not been approached in the dry light of pure reason, free from prejudice and from rancour, and with that desire to put first the advancement of enginemen, which should characterise every consideration of so important a question. Candidly, we would make every reasonable sacrifice and concession to secure a really satisfactory settlement and amalgamation of the forces of enginemen, but we think a section-

al union a mistaken idea, and we hold that we have history and experience on our side.

Last week we attempted to show that sectionalism had failed, and we gave that as our main reason for opposing the attempt of the Associated Society to capture the enginemen members of the A.S.R.S., either a few at a time or *en bloc*. As we have already stated, it is our firm belief that all enginemen should be in one union. There are two ways in which this might be brought about, and only two. Either the A. S. R. S. enginemen must leave it and join the Associated, in which case they would have to forego the whole of the benefits for which they have paid, and

should go over in a body and take their proportion of the funds. That is a still wilder suggestion, and one clearly bordering on the impossible. All these suggestions, approaches, attempts to secure that the locomotive men shall leave the A.S.R. S. and go over to the Associated Society are no doubt made in good faith, and considered to be both sound and feasible plans for uniting enginemen in one society. But they lack any real grip with the essential facts of the case. It is impossible for the loco. men to leave the A. S. R. S. in a body, except at immense sacrifice, at great risk to themselves, and with the more than possible likelihood of

ENGINE NO. 15, PHOENIX & EASTERN RY. [A. T. & S. F.] AND EXCURSION TRAIN.

Bro. Waddington of 647; Engineer, standing on pilot; Traveling Engineer Harry Elliott, to the left, Conductor Buckley to the right.—Courtesy W. W.

all the advantages to be derived from membership therein, or the Associated Society must join its forces to the Amalgamated Society, in which case its members would lose little or nothing and gain much. One writer in the *Journal* suggests that it would pay the other grades to transfer the locomotive members of the A. S. R. S., but the only way in which he suggests they would obtain payment is by the reflex activity which a united enginemen's society would bring to bear upon their conditions. A one-sided bargain surely. Another suggests that loco. men

the sacrifice being all in vain. The other grades could not be expected to hand over any proportion of the accumulated funds of the A.S.R.S. We do not think they could legally do so, and we are quite sure an apportionment on any fair and equitable basis would be impossible. On the other hand, for the Associated Society to amalgamate to the A.S.R.S. is both practicable and possible, would injure no one, would assist everyone, and would bring about that consummation so fervently desired by the writers to whom we have referred, viz., all enginemen in one society, and with

the added advantage of having in all their movements the assistance, moral and practical, of the other grades.

Mr. A. Fox, General Secretary A. S. L. E., says: "We were in all sincerity when we endeavoured to bring it (federation) into force, but regret to say we find very little spirit of federation on the Amalgamated Society's side of the game. I do find an evident desire to absorb us in our entirety and snuff us out as it were." To absorb and to snuff out are not exactly convertible terms, nor had we any idea that federation was a game.

The fact of the matter is, it is time to speak plainly. We want to know if enginemen are mere cards in a game which a few men are playing, like those other accomplished whist players who are said to be playing for the body of the Unionist party while the interests of the country and the Empire are sacrificed. Or must the interests of enginemen be paramount, greater than prejudices, greater than officials, greater even than societies? We repeat the interests of enginemen require, and require imperatively, that they should be in one society. Federation can never be successful without agreement of purpose and principle. Amalgamation ensures it, nay, compels it.—*Locomotive Journal*.

X. Y. Z. writing in this publication which represents the A. S. L. E. says:

I take up my pen this month with a heart of discontent, for the men who represent the whole body cannot get the men to rally round them with the faith that should prevail, if improvement is to be made. What position do we think of finding ourselves in with the time approaching for the introduction of the National Programme? Surely the locomotive men of the country will look upon us here with disdain, and no wonder. Why animosity should be prevalent amongst us is past my comprehension; but we are beset on all sides. The editor of the *R. R.* writes a leading article, telling his readers the heads of our Society do not make the best of opportunities afforded them. This, I consider, is nothing less than scandal, and as Mr. Fox said, a man of Mr. Wardle's abilities and position ought to have ascertained whether our officials had done their duty or not before criticizing their actions. Not long ago, Mr. Wardle headed the *R. R.* with a leading article that was anything but sweet for a member of the A. S. L. E. & F. to read. Such actions as these want a stop putting to at once. Taking a retrospect of the *R. R.* since federation was first introduced, there has been nothing but ill-feeling caused among the men in general, although at Cricklewood Mr. Wardle denied this. He said if his statement was not true he would apologize. He ought to have known whether it was

true or not before allowing it to be published. He also stated that if federation was to be a question of either of the societies playing for their own hand, the sooner it was done away with the better. Just so, but the Executive Council of the A. S. L. E. and F. has tried every possible means to harmonize and transact business with the Executive Council of the A. S. R. S. The last meeting was a deal more in order than the one that was held in London, and it was pleasing to read the speech of Mr. Fox, at the Leeds meeting, referring to the objection by Mr. Bell not being in favour of having the correspondence leading up to the meetings published. The defence was given in a masterly manner, which does credit to our General Secretary. Fellow brethren, we are about to be up in arms, which way shall we move, what shall be the cry, victory or defeat? One or the other will be in our hands, and is bound to be here before we expect it. Turning to the *R. R.* again, we read the branch report from Port Talbot, which strongly appeals against the action of our General Secretary with reference to him writing a letter to a driver at Holbeck. The report goes on to say they object to the members of our Society persuading their members to come and join ours. There again we are powerless. I should say, if a man's idea is so disposed towards himself to throw out of one and join another, he must have good grounds for so doing, and here we are urging for a National Programme with friction reigning more strongly than ever. If the leader of the A. S. R. S. would make himself more closely connected with the men on the footplate, we might look to him for more support, not but what we are in earnest in pushing forward the National Programme movement; but are we aware what port we are steering to? If we could only use the words of Baring Gould—

We are not divided, all one body we,
One in hope and doctrine, one in charity—

Victory would then be in our hands; but again, belonging to the societies does not alter the principle of some of the men. We have traitors in the camp belonging to our own Society. Not long ago, some business was being transacted at the branch room referring to some of our men, and an hour after our officials knew about it. Is this business? Certainly not, and such men never ought to put their heads inside the branch room again. This toadying business belonging to society men is a disgrace to any union, but the union is powerless unless the names of the offending members can be divulged. Every man should make himself his own organizer; but instead of this we find men who have been mated together for years protected on one side of the foot-

plate, and not on the other, consequently, we have to go on with our grumbling in 1905 as in previous years. Up to the time of writing several names have been enrolled, with promises more next meeting.

MASS MEETING AT SHEFFIELD.

SIR,—Under the auspices of the A. S. L. E. and F. and A. S. R. S., a meeting was held in the Vestry Hall, West Bar, March 26th, which was attended by our General Secretary (Mr. A. Fox), and Mr. Bellamy, of the A. S. R. S.

After a few opening remarks Mr. Fox addressed the meeting in fine style, occupying one hour and 25 minutes. He began in quite a calm and collected manner, but eventually got warm, and went at it right and left, dwelling at some length on the need of an eight hours' day, and the wages due to us for the same. He said it was our duty to ask for an eight hours' day, seeing that we take twice as much traffic with the engine of today as we formerly did, consequently the companies are making more profit. Men who have had 7s. 6d. per day are having to use the shovel, and the firemen are having to use the waste. But the directors do not say: "We are getting more profit and paying better dividends, we will give you an increase in your wages!" Not likely, they are taking all from us they possibly can, and men that have been on the foot-plate have gone to swell the ranks of the unemployed. Mr. Fox said that thorough organisation was the only means of resisting encroachments and of keeping what we had, and still more of making any advance. He spoke of the constantly increasing pressure of the work put upon us. There was the 8 hours non-stop run to London, and on the Great Western there was the 4½ hours run of 246 miles from London to Plymouth, and the strain of driving those trains at 60 miles an hour for such a period was sufficient for a day's work. They take 120 wagons with one engine, and it was a mystery to him how the men managed to manipulate them without any breaking loose. He appealed to the young men not to let all the work rest on the old ones' shoulders, and *vice versa*, but to keep alive as to what we were doing, and better results will be obtained.

X. Y. Z.

Short Route to the Portland Fair.

DUNSMUIR, CAL., May 25, 1905.

EDITOR JOURNAL: As the great multitudes are headed towards the Pacific and the great Fair at Portland, Ore., we expect a great many of the Brotherhood boys will get a short vacation and join the multitudes to the land of wine and honey, and that they will either go or come via our division, the Mountain Division of the

THE "SENTINEL," MT. SHASTA REGION, CALIFORNIA.—COURTESY BRO. T. HERBIG, 425.

Short Route. I thought it would be advisable to jot down a few of the sights that are to be seen while passing over our division in the Mount Shasta region.

As one is overjoyed with the beautiful scenery of the Sierras, the Yosemite and other beautiful scenery of southern and middle California, they board the train for Oregon thinking they have seen all; but as the train moves up and crossing and re-crossing the beautiful Sacramento River eighteen times, before we get to the

headwaters at the base of Mount Shasta, one mile from Sison, Cal., a big spring, the head of the Sacramento River, right by the railroad is in plain sight of the train.

After we pass Redding we enter the foothills and enter the great Sacramento Canyon, pass the big copper smelts at Keswie and Kennet, come in sight of the beautiful snow-like "Crego," that tower thousands of feet above the railroad. They look like snow-capped peaks, but are white, ashy, lava rock, very beautiful. We pass numerous summer resorts and summer homes, we come to the canyon town of Dunsmuir, seen on the cover of this issue, a strictly railroad town.

ramento Canyon. A ten day stop over is allowed by the railroad, which is ample time to visit and see most of the beautiful scenery of the Shasta region and catch Mr. Trout, until you are tired, climb to the summit of Mount Shasta, 15 miles distant, and 14,444 feet above sea level, which is not a hard climb, visit the big Sison tavern and the State Fish Hatchery, which is a very pretty place and very interesting. "Castle Lake," 10,000 feet above sea level, can be visited on horseback. The water is so clear in this lake one can see a common dinner plate one hundred feet down. A sounding line has been let down 1,000 feet and found no bottom—besides other interesting places. The

CASTLE LAKE, CAL., 12,000 FEET ABOVE SEA LEVEL, MT. SHASTA IN THE DISTANCE.
Courtesy Bro. T. Herbig, Div. 425.

The S. P. R. R. maintains a large roundhouse and machine and car shops, and is the main division point between Redbluff, Cal. and Ashland, Ore., or the Mountain Division of the Great Shasta Route. The trains stop twenty minutes for breakfast at Dunsmuir, the town of railroad men, and beautiful homes.

After leaving Dunsmuir we wind our way up the Canyon between towering mountains where there is just enough room for the trout-filled Sacramento and the railroad, pass numerous soda springs and summer resorts. We make a ten minutes stop at Mount Shasta Mineral Springs, the beauty spot of the great Sac-

grandest sight is to see how the railroad climbs out of the Great Sacramento Canyon 1,000 feet in the distance of two and one-half miles, by doubling back one track above the other. This can be seen from the train, when on the upper grade we look back with interest at the great piece of engineering and the beautiful Sacramento 1,000 feet below us. We arrive at the town of Mott, where we get the first good view of the highest mountain in the United States, "Noble Shasta."

With a few photographs, I will finish the trip over our Division next month, with photograph of Noble Mount Shasta.

Correspondence.

All contributions to our Correspondence columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer as a guarantee of good faith, and to insure insertion.

While the Editor does not assume responsibility for opinions expressed by contributors to this department, he is held responsible in both law and moral ethics for admitting that which will injure or create ill feeling. Hence all communications are subject to revision and rejection if the Editor deems it necessary.

C. H. SALMONS, Editor and Manager.

A Train Despatcher's Troubles.

It is strange when a man with a good level head,
Once he stretches his limbs on a nice downy bed,
And instead of resting should turn on his back,
To go plaguing his brain about ills of the track ;
Yes, 'tis strange, but some do it. Please list to my tale,

Till you hear a brief story regarding the rail,
And a good train despatcher who sweat every night
From such thinking to dreaming that nothing
went right.

He'd been lately assigned some new engines so
large,
He supposed from the moment they came in his
charge

They'd be blocking the line, and a train couldn't
pass,
On account of the way that the mountainous mass
Of machinery took to parading the ties,
Which he saw in his sleep, with his two dreamy
eyes.

For the wrecking crew then he would roar in his
might,
And his nerves were let loose for the rest of the
night.

He'd keep quiet a spell, then go at it once more,
And he'd soon be at work ten times worse than
before.

He expected the decapods really could fly
At a fifty-mile gait ; but they couldn't, that's why
In his bed not a moment of rest could he find,
For he saw eighty loads stretching tailward be-
hind,

And at ten miles an hour they'd go crawling ahead,
Which tormented his brain as he tossed on the bed.

All the comfort we once on the rail used to know,
Is as dead to us now as is last winter's snow ;
We have hurry and worry in lieu of old times,
And big decapods, too, to make barge loads of
dimes ;

We have run-offs and wrecks and blockades and
the like,
Every hour of the day, on the best managed pike ;
We have hell undiluted in full flowing bowls,
But what good does it do to go fanning the coals ?

Here's a moral I'll pin to the tail of my song :
" Don't go brooding to bed, thinking things will
go wrong ;

If you do you'll be walloping nightmares all night,
And arise unrefreshed for your work at daylight."
You may take it or leave it. I give it to all
Without charging a cent for such wisdom at all,
Train despatchers, please note. You get very good
pay,

Keep a grip on it, boys, and keep out of the clay.
SHANDY MAGUIRE.

Troubles and Triumphs of Travel.

BY SHANDY MAGUIRE.

[Continued from July JOURNAL.]

The train slowed down, which was suf-
ficient notice we were nearing the Mecca
of our pilgrimage. Feeling that I should
do something in the singing line to con-
tribute my share to the hilarity which
was typified in song by the others, and
with the intention of making the party
get on a lively gait at the station, to
avoid the discordant groanings of my
tuneless voice, I struck up the following,
called " The Good Engineer :"

Ere we say au revoir very soon,
Let us lift up our voices once more,
Full of praise, though discordant in tune,
For our long pleasant ride is near o'er.
Every day we exulted with joy,
Every night we retired without fear,
We had nothing our hearts to annoy,
In the charge of each good engineer.

Hurry Bryant, and fill up each glass,
You've a bottle or two yet to spare,
And dear Sanderson, round let them pass,
You can deal out a generous share.
Here's a toast, drink it standing: " Success
To the men who have wheeled us along ;
May they ne'er feel a pang of distress,
And be always applauded in song."

And it was " soft stuff " we were in-
dulging in since we met, and as the cooler
was kept well stocked with it, we held
our innocent carouses daily without any
offense to the most radical teetotaler.

" Los Angeles! " was the salute from
the trainman as he swung open the door.
In another instant we were on the station
platform.

We'd joys one never misses,
Big handshakes thrilled with blisses,
Kind how do you do's and kisses,
When that famed trip was o'er ;
Dear friends were there to meet us,
Old-timers came to greet us,
And boys and girls to treat us
To welcomings galore!

" Who is here, Ed? "
" Everyone. You came near not being
one of us."
" Who told you so? "

"Yourself, in your letter to Dick Kelly."

"I never got left yet. How is Dick?"

"Around on crutches."

"Poor fellow. There was no finer looking man than he at Norfolk when I saw him last."

"Get into this carriage. Here's a paper which announces your arrival; read it."

Under the heading of "A Belated Arrival," I read the following:

"Shandy Maguire arrived this morning. He is late in coming. He would have been a few days later, on account of an interview he had with the owner of an orange grove up at San Bernardino, who caught him in the act of filling his dressing case with the fruit fresh from the tree, but in courtesy to the engineers, who made such a favorable impression the day of the banquet known as the Feast of Roses, he was permitted to continue his journey on his own recognition."

"That's a rascally trick of you. I took you always for a fair fighter, who would not strike below the belt; but I am deceived. You commenced at me before my arrival, when I didn't know it and couldn't get back."

"You know it now, and little good the knowledge will do you. In a few days more very few hamlets on the continent but will be rolling the sweet morsel under their tongues, that you couldn't control your thieving fists when you saw something to take. The papers are sent out. I guess we are evened up now for some of your Norfolk jabs two years ago."

(Dear old Ed! In a few months from that day he was summoned to that undiscovered country, from whose bourne no traveler returns, and I could not restrain the tears which fell upon the telegram notifying me, if I tried.)

In the language of the late lamented Dr. Talmage, at the opening of the New York Convention of 1886, I saluted the mighty crowd in the rotunda of the Hollenbeck as we entered, with a hearty, "How are you, boys, and the girls that own you?"

That same afternoon we paid our respects to Mr. and Mrs. R. W. Kelly in their delightful home on New Jersey avenue. Here I made out an itinerary for the next day, and I followed it, too, regardless of all the solicitations to go elsewhere. I took a Pasadena car, went there, then took another for Altadena, a place about five miles further out. I had a kodak, and to prove that I am not the only light-fingered one in the family, as I was charged with being on my arrival on account of taking things which I do not own, I here present her ladyship

in the act of taking oranges off the tree.

On our way back we took in the ostrich farm, and in my admiration of the sights, I got a little too close to the fence corraling the long-necked marauders, for one of them stretched over and took a boutonniere off my coat in about as slick and dextrous a manner as ever a New York pickpocket "touched" a granger. I was admonished by my guardian angel to keep farther away or my head would go next, I looked so green.

On the following day I took a different route; took in Hollywood and had an interesting chat with the reigning genius, Paul de Longpre. You, dear Salmons, described this wonderful place for the delectation of JOURNAL readers, and I am short on a supply of adjectives; therefore, will not attempt to do so. I only wish to say that "here in my own native town" I am not considered deserving of having any orthodoxical bouquets shied at me. But in the language of Byron:

"Set those people down with me to pray,
And we will see who has the properest notion
Of getting into heaven the shortest way.
My altars are the mountains and the ocean,
Earth, air, stars; all that sprung from the great
whole
Who hath produced and will receive the soul."

On the day I stood viewing the enchanting nooks in the paradise owned by Paul de Longpre, I felt I was in Nature's Cathedral, where the flowers had the air laden with incense, and the green of the symmetrical trees was rendered more delightful by the bewildering songs of the feathered choristers. As I gazed with moistened eyes and uncovered head, I required no pulpiter to inform me that there are "tongues in trees, sermons in stones,

books in the running brooks, and good in everything." Away beyond the confines of creeds I paid silent tribute to the Creator, no matter by what name known, and I feel that on the general judgment day we hear so much about, when we'll all be rounded up and herded in the Valley of Jehoshaphat, or some other post mortem rendezvous, where the sheep are to be divided from the goats, I do not think my head will be decorated with a pair of horns, while others are twanging out music because they rolled up the whites of their eyes in a "holier than thou" frenzy within the confines of churches, listening to some narrow-minded shepherd. It may be that I may wake up and discover that I am making a tremendous mistake—well, even so, God is good. I have a few friends in the other place.

That same afternoon, a small party went to Santa Monica, where we got our first view of the Pacific Ocean. We went in one direction, passing the Soldiers' Home, and returned by Ocean View. While meandering around the sand beach I remembered having a couple of unfired shots in the kodak, and whether it was clannishness, coincidence, or some mental cohesion drew us all in a group who reside not more than 150 miles apart in the State of New York, I do not know, but here they are:

On the left is Sweetness, next is Mrs. Nevils of Utica, next Brother Martin of Syracuse, next Peck of Albany, next Bro. Hicks of Buffalo, and on the extreme right Mrs. Fogarty of Syracuse, all New York State productions, neither ashamed to tell it nor to show their faces in any gathering of good looking boys and girls, and only that I am applying the kodak, I'd be one of them, equally proud.

Amongst the many invitations we received to enjoy the hospitality of the good people of Los Angeles, we accepted but two. One of the two houses was the Kelly mansion; so on Sunday we bent our knees under the table of our hosts and gave praise to the cook, who was the most deserving to receive it. It was not articulated. It was manifested in the cleaning off of the dishes of about a dozen courses, and as I once said to a lady in Harrisburg, Pa., when dining at her house in company with our lamented Grand Chief, Brother Arthur, "The best compliment we can pay you is to have eaten everything served us," which we did, as Mrs. Kelly passed them on.

The ensuing Tuesday was the day of days in our memorable trip. Dick Kelly bossed the job, and did it well. Brother Ingraham, Brother Everett, Brother and Mrs. Kelly, Mrs. Baker, wife of Brother Baker of Los Angeles, myself and wife, were up bright and early and at the station to take the train "around the kite," as the trip of 164 miles through the orange country is called, which has for its motto: "So scene twice seen."

When we got to Redlands we were joined by Mr. G. C. Thaxter, Secretary of the Redlands Board of Trade, making eight of us, all of whom were very comfortably seated in a three-seat canopy-top surrey, drawn by four horses, and shown the town.

Redlands is most properly named "The richest and most prosperous city in the largest county in the grandest state in the the most glorious country on earth." I cannot add to that, for the want of words. We were taken everywhere at a spanking pace. Under giant palms, live oaks, Japanese umbrella trees, pepper trees, walnuts and scores of others, up which ran the California poppies and other flowers, filtering the genial rays of the kindly sun as it kissed us with its perfume fresh from the petals. We were driven over drives where the genius of the landscape gardener festooned and trained the luxuriant growth in a bewildering way; and when we were going through Canon Crest Park, up the justly famed Smiley Heights, our flow of language ceased, and all the tribute we could pay the beauteous windings and delightful enclosures was the easily articulated request, "Look here!" "Look there!" "Oh, see the flowers climbing to the tops of the trees!" "Listen to the singing of the birds!" "Well, if heaven is like this I'll try to get there," and poor Ingraham, who made the remark, was summoned there less than a week afterward.

When we were taking our leave of Mr. Thaxter I perhaps was somewhat louder in my thanks for his labors in pointing

out places of interest to us than others. He silenced me by saying: "Your thanks have been given me every minute while in your company in the appreciative way you enjoyed all you saw." The gentleman sent me a box of navel oranges last March, and they were of the choicest in kind and size. While they lasted, Ruth had a snap. She discarded her dolls, took a couple to bed with her each night, and cannibalized them ere morning.

The next stop was at Riverside. Again we had a most enjoyable drive through that beautiful place, and a dinner at the principal hotel to make the immortal gods and goddesses of Mount Olympus envious if they would not get an invite to partake. You didn't have to taste the goods to know what they were. They came dished up at one's call, but they never went back. We got away with them.

Once more in going around the kite, I found myself at San Bernardino, which the sports in Los Angeles had chronicled as the place of my detention. We were very cordially received by the hospitable people of the place anyway. Kelly's mug and mellifluous tongue seemed to be requisite to open the hearts and houses of the people we foregathered with the whole of that memorable day. We got back to Los Angeles on time and swapped lies in the various groups of the hotel till 24 o'clock, as they call the mid of night down around Riviere du Loup.

(Concluded in the September Journal.)

Letter from a Retired Engineer to a Friend.

PLEASANT VALLEY, N. Y., June 4, 1905.

FRIEND DAN: Your welcome and interesting letter arrived yesterday. It contained news that was pleasing, and some that was sad. While I was pleased to know that you and yours were well and happy, I was very sorry to learn of the death of our mutual friend, "Hank" Lennan. Poor Henry! We fired together on the "Central" and he went west shortly after being promoted. The newspaper clipping you enclosed states that he ran into the rear of a freight train that was not protected by flag, and that he was the only one on the passenger train that was injured, the fireman saving himself by jumping. There is also the usual amount of praise for the engineer whose heroic conduct in "sticking to his post" is given as the sole reason why the passengers and trainmen escaped injury.

Well, Dan, there is no denying the fact that vigilance and prompt action on the part of the engineer have often prevented loss of life and property, but it is to be regretted that so many of our men have needlessly sacrificed their lives, and bearing some marks to prove having been there

myself, I feel competent to express myself on that matter.

I believe it is neither poor judgment nor a desire to be heroic that prompts a man to stay on his engine in the face of positive danger; it is rather the complete elimination of self in the matter when lives or property are in danger, or it might be called an overpowering sense of duty. The very nature of the engineer's service, his being left largely to his own judgment and honor in the discharge of his duties, tends to develop a spirit of self sacrifice. It is shown in his daily service when he takes advantage of opportunities to further the company's interests, often when inconvenience or even decided discomfort to himself may result, and in the light of that fact it is not surprising that during a long term of service the sense of duty, together with a deep rooted though slightly exaggerated idea of the need of his presence at all times, grows upon the engineer even to the extent of causing him to remain on his engine in the face of positive danger, after exhausting every possible effort to avert disaster.

The speed of trains nowadays is not consistent with safety, Dan. The railroad officials say the public want to go from Chicago to New York in eighteen hours. Should the foolish public be humored even to the extent of reducing the margin of safety already none too wide on American railroads? I think not. I notice in discussing the subject of high speed, the only question considered seems to be the propelling power. The public and the press want to know only how fast can locomotives be made to haul their trains, while the real measure of safe speed should be the stopping power.

I observe these things perhaps more than you, Dan, since I am out of the service, but I know you will agree with me when I say that any train is a dangerous one that cannot be stopped within reasonable distance in an emergency, or runs at such extremely high speed that ordinary derailment causes it to smash to pieces.

I am told that there is a motto hung in the cabs of the engines on the new fast trains between Chicago and New York, reading in substance as follows: "Let Safety Be Your First Consideration." That is, of course, all right, Dan, as a sentiment, but for practical purposes the following might be made more fitting: "Be Careful, But Make the Time."

You asked about "Old Man" Henderson in your last letter. He died several years ago. The latter part of his life he spent on a farm situated close to the city. I believe he was an ideal official, the best superintendent of machinery I ever knew. He was strict without being harsh, and while directing others led the way

himself. If he recommended (not demanded) any practice to his engineers, he showed them the philosophy of it, the why of it, and he usually got the results sought. His administration of affairs in the motive power department here for over ten years was a campaign of education, and he developed a class of engineers that are a living monument to his technical skill, as well as his ability to manage men. I will never forget my first meeting with him. It was shortly after I had commenced to "run passenger." While oiling around in front of the old depot I noticed a well dressed elderly man watching me, and when I had finished and placed the oil can on the deck of tender, he came closer and asked me how long I had been running an engine. I said about fifteen years. He then asked what type of engine. I answered, "Eight wheel." Then said he, "During that fifteen years you have no doubt oiled an engine around with your hand oiler on an average twice a day, omitting Sundays, which makes the number of times you have "oiled around," 9,450, and I suppose you can tell me how many oiling places the eight-wheel engine has, or how many bearings that are oiled with the hand oiler. I thought I knew the whole thing in those days, Dan, but I was stumped, and I told him so.

"Well," said he, "that's strange, but I can tell you something stranger still," and with a humorous twinkle in his eye he said, "I ran this type of engine for nearly thirty years and I never knew." "I will admit," he added, "that the question is not an important one, but it serves to show how little we know about things to which we have not applied our minds, and the difference in the skill of engineers is due more to the measure of their mental application than to any superior natural ability or educational advantages, for one could know the number of oiling places by simply counting them once while oiling, and many things of real importance can be as easily known by close application or inquiry into the 'Why' and the 'When' and the 'How' of things." I was trying to think how you came to know him and I just recall to mind that he ran on the Mountain Division during your time there.

A few days later an "Official Notice" informed us that Mr. W. G. Henderson was made superintendent of motive power of our road, and he proved to be the right man for that time and place, for things were simply running themselves, while discipline was something unknown until he took the reins of management. I will tell of an incident that occurred about that time just to illustrate the utter disregard for official authority in those days on the "Midland." One day shortly

after his arrival among us Mr. Henderson saw Jim Judson coming down Main street with an uncertainty of stride and direction that plainly indicated too much inside lap, and he suspended him for ten days. On the following day Jim concluded he would go to work, so he went to the roundhouse where the "Old Man" spied him tinkering about the engine, and he said to him, "Judson, don't you know that you are suspended?" Without looking up from what he was doing, Jim answered in the most unconcerned manner possible, "You're the only one I ever heard say anything about it." He certainly had an unlikely lot to drill, but he worked wonders in the ten years he remained with us, and when he retired we felt that we had lost a friend.

Of course, there has been a general change for the better among railroad men of all the departments of the service of late years, and in saying this I am reminded of my visit to Cleveland last fall. I went to attend the Union Meeting, and, incidentally, to look up some old acquaintance of our people who had moved out here a good many years ago. They had lived in our town during the time when the railroad man was rather "sidestepped" by polite society. During the time when the coming of the pay car was a matter of decided uncertainty, and an event looked long and anxiously forward to by proprietors of "beaneries," "hasheries," and other places where joys and sorrows were frequently submerged, if not actually drowned, not omitting the "sheeney," the railroad man's banker, the earliest bird of all who usually got the worm. In the days when in passing almost any railroad boarding house about the time of the arrival of the pay car one was likely to be struck by a "grip," a box of paper collars or other articles of light baggage thrown from the windows by some knight of the rail who had stayed his limit. To be brief, Dan, it was during the "Stone Fence" and stogie period when chewing tobacco was purchased at the grocery store just like any other article of household merchandise, and was "charged on the book."

Well, Dan, this acquaintance of ours whom I visited in Cleveland at the time of the Union Meeting lived in our town, as I said before, in the days already mentioned, but left there before the reformation, and being extremely nice folks they had, not without some slight reasons, acquired the impression that the railroad people "were horrid;" so mother, after dressing me up (as I told her as slick as a confidence man), made me promise to visit the "Hawkinses" and to take the old gentleman down to the meeting to see some of my friends. I did so. I called

on the family and think I made a fair impression, in spite of the fact that I was away from home over night, alone, and had to tie my four-in-hand myself in the morning. It is wonderful how handy a wife can make herself to a man, and I never realized it more fully than this morning. I will go to bed with my collar on after this when away from home, or buy some other kind of tie, but mother says the four-in-hand is the correct thing, and mother knows. Well, Dan, after making my good impression, I invited my friend to take a walk down town, for I wanted him to meet some of my friends and he did so. I introduced him to all the Grand Officers and everyone else I knew. I was proud of every one of them. The old man enjoyed making the acquaintance of such model types of good citizenship, and in my enthusiasm I had about carried the old fellow off his feet, so when I thought the time opportune, I exclaimed in my most forceful manner, "Now what do you think of the locomotive engineers?" I was disappointed at not receiving a prompt answer. He reflected a moment, and in that moment visions of flying grips, hand to hand encounters, the impromptu glee clubs, and other features of long ago flitted in panoramic view before his mind's eye. He had been very deeply and unfavorably impressed in his youth, and early impressions are lasting; but when I pressed him for an answer to my question he said, "Jason, I have enjoyed my visit with you very much. I am pleased to have met with men of such intelligence and manly bearing, but when you ask me what I think of the locomotive engineers, you ask a broad question, and answering it as broadly as possible, I will say that, judging from those whom I saw and met this morning, I am constrained to say that you remind me of the farmer with strawberries to sell, you have put the best ones on top."

When I returned home, one of the first things mother asked me was what our old friend thought of the engineers he had met with, and when I told her she laughed long and loud, ending her hilarity by saying, "Jason, dear, I fear the 'Scot' was too much for you." Mother, you know, was a lassie herself.

I will bid you good night, Dan. When you write let me know how Pete Daily is getting along. I understand he was injured the other day. Give him my regards. Write soon. JASON KELLEY.

A Glass Diamond Reminder.

SPOONER, GA., July 3, 1905.

EDITOR JOURNAL: In searching through my desk a few days ago for some valuable papers that had been misplaced, I

came across an old relic of the Pittsburg Convention which refreshed my memory of the good old time and pleasure I had while in the Smoky City. It was a large (glass) diamond ring presented to me by our old and esteemed Brother Nat Sawyer, to offset the presentation of the pure diamond stud to Mickey Free by the Ladies' Auxiliary.

I have often thought of my donor, and had lost sight of it, but hereafter I intend to keep it as a sacred token of my esteem for our departed Brother Sawyer. It reminds me of many pranks played upon him because he was a favorite of a great majority of the delegates on account of his seemingly young ways, full of life and fun. Again I have to laugh and feel sorry, too, for the fun I had with him; when he made himself a paper cap in the hall and as soon as he put it on, I put a match to it and set it on fire on his head, and he took it all in good part, as it did not injure his head of hair.

Mickey was another favorite with the boys, but they were afraid to play pranks on him. Perhaps you remember the circumstance when I put the rubber snake in his paper in the hall during the evening session, and he was about to nail me with a chair, which stopped my pranks with him.

Poor Shandy, I am sorry for the so-called troubles he had to the Pacific Coast last year. If I only had him out here on the farm I think I could make him forget a great many of them by taking him into my Georgia rattlesnake patch and let him make his selection of a 40-pounder if he chooses. It's not the rattlesnakes that Shandy would fear, as mine is the Georgia rattlesnake watermelon: we have acres of them. From the melon patch I will show him into the dining-room three times a day and fill him full of all kinds of vegetables fresh from the garden, country smoked and cured hams, even smoked sow-belly, if he chooses, which is my choice. After he is tired of all this, I will commence on fine fish caught at home, but not such as he needs under his present condition. We have no whales here, but smaller ones, perhaps, that will answer the purpose if enough are eaten; but I really am not prepared to say at this writing whether our fish here is good brain food or not; but, Shandy, it will not hurt you to make me a visit and try it, as I am satisfied myself and better half can make it pleasant and interesting for you during your stay with us.

I want some of my good Eastern Brothers to see how smooth a Georgia country life is, but please don't say anything about the grass you find on my farm, because it is no fault of mine. I never planted it—it seems to be a natural volunteer plague of

its own; they call it crab-grass, but it should be called grab-grass, for it has no respect of persons, and is, it seems, without scruples; so much so that it has federated with another growth called Eliza's plague, somewhat on the pusley order, but it doesn't plague Eliza alone, it devils me, and my name is Ben.

If by chance you would come in the fall, I then can interest you right, as my syrup making will commence in November and perhaps will last thirty days, as it did last year. I made 60 pounds last crop, and will have a good making this crop if luck doesn't turn against me; so by coming then I can sweeten up your frowns from your trip to California, but if they have reverted into wrinkles, I don't say I can smooth them, that is, on your face, but around your belt I can guarantee to smooth them until they will stand out like a fifer's eye.

I have been trying to get some of my Western Brothers to visit me, but they all seem to be on the extra list and afraid to lose a trip for fear of the wolf presenting himself at the door. One good Brother did come from San Antonio to see us, that is, he had to run away, and not knowing where to go, fortunately landed at my house, where I cared for him until he could go back home. I never could find out why he ran away from home, as he has one of the pleasantest women for a wife I ever met and two sweet little boys. I wish he would run away again and head himself this way and let the wife and two boys follow him. I would give anything to see them in a big melon patch.

There are several members of Div. 197, to which I belong, that if they wished, could come out here and have a good time; but no, sir, some good extra Brother would get the money he lost on the visit on his engine or run. During my twenty-nine years' service with the G. H. & S. A. R. R., now the S. P., I made twenty-eight trips to this state in December on a visit, taking thirty days at each lay-off except one, when I took only fifteen, and my run was worth \$175 per month; but between December and December I never laid off unless something unusual occurred, and I lived and am still living; but there is no extra list here to look out for. I wish there was, so the madam would not have to make me make an extra trip every morning to drive up the yearlings for her to milk. I don't mean she milks the yearlings, but their mothers. I can get along with them until I make a bad step and fall, which I do frequently, and then I take a layoff for a spell and she either takes the trip herself or sends our big boy if he is not out already.

Now, Brother Editor, if Shandy's name

is not on your subscription list, send him a JOURNAL or see that he gets a copy of this letter, and I will be as ever

Yours fraternally,
B. A. PICKREN.

Pay Off Old Policies.

LOS ANGELES, CAL., July 1, 1905.

EDITOR JOURNAL: I am pleased to read so many good letters on suggestions to better our insurance. I believe it is the duty of every member to have those different plans discussed in the Division, and in that way agree on some plan for the delegate to bring before the convention at Memphis. When planning to improve our insurance laws, age (except as explained in our laws) or any Brother's circumstances, gives no preference. This has been a stumbling block in the way of changes. The Ohio insurance law has been overworked to defeat many unwise changes and some good ones. Not hearing any objections to change making special assessment at last convention a law, I suppose all are satisfied. While I never heard of a specific case where a wait of 60 days worked material hardships, I am in favor of this special assessment. I believe we can use this special assessment plan to do a great amount of good and none of us will ever miss the amount we advance. My plan is to levy two assessments each year of 50 cents on each \$750 of insurance; that would give about \$55,000 for each assessment, or \$110,000 for year. We will now take 225 of the oldest continuous policies, and pay \$500 on each of them. Pay a like sum each year, this amount to be treated as a loan until \$1,500 is paid, when one policy would be canceled. During the time of those partial payments, should a claim become due, it would be paid in the usual way, amount deducted and returned to the special fund the same as funeral expenses are now deducted; assessments to run the same as now until the policy or policies are canceled. (Policies would be for \$3,000 or \$1,500 for years to come.) This would call for an assessment of 8½%, 16%, 33½% and 50 cents per month (a very small assessment), \$1, \$2, \$4 and \$6 a year on the four classes of policies now in force.

The Brothers that this would reach have been loyal to the B. of L. E. and insurance for 30 years or more, paid in when their policies were only worth one-half face value. They are near end of run and will soon have to be paid for anyway.

As a business proposition, it is nothing wasted and gives us a chance to build for our own future at small expense. It would put premiums on loyalty. I believe that

our Brothers would cheerfully pay above assessments, but do not believe we can ever carry any measure to create a fund as proposed to use interest from it for benefits. Our most liberal Brothers would vote it down.

Just think of the good we would do—the happiness and sunshine that would enter many a good old Brother's life, where at present it is dark and sad. The object in paying \$500 is to benefit as many as possible and give more time to pay. Better six Brothers have \$500 than one \$3,000; besides, should we ever decide to change the plan before any policies were canceled, we would have more interested to influence vote. It would not cost much to try it. "Where there is a will there is a way." We have six years to pay \$3,000. Our time will soon come.

Fraternally yours,
R. W. KELLY, Div. 662.

Long Hours.

COLUMBUS, GA., June 6, 1905.

EDITOR JOURNAL: On the 6th day of December, 1904, President Roosevelt in his annual message to Congress demanded the passage of a law requiring the adoption of block system signals, and a limit to the hours of labor for railroad employees in train service upon railroads engaged in interstate commerce. I intend to show and prove to the readers of this article the necessity and wisdom of such a law where shorter hours are concerned.

The hours an engineer in freight service is required to be on duty vary from twelve to thirty hours. Almost all freight schedules are thirteen, fourteen, and eighteen hours, with eight and ten hours rest at terminals. During the time he is on duty he is frequently wet and hungry. We all know the modern one hundred and fifty-ton battleship is not arranged for comfort. Under such circumstances would you call it human weakness and punish the employee should he overlook his orders, or for an instant drop asleep and thereby cause a disaster in which many human lives would be lost?

An employee is a human being and not a machine like the one under his guidance. A block signal system would be of small benefit if an overworked engineer should drop asleep and run by the board in face of a flying limited loaded with its precious human freight.

During the month of December, 1904, an engineer made twenty-three trips, one hundred and fifty-seven miles each way. He made two trips in twelve hours and ten minutes, ten trips in thirteen hours and thirty minutes, four trips in fifteen hours and forty-eight minutes, one trip in

sixteen hours, two trips in eighteen hours and thirty minutes, one trip in ten hours. He was on actual duty on his engine three hundred and twenty-one hours and some minutes. He was called at least one hour before leaving time, and consumed one hour at terminals washing up, inspecting engine and making work report. In twenty-three trips this amounts to forty-six hours, add this to three hundred and twenty-one hours it would put him on duty three hundred and seventy-seven hours. Out of five hundred and fifty-two hours he would get one hundred and seventy-five hours rest. I ask you in the name of common humanity is it right?

I believe in the efficacy of the block signal system, but it is without efficacy with an overworked crew on duty. Most wrecks are due to the human carelessness of one man, and that is the man at the top. Any man with common reasoning power should know that our present overtime system is a fraud and a delusion. Our schedules have been made so long that it is almost impossible to make overtime. An engineer is physically exhausted when he becomes eligible for overtime.

The long hour system in vogue on so many roads has become a curse, and is responsible for many serious disasters, and nothing will more surely or quickly undermine and destroy our health and happiness than this much discussed question. It will degrade us and soon reduce us to the lowest condition of servitude.

It is too often the case that men in authority serve the stockholders they represent at the expense of the health and vitality of the employee. Let the man at the top work fifteen and twenty-four hours without rest, let him do it year in and year out, let him wreck his health and deprive himself of the home comforts, and at the same time hold the lives of many human beings in his hands; then let him—and not until then—ask the same of his fellow-servant. I do not believe he would do it.

The trend of the times points to shorter hours for men who fill responsible positions. The traveling public demand safer transportation, and when the hours are cut down they will get it. Not only the public has asked, but the President of this nation has urged and demanded it, and if our Congress is wise within its rights, it will make and enforce such a law.

The B. of L. E. should exhibit a determination to fight and fight hard this long hour curse. We would be better, healthier, and happier men for it. Under the present system we will deteriorate instead of progress, we will lose the nerve, stamina and backbone that an engineer should possess. Let us come together on this one vital question, and say to the railroad

companies that we will give you an honest, sober day's work for your money, but that we have decided to be men and not mere "dumb driven cattle," that you must shorten your schedule and your hours, and that we will repay you in safe and first-class service.

We have made a name among the nations of the world that they envy; our freedom is the kind that God in His wisdom intended, and it is for us to perpetuate, and we can never do it by working twenty out of the twenty-four hours.

Yours fraternally,
W. A. KLINE, Div. 409.

Endowment Fund, Etc.

FOND DU LAC, WIS., June 7, 1905.

EDITOR JOURNAL: Please allow me space to answer some of the alarmists' writings in our JOURNAL regarding expulsions. I have never looked into the details of these matters before, but find in the June JOURNAL 88 reinstatements and 53 expulsions from all causes, classified as follows, viz: 23 for non-payment of dues, 22 for non-payment of dues and forfeiting insurance, the balance other causes. Out of the latter 22 I find that there are 6 for forfeiting insurance without any other cause. (Now, I would say, inasmuch as there are actually 45 expulsions for non-payment of dues, that we do away with the payment of dues for the purpose of keeping those men in the order. The alarming extent to which expulsions take place necessitates this.) There is just as much reason in that kind of talk as there is to harp about the insurance, and more so, since there are actually 45 expulsions for non-payment of dues against 6 for forfeiting insurance. Now, then, let us consider further, Brother Alarmist, and see how we come out. In the June number the Grand Office tells us there were 54 expulsions from all causes and 88 reinstatements, deduct the latter and the actual expulsions amounted to 16. How is that, Brother Alarmist? Compare that with our membership and our growth. Compare it with other labor or fraternal orders and see how we stand, and I think you will be sorry you spoke. Now, Brothers, I will tell you once more why expulsions take place for forfeiting insurance more than for any other cause. It is usual that one who joins the B. of L. E. goes into it with his eyes open, but it is usual that lapsing of insurance takes place the first few months that they are members. I have told you in my previous writing that our ranks are filled principally from the B. of L. F., and the insurance is included in the dues in that order; consequently, they think when one is paid all

is paid, and the consequence is the secretary of insurance not getting insurance money will report him delinquent and insurance is forfeited. The law requires the insurance secretary to prefer charges and the Brother is expelled. This possibly could and would have been avoided had the insurance secretary written the Brother a letter of instruction when he sent him his policy, telling him when and where to pay and how he will get notice of assessments. Lots of these expulsions would not take place.

I am not writing to cast reflections on any one, but a case of this kind happened not long ago to a Brother who requested to be transferred to our Division. Instead of being transferred he was expelled for forfeiting insurance. He appealed to me for advice and assistance; the result was he was reinstated, and transferred to our Division.

It is not necessary that a Brother be expelled for forfeiting insurance until appeal to him is of no avail, and then he can be re-examined by the Division physician, if he is under the required age and labored under a misunderstanding, and I certainly would take the matter up with him before preferring charges against him.

Further, as regards my pet scheme of an endowment fund, I would not make it compulsory. I think Brother Lockhart is on the right track. Read his article, page 494, June JOURNAL.

With the Editor's permission, I will come again and invite all my opponents. The more the better, but I have so far answered the opposition for the present, and conclude with best wishes and success for the B. of L. E., our insurance, and an adoption of an endowment feature.

Fraternally yours,
J. F. FREENOR, Div. 372.

Poor Attendance—Cause.

PHILADELPHIA, PA., July 1, 1905.

EDITOR JOURNAL: So much has been said of late in regard to attendance at our Divisions, also in regard to grievances, that in this article I will try to give my views from a practical standpoint. In the first place, I will make the assertion that the Division meetings of themselves are a dull place to put in our time. Now, this article will be printed in a month when the weather will be exceeding warm, and dare anyone blame a member who has rawhided it for six days, twelve to twenty hours per day, for using the day of rest in other ways than going to the Division meetings? Understand, in my opinion, it is no disloyalty on the member's part that keeps him away, for the most loyal members often are those who never attend but who are every other way in good

standing. I have known of members who have not been in a Division meeting in five years whose names are always on the square side so far as dues, life insurance, health association, mortuary fund are concerned.

Now, Flat Wheel, Div. 599, says make the room a training school, create interest, etc., that will change it; and I want to differ with him. It will not do it. Some years back the writer, a member of Div. 45, paid through a benefit enough money into the Division to pay for a Saturday night meeting with the object in view that we could take up any subject and have an interest created that it would be best to leave alone on Sunday. For a few months our members came in large numbers, but dwindled down until long before the money was all spent, we saw that our effort was a dead failure. The same excuses were given for not coming on Saturday night that are now given for not coming Sunday afternoon.

I do not believe that any Division should meet on Sunday. I know of all the reasons for having them on Sunday, and they are as flimsy as many of the grievances by members who do not attend as well as those who do.

Let us go back some years. In actual experience we did an honest day's work; we all worked for the general interest of the railroad that we were employed by, and the best of feeling existed between officials and employees, all worked to make all the money it was possible to make for the company that employed them, regardless of what position they held. Is it so now? Methinks often as I hear men speak that through organization men and officials have grown far apart. Liberal views between each have been cast aside by the foolish and strict ideas of certain laws. Such expressions as, "I am not hired for that," "That is not my work," etc., were unknown a few years ago—until methinks often now that we are not only here for the general welfare but only so far as it relates to the certain position or the work connected with that position is concerned.

I am not in this article going to blame anyone, but it not only is among the employees but also among the official force. There is a reason for it that others may explain. On the one side, officials want too much done for a day, too many hours put in for a trip, and the men want too much for nothing. Lines have been drawn so closely that more and more dissatisfaction has been created until wise or unwise men always have some foolish or petty grievance to grumble about that is no actual grievance at all. Too often it begins with the non-members of the organizations; they agitate it with the non-attend-

ers of the B. of L. E., and they in turn chew the rag with those who do attend, and they who do attend know it is the same old story, not of importance enough to bring to the Division or those interested would long ago have had it there, and so the growl goes on, but it is not right. Quit your growling, take a little thick with the thin work for the interest of the railroad, as if it were your own direct interest. Attend your Division, be true to yourself and the men around you, and rest assured all will be well with you, or you have missed your calling.

Fraternally yours,
C. B. NIXON.

"Diamonds and Glass."

Dedicated to Bro. John H. and Sister Mary Burns on their fifteenth wedding anniversary, celebrated at their home, in Howell, Ind., June 12, 1905.

Fifteen long years

Yet so quickly to pass,
We meet you this evening
At your wedding of glass,

May the next ten years

Of your life be as fine;
At your silver wedding
May all now present dine.

Then we all hope,

Tho' the wish may be bold,
To meet you again
At your wedding of gold.

By that time the most

Of our lives will decline,
But may time mark you each
With never a line.

May your lives be so long,

So happy and free,
That you'll both live
Your diamond wedding to see.

And may care p'ace her hand,

So light on your brow,
Your eyes will sparkle diamonds
As brilliant as now.

But let's return to this evening,

Now so quickly to pass,
For there's many long years
Between diamonds and glass.

F. A. E., 154.

Weekly Benefits.

SEDALIA, MO., June 12, 1905.

EDITOR JOURNAL: I am going to try to interest your readers, especially the engineers, with this article, and I firmly believe every engineer should be interested enough to give it careful consideration. We have in Divisions 48, 178 and 517, a mutual aid society, paying ten

dollars per week to sick or disabled members on one dollar a month membership fee. When this society was organized 16 years ago the 4th of last May, there was lots of prophecy that we could not do it and the local accident insurance agents were the loudest in crying out against it. During the sixteen years we have had a large number of six month claims and at one time had three Brothers laid up with broken legs and broken skull for six months. At that time we raised the assessment for a few months to one dollar and fifty cents per month. After paying these claims we lowered it to one dollar again and it remained at one dollar for five years. We have just now raised it to one fifty per month again for a few months, to build up our treasury a little more.

Now, Brothers, there has been volumes written on the subject of insurance, and we, that is a number of the members of our aid society, with our experience of sixteen years, believe we can pay the totally disabled and decrepit Brother engineer \$1,000 on the payment of one dollar per month dues, and with that end in view we have organized ourselves into a mutual company and invite all our Brothers to carefully consider it. Any Brother actively employed as locomotive engineer is eligible to membership upon the recommendation of Chief Engineer and First Assistant of the Division of which he is a member, unless he is employed on some railroad which has a retiring age, and in that case he is not eligible if he is within five years of the retiring age.

I have personally spoken to Brothers during the past five years concerning this plan and very nearly every one I have spoken to agrees that they believe that it would be a good move, and believing so ourselves, we have organized with the following officers: Frank James, Div. 517, President; J. E. Kinzie, Div. 517, First Vice-President; H. A. Daniels, Div. 178, Second Vice-President; J. L. Russell, Div. 517, Treasurer; J. F. Williams, Div. 178, Secretary; Ed. Burk, Henry Aubetner, J. P. Alcorne, J. F. William, Div. 178, and J. H. Barker, Div. 517, directors.

Now, Brothers, stop—look—think. You will say it cannot be done. I say it can. You will say this is for the old man. I say it is just as much for the young man. Look at your JOURNAL, study the insurance feature carefully, and you will note that we are paying off more young men than old men; that is, if from 30 to 45 may be considered young, and then compare your present accident policies with what can be carried with the engineers. I receive ten dollars per week

benefit for one dollar per month in sickness or accident, and for four dollars per month, making sixty-two dollars per year, I carry \$3,000, death from any cause or total disability, and ten dollars per week indemnity. There is not one old line company in the world that will give us the same policy for \$200 per year, and it is high time that we were looking about to see how we may handle our own insurance, for about one-fourth of what we pay accident insurance companies.

Yes, we will undoubtedly be worked by some man, or men may secure membership who are unworthy and will secure payment of claims when they should not, but I am one who is willing to be worked if three or four out of five are worthy, deserving men. Some will say with our wages we should save enough to care for ourselves in old age. Very true, it does look so; but, Brothers, there is not one working man in ten that can save money. Many have tried through banks and building associations and have lost the very homes they lived in, and others have had sickness in their homes for years, and it has been a struggle to keep going.

Last fall we buried here in Sedalia one of the oldest engineers on our road. He had no bad habits; he and I were warm personal friends. He made me his confidant, and I never knew him to spend one cent foolishly (unless buying medicine was foolish), and when he died there was a deed of trust on his home and he had less than \$100 in the bank. Brothers, don't score the old man who has not saved money, but rather try to cheer him, and let our present insurance alone and branch out in the mutual benefit association, which can be done cheaper than any other way and just as secure.

Until our membership reaches 1,000 members the beneficiary will receive only one dollar per member. Should our membership increase to 3,000 or 4,000 in a few years, we may raise the policy to \$1,500 or \$2,000 by a two-third majority vote of all members.

Now, I believe there are in every Division of engineers men who believe as I do, that this plan is feasible, so to such I appeal. Send in your application blank—secure your membership in our mutual benefit society. Remember it is for engineers only and let your interests be mutual. You can secure a \$10 money order as cheaply as one dollar, so combine your interests and send in your applications jointly and your monthly remittances the same way. I can arrange a convenient place in Sedalia and Kansas City where dues may be paid to avoid cost of remittances, and you in your home towns can do the same.

Now, as this has become very lengthy, I shall conclude for this time and hope to see your estimates of this plan in the August JOURNAL, but hope by that time to have a large number of names enrolled as members of our society,

Fraternally yours,
J. F. WILLIAMS, Sec'y, Div. 178.

How to Keep a Job, and How to Get a Good Pull.

MEMPHIS, TENN., April 5, 1905.

EDITOR JOURNAL: I promised I would tell you what the General Manager asked and my reply, so I'll keep my promise.

I see in the April JOURNAL an article by Bro. J. W. Reading, Div. 286, which I believe is in line with my own ideas of engine failure. Well, Brothers, did you ever stop and look at the men failure? May be some of you have been confronted by the same question I have, "Oh, you always have a good engine because you have a pull." It is my intention and I shall endeavor to show you how you can get the pull, and so a good engine.

I always manage to keep a hammer, chisel, wrench and a pencil. If anything is wrong and the work not done right, to the old man I go, for I can assure you that those old bricks on the corners don't hear nor do they care a snap; nor do the call-boys care about your troubles. I am a big kicker, but I always kick in the right place. Still, I have the pull. I don't expect the engine to take me over the road, but I will take her across. Success is what railroad managers want, and if we use our efforts and try to profit by others' experience, we will have pull, all of us. Again you hear, "Oh, he is a lucky duck."

Now, how to get luck is to make it. Don't believe you know it all, for if you do, you will be a man failure, and with it comes engine failure and accidents. I have run a locomotive for sixteen years and I still keep my ears open and eyes fixed on anything that may improve myself as an engineer and man.

Some years ago I was picked out for one to answer questions of the general manager. Was it because I had a pull? No, the notice came to me in the shape of a letter from the master mechanic to report to the general manager's office. I asked the master mechanic what was the trouble. I knew of nothing wrong, and he told me he did not know. I appeared at the office very much strung up, as one will when expecting to stand on the carpet. I found several others waiting, as I did. A hurried exchange of questions between us revealed the fact that the old man had called one man from each de-

partment. We all agreed that a cut must be the cause. A resolution as strong as Gibraltar was passed not to give in one cent. Our conference was very suddenly interrupted by the negro porter: "Mr. G—— wants Mr. B—— first," and so "first" I went.

"Take a seat. Smoke this cigar, it is a good one."

I knew then a cut was surely coming, for no one ever knew of him giving a smoke to one of the boys before. Following are the questions and answers as near as I remember:

"Mr. B——, I want you to tell me what established rules you have adopted and follow, that makes you such a successful engineer."

I was so surprised, I turned around to see if he did not speak to somebody else, and asked, "Did you speak to me?"

"Yes."

"Well, Mr. G——, I did not know I was any better than any of the rest of the engineers."

"Yes, I consider you the best. I want to improve the service, as I wish to get greater results for the company. You have been here nine years and if every engineer's performances were as good as yours, we could declare larger dividends."

I began to feel good and surely had the "pull."

"First of all, Mr. G——, I follow the rules; not as some say, as near as they can, but as they read. Second, I have always remembered what the master mechanic who set me up asked me about the blind man."

"What was that?"

"Well, he asked me what the blind man did. I told him, 'Not much of anything, as he could not see.' 'Well, what does he do as he cannot see?' 'He feels.' 'Well, that is what I want you to do when you do not see, feel your way.' Again, I never 'suppose' that everybody is looking out for me, but I do the looking out myself all the time. I have found it is always the cheapest to give a little more steam, than it is to overcome having too much on."

"What cause can you give me for the poor class of engineers I have?"

"That would be very hard for me to tell. Poor pay, maybe."

"I pay as much as any road in this section," was his sharp reply.

"I would say indifference, Mr. G——, is one great cause. Some men are very easily discouraged. If they make a mistake, improper methods are applied and they have a constant fear that the officials are 'after them.' Some men cannot be run down, and those are your good men."

"Do you believe I have such officials?"

"Yes; every road has such officials in some capacity who are by nature not fitted to manage men."

"I want you to tell me if I have an official who is unfit for his position."

"I am a subordinate, Mr. G——. I'll ask you to withdraw your question, as I cannot answer."

"Very well."

"How much interest do you take in this company, and what is your reason for such interest?"

"It is to my own interest to wish this company success. If this company fails, I'll fail in a measure. I also remember that no official who has this company's interest at heart, would be so severe on me should I make a mistake, when on all other occasions I have done so well. I am a man, and no one was ever infallible. Selfishness is human; selfishness would naturally come in here and I would not have to go and hunt for another job, or in other words, I'll do well by the company and they will do well by me."

"Did you ever make a false report to this company in any of your reports, or would you make one?"

"I did at one time make a false report about a breakdown of an engine. I would do the same again under the same circumstances. Nobody concerned but myself and nobody injured by my false report; but I'll do this, I'll first stop to see if I would believe it myself if the case was put up to me, before I made it."

"Ha, Ha! Good idea."

"Yes, I think it is myself. Not to tell a lie unless she can go through."

That ended my call.

Now, you see how I got the pull. You see how I am lucky. Anyone who will halfway try can get just as much as I have; but Brothers who have trouble, don't let any officials henpeck you. Don't suppose they are after you, for right then you are the only one after yourself. Courage, confidence and let whisky severely alone, and you will have the pull that will make you old in the service. Good men and good pay, poor men and poor pay, at all times. Be it on the road, in the home, or on the street, let us see the good and learn from it. Turn our eyes away from evil. We need more morals in our ranks.

"SIDETRACK," Div. 23.

All This Will Live.

W. F. STUART, T., H. & B.

The look of love, the kind and gentle word,
In accents low that none but angels heard;
A secret art, a pure and manly grace,
That shines each day to cheer some clouded face—
All this will live.

The silent tear that falls for human woe
O'er robes, now soiled, that once were white as
snow;

The prayer that floats like incense to the skies
To grasp some flickering hope before it dies—
All this will live.

The words that burn within the poet's strain,
Wrung from his heart by some great grief or
pain;

He writes them down with timid doubt and fear
For busy crowds that will not stop to hear—
All this will live.

The dreams of youth that gladden all our days,
And mother's eyes that saw our wayward ways;
With child-like faith we sought her in our grief;
Pressed to her heart, we always found relief—
All this will live.

Do we devise some plans for others' good,
That few have guessed and none have understood?
But in some quiet way we try to win
Some wandering soul away from paths of sin—
All this will live.

When death's dark wing is spread o'er some
abode,

Can we in some way help to bear the load,
By look or word or deed or in some way
Bring to the wounded heart the light of day?—
All this will live.

No! no! they cannot die, no word or call
But He can hear who notes the sparrow's fall;
And though long hidden from us here below
He will to us reveal, and we shall know—
All this will live!

Hamilton, Ont.

Lack of Courtesy.

GLENN'S FERRY, IDA., April 23, 1905.

EDITOR JOURNAL: To illustrate to the worthy Brothers of our order the feeling now existing in regard to securing transportation for each other, I write this to be published in our monthly JOURNAL. In a trip of 2,500 miles I find only five Brothers willing to assist in securing transportation, six who will not assist and three of them tongue-tied. Five times I was forced to ask firemen to get me passes when engineers refused. This may be brotherly love, but it does not look that way from the highway.

Will my worthy Brother, the Editor, explain to me why so many B. of L. E. men are short of the standard, when the firemen never fail on any occasion? Brother Editor, you will confer a favor on me by answering the above, also by giving this article space in our JOURNAL. I am a member of Div. 368 and in good standing, and positive no member of that Division could be guilty of anything above.

Yours fraternally,
J. F. WILLIAMS.

Contingent Fund.

BANGOR, ME., June 27, 1905.

EDITOR JOURNAL: That goat story of Brother Nixon's, in the June JOURNAL, might have been an old one, but was new to me, and I appreciated the many good points in it. It reminded me of Artemus Ward's lecture on Egypt; the noteworthy feature of the lecture was there was nothing about Egypt in it.

I did not expect my ideas would meet with the approval of all, it is only by discussion of different ideas we arrive at a conclusion, and the proper place to discuss things pertaining to the Brotherhood is in the Division room, or through the columns of the JOURNAL.

As far as the work of our conventions for the past twenty-five years goes, I am rather proud of them, proud to think they have laid the foundations of our great Brotherhood as strong as they are today, thankful the good they did still lives, and hopeful for the future.

"The good men do lives after them,
The evil is interred with their bones;
So let it be with Caesar."

Now a word about the insurance. The first thing to remember is, if you want more benefits it will cost more money. Then the question comes how much more are you willing to pay?

There are no doubt many members of the B. of L. E. who are paying all they want to pay, and others who are paying all they can afford to pay; these Brothers must be reckoned with before any plan is adopted for an increased cost.

It seems to me it would be a good idea to so legislate as to make sure we pay no more for the same benefits. In the nature of events there might come a time of business depression, epidemic, discord among our members, or other causes, that might increase the cost of our assessments to a considerable degree.

In view of such contingency arising, I would be in favor of a contingent fund. It is well to remember that a child creeps before it walks, and nearly all large financial successes are the result of small beginnings. Therefore, I would suggest that we take plenty of time to raise the fund, and we accumulate it by such small assessments as will not materially increase the cost of our insurance.

For example, suppose we assess each member of the association 50 cents per year, let the fund be placed at interest and be allowed to accumulate for five years; allow we have 40,000 members, take your pencil and figure how much of a fund you will have at the end of five years. Let such part of this sum be used as will keep the cost of the insurance to a

nominal figure, say at least \$16 per year per thousand. Of course it might be less, but the fund would prevent it costing more. Let such yearly assessments be made as will keep this fund to such a figure as the future conventions may determine.

I am aware that this plan is imperfect in some details, but my idea is to get an anchor to windward, and be assured against future possibilities that may arise, decreased membership, a raised age average, or some of the other risks incident to a fraternal insurance.

Fraternally,
W. J. BOOTHBY.

Endowment Feature.

COLUMBUS, O., June 8, 1905.

EDITOR JOURNAL: I have taken particular interest in reading the discussion going on in the JOURNAL now with reference to creating an endowment feature to our insurance organization. If the officers of our insurance, who are in a position to know, can guarantee that the figures given by W. T. H. in the June number are reliable, and that the endowment feature can be put into successful operation with that cost, then I consider it the height of supreme folly to let the next convention pass without passing the necessary legislation to put it in operation.

It was my misfortune some few years past to lose a limb which, of course, took me out of the insurance; but determined not to be long without a policy, I invested in one of the old line companies and took out a twenty-year endowment policy for \$3,000. This cost me \$162.00 annually and as the years pass by I am perfectly satisfied with my venture.

Now, then, according to W. T. H.'s figures, an endowment policy in the Brotherhood would cost about half that much and still the old companies are writing up all they can handle. Who would say that this would be a handicap to the insurance, when we all know the superiority of an endowment policy over a straight life policy. To the old men it would be a great boon and to the young men it would be a special pride to protect their families if they died and to know that they were protecting themselves if they lived. In other words, it would be a grand march forward by a great organization. The railway men of today figure intelligently, and if there is a better investment for a young man than an endowment insurance policy I am not aware of it, and that is the reason why the old line companies are writing up so much insurance the past several years.

Brother Winter, of Div. 362, says increased assessments means a falling off in membership, but increased assessments, when it virtually means storing it in a bank for a declining age, ought not to a thinking man mean falling off in membership. Endowment is the modern insurance and I am for it first, last and all the time.

Fraternally yours,
C. T. CUMMINS, Div. 175.

Paid-Up Policies.

BARABOO, WIS., June 9, 1905.

EDITOR JOURNAL: I see in the June JOURNAL, page 498, Brother Freenor acknowledges that I understand his plan of endowment insurance correctly, but says that my statement that "a man would have to live 1500 years in order to have his policy paid from the earnings of his own money" is a delusion in the extreme (which means misleading, deceptive and untrue) but he failed to give any proof to show that his statement is correct. I do not think that is exactly a square deal and don't know as it should be given any attention, but as Brother Freenor claims to be a young man and seems quite energetic and sincere in his belief, I will venture to give the Brothers a few more figures in a little plainer manner and perhaps the boys can understand them, but if the figures are incorrect or misleading, I hope Brother Freenor or some other Brother of his belief will have the kindness to show us where the mistakes are.

Now, then, if one Brother's money earns \$1.00 in a year it would take just 1500 Brothers' money one year to pay off one policy, would it not? If it takes 1500 Brothers' money one year to earn enough to pay one Brother's policy, let us see if we can come somewhere near telling what per cent of the Brothers would receive their money during the average life time of our insured. Brothers, I have no way at hand of finding out just what the correct average age of our entire membership is, but presume it is somewhere between forty and forty-five years, as we have many old Brothers; but I want to give Brother Freenor's plan the advantage of any doubt so we will call it thirty-five years. According to the American table of mortality (which is said to be very accurate) a man at the age of thirty-five years, or a set of men in good health at an average age of thirty-five, have an expectancy of thirty-one years of life before them. Of course they will not all live that long; a percentage will die the first year and each year thereafter while they last and a great many will live longer than thirty-one years, but the average years of life left for them will be very near thirty-

one years each. Now, if a Brother has one chance out of 1500 each year and the average years left to each Brother is thirty-one years, any schoolboy can tell us that we would have just one chance in forty-eight in our average lifetime; or figuring it in another way, it would be about an average of one and one-half policy holders paid off in each Division of the order in the next thirty-one years.

Brother Freenor says the new members would swell the capital, but would it not also swell the membership and thereby leave the percentage the same? The only way in which your capital can be increased per capita is by the members dying or being paid off. Is not this true?

We haven't said anything about expenses of running the business or taxes on the capital; but I want to make this liberal to you, so we will knock off eight points on account of increase of capital by death, etc., and make it an average of one in every forty to receive their money while yet alive.

Now, why does this one man out of forty get this money? Is it because he needs it? No. He may be the best off of any one in his Division. Is it because he has paid in enough so that he is entitled to it? No, for you have compelled forty others to contribute to a fund to pay to the one who was lucky enough to be the oldest member on a certain day in the year a premium or prize for having lived so long. Many a Brother could have the distinction of being the oldest in the order for nearly a year without even receiving the interest of his own money, if he should be guilty of dying before payday, as it were, or the day your interest is collected and paid out. Why, Brothers, this could hardly be called an endowment insurance or fund; it is sort of a lottery or game of chance and it is not even a fair proposition at that, as I will prove to you in the following illustration:

Suppose 100 men join the B. of L. E. with this plan in force; say ten of them go in at the age of 21 to 25 years; another bunch between 25 and 30, and so on up to 50 years of age; who would be most likely to get the prize? I think it would be plain to everyone that the boys who went in between the ages of 30 and 50 wouldn't stand any more show than a rabbit, for the fellows below them would have from one to 29 years the advantage. Some sarcastic Brother might say that Brother Freenor is probably one of those who got in on the ground floor, as it were, and is therefore in a fair way to get the prize, but I do not believe it, neither do I believe he ever figured this plan out for himself; if he did, I for one would be pleased to have him tell us where the business principle comes in, as he admits

that insurance must be conducted on business principles in order to stand any length of time.

Some of our Brothers in commenting on this plan have said \$20.00 is not much, any one could afford that much, etc. I say the average man who is figuring on having something in old age will save his surplus \$20 bills or invest them safely; or if he wishes to invest in a game of chance it will be in something with quick returns, so he will not have to wait until the day of his death to know that some one else has profited by his speculation.

I wish to say in way of explanation that the only reason I had for speaking of my carrying endowment insurance and having written it was to show that the statement often made that railroad men could not get that kind of insurance at the same price as others was a mistake. I for one have always been willing to pay the same price for any article I want as others do and I do not see why it should be called a luxury unless it is because you do not have to have it; but if you do take it out and keep up your side of the contract, it is just like putting money into a savings bank for a stipulated number of years, with the additional feature of having your life insured.

Brother Freenor also insinuates that I am crying against our present plan of insurance, which hardly does my article justice, as I did not say a word against our present plan and never have and have carried \$3,000 worth of it for years. I have always claimed the B. of L. E. insurance is the best fraternal insurance in the market, for the reason that it is not the main feature of the order and will therefore be permanent as long as our grand old organization stands; but, Brothers, there is a limit to the amount of compulsory outside or insurance assessments a labor order will stand without doing it great harm, and would therefore urge that we be careful about additions lest we kill the goose that lays the golden eggs.

With the B. of L. E. well organized we can insist on our men getting good salaries for services rendered, but we cannot make financiers out of all of our members, so why not let them invest their money as they see fit, then the Brotherhood will not be to blame if things do not come out as they have figured.

Bro. L. S. Winter gave a very able illustration of this subject in the June JOURNAL, page 491.

Hoping I have made myself plain on this theme and wishing only for the greatest good for the greatest number, I am

Fraternally yours,

HENRY H. TINKHAM, Div. 176.

The Denudation of the Forests.

LITTLESTOWN, PA., June 10, 1905.

EDITOR JOURNAL: To make naked, to strip, or to rob the earth of its forests is a sure way to make out of the earth a desert. Imagine our beautiful earth with its grand waterways and almost boundless forests converted into an arid desert—but we are coming to that if the wood destroyers persist in their nefarious designs on posterity. National legislation should be invoked to prevent this wanton destruction of this God-given means of keeping our fertile fields moist, because were it not for the moisture emanating from the woodland the crops in our now fertile spots would wither and die and, of course, famine would ensue.

The railroad companies are in a larger measure doing their part to prevent the destruction and in some ways they are not. A number of them have adopted the practice of firing up cold engines with fuel oil and refuse cotton waste, which is praiseworthy. Just think of using an eighth or a quarter of a cord of wood to fire up an engine after the fire has been drawn for a washout, stay bolt inspection or other work. In bridge work they are substituting stone, brick and iron, which is grand; but they are not by any means doing all they can. They could substitute structural iron, brick or stone for their engine houses, stations, offices, machine shops and tool houses, and in addition to saving the forests, they would be in a large measure secure from fire losses, and would save on insurance rates. I almost lost sight of the fact that they are saving timber in car building; some of the cars have not a splinter of wood about them, except one little bit of board secured to the side with strap iron used to tack cards upon.

Now, all this saving is highly commendable; but mark you, there is one thing they could do, which I fear they never will do willingly, to save the wanton destruction of wood, make the price of coal so it will be within reach of the poor and lowly. Nothing but pure avarice stands in their way to do this. I have seen railroad companies order track men to burn up wreckage for fear some poor devil would secure his winter fire wood, as that would mean the loss of the sale of a few tons of high priced coal. Legislation can force down the price of coal if it will, because there is no reason why any company, monopoly or corporation should be greater than the nation in which it abides.

Fraternally yours,

LOUGHREA, Div. 104.

America's Past and Present.

LARGER, W. VA., April 28, 1905.

EDITOR JOURNAL: If you will allow me space in your highly appreciated JOURNAL, thought I would write a little.

We behold today only the rising of the sun of our empire, the beginning of a great nation. Whether the seed sown shall mature into autumnal ripeness, or perish, yielding no harvest, depends upon God's will and providence. God's will is not governed by caprice and avarice, but by certain revealed laws, and, therefore, in order to carry out the grand mission which God has designed for us as a nation, we must be willing to abide by these laws. Just as the individual finds in God unerring guide and protection, so may any nation of people, which is submission to Divine providence.

We Americans should be truly grateful that our government is founded upon religious principles with George Washington, a grand and noble Christian character as leader; one who attributed his wonderful accomplishments in life to the guidance of an unseen hand; a man who is enthroned in all the affections and hopes of American people; one whose reverence for God gave him the respect of all his soldiers. His singleness of purpose gave him the esteem and love of all who loved their country. Not only Washington, but all the founders of our nation believed that "Righteousness exalteth a nation, but sin is a reproach to any people and that the nation and kingdom that will not serve God shall perish. Yea, those nations shall be utterly destroyed."

As we study the history of the past, we find that nations who put Jehovah out of their councils were very short-lived, and their suns set in darkness and blood. We have, no doubt, at times departed from the trodden path of our forefathers, but only to be plunged into an age of revolution—a revolution which was to bring all mankind from a state of servitude to the exercise of self government—from under the tyrannical rule of physical force to the gentle sway of opinion.

Let us rejoice today that our forefathers inaugurated a Republican form of government and supported it against all nations, although the way was reddened with blood, and the fields made white with the bones of thousands of our gallant men. Yet as these heroes breathed the spirit of Puritan faith—came forward overriding all opposition—continued the grand march with freedom's bell ringing in their ears awoke the new world from its savage lethargy to an appreciation of religious freedom.

In an hour like this do you not believe

that the spirits of the blessed are looking down upon us? Our hearts should be filled with gratitude to those great men of old, whose inspired patriotism and lofty courage caused them to face any danger and even death itself, in order to work out the miracle of American independence.

They toiled and struggled not for themselves, but for all future generations. They did not dream what strides would mark their onward march; they sought no honors, asked for no rewards; they laid their lives an offering upon the altar of duty for the sacred cause of right. The perils already passed and the precious things already attained ought never to be forgotten when our eyes are fastened on things that seem so desirable.

"There are but few blessings which the nation now covets, which are worth mentioning compared with the blessings already secured." See Otis and Hamilton and Lee and Sumner and Marion and Gage and all others standing around these words, "Behold, oh, Father! and thy country behold what a century hath wrought." Instead of thirteen colonies, forty-six happy states; instead of 3,000,000 people, 65,000,000 prosperous people; instead of eight schools our hills and valleys are dotted with schools, school houses fill the streets of our great cities and spread all over this wonderful land of ours, teaching our children, the coming generation, to make this country better and better every day. Look at the churches which set their steeples against the sky, echoing from spire to spire, from the shores of the hundred-harbored main to the soft flowing waves of the Pacific.

As in the words of George Curtis, "We of America, with our soil sanctified and our symbol glorified by the great ideas of liberty and religion, love of freedom and love of God, are in the vanguard of the great caravan of humanity. To us, rulers look and learn justice, while they tremble; To us, the nations look and learn to hope, while they rejoice. Our heritage is all the love and heroism of the liberty in the past, and all the great of the old world are our teachers.

"Our faith is in God and the right, and God himself is, we believe, our Guide and Leader. Though darkness sometimes overshadows our national sky, yet this passes in God's good time; and in clearing sky and pure atmosphere our national life will grow stronger and nobler, and so with our individual hearts strong in love for our principles, strong in faith in our God, shall the nation leave to coming generations a history and law and religion and truth more glorious than the world has known before; and our Ameri-

can banner be planted first and highest
on heights yet unknown in the great
march of humanity." S. S. CORDER.

Singeth ye Fireman.

BY SANDY M'GLASHAN.

On a moonlit night in summer,
With a light train on good time,
And an easy steaming mogul,
Tell you what, that's my good time.

For the old chief works her lightly,
No need now to drop her down
In the corner near the wrenches
With that "got to make time" frown.

And I give her just three scoopfuls,
While my phiz is wreathed in smiles,
Then upon the seat-box jumping,
Ride for two long happy miles.

Every carking care and sorrow,
All my troubles are forgot,
E'en the brass that on the morrow
Must be polished to a jot.

There is magic in the moonlight,
Things prosaic all are gone,
Rails, two gleaming lines of silver,
Ever stretching on and on.

Every stump's a thing of beauty,
Rail-fence, corn-row, dead pine-tree,
All are changed to lovely seeming,
By the moonlight's alchemy.

Air with woodland odors scented,
Jessamines, magnolias, bays,
Back to memory brings trooping,
All my boyhood's happy days.

How to get my girl some blossoms,
Her bright tresses to be deck,
But I climbed a tall old by tree,
Fell, and nearly broke my neck.

So we rolled up to the junction,
Just at breaking of the day,
Chief goes over for his orders,
Soon comes back and sings out, "Say,

"Get her hot, my son, we've got to
Pick up twenty seven loads,
All pig iron, coal and lumber,
From these dad-blamed one hoss roads.

"And as if that wa'n't a plenty,
Number 3 is two hours late,
And that great-headed dispatcher,
Says right here we've got to wait."

Red hot blazing summer morning,
Heavy train and way behind,
Lever way down in the corner,
Sweat a pouring till I'm blind.

Mogul eating up the coal pile,
Like a darned old hungry cow,
And I rake and shake and shovel,
"Darn that Moonshine anyhow."

Honorary Members.

HATTIESBURG, MISS., June 8, 1905.

EDITOR JOURNAL: I have read the June JOURNAL with unusual interest. I wish to reproduce a small portion of Bro. B. A. Pickren's valuable article on pages 486 and 487.

"I find a great deal of comfort once a month when my JOURNAL comes, but I take issue with a great many articles, though I keep still merely to show my good Brothers I am as their law decrees, dead. The established laws of our Brotherhood forbid any Brother not in active service from holding or performing any official duties of the B. of L. E. Men serve out their days in the order in active service, and soon a circumstance forces them from active service. They themselves close the doors upon them, through some selfish motive, I presume, unknown to me; hence, they are dead to the Brotherhood as soon as they come in possession of honorary membership. I have no desire to be in any way sarcastic."

In this Brother Pickren has expressed the truth in a very mild form, to my way of thinking, of every honorary member. In this connection, after making a suitable allowance for poor old human nature, I wish to refer to the statute law, page 38, section 75, which imposes somewhat of a burden on any of those honorary members who might be so fortunate as to have a position paying them \$50 a month. Here is a law which requires taxation without representation.

I wish with all candor to ask, is this in keeping with one of the B. of L. E. mottoes—Justice?

I want the delegates who met at the last convention to answer this Brother's question asked in the May JOURNAL signing himself E. P. S., from Rochester, N. Y.

I was very much interested in reading the June JOURNAL and the number of subjects discussed, especially J. W. Reading on breakdowns. I will here relate a little experience I once had when a tower man operating the switches, put the engine I was running and four cars on the ground. Soon after this two engineers of one of the other roads came up and in a polite way asked me what Division I was a member of. In reply I said Div. 101 in the South, which was the beauty and glory of the day. They said, "Wait until we return." When they did it was with their conductors and two powerful engines. The engine and cars were soon on the track without any damage only to the track. After the usual congratulations they said, "Some men meet on the level," and I said they parted on the square; and in about this way I have come to others' assistance and did not make use of anything that would ignite. J. O. DETWEILER, Div. 336.

Do Away With the Noms de Plume.

EDITOR JOURNAL: Recently an article appeared in print over a nom de plume which I am ashamed to think I wasted my time in reading. The subject of the article was, "The Incompetent Engineer in Charge of a Defective Engine." It is the first time I can call to mind where a writer following the vocation of a locomotive engineer ever published an article in detriment to another engaged in the same occupation, who lacked the moral courage to sign his name to it. It seems to me that in his criticism he should have come out boldly and fearlessly by revealing his identity in his signature.

The substance of the article one might say was ponderous, although its weight would not strike one so forcibly as its rashness and dare-devilry—its flying in the face of danger—its invitation to the lightning to descend and strike; and from comments I have read from intelligent men—in the same line of employment as the author—it did strike hard enough to cause him to recant in a wishy-washy explanation of his article, the enormity of his offense over the same nom de plume; its effect being that of the proverbial red flag flaunted in the face of the "gentleman" cow. It was audacity packed into verbose bullets and fired into the ranks of those who could but retort with a cannonade of hot shot, which may be the means of driving him from his convenient hiding place, from under the protection of a nom de plume; which anyone can use as a concealed weapon if so disposed.

Some years past the undersigned used a nom de plume for his signature to a few articles published in the JOURNAL, and at that time when I asked a gentleman to subscribe for the JOURNAL he replied that there were too many contributors to the JOURNAL who used noms de plume to make the reading matter interesting to him. From that time on I discontinued the use of a fictitious signature, accepting his remarks as a suggestion worthy of approval and adoption.

As I understand it the JOURNAL is the official organ of the B. of L. E.; its largest circulation being among the members, who are its contributors; therefore, an article worthy of publication should be over the signature of the author, especially when referring to any personal matter that is liable to create comment. I have noted of late an increase in the nom de plume signatures in the JOURNAL and if continued the increase will still be greater. Now the question arises: Will this be a credit to the author and an advantage to the JOURNAL, or the opposite?

In my opinion it would be better to discontinue its use, for I believe the time has arrived when there should be lack of space in the JOURNAL for the nom de plume, with the exception of "Shandy Maguire," which nom de plume has appeared for the past quarter of a century in the JOURNAL, and is familiarly known from the Atlantic to the Pacific as Brother P. Fennell, of Div. 152, Oswego, N. Y.,—our Brotherhood poet—who in my recollection never wrote an article reflecting discredit on a fellow brother.

In a conversation recently with an aged Brother he made the remarks that he had long patiently waited to see the time come when the noms de plume would disappear from the JOURNAL.

No doubt some one will wonder why that old Brother raises this point at the "eleventh hour," and why I am bringing it to the notice of the readers of the JOURNAL at this late day. "Sometimes toward the evening of life, patience is rewarded with success." Count Tolstoi, after arriving at the milestone marking the half century of his existence, gave to the world some of his brightest thoughts. In a historical line of thought, Christopher Columbus, in his great belief in the roundness of the earth, and that another route could be found to the Indies, set out on his journey, with but a few men to complete his crew. After many days' sailing they lost faith in their leader, not seeing land in sight, and revolted against their leader; this was, no doubt, the most trying moment of the voyage. Columbus did not, however, give up his belief of the discovery of land, and an agreement was established between himself and the crew, giving him three days' grace. At the close of the third day when all hope seemed about gone, there appeared in sight in the far distance an indistinct object—a mere speck. This imbued Columbus with renewed hope and he sailed on. Finally a cry was heard from the crew, "It is land! It is land!" We read that this is one of the most important events in history—the discovery of a new continent—and at the "eleventh hour." It is written that Bernard Pallisy, after days and nights of study in research, threw into the oven the last remaining piece of furniture, as well as the boards of the flooring in his home, and found at the "eleventh hour" what he was seeking.

These object lessons should teach us that it is never too late for improvement and discovery; therefore if "cutting out" the nom de plume would be an improvement to the JOURNAL, it would certainly be a discovery at this late day, and I would recommend that the subject be given proper consideration by all those inter-

ested. Personally, I would advise that they be excluded, with the exception heretofore mentioned—Brother "Shandy"—as I think it would be to the best interest of all concerned. It would not be reasonable to expect every one to agree with me, but I assure you I will not become a pessimist, a repiner or a suicide on account of the difference of opinion. I would like to say to those having recently adopted the nom de plume and to those who contemplate doing so in the future that if they would discontinue its use the nom de plume would soon be a thing of the past in the JOURNAL, and that if they do not it is my opinion the outcome will be that by an act of the Convention a law will be made excluding the fictitious signature from the JOURNAL. I am giving this matter to you with best intentions from my own view-point.

When Fulton tried to talk to Napoleon about the steamboats which he had invented, "Napoleon's mind was full of a plan to cross the Channel to conquer England," his own boats being at the mercy of the wind. He said to Fulton that he could give him but five minutes and at the end of that time Napoleon's extraordinary mind rejected the knowledge given. "He did not cross the Channel, and England eventually conquered him." Had he given Fulton the necessary time and the proper encouragement he might have ruled England and throughout all Europe, and today one of his descendants, the little king of Italy, might be the dictator of the world.

Please do not imagine I am egotistical enough to classify myself with Fulton—I simply give the illustration to show that it is best to take time to consider well before rendering hasty decisions. "With malice toward none; with charity for all."

Faternally yours,
J. PUFFENBERGER.

On a Georgia Sheep Ranch.

DESSER, GA., July 8, 1905.

EDITOR JOURNAL: As it has been nearly two years since I gave up a run on the Central of Georgia Railway, to associate myself with my brother on a sheep ranch, I will endeavor to let the Brothers know how the world is serving me here. We have 1,300 head in the neck of the woods between Spring Creek and Chattahoochee River, and I stay in the woods most of the time looking after them. I ride a mustang pony and carry a Winchester rifle. There is lots of game, such as squirrels, turkey, fox and a few worthless dogs that occasionally take a mutton from the flock, some deer, coons, and more rabbits than John saw, plenty of fish in all the streams

and lakes, and there are some things to rejoice over and some to lament over, just as it was on the road. One thing I am glad to say is I am not run about by a boss as I was on the road, and I am at home with my wife and boy every night, which is a great satisfaction compared with being on the road with a bad steaming engine, and a nigger to shovel the coal. Here is, too, Brother Pickren, at Spooner, Ga., who lives just fifteen miles north of me. Come down and spend a week, I would be very glad to have you; if you cannot do that do like you were fishing, drop a line. And also Brother Skinner and Cox at Blakely, who are only thirty miles away, can't you do the same thing? Now to the Brothers on the G. F. & A. and C. of Ga. I have the highest regard for and am always very glad to hear from you, and will ever hold you in my mind as true friends and Brothers, and if the great God of the universe permits I will see you in October.

Good luck to you, boys
Of the grand old B. of L. E.
I'm certainly one of you,
All the way down to eternity.

If, by chance, you think of me,
And wonder how I do,
Just please remember "Old Huldy,"
Her number is 1402.

May God in mercy guide
The wheels on the track,
Boys, don't forget your Brother
On the "Mustang's" back.

A. J. RICH, Div. 210.

Railroad Employees' Home.

Communications for publication must be written on one side of the paper. Noms de plume are always permissible, but to receive consideration must be signed by the full name and address of the author, and addressed to the Editress, MRS. M. E. CASSELL, 927 Dennison Av., Columbus, Ohio, not later than the 8th of the month.

The Editress reserves the right to revise, reject or use matter sent in, governed entirely on its merits.

Out of the World.

BY J. CARLETON SHERMAN.

Out of the world of wrack and wrong,
 Into the world of joy and song ;
 Out of the land of strain and stress,
 Into the land of happiness,
 All on a summer's day.

'Tis good to steal a quiet hour ;
 'Tis good to feel the subtle power
 Of wood and wave and quiet ways,
 And the wondrous spell of a maiden's gaze,
 All of a summer's day.

So out of the world of wrack and wrong
 Come to the beautiful world of song,
 Where blossoms blow and streamlets flow ;
 Forget that life is full of woe
 For one brief summer day.

In Colorado.

Again the summer finds me in beautiful Colorado Springs, where all is sunshine and the snow-capped mountains ever near. On my way out here from Ohio I took the opportunity of visiting Divisions at Des Moines, Ia., and Denver. Arriving at Des Moines June 7, was met by a good B. of L. E. Brother who took myself and husband to the home of

Brother and Sister J. E. Platner, where we were nicely entertained during our stay in Des Moines. Arrangements had been made for a Division meeting that afternoon, but before going we had the pleasure of meeting most of the members at an 11 o'clock breakfast at the beautiful home of Brother and Sister J. J. Spellman.

The breakfast was served on the veranda, and the table decorated with roses which grew in profusion in the yard of this suburban home.

The hour was too short which we spent in this ideal spot and happy memories will linger with us of this occasion.

The afternoon meeting was greatly enjoyed, and I found the Division in good working condition. My desire is that the good Sisters of Des Moines may prosper in every way. Brother and Sister C. H. Fesemyer extended the hospitality of their home to us and we dined with them at 6 o'clock in the evening. They have a very pleasant home and an interesting family.

In the evening a reception was held at the home of Brother and Sister Platner at which a number of B. of L. E. and G. I. A. members were present. Again was the courtesy and hospitality of the Des Moines Sisters in evidence, and every minute was enjoyed. We left the city next morning, taking with us the most pleasant recollections of all who were so kind to us.

Our next stop was Denver, where a meeting of Div. 46 had been arranged for the afternoon. Sister Ensign met us and tendered her home for our stopping place. Dinner was served at the home of Brother and Sister A. McAllister, she being President of Div. 46. The meeting of the Division in the afternoon was largely attended and was in reality a joint meeting of Divisions 46 and 184. I find these Divisions well up in the work and it was a real pleasure to meet with them once more as I have always remembered the enjoyable time spent with them some years ago.

During the afternoon President McAllister, in behalf of Division 46 presented me with a handsome souvenir State spoon, which I will most highly prize as representing the good-will of these dear Sisters. Ice-cream and cake were served in the hall and we said a reluctant goodbye to take the evening train for Colorado Springs.

Being in close touch with Colorado City I took the opportunity to visit Roma Division a few days ago and renew old ties of friendship. I feel as if this Division is almost as dear to me as my own at home, because I have met with them so often and have always received such a cordial welcome. This one was no exception, and although I missed some

familiar faces, the afternoon was pleasantly spent in their beautiful hall, Sister Dibble, as President, doing her duty well. Refreshments were served and plans laid for the next meeting, when I hope to be with them again. M. E. CASSELL.

Pleasant Outing.

Southern hospitality is a matter of history. But we wish to tell you that it is only necessary to go 128 miles south on the I. C. R. R. to find the genuine variety.

On Wednesday, June 7, thirteen members of Div. 5, Chicago, Ill., G. I. A., escorted by a brave, Bro. Stewart Gilkinson of Div. 10, B. of L. E., went to Champaign, Ill., to visit Supreme Div. 344, G. I. A. Upon arrival we were met by a large delegation of Sisters and Bros. Homer Howard, Master Mechanic, and P. L. Hayee. Instantly the writer's mind crossed the desert to Los Angeles, where we last saw the pleasant faces of Brother and Sister Hayes and Sister Sabin. We were taken to their lovely little hall and served with an excellent luncheon followed by the regular meeting of Div. 344. Their work and attendance were both good. They have every encouragement from their B. of L. E. Division and will surely become a banner Division in the near future. They are only six months old. Following Division meeting some went riding in the handsome turnouts of several Brothers, while others repaired to the homes of Sisters to rest and await the reception and social given for all engineers' families in the evening. It was our good fortune to be taken care of by the President, Sister Isabell, and our visit was most enjoyable with her pleasant family. The evening entertainment was very pleasant with addresses of welcome from several Brothers, games, music and elegant refreshments, and best of all the spirit of harmony and kindness shown by all.

The following day a picnic was given by Div. 602, B. of L. E., and their auxiliary, 344. The cars were donated through the kindness of Representative McKinley of that department, and such a pleasant picnic, not a dull moment the entire day. Dr. Osler would certainly have changed his opinion as to the chloroforming age had he seen Bro. Humphrey Roberts and Brother Gilkinson racing, also Sister Clifford and Sister Gilkinson, for particulars see Bro. John Graney. Every one did so much to make us feel at home that Sister Bristol was moved to sing as we sat at that wonderfully bountiful dinner table, "Home ain't nothing like this," until Brother Howard talked

of 'phoning for the derrick. We returned to Chicago that evening. We thank every Brother and Sister who helped to make our holiday so pleasant, also to Master Mechanic F. F. Barton of Chicago for courtesies shown to all who wished to make the trip. Champaign is a beautiful city, and her people "all right."

Fraternally yours,
MRS. JOHN SPURR.

Inspection.

The inspection of Div. 81 occurred at Woodville, N. H., May 23. The forenoon was passed socially. Members were present from St. Johnsbury and Lyndonville, Vt., beside the local members. The work was fully exemplified by new staff of officers, who acquitted themselves creditably, and passed the examination of by-laws with few failures. Music added much to the work. Sister Nellie Corliss, pianist, and the work of Guide Hardy (or it may be Harvey) was commendable.

An excellent dinner and supper were served, after which we were entertained by Ins. Sec. Annis, and calls were received for Sister Corliss and Miss Flora Hoyt. A few minutes were enjoyed with Sister Gibson. Left the following day for St. Alban's, Vt. A short stop was made at White River Junction, where I was met by Sister C. E. Davis of West Lebanon, with whom dinner was taken. Sisters Davis and Scannell saw me off, and arriving at St. Alban's was met by a delegation of Sisters who accompanied me to the hall where, as in the past, Div. 114 extended a hearty welcome. All enjoyed the "spread" provided, served as these Sisters know how. It was my pleasure to meet here Sister McCluskey of Div. 205, who has the sympathy of all who know her in her sorrow by loss of husband and son.

An evening session was held, well attended. Sister Taylor entertained. Inspection occurred the day following, May 25, with all chairs filled, Sisters McCarthy and Anderson making extra effort to be out. This Division has recently purchased a piano, and it is the first time we were favored with music at our meetings with this Division, Sister Kenyon acting as musician. We were pleased to meet the new Sisters admitted since my last visit in June, 1904. Composed of only twenty-five members, five non-residents, hindered by irregular attendance, sickness and other unavoidable causes, the work was well done. Accompanied by Sec. Taylor and Treas. Parmlee, left May 26 for White River Junction, where we were met by Sister Davis who, with Sister Scannell, entertained during our stay. To these Sisters and Sister Currier are indebted for

many courtesies, among them a tea and reception at Sister Scannell's home, where members of Div. 114 and Div. 81 were also present. Carriage drives to Lebanon, Hanover and about White River Junction were taken, and pleasant calls were made on the members, and Mrs. Colby and Hurlburt, the latter ill at her home.

In my May letter please note following correction: Sister Agne was chairman of committee who extended invitations to attend anniversary of Div. 264, and the car in which we traveled to Los Angeles was Inglewood. MARY L. COOK.

From an Old Member.

In looking over the JOURNAL I see a good deal about the Insurance, and as we are one of the older Division, 1, as we were organized in 1887 as a Ladies' Society to the B. of L. E., and in 1888 as Auxiliary to the B. of L. E., our Division number being 15. We have seen it grow to its present proportions, through the good management of our Grand Officers.

I feel like saying, as one Sister said, to let well enough alone. When our first insured member died her husband only received \$9, and several of us took out two policies, and some took out three to help to pay a larger premium, and these same members are too old to take any insurance in anything else, and we have been paying in this for 15 years; it does not seem just to them to make the change contemplated by some.

I am 68 years old and my certificate is No. 39, and I could not keep my assessment paid up if it is rated, as I have no income now, and I am not the only one so situated, and as figures show there is no need of a change being made, and I think that every Division should take it up seriously and make it plain to their members so that we may be able to vote intelligently on the subject, for I can see there will be a great falling away of those who are in our insurance, and it will deter others from coming in.

I do not think I can say anything more convincing than the member from 33 in March number of JOURNAL, Mrs. G. W. Morse, Ins. Sec. We assisted in organizing that Division, and she fully expresses my idea about it, and Mrs. Hoyt has a good article in the same number, and if the younger members object why should they want to change it?

I wish every member would read what comes to them through the JOURNAL; they are convincing enough for any careful reader. In this month's JOURNAL we have eight deaths and only assessed for three; it seems to me it is very encouraging for

it to remain as it is. I hope we may hear from other Divisions so that all may know what they are doing on this question.

Cheerfully submitted,
ELIZA W. COSTIN, Ins. Sec. Div. 15.
1108 East 6th St., Sedalia, Mo.

Study Club Reports.

The following report gives a good idea of the ambition and industry of the Optimist Study Club of Grand Rapids, Mich. This club was organized in January, 1905, has eleven Auxiliary and two outside members. The meetings have been monthly, consequently only a portion of the programs has been studied. This club is not federated, but expects to be when the work resumes in the fall.

Mrs. M. C. Gage is president and Hattie L. Smith, secretary.

A report from the Toledo G. I. A. S. C. for the year ending May 31, 1905, has been received. This club was organized in 1898, has a membership of 36—23 being Auxiliary members. It is affiliated with city and state federations, has contributed to the Junior Civic League Fund. This organization has for its object, the beautifying and cultivating of waste land within the city limits.

The club expresses itself as well pleased with the year's programs, finding profit in every one.

MARY L. ROBERTSON, Pres.,
JANE E. UTLEY, Sec'y.

To Our Club Members:

It is not possible to publish what in other clubs is denominated a "Year Book" of study, yet we can give you an idea of what our work will consist for the coming year. There will be a study of Russia and Japan in each number of the B. of L. E. JOURNAL. Members can, as opportunity offers, lay aside for reference, articles upon geographical Russia and Japan, political divisions of each country, their religions and literature, educational systems, etc.

We shall have reviews of magazine articles, character sketches of prominent Americans, the irrigations of the arid West, and the proposed improvement in the tenement houses in large cities. Other subjects of interest will also be considered.

If any club members see fit to suggest subjects, we will be glad to hear from such.

Our reports are slow in coming in and we call special attention to Article 15, Rule 10, in our By-laws.

C. E. CUNNINGHAM, Chr. Study Club Committee, 904 Wheeling St., E. Toledo, O.

School of Instruction.

On Tuesday, June 20, under the direction of Vanderbilt Div. 264, a School of Instruction was held in New York City. Twenty-one Divisions were represented, and the school, under the capable direction of Grand President Sister Murdock, assisted by Grand Secretary Sister St. Clair, proved to be the most successful thus far held in New York city.

At the morning session ritual work was taken up and the accuracy and thoroughness with which this feature of the school was handled by Div. 264 surprised the visiting Sisters, and showed the result of close attention to this branch of the school. After recess Sister Jardine, of Div. 244, relieved Grand President Sister Murdock, and presided over the afternoon session. The able manner in which she conducted the business under discussion sustained the reputation which Div. 244 holds among the Sisters of being perfect in its work.

At the close of the afternoon session Sister Wheeler, in behalf of Div. 264, of which she is President, in a few well chosen words, presented Sister Grand President with a beautiful cut glass dish, and Sister St. Clair with a souvenir spoon. In expressing their appreciation for the happy surprise, and after thanking the members of Div. 264 both Sister Murdock and Sister St. Clair took occasion to compliment the Division on its thorough organization, and also spoke of the kindness and hospitality of Sister Wheeler, at whose home Sister Murdock stayed while in New York.

After a further exchange of good wishes Sister Wheeler extended to all the Sisters present an invitation to a supper and lawn party to be held at the residence of Sister Wm. Higgins, which invitation was accepted with delight. On entering Sister Higgins' home the guests were warmly greeted by the hostess who, with the assistance of the Brothers of Div. 145 (to which Division 264 is Auxiliary), had the house and lawn beautifully decorated with American flags and lanterns, and tables tastefully arranged and temptingly arrayed with appetizing dainties for the most fastidious. The only disappointment of the occasion was the absence of the Sisters from Syracuse, as it was felt by the members of Division 264 that this was an opportunity to reciprocate to some small extent for the hospitable treatment accorded our Brothers of Division 145 on the occasion of their union meetings in the Saline City.

After partaking of the delicious repast a cake walk was indulged in, and Sister Seelig, of Div. 234, whose ability in this line gained her the applause of all those present, won the prize.

Dancing was then in order, the music for which was furnished by Mr. W. Higgins. One of the pleasantest features of the evening was the vocal solos rendered by Sister Fred Elliott.

Farewells were finally said, and on the breaking up of the happy gathering it was the unanimous opinion that the event was one of the most enjoyable ever given by 264. Inclement weather usually dampens the enthusiasm of the members in their efforts to provide entertainment for their numerous friends, but the presence of our Grand President and Grand Secretary it was decided had a counter effect, and even the atmosphere partook of their cheerfulness.

Division 264 sincerely hopes that the visiting Sisters experienced the same degree of pleasure and profit in their attendance at the school and reception as the occasion to provide entertainment and lend encouragement to the promotion of good will and social intercourse among the Sisters gave to the members of Division 264.

It is hoped that on the occasion of the next school meet, which will be under the auspices of Manila Div. 244, at a time to be set by the Grand President, the same welcome faces will be seen, and as pleasant a recollection of a happy time be cherished by those fortunate enough to be present. Sincerely yours in F. L. & P.

MRS. J. J. AGNE.

A Visit to Div. 22.

Accepting an invitation from Silver Star Div. 22, Grand Rapids, Mich., we arrived in that city the 31st of May, 1905, and were met at the station by Mrs. Mary Gage whose hospitality we enjoyed for the three days of our stay. On Thursday the real event was ushered in by the arrival of the members of Saginaw, Bay City and Jackson Divisions. All had arrived at 1 P. M. and were conducted to the Moreton House where we were dined in a royal manner. At 2:30 the Sisters met in the Division room where the ritual was exemplified in a most creditable manner, the initiation of a candidate being exceptionally fine. The Division room was elaborately decorated with national and auxiliary colors, ferns, palms and a profusion of flowers. A reception was held in the evening, many of the Brothers being present. A pleasing program was rendered, consisting of music, vocal and instrumental, impersonations and recitations. At the close ice-cream and cake were served, and a social hour followed.

On June 2, trolley cars conveyed the Sisters, eighty in number, to North Park, where after a time spent in dancing in

the pavilion, we adjourned to the dining room where a feast fit for a king awaited us.

Can we ever forget it? Never. Nor the pretty girls who served us. We left the park at 2 P. M., passed the Soldiers' Home where many of the old comrades smilingly saluted us. On and on until John Ball Park was reached. What a dream of beauty! Rippling cascades, crystal brooks, mirroring the great forest trees, flowers, flowers everywhere.

"Oh very pleasant when woods are green
And winds are soft and low,
To wander amid such sylvan scenes
When the long, drooping boughs between
Shadows dark and sunlight sheen
Alternate come and go."

We left this beautiful spot with regret, but as if the Sisters had not done enough, there was still another part of the city to be seen and enjoyed, and Ramona Park with all its beauties greeted us.

"The gentle spirit that haunts the lake
And wanders wherever the south wind floats,
Or the white flowers bloom in the valley green
Ramona, the gentle, wanders alone,
Waiting her lover who cometh not.
While ever and ever her plaintive voice
Is heard like the songbird's evening note."

Time flies apace and it is time to go, for time and steam cars wait for no man, or woman either, and the visiting Sisters were compelled to hasten to the station, where goodbys were regretfully uttered.

This meeting at Grand Rapids was a complete surprise and success. Silver Star is a small Division, but its members possess rare executive ability and work in harmony.

There was much disappointment that Mrs. Murdock and Mrs. Robertson could not be present. Their absence was unavoidable. A letter from Mrs. Robertson relative to the V. R. A., was read and commended.

The guests from Saginaw, Bay City, Jackson and Toledo were enthusiastic in their praise of Silver Star Division. Their only regret that these fraternal meetings are not more frequent. Their hope that each may meet the Grand Rapids Sisters under similar circumstances, and extend to them the gracious hospitality they enjoyed.

C. E. C.

Graves Decorated.

The B. of L. E. and the members of the Ladies' Auxillary to the B. of L. E., Cleburne, Tex., decorated the graves of the departed members of the order on Sunday. Twelve or fourteen of the members are at rest in the Cleburne cemetery and loving hands covered their graves with flowers.

In the afternoon a nice program was rendered in the Order of Railway Con-

ductors' hall on Chambers street. This is about the order in which the program was disposed of:

Introductory remarks by Engineer Henry Moore, Chief of the local B. of L. E. Division.

Prayer by Rev. Frederick Bowen.

Opening Ode by the order.

Solo by Mrs. Smith, of Gainesville.

Address by Hon. W. F. Ramsey.

Solo by Mrs. Smith, of Gainesville.

Address by Rev. Frederick Bowen.

Music.

Address by General Secretary Warr, of the Y. M. C. A.

Closing ode by the order.

Benediction by Rev. Frederick Bowen.

Judge Ramsey, in his address, said that the B. of L. E. was an order that stood for something, that it was on the side of law, that its members were men who lived faithful to duty and that many died on watch. He referred to Engineer Williams, who was shot by train robbers in the Indian Territory, and others that had been killed in wrecks, etc. He said that the B. of L. E. was a most important order and that its members commanded respect in the community in which they lived.

Rev. Frederick Bowen said that inasmuch as the members were so faithful from a standpoint of duty to the company employing them, and the further fact that they held such hazardous positions, made it more imperative why they should be prepared to meet God at any time. He made a strong plea to the members from a religious standpoint.

Mr. Samuel Warr referred to the time when he fired an engine in England, and asserted that he was a member of the Amalgamated Order of Locomotive Firemen's Association in that country. He said the members of the B. of L. E. were always ready for duty, and that he had known them to come in from a trip, tired and worn. After washing up and retiring they were called in thirty minutes to go out on another run. He said as they were so ready to perform duty they should strive to be equally as loyal to God. He laid stress on the peace of the man who was well grounded in the faith and was true to God.

All of the talks as well as the music were greatly enjoyed. The members of the order were accompanied by many friends to the cemetery to perform the pleasant duty of strewing the graves of the dead with flowers.

Midsummer Fancies.

It's a fact every man would be glad to dispute,
But there seems no good way to defeat it,
Adam hadn't the courage to gather the fruit,
But seemed perfectly willing to eat it.

If you cannot make both ends meet just call on the Telephone Girl.

The youth looks forward unto age,
But backward looks the man,
And one is vexed why Life should end,
And one why it began.

If it is a man's duty to work hard to provide the food for his family, it is equally the wife's duty to study how to prepare and serve such food in the best possible manner.

If nine women out of ten would devote the time and money now spent in pursuing the fads of the times in learning how to be expert cooks, the world would be happier and there would be fewer divorces and smaller doctor's bills.

Three women may a secret keep
If, as it has been said,
There's one of the lot has heard it not
And the other two are dead.

Bostonian—And what, I ask, is the price of freedom?

Chicagoan—Alimony.

"Here, Maria, here is a story about thirty Buffalo women who cooked on one stove for more than a year and didn't have a single quarrel in that time."

"What an amiably stupid lot they must have been."

Life's Mirror.

You will not be sorry for hearing before judging, for thinking before speaking, for holding an angry tongue, for stopping the ear to the tale-bearer, for disbelieving most of the ill reports, for being kind to the distressed, for doing good to all men, for asking pardon of all wrongs, for speaking evil of no one, for being courteous to all.

Let us resolve, first, to cultivate the grace of silence, second, to deem all fault-finding that does no good a sin, and to resolve, when we ourselves are happy not to poison the atmosphere of others by calling upon them to remark every painful and disagreeable feature in their daily life; third, to practice the grace and virtue of praise.

Did you ever think how much depends on the way we look at things?

Sometimes it almost seems that life is like a mirror, giving us back a reflection of the very thing we bring to it. How we all admire the man or woman of the cheery, optimistic spirit! Their bright, happy way of looking at things seems to be contagious, and the huddles in our own pathway smooth out. We give them back joy for joy, good will for good will, strength for strength, and are so glad in the giving! Isn't this true? They seem to call out the best there is in us.

We feel that success, health, harmony,

are the realities, and that failure, weakness, discord, the shadows. Our ideals grow higher and the world seems a glorious place. It is exactly as when a note is struck on a musical instrument in a warehouse with many others: the same tone responds in every one.

For life is the mirror of king and slave,
'Tis just what you are and do:
Then give to the world the best you have,
And the best will come back to you.

And what better thing can come to us than to be able to give to others the best that lies within ourselves, that by our living we may teach them the way in which to live, and by so doing, build up that only which is truest and best in their natures, and so unconsciously proving the truth of that old adage that, "Teaching by example is better than by precept."

FRANCES R. FOGG.

Visit of Our Grand President.

One of the most pleasant social functions to occur in the history of our Div. 188, Jackson, Tenn., was on May 18th, when we had the pleasure of a visit from our beloved Grand President Sister W. A. Murdock, of Chicago, Ill. Pythian Castle, our place of meeting, had been appropriately decorated for the occasion, and by 10 o'clock A. M. the hall was well filled with happy, bright women, waiting to greet our Grand President. Upon her arrival a few minutes were spent in social converse, and those of our members who had not met Mrs. Murdock, now had that pleasure. The meeting was called to order at 10:30 by our President, Sister Jas. R. Murphy, the Grand President occupying the seat of honor at her right. The meeting was opened in regular form, and I am glad to say that each officer elected and appointed, was at her "post of duty."

At 12 o'clock we adjourned for dinner and about twenty-five of the Brothers and Sisters repaired to "The Stag," one of the most fashionable hostels in the city, where an elegant course dinner was served. Two hours were pleasantly spent here in conversation and refreshing the "inner man." This being the afternoon of our regular meeting we again repaired to the hall, and were called to order at 2:45. One candidate, Mrs. John Gregory, was initiated. All of the ritualistic work was gone through with, and while we were by no means perfect, we received words of commendation and encouragement. Just before closing our President on behalf of Div. 188 presented Mrs. Murdock with a beautiful white gauze fan, hand painted in forget-me-nots, the

work of Miss Mayme Lee Hayley, the beautiful and talented daughter of Brother and Sister Ben Hayley. The Grand President in well chosen words expressed her appreciation of this little token of remembrance. At the close of the meeting the officers went in a body to James & Nelson's, where refreshments were served. Each lady was presented with a pink carnation, the emblematic flower of our order. From 9 till 12:30 P. M. an elegant reception was held at the Castle. The decorations were in our order colors—white, red, blue and royal purple, with banks of ferns, potted plants and crimson rambler roses. One of the city orchestras furnished music during the evening and altogether the scene was one of unusual charm.

Bro. J. B. Good, C. E. Div. 98, in his dignified and self-possessed manner was at his best as master of ceremonies. The address of welcome by Hon. R. F. Spragins and response by the Grand President were both brimming with wit and wisdom. Mrs. Murdock gave some good advice to the B. of L. E. and told of the good of our order. Bro. Thos. Quinn, C. E. of Div. 666, on behalf of his Division presented the Grand President with a beautiful bouquet of pink carnations, which she accepted in her usual happy manner.

Elegant refreshments were served, block cream in pink and white, heart shape, and block cake iced in white with the letters G. I. A. in pink.

Delicious frappé was served from a huge cut glass punch bowl, presided over by Miss Rachel Seiber, the pretty little daughter of Brother and Sister Charles Seiber. Miss Seiber also delighted the audience with two splendid recitations. Only engineers and wives of engineers were present at this reception, but the crowd of handsomely gowned women and gallant men was a large one. We have one of the largest and most prosperous Divisions in this entire Southland, are constantly adding to our membership, and a more loyal and enthusiastic body could not be found anywhere. While in our city, Sister Murdock was the guest of Brother and Sister George Cundiff at their elegant new home on North Royal street.

MRS. L. B. BAILEY, Sec. Div. 188.

School of Instruction.

May Flower Div., 133, Pittsburg, Kan., had a splendid time April 19 and 20. We were favored with a visit by our Grand President, who came to instruct us in a School of Instruction. We had about 70 delegates present with us from Divs. 227,

148, 150, 84, 90, 228, 287 and 158. Our Grand President came Wednesday morning and stayed with us until Friday morning. The Grand President and the delegates from Div. 90 were entertained at the home of Sister Melville, and a jolly good crowd were they.

The school opened Wednesday morning about 11 A. M., and closed Thursday afternoon at 4:30.

On Wednesday evening the members of May Flower Div., 133, held a reception at Red Men's Hall for the visiting members, the members of L. S. to B. of L. F. and their husbands and some of the members of the B. of L. E.

An enjoyable evening was spent in dancing, card playing and music, after which they served ice-cream, cake and fruit punch. Our Grand President was presented with a lovely bouquet of pink carnations to which she very fittingly responded.

Thursday afternoon after the closing of the session the ladies again served ice-cream, cake and punch to all present. Each one expressed himself as more than pleased with the kindness and hospitality extended to them by the members of May Flower Div., 133, also for the good derived from the school.

A reception was held on Thursday evening at the home of Sister Melville for the delegates who had not returned to their homes, also for the Grand President. The members and their families were invited in order to become better acquainted with our President. A very pleasant and social time was enjoyed by all. Dainty refreshments were served during the evening.
A MEMBER OF Div. 133.

Notice.

The new P. W. has been sent to each president. Any one failing to receive it will please notify the Grand President.

There is an error in it. The second number in third word should be 23.

MRS. W. A. MURDOCK, G. P.

Division News.

As it has been some time since 105 has been heard from, and as we are still on the track and in good running order, would like to have a little space in the beloved JOURNAL.

One of the most enjoyable times the Sisters have had was a dinner given by Sister Wm. Price, Sr., to which were invited the members of Steenrod Div. 105, G. I. A. to the B. of L. E. Dinner was served at 6 o'clock in courses, every idea being carefully carried out. The hostess was assisted by her daughters, Mrs. Wm.

Price and Mrs. Ed Price. Carnations and ferns were used in the dining room, and covers were laid for Mesdames Riley, Smith, Fualkenstine, Nichols of Wheeling, Seidwitz of Bridgeport, Tolmie, Heatherington, and Lewis and Miss Dolly Ohisholm of Bellaire. The hours were spent in a social way with music and games. Roses and ferns were much in evidence in the parlor and reception room. We had a raffle for a cushion, Sister Krebbs drew the lucky number. The insured members of 105 are not in favor of any change in the insurance, it is good enough as it is and costs enough. Hoping this will not find a resting place in the waste-basket,

I am yours in F. L. & P.,
MRS. C. D. LEWIS, Sec. 105.

FRIENDSHIP Division of Fort Wayne, Ind., has not been sleeping as some may think, because they do not see anything in the JOURNAL about them. The fact is they have been too busy to write.

As soon as the new officers were installed, and committees appointed, they proceeded to make arrangements to replenish the empty treasury.

The first event planned was a fair and bazaar the last of February and the proceeds of that gave them \$103 clear of all expenses to add to their general fund.

On Monday evening, May 1, they gave a reception and ball that was a great success, both socially and financially, so much so that it will be an annual affair hereafter, \$55 clear was the report from that.

Saturday evening, May 20, they entertained the members of Div. 12, B. of L. E., and gave them a sign for their hall, and served ice-cream and cake to all, and cigars to the Brothers.

June 28, this same busy Division, or rather their committee, made the arrangements for the entertainment of the Sisters from Bellevue and Garrett Divisions, about forty members in all. The visitors were met at the train by the committees appointed, and taken to the Young Women's Christian Association for lunch, and then to the hall for the meeting. It being the regular meeting day for Div. 18, the usual order of business was carried out, and the work exemplified at the request of the visitors. Remarks were made by the visiting Sisters for the good of the order.

At 5 o'clock the meeting adjourned and the visitors accompanied by thirty-five of the local Division went to the Areline Hotel, where arrangements had been made for dinner. In the evening an open meeting was held in Mulqueens Hall, and the Brothers and their wives were invited to attend.

At 8:30 the President, Sister Horning, called for order, and welcomed the guests, and then gave the chairman of the entertainment committee, Sister Carter, charge of the program. The first thing was the drill work by twenty Sisters dressed in white. They were on the floor for more than an hour, and not a mistake was made during all the numerous changes. The work was a credit to the team, as well as the drill mistress, Sister Carter.

Sister Durnell gave a talk on the "Origin and Growth of the Relief Association," and the reasons why every member of the Auxiliary, who is eligible, should avail herself of the protection provided for her. The social part of the program was certainly a success, visiting, dancing, etc. Ice-cream and cake were served during the evening, and it was not until time for the visitors to leave for their trains that the jolly crowd left for their homes, asking what next, when, and where so they could all be on hand.

Thus has passed the first six months of the fiscal year of 1905, and if the next committee on entertainments are as full of business the rest of the year there will be something more to report by January.

The Auxiliary appreciate very much the loyal support given them by the Brothers of Div. 12. Their attendance at all gatherings, when invited, speaks for itself and is ample proof that they are interested in their welfare. The Brothers have donated the use of their fine lodge room to the Sisters ever since they were organized, March 21, 1888.

PERHAPS the readers of the JOURNAL would like to hear once more from Div. 185, North LaCrosse, Wis. The first ball given by the Ladies' Auxiliary since the reorganization, when the Burlington women were taken into the order, was given Tuesday evening, June 9, in Union Hall, and was one of the crowning social events of the season in North LaCrosse society circles. The hall had been handsomely decorated for the event by the committee on arrangements, and the blending of the colors of the decorations with the colored light effects of the order presented a pretty scene. The weather was very bad and a heavy rain fell during the evening, but in spite of this fact there was a large crowd in attendance. The order cleared something near \$100 as the result of their labor. Much of the success of the event is due to the untiring effort of Mrs. James O'Brien, chairman of the committee on arrangements, and Mrs. W. Blanchett.

MRS. J. F. MERCER, Sec. Div. 185.

Div. 349, Washington, Ind., is still as enthusiastic as when I wrote last. A great many applications are coming in daily, and I think Div. 349 has some of the finest members to be found any place. We will soon have a banner Division.

The ladies of the G. I. A. have attended some very pleasant duties during the past month, also they have some sorrowful duties. Such is life, sunshine and tempest alternately; happy indeed are those whose dispositions will allow them to meet both extremes in the right spirit. Of such are the members of G. I. A. Div. 349.

On the 11th of May a very successful surprise party was given by these ladies on Sister Wm. Day. Dear Sister Day has met both sunshine and tempest, enjoyed the first, and overcome the last. On this occasion she was so completely surprised that the first remark she made was to say she wished she had had time to remove her dressing sack, to which Sister Sullivan strenuously objected, saying it was not at all correct to receive *deshabille*. Of course the visitors all knew Sister Day meant *exchange for remove*.

On the 19th of May these fun-loving Sisters planned another surprise, this time on Sister Stump, which was so secretly planned that Sister Stump has hardly recovered her equilibrium yet. It is an old saying, "that a woman cannot keep a secret," but Sister Stump says the author of that statement had not been introduced to the ladies of G. I. A. Div. 349.

On the 30th of May, Decoration Day, these ladies also distinguished themselves by visiting Oak Grove and St. John's cemeteries, and the graves of deceased Brother engineers were profusely covered with lovely and costly flowers. The ladies drove to both these cities of the dead in the forenoon, and those who visited the graves in the afternoon were surprised at the beautifully decorated mounds. It was a beautiful and touching tribute to the memory of the loved forms lying so peacefully in their last sleep.

Scatter sweet flowers o'er the honored dead,

Water the blooms with the falling tear;

But the grave that we honor the dearest, the best,
Is the resting place of the engineer.

Peaceful he lies in the city of the dead,

No cares or no sorrows can trouble him here;

Engraved on his tombstone there plainly is read

The name that we honor—our dead engineer.

The shriek of the whistle, the sound of the bell

For him has no terror, he is lying at rest;

The heart that was bravest when danger was near

Forever is stilled. Well, our Father knows best.

But scatter the blossoms so lavishly there,

Where the green sod is growing upon that dear spot;

While the heroes of battle are honored today,

Our brave engineers they shall ne'er be forgot.

MRS. HENRY B. JONES.

ALEXANDRA Div., 297, Hamilton, Canada, Ladies' Auxiliary to the B. of L. E., held a very successful At Home in the A. O. F. Hall, on June 1.

The following contributed to the program:

Misses Marie McCartie, Alta McKeown, Agnes Oliver, Tena Pitt, Jean Michael, Helen Ballentine, Mr. Blatz, R. Symmers, Fred Mitchell, Willie Reid, Miss J. Clunas, Mrs. T. Binkley, and Mr. Blatz, accompanist.

During the evening Miss Irene Wright presented a bouquet to the chairman, Mr. Jas. Oliver, C. E. of Div. 133, B. of L. E.

After the program refreshments were served and card playing and dancing indulged in.

This is the second At Home given by the ladies of Alexandra Div. 297, which gives promise of being one of the flourishing Divisions in the order.

MRS. W. F. BAINES, Sec.

THE members of Border City 206, Laredo, Tex., wish to thank our Sister Divisions, who responded so generously. Baby Scott drew the lucky No. 3 for Better Half Div. 21, Atlanta, Ga.

SEC. 206.

On Friday evening, May 25, a carnation tea and reception was given Mrs. J. F. Cook of Concord, First Assistant Grand Vice President of the G. I. A. to the B. of L. E., by Mesdames J. E. Scannell, C. E. Davis and G. W. Currier, members of No. 49, Concord, N. H., at the home of Mrs. Scannell in West Lebanon. Members of Div. 114, St. Albans, Vt., guests of Mrs. D. A. Elliott and Mrs. C. E. Davis, and members of Div. 81, Woodsville, residing at White River Junction and West Lebanon, were present. A happy crowd did justice to the delicacies of the season provided and served by the hosts. The table was decorated with beautiful pinks, and a pink carnation, the emblematic flower of the order, was beside each plate. A delightful evening was passed. Mrs. Colby, a former music teacher of Lyndonville, Vt., and Mrs. Hutchinson of White River Junction, entertained by vocal and instrumental music. All thoroughly enjoyed and appreciated the efforts of the three ladies who conceived and successfully carried out the details of such a happy occasion. The following day, through the courtesy of Mrs. Scannell, who accompanied them, Mrs. Cook and party enjoyed a ride through Lebanon and Hanover, where Mrs. Cook's son is a student at Dartmouth. While here Mrs. Cook was entertained by Mrs. Scannell and Davis, and by kindness of latter escorted by Miss Wood, carriage drives were taken about

West Lebanon and White River Junction, when calls were made upon all resident members of the G. I. A. and B. of L. E.

MRS. C. DAVIS, Member of Div. 49.

PERHAPS the Sisters that attended the school of instruction held in Newark, O., by Criswell Div. 41, wondered why there was never any account given in the JOURNAL, for we had such a delightful time, and our own members wondered why it was never printed, for I know it was written and sent somewhere.

Well, dear Sisters, I will tell you a secret, that is if you will promise me never to tell any Sister of Criswell Division, not even to tell our dear President. I misdirected my letter; it has been around the circle, returned to me, and here is the way it was directed—Mrs. Mary Cassell, editress, Ohio. Now, Sisters, what do you think of that? What a correct and learned secretary Criswell Division has! Now Sisters, do you not think our next convention delegate ought to present my name for consideration as next Grand Secretary?

I hope this article will not be too lengthy to tell you something about the enjoyable times we have been having this year. We had a progressive euchre party, of which Sister Eberly was chairman and she is a progressive Sister and it was a financial success. We also held a country store under the leadership of Sister Jennie Johns, and she just knows all about a country store, and we made \$80. The last social, but not the least by any means, Sisters Ryan and Wyant made up their minds they were going to make Brother and Sister McManus happy, and they were called to the hall to spend a social evening. When they arrived at the hall the tables were spread for about sixty, and they were told it was a surprise for them, and they were indeed surprised. When our President, Sister Howard, called for order and presented to the old engineer of nearly fifty years' service, in behalf of Bro. Ed. Ryan, a beautiful Brotherhood badge, all the old Brother could say was "I thank you." The Sisters also gave the Sister some very useful presents, to which she responded with many thanks. So you see, Sisters, Criswell Division is never sleeping. Sisters, keep the secret. SEC.

[This article from Newark, Ohio, goes to prove how very necessary it is that correspondents should be careful when they direct their letters to this office.

Many times the Editors have to bear unjust criticism and fault-finding, when the fault lies at the door of the writer. In this one case I know the members of Div. 41 thought they were slighted be-

cause their splendid school of instruction was not mentioned in the JOURNAL. I understood at the time (which was many months ago) that the Secretary would write it up, and I kept waiting for the account which never came. I would have been pleased to tell about it, because we all enjoyed it so much. Sister Murdock was there and many Divisions were represented. All who were present were more than benefited.

Dear Sisters, after this when your doings are reported and do not appear, please send to this office for an explanation.

One Division is just the same to us as another, and no partiality is shown. Be careful to address mail correctly, and there will be no reason to complain, I am sure. EDITRESS.]

G. I. A. Voluntary Relief Association.

TOLEDO, O., Aug. 1, 1905.

To Division Insurance Secretaries, V. R. A.:

You are hereby notified of the death of the following members, and for the payment of these claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for same was dated later than June 30, 1905.

ASSESSMENT No. 222.

Died June 16, 1905. Sister Mary V. Aldrich, aged 55, of Div. 232, Buffalo, N. Y. Cause of death, multiple sarcoma. Carried two certificates, dated Aug. 1, 1896, payable to Mary E. Aldrich, daughter.

ASSESSMENT No. 223.

Died June 17, 1905. Sister Mary E. Davis, aged 51, of Div. 258, Louisville, Ky. Cause of death, acute softening of brain. Carried one certificate, dated February, 1903, payable to Geo. W. Davis, husband.

ASSESSMENT No. 224.

Died June 18, 1905. Sister Kate E. Snyder, aged 53, of Div. 98, Topeka, Kan. Cause of death, cancer of uterus. Carried one certificate, dated May, 1891, payable to John H. Snyder, husband.

Assessment No. 224 will be paid from the Assessment fund.

Members will pay their Insurance Secretaries on or before August 31, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than Sept. 10, or stand delinquent till remittance is made.

Members in good standing June 30, 1905, forty-nine hundred and eighty-nine in first class; and two thousand and ninety-one in second class.

N. B.—Bylaws, page 88, lines 6 and 7, refer to all receipts received from General Secretary and Treasurer. As now worded, the meaning is obscure. MRS. GEO. WILSON, Pres. V. R. A.

M. L. ROBERTSON, Gen'l Sec'y and Treas.

Contributions for this department must be received by the Editor on or before the 12th of the month to be in time for the succeeding issue.

Westinghouse Compound Pump.

BY R. H. BLACKALL.

The accompanying illustration shows the Westinghouse compound air pump that is now being introduced into service where this type of pump is desired. While this is a pump new to the railroad world in America it is not of an experimental nature since it has been manufactured by the English Westinghouse Company for a number of years. The one illustrated is essentially the same as the English pump, though it has been changed slightly in its construction.

As to capacity, this pump is designed to correspond to that of the eleven-inch pump, the air cylinders being eleven inches in diameter and the stroke twelve inches.

You will note that the diameter of the steam piston is but eight inches, hence the steam consumption corresponds to that which would be used with an eight-inch simple pump having a twelve-inch stroke. Due to the small size of the steam cylinder the saving of steam effected, as compared with the eleven-inch pump, is 52 per cent. Due to the compounding feature, there is a saving in the air efficiency of 16 per cent, even when not taking into account the saving made by the use of the smaller steam cylinder.

The steam consumption per cubic foot of free air compressed is 45 per cent of that used with the 11-inch simple pump.

The pump has been so designed that, as far as possible, the parts will be interchangeable with the eleven and the nine and one-half-inch pumps. The parts of the valve motion for the steam portion are interchangeable with nine and one-half-inch pump, aside from the reversing rod; the packing rings and the air valves of the air end are interchangeable with the 11-inch pump. A study of the construction of the pump shows that there is nothing new in the steam end and that, after being familiar with the simple pumps, there is no difficulty in understanding the operation of the air end, and in locating any defects that may develop. It will also be noted that the steam and air connections are standard with other Westinghouse pumps.

There are some who are of the opinion that a compound pump is what should be used. There is no doubt but that steam

is saved with a compressor of this type, but it is a question whether the same gain is effected under practical conditions as in laboratory tests. In considering this matter, the final decision is affected somewhat by the experience we have had in saving coal by the use of compound engines. The results should not be compared, as the actual conditions are so different. It must be remembered that the work of the pump while on the level and up grade is to supply leakage, and the air consumed by the so-called "parasites." It is true that the leakage sometimes means considerable work for the pump, but the hill and mountain work is what calls for the greatest energy from the pump. If the steam were not used in the pump, when a train is descending a grade, there would usually be a large amount blown to the atmosphere through the pop, hence this should be considered in estimating the actual saving made with a compound, as compared with a simple pump, under actual and practical conditions.

There are advantages in the use of the compound pump, when considered from the standpoint of steam consumption, and as shown by a laboratory test, but in the case of a locomotive this saving is offset to a large degree when we consider the greater number of parts to maintain, the steam used in the pump which would otherwise be wasted through the pop, the additional size, weight, number of parts, etc.

While there may be conditions that will warrant its use, such as a practically level road, it would seem preferable for the general run of service, to use two simple pumps of a smaller capacity, but such as will permit a train to be brought to a terminal in case one of the pumps should break down. With a compound there is always a greater chance for failures, due to the fact that there are a greater number of parts, hence there are more chances for engine failures that would practically be done away with by the two pump system.

DESCRIPTION OF THE PUMP AND ITS OPERATION.

As before stated, the diameter of the steam cylinder is 8 inches and the stroke of the pump is 12 inches. A description of the operation of the steam cylinder is unnecessary as it is precisely the same as that of the nine and one-half and the eleven-inch pumps.

The air cylinder is eleven inches in diameter. The pistons are so connected that there is an annular groove around their trunk. This groove is separated at the middle by a ring so as to make two compartments which are the high pres-

sure chambers, separated from the large chamber under the lower piston and above the upper piston by the pistons and by suitable valves.

lower receiving valve; 4, is the low pressure discharge valve; 5, is the lower-intermediate discharge valve; 6, is the upper-intermediate discharge valve; 7, is

There are eight air valves: the upper valve, 1, is the upper receiving valve; 2, is the low pressure discharge valve; 3, is the

the upper, high pressure, discharge valve; 8, not shown, but corresponding in position with valve 7, is the lower, high-pres-

sure, discharge valve, used in connection with chamber *i*.

We will suppose the pump to be on the up stroke. Air will enter port *l*, unseat valve 3 and pass through port *m* and fill chamber *b* below the large piston. When the motion of the pump is reversed, the air that has been drawn into chamber *a* will be compressed. It will pass through port *n*, unseat valve 4, pass into chamber *o*, unseat valve 5, pass through port *p* and into chamber *i*, surrounding the spool of the piston. The ratio of the volumes in *b* and *i* are such that the air from the former, forced into the latter, will give a pressure of about 40 pounds when the piston has reached the bottom of its stroke. When the motion of the piston is reversed, the pressure of 40 pounds in chamber *i* will be compressed, at the same time air is being drawn into chamber *b* from the atmosphere. As soon as the pressure in chamber *i* exceeds that in the main reservoir, above valve 3, not shown, the valve will be forced from its seat and air from chamber *i* will pass through port *q*, and by the unseated valve to the main reservoir.

The offices of the other valves, which work in conjunction with the upper part of the cylinder, are the same as those whose action has just been described. It might be well to add, however, that chamber *f*, above valve 2, is connected with chamber *f* which extends down the side of the pump, as shown, and extends underneath valve 6, which is the intermediate-discharge valve for the upper cylinder.

It will be noted that no air can pass from either chamber *h* or *i* until the pressure in either of these chambers is in excess of that in the main reservoir.

Suppose the pump to be at a point just before it has reached the top of its stroke: In this position there will be main reservoir pressure in chamber *i*, acting down on the annular space above the lower piston; this corresponds with chamber *i* above the lower piston; below this piston there will be atmospheric pressure. There will be 40 pounds in chamber *a* acting downward on the upper piston and an equal pressure acting upward on this piston, but on the small area which corresponds with a section of chamber *h*. It will thus be seen that the pressure of 40 pounds acting down on the upper piston is balanced to an amount which equals the horizontal section of chamber *h*. The width of this chamber is $1\frac{1}{2}$ inches on each side, so the actual area subjected to a pressure of 40 pounds, and which the power acting on the steam piston has to overcome, is but $8\frac{3}{4}$ inches, on the upper piston. On the lower piston there is atmospheric pressure below and main reservoir pressure on the area exposed to cham-

ber *i*. The total area exposed, and what represents the work that must be overcome by the pressure acting on the steam piston, is 40 pounds maximum on an $8\frac{3}{4}$ inch diameter and main reservoir pressure, on the outside ring $1\frac{1}{2}$ inches wide on an 11-inch piston, that is, an area equal to that of an 11-inch circle less that of an $8\frac{3}{4}$ inch circle.

The statement that there is an air efficiency in the air cylinder alone of 16 per cent may, at first thought, seem to be erroneous, since it would seem that, if the cylinders in both the simple and the compound pumps are 11-inch, the air drawn in must be the same. While the volumes in the cylinders are the same, the actual working conditions cause more air to be drawn into the compound pump at the end of the stroke; with the simple pump there is a pressure below or above the air piston, as the case may be, equal to that in the main reservoir. With the compound pump this pressure is but 40 pounds. With a pressure of 40 pounds in the clearance space in the one case, and with 100 or 130 pounds in the other, a greater movement of the pistons will be necessary in the one case before atmospheric pressure has been reached, and before air can be taken in from the atmosphere. This being true, it follows that atmospheric pressure is reached more quickly, and with less movement of the piston, with the compound pump, consequently more air will be taken in and the air efficiency, as stated, will be greater.

It will be noted that three oil cups are shown; the lower ones are to insure proper lubrication for the inner packing rings. An automatic oil cup is furnished in place of the top one shown. The oil furnished by this cup will afford sufficient lubrication after the middle cups are used to obtain a preliminary lubrication.

The same method of operation employed with the other pumps will also obtain satisfactory results with the compound.

QUESTIONS AND ANSWERS.

Q.—W. R.—Every once in a while I hear of some trouble on the road and that an angle cock has closed. I would like to know what the JOURNAL thinks about this; that is, whether the angle cock ever does close or not. I have examined a great many and do not see how they can close very well unless some one turns them by hand.

A.—There is no doubt but that an angle cock, under certain conditions, can work shut, but this is the exception and occurs but seldom. There is also no doubt but that some of the cases of which we hear are misstatements made by the people who have been careless and who, knowing that an angle cock may work

shut, ascribe this action for some accident that is actually the result of carelessness on their part.

We have known of cases where the valve handle has been turned by hand by mischievous boys, and also by people who were stealing a ride and who closed the cock so that the brake pipe leakage would cause the brakes to apply, and thus permit them to get off at the point to which they were traveling.

Angle cocks have also been known to close from being improperly secured, and from being loose in the hanger. If loose, and so located that they may strike some part of the car when vibrating, they may be closed. The constant striking jars the valve from its seat, compressing the spring under the valve. There is a torsional action to the spring when compressed which tends to turn the valve when unseated, thus acting to close the air passage.

We have seen a case where a cock was closed by the action of the end sill when the engine was working hard. The angle cock was fastened to the car framing very close to the end sill and had a very considerable slant. The end sill was quite loose so that when the engine was working hard, there was a constant twisting of it. In twisting a part of the sill came in contact with the edge of the valve handle and the rubbing action caused a movement of the handle. The movement was slight, but sufficient to gradually close the cock.

While the actions described are very few and far between, the fact that such things may occur are forcible reasons why engineers should not take chances in starting down grades before knowing whether or not the cocks are open. This can be told by the length of the brake pipe exhaust, which is longer, for a given reduction, as the length of the train increases. The possibility of this action also shows the necessity for making a running test, if possible, before descending a grade. It is too often the case that the brakes are not applied until the speed of a train, after tipping over a summit, has reached the maximum desired. If there is anything wrong with the brakes, this practice does not give the train crew the requisite time to obtain control of the train by hand before a dangerous speed has been attained.

Q.—L. K. M.—We have some new engines with an equipment that I never saw before. It hasn't any triple valves on the engine and tender and no auxiliary reservoirs on the engine or tender. The brake valve is different too and has another position on. What is the extra position for and are the others the same as the ones on the old G 6 valve?

A.—The equipment referred to is the Improved Westinghouse Engine and Tender Brake. As you state, there are no triple valves on the engine and tender and the brake valve is somewhat different in construction. This whole equipment will be fully illustrated in the columns of the JOURNAL and full explanations of its operation will also be given in the near future. For the present, we will answer your question by simply explaining the different brake valve positions.

They are five in number, and are the same in name with the exception of the one just to the right of "running position," that is, the one between "running" and "lap" positions. This is known as the "holding" position.

The valve is handled practically the same as the old valve, but by so doing, the advantages obtained will be greater. If the valve handle is placed in release or holding positions the driver and tender brakes will not release. This feature was placed in the valve so that in making a release on a train the engine and tender brakes can be retained so that the tendency would be for the slack to bunch in releasing, rather than for it to run out and break the train in two. If the brake valve handle were left in release position too long, the brake pipe would be overcharged, hence the brake valve handle may be returned to the holding position where but 70 pounds brake-pipe pressure will be obtained, but the driver and tender brakes will still be retained. When ready to release these brakes it is only necessary to move the handle to running position, in which position the resultant brake-pipe pressure will be 70 pounds and both the driver and tender brakes will release. If it is desired to release the driver and tender brakes gradually, this can be done by moving the valve handle to running position and back to holding position. This action can be repeated until all of the cylinder pressure has escaped, thus giving the same kind of a release as is obtained with the straight-air brake. The lap, service, and emergency positions are the same, and accomplish the same results, as the present valve in general use.

This new equipment also includes straight air features, which are obtained by the simple addition of a single valve. This straight air also contains desirable features in addition to those embodied in the present combined Automatic and Straight-Air Brake. As already stated, a full illustration and explanation of this new equipment will be given the readers of the JOURNAL in the very near future.

Q.—F. B.—In using the brakes with a service application can you tell me whether the slack bunches or stretches?

The idea I have always had was that it bunched. I don't know where I got the idea, for I think I always had it and I think most of the engineers I have talked to had the same idea.

A.—It depends upon whether you refer to the action of the slack in a passenger or a freight train. Aside from the different conditions in the two kinds of trains there are other things that have a bearing on whether the slack would be bunched or stretched. The loaded cars have a very strong bearing on this matter, also the condition of the track under consideration.

Considering the matter in a general way, the tendency for the cars in an empty freight train is to come together, since the braking power on the engine is higher and the brakes on the front of a long train are generally applied with a higher cylinder pressure. The pressure is higher at the front of the train, if the piston travel is about the same, since, on the rear, the reduction of brake-pipe pressure is slower and more of the auxiliary reservoir pressure feeds back into the brake pipe.

In passenger train service the tendency is for the slack to bunch when the brakes are first applied and then gradually stretch. This is because the braking power is higher on the cars than on the engine and tender, also to the fact that the load in the baggage and express cars reduces the percentage of braking power on these cars. The tender, though usually braked at from 90 to 100 per cent, has a sufficient load to greatly reduce the actual percentage of braking power.

To give an answer to your question with any degree of accuracy, it would be necessary to consider some particular set of conditions where the information could be obtained covering the distribution of weight, percentage of braking power, amount of piston travel, track conditions, etc.

Q.—S. S. D.—Why is it that there seem to be so many more train-line leaks where the cross-over joins the triple valve and at the union on the strainer than at any other place in the train line? I should think that one of the joints would be as likely to work loose as another.

A.—The reason more leakage is found at these places is that the cylinders and reservoirs are not kept tight against the timbers or iron work to which they are fastened. When put up with timbers they shrink and permit lost motion between the equipment and the timbers, thus permitting a movement when the brakes are applied. This movement is such as necessitates a proper provision in flexibility in the piping. If this provision is not made the strain comes principally at the points

which you cite, with the result that leakage occurs. The cross-over piping should be so erected that any motion parallel with the car will be compensated for by a movement of a pipe fitting about a nipple. There are many cases where this provision is not made, and where this is, considerable trouble is experienced with leakage. The writer knew of one case where all leakage was reduced so that the pump made but forty single strokes per minute to supply the leakage. After the train had been controlled down a seven-mile grade by the brakes the leakage had increased so that the pump made some eighty odd strokes to maintain the leakage. This was entirely due to the loose condition of the cylinders and reservoirs. The road owning these cars, upon being advised concerning the condition of the equipment, put on a force of men to tighten up all cylinders and reservoirs with the result that a 9½-inch pump had no trouble whatever in supplying a train of seventy cars where before they had complained that this pump was not large enough to supply the air for this length of train.

Q.—B.—In what distance can a six-car passenger train be stopped with the high-speed train and how long would it take to make the stop with the 70-pound pressure if the speed was 60 miles per hour?

A.—To tell just what could be done in a certain case it would be necessary to know the conditions as to braking power, kind of brake shoes, etc. We presume what you wish is the comparative distance and give the following figures covering comparative stops for a seven-car train:

Sixty miles per hour, high-speed train, 1,275 feet.

Sixty miles per hour, ordinary brake, 70 pounds, 1,615 feet.

Better stops have been made than shown, but these show comparative work done by the two brakes where both wheels and brake shoes were cast iron.

Electricity—The Street Car Equipment.

BY ELWOOD A. GRISSINGER, E. E.

When starting a new car, try the motors one at a time, and observe whether the revolution of the controller handle moves car in same direction with each motor. If it is found that it does not, cross the armature or field wires on one of the motors. Sometimes an open circuit in the car wiring occurs, and the car cannot be started. To check up, try both controllers. If car will start from one controller and not the other, a fault will be found in the second controller. If neither works, the trouble is not likely to be in the controllers. It is scarcely possible

that both controllers will be crippled at the same time, although the writer has seen a parallel instance on a steam locomotive where both injectors were crippled at the same time, and in precisely the same manner.

If the controllers do not evidence the open circuit, tie down the trolley pole from the overhead wire. Then turn controller handle to first notch. Remove the controller case, hold one wire of a magneto or testing bell upon the iron work of the car truck and place the other wire of the magneto bell upon the terminal of the controller marked G. If the bell rings when its handle is turned, it is certain that the ground connection is all right through the controller. In the same manner, test all terminals of controller with corresponding terminals on armatures, fields and brakes (if electric brakes are used) until you come to that one where the bell will not ring. When the latter occurs the source of trouble is located, and the wires should be traced from that point and faults corrected, until you can cause the bell to ring through that circuit. If it is found that all points ring up from the one controller, bring that one to "off" position and repeat the work with the second controller. If both controllers and their circuits are found correct, look for the open circuit between the trolley and the fuse block or the circuit breaker. In doing such testing, the canopy switch or circuit breaker should be kept closed.

Street car motors are not the nicest looking type of electrical apparatus, but they are built of the very best materials and in the most substantial manner, so as to withstand the most severe service to which any kind of motor power is subjected. The one great aim of every street car company is to keep the cars running, and as nearly regular as possible; secondary to such is the cost of operation. The latter item used to be very heavy, because of an enormous repair account. Such an account will always prove a considerable item, but it can be kept very low, comparatively speaking, if equipments are regularly inspected by competent inspectors, and if all employees who have anything to do with the operation of the cars familiarize themselves with the details of the system. Those men are always the most valuable who know most of the business in which they are engaged. It is not only necessary to know when to turn a controller handle on or off, but just as well to know what happens when you are doing it; and if nothing happens when it should, or the operation be imperfect, it is the desirable man who knows what to do and can do it quickest.

Regular and frequent inspection should include the commutator, brushes, brush holders, controllers and trolley wheel. The commutator must be kept clean. Its surface should be kept as true as possible. As long as the commutator runs smooth, without sparking, etc., nothing need be done to it. Otherwise, the brushes should be removed after motor has been cut out, and while the armature revolves from some other source than its own power, apply sandpaper of reasonable fineness until the surface feels perfectly smooth to the hand. A very small amount of paraffine or commutator compound is beneficial when rubbed on the commutator, but as long as the latter runs smooth and shows a good gloss apply nothing and do nothing to it, unless to remove dust or dirt by means of a dry cloth. Should, however, the commutator become out of true, or so rough that sandpapering does no good, the armature must at once be removed from the frame, placed in a lathe, and its commutator carefully turned down with a very sharp tool. When turning, take a very shallow cut, and repeat until the commutator has been brought into proper shape. Do not run the tool all the way to the edge, but permit a narrow flange to stand. Finish the job by polishing with fine sandpaper. A very sharp tool must be used, because commutator copper is hard and tough, and in cutting, small pieces are liable to burr across from one segment to another, which must be guarded against.

The brushes should always make good positive contact with the commutator. It is only necessary that they bear upon the latter with sufficient pressure to keep them there at all speeds and over all kinds of track. The brushes are placed within brush holders, and held against the commutator with springs, the tension of which can be regulated within certain limits. Brushes should be removed often and any dirt cleaned from them, and from the brush holders within which they are placed, because dirty brushes cannot move as freely as necessity demands. Brushes should not be allowed to wear too short, because the springs will then not act properly. When brushes are removed, care must be taken that they be replaced as found, because after wearing for a time they will likely not fit the commutator on the opposite side to which they had been running. The brush holders can be adjusted up and down and in a small arc of a circle. This adjustment should be effected as the commutator wears down, it being borne in mind that the lower end of a brush holder should remain at about one-quarter of an inch from the commutator.

With the controllers, their cases should

be removed and all contacts examined and made tight. In fact, wherever there is a contact made by means of a bolt, nut or screw, it should be examined often and made tight. The constant jarring is very liable to loosen them, and a loose joint of any kind will make all sorts of trouble. Since the controller is virtually a combination of small switches, it follows that it will consist of a large number of moving contacts. Every time a car is operated, these contacts make and break a circuit, which, combined with the friction, causes them to roughen, work hard and heat from sparking, all of which will wear them down rapidly. Such contacts should be cleaned frequently, all rough spots removed, polished, and a very small amount of tallow placed on their surfaces to facilitate smoothness of motion and prevent them from becoming dry, harsh and cutting. These small parts require repairs fast enough, and their life can be materially increased with a little care. At the top of the controller cylinder is a form of ratchet wheel. This should be lubricated as well as the upper and lower bearings of the cylinder; but such lubrication must be just enough for the purpose and not sufficient to permit of its running down upon the cylinder proper.

Bearings and the proper lubricant to use are a matter of great importance. All street car motor bearings nowadays are babbitt lined. In many cases they are self-oiling, using a medium heavy lubricating oil, and in others, so-called dope or grease is used in grease boxes above the bearings. To this grease is usually added a small amount of heavy lubricating oil. Bearings should never be allowed to get very warm. It is well after every day's run to add a little oil in the grease; stir it and push it through to the shaft below. At times, all grease should be removed and bearings thoroughly cleaned. In case of self-oiling bearings, it is only necessary to see that there is always a full chamber of oil. Care must be exercised that dirt of every kind be kept out of the bearings. The wearing of the bearings must be watched closely, because, as they wear, the armature will be lowered and approach the field poles on one side. Such wear can extend sufficiently to permit the armature rubbing against the pole pieces. Such rubbing may destroy an armature that will cost a great deal more to replace, whereas a bearing can be removed and re-babbitted at a small expense.

Upon the side of each motor a great case is placed. This completely incloses the pinion and gear wheel, is water-tight, and will hold a goodly amount of grease for lubricating the gears. These gears as

now made are cut steel, and will last a long time if a sufficient quantity of the lubricant is kept within the casing, but an examination should be made frequently to see how much they have worn and whether all bolts are tight, for the gear wheel which is mounted upon the car axle is a split-steel gear. Any loose motion of a pinion can be taken up on its own shaft by means of the nuts provided for the purpose. Both pinion and gear must be tight upon shaft and axle. If there be any motion, a worn feather or key may prove to be the cause. Because of the fact that the gears are carefully cut, and that they revolve in a lubricant, they will run quiet. If they do not, they should not be operated until any faults have been remedied. The amount of grease in a gear casing should be enough to keep the gears well oiled. Frequent examination will reveal whether they are running with sufficient lubrication or not. Gear casings must be kept perfectly tight. The writer does not deem it necessary to refer to the mechanical details of the hand braking mechanism, as the readers are, no doubt, thoroughly familiar with such. What applies to steam railroad practice applies with equal force here. The adjustment of brakes is the same. Hand brakes are used almost exclusively. Some systems have employed air, which is compressed by a compressor attached to an axle, or by means of an automatic motor driven pump, deriving its power from the trolley. Of late, the electric brake has been meeting with good success, but such a brake will not hold a car still on a grade. A car will creep down hill with an electric brake. Still another form of brake employs a shoe which can be pressed upon the rail. This has only been used in a few instances, so far as the writer is aware.

The life of a trolley wheel depends upon the quality of the metal of which it is composed, of the care it has had, and the number of miles it has traveled. Wheels should be oiled daily, and renewed when they are found to rattle and to have roughened materially where they come in contact with the trolley wire. If a wheel flashes badly, it may be due to there not being sufficient tension between the wheel and wire. Such flashing is very injurious to the trolley wire, and should be prevented at the earliest possible moment. Trolley wires cost money.

Much that has been said about dynamos and motors in general applies to street car motors as well. Some of the writing may appear superfluous, but too much attention cannot be given the details of electrical apparatus, and street car work in particular.

Accompanying this article, the writer

has prepared a diagram of car wiring, which will show the path of the current from the trolley through the motors. From the trolley the circuit divides, one to each end of the car. In this instance, we will assume that controller No. 1 is to be used. The current will, therefore, flow to the left through the circuit breaker and choke coil to the controller. When the latter is put in operation, current flows through the wires inclosed in the drum hose to motors No. 1 and No. 2. Now, the amount of current that will flow to the motors depends on the position of the controller handle, because by the latter more or less of the resistance marked R1, R2, etc., is put in series or parallel with the motors. The controller subdivides the resistance, and also places the motors in series or parallel with one another and the resistances. The first notch of one type of controller places the motors in series with each other and with the resistance. The second notch will halve the resistance. The third notch will cut out the resistance entirely and leave the motors in series with one another, each motor then getting 250 volts approximately and the same amount of current, depending on the work that is being done. The fourth notch will throw the motors in parallel with one another and in series with the resistance; the fifth notch will halve that resistance, and the sixth notch will cut out the resistance and leave the motors in parallel with each other, but each motor will be in series with the line, and will then be getting the full 500 volts. All the while these controller changes are going on, the motors are increasing the power they develop, and as they are variable speed motors their speed will be increasing—this provided the load remains the same. For different conditions, different types of controllers are used, some having more or less than six notches. The more notches, the more subdivisions there are, and the easier the car will start.

Each motor has its field and armature terminals connected to each controller through different leads. From the motors the current passes to the rails through the ground connection. If, however, as is usually the case, the current flows the other way—that is, comes from the power house through the rails, thence through the car equipment to the trolley wire, thence back to the power house—the direction of the current through the car wiring depends upon whether the trolley wire is made plus or minus at the power house. If plus, the current will return to power house through the rails; if minus, vice versa. The reason for making a distinction is that electrolysis of piping is minimized if the current

flows to the power house through the trolley wire. In all systems of electric traction as now used, the rails form one side of the circuit. That is why the rail joints are connected with heavy copper bands, and why, still better, rail joints are electrically welded together in some of the more modern systems.

Taking Chances.

BY J. W. READING.

In watching the various accident reports issued by the Interstate Commerce Commission, it seems surprising, modern safety appliances being considered, that the accident and death list should continue so high.

Undoubtedly chance in one form and another will continue to be taken by railroad employees. The engineer will not fail to be in evidence who will take a chance to run for water or who may take a narrow chance to go one station farther to meet an opposing train, or may know that something has gone wrong with his engine but thinks she will hold together until he makes the next station. When the engineer takes a chance his success must of necessity depend largely on the amount of experience he has had together with the keen judgment and natural adaptability he may have for his calling. The chance that goes with one engineer fails with another, and the failure of a chance often brings disaster, no matter in what calling of mankind the risk is taken.

In the days of the link and pin chances were continually taken by train and switchmen who would jump in front of a moving car to take out or insert a link. These men during switching service had a habit of waiting at the switch stand; after giving a "kick" signal for car or cars to reach them where cut was to be made, and while cars were moving anywhere from six to ten miles an hour, would run in between the cars and lift pin, jump out and signal engine men to stop, back up, etc. It frequently happened that they never came out and if a list could be compiled of boys who took this chance and are now sleeping away the years it would be something surprising if not appalling.

In the days of which I mention train and switchmen prided themselves on their dexterity, the practice of standing between the rails to mount an approaching car by grabbing the brake staff with their hands and stepping on brake beam, or go through about the same performance in mounting the footboard or pilot of the locomotive, all of which could be seen in

any railway yard. If I should go into detail of the desperate, dare-devil chances I have seen taken, my story would hardly be believed by those not acquainted with the inside history of railroading. Every Brother engineer has seen more or less of the affairs I have described. Laws have been enacted compelling the adoption of modern safety appliances. The railroads at an enormous expense have adopted the vertical plane coupler, grab irons and the air brake, and the results are what? Go into a large majority of the railway yards today and watch present shipping methods; probably if you have not followed the business since the adoption of the safety devices you may look for a radical change in the manner of handling yard service. You may think that the cause which tempted men to take chances in past days could not possibly be in evidence now, and what do you find? Let me tell you, or possibly I can show you.

Watch those cars coming, there is a coupling to make, both knuckles are closed, one at least must be opened; see the switchman—for some reason he does not want the knuckle on the standing car opened but must have the one on the moving car adjusted. See, he runs almost backward in front of the car in motion while he raises knuckle pin with his left and pulls out knuckle with his right. You instinctively shudder at the chance he is taking and would not be surprised in the least to see disaster overtake him.

Here is another crew—let us watch operations. Cars have pulled over switch, "kick" signal is given, as described on another occasion; when the proper place for cutting train arrives, switchman grabs pin lifting lever and finds it out of order, and regardless of the fact that the cars are now moving anywhere from six to ten miles an hour, he jumps in between the moving cars and raises by hand one or the other of the knuckle pins.

Why should we, the initiated in the duties that are and are not incumbent upon ourselves, wonder that the casualty record remains so high? The public at large have cause to wonder that the change for the better is not more apparent.

Investigation will prove that the adoption of the vertical plane coupler has removed only partially the different causes which led men to trifle with fate. Our boys continue to go down and under, the greater number of the disasters being directly due to the want of prudence and common sense on the part of the employees themselves.

In my experience of 26 years as a locomotive engineer, I lay claim to a record equaled by few and excelled by none in

the matter of injuries to trainmen working with me. In all of those years none of them while under me ever received an injury of any consequence. I made it continually a part of my duties to never allow a trainman to take any chances, if in my power to prevent it. I never would take a "kick" signal until I was positive the pin was pulled, and my fireman was so instructed. I always made a practice to slow down or stop if I saw a man run in front of a moving car for any purpose; no man ever got the chance to show off his dexterity in stepping on the footboard of my locomotive, if I saw him in time to reduce speed. In leaving stations I wanted to be sure everyone was on board before I proceeded to move throttle lever out of back end of cab.

I may be considered egotistical in commenting largely on my success in the line named, but there is nothing in my past life that I am quite so proud of, and my principal object in mentioning it here is because I am in hopes by so doing to influence some of my Brothers who are not doing what they might to make greater effort to prevent injury and death to that class of their brother workmen, who seem to lack the animal instinct that "self-preservation is the first law of nature."

The various brotherhoods should make united effort to prevent needless sacrifice of life and limb, no matter what the cause. I have often thought that we should have something like the following in our obligations:

"I promise fealty to the company that gives me employment and will ever give my best efforts to promote their interests; that I will not at any time take a needless, reckless risk, either with the property of my company or with my own individual life, and neither will I permit the same to be done by others, if in my power to prevent."

If the trainmen and switchmen will pardon the suggestion, I would advise that they incorporate in their respective obligations (if not already there), something similar to the following:

"I further promise that I will do all in my power to promote the best interests of the company that gives me employment, providing that I am not expected to assume a needless risk, and that under no consideration will I run in front of a moving car to adjust coupler, nor for any other purpose; nor will I run between moving cars to lift a pin or perform any other duty of a like hazardous nature, and neither will I permit the same to be done by others if in my power to prevent; and that I will pledge my moral and financial support to any Brother workman who may be suspended or discharged for refusing to accept a risk that might

result in serious injury or the loss of the life of a Brother attempting it."

Space will not permit me to go further with this article and I will conclude by saying that I know of nothing that deserves more thought and attention. I believe that the foremost effort of every railway employee should be exercised in the prevention of injury or loss of life to either their Brother workmen or the traveling public. Radical measures should be adopted, if necessary, to prevent mankind "rushing in where angels would fear to tread," and I am at times constrained to believe that laws should be enacted making it a penal offense for a man to assume a needless, reckless, uncalled for risk.

Brother Nash, of Div. 237, has asked if a direct motion engine's eccentric could not be set by valve stem same as an indirect motion. My answer is, yes. To set the go-ahead eccentric on a direct motion engine, I would back engine to bring main pin as near as possible on front center and fasten eccentric in the same position on shaft that I would with an indirect motion engine with pin on back center. I will explain further: On a direct motion engine, the eccentric leads the main pin one-fourth of a turn plus the advancement for outside lap and lead. With the direct motion engine when main pin is on forward center and eccentric pointing straight to earth, valve will be in the center of its travel and it becomes necessary to move it towards ash pan or away from the main pin far enough to overcome lap and lead.

Brother Nash's article is all right. There are no material points taken which deviate to any extent from the course I have outlined in the May JOURNAL.

Brother Stewart's article is good and along the same lines and I heartily agree with him that our technical columns show improvement and an increased interest.

Brother Cheney has taken issue with me regarding the "Model Engineer," but practically admits of duties neglected. I am pleased to have the Brothers' views and shall take no offense at an article disagreeing with me, providing said article is couched in gentlemanly language; sarcasm and abuse are not argument and never have nor ever will disprove a truth.

Running Trains Before Telegraph Was Invented.

NORWALK, O., July 4, 1905.

EDITOR JOURNAL: "How were trains run before we had the telegraph?" I have often been asked, and, no doubt, it is a wonder to the readers of the JOURNAL. How did they manage to run trains before they had the telegraph? Passenger

trains were first-class and were superior to freight trains. Trains in both directions of the same class had the same rights; for instance, a passenger train left Detroit on time. By time table he should meet an eastbound passenger train at Ann Arbor. If the eastbound train was late the westbound would wait until twenty minutes late and five minutes for variation of watches, and would then proceed, keeping twenty minutes late until he met the opposing train, after which they would make up their lost time as soon as they could. The same rule would apply to the eastbound train, should he be on time at Ann Arbor and the westbound train not there, but when both trains were way off time, it was then that the fun came in. One might be waiting at Dearborn for the train going east and the other at Jackson for the one going west; after waiting until each was twenty minutes late, both would proceed with train under full control and be able to stop inside of one-half the distance they could see. There were no mile posts nor halfway posts, but some road crossing, bridge, culvert, tree, or stump was counted as halfway, and the one getting beyond the halfway line first—the other must go back. These rules applied to all trains.

Sidings capable of holding even the short trains of those days were from seven to sixteen miles apart.

I was freight conductor those days and I feel safe to say that I have ridden the back of a locomotive or on the brackets of the headlights 10,000 miles. This enabled me to see much farther than the men in the cab. It was slow work when the curves were plenty, but we made things hum when on straight track. Occasionally some one lost his pilot, but pilots are cheap yet.

I will relate an actual occurrence.

Coming east from Michigan City one morning, we had lost our rights and the one going west was also overdue. We had John Hidenburg as engineer, a jolly German. After rounding the curves east of New Buffalo, a smokestack hove in sight at Three Oaks. He had us beat by over three miles, so back we went and took a siding at New Buffalo, and the other fellow had to toot his horn as he went by. We had time to make Terre Coupee (since called Dayton) before the next freight was due. After his twenty minutes were up, we go again, got dinner at Niles (at that time no train passed Niles day or night without eating). A way we went again, and when we were three miles from where Pokan now stands, another smokestack hove in sight and back we go for Niles. He gives us the crow, and away we go. Four miles

east of Dowagiac another train hove in sight. He had us beat by two miles. I wondered why we did not go back, but we stood there until the other fellow came. We had the Sampson A V hook engine. Before the other train got to us Hidenburg had a back up eccen ric and hook on the tank. There being no other alternativs, they backed to Deca. ur. In ten minutes old John had the Sampson rebuilt and off we went for Paw Paw (since Lawton) to meet the mail west. When they came their engine gave out, and the Sampson took that train, backing up and passed the freight at Niles, the one he had backed seven miles only a short time before. John said he did not mind going back twice in one day, but three was more than he could stand. This was a trick they had not all learned.

Yours fraternally,
N. A. SOMERS

Air Signal Whistle Defects.

CORNING, N. Y., July 10, 1905.

EDITOR JOURNAL: In the July JOURNAL on page 609, on questions and answers on the air brake, you will find a question by some engineer, asking for information about his air signal whistle. He does not say which signal system he has, New York or We-tinghouse, but I take it for granted it is the latter. His question in one instance, in my opinion, is answered wrong. I agree with the Brother answering the question that the pressure in the signal line running up to main reservoir pressure will cause the whistle to blow quite a while, particularly after the engineer releases his brake.

The high pressure is not alone responsible for the double blast of the whistle after one discharge from the car discharge valve, as he says: "The high pressure is also responsible for the double response when the cord is pulled but once." The cause of the double response is a too loose fit of the diaphragm stem in the bushing in the signal valve. The pressure in the signal system being equal with main reservoir, pressure will not cause it.

When two responses are given for one pull of the signal cord, you will always find the second blast the weaker. The diaphragm stem is made so it gently rubs the bushing in raising and lowering when a reduction is made above the diaphragm. When this bushing and stem become worn so the stem is real loose in the bushing the stem rebounds on its seat after a reduction is made and thus you get the double response for one pull of the cord; but the valve does not rise as high when it rebounds as it did when it rose from its seat on account of the reduction; hence,

the weaker blast for the second blast. These valves are repaired by removing from engine and the end of the bushing is closed by a special kind of a tool which fits around the end of the bushing, so the stem just rubs the bushing in working up and down in it.

I have known of many valves removed for this fault and all were repaired in this manner. Most every air brake inspector will agree with me on this point.

The latest revised edition of the Air Brake Association's book of questions and answers on the air brake also gives the cause as a loose diaphragm stem.

Hoping you will give this explanation a place in the next edition, as it is a trouble that frequently occurs, and will give the Brothers a reliable answer to the question, I remain,

Fraternally yours,
TOBIAS PURCELL, Div. 641.

Answer Cause of Lame Engine — Train Order.

BIRMINGHAM, ALA., June 22 1905.

EDITOR JOURNAL: In answer to C. J., Div. 204, found on page 553, Jcne number, where at Ashton he found after stopping with engine so lame she would not go, he only had a hot driving box, he don't say which one. I presume it was the main one, and when he pulled wedge down and packed box, engine was all O. K.; when box got hot and stuck to wedge, then expansion caused brass on journal to become tight and bind. The other side of the engine being loose, the end free would pull its load without any trouble, but this side was being clasped, which could be clasped so tight you could not move engine at all.

In answer to Bro. W. F. Hetrick, Div. 50, will say when you bleed off brakes with bleeder in auxiliary, the last twelve pounds of air gets out of brake cylinder, back through triple and out at bleeder.

If I were on No. 1 and received the meeting order with No. 2 at O and run late on No. 2 from A to M, I would carry out the meeting orders regardless of how much further I could go with the time I had on No. 2 by run late order.

Yours fraternally,
W. C. BROWN, Div. 156.

Answer to Brother Lindsey, Etc.

PRINCETON, IND., July 1, 1905.

EDITOR JOURNAL: In answer to Bro. E. A. Lindsey of Div. 584, on page 621, July JOURNAL.

To his first question I would say, if engine could not back up train, on one side, I would take down the right forward mo-

tion eccentric strap and blade, turn it upside down and put it up on R back-up eccentric, and couple the clevis on bottom of link, then you can back the train to the siding, backing into clear. Engine must be worked in full gear backing up.

In answer to the hole on link block not being in center, will say, I have never seen a link block the hole not being in the center of the block. I think Brother Lindsey has reference to the link saddle pin. The link saddle pin has back set to make a more equal distribution of steam in cylinders when working in the cut-off or hooked up.

Answering his next question, I will say it is always best to block up the link that has the broken hanger; and then in case engine would have to be reversed, the broken side would have to be pried up and blocked higher.

Answering the slip of the link block, I will say that the link block being securely fastened to the lower rocker arm, must move in the arc traversed by the arm, while the motion the link derives from the eccentrics is somewhat complex. Suspended by the link hanger, the link is made to oscillate about the saddle pin, while at the same time it swings like a pendulum on the link hanger, and the saddle pin having back-set, will cause the link to slightly raise and lower; so with these different notions, the link block will slip up and down. The slip of the link block varies from $\frac{3}{4}$ to $1\frac{1}{2}$ inches.

Answering the pump question, I will say that it would be a hard matter to tell what would be wrong with the pump without taking anything down. If pump should stop suddenly on the road and the piston would be at the bottom of the stroke, the cause would be either in the nuts worked loose at bottom of piston in air cylinder, and not letting the piston complete its stroke, or the reversing valve plate coming loose, or the bottom button on reversing valve rod broken off or the reversing valve rod broken. In the above case I would take out plug in bottom cylinder-head and see if nuts were worked off the piston, and if they were all right, I would consider it to be one of the other defects.

In answer to the other pump trouble, I will say that if trouble happened to an eight-inch pump, it would be the stop pin 10 broken in main valve chamber, and letting main valve drop down too far, causing the packing ring to get out of bushing and to expand. With a $9\frac{1}{2}$ -inch pump the trouble would be in the nuts working off the small end of main valve piston and dropping down in cylinder part of cap, and would not let the main valve travel its full stroke.

Now, I have a question to ask through

the JOURNAL for the sake of argument. Would it be necessary to take down all side rods on right side of a mogul engine, the engine having broken the left main pin flush with the pin hub, knowing well all rods on left side would have to come down, and if so, why—and if not, why not? There is some good argument pro and con on the subject.

Fraternally yours,
F. THALMUELLER, Div. 343.

Broken Link Hanger.

BALTIMORE, Md., July 6, 1905.

EDITOR JOURNAL: In reply to Brother Lindsey's questions, number two and number three, July number of our JOURNAL:

Question No. 2. It is not necessary to block both links for a broken link hanger. Fit a block in the slot between top of link and link block, have the block long enough to hold the link where you desire to work engine and fasten it securely in its place.

Question No. 3. The link block is securely fastened to the lower rocker arm, and must move in the arc traversed by the arm. The action of the eccentric rods on the link during certain parts of the stroke forces it to have an almost vertical motion. These two motions combined causes the slip of the link. The slip is also caused by the manner in which the links are suspended and the manner of fastening the eccentric rods to the links, the link pin holes being behind the arc of the link, an equal distance from the radius and as close to the radius as possible, because the further the link pin holes are from the radius the greater will be the slip. The link must slip because of its arc shape, and because of the difference of the movement given it by the rocker arm and eccentrics.

Yours fraternally,
T. A. ANDERSON, Div. 97.

Broken Relief Valve.

LOS ANGELES, CAL., July 6, 1905.

EDITOR JOURNAL: In looking over the several answers to Bro. E. A. Krause's broken relief valve problem, I must take exception to some of them. Putting nuts under valve or anything that may work into steam chest is bad practice, and would cause trouble on some types of engines. The best remedy is to turn case one-half turn to left, so as to have seat of valve down. By hammering on squares it can be turned with small bar and brake chains, in case there is no large wrench. Another way is to take out valve and flatten broken part of stem about one-

quarter of an inch from end, until it is larger, then fit in case, and set it back. When valve is forced down by seat, it will force lower end of stem down, flat part acting as a shoulder will hold valve up. If stem is gone, drive in a piece of broom handle cut to proper length.

Fraternally yours,
R. W. KELLY, Div. 662.

TOLEDO, O., July 3, 1905.

EDITOR JOURNAL: In reply to Bro. E. A. Krause, if he will turn his release valve cage half way around so cage will be upside down, valve will fall on its seat and stay there under steam pressure.

As to the balance strip question, after having shut off, hold hands over release valve; the one that has the least suction will be the side the strip is down on.

Fraternally yours,
W. J. POTTER, Div. 457.

Emergency in Running Position.

HOWELL, IND., July 7, 1905.

EDITOR JOURNAL: In answer to Bro. A. S. Trigg, Div. 552, would say if the train was running it was caused by one of the train pipes being loose, allowing the top of the angle cock to strike the deadwood of the car, forcing the taper plug down and causing a sudden reduction.

Fraternally yours,
S. K. PRICE, Div. 154.

Answer to Brother Keating.

MEMPHIS, TENN., July 10, 1905.

EDITOR JOURNAL: In answer to Brother Keating's question as to what was wrong with his engine, I offer this answer. The axle on which the eccentrics were attached was loose and turning in the drivers.

Fraternally yours,
P. M. FORD, Div. 31.

Answers to Various Questions.

PORTSMOUTH, O., July 4, 1905.

EDITOR JOURNAL: Please allow me space to answer some questions asked by the Brothers in the July number of our JOURNAL.

In reply to James Lenahan's train order question, will say that No. 15 had no right to go to I unless it could clear No. 6 five minutes on the one hour and forty minutes late. The point is that No. 6 running one hour and forty minutes late to I and one hour and thirty minutes from I to A, the dispatcher may start some other engine out of I, as First No. 6 on the one hour and thirty minutes late order, and not only this would prevent

No. 15 from going to I on the one hour and forty minutes late order even if No. 6 could make up any time between the last station back where time is shown and I, No. 6 may leave I on the one hour and thirty minutes late; where the time card doesn't show any arriving time, No. 6 could come into I ahead of the one hour and forty minutes late, and leave on the one hour and thirty minutes late.

In reply to Brother J. C. Nash's question on valve motion, will say that if with the valve setting center on the seat with three-fourths of an inch outside lap, and line and line on the inside, the valve will have just the same amount of inside lead as it has outside lap; it is easy to see that the valve will travel the amount of the outside lap before the valve will admit steam to the cylinder, and if line and line on the inside it is bound to open the port for the exhaust of steam the amount of the outside lap before steam is admitted to the cylinder.

In reply to Bro. Roy Mead's air brake question, will say that he will only get the emergency application on the first ten Westinghouse air brake cars, and will not get only a full service application on the ten New York and the ten Westinghouse air brake cars back of the first ten cars. Now, if he had gone to the emergency before he had made a service application then he would have the emergency all the way back.

Replying to Bro. A. S. Trigg, will say that if he will have the feed valve attachment of his brake valve cleaned, and have all the leaks from the train line looked up and stopped, and then hunt up the sticky triple, or kicker, as the train crews generally call it, he will have no more trouble with the brakes setting and releasing and going to the emergency without any movement of the brake valve.

Yours fraternally,
E. A. LINDSEY, Div. 584.

Brother Lenahan's Train Order.

ROCHESTER, N. Y., July 4, 1905.

EDITOR JOURNAL: In reply to Brother Lenahan's question as to rights of No. 15 to run against No. 6 on an order for No. 6 to run late, No. 15 had no right to use the 1 hour and 40 minutes against No. 6 H to I. The 1 hour and 30 minutes late was the leaving time of No. 6 at I. One might say No. 6 is not due at I until 1 hour and 40 minutes late. What is there to prevent—and for all No. 15 knows to contrary, the dispatcher may intend running another train out of I as No. 6 on the 1 hour and 30 minutes late. There is an unwritten law that a train leaving one station is due at the next

station. On those lines No. 6 could arrive at I as much ahead of her 1 hour and 40 minutes as possible, providing she did not leave any preceding station ahead of time.

To my thinking, the only question to be raised is, can No. 6 arrive at I ahead of 1 hour and 40 minutes and keep within her rights? Fraternaly yours, B.

CONWAY SPRINGS, KAN., July 3, 1905.

EDITOR JOURNAL: Answer to Brother Lenahan's question in the July JOURNAL: The train and engine crew of No. 15 should be thankful that they are alive and still holding their jobs. No. 15 had no more right to go from H to I, using the 1 hour and 40 minutes late order, than they would have had to continue to M, regardless of No. 6. Just because No. 6 has an order to run 1 hour and 40 minutes late M to I, it does not follow as a natural sequence that they are going to run 1 hour and 40 minutes late I to H. No. 6 might have had several minutes dead time at I and even if they were 1 hour and 40 minutes late into I they could have left there only 8 hours and 30 minutes late, according to the second part of the order. Then it is possible that No. 6 could have made up ten minutes between J and I and thus have been only 1 hour and 30 minutes late out of I. No. 15's crew has no right to presume that No. 6 will be 1 hour and 40 minutes late out of I, even if it was impossible for No. 6 to make up any time between J and I.

Fraternaly yours,
H. D. KINSELLA, Div. 82.

ANACONDA, MONT., July 11, 1905.

EDITOR JOURNAL: In reply to Bro. James Lenahan, Div. 82, will say that the man who bets that No. 15 cannot run H to I on the 1 hour and 45 minutes, is the man who takes the money, as No. 6 is only running 1 hour and 30 minutes late from I to A.

Yours fraternaly,
J. G. HAIN, Div. 232.

GREAT FALLS, MONT., July 3, 1905.

EDITOR JOURNAL: In reply to Bro. James Lenahan, of Div. 32, he had no right to go from H to I. When a train is due to leave one station, it is due at the next if there is no arriving time given; therefore, when No. 6 arrived at J they could leave J 1 hour and 40 minutes late, arrive at I that moment and could leave I when 1 hour and 30 minutes late. The 1 hour and 40 minutes would not help No. 15 until they arrived at I.

QUESTION.

I will give an order that I would like the opinion of some of the Brothers on. Westbound trains have right of track. Conductor and engineer No. 433 at H,

and conductor and engineer, engine 600 and 601 as first and second No. 434 at M. No. 433 will meet first 434 engine 600 at J and will meet second 434 engine 601 at K. When No. 433 arrives at J he meets engine 600 as first No. 434, also he receives an order No. 2 that reads thus: Engine 601 is annulled as second No. 434 from L to A.

Can No. 433 proceed on her own time or, in other words, could second 434 of the same date be run with engine 602?

Fraternaly yours,
J. V. BLASDEL, Div. 504.

Train Order Questions.

HOUSTON, TEX., July 6, 1905.

EDITOR JOURNAL: I would be pleased to have some of the Brothers express themselves on the following questions: No. 1 is due to leave A at 11:50 P. M. on the 4th; new time table takes effect at 12:01 A. M. on the 5th, and No. 1 leaves A on new time table at 12:10 A. M. If you were an extra leaving Z at 1 A. M. of the 5th, would you look out for two No. 1's? If you say yes, then suppose you left Z on an extra at 11 P. M. on the 4th and happened to meet No. 1 at B at 12:05 A. M. on the 5th, would you still look out for another No. 1?

In reply to Brother Lenahan who says in reply to Brother Krause, that No. 1 could leave C against No. 2 in the face of a positive meet order, will say that he is very much mistaken, as nothing gives a train the right to disregard a meet order, except another meet order with the word *instead* or the annulment of the meeting order, or the train to be met being 12 hours late. Of course, I understand that the dispatcher could have annulled that part of the order which read that Nos. 1 and 2 will meet at C, then No. 1 could have used the 1 hour of No. 2's time.

Also in reply to Brother Lenahan relative to trains No. 6 and No. 15, will say that No. 15 had no right to go to I unless it could make there on the 1 hour and 30 minutes of No. 6's time, as No. 15 had no right to use the 1 hour and 40 minutes until after it left I.

Yours fraternaly,
E. M. MURPHY, Div. 139.

DICKSON, TENN., July 3, 1905.

EDITOR JOURNAL: Please allow me to ask a question. If I get an order at D to run from D to L, and return extra (both telegraph stations), in case I break down before I get to L, have I the right to come back on this order? Please answer.

Yours fraternaly,
C. B., Div. 129.

CLEVELAND, OHIO.

CHARLES H. SALMONS, - Editor and Manager.

Address all matter for publication—Correspondence, Technical and Link Departments, changes in Division Addresses, Special Notices, and address of Outside Subscribers to C. H. SALMONS, S. G. E., Editor JOURNAL.

No reading space will be sold for advertising purposes under any circumstances.

All money matters should be addressed to W. B. PRENTER, F. C. E., 307 Society for Savings Bldg. Send New York or Chicago draft, Express money order or Postal order, but never send personal check. Also send the name and address of all members Initiated, Reinstated, Transferred, Expelled, Suspended, Withdrawn and Deaths to the F. C. E., as per Section 16 of the Statutes.

Changes in Address of the JOURNAL and orders for Division supplies should be addressed to D. EVERETT, T. G. E., 307 Society for Savings Bldg.

Advertising Department matter and all correspondence relating thereto should be addressed to W. N. GATES, 409 Garfield Bldg., Cleveland, O.

AUGUST, 1905.

You Are Your Brother's Keeper.

Under the above title C. W. Post, the successor to Parry as President of the National Citizens' Industrial Association and Allied Associations, writes a vicious tirade of 5,000 words, and in a foot note says: "This space is owned and paid for by C. W. Post under contract. He uses like space in every paper in America, where he has similar contracts. This article is one of a series of what he calls a 'campaign for industrial peace,' with oppression for none, with freedom for all."

He brags that he pays \$20,000 for this opportunity to vent his spleen against organized labor and spleen against newspapers which will not become tools of the Citizens' Industrial Association and Allied Associations, which chafe at any interference with their own interests regardless of others, and whoever reads his last effort will not need to draw much upon his imagination to see C. W. Post, the Postum Cereal Grape-Nut Manufacturer of Michigan, in his office, his face distorted, his hand trembling with passion, while he preaches duties to other

people, reserving for himself such rights as his own interests dictate.

His tirade is against all classes of union labor, many of which have received the highest encomiums from the employers themselves, otherwise we would treat the Post syndicate letters, and the vile stuff which emanates from others in the employ of the Citizens' Alliance, with silence. They need no light thrown upon them; the gauze is so thin that they remind one of Milton's Satan, in which he has worked the intense selfishness which would rather reign in hell than serve in heaven. The following are samples from Post's last effort:

"We have oil, beef, steel and other trusts on one hand, and numerous labor trusts on the other. The capital trusts attack the pocketbook and the labor trusts attack the person and property. Between the two the common people suffer, endure and pay the bills for the entire cost of the warfare, increased cost of necessities, cost of guards, policemen, sheriffs, militia, army, judges, court costs, etc., etc.

"So we see the power of organization placed in the hands of a few designing men, and that power enough to gather the inflammable, dangerous people into mobs and defy the civil government, established and relied on by the people for their protection.

"This dangerous condition is encouraged by what some call the 'Daily Assassin,' the 'Murderers' Advocate,' alias the Yellow Journal, and some socialist and anarchist labor papers whose artful, criminal-minded writers, color, twist and misstate facts, always denouncing the man who pays money to support workmen, whether he be right or wrong, always urging the wage earner to hate his work, to hate his employer, hate the laws, the peace officers, the government and the flag.

"Daily injections of the poison of the 'Yellow Journal' change the former thrifty, upright citizen into a criminal and force him to sure destruction.

"The 'Murderers' Advocate' is a riot maker and constructor of criminals to the limit of its ability.

"Note its demoniacal art, how it works up sympathy and inflames passion by coloring and distorting the facts of this arrest, which was a wise, just, and, under the circumstances, most lenient act, in defence of the common people, to preserve them from the violence of these lawbreakers and rioters. The impulsive, prejudiced workman is fed daily upon this mawkish, sentimental, poisonous gush; the criminals, petted, cuddled and held up as martyrs and heroes, utterly ignoring the helpless children, made fatherless not by the fathers being temporarily detained in a hotel, but by the beating, maiming or murdering of over 500 fathers and brothers by the labor unions in the one strike in Chicago.

"Large merchants up until recently have contributed great sums of money paid in advertising in these papers that are open enemies of law and order. Dearly have they paid for it in Chicago."

We have yet to see the yellow journal, socialist or an anarchist paper which contained anything half so yellow and vicious as the above, or comes as near "murder's advocate."

He says, "We have the oil, beef, steel and other trusts." But what are the Manufacturers' Association and Citizens' Alliance and their allied associations? Is not an association like this as much a trust as the oil or steel trust, when there is an agreement that the loss of one employer who has trouble with his employees and fights them shall be borne by the Citizens' Alliance and associates? The fact is, their organization has for its purpose better profits, and lower wages by crushing organized labor, because it has power to make demands. The Alliance makes a great hobby of personal liberty, and yet they expel members of the Alliance for making contracts with their employees. They abhor the boycott, and yet in the last paragraph we have quoted Post intimates that the merchants are boycotting the papers which have anything friendly to say of labor. He charges organized labor with being lawbreakers and disloyal to the flag. But I do not know of an organization which would tolerate a member who would refuse to honor the flag, as did one of the manufacturers in a Chicago meeting because the government would not protect him in doing as he pleased, and in making such conditions as he liked for those he employed.

If there should be need for defense for the flag, we do not hesitate to express the opinion that there would be a thousand members of organized labor to one man like C. W. Post to sacrifice even life for its preservation.

The President of the Citizens' Industrial and Allied Associations seems to abhor socialism and anarchy, but such as he who lack the moderation that discerns the path of justice, create more of that sentiment than the most red-handed anarchist could do. Pointing to the evils of any condition or system is commend-

able if it is done in the right spirit, but to condemn all organized labor and all leaders of organized labor, is as inconsistent as condemning all ministers because one strays from the fold, or all Christians because some do wrong. And we may carry this out to all society because they will not do as the Citizens' Industrial Alliance dictates. Post says the alliance is organized to meet organizations with superior strength—for defense and justice.

For defense and justice is what the Brotherhood of Locomotive Engineers is organized for, and we succeed, but not by bluster and calling other people bad names. We entertain no designing man or men as leaders, who incite mobs and defy law, and we are not alone in conducting an honorable business of negotiating benefits for the members. Usually justice is accorded when pointed out, but occasionally one is met who expresses himself like Post or Parry, who would sooner rule his own way in hell than serve justice in heaven. Thus organization is necessary, and regardless of any such tirades of abuse heaped upon all opposition to the will of the Citizens Industrial and Allied Associations. Organized labor will remain to deal with the selfishness that prompts the Association to spend \$20,000 on its splenetic syndicate letter, money, if paid out in betterments for laboring people, would be commendable. In the following quotation, first paragraph, President Post says a good thing, and if carried out by those he represents would mean peace and the disorganization of the Citizens' Association, for it would not be needed as a means of defense, but he spoils it all in his next paragraph qualifying the first:

"I am an open advocate of high wages, and an eight-hour work day, and will support peaceful methods, which do not oppress others to bring them about.

"But the Union man and all others must remember the Citizens' Association is for the defence of liberty, and in order to obtain its support, the individual must himself abstain from tyranny over his brother."

In other words, organization must be a dead letter in order to obtain the support (favor) of the Citizens' Association.

How beautifully consistent! Froude said, "Where all are selfish the sage is no better than the fool, only rather more dangerous." The Parrys and the Posts may heat the furnace hot enough to burn their foes as they see them without getting scorched themselves, but we do not believe organized labor as a whole should have any fear of the consequences. We do not object to decent criticism of organized labor, in fact, that is courted; but it is evident that it is not the intent of the Citizens' Association to criticize but to crush organized labor, otherwise they would name those which come within the scope of their denunciation.

Union Meeting at Riviere du Loup.

Owing to lack of all the information desired relative to this most profitable and enjoyable union meeting and, lack of space owing to having so much matter held over from the July number, we concluded to hold the matter until September so we may do the subject justice. We will say, however, that the register at Riviere du Loup showed that there were more Subdivisions from the States represented than from Canada, the record standing: States 46, from 15 states; Canada 33. The evidence that the visitors from the States appreciated the kindly greetings and splendid entertainment at the hands of the Brothers of Riviere du Loup will be evidenced by the action taken on the boat trip which will appear with the thanks to the railroads and others in the September issue.

LINKS.

A UNION MEETING under the auspices of Div. 98 will be held in Lincoln, Neb., about the middle of September. We are preparing for a large enthusiastic meeting. Exact date and full information will appear in the September number.

H. WIGGENJOST, F. A. E.

THE old Atlantic & Great Western Railroad employees will hold their Eleventh Annual Reunion at Oakwood Park, Meadville, Pa., on Saturday, Aug. 19, 1905, to

whom a cordial invitation to be present is extended. Brother Sweetman, Pres.; Bro. W. E. Nichols, Sec.

A rate of half cent a mile has been arranged for this meeting, which applies from the following stations: Dayton, Urbana, Galion, Mansfield, Ashland, Akron, Kent, Ravenna, Leavittsburg, Windham, Warren, Niles, Youngstown and Cleveland, Ohio; New Castle, Sharon, Shenango, Greenville, Union City, Corry and Bradford, Pa.; Jamestown, Randolph, Salamanca, Olean, Buffalo and Binghamton, N. Y.; Jersey City, N. J.; Chicago, Ill., and Huntington, Ind.

The large committees looking after the ways and means of entertaining, insures a pleasant time to all who attend.

WHILE at the union meeting in Riviere du Loup, Mrs. Duffey, wife of Bro. T. Duffey, member of Div. 132, St. Thomas, Ontario, had the misfortune to lose her rings. One had diamond setting, the other amethyst. Anyone having found them will do a great kindness by notifying Bro. T. Duffey, St. Thomas, Ont.

THE many friends of Bro. H. C. Van Buskirk, a member of Subdivision 261, Herington, Kan., will be pleased to learn that he has recently been promoted from Master Mechanic of the Ft. Worth & Denver City to Superintendent of Motive Power of the Colorado & Southern System, with headquarters in Denver, Colo. Brother Van Buskirk was one of the engineers on the battleship Oregon at the time she made her famous trip around Cape Horn on her way to help smash Cervera's fleet, and the good wishes of his many friends for his success will follow him in his new position. W. S. S.

BRO. T. P. McCORMICK, member of Div. 114, Waterloo, Ia., who has been totally disabled since May, 1900, has prepared a vest pocket edition entitled "Gems of Knowledge for Engineers and Firemen," which treats on the maintenance and proper care of the air brake, signaling apparatus, valuable instructions in everyday life on the road, engine failures, etc. The book contains 80 pages, and any mem-

the dead who had been identified with the Brotherhood and supplementing the list with a very eloquent and touching address.

Rev. R. H. Balmer delivered the address of the afternoon, basing his remarks on the two following features of the Brotherhood, the education and heroism of the men of the order, closing his address by a reference to the Golden Rule.

The engineers and the ladies then proceeded to the cemetery, going in three special cars. At the cemetery wreaths were deposited on the graves of all deceased members, and Rev. W. A. Perrins delivered a brief address, speaking of the members who are not buried in Fairview, and a large wreath made by the Ladies' Auxiliary was deposited on the grave of John Meuser in memory of those resting elsewhere. The ladies decorated the graves of their deceased member, Mrs. John Cronenwett, concluding with the ladies singing "God be With You Till We Meet Again," and the Benediction by Rev. John Whitworth.—*Galion Paper*.

DIVISION 816 of Hazleton, Pa., extended an invitation to Div. 259 of Easton, Pa., which was accepted, and the party arrived about 10 o'clock A. M., June 18, it being composed of members and their wives. Our committee, Brothers McCarthy, Brush and Moser, did their duty well, met the party at the depot, took them to the Washington Hotel, and after introductions we left Brother Moser to take care of the ladies while we went to the Division room.

The meeting was called to order by the writer, and it was a special meeting for the discussion of matters pertaining to the good of the order. Brother Freeman advocated the fifth Sunday, as that is no regular meeting day; the object of those meetings would be to get better acquainted with each other. We all agreed that it would be a good thing, so we will leave it to him to say where we will meet next time. We would have settled on the next meeting place but for some one knocking at the door, which proved to be

Brother Moser with the ladies. Of course, we saw that the poor fellow could not take care of them all, so we helped him out by letting them in, and incidentally showed them an altar cloth of scarlet velvet and a bible, which was presented to Division 816 by the G. I. A. The mot-toes are worked in the corners with yellow, and were worked by Mrs. William Pickring. We have only a few members in the G. I. A. here at present, but expect to get them coming our way soon, and if the engineers have union meetings every fifth Sunday, it will do more for the G. I. A. than anything else. So, Brothers, let us have a meeting the next month having five Sundays.

It being dinner time, and as Brother McCarthy had everything arranged, we followed him to the hotel where we participated in a bountiful feast. After satisfying the inner man, we were escorted by trolley to Hazle Park. After taking in the sights at the above place we boarded the Wilkesbarre & Hazleton car bound for Evergreen Park. I must say a little about the W. B. & H. R. R. This road runs from Hazleton to Wilkesbarre, a distance of thirty miles. Hazleton is 1,100 feet above Wilkesbarre, which makes the scenery very grand as it winds around the mountain. The power is furnished by a heavy steel rail on the side of the track, called the third rail; there is no road crossing, as all roads are bridged; no cattle can get on the track as it is fenced all the way. The cars are of modern build, weighing 45 tons, equipped with Westinghouse automatic and straight air, and ride easy. I know that the Brothers and Sisters enjoyed this ride.

When we arrived at Evergreen Park, after partaking of refreshments, we all had our pictures taken. As time was getting short it was decided to take the car for Hazleton, where we arrived in due time, had our supper, and got ready for the train. After handshaking and wishing for many more outings together we parted for the day, which will always be remembered as one spent with good friends.

Fraternally yours,
GEO. E. FARRELL, Div. 816.

On Saturday evening, July 8, 1905, the members of Columbian Div. 519, B. of L. E., seventy-five strong, left South Chicago in a special train kindly donated by Mr. J. S. Kirk, Superintendent of the C. L. S. & E. R. R., for Indiana Harbor, Ind., to organize a new Division, Number 682.

Upon arrival at Indiana Harbor, the train was met by a committee of engineers and the members marched in a body to the hall, where business was begun. After all were seated, the doors attended to, C. E. Baumer, of 519, proceeded to do business. Bro. C. W. Pepin was instructed to take up the password from all, there being members present from 23, 231 and 239. The organization being over with, initiations were next in order and nine candidates were put through the ceremonies, making a total membership of fourteen to start out with, there being ten more who could not be present on account of having to work.

After the regular order of business was through with, the Division closed and Bro. J. W. Dunlap, taking the chair, introduced Mr. A. S. Scott, Superintendent of the Indiana Harbor Railroad. He favored the members with an eloquent address and some good advice, which was appreciated by all present. At this time the chairman announced the Blucher Quartet, composed of B. of L. E. members, Bros. Rush and Carney, of Div. 519, Bro. Warren, of 231, and Bro. Cummins, of 239, who favored the meeting with some fine selections. They are all fine singers.

The chairman next introduced Mr. H. Warner, T. M. and Mr. N. R. Rathborne, G. Y. M. of the Indiana Harbor Railroad, who also spoke kind words and gave good advice.

After all had gotten through talking, the party proceeded in a body to Sternberg's Hotel, where, after grace being said by Brother Dunlap, all were seated. I wish to say that the hotelkeeper set up a table fit for a king, some of the members expressing an opinion that it was the finest ever seen. The tables were loaded down with good things and flowers, and every one did justice to the spread.

While waiting for the train we were favored by the quartet with more singing, which was fine. Space will not permit me to say more, but I can say that Div. 682 starts out with bright prospects and a good set of officers, and has a large field to work on. Fraternal yours,

J. E. DAVIS, F. A. E. Div. 519.

ham district, consisting of the L. & N. Div. 156, Frisco Div. 386, Southern Div. 432 and A. G. S. Div. 436, held their first annual joint picnic and barbecue at Germania Park, Thursday, June 22, and never before in the history of Birmingham has such an enjoyable affair occurred. This fact was clearly demonstrated by the number of people present and the many flattering compliments paid the organization by the vast multitude. Fully 7,000 people passed through the gates during the day and evening, and until the announcement that the last car would leave the grounds shortly, the merriment lasted; and the only complaint was that midnight came too early. Germania Park is an ideal place for a picnic, being only five miles from the city, and with a car service of every five minutes, added so much to its popularity.

For the young folks, there was a large pavilion with a floor for dancing that would please the most fastidious, and with music furnished by Memolee's band, everybody felt young again and joined in the festivities. A bowling alley and many out-door sports were on the ground and enjoyed the patronage of the crowd.

Another feature of the day was the many distinguished guests that were present, among whom were Grand Chief Warren S. Stone, of Cleveland, O.; Hon. Wm. Dorsey Jelks, Governor of Alabama; Capt. Richard P. Hobson; Lieut.-Gov. Cunningham of Alabama, and many other prominent men of reputation. By their presence and addresses from each, they contributed much to the grand success of the occasion. Visitors from Tennessee, Georgia, Illinois, Kentucky and South Carolina were present, many of whom stopped with friends in the city. Our guests were met at the union station by a special committee and escorted to the different hotels, where arrangements had been made previous to their arrival. Brother Stone arrived Wednesday morning over the Frisco, and was met by a committee and escorted to Hotel Hillman.

After a few hours' rest Brother Stone's room was turned into a reception hall, and visitors were in and out during the morning.

At 2 o'clock a special meeting was called to order in Div. 156's hall with Bro. G. F. Garrett, Chief Engineer of Div. 432, presiding, who in a few very appropriate words introduced Brother Stone to the assembly. Brother Stone made a beautiful talk and gave the members much valuable information concerning the organization and transaction of business of the Grand Office, and for two hours (which seemed but a short time) Brother Stone interested his hearers, who listened with profound interest. Several

other addresses followed, and no doubt the meeting would have lasted much longer had it not been that Brother Alexander, who was door-keeper, answered an alarm at the door, and the room was soon filled with ladies, members of Clematis Div. 169, G. I. A., who as a pleasant surprise served the assembly with cake and cream. We cannot say that we were surprised at their visit or their treat that was given, for we well know that they were equal to the emergency, and ever studied the interest and welfare of the Brotherhood. Brother Stone was introduced personally to each lady and after a hearty handshake to all he ascended the platform and made them a beautiful address, and at the conclusion the applause was deafening.

Wednesday night, while the engineers were in executive session, a committee of the G. I. A., composed of Sisters Carlisle, Vanarsdale, Turnipseed and others, took charge of the visiting ladies, and, after a lunch at the cafe, were tendered a trip to East Lake where many places of amusement were visited and enjoyed heartily by everyone.

The evening session was called to order at 8:30 by Bro. George Carlisle, Chief Engineer of Div. 156, who, in a short address, welcomed the visitors to our city.

Mr. B. M. Starks, General Manager of the Louisville & Nashville Ry., arrived in the city shortly after our meeting was called to order. Our business was suspended and Mr. Starks was brought in and introduced to our Grand Chief and Brothers. Mr. Starks made a short address, but in every way commendable, and he not only showed in his talk, but by his actions, that he is a staunch friend of the B. of L. E., and was one of the tried, true and trusted, and he is a man who never gets so busy but that he has a kind word for all. Each member was introduced personally to Mr. Starks, and during the intermission a grand old-fashioned handshaking was engaged in; and it tends to show that with a few more such men at the head of our railroads, it would bring employer and employee closer together and results to both would be very beneficial.

After Mr. Starks left, business was resumed and Bro. Thos. Glazier addressed the meeting.

Brother Stone again addressed the body and with beautiful language captivated his hearers. He forcibly reminded us of the mottoes of our organization, and urged us to live and practice their teaching, one especially, that of sobriety. At the conclusion he was given quite an ovation, and among the two hundred Brothers present the brotherly love was strength-

ened; and so long as he lives and practices his teachings, he can rest assured that he will ever enjoy the love, respect and support of the Brotherhood.

Short talks from others followed, and not until near the midnight hour did we adjourn. The evening was delightfully spent and much valuable information gathered.

By 10 o'clock Thursday morning the vast crowds began to wend their way to the picnic grounds. Three special cars were in waiting at Third ave. and 19th street to convey Brother Stone and our visiting guests to the grounds, and at 10:30, headed by Memolee's band, the specials traversed the center of the city and then direct to the grounds. Gov. Jelks, Capt. Hobson, Dr. Cunningham, Col. O'Bryan, and others, were brought out later in automobiles.

At 1 o'clock dinner was served, and for two hours the inner man looked to. The ladies of the G. I. A. had this in charge and it is useless to mention the menu, for with such a grand and noble body of ladies that constitutes Clematis Div. 169, you may rest assured that there was nothing left undone to make this part of the occasion a grand success, in fact, the Ladies' Auxiliary have the greatest credit for the entire success of the picnic.

After dinner was over, the band rendered several beautiful selections, after which Col. Frank P. O'Bryan ascended the platform and as toastmaster for the occasion addressed the audience who had filled the pavilion to its capacity, and in a few well spoken words, extended to all a hearty welcome, and thanking the public for their attendance for the B. of L. E. He then introduced Hon. Wm. Dorsey Jelks, Governor of Alabama, who delivered a stirring address, in which he advocated arbitration, complimented the B. of L. E. very highly, illustrated loyal courage by reading "Jim Bludso," giving the trend of the whole in his closing paragraph: "In conclusion, may there be peace to the Brotherhood of Engineers, peace to unionism, peace and plenty."

Capt. Richmond P. Hobson, the hero of the Spanish-American war, was then introduced, and also paid a high compliment to the members of the B. of L. E. in his very interesting address.

Lieutenant-Governor Russell M. Cunningham was next, taking for his subject co-operation, treating it as the central principle of all organization, and in conclusion said: "I believe that the world is getting better and not worse. I believe there is more good in the world than ever, and that there is more righteousness than sin. The progress of man today is onward and not backward, and the keynote of this progress has been co-opera-

tion and organization to bring to bear the ends that promote and not destroy."

Bro. Fred Burgess of Div. 78, Louisville, Ky., was then introduced, taking for his subject Capital and Labor, and he handled his subject in a masterly way, winning hearty applause from his audience as he took his seat.

Grand Chief Warren S. Stone was then introduced, and as he stepped to the front, was received with a ringing round of applause, and as it subsided said, "I wish to express my appreciation of the many good things said about the organization I have the honor to represent, by the speakers who have preceded me." He then took up the subject of the conditions of labor preceding organization, what brought about organization, what it stands for and what it has accomplished, handling his subject in a masterly manner, to the delight of the audience.

Judge N. B. Feagan of Birmingham, was the next speaker, making a very pleasing address, interspersed with very witty comparisons, and paid a high compliment to the ladies.

After the several addresses were concluded a prize waltz was danced, and the honors were conferred on Miss Estella Hardin of Birmingham, for first prize, and Mrs. King of Bessemer, Ala., for second prize. Capt. Hobson was one of the judges, and after making the announcement of the judges' decision, he said that he seldom ever asked any compensation for his services on such occasions, but in this case he would, and the fee would be a dance with each of the winning contestants. The debt was paid and the Captain seemed to enjoy it immensely.

Supper was served at 6 o'clock, and continued until everyone had been supplied, and not until the midnight hour did all depart for home; and it can be well said that this day will go down in history as being a grand success.

Friday, the 23d, the Louisville & Nashville R. R. tendered the engineers a special train for the members, families, and visiting guests, for a trip "Around the Horn." The train consisting of three coaches, with about 200 on board, with Conductor Marshall Hanbury and Bro. Chas. Silliman at the front, left the Union Station at 10:30 A. M., under the personal supervision of Supt. T. E. Brooks and Col. A. B. Bayliss, Trainmaster. Many places of interest were visited, and every courtesy possible extended at the various places to make the trip a pleasant one.

Our first stop was at Valley View Ore Mines on top of Red Mountain, situated several hundred feet above the city of Birmingham, and from this point the view of the city was grand. Our next stop was at Readers. Here we were shown

through the various workshops of the Tennessee Coal, Iron & Railway Co., and here we saw the automatic hoisting engine and four of Corliss's finest engines in operation. After viewing the many interesting spectacles at this point, we repaired to a shady grove near by where a delicious lunch was served, consisting of all the good things that go to constitute an outing dinner. Here our photographer made a splendid picture of the group. Leaving this place we proceeded to Bessemer and Ensley and other points along the line, stopping last at North Birmingham. We were then shown through the pipe works at that place by members of the plant.

Before boarding the train for home, Col. O'Bryan, ex-sheriff of Jefferson County, a staunch friend of the B. of L. E., and in fact, a friend to all who know him, led the crowd to a beautiful grove a short distance away and there in behalf of the engineers in a pleasant manner thanked Superintendent Brooks and Trainmaster Bayliss for the many courtesies shown them in entertaining our friends and guests. Mr. Brooks responded in a very touching way and paid his men, as well as the entire organization, many beautiful tributes. Mr. Bayliss made quite a pleasant talk, after which we boarded the train for home, arriving in the city at 3:30, everyone expressing himself as having spent a most enjoyable day.

To Superintendent Brooks and Trainmaster Bayliss we felt greatly indebted for such a pleasant outing, and trust they fully realize just how much we appreciated the courtesy, for words are inadequate to express our thoughts.

The picnic was a grand success, both socially and financially, and will long be remembered by everyone present.

Bro. Geo. Carlisle, Chief of Div. 156, was General Chairman of the affair, and there was no mistake made in selecting him for the position, and to him great credit is due. His entire time for weeks was devoted to this work and his reward for such untiring work was enjoyed by all, and he received many flattering compliments which he so justly deserved. Brother Carlisle selected his own committeemen, and he made a wise selection, for each one gave him loyal support, and not a single event occurred to mar the pleasure of the occasion.

The Brotherhood is greatly indebted to Varley and Beauman for their hospitality. These gentlemen had a room nicely furnished over their store, which was used as a committee and reception room.

Next year we intend to repeat our program and trust to see our friends again,

Hoping that we have succeeded in giving all an assurance of a hearty welcome to our city and home, I am

Fraternally yours,
J. S. MAY.

On May 4, America, Virginia, Richmond, were called upon to pay their last homage to the bravest of the brave—a nation's hero, a state's fondest pride, and a city's loyal friend. Our own loved Fitzhugh Lee was borne to his last resting place in beautiful Hollywood, where the noble James will ever sing of his valiant deeds, as it winds its way to the distant sea. A pall, as it were, hung over our city, for all business was suspended, to pay a just tribute to him who under all circumstances and in all positions, both public and private, had been true to his trust and faithful to his duty.

Then a few short hours intervene and on the night of May 5, behold a scene of rare beauty and pleasure, for, gathered in the hall of the R. R. Y. M. C. A., under shaded lights and palms, were the noble heroes of the throttle and their families. They were there to honor and to lay their tribute of love upon the heart of a loyal and brave engineer who was soon to make his home among strangers. Bro. Harry Funk of Div. 26, B. of L. E., on account of faithfulness and strict adherence to duty, had been promoted to Road Foreman of Engines, Covington Division of C. & O. His fellow engineers wished to acknowledge his worth and express their high appreciation of his faithful friendship, therefore this brilliant scene.

The C. & O. officials were invited to participate, and as they are men of high integrity and appreciate true worth and good service, gladly lent their presence to make the occasion more joyous.

Mr. Walsh, Superintendent of Motive Power, was the orator of the evening, and presented Brother Funk, in behalf of his brother engineers, with a silver service, a token of their love and esteem. May sweet memories ever keep it bright.

The ladies of Virginia Div. 228, G. I. A., served refreshments, and had the privilege of assisting the Brothers in making the entertainment a perfect success. Richmond's sweet singer, Capt. Cunningham, known North and South, lent the enchantment of his voice to thrill the audience. So amid the perfume of flowers and under music's magic spell, the hours sped by all too quickly, and farewells had to be spoken.

Brothers, throughout our broad land, I wish to impress upon you the great good resulting from these "family gatherings" of railroad people. Their hand clasps hand in brotherly love, and hearts beat

true to each other. There each vies with the other in placing the laurel on the brow of the hero who, by nobly keeping the precepts of his Brotherhood and strict adherence to duty, reaps his honest reward.

Duty is said to be the sublimest word in the English language; it is also an inspiration to all honest toilers in any cause. The great Napoleon's watchword on the eve of so many of his victorious battles was, "Gentlemen, France expects every man to do his duty," and it was done. So I say to one and all of our engineers—Virginia, your Grand Chief, the Brotherhood, "expects every man to do his duty." That done, success will crown his efforts and he will inhale the sweet perfume of perpetual friendship from both employer and employee. Brothers, "we are all architects of fate, working in these walls of time." See to it that the material you use is just, honest and true to your employer, and your mortar is mixed with "Sobriety, Truth, Justice and Morality," to your Brothers.

We can all hold the high place we covet, if we have noble aspirations and aims, and act prudently, justly and kindly, as did our Brother Funk. "Kind words and deeds are more than coronets." Neighboring Divisions can learn a lesson of loyalty and fidelity to each other from kind old 26.

Then, let us still honor our brave engineer,
And his fond trusting wife, whom we all hold so
d^ear;
May their new home be joyous, their new friends
so true,
They may never regret bidding old ones adieu.

MRS. O. F. CONLEY,
Pres. Div. 228, G. I. A.

Boston Div. 61 had an interesting meeting on July 9, having with us A. G. C. E. Bro. E. W. Hurley. Our attendance was not as large as usual, but decidedly interesting to those present. It was the first Sunday meeting for some time when initiation of candidates was not a part of the session work, and it was with great pleasure that we welcomed Brother Hurley, who gave us a very entertaining discourse upon conditions in general in the order and advice relative to our local interests.

At the close of the regular business the Chief Engineer, Brother Abbott, called upon the visiting Brothers for remarks on the good of the order, and Bros. H. L. Tobey, Past Chief of Div. 312, and Bro. T. H. Henderson of the same Division, responded with able remarks, out of which came the important subject of intemperance among men of our calling, and our

Brothers who were not present missed hearing sentiments worth taking home, whether it applied to us as individuals or not. Bro. Geo. R. Dority of Div. 61 followed in a broader moral tone, painting a picture of duties we owe to our families, to ourselves and to our employing companies, and in the course of his remarks, told what had become known to the officials, of the practice of some who frequent saloons, and what it meant if the practice continued.

Then A. G. C. E. Brother Hurley addressed the meeting, taking up every phase of our responsibilities as members of the order, showing that our difficulties and failures come from failure to live up to our law, and that our success comes with our strict compliance with that to which we had obligated ourselves. He gave many and very instructive illustrations of cause and effect, which were powerful lessons in right duty and beneficial consequences, when followed. He touched the temperance question in a general way and its relation to us as engineers, telling of what happened to various individuals through drink. His remarks were exceedingly interesting and highly appreciated by those present.

The trend of the discussion during the meeting, and some things which have come to my knowledge, induce me to pen a few paragraphs. Don't jeopardize your job for a few glasses of beer. Perhaps you place little value on your job, but how long did you work to get it? Warnings have been plentiful, but you can sell your job for beer if you want to, and there are some who if they do not change their ways will lose their job whether they want to or not. If a member loses his job through drink, how much consistency would there be in his asking for the intercession of the Division in his behalf or in the Division interceding? Think of this before your Waterloo.

COR. SEC. Div. 61.

DETROIT DIV. 1, Brotherhood of Locomotive Engineers, held its annual memorial services on Sunday, May 21, 1905, at the lodge room in the Elks' Temple, at Detroit, and the services and program were very impressive.

There was a large attendance at the meeting, consisting of engineers, their families and friends, and the session was taken up by a very impressive service in commemoration of the deceased members of the Division.

Grand Chief Engineer W. S. Stone was present at the exercises and his remarks about the departed brethren were very appropriate and well received. Bro. Stone complimented the order in general on the

good work it was doing, and urged united action among the members of the order.

The order of service was as follows:

Opening ceremonies, C. D. Brown, C. B.; Prayer, Rev. W. T. Jacques; Solo, selected, Mr. Homer Warren; Eulogy, Mr. W. S. Stone, G. C. B.; Solo, — McKersahey; Remarks, D. S. Sutherland, Div. Supt. M. C. R.; Solo, "Face to Face," Mr. Allen Wallace; Address, Rev. W. T. Jacques; Solo, selected, Mrs. Haynes; Solo, selected, Mr. Homer Warren; Quartette, selected; Benediction, Rev. W. T. Jacques.

The hall was very tastefully decorated for the occasion and the meeting was a success in every way.

W. F. HAMILTON,
Chairman Memorial Service.

MEMORIAL SERVICES were held by Div. 448, Bluefield, W. Va., on Sunday, June 25, which was a success in every particular. The address was made by Master Mechanic L. D. Gillette, a member of the order since 1875, and his address was a masterly effort, in which he took up the history of the order he knew so well from his association with it, paying a high tribute to our late Grand Chief P. M. Arthur, who preached and practiced the precepts which had made the order great; that in the order's following the precepts we not only helped ourselves, but the companies and the country at large. He referred to the time when the North and South were arrayed against each other, and said that the Brotherhood of Locomotive Engineers were more instrumental than any other association in setting the example of peace; that the B. of L. E., bound together by the bond of fellowship, living the great precept of "Do unto others as you would that they should do unto you," the hand of fellowship was extended until there was no North, no South, but one united country. He said the B. of L. E. was the first in the field of temperance; sobriety, one of its first mottoes; temperance, one of the conditions of membership long before any railroad company put a clause in its rules in relation to it. He touched upon every phase of the excellent influences exercised by the B. of L. E., and touched the hearts of all who heard him. I wish I could give his address in full, for it was a masterpiece full of tribute to the B. of L. E. and G. I. A., and the high moral standing brought about through their influences. We appreciate his sentiments possibly much more, for his practice is the Golden Rule, and he is an official, is always approachable and his kindly advice helpful.

Fraternally yours,

J. W. SIMPSON.

SPECIAL NOTICES.

Wanted—The whereabouts of Matt Eagan, who when last heard from in 1904, was at Enola, Pa., on construction. Any information will be received by Miss Mary Eagan, 638 Howard street, Buffalo, N. Y.

Wanted—The whereabouts of Frank McTigue, who when last heard from was running an engine in Louisiana. Address Mr. Wm. McKinsty, 711 Main street, Nashville, Tenn.

Will Mr. Frank Richardson, who was running out of Cardenas, San Luis Potosi, Old Mexico, until about April 10, 1905, please correspond with his wife?

The traveling card of Bro. A. Bohosky, member of Div. 304, has been lost. If presented, please take up and forward to Bro. L. B. Moore, F. A. E. Div. 304, 712 Meredith street, Saginaw, Mich.

Wanted—The whereabouts of W. A. Kalat, who when last heard from in December, 1904, was working on the Seaboard Air Line, out of Birmingham, Ala. Address F. H. Patterson, 114 McCulloch street, Stevens Point, Wis.

Wanted—The whereabouts of Frank McCormick, who when last heard from was running out of Mart, Tex. Address Mrs. A. McCormick, 1508 Kansas avenue, Atchison, Kan.

Wanted—The address of Mr. A. Young, who was running an engine on the C., B. & N. out of La Crosse, Wis., before 1888. Address Chas. R. Conrow, 2597 Couler avenue, Dubuque, Ia.

Wanted—The address of Roger Ronau; when last heard from was in Alexandria, Va. Address Bro. S. B. Morris, F. A. E. Div. 41.

Information is wanted of Geo. L. Weatherhead, who when last heard from was in Chicago, Ill. Address Mrs. A. E. Burton, 390 Pearl street, Buffalo, N. Y.

Information is wanted of Geo. J. Call, who when last heard from was running on Central Vermont R. R. Address Mrs. Anna M. Call, 771 E. Orange Grove avenue, Pasadena, Cal.

Information is wanted of Geo. A. Thompson; when last heard from was switching on the Belt Line of Chicago, Ill. Address his father, J. W. Thompson, member of Div. 448, Bluefield, W. Va.

Wanted—The address of J. P. Hays, formerly Howell, Ind., Chicago, Ill., St. Louis, Mo. Address Bro. G. L. Pepper, F. A. E. Div. 363, Somerset, Ky.

Will anyone knowing D. M. Doty, who lost an arm in Wyoming, and was later foreman U. P. Ry. at Columbus, Neb., please write to his wife, who has three children to support? Please address Mrs. D. M. Doty, 816 P street, Lincoln, Neb.

Information is wanted of the whereabouts of Bro. O. J. Lee, who when last heard from was in Santiago, Cuba. Address Chas. McCauley, F. A. E. Div. 134.

D. G. Huddleston, member of Lodge 206, B. of L. F., was killed on the Cotton Belt near Camden, Ark., in February, 1905. He had a suit-case containing clothing, papers, etc. His brother-in-law, member of B. of L. E. Div. 23, is very desirous of finding these personal effects. Will anyone know-

ing anything of them please write Bro. R. W. Butler, 347 La Clede avenue, Memphis, Tenn.

Members of the following Divisions will correspond with the F. A. E. of their Divisions immediately:

<i>Division—</i>	<i>Division—</i>
69—J. A. Campbell.	183—F. K. Chandler.
186—C. Grover.	254—A. P. Rogers.

OBITUARIES.

[In accordance with the action of the Ottawa Convention, no resolutions of condolence, obituary letters or poems will be published in the JOURNAL. All deaths will be listed under obituary heading only, with cause and date of death.]

Argenta, Ark., June 17, killed in wreck, Bro. Bernard Carroll, member of Div. 278.

Ashtabula, O., June 21, Bro. M. Cook, member of Div. 260.

Cincinnati, O., June 16, asthma and heart failure, Bro. Edward Wall, member of Div. 95.

Ennis, Tex., June 19, Bro. J. J. Reilly, member of Div. 242.

Seymour, Ind., June 24 consumption, Bro. Enoch Baughman, member of Div. 39.

E. Mauch Chunk, Pa., June 19, apoplexy, Bro. Hiram Bossert, member of Div. 257.

Atlanta, Ga., June 24, typhoid fever, Bro. D. M. Queen, member of Div. 207.

Syracuse, N. Y., June 21, apoplexy, Bro. A. Daily, member of Div. 169.

Winnipeg, Man., June 20, killed in wreck, Bro. John Perry, member of Div. 76.

Springfield, O., June 25, cirrhosis of the liver, Bro. Chas. N. Leitschuh, member of Div. 208.

Flint Mich., June 17, Bro. R. E. Haddon, member of Div. 33.

St. Louis, Mo., May 6, Bro. Wm. E. McElwaine, member of Div. 453.

Rockford, Ill., June 26, Bro. H. H. Broadie, member of Div. 96.

Marceline, Mo., June 29, scalded, Bro. C. F. Willis, member of Div. 396.

Clinton, Ill., June 28, killed in wreck, Bro. Henry A. Ball, member of Div. 315.

Toledo, O., June 19, dropsy, Bro. J. A. Routson, member of Div. 4.

Tierra Blanca, Vera Cruz, Mex., June 8, yellow fever, Bro. Chauncey E. Colton, member of Div. 587.

Pueblo, Colo., June 8, Bro. Wm. T. Ward, member of Div. 186.

Rock Island, Ill., June 24, killed in wreck, Bro. Phillip C. Barnhart, member of Div. 60.

Hagerstown, Md., June 17, killed in a collision, Bro. L. D. Rice, member of Div. 233.

Ellis, Kan., June 29, killed in wreck, Bro. J. H. Kinney, member of Div. 141.

Cleveland, O., June 29, injuries received in wreck, Bro. R. A. Baldwin, member of Div. 170.

Escanaba, Mich., July 4, killed in collision, Bro. John J. McCarthy, member of Div. 116.

Charlestown, Mass., July 5, killed, Bro. Chas. R. Kendall, member of Div. 61.

Proctor, Minn., June 21, killed in accident, Bro. T. E. Mitchell, member of Div. 566.

Jackson, Tenn., July 6, consumption, Bro. O. P. Chesabra, member of Div. 66.

Fitchburg, Mass., July 5, killed in a collision, Bro. Clifford A. Smith, member of Div. 191.

Houston, Tex., June 2, Bro. W. T. Miller, member of Div. 366.

Syracuse, N. Y., July 4, surgical operation, Bro. Cornelius Brown, member of Div. 169.

La Crosse, Wis., July 9, heart failure, Bro. Wm. Murphy, member of Div. 13.

Detroit, Mich., May 24, consumption, Mrs. T. P. Kingston, wife of Bro. Thos. P. Kingston, member of Div. 503.

Columbia, S. C., June 29, Bro. T. E. Kinard, member of Div. 498.

Easton, Pa., Feb. 26, Bro. Sylvester Fishbaugh, member of Div. 259.

Gainesville, Tex., July 3, apoplexy, Bro. Wm. Higgins, member of Div. 206.

Jeffersonville, Ind., July 15, Mr. J. C. Willeman, father of Bro. C. G. Willeman, member of Div. 463.

Cleveland, O., July 1, bladder trouble, Bro. Henry E. Graves, member of Div. 318.

Yardville, N. J., July 13, consumption, Bro. Wm. P. Smith, member of Div. 373.

Brooklyn, N. Y., July 16, cancer, Georgine Raudel Brown, wife of Bro. Alfred A. Brown, member of Div. 77.

Sheboygan, Wis., July 15, killed in wreck, Bro. A. Niederst, member of Div. 304.

Nashville, Tenn., July 16, Bro. Hill Harvey, member of Div. 473.

Elmira, N. Y., July 16, Bro. Thos. Reardon, member of Div. 41.

Atlanta, Ga., June 30, Bro. J. N. Anthony, member of Div. 207.

Sheffield Ala., July 13, Mrs. Datta Stafford Devaney, wife of Bro. J. P. Devaney, member of Div. 423.

Bathurst, N. B., July 10, Bro. Isalah Schofield, member of Div. 381.

Denver, Colo., July 17, paralysis, Bro. J. O. Finnell, member of Div. 186.

Houghton, Mich., Feb. 16, jumped from engine on account of misplaced switch, Bro. John W. Gribble, member of Div. 564.

Detroit, Mich., July 18, oedema of lungs, Bro. William Schauf, member of Div. 1.

Union Hill, N. J., July 11, paresis, Bro. Daniel Shelb, member of Div. 235.

Chicago, Ill., June 17, killed in wreck, Bro. Leonard Y. Smith, member of Div. 404. Brother Smith was born February 29, 1840; enlisted in the 8th Illinois Cavalry in 1861, and by energy and

bravery was promoted to lieutenant. He eventually entered railroad service which he followed for 38 years. He joined Div. 96 in the 60's and was delegate representing that Division at the convention held in Philadelphia, in 1873, and represented 95 at Louisville, in 1882, and Chicago, in 1887; became a charter member of Div. 404 and represented that Division at Denver, in 1889, Pittsburgh 1890, Atlanta, 1892, St. Paul, 1884, and Norfolk in 1902, and was honored with the position of Chief Engineer of his Division for ten consecutive years. He had seen and been a part of almost the whole life of the B. of L. E., a loyal, earnest worker, having the confidence of all who knew him and consequently one of the leaders in building our great Brotherhood, deserving the highest encomiums we can give. These architects of our great institution, a heritage to younger members, are responding to the last call, having been faithful in well doing, and in teaching the Golden Rule. This was not only what Brother Smith taught, but practiced. Regrets will be widely felt, and we will say, "Well done, good and faithful servant." Peace be unto our Brother. EDITOR.

 feiting insurance.

PREMIUMS FOR JOURNAL SUBSCRIPTIONS.

We have renewed our arrangement with the Webb C. Ball Watch Co., Cleveland, O., for an unlimited number of watches as premiums; watches that are guaranteed to be O. K. in every respect, and will be given as premiums under the following conditions:

LADIES' WATCH.—For 30 subscribers named and \$30.00, the Ladies' Queen Watch, 17 jewelled, 14 karat, gold filled case, retail price, \$20.00.

GENTLEMEN'S WATCH.—For 60 subscribers named and \$60.00, Gentlemen's B. of L. E. Standard, 17 jewelled, 14 karat, gold filled case, retail price, \$42.00.

19 AND 21 JEWELLED WATCH.—For 75 subscribers named and \$75.00, either the 19 or 21 jewelled watch, in 14 karat, gold filled case, retail price, \$50.00. All cases guaranteed for 25 years.

Mr. C. H. Salmons, Editor JOURNAL:

DEAR SIR AND BROTHER:—The 19-jewelled Webb C. Ball gentleman's watch has been received O.K. The case selected by you was perfectly satisfactory, as is the watch. I think some one in each Subdivision should work for one of these splendid premiums, as well as for the interest of the JOURNAL, and through it, the order. With many thanks for the watch, I remain
 Yours fraternally,

C. K. TALIAFERRO, C. E. Div. 595.

A large number of Brothers can obtain one of these excellent watches if they make an effort, and will help the JOURNAL as well as themselves. EDITOR.

If your JOURNAL address is not correct, or you fail from any cause to receive it, fill out this form properly, cut it out and send it to 307 SOCIETY FOR SAVINGS BLDG., CLEVELAND, O.

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION

Official Notice of Assessments 1018-1021.

SERIES F.

OFFICE OF ASSOCIATION, ROOM 803, SOCIETY FOR SAVINGS BUILDING, }
 CLEVELAND, OHIO, Aug. 1, 1905. }

To the Division Secretaries L. E. M. L. and A. I. A.:

DEAR SIRS AND BROS. :—You are hereby notified of the death or disability of the following members of the Association :

Four Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.25 from all who are insured for \$750. \$2.25 from all who are insured for \$1,500. \$4.25 from all who are insured for \$3,000. and \$6.25 from all members insured for \$4,500. and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25; page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries

located in Canada will please remit by draft or express money order. We will not accept packages of money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

An Open Letter to Railroad Men—Number 5

Going to Heaven

A man said to us the other day:

"You conduct your business and treat your customers as though you wanted to go to Heaven sometime!"

That was a compliment to our business integrity that we appreciate.

Telling the truth and being honest with our millions of customers has built up a business of unprecedented magnitude.

It has paid, both in pocket and in conscience, to be upright in our transactions with our fellow men.

To be cited as an example of the success of straightforward business methods is surely a greater honor than to be referred to merely as an example of magnitude in merchandising.

So, when this customer spoke about our "going to Heaven," we wondered if the integrity that has characterized our business career had ever been given definite thought by the public in general.

The house of Montgomery Ward & Co. is recognized as a "big" one. And it is.

Montgomery Ward & Co. desires also to be esteemed for its fairness, its square dealing and its truthful representation—as much as for its magnitude.

We believe that we represent every article we sell to be exactly as it is.

We go to any extreme necessary to learn the exact quality of everything we offer the public.

We make an analysis, where an analysis is possible or will help us determine the truth.

We want to know the truth ourselves, and then we want to tell it to you.

If any article you order of us is not just exactly as we have told you it was, we do not want you to keep it.

Send it back, and get your money back, and tell us where we were in error, and we will thank you for the information.

We might make an occasional extra sale, doubtless, by permitting exaggerations in our printed descriptions that would make the bargains **seem** better than they really are.

But that would be neither honest nor in accordance with our established business policy.

The customer, who buys once from an exaggerated description, is dissatisfied both with his purchase and the house that fooled him.

Permanent customers—like **ours**—are not made by misrepresentation or exaggeration.

It pays to tell the truth.

In brief, the man was right; we propose to transact business as though our going to Heaven depended upon our business policy towards our fellow men.

To take advantage of our bargains you must have our **Catalogue**, which illustrates and quotes lowest prices on 125,000 articles—everything you eat, wear or use. To obtain a copy, send us the following coupon filled in with your name and address.

SEPTEMBER, 1905.

NUMBER 9.

The Waterway to Riviere du Loup.

Having received an urgent invitation to attend the annual gathering of our Canadian Brothers, to be held in Riviere du Loup, P. Q., on July 4th, 5th and 6th, the Editor concluded to make it his summer vacation and, accompanied by his wife, joined the party composed of Grand Chief W. S. Stone and wife, F. G. E. Bro. W. B. Prenter and wife, daughter Lillian and her friend Miss Freye, and President Insurance Department Bro. W. E. Futch and wife.

We left Cleveland on the palatial steamer City of Cleveland, on the evening of June 30, reaching Buffalo at 6:30 A. M., and after a quick meal breakfast took the trolley cars to Niagara Falls, where we spent a few moments in contemplation of the world-famed falls reach-

ing from the shore of our great country to that of another, with its 15,000 tons of water per minute dropping into the abyss below, the light of the sun playing upon the mist forming a rainbow, one end touching the United States, the other Canada, linking the two continents with a bond of gold; and here, as elsewhere, one forgets that there is a dividing line between these two English-speaking races. But what is more wonderful is the thought of the ages these thousands of tons of water have been wearing away the great mass of rocks through which the channel is cut, that the falls, the mist, and the rainbow were here before Christ was crucified—yes, even when Adam came into the world, this wonderful phenomenon existed.

We took the Gorge Route down past the rapids and the whirlpool, where the water

RICHELIEU & ONTARIO NAVIGATION CO.'S STEAMER.

YACHT PASSING THROUGH LOST CHANNEL,
THOUSAND ISLANDS.

seems to turn back for a last angry look at the rocky obstructions, then passes on to Lake Ontario and the St. Lawrence.

As we arrived at Lewiston the Toronto steamer was making the wharf, having on board thousands of our Canadian cousins coming to the Falls and Buffalo on Dominion Day, which to Canadians is what the Fourth of July is to Americans. We boarded the steamer, and with the lake as placid as a pond, the trip to Toronto was delightful. At Toronto the people seemed to have turned out *en masse* in honor of the anniversary of the Canadian national existence under one government. They seemed to be going in every direction, and when we boarded the steamer bound for the St. Lawrence at 3 P. M., we found ourselves confronted with a problem for sleeping space, the whole capacity of the steamer having been previously engaged, but through the kindly efforts of the purser we were eventually comfortably cared for. In our rambles over the boat we discovered a number of members and their families headed for Riviere du Loup, which added much to the pleasure of our long water ride. The lake continued to behave admirably to the great satisfaction of all as we zigzagged down the lake, touching at Charlotte, near Rochester, N. Y., where we arrived at 9:15 P. M., and left at 11 P. M., the steamer taking on coal at this point. The direction then is across the lake to Kingston, Ont., which is reached at 6 o'clock A. M.

Kingston is the West Point of Canada, with its military college, its massive gray stone forts, its Martillo towers and imposing buildings. It is situated at the foot of Lake Ontario, at the head of the river St. Lawrence. Breakfast is served shortly after leaving Kingston and while at the tables we entered the Thousand Island scenery.

Rain during the night and a temperature warmer than the water created a fog, which interfered somewhat with an extended view as we entered the group of

islands, which later on became so dense as to necessitate a tie-up for a time, but a breeze and the sun breaking through the clouds soon dissipated most of the fog and we proceeded on our way. From Clayton the steamer coursed along the American channel to Round Island, an exceedingly pretty island, one mile by fourteen hundred feet, abounding with pretty cottages and beautiful grounds. Passing through a labyrinth of islands, the steamer stops at Frontenac, N. Y., and Thousand Island Park on Wellesley Island, an extensive summer resort, and home of the Thousand Island Yacht Club. The scenery from Thousand Island Park to Alexandria Bay is among the most beautiful of the trip, the steamer going zigzag between a great number of islands of various sizes and colorings, some low and wooded, others high and abrupt, some containing a modest home, others more pretentious, decorated with grand mansions and castle-like structures, such as Alster Castle, Hopewell Hall and Castle Rest, with fine dock and boats of various dimensions and designs, up to the fine steam yacht.

Alexandria Bay is the Saratoga of the St. Lawrence; the great hotel here will accommodate thousands. Nearly opposite Alexandria Bay is Westminster Park on Wellesley Island, the park grounds consisting of about two hundred acres of ground, rising to a mean elevation above the water of some forty feet, with heights reaching nearly 150 feet above the river. From these heights a grand view of the islands and river may be had.

Leaving here, the steamer heads for Brockville, passing many islands decked with pine and firs, and passing the Three Sisters standing out like pickets guarding the entrance to the archipelago.

From the entrance to the river at this point there are nearly 1,800 islands, and a good sized steamer may travel fifty miles between these islands without following the same channel twice.

FIDDLER'S ELBOW, THOUSAND ISLANDS.

Brockville is a picturesque town of about ten thousand inhabitants, named after General Brock, who was Lieutenant Governor of Upper Canada, and in command of the English troops at the capture of Detroit from General Hull in 1816 and the same year was killed at the battle of Queenstown, Queenstown Heights, near Lewiston, on October 13th.

Our next stop is Prescott, named after General Prescott, nearly opposite Ogdensburg. The town is small, but they have their Fort Wellington, named after the Iron Duke, the tomb of Barbara Hick, one of the founders of Methodism in America, and the famous windmill that figured in the insurrection of 1838 as the stronghold of the patriots under the unfortunate Van Schultze who, with nine others, was executed at Fort Henry. The windmill is now used as a lighthouse.

but we soon came to the Long Sault Rapids, the first one of the really remarkable rapids of the St. Lawrence. Here, for a distance of nine miles, the blue waters of the river break into whitecaps, and as far as the eye can reach these foaming billows may be seen, and the steamer is rocked as though on the waves of a tossing sea. The river is divided into two channels by numerous wooded islands, and the narrowed channels and the descent, increase the current, and the boat with little steam darting past jutting headlands and in close proximity to great rocks, together with the roar of the surging waters and spray that frequently dashes over the vessel, makes shooting the rapids an exciting experience. Navigation of the Long Sault requires nerve and skill in those who manage the boat, and, as a precaution, four men are

SHOOTING THE LACHINE RAPIDS.

A number of Frenchmen boarded the steamer at Prescott, possibly college students or some glee club. At all events they were not only excellent singers, but loved singing, much to the delight of the great number of passengers aboard.

Here we change from the lake steamer to the river steamer, Brockville, with lighter draft, to run the rapids. Soon after leaving Prescott we pass through the first of the troubled waters of the St. Lawrence, called the Gallops, small waves indicating that there was something in the bed of the river to disturb its even flow, just an evidence that we were entering a field of turbid waters, and a little farther on, we come to the rapids Du Plat, where the whole expanse of the river is covered with small whitecaps, which do not disturb the steamer;

kept at the wheel to insure safety. The first passage of these rapids by steamer was made about 1840 under the pilotage of an Indian named Terorhiahere.

After passing the rapids we come to the Indian village of St. Regis. Interest here centers in its church and in its bell, which is connected with a historic incident of Indian revenge in early history. An English cruiser is said to have captured the bell, taking it to Salem, Mass., where it was sold to the church at Deerfield. The St. Regis Indians, hearing of the capture and disposition of their bell, proceeded stealthily to Deerfield, attacked the town, massacred forty-seven of the inhabitants, and brought one hundred and twelve captives and the bell back with them, and the bell now hangs in St. Regis church.

Cornwall is nearly opposite, and just

below this point the St. Lawrence expands into what is called Lake St. Francis, a broad expanse of water with beautiful shores, and in the distance may be seen Chateauguay Range, a spur of the Adirondacks. At the lower end of the lake the steamer makes a landing at the long wooden pier of Coteau du Lac, a little French town with a great stone church and gleaming spire which may be seen many miles away, an evidence that we are in French Canada. At Coteau we found a large number at the pier, evidently bound for Montreal, and our glee club sang a French national air, and to our delight some 20 or 30 of those on the pier joined in the singing, and then sang one of their own selection, which proved to be a grand treat. They were apparently some society on an outing.

more danger in passing the great boulders which, like sentinels, guard the entrance to it. Then come the Cascades, noted for their white-crested waves. This group of four rapids have a descent of 82½ feet and extend in all about eleven miles. Below the Cascades the river expands into Lake St. Louis, and at the head one of the branches of the Ottawa River enters into it, and the brown waters of the Ottawa may be distinctly seen for a long way.

After issuing from the lake we pass the town of Lachine, nine miles from Montreal. Above this for each rapids a canal has been provided for the western trip, and here begins the famous Lachine Canal, built to overcome the descent of the rapids. The canal is lighted by electricity its whole length for the benefit of

THE STEAMER FROM MONTREAL TO QUEBEC.

Leaving Coteau we pass under the great iron bridge of the Canada Atlantic Ry., nearly a mile and one-half long, and in a few moments we are at the Coteau Rapids, about a mile long, with a very swift current and innumerable whitecaps. Here a detachment of men sent to Montreal by boat by General Amherst in 1759 was lost. About seven miles farther down we enter the Cedar Rapids. These rapids are very turbulent, and ugly-looking rocks seem to threaten our safety, but the steamer settles and rises with the force of the dashing waters and emerges in safety, a very exciting experience, though of short duration; but we are only safely out of this rapids when we enter what is called Split Rock Rapids, another of a similar nature, only there is presumably

the shipping. Just below Lachine we pass under the iron bridge of the Canadian Pacific Railway, and we soon enter the Lachine Rapids, the greatest and most turbulent rapids of the St. Lawrence. Here the river runs through a narrow, foaming channel between two long ridges of rock, over which the water tumbles with a never ceasing suggestion of danger. The boat plunges into this mass of breakers, and to the passenger seems to be heading for a great shelving of rocks, but through the great waves and whirlpools formed by the rock obstructions the pilot deftly guides the steamer, sometimes seemingly near enough to some great rock to step from the boat to its surface, but the steamer goes on its tortuous course, midst

the rock and surging waters and we soon ride into the placid waters below, and Mount Royal, Montreal's mountain, long visible, now stands far above us at our left, and as we pass the wooded shores of Nun's Island the famous Victoria Jubilee bridge comes in view, and we soon pass beneath it and swing to the left in full view of Montreal, the largest city in Canada, situated on an island in the St. Lawrence, population 300,000. The city is built on the site of the ancient Indian village of Hochelagc visited by Jacques Cartier in 1535. It was the last section of French Canada to pass into the possession of Great Britain in 1763. Montreal is the head of ocean navigation, and a central point for the Intercolonial, Grand Trunk and Canadian Pacific Railroads.

We transfer to the steamer Montreal for Quebec at 7:30, the largest and finest steamer of the Richelieu & Ontario Company's lines. As we leave port, we get another view of the great Victoria Jubilee bridge, with its 24 piers, 23 having 242 feet span, the center 330 feet. This bridge was built in 1898 to replace the old Victoria bridge, and was constructed without interfering with traffic. It is a mile and a quarter in length, and has a width of 65 feet, space and strength sufficient for a double track steam railroad, electric tracks, and a broad roadway.

The lateness of the hour soon obscured the shores of the St. Lawrence, and we retired to get needed rest, expecting we would be in Quebec at 6:30 A. M., but an intense fog caused the captain to tie up at Three Rivers for about five hours. This gave us about four hours' view of the beautiful scenery, the quaint old towns and numerous churches in French Canada. After passing the Jacques Cartier River the river banks begin to rise, presenting a more bold and picturesque appearance as we near Quebec, culminating in the altitude of the famous Citadel of Quebec, the grand gateway of the St. Lawrence.

Brother Prenter, in taking a walk on the upper deck, fell in with the captain of the steamer, whom he immediately recognized as Captain La France, an old acquaintance, and from thence to Quebec the captain not only proved a very companionable gentleman but an excellent guide, pointing out many things of interest to us. He was introduced to all our

party, and Miss Lillian Prenter watched her opportunity with her kodak, and while the Grand Chief, Brother Prenter and the writer were talking to the captain, she obtained the accompanying picture, very excellent for a snapshot.

At 11 A. M. the steamer headed in at the dock at Quebec, eight hundred miles from Toronto by water, a trip delightful because of the splendid service, the beautiful and historic scenery and above all the general courtesy of all, especially Captain La France, who shook our hands and bid us a pleasant journey as we landed and made our way to the dark, dingy elevator or incline, with hydraulic hoist, which seems to have the hysterics because it had something to do, and somewhat at the expense of the nerves of the ladies,

On board the Montreal. G. C. E. W. S. STONE. CAPT. LA FRANCE. C. H. SALMONS. W. B. PRENTER.

but after jerking itself together moved on and landed us above the walls at Chateau Frontenac, owned by the Canadian Pacific Ry., where a scene presents itself that can be duplicated in few places on the American continent.

Like the rock of Gibraltar, the rocks of Quebec bristle with engines of war, and on the opposite bank of the river are forts ready to challenge any foreign invader. As we look out from Dufferin Terrace, across the river lies the odd looking old-fashioned town of Point Levis. A little to the east is the beautiful green Island of Orleans, and to the left is seen the broad beautiful fertile valley of the St. Charles River, dotted with villages,

VIEW OF THE CITADEL, QUEBEC.

church spires, and the small white houses of the French farmer, and the St. Charles River winding its way to the St. Lawrence, while in the distance the Laurentian Mountains tower skyward; the whole one of the greatest scope and beauty it has ever been our pleasure to witness.

Quebec is not only among the oldest but is one of the most interesting cities in America, and is often called "a bit of the Old World set down in the New." Its location was visited by Cartier in 1535, and soon after was made a trading station, but was founded by Champlain in 1608, when a struggle began to gain a permanent residence for white men among the savage Indians. Eventually it became the capital of royal government established in New France in 1663, and the French held possession until the Battle of the Plains of Abraham in 1759, when the English,

under command of General Wolfe, defeated the French army under Montcalm, both generals losing their lives in the famous contest. This battle and defeat of the French forces led to the Treaty of Paris in 1763, when the whole country became British, with Quebec as its first capital, and everywhere the visitor is shown monuments and buildings associated with Quebec's eventful history, and if one is shown about by a French guide, there is likely to be something pathetic in his narration of what is and what has been, for the name of the fatherland is still very much to the French Canadian.

The Citadel, the central figure of Quebec, covers forty acres, strongly fortified, and continuously occupied by troops, the guards always at their posts, as though still watching for the approach of some enemy. The drill of the troops and the music of the Regimental Band make it of great interest to the people of Quebec and particularly so to the tourists.

Not arriving until nearly noon, our time for observation was short, and we made the most of it by the use of conveyances. The caleche, a conveyance peculiar to Quebec, was plentifully in evidence, but we preferred what we were more used to, the carriage.

From Place D'Armes, across the street from Hotel Frontenac, we are shown the Wolfe-Montcalm Monument, the building in which Montcalm died from his wounds, and along an inner wall with many gates, originally named, but now

CHATEAU FRONTENAC AND THE ELEVATOR, QUEBEC.

THE CALECHE, QUEBEC.

mostly walled up, to the Citadel, where we were very courteously received, and a non-commissioned officer assigned us a guide.

The view from the ramparts, the highest point of Quebec, is grand; great guns, mortars, and piles of shell and solid shot are abundantly in evidence. Leaving the Citadel, we are driven to St. Louis street (Grande Allee), past the Cavalry School, and Garrison Club, through St. Louis Gate (seen on cover), view the Parliament buildings just beyond, and on out to the Plains of Abraham and the Wolfe Monument, placed on the spot where he is said to have expired. From here we turn back by the Protestant Home, Episcopal Orphans' Asylum, and to De Salaberry street, passing the St. Bridget's Asylum, to St. John street, St. Jean

Baptiste Church (R. C.), St. Matthew's English Church, down St. Augustine street to Patronage Cliff, where we had a splendid view of the lower part of the city, which lies between the bluffs and the St. Charles River. From this viewpoint we could see the Hospital of the Sacred Heart, St. Peter's Market, the General Hospital, Marine Hospital, Canadian Pacific ships and railroad station, and numerous churches and schools; while in the grounds immediately before us was a church, Jeffery Hall Hospital, Orphans' Home, and the Grey Sisters' Asylum, composed of one very large building and two smaller ones. We were then taken through St. John's Gate, and made a stop at the French Cathedral, said to be the oldest church in Canada. The record says it was built in 1647, destroyed by fire during the siege of Quebec in 1759, was rebuilt on the same walls, and on August 28, 1874, Pope Pius IX. raised it to the dignity of minor basilica. This church contains a wonderful collection of religious relics and pictures with titles of The Holy Family, Our Saviour Insulted by the Soldiers, Birth of Christ, The Flight of Joseph into Egypt, Our Saviour Attended by Angels after the Temptation in the Desert, The Immaculate Conception, St. Paul's Ecstasy, Virgin of Rosary, Miracles of St. Ann, Saviour on the Cross, The Pentecost, The Annunciation, The Agony of Our Lord in the Garden of Olives, The Apparition of the Sacred Heart to Blessed Margaret Mary, The Saviour's Sepulchre and Interment.

QUEBEC AS SEEN FROM POINT LEVIS, PROVINCE QUEBEC.

COTE D'ABRAHAM, QUEBEC.

The Baptism of Christ, Lady of Pity, St. Joseph's Death (two pictures), Vision of St. Anthony of Padua, and fourteen small paintings relating to the life of Christ, and with the altars and other decorations, one could spend hours in their study; beside these, on application to the sexton, strangers may see the large collection of ornaments in gold and brocade, consisting of a silver and gold set of 29 pieces, 1850; purple set, 26 pieces, 1850; black set, 20 pieces, 1869, and an older set more than two hundred years old, a gift of King Louis XIV., contains 22 pieces, all of French make.

Associated with this church in the same inclosure, is Laval University and Seminary. We swung around this to the ramparts and climb the hill to our starting point, having had an excellent survey of this quaint old city, with its numerous narrow, tortuous streets, many of which are so steep that they would seem almost impassable by any sort of conveyance, its reminiscent buildings, Grand Allee, and beautiful residences. It is but a glimpse, but we must be content with it, as we are due to leave Quebec at 6:20 P. M. for Riviere du Loup.

We are set down at a restaurant with a sign which indicated that the language used was English, and our carriages were dismissed. We got very good service but very bad English, and some difficulties in making them understand our wants, but we were all well pleased with our stay in this "bit of the Old World set down in the New."

We present herewith some views of Riviere du Loup and vicinity. For description see Union Meeting in Editorial Department, this issue. THE EDITOR.

Courtship by Proxy.

I was sitting one summer evening at the open window of my snug bachelor apartments on Kay Street, reflectively smoking my postprandial Partaga, and wondering whether I would not be about as comfortable during the next two months in the city as out of it, when the door was flung open, and Tom Kiddoo burst in, in a state of mingled excitement and dejection.

"My dear fellow," I said, knocking the ashes from my cigar, "what is the matter with you?"

"Matter enough," he said, flinging himself into a chair. "Did you ever have any money left to you?"

"Alas, no! I never did," I replied, with a sigh.

"Then you don't know what it is to fall heir to a lot of property only on condition that you marry somebody you don't like, when you are madly in love with somebody else, and your governor is insisting on your tying yourself for life to the woman you don't want, and having nothing whatever to do with the woman you do want."

I swung around in my chair and looked

RUE SOUS LE CAP, QUEBEC.

at him. "This is very interesting," I said. "You don't mean that you are in a scrape of that kind?"

"Yes, I do. The whole thing is just this. When I was a boy, my uncle Oliver died, and meanly taking advantage of my youth and helplessness, left his whole fortune to my cousin, Rebecca Mudge—(think of that for a name!)—and me, on condition that we marry each other. If we don't, the money is to go to some charitable institution. Mudge lives with her family at Oldport, and her governor is as eager for the match as my governor. Now, my governor has taken it into his head that we are old enough to consummate the infernal compact, and as he is pretty hard pressed just now for money, he in-

"Perhaps you would learn to love her even better than the angel."

"Great heavens! You don't know what you are talking about," exclaimed Tom, jumping up and commencing to pace the floor.

"Then think of the fortune."

"What do you take me for?" exclaimed Tom excitedly. "Am I a man to sell my soul for filthy lucre?"

"Does your angel reciprocate your passion?"

"I don't know. I've never asked her. With this odious will hanging over me how could I? If I had told her the facts she would have refused me instantly, out of pure generosity."

"Then, my dear fellow," I said, laugh-

VIEW OF RIVIERE DU LOUP, PROVINCE QUEBEC.

sists on my going down to Oldport day after tomorrow, getting acquainted with Mudge and arranging the preliminaries for our marriage in the fall."

"Well," said I, "what possible objection can you have to doing it?"

"The greatest of all objections," he replied, excitedly. "I love another—an angel who left a vacant place in heaven when she was born on earth—and I cannot leave her. When I am here, I can see my darling almost daily. If I am compelled to go to Oldport the separation would kill me in a week."

"Have you ever seen—Mudge?"

"Never in my life."

ing, "there's only one course to adopt, and that is to brave your father's displeasure and refuse to carry out the compact."

"I don't dare to," he said gloomily. "The governor would turn me out of the house. I am deeply in debt and have already exceeded my allowance. I can't brave the governor at this time. I must have a chance to turn about first."

"I don't see that I can help you then," I said.

"Yes, you can," he replied, quickly. "That's just what I came here for. I've got a plan that will work to a charm, and will give me a good three months' delay,

FRASERVILLE, FROM THE WHARF.

and save me a long separation from my darling into the bargain."

I looked at him inquiringly, and he proceeded with great eagerness.

"Look here! I never saw Mudge or a single individual of the Oldport family in my life. They wouldn't know me from a hill of beans. I will stay here in town and keep out of the governor's way, while you go down to Oldport and introduce yourself as Mr. Tom Kiddoo."

"You are mad!"

"Nothing could be easier," continued Tom; "and it would help me out wonderfully. You could make love to Mudge for a couple of months or so, and in the meantime I could arrange matters here; then, when all was ready, I could announce my resolution to the governor and go to my dear girl with my heart in my hand, telling her of the sacrifice I had

made, and ask for hers in return."

"And I could go to jail!" I said.

"Nonsense! You wouldn't do anything of the kind; and, besides being a lasting favor to me it would be a splendid lark for you."

I reflected. As Tom said, it would be a beautiful lark. Perhaps Rebecca Mudge was an angel, too. It could do no great harm, for she had never seen Tom, and, of course, had formed no attachment for him. As for me, it was possible that she had as strong an aversion to the match as Tom had, and would therefore naturally detest me, so there would be no danger of a broken heart, no matter how violent my love-making might be. Under such circumstances I had no compunctions in acting upon Tom's idea.

"I'll do it," I said, after a pause. Tom grasped my hand with the greatest fervor.

"I knew you would, old man," he said, "I knew you would. God bless you! And if you can only behave down there so as to make the whole family hate the sight of you, the thing will be brought about so much easier."

We settled the details next day. Tom procured me a letter of introduction from his father to Mr. Jonas Mudge. He also gave me a pack of his visiting cards, some stationery with his monogram, and a seal ring with his initials, T. K., on the stone. I had his name painted on the end of my trunk, and carefully discarded everything that could possibly lead to my identification. Tom then took an affectionate farewell of his father and went to a boarding-house three blocks distant, assuming my

TADOUSAC AND BAY OF THE SAME NAME AT THE MOUTH OF THE SAGUENAY RIVER, P. Q.

own name of Ned Rushmore for the occasion, while I embarked on the 5 P. M. boat for Oldport, not without some misgivings as to the result.

I reached the Mudge mansion about breakfast time next morning, and was warmly welcomed by the entire family.

"I'm glad to see you, my boy," said the paternal Mudge, shaking me cordially by the hand. "My stars! How much you do look like your father!"

I found Miss Rebecca Mudge to be a young lady of about twenty—a listless, washed-out blonde, with a face betokening amiability without character; a docile enough person, but one in regard to whom it would be difficult to feel any sort of interest whatever. She regarded me with perfect indifference, apparently ac-

been brought to a sudden conclusion by an occurrence that had never once entered into my calculations.

One morning about three weeks after my arrival, Miss Mudge came into the breakfast room where I sat reading the paper.

"Who do you think is coming, Mr. Kiddoo?" she said, smiling. "An old and very dear friend of yours. Now guess who it is."

My cheeks blanched; my knees smote together; the paper fell from my grasp, and I really believe my heart stopped beating.

"I—I can't," I gasped, feebly.

"Hilda Duryea," she exclaimed, triumphantly holding up a letter before me.

I was on the point of saying, 'And

SPORTSMAN'S CAMP, TEMISCOUATA LAKE, TEMISCOUATA RAILWAY, P. Q., WHERE PICNIC WAS HELD.

cepting her marriage to Mr. Tom Kiddoo as one of the foregone conclusions of her colorless life. Nevertheless, I found her companionable enough, and I soon installed myself in her father's good graces by paying her every attention consistent with my assumed character. This was not difficult, for she was by no means bad looking, and dressed well; so that I had no aversion to driving her about Oldport, to strolling with her on moonlight evenings, or to mingling freely as her attendant, with her little circle of society. In fact, I might, perhaps, have ended by actually becoming interested in her, had she shown the slightest spark of interest in me, and had not the "beautiful lark"

who the deuce is Hilda Duryea?" but recollected myself, and faintly ejaculated, "You don't say so!"

"Yes, indeed. She'll be here early tomorrow morning, on the New York boat, and is going to stay all the rest of the summer. Oh, won't we have a splendid time!"

"Yes, no doubt," I replied.

"Why, you don't seem pleased a bit," said Rebecca, returning the letter to the envelope.

"Oh, yes, I am," I returned, jumping up. "I'm tickled half to death. We'll have lots of fun—lots of—fun. I'm quite too awfully delighted!"

Miss Mudge looked at me somewhat

doubtfully. My face must have been a perfect picture of despair, but I capered about the room in a ghastly attempt to express my rapture. Her mother called her, however, before she had a chance to inflict any fresh torture, and I rushed out doors to think it over.

There was little use in thinking of the matter, for, of course, my only chance of safety was in immediate flight. The only thing to consider was how to accomplish this with the least ignominy. Whatever excuse I might make for a sudden departure would be immediately connected by the family with the visit of Miss Duryea. I would be questioned about it, which would be unpleasant, and the plot might

the family should have retired to bed.

At the supper table that evening, Rebecca, whose head had been full of her expected visitor all day, suddenly exclaimed:

"Mr. Kiddoo, I've a splendid idea. The New York boat will be in about three o'clock in the morning, you know. What do you say to getting up early and driving with me down to the wharf to meet her? Wouldn't it be jolly!"

I was about to exhibit some extravagant demonstrations of delight when there was a sound of wheels without, the quick bang of a carriage door, and a brisk ring of the bell. Rebecca jumped up from the table; the entire Mudge family rose to their

MISSOURI PACIFIC TRAIN NO. 1, LEAVING JEFFERSON CITY. BRO. P. SMITH, DIV. 48. AT THE THROTTLE. THE CAPITOL OF MISSOURI AND THE MISSOURI RIVER IN THE DISTANCE.—Bro. Wallace Yost, Div. 178, Phot.

be discovered, or at least suspected, before I could make myself scarce. The only alternative that seemed open to me was to fly by night. This would not be difficult. The room which I occupied was a front one, facing the street. The windows opened upon the roof of a piazza, and escape to the ground with the aid of the vines and the darkness would be easy. It would be a miserable, contemptible ending of my "lark," but I had no desire to view the interior of Oldport jail. Having arrived at this conclusion, I packed my carpet-bag and prepared for a surreptitious departure just as soon as

feet; there was a chatter of voices in the hall, the door of the supper room was thrown quickly open, and on the threshold appeared, flushed, laughing and dimpled, the most beautiful thing I had ever beheld in my life.

"Hilda!" exclaimed Rebecca, springing forward, and in an instant there was a babel of voices, in which, in my dazed and collapsed condition, I could only distinguish "darling," "you dear girl," "surprise," "came by day train," "so glad," etc., etc. I looked about for a chance to escape, but the excited group blocked up the doorway. A chill of hor-

ror such as I shall never forget to my dying day, froze my blood as Rebecca Mudge turned around and said:

"But here is some one that you didn't expect to see. I believe, Hilda, that you and Mr. Tom Kiddoo are old friends."

I smiled a ghastly smile and held out my hand.

"A pleasant surprise, indeed," I said.

The beautiful brown eyes opened to their widest extent, and a startled look came into them as they met mine. I gave myself up for lost, and darted toward her a look of imploring helplessness. She looked at me earnestly for an instant, with the slightest possible shrink-

When I retired to my chamber that night I unpacked my bag, and resolved to remain in the house at all hazards until I could see Miss Duryea alone. I passed a sleepless night, and descended the stairs next morning, haggard, feverish, and utterly dejected and miserable. My good star was in the ascendant, however, for Miss Duryea was on the front piazza and alone. I sought her side immediately, thinking, as I approached her, what a lovely picture she made in her white muslin dress, and with her luxuriant hair braided in two simple braids that fell below her waist. Framed as she was in a circle of climbing vines, she was a study for the best of *genre* painters. As she saw

ing back, as though trying to comprehend the mystery. Then with a face which all the color had suddenly left, she placed a trembling hand in mine, and instantly withdrew it.

I could have fallen down upon my knees and worshiped her. Contemptible impostor that I was, and as she knew me to be, she yet was merciful enough to refrain from denouncing me without an opportunity for explanation. Few women could have resisted such a natural impulse, and from that moment I was her slave.

me she turned her back towards me, but I would not be rebuffed.

"I know not how to thank you, Miss Duryea," I said humbly, "for your consideration to me last night. I had no right to expect anything but the shame of exposure, and I am very grateful."

She turned her dark eyes full upon me with a scornful curl of the lips, but made no answer.

"Whatever you think of me," I continued, "I am neither a thief nor a villain. I can scarcely expect you to believe me, but I am most painfully situated. I ad-

mit that I am an impostor, but I am not a scoundrel."

"Then why are you here," she said, "under a name that is not your own? What end had you in view? Who are you?"

"A fool," I replied, "who to oblige a friend has placed himself in a most ridiculous position." And then I unburdened to her the whole story, revealing my name; Tom Kiddoo's infatuation with the young lady in New York; his repugnance to the proposed marriage with Rebecca, his request for me to personate him for a time, and my good-natured compliance. I ended by expressing my contrition for the course I had taken, and im-

and a mind quite dazed with her beauty and her manner. For as I stood before her I had had an opportunity of watching every expression of her mobile features. I had gazed into the depths of her lovely brown eyes; I had seen the tremor of her red lips and the faint shadows of the smiles that suggested themselves about the sensitive mouth. I had watched the dimples spring into her cheeks and the merry light come into her eyes, and I had seen her color come and go, and her whole face relapse into thoughtfulness when I implored her to keep my secret. I was lost, and I knew it. In those few moments she had woven about me a spell more potent than that invoked by conjurer, and as I watched

EXCURSION OF ATTENDANTS AT THE BIRMINGHAM MEETING,

June 22, at the Penn Coal & Iron Co.'s Plant, L. & N. Ry.—Courtesy Bro. J. S. May.

ploring her in extravagant terms, for Tom's sake, for my sake, for the sake of her own summer's pleasure, to keep my secret and to treat me as Kiddoo.

She regarded me intently during my narrative, and her mouth showed a slight tendency to smile as I came to the end. Her face became grave for a moment when I ceased, and she said, at last, quietly:

"I will not betray your confidence, sir, unless you prove unworthy of mine."

She turned away and entered the house, leaving me standing among the vines, gazing after her with a grateful heart,

her retreating figure, with the soft tones of her voice still ringing in my ears, I knew that I was in love and beyond the reach of all argument or reason.

In the weeks that followed I scarcely knew whether to consider myself happy or wretched. I was happy in being with her, in listening to her, in gazing at her whenever I could do so unobservedly.

I was wretched when I thought of the contemptible light in which I must appear in her eyes, and of the necessity of playing out the miserable comedy to the end. And what the end would be I could not conceive, except that whatever it was,

it could scarcely fail to be productive of wretchedness for me. I did not obtrude myself upon her society, but there were many times when, together with Rebecca, I was unavoidably with her for hours at a time. She always treated me politely, sometimes turned and addressed herself to me with the most perfect familiarity and frankness; but I realized that at these times I was, to her, Tom Kiddoo, and not my proper self. On several occasions, on looking suddenly up, I detected her eyes fixed stealthily upon me and regarding me with a look of intense interest. Then she would turn quickly away with a blush of confusion, and I would hang my head and feel, if possible, more contemptible than before.

cliffs overlooking the sea. It was near the close of a lovely day. The long, level line of the sleepy blue water was broken only here and there by a loitering sail; the surf broke against the foot of the rocks lazily, and the idle breeze was warm to my face as I sauntered along the unfrequented path. In a sunny nook in the rocks I came unexpectedly upon Miss Duryea with a book in her lap which she was not reading, but was apparently only musing over. I hesitated and was about to turn back, when she exclaimed:

"Oh, Mr. Rushmore, is it you?"

"I—I did not expect to meet you here," I said. "I supposed you were at home."

"Rebecca and I started together to come here," she replied, "but she was seized

GROUP OF ATTENDANTS, BIRMINGHAM MEETING, AT LUNCHEON AT READERS, L. & N. RY.

This could not go on forever, for I was going mad. I had letters from Tom only at rare intervals. They were generally despondent, and I assumed from their tone either that his *inamorata* had rejected him, or that he was not getting rid of his debts. The summer waned. Rebecca's father began to hint about the wedding outfit, and Miss Duryea began to talk of going home. It was plain that matters had about reached a crisis, and that the farce could not be carried on much longer.

One afternoon, to get rid for an hour of the racking perplexity of brain which was constant with me when these two women were near, I went for a stroll along the

with a headache and went back. Isn't it a beautiful spot?"

She made room for me on the rock beside her, and I took the seat with a feeling of happiness that I cannot describe.

"Why are you afraid of me?" she asked. "There should be some friendship between rogues. I have helped you to carry out your imposition, and so I am just as bad as you."

"I'm not afraid of you," I answered, "but I am ashamed of myself, and feel that you despise me."

"But I don't despise you."

"You do—you must!" I persisted. "You may not admit it, even to yourself, but no woman can regard a man whom

she knows as an actor, a fraud, a lie, otherwise than with a feeling of contempt."

She pushed a little stone away with her foot, and waited until it struck the water below before she replied, softly:

"You don't know how I regard you."

There was something in her voice that made me look at her quickly, and caused my pulse to beat faster. The tone in which she spoke seemed to hint that her feeling towards me was one very different from contempt or aversion.

"I would give all I possess," I exclaimed fervently, "to earn your respect and good opinion. The belief that I had lost it has caused me a summer more full of bitterness than I can ever tell."

Her eyes fell, and she began to nervous-

THE PIPER THAT PLAYED BEFORE MOSERS, MEMBER DIV. 278, ARGENTA, ARK.

—Courtesy E. H. B.

ly tug at the roots of grass that covered the rocks at her side.

"Why?" she asked simply.

"Because I love you!"

It was out now. I had made the plunge and nerved myself for the worst. As I spoke I seized her hand. It trembled slightly in my own, but she did not withdraw it, and sat with her face averted, idly pushing at the loose gravel with the point of her parasol. Another pebble was pushed to the edge and fell into the sea, and another, and yet another. Still she made me no reply, and I held her hand with fast beating heart, and waited.

"Hilda," I said, "will you be my wife?"

Suddenly she turned to me, and a light came into her beautiful eyes which I had never seen there before. Both her hands sought mine, and her head nestled upon my breast.

But if the reader thinks I am going to let him into the secrets of the half hour that followed, he is mistaken.

The sun was sinking in the west before we arose to go. As we took the path homeward, arm in arm, Hilda said:

"But, Ned, how can you arrange matters with Tom and Rebecca?"

"I don't know," I replied. "I have done for Tom all I agreed to do. When I get back to New York he must arrange affairs with Rebecca and his angel to suit himself."

She looked up at me demurely.

"I am afraid I am his angel," she said softly.

I stopped in the path and gazed at her in astonishment. "You!" I exclaimed.

"Yes. I came down here to get rid of him, and—to worry you."

"Then you knew—" I began.

"Yes," she said. "Tom told me the whole story before I came. I didn't want to undergo the pain of a proposal from him, and I thought I could have some good fun coming down here and plaguing you. I—I told you I was as great a rogue as you were, but—I didn't expect to fall in love with you."

The reply I could make was a long whistle.

"But your astonishment when you first met me," I said at last; "your changing color, your—"

"I was excited," she replied, "and you were too frightened to be able to read my thoughts."

I had evidently put my foot in Tom's kettle deeper than I had supposed. However, I was satisfied if Tom was. That night I wrote him a long letter, and the next morning but one I found him awaiting me in the parlor. He was raging about the room, and held my letter in his hand.

"What does this mean?" he asked, as soon as he could find utterance.

"My dear Tom," I said, "calm yourself. I couldn't help it. I didn't know you had a claim upon her until two days ago, and, besides, she would have refused you anyhow, for she ran away to avoid you."

"If I had known where she was, I would have followed her," he said, hoarsely.

"That was why she concealed her address from you. Then you would have spoiled your chances with Rebecca. Now you can step into my place, marry Rebecca, who is apparently indifferent as to whom she has for a husband, and receive your uncle's legacy. Come, Tom, it's not

so bad. Make the best of it, my boy." As there seemed no help for it, he wisely concluded, after considerable argument, to adopt my advice. We called in Rebecca and her parents, and explained the entire matter to them, and Hilda besought their forgiveness for her sake. The old gentleman seemed to regard the affair as a rather good joke, and Rebecca readily agreed to install Tom in my place in her affections. When matters had been thus satisfactorily arranged, I restored to Tom his personal property, and tucking Hilda under my arm took the first train to New York. Hilda and I are married now, and so is Tom; but though he is very happy, he still declares that if he were to

He had time to see the beauty
That the Lord spread all around,
He had time to hear the music
In the shells the children found;
He had time to say to others,
As he bravely worked away:
"It is splendid to be living
In the splendid world today!"
But the crowds—the crowds that hurry
After golden prizes—said
That he never had succeeded,
When the clouds lay o'er his head—
He had dreamed—"He was a failure," they com-
passionately sighed,
For the man had little money in his pockets when
he died.

live his life over again he would not do his courtship by proxy.—*Frank Leslie's.*

The Man Who Won.

He kept his soul unspotted
As he went upon his way,
And he tried to do some service
For God's people day by day;
He had time to cheer the doubter
Who complained that hope was dead;
He had time to help the cripple
When the way was rough ahead.
He had time to guard the orphan, and, one day,
well satisfied
With the talents God had given him he closed
his eyes and died,

A Heroine's Reward.

Nannie Gibson, a little mountain maid of North Carolina, fourteen years old, the heroine, lived in a rough mountain hut with her father in care of her younger brothers and sisters. It is a wild, stupendous region, with the Black Mountain range rising high on every side. A river rushing like a torrent through the gorge below spreads away in soft silver loveliness as it reaches the plateau in the wilderness.

Nannie's mother had died but a few weeks before, and being the oldest, she became the "Little Woman" of the

household. She was at work about the house cooking and caring for the children when suddenly the mountain trembled and with the roar and crash of a cyclone an immense slab of the mountain fell upon the main track of the Southern Railway.

It was a situation to appall any one but the little heroine with good cool blood in her veins. She recovered her wits instantly and became mistress of the situation. Seizing a red tablecloth she told her sister Patty, a little tot of 9 years old, to run for her life down the track and flag trains coming from below.

Then turning household affairs over to little Julia, a 6-year-old mountain kid, she ran like a deer up the track, where she knew a train would soon be coming down the mountain. She had no red tablecloth, but she switched off her red petticoat as the roar of the train was heard approaching, and waved it frantically as the big locomotive thundered down the mountain.

The engineer, presuming that something was wrong, sanded the rail and applied the airbrakes and the grinding machine came along in a cloud of steam and with fire streaming from every wheel. The heavy train finally came to a stop not ten feet from the big rocks of the mountain avalanche. It was in that part of the canyon where the road runs through a notch in the mountain, a thousand feet above the valley.

When the passengers swarmed out of the train, and men, women and children looked into the dizzy abyss, they realized what they had escaped. In an instant they brushed the trainmen away from the girl and hugged and kissed her as if she was the one heroine on earth. "Bob" Weaver, the engine driver, had already picked her up in his arms, calling her an angel whom heaven had sent to save the train and passengers. A dozen men, with tears in their eyes, came forward and wanted to adopt little Nannie and wanted to adopt others, swearing or crying, were taking up a collection. Enough money to fill a Baptist preacher's stove-pipe hat was realized in two minutes.

Nannie thanked everybody in a sweet, bewildered way, but told them that her mother was dead and that there was no one to care for the children and run the house in the absence of her father but herself.

With the modesty of the violets by her side, the girl talked shyly of her family affairs, and explained why it would be impossible for her to accept the many kind offers showered upon her for a home in a big house, with servants to wait upon her and a piano to play after she had learned music and other things.

She accepted the money, however, because it was pressed upon her, and they told her that she could do what she pleased with it. It was all hers, they said.

Like a dutiful daughter, she gave every penny of it to her father, who is an industrious and honest man. Instead of going on a North Carolina spree to drink moonshine whisky and have a big time with the boys at the crossroads, he went further down the mountain and bought the sweetest little home you ever saw. There is a patch of grass around the house, a fine area of farm land under cultivation, with the clearest of trout brooks flashing down from the glens above to irrigate the crops during dry seasons.

It is an ideal place, where bluebells and violets bloom all the season, where the skies are as blue as in Italy and the air is crisp and tingling with health.

It was in this new home that Nannie and her father settled down with the children the other day, and were six times happier than a Texas ranchman with a hundred square miles of land and cattle. In this particular case it seemed as if virtue were really its own reward. There was only one possible thing that the girl hoped for and that was an education. Like all resolute minds who read, she was ambitious for knowledge of books and the world she dreamed of.

Such was the situation in that quiet mountain home near the wonderful region of Asheville, where the Vanderbilts and other millionaires have their palaces, when the unexpected happened. A representative of the Southern Railway Company appeared and said the corporation was anxious to offer the girl a substantial and permanent reward for her courageous foresight in saving the train in that awful emergency.

The girl said that she wanted nothing, now that she had a home, except an education; but she little thought that anything short of a miracle or a cloud of angels from heaven could bring that wonderful thing about. Then the railroad man told her that she should go to college at the company's expense and receive a first-class up-to-date education. In the bewilderment of this astounding information, when everything in the world seemed dancing to fairy music, she began talking of her brothers and sisters and asking herself what would become of them. It was explained to her that with education she could easily look after them.

So it came about that the matter was speedily arranged, and in that longest and most beautiful of all the sunny days of the girl's life she learned that she was to begin her education at the Asheville Normal Collegiate Institute.

It would take a diamond pointed pen with an ink pot full of rainbows to begin to describe the joy of the girl and her household over their wonderful good luck in saving a train full of people and in getting a pretty little mountain farm, with a first-class education thrown in. But that seems to be the way they do things on great occasions down among those mountains near Asheville, N. C.

"I was listening to hear the train go by when the landslide came," said Nannie, as she afterward described the incidents in what was to prove to be the great and memorable day of her life. "I knew by the sun that it was pretty near train time. I was listening for the train to go along so as to put the potatoes on. If you put them on when the train goes by they are cooked just right when daddy comes home to dinner. So when I heard the noise of the landslide I knew that it must be all most train time. That's what made me hurry so and run down the track to stop the train. I didn't feel very sure that I could stop it because the trains never do here. I was afraid that the engine driver wouldn't pay any attention to me even if I did get there on time. He might not know what I meant and I didn't know how to signal to have it mean stop."

In sparsely settled mountain communities, like that where Nannie's home was, clocks and watches are scarce things. The sun is the most frequently consulted time-piece, and in many cabins the only one.

However, cabins located near the railroad are considered to be especially favored, as the trains go by at certain hours and their passing answers the purpose of a town clock. When the up express goes along, the mountaineer knows that it is 11:30 and that in half an hour dinner will be ready.

The passings of the trains are the chief incidents of the day. Everybody stops work to watch them and watches are regulated accordingly.

Enough to fill a dozen books has been written about the charm and the beauty of that wonderful health resort of the South. But nothing can compare with the clear romance of this little story, which ends like a fairy tale of childhood and which many a big six-footer has read in preference to pouring over musty volumes on law or the ways of stocks and high finance. At the end of Nannie's college

course a prince should appear to round out the fairy tale, and all the neighbors in the Asheville region say he will come for little Nannie.—*Los Angeles Herald*.

The Return of Peter Taviner.

BY TEMPLE THURSTON.

It was considerably past 11 o'clock; everyone else of Sir Peyton's week-end party had retired to bed, and only young Archie Doyle and Sir Peyton Loftus himself remained sitting over the fire in the large, square hall of the latter's country house. Whisky and soda were near at hand on a small table, and each of the two men, with his legs stretched out comfortably before him, held a cigar between his fingers.

They conversed at occasional intervals

BROS. G. F. MORRIS, W. C. EARNST, A. F. COULTS, A. F. KING, THEIR FAMILIES AND THEIR FRIENDS, THE GOUSE BROS., AT THEIR ANNUAL OUTING AT LAKE GEORGE, IND.—Courtesy A. F. K.

as men will who are sitting comfortably in front of a glowing fire at the end of a long evening.

"Your week-end collection, Peyton," Doyle was saying in a somewhat sleepy voice. He referred to the week-end guests.

"Who are they? Who's Mrs.—Mrs.—the one in the blue silk dress—Mrs. Brayton?"

Sir Peyton woke up a little at the question concerning his guests.

"She's an elderly lady, Archie," he said, calculatingly, "who, though she doesn't bring her husband with her, carries a volatile oil of respectability on her person. Respectability's what you might call a cheap scent."

"So I should imagine," assented Doyle, with a laugh, "so many poor people seem

to saturate their clothes with it. And who's Miss Van Dester?"

"An American. Very decent girl. Rather liable to try to forget her nationality. Harmless amusement, of course. She carries a fortune up her sleeve, when she wears one."

Doyle drank off the remainder of his whisky. He found Sir Peyton's descriptions amusing.

"Well, then, Mrs. Maidlow?" he continued, "she's the best of the bunch."

"Ah!" Sir Peyton looked thoughtfully into the fire.

"Betty's the best, as you say. She married abroad. America. I was one of the few who heard of it. She lived there for eight months, then came back here again with 'Mrs.' tacked on to her maiden name. Told me everything about it but what I wanted to know: who her husband was. She shuts her mouth both on his name and whereabouts, and I can't get a word out of her."

"They didn't hit it off?" suggested Doyle, "or did she divorce him?"

"That I don't know," said the host, after a pause. "She never told me whether it was divorce or separation, and I've never been able to find out."

"How long have they been separated?"

"A matter of two years."

"And where's the man? Oh! of course, you don't know. Is she happy?"

Sir Peyton leaned back in his chair, flicked the ash of his cigar some feet into the fender, and laughed.

"Don't you waste your time, Archie," he said good-naturedly. "You play golf remarkably well. Some one told me you ought to have your international cap for Rugby. You stick at that; it suits you; suits you admirably."

Doyle took the remark with a smile.

"Well, I'm off to bed," he said. "But who's this chap Taviner that you're waiting up for? I've never met him before, have I?"

Sir Peyton shook his head.

"No," he said, "you've never met him. When I first ran across you, three years ago, he'd started on his travels round the world. We were at school together."

"What sort is he? Good shot?"

"One of the best. He's one of those fellows," Sir Peyton continued, beginning to elaborate, "one of those chaps who's sure to be a trump whatever the top card is. One of those good old brick walls, with broken glass on the top, but as fine a garden as you could wish to find on the other side."

Just as he had finished his sentence, they heard the wheels of a carriage stop outside on the drive, and the next moment the hall door opened.

Sir Peyton jumped to his feet, crossed

to the entrance of the inner hall, and met Taviner on the threshold.

After the description he had received, Doyle looked at the newcomer with some interest. He was a strong, well built man, with wind-roughed, sunburnt face, and steady, gray eyes that did not want for humor. All, in fact, that he had been told seemed to coincide with his appearance. Archie moved forward, and held out his hand to Sir Peyton.

"Well, I'm off to bed, Peyton," he said.

"Good night, Archie." Then he turned to Taviner. "Peter," he said, "this is Doyle, the amateur golf champion."

The two men shook hands, and then Archie turned off to the stairs.

"Well, old man," Sir Peyton said, turning again to his friend, "if you're not too tired, come and have a whisky and a jaw. I want to hear something after all this stretch."

* * * * *

The two men pulled up their armchairs nearer to the fire, Sir Peyton filled a tumbler for Taviner, and the grandfather's clock at the foot of the stairs began to strike twelve as he began to speak.

"Well," he said, when they were comfortably seated. "I suppose you've had a rare good time?"

Taviner screwed up his eyes, and looked thoughtfully at the fire.

"From some points of view, yes; from others, no. I've had what you might call a mixture."

Taviner took a cigar from his case, laying the latter on the mantelpiece as he cut the end off the cigar.

The tone in his voice led Sir Peyton to realize that his friend had been hit—hit hard on some subject, which all the traveling in the world could not make him forget, and he set to work to try to find out what that subject was.

"Why didn't you come back after the year, as you said you would?" he began by asking.

"Reasons," said Taviner. "Reasons."

"Excellent," said Sir Peyton with a laugh. "But I thought reasons were quite decadent nowadays."

"Quite possible. But I'm old-fashioned—horribly old-fashioned. Why, Peyton, old chap," he leaned forward with his elbows on his knees, and then added the rest of his sentence with a sudden rush of confidence, "I'm married."

Sir Peyton put down the glass of whisky that he was in the act of raising to his lips. So it had gone as far as this. Sir Peyton raised the glass again, after a pause, and swallowed his surprise with his whisky.

"Well," he said, "you've got it now. I didn't think you would make a fool of yourself, Peter. What's her vice? A wife may be anything but vicious, you know."

"She had none," said Taviner quickly.

"Oh, you seem bent on making me surprised."

"We're separated." Taviner pulled at his cigar.

There was a rather long pause of silence. Sir Peyton broke it as Taviner looked around at him.

"Separations are irrevocable," said he. You ought to have been divorced, then you could have married her again; but human nature's too pig-headed to get over a separation. There's nothing romantic about making it up. Tell me something about it, old chap."

absurdly young, she didn't know where to keep it."

"Who broke the last straw?" Sir Peyton interposed.

"Oh, I don't know. I suppose we both had our hands on it. She went, if that's what you mean. Strolled away with her head in the air, just as if she were going to Brighton for the week-end; asked me to send on the rest of her things, and requested me, as she looked around the corner of the door, not to make a scene."

"And you—?"

"I? Oh, I picked up the rest of her traps, of course; but when I came to her little slippers and things—"

"Well?"

"I swore!"

Both men raised their glasses and drank.

NICKEL-PLATED CAB EQUIPMENT.

The above illustrates the cab of one of the standard engines at East Portland, Oregon, and the pride Bro. E. Casey takes in the care of his "regular" engine, who with the help of M. M. Younger has made the cab equipment the most beautiful and convenient of any in Oregon, and his fireman, F. D. Beard, is as proud of it and keeps everything in apple-pie order, a condition not found among pooled engines. J. N.

"Nothing to tell," said Taviner. "She slept with her head under the clothes."

Sir Peyton laughed. "Dangerous habit. Don't tell me she—breathed too heavily."

A smile crept into Taviner's eyes, but the light of it soon died out again.

"No," he said, "that wasn't it; I liked fresh air, you see. I had the windows opened."

Sir Peyton concealed his smile. "Fatal!" he exclaimed.

"Yes, I know it was. Out of that came her temper. She was sweet, old chap, but she had a temper; and being

"Where is she now?" Sir Peyton asked, after a pause.

"I don't know."

"Ever hear from her?"

"Sometimes. She writes to me occasionally from nowhere. And adds in a postscript that she's very happy?"

"In a postscript?" exclaimed Sir Peyton, with a laugh. "Then don't believe it."

"Why?" Taviner turned round on his friend with surprise and hope in his eyes.

"Postscripts with woman," said Sir Peyton sententially, "are either one

of two things. Sometimes both. They contain what she originally intended to write about, or they express feelings which she thinks it diplomatic to convey. Don't you believe it, Peter."

Taviner rose from the chair and held out his hand.

"All this is useless," he said in a hard voice. "I'm going to bed. Will you pilot?"

The two men left the hall together, and on the mantelpiece remained Taviner's cigar case.

* * * * *

The grandfather's clock in the hallway had struck the half-hour after twelve when the light of a candle lit up the old oak stairs of Sir Peyton's country house; and Peter Taviner, his coat, waistcoat, tie and boots, all off, came down to look for his cigar case.

To his surprise the fire was still alight, and, having found the object of his search, and drawing a chair up to the fire, he began to smoke, oblivious of the hour of night and his surroundings.

The previous conversation with his host had served to bring up to his mind the subject for whose oblivion he had taken a two years' journey round the world.

Once make a woman your wife, he told himself; once give her your name and live under the same roof with her, if it's only for a day, and you cut yourself into two pieces, of which it may be said that it is impossible for one to forget the other.

As he sat lazily smoking, he idly counted the number of times since their separation, when he had set up over a fire, just as he was doing then, or out in the air on a summer night, without a thought of going to bed. Then he recollected that they used to clear off at 11 in those days. Those days; the words themselves had a forbidden sound. His head began to fall forward on his chest. He knew it was late. He didn't want to go to sleep, he wanted to think. It was no good to sleep there. If he could not keep awake, it was far better that he should go back to his bedroom. He fancied to himself that he made an effort to rise, but his head only fell further down on his chest, the cigar dropped out of his hand on the carpet and nature settled the matter for herself.

* * * * *

How soon after it was that he woke he could not say; but the fact that the sound of a board creaking in one of the passages had awakened him, he was certain of. He stood up unsteadily, and held on for a moment to the arm of his chair. There was no doubt about it, someone was com-

ing from one of the bedrooms; he could see the glimmer of the light approaching. Suppose it were burglars. He smiled as he thought of the prospect. Action, as it is to some men, was like wine to him. But that supposition was unlikely. Burglars did not wander round country houses with candles. He caught sight of a reflection of himself in the glass over the mantelpiece. Without his tie, coat or waistcoat, he came to the conclusion that he looked somewhat ridiculous. The next second, he had blown out his candle, and got into the angle formed by the grandfather's clock that backed against the stairs, with the intention of watching developments.

A moment later the light became absolutely apparent, as two girls, dressed in their tea gowns, and each holding a candle in her hand, turned from one of the passages that opened on to the main staircase.

Taviner heard them whispering as they crept down the stairs into the hall, and he silently shifted his position, creeping behind a curtain that served to hide a door leading to the domestics' quarters, where he would be less conspicuous, and yet see all that was going on.

They had evidently heard a sound, for they both stopped half way down the stairs.

"Did you hear?" said one in an awed whisper.

Taviner smiled to himself, and wondered what they were doing.

Immediately after, evidently satisfied with the renewed stillness, they continued their way, and as they reached the bottom of the stairs came directly into Taviner's range of vision.

"My God!" he exclaimed silently to himself. "It's Betty! Betty!" and he repeated the word over and over again to himself in silent wondering.

It was Betty. Betty Maidlow, of whom Sir Peyton had given a brief sketch to Archie Doyle. The other girl was her cousin.

As soon as she had satisfied herself that they were alone, Betty went to a large basket, kept for letters, and dropped an envelope on to the top of the collection, then crossed to the fireplace, putting out her feet to the flame.

"I told you it would be all right, Lillian," she said, in a hushed voice. "Only you're so silly; you get so frightened."

Lilian Reeve moved over to Betty's side.

"I wasn't frightened," she objected, "but it seems so silly to come down at this time of night, simply to put a letter into the basket."

"I couldn't get it written before, and, besides, I didn't want anyone to see me

post it. The reasons are quite good enough for me." She looked up at the clock, and seeing her full face again, Taviner still wondered.

"This'll go by the first mail tomorrow," she said, "and he ought to get it by the first post on Monday."

"He?" repeated Taviner to himself in his recess. "So nature's found a substitute. What a fool I was to ever think it wouldn't."

"It'll be such fun," Betty continued; "he'll be down at about 6. It's the wickedness of it that's so lovely. We'll have dinner at about 7, and I shall tease him all the time, to make him think I don't care a pin for him. Then he'll have to row me up the river towards Clevedon, till it's quite dark, and then—," she stopped.

"Well, and what then?" asked Lilian.

"What then?" echoed Taviner in his despair. What else was to be expected, he wondered. You can't let a pretty woman run over the world by herself and not get her dress soiled somewhere. He thanked Providence that he had overheard. It seemed possible, even at that hour, to prevent.

Looking straight at her from behind his curtain, Taviner saw her suddenly stand erect and sniff the air.

"Lilian," she said quickly, "either your gown or mine is burning. How do you like mine, by the way? I shall wear it after dinner when he comes. It's just the sort he'd like."

"But you couldn't go up the river like that," said Lilian.

Betty moved quickly away from the fire.

"Something is burning," she exclaimed, and she looked about her on the ground. Then it was that she found the cigar. Picking it up from her feet, where it had burnt a hole in the hearthrug, she held it up to view. It was still smoldering.

"Someone's been here," she said, in a frightened voice, "not so very long ago."

Lilian stifled a scream.

"Perhaps they're here still," Betty added nervously, and her cousin made a rush to the stairs.

"Don't! Betty!" she exclaimed. "It isn't fair. You know how nervous I am."

Just at that moment the swaying of the curtain over the door caught her notice. She pointed to it before she could speak.

"Someone's there behind that curtain," she said in a whisper, hoarse with fear; and when it came to that Taviner stepped out.

"Peter!" she exclaimed in utter incredulity. "Peter."

"Peter Taviner," he suggested.

Betty turned with a swish of her gown to her cousin.

"You can go back, Lilian," she said,

authoritatively. "I shall be all right. I'll be up presently."

Too amazed to disobey, Lilian crept silently upstairs back to her bedroom. Then Betty turned to her husband.

"The Taviner scarcely improves the occasion," she suggested haughtily.

"I thought we might throw it in," remarked Peter quietly.

Betty's lip curled. "What are you doing here?" she asked.

"I was improving the lurid hour till you came; I suppose we're both guests of Sir Peyton's; then, when you turned up, I'm afraid I rather made a mess of it."

"But isn't that characteristic of you?"

"You would say so. You've always said so."

"Only because I've made myself the mouthpiece of circumstances," Betty rejoined.

"Well, let me follow your example. I've been behind that curtain."

A laugh rose to Betty's lips. "I wouldn't tell that to every one if I were you," she suggested.

"It's not my intention to." Taviner was quite calm, though he was perfectly conscious of looking ridiculous.

"I overheard some of your plans," he added, "and even now those plans in some way concern me."

"Really?" Betty's surprise was admirable.

"You bear my name," said Taviner.

"Pardon, my father's."

This was just the way she used to aggravate him two years before.

"You hold that," he said slowly, "but you bear mine, and I can't afford it to be dragged about in a flat-bottomed punt, trailing in the water at Maidenhead."

Betty yawned. She took elaborate means to conceal it, but, nevertheless, she yawned.

"My dear Peter," she said casually, "when I go down to my cottage at Maidenhead, I contemplate enjoyment, and, believe me, nothing would induce me to stop the progress of my flat-bottomed punt with so hampering a weed as the name of my husband. However, having played the eavesdropper, what does all this lead to?"

Taviner did his best to control his voice.

"I am going to take that letter out of that basket and throw it in the remainder of that fire."

Betty's eyes opened with surprise.

"That's a very senseless proceeding," she remarked.

"Why?"

"Because there is more ink and more paper in the world than that letter was written on, and, at the most, it will only satisfy your curiosity."

Taviner walked over to the basket with determination.

"I shall burn it, nevertheless," said he.

Betty watched him as he took it from the top of the other letters. She made no movement or sign to prevent him as he carried it across the hall. Only when he threw it into the fire did she half raise her hand, but she let it fall again to her side. He stood there, looking into the red, hot embers waiting until it should catch alight. Suddenly a little flame licked it, and it blazed up in light, and as suddenly, with an exclamation, Taviner turned round to his wife.

"Why, Betty!" he said. "It was to me!"

"You might have known that before," she said quickly, "if you'd chosen to satisfy your curiosity!"

"I didn't want you to see that I cared as much as that," he replied simply. For a moment they were looking into each other's eyes, when suddenly he realized what he had overheard. "Then it was I to have come down to Maidenhead," he exclaimed.

Betty was not going to give way at once.

"Presumably," said she.

"I to have had dinner at seven?"

"No one else."

"I to have rowed you up the river till it got dark?"

"Your hearing is just as good as ever."

"And then—?" Taviner came to her side. "What then, Betty?" he asked gently.

"Well," she smiled up into his face, "supper, I suppose."

"And then?" he persisted.

Betty looked up at the clock.

"If I don't go to bed now," she said, "that child will never get any sleep at all."

"But what about Maidenhead?" Taviner asked.

Betty stood on tiptoe, so that her lips reached his.

"Well, will you come?" she said.—
London Bystander.

Why He Did Not Drink.

"I read the other day of four young men riding in a Pullman car chatting merrily together. At last one of them said:

"Boys, I think it's time for drinks.' Two of them consented; the other shook his head, and said:

"No, I thank you."

"What!" exclaimed his companions, 'have you become pious? Are you going to preach? Do you think you will become a missionary?'

"'No, fellows,' he replied, 'I am not specially pious, and I may not become a missionary, but I have determined not to drink another drop, and I will tell you why. I had some business in Chicago with an old pawnbroker, and as I stood before his counter talking about it, there came in a young man about my age, and threw down upon the counter a little bundle. When the pawnbroker opened it he found it was a pair of baby shoes, with the buttons a trifle worn. The old pawnbroker seemed to have some heart left in him, and he said:

"'Look here, you ought not to sell your baby's shoes for drink.'

"'Never mind, Cohen; baby is at home dead, and does not need the shoes. Give me ten cents for a drink.'

"'Now, fellows, I have a wife and baby at home myself, and when I saw what liquor could do in degrading that husband and father, I made up my mind that, God helping me, not a drop of that stuff would ever pass my lips again.'"—
Herald and Presbyterian.

Do Men Like Clever Women?

Anyone examining one of the popular magazines might see in bold type the line: "Do Men Like Clever Women?"

It is funny how eternally that very silly question is thrashed out. Of course they like clever women; they would be very silly if they didn't, and they especially like the woman who shows how clever she is in matters of economy, who when the stock exchange is stagnant and things are generally below par, knows how to keep things going without making her husband feel acutely the difference.

And how does the clever economist tell out more than in the matter of dress?

The brainless is generally the extravagant woman—doesn't know how to adapt this, that and the other thing, doesn't know for instance how she can be really clever in many ways.

When it comes to cleverness that a man admires, nine times out of ten he will be very proud of his wife for her knowledge of literature and general topics, but he will be the most pleased if she shows cleverness in household ways.

Men as a rule enjoy talking to women who are clever along the lines of erudition, but when it comes to general things, the majority forget that there is anything in life but the cleverness that makes a good housekeeper and economical housemate.—*Exchange.*

No Paupers in Japan.

With all our high wages and boasted civilization, the fact remains that you will see more wretchedly poor in any of our great cities in a day than you will see in Japan in a lifetime. In other words, you will see no destitution in Japan. Though some are very poor, yet all seem to be well fed, clothed and housed and are invariably cheerful, and what is more surprising, invariably clean. There are no paupers in Japan and, therefore, no workhouses or poorhouses, though there are many hospitals where the sick are healed gratuitously. Practically every one can earn a living. Would that we could say the same.—*Pall Mall Gazette.*

Fools, But Mustn't Say It.

The famous Horace Greeley was a pious man but he acquired profanity in his boyhood while acting as operator at a way station and he never overcame the habit. One day when he was editor of the *Tribune* a reporter who attended a meeting of a farmers' club made fun of the proceedings and his account was duly printed in the paper. Greeley sent for him next morning and said, "You reported that farmers' club meeting and made them out to be a set of damned fools. That was entirely correct, but you oughtn't to have done it. They are a lot of fools, but it mustn't be said in the *Tribune*. Young man, I'm president of that Farmers' Club."

NEWTON & ISON TRAIN ORDER CRANE IN POSITION.

Mediation Before a Strike.

President Roosevelt has added another to his long list of pertinent and epigrammatic sayings anent social conditions. Not long ago John E. Bruner, President of the International Union of Engineers, with three other international presidents of labor organizations and three international secretaries, called upon the President, and took away with him this statement: "Mediation before a strike is far better than arbitration after." Mr. Bruner says he shall remember the saying as long as he lives and does not believe any other member of the party is likely to forget it.

What the World Wants.

Young men and women who can stand erect and independent while others bow and fawn and cringe for place and power.

Men who do not believe that shrewdness, cunning and long-headedness are the best qualities for winning success.

Merchants who will not offer for sale "English woolens" manufactured in American mills, or "Irish linens" made in New York.

Lawyers who will not persuade clients to bring suits merely to squeeze out of them, when they know very well that they have no chance of winning.—*Selected.*

MT. SHASTA, LOOKING ACROSS BLACK BUTTE LAKE.

Short Route to the Portland Fair.

(Concluded.)

After rounding Horseshoe Curve out of the now famous Canyon of the Sacramento, one gets the first good view of Mount Shasta, the monstrous extinct volcano, with its great Konwakiton, and five other glaciers, its vast lava flows, and crater lake of the most beautiful emerald hue that could be imagined, the Hot Sulphur Spring at the very summit, emitting hot sulphur vapor which makes it possible for the climber to spend the night at this great height, 14,444 feet, besides the many points of interest in

the climb to the sublime summit of Mount Shasta. When at the summit one feels that one is really on top of this great earth of ours. The view is magnificent.

To the east, the vast Nevada Plains; to the north, the Oregon country with snow-capped Mount Hood, Three Sisters, and other majestic peaks, with Mount McLaughlin in Southern Oregon in the foreground; to the west, the broad Pacific; and the south, California, with many lofty snow-capped peaks, and the great white dome of the State Capitol at Sacramento, 250 miles distance, can be seen. The view

is most commanding for hundreds of miles in every direction.

In passing Mount Shasta, the road passes right at the foot of Black Butte (Little Mount Shasta). Black Butte stands right at the base and west of Shasta. The two photographs of these mountains were taken at right angles across Black Butte Lake, right by the railroad and at an elevation of 8,900 feet.

Black Butte stands one-half mile from the railroad and towers 11,000 feet above sea-level, so it looks like a big ant hill towering 7,100 feet above the roadbed. No snow stays on this mountain, as it is composed of shell rock, and draws too much heat for the snow to stay long.

BLACK BUTTE, LOOKING ACROSS BLACK BUTTE LAKE.

As we pass "Noble Shasta," and its small brother, Black Butte, surrounded with beautiful lakes and scenery, and the hum of several large lumbering plants, we descend to and cross Shasta Valley.

As we speed away across the beautiful valley, away from "Noble Shasta," towards the rightly named "Pilot Rock"—the pilot for the Indians ages back, the pilot for the white man in early mining days, the pilot that marked the southern boundary of the great Hudson Bay Company (the Oregon Country), the pilot of many a weary miner of the great Siskiyou Range in early days when there wasn't any trail—many a weary traveler owes his thanks for its guidance.

Pilot Rock stands on the high Siskiyou Range, about seventy-five miles north of Mount Shasta, and about six miles from the railroad, and about 8,000 feet above sea-level. It covers about three acres of ground and is seventy-five feet high, almost perpendicular, with a round dome-like top, and of solid rock—a landmark for ages past and ages to come.

After crossing the tranquil river of the "Klamathon," we make a ten minute stop at Hornbrook. Having come all the way with two big engines with ten coaches, at Hornbrook another large engine is coupled on as pusher, and we start to climb the Siskiyou Mountains, nineteen miles, most of it 200 feet to the mile. As the train winds its way up the rugged mountain with Pilot Rock and Mount Shasta in view, most of the time we go through the Siskiyou tunnel, three quarters of a mile long, and stand at the summit 4,124 feet, having started at sea-level at San Francisco, and through valleys, dales, canyons and mountains, we have climbed to the very summit, and now the road descends to almost sea-level again at Portland, Oregon.

PILOT ROCK, AS SEEN FROM THE SHASTA ROUTE, S. P. RAILWAY.

After leaving the Siskiyou summit, one views the vast Rouge River Valley; the road descends, making one loop and one horseshoe. Three tracks are in sight, winding down a 176 foot grade for seventeen miles. We come to the end of the Shasta Division and enter the beautiful town of Ashland, Oregon, the home of several of the members of the B. of L. E., which is the division between the Shasta Division and the S. P. lines in Oregon.

Ashland is a beautiful town, the best climate in the world, the finest fruit, plenty of farming, lots of mining, and the main starting point to one of the wonders of this country, "Crater Lake." It is about ninety miles by wagon road from Ashland, Oregon.

The walls surrounding Crater Lake are

ASHLAND, OREGON, SOUTHERN PACIFIC RAILWAY.

from 1,000 to 2,000 feet high; the lake itself is 6,251 feet above sea-level, and will average about nine miles across. Wizard Island is a volcanic cone, within the center of the lake, rising 845 feet above the water level of the lake, and it also has a crater within, filled with water several hundred feet deep. Crater Lake is surely a wonder spot. The Government has established a national park around this famous scenic attraction.

I am afraid that I have now already taken up too much of your valuable space about this wonderful country, so I will close by saying we have all kinds and builds of engines here, have the pooling system, engine and men, and the double-head system. We are treated very nicely by the company, fair pay, and lots of traffic to the Fair at Portland, Oregon.

T. HERBIG, Div. 425.

The Largest Lump of Ice.

The largest mass of ice in the world is probably the one which fills up nearly the whole of the interior of Greenland, where it has accumulated since before the dawn of history. It is believed now to form a block about 600,000 square miles in area, and averaging a mile and a half in thickness. According to these statistics the lump of ice is larger in volume than the whole body of water in the Mediterranean, and there is enough of it to cover the whole of the United Kingdom of Great Britain and Ireland with a layer about seven miles thick. If it were cut into convenient slabs and built up equally upon the entire surface of "gallant little Wales," it would form a pile more than 120 miles high. There is ice enough in Greenland to bury the entire area of the United States a quarter of a mile deep.—*London Tid-Bits.*

Who Was the Loser?

A Missouri-Pacific ticket agent in Arkansas tells the following: "A man presented himself at the ticket window and asked the fare to Atkins, Ark. I told him it was \$3. He said he had only a \$2 bill, but could easily raise the other dollar. When he returned with the three dollars and was asked how he got the other dollar, he said: "I went to a pawnbroker and pawned the \$2 bill for \$1.50. Then sold the pawn ticket for \$1.50. While you are making out the ticket kindly tell me who is out the dollar." The agent afterward said that he had wrestled with the forty-seventh problem of Euclid, dragged through quadratics in algebra, worked on "How old is Ann?" but the question was too much for him.—*Ex.*

Fault-Finder is Toad of Society.

The Rev. Robert Hopkin, in a sermon on "The Robin and the Toad," said in part: "The other evening I paused to listen to the song of a robin, as from the top of a maple he poured out his heart in joyous melody, and while I listened, and the deeper, better feelings within me were quickened, there arose from a nearby marshy pool the hoarse croakings of many toads, and I said to myself, thus is it with humanity, for every hopeful singer we hear there are a dozen gloomy, faithless croakers; for every robin a dozen toads.

"The chronic croaker never seeks to make conditions better, but always makes them worse; he never lightens a single load, or dries a single tear. He is found in every department of life and work. Yes, you will find him even in the church, and by his croaking and fault-finding he becomes a greater menace to the Christian cause than any avowed opponent.

"There is no place in all the world for the croaker. He is a discordant note, and his croaking is productive of far more misery than the wrongs he croaks about.

"The world needs men who sing, men who radiate hope and cheer wherever they go, and who always hear and say they hear above the croakings of the toads around them the blithe sweet song of the robin; for there's always a robin singing whether the day be dark or bright, and he that hath ears can hear."—*Cleveland Leader.*

A Bad Example.

Hudson Tuttle, the Ohio lecturer, made an address recently wherein he described the pitfalls of the lecture platform.

"One pitfall," Mr. Tuttle said, "is the unwise choice of examples and proofs.

"A temperance lecturer wished to prove the deadly power of whisky.

"Accordingly, he caused a drop of water to be magnified and thrown upon a magic lantern screen. The picture was terrible. Worms bigger than pythons, crabs bigger than elephants, spiders the size of a ship, fought together in the drop of water like fiends in the infernal regions.

"The lecturer now caused a drop of whisky to be added to the water.

"Watch, friends," he said. "Watch the whisky's effect."

"The effect was marvelous. The liquor killed all those ferocious horrors instantly. Their claws, tentacles and feelers stiffened. All became peaceful and still.

"An old lady in the front row whispered hoarsely in her husband's ear:

"Wall, Jabez, that settles me. I'll never drink water again 'thout puttin' some whisky in it."—*Minn. Journal.*

Correspondence.

All contributions to our Correspondence columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer as a guarantee of good faith, and to insure insertion.

While the Editor does not assume responsibility for opinions expressed by contributors to this department, he is held responsible in both law and moral ethics for admitting that which will injure or create ill feeling. Hence all communications are subject to revision and rejection if the Editor deems it necessary.

C. H. SALMONS, Editor and Manager.

A Well Merited Promotion.

TO MR. THOMAS FITZGERALD,
General Manager Baltimore & Ohio R. R.

Up I tossed my old hat with a hearty hurrah,
Which arose from the lowermost depths of my
craw,
When I read the good news that the JOURNAL
contained,
Of the banquet, where glasses were gloriously
drained
To your health and success and continued joys,
By your army of skillful and dutiful boys;
Who would toil for you, fight for you, die for you
—yes,
Just the moment you'd show them a flag of distress.
'Mid the festive delights I at one thing felt sad,
When you claimed 'twas too much "for a poor
Irish lad"
To be given such honors—my grandmother's cat
Would raise Hades and yowl at a statement like
that!
In that dear, insignificant isle of the sea
They've raised kaisers and kops; and this land of
the free
Can attest to the valor the Paddies display.
Every time they charge into a blood-letting fray.
In our grand-daddies' days that old emblem of
green
In the front of battalions of fighters was seen;
And Pat Clayborne flaunted it proudly in war
Just the same as did Barry, and Shields, and Tom
Meagher,
And the rest of the heroes who came here from
Cork,
And the other famed counties, to find honest work;
So instead of your grieving, you should have felt
glad,
Just because you're a big-hearted, famed Irish lad.
I have sat by your side, while we've chatted a spell,
And since then I could follow you down into—
Well,
I'll not mention the place. My old pastor declares
I'll be there soon enough, for neglecting my
prayers.

'Tis a figure of speech which I use just to show
How the boys the whole length of the famed
B. & O.,

And myself, and all others who know you, admire
Every inch of you, "Tom," and we hope you'll go
higher.

I could sit up all night crooning doggerel lays,
In a good honest mood emphasizing your praise,
But I bow to your modesty. Long may you reign,
The loved idol of men running engine and train.
May your heart keep on throbbing with pulses of
life,

And your lips remain sweet to your beautiful wife,
And old Time pass you by with a smile and hello,
Like the way you greet all on the great B. & O.

SHANDY MAGUIRE.

Troubles and Triumphs of Travel.

BY SHANDY MAGUIRE.

(Concluded.)

Our next trip was made to Santa Catalina Island. We left Los Angeles in jovial mood, ready for the sights, and in a thoroughly appreciative condition of mind to enjoy them.

We saw all there was to be seen in the magnificent ride of ten miles over Long Beach; and arrived at San Pedro on time.

I have read "Two Years Before the Mast," by Dana, a score of times, it being the most vivid portrayal of a sea life ever published; and its chief beauty consists in its being a truthful narrative, making it more wonderful and thrilling than fiction. I was now amongst the places where Dana visited on his famous voyage; and San Pedro was not the least.

We boarded the steamer, and between the night-heads I took my place, so as to get all the sights there were to be seen as we sailed through the harbor out into the Pacific Ocean. On our port hand we passed within one hundred feet of a ship named the "Mary Ann Hope," of Liverpool. I took off my hat and gave her a salutation her namesake would not be offended at, neither for its gracefulness nor its respectful heartiness, if she were of the blood royal of Great Britain. The ship was discharging cargo. She had her yards squared by the lifts and braces. She was scraped and polished from the rail to the skysail truck; not a wrinkle in the bunts or yardarms of her sails, everything "ship-shape and Bristol

fashion," and a sight to glad the eyes of any observer. After drifting by, my lady love asked me, "Whom did you bow to on that ship?"

"To Miss Mary Ann Hope."

"Who is Miss Mary Ann Hope, and when did you meet her?"

"I never met her before today, and she is as graceful and as fashionably attired a sight to behold as ever rested upon the bosom of the waters, which are not half so graceful as her own symmetrical breast."

"It seems to me that you are a little

fighting for supremacy. She came triumphantly through them with her beauty uninjured, just the same as yourself has weathered the Cape Horn of life a few times since we talked soft nonsense in the long ago, and you are not without some of the marks that caught my youthful fancy yet."

"That fixed things. I knew by the smile.

"There she blows!"

I thought the allusion was personal until I heard the query, "Where?" I went over to the port of the deck whence the sound emanated, and saw the

genial "Jack" Seeley, the Galena Oil representative, in the midst of a group of anxious engineers, he endeavoring to explain where a whale had blowed. His handsome phiz did not show any appearance of being affected by water or by any other impairment, yet some of us thought he was coming it on us poor tenderfeet in a merciless manner, telling us there were whales about. "There she blows again—there goes another! Look!"

Sure enough, a half dozen of them, not more than a mile away, came up and blowed in an unmistakable manner. After enjoying the sight until they had gone off down in the southeast, we sat down to inhale big lungfuls of the air which

MRS. PENNELL ADMIRING THE ROSES.

too free with your remarks about any lady in the presence of your wife."

"Oh, don't get a dose of the green-eyed monster now. I love the lady, and so would you if you knew her graceful curves and lines as well as I do. You always had an eye for the beautiful since the first time ever you saw me, and you would ardently admire Mary Ann also had I pointed her out to you. She was a ship which came around Cape Horn, which means she was buffeted by the mountainous seas of two mighty oceans at the end of the earth, as they were

came refreshingly to us, presumably from the other side of the world.

"Look at the long-tailed bird that just dove under the water!"

"How can we see it if it is under the water?"

"Look! There are more!"

A school of flying-fish scooted by us and some one asked how came the whales and flying-fish about, or if they were natives of the waters we were sailing through. Either Seeley or his co-employee, Mr. Walsh, said that the committee of arrangements had the waters

stocked with them for our special benefit during the sittings of the convention. I don't know who asked the question; some say it was I. Maybe so—small wonder if I did, and if I believed it also. The head I had on my shoulders did not seem to be the old knob I carried there for so many years. It seemed to be a sort of substitute that had grown there west of Chicago, and it did not seem to wonder at any old thing either in the air or water that day.

We arrived at Avelon, had a dinner that would distend the stomach of a plowman, and then had a sail in a glass-bottomed boat. The submarine sights were in keeping with everything we had ever dreamed of in the realms of fairyland. We feasted our eyes on beautiful trees, flowers, foliage, and moss-covered grottoes beneath the waters, where shells of the most gorgeous hues were scattered about, and where fishes of every tint of the rainbow were desporting themselves in and out through their branches.

In a sort of somnambulistic way I told the oarsman to row us ashore, where I sat on a bench, watching a dog playing tag in the water fifty feet away with a school of frisky seals, until the steamer departed with us, taking us off from a counterpart of heaven.

We made Los Angeles on time, said a fatful of prayers, and retired.

"Of all sad words of tongue or 'pen," pack the trunk is the saddest to my own darling girl, when the time comes to go.

I got her at it, and sooner than be telling the why and wherefore, I decided to return home so abruptly. I went to the Pullman ticket office, where I stood in line for a couple of hours, till I got in front of the high and mighty dignitary who dispensed berths to broil in. I showed my documents, and answered questions propounded to me by the contemptible autocrat till I got lower two. He pushed my papers back, saying, "Hurry up and make way for the next." I got a parting kick at him, after I had my passes safe, by saying, "I'll get out of your presence, you pestiferous little cuss, as speedily as if your homely mug was full of smallpox blotches." I got

the laugh of a couple of scores of unfortunates on him, and I never saw him since, nor do I ever want to.

We telephoned adieus to Mr. and Mrs. Kelly twenty-seven minutes before our train left, and one of our surprises consisted of seeing them in the station almost ten minutes before our departure, having a goodly supply of lemons sent us by them from Mrs. Barker, who pulled them in her own garden. How our dear friends made the meet, considering the distance their home was away, is a puzzle to us still. "We kissed, shook hands and parted," when we heard the "all aboard" of the conductor, and really felt exceedingly sorry to be leaving Los Angeles and its hospitable people.

I went through the train after we got out of town to size up our companions, and found a couple of gems of the first water in Mr. and Mrs. Chester Durnell. They were in the sleeper just ahead of us, Chicago-bound; so we knew that loneliness was not to be thought of where Chester and his lovable wife were to be our associates.

The next morning after leaving we made plans to go to the Grand Canyon of Arizona. This trip was looked to with much pleasure. When we arrived at Williams, Ariz., the junction point for the trip, some misunderstanding relating to connections occurred. We all got mixed up, and having but ten minutes to untangle ourselves, through pure spite we decided not to go, and the vote was unanimous. The Durnells started ahead to their car to continue their journey homeward. We flopped down into our seats with every indication of colloquial squalls to continue indefinitely. My darling led off by saying:

"You should have gone to the Grand Canyon. We may never get another chance to see it."

"I was willing to go, but you and Mrs. Durnell took too long to arrange your bangs and get a gait on you to follow Chester and me."

"All right," she said, and she looked like Tam O'Shanter's wife,

"Knitting her brows like gathering storm,
Nursing her wrath to keep it warm,"

as she continued, "You'll be sorry for not going, for I'll never forgive you."

The train was just beginning to move as I sprang up, gathered up the grips and exclaimed, "Come on, sooner than have a jawing match the rest of our lives for not taking it in, we'll get there; and as you are mounted astride a jackass with four legs, going down the trail, I'll admire your gracefulness, and if possible take a snapshot of you for the benefit of the grand-kids."

The next morning we "did" the Grand Canyon from Oneill's Point to Rowe's Point, on the surface; and, indeed, we were well satisfied that we got the opportunity to see that stupendous work of nature.

When we took the train again for the East we were among strangers, and it gave nothing of any interest to chronicle during the remainder of the trip home, where we arrived in due time.

About a week after our return we got a letter from Mrs. Durnell, which contained the following paragraph, substantially correct as necessary:

"We were astonished next morning to not find you on the train, and of your sudden change of mind. We really regretted we were not with you, and next day had still greater reason to feel so, as we ran into a tremendous rain, which overflowed the banks of the Kaw River, and inundated the country for scores of miles. Our train stood in the midst of the waters for thirty hours. The sick man you remember being with us from Los Angeles, died, and he had to be taken off in a boat to prepare him for burial. We also had to get our meals by boat, and on the whole we had a sorry time of it. It was our intention to be at the station as your train was passing through Fort Wayne to give you a blowout when you'd arrive, but you must have passed through a couple of days before we got home."

I now close this simple narrative of a trip across the continent and back; and my gentle tramps, who have kept with me, I bring you all back in safety, having by the good luck acquired by starting on a Friday avoided the overflow of the rivers of Kansas and the melancholy feelings

which a death in our midst on a water-bound train would entail. I let nothing mar your pleasures, as I chronicled this trip. It was one which will never be forgotten by those who enjoyed it. The innocent fun-making part of it was allotted to Sanderson and McGovern on our way out; Pound and Davis did the praying part every night, and the unction of the former as he, in night garments arrayed, drawled out "Now we lay us down to sleep," would do justice to a cardinal or an archbishop of Canterbury. We all felt as if he missed his vocation when he went into a cab instead of holy orders; so said Miss Byrnes, companion of Miss Lape, whose name I learned of Miss Lape's father recently.

It remains for me but to make my retiring bow and drop the curtain.

"To each and all a fair good night,
And pleasing dreams and slumbers light."

Letter from a Retired Engineer to a Friend.

PLEASANT VALLEY, N. Y., June 10, 1905.

DEAR DAN: This being the first anniversary of my retirement from "active service," we thought it fitting to write you. Mother says this is my second time on earth, and that all events must date from the period of my retirement. If my second appearance here will last as long as the first it will make me 133 years old at the end of my second term. That would be an awful blow to the pension system. But special occasions like this bring their share of joy not unmixed with sadness, for as the weary traveler observes more closely the few remaining milestones which indicate the lessening distance as his journey is about completed, so do we at such periods note the all too rapid flight of time that marks the near approach to our journey's end, and the heart grows sad at the prospect; for life, even at our age, is sweet, Dan.

Yes, the Autumn of life is sweet, Dan,
When it brings relief from care,
When labor's reward is complete, Dan,
And the harvest enough and to spare.
When enduring faith attends, Dan,
And hope, like a bright, bright star,
Reveals where departed friends, Dan,
Seem to beckon from afar.

But hope at times takes flight, Dan,
And often my faith grows weak,
Like a child at the coming of night, Dan,
Then dear old "mother" I seek.
And she strokes my brow with a gentle hand,
And dispels my haunting fears,
By telling the "old, old story"
As she's done for years and years.

It is on occasions like this that we love to indulge in sweet memories of the past. Mother sits close by, holding a sheet of paper and wearing a happy faraway look in her eyes. She calls the letter she holds the family heirloom, and says it will be handed down through the family because of the lesson it teaches. There is a family history connected with it that covers a period of my life with which you are not familiar. Mother says, "Tell Dan, he will like you better for confiding the matter to him, and his wife is a sensible person who will understand." So here goes:

When I first discovered myself I was very young, the youngest of a family of four, all boys, three of whom belonged to the lady of the house, while I was my father's son. Father bought timber for a lumber company, staying away sometimes for long periods, seldom remaining at home more than a week at a time. During father's absence I was anything but kindly treated by my foster-mother, while his visits home, that I was wont to look forward to with pleasure, became rather a source of terror to me, and having to do all the drudgery for the family, while receiving nothing but cuffs and harsh words by way of reward, I concluded to leave the place which was more like a prison than a house. I was then ten years of age, but had not gone to school more than a month. "She" would tell father I was too stupid, or that the teacher complained of my impudence, in fact, she painted me as black as possible; so when he also turned against me there was nothing left to do but get out. Strangely enough her sons treated me very kindly, all things considered, and I have still a warm spot in my heart for them. The only real equipment I possessed to aid me in my venture, aside from a scanty, very scanty wardrobe, was the ability to stand a great deal of ill-usage patiently, for I was any-

thing but a "spoiled child" when I began to do for myself. This latter resource stood me in good stead, as I lived a rather precarious existence for about six years, working for anyone who would give me a day's work to do, a sort of handy boy in the neighborhood, receiving little pay for my service excepting board and cast-off clothes. I saw other boys who were being sent to the city schools but a few miles distant, coming home with their city ways and city clothes, and one day it occurred to my mind that there was some place in the world where even I could better my condition. At that time I was "doing chores" for a farmer whose land bordered the Erie Railroad. I used to think if I could only get a job on the road I would be all right, but having no education, and the poorest kind of clothes, getting on the road seemed out of the question. There was a water tank at the station, which was about two miles from the farm, and as all trains stopped there it gave me a much prized opportunity to see them at close range. I was especially interested in the engines, which were a source of wonder to me; so I used to go to the depot whenever possible, but my prospects seemed to grow no brighter.

One day I learned that the construction train was coming to Bottsville to lay over there nights while engaged in building a new trestle several miles west of there. I saw the train pass by the farm one evening with its army of workmen aboard, and it seemed to me that where there was work for so many there ought to be a chance for me. When my "chores" were finished I hurried to the station. There was the great construction train on the siding. The workmen were sitting in groups here and there, smoking and chatting. I passed along on the outside of them, for with my tattered appearance I feared being made a subject for ridicule. The engine was my objective point. While gazing in silent admiration at the great machine, several young fellows who were employed on the train came towards me, one of whom, to the great delight of his companions, annoyed me somewhat by such sayings as, "Boots, where are you

going with the boy?" and "Does your mother know you're out?" I moved around to the other side of the engine, and again was feasting my eyes upon the machinery when my tormentor began to nag me as before. I was not afraid, even if he was larger and older, for I was well able to care for myself, but feared that to have any trouble would prevent my getting a job on the road. After using up his stock of smart sayings he came nearer, and taking off my hat threw it under the engine. Then I struck him, and continued to rain blows upon him until I bore him to the ground. His companions were about to interfere when some one ordered them away. That gave me renewed courage, and the spirit of a wolf seemed to take possession of me, for I felt like tearing him to pieces. Then I heard the same voice again ordering me to stop, saying, "I guess he has been taught a lesson he won't forget soon." The fellow got away as quickly as he could, and looking about me to see who had spoken I saw a large well dressed man coming towards me. He asked me in a kindly way who I was and where I lived. After hearing the story of my life much the same as I have just told it to you, he laid his hand, it seemed to me, affectionately upon my head, saying, "I believe you deserve better." Then he wrote something in a book, brought me to the general store of the town where I rigged out with suitable clothes, and introduced me as one of his men. The proprietor was told to let me have anything I wanted and it would be all right. Then, after making arrangements for my board at the home of the section foreman, he told me I would be employed to watch the engine nights. I found out in the morning from the section boss that the man who hired me was Sylvester Morgan, who was the engineer, and had charge of the train. He also said, "Sylvester is a foine man, and believe me, if he takes a shine to ye yer all right;" and so it happened. Mr. Morgan used to come over to the engine in the evenings often and talk to me about my past and my future; while now and then he would drop a remark that led me to believe his early

life was as full of bitterness as my own. He especially impressed me with the need of all the education I could possibly get.

When the train was taken off in the fall he took me to his home in Erie and insisted on my going to school for the winter. I studied hard, and with the aid of Mrs. Morgan and her two daughters, the younger of whom sits beside me now, made good progress in my studies, while from the refined associations surrounding my home life I acquired a polish of speech and manner, and taste in dress that would have surprised the natives of my home town. Mrs. Morgan proved a mother to me, and her wise counsel and moral influence were a source of comfort as well as encouragement then and in after years. I missed very much the companionship of Mr. Morgan, who was called to another part of the road where he remained the greater part of the winter, coming home only occasionally; and now I come to the point where I can explain regarding the slip of paper that mother calls the family heirloom. When Mr. Morgan was called away he said it would please him to have me write a letter to him as soon as I thought myself capable of doing so, and it is that very letter which is now fondly clasped in mother's hands as she dozes in her easy-chair beside me. Its penmanship is poor, but it contains the outpouring of a boy's heart that was overflowing with gratitude. In mother's eyes it is a work of art. I often find her in these days gazing fondly on her treasure. Once I asked her if she prized it most on account of the awkward boy who wrote it, and with a smile she answered, "Jason, you are awfully inquisitive," adding, "Don't you know that a compliment sought is a compliment bought?"

Now, Dan, you must not think because of the Dead March tone of the preceding portion of this letter that I have suddenly grown older or despondent. Far from it. This you must know is practically mother's letter, and the women, as you know, are so sentimental at times. They can of course also become severely practical on occasions. I was made aware of the fact shortly after marriage.

I started married life with the impression which prevails among young benedicts, that because of my being the senior member of the new firm of Jason Kelley and wife, I was the logical business agent, general manager and financial secretary of the company, and that the junior member was to be simply the canary bird of the house. The impression lasted until our financial policy proved to be extremely defective. At this juncture the junior member of the company began to assume the role of chief executive, and instead of a canary bird in the home we contented ourselves with a parrot. Under the new order of things my pride grew less but our financial condition improved wonderfully.

Women are queer creatures. I have learned that it is much easier to lead a woman to believe she is right when wrong than to convince her she's wrong when right. Strange, isn't it?

Mother, in speaking of you folks, often remarks that your wife is "an excellent manager." So, I judge from that, all you have to do is sign the pay roll—Mrs. Watson does the rest. You don't even have to look wise, for it would be a waste of effort to do so; at least that is my experience.

I have frequently seen printed advice on "How to Manage a Husband," but none on "How to Manage a Wife." They seem to be the molders while we are the clay, and, taking the American citizen as a sample of her skill, the American woman is entitled to first prize as a molder of character, when her work is compared to the product of any other nation in the universe.

It is getting late, Dan. The Erie express is about due. I can hear Bill Cooper whistle for State Line road crossing three miles away. He is bowling along about seventy miles an hour, and the two long and the two short are as nicely timed and as evenly divided as music played from the notes, which, as truly as scattering straws indicate the direction of the wind, shows the perfect balance of the man, for you know, Dan, character is shown even in the handling of the whistle.

I stop a moment to watch the brilliantly lighted train with its load of precious freight roll slowly over the high trestle that spans the valley below, and it is a source of pleasure to know it is in good hands; and it also occurs to my mind that should ill fate befall it in spite of the skill, the nerve, and the vigilance of the man in the cab, my old friend Bill Cooper, a model of his craft, may be dug out from under a mass of wreckage when every other occupant of the train may escape injury, the daily press will have an article headed "Died at His Post," and the people will ask each other why the engineer did not save himself when everything seemed to prove the possibility of his having done so; but the question, which has been so often asked before, will remain unanswered this side of the grave. Good night, Dan. Your friend and Brother,

JASON KELLEY.

Railroading in High Altitudes.

MONTECRISTO, TABASCO, MEX., July 3, 1905.

EDITOR JOURNAL: In reading my June JOURNAL I notice on page 456 in the interesting description of the Denver, Northwestern & Pacific Railroad, the statement that the point at Rollins Pass, 11,660 feet above sea level, "is the highest point reached by any broad gauge railroad in the world."

With apologies to the writer I wish to correct this, not in a spirit of criticism, simply as a matter of information.

Assuming that by "broad gauge" 4 ft. 8½ in. is meant, there are higher railroad summits in South America than the one noted, or the Marshall Pass on the D. & R. G. Railway, which I have often seen quoted by writers as the highest railroad point in the world.

In February, 1879, I went to work on the Callao, Lima & Oroya Railroad as a locomotive engineer, and ran on that road two years. At that time the road was finished to Chicla, a small town in the Andes Mountains, and which is 12,200 feet above sea level. Callao is a seaport in Peru, S. A. The distance from Callao to Chicla—by rail—is 86 miles, and by mule train a

little over 40 miles. Between Chicla and the summit, at the time mentioned, the grade was finished, and the summit tunnel, which is 14,000 feet above sea level, was also finished, but no track had been laid above Chicla. The road has been finished and operated for a number of years past to Oroya. This is the famous road built by the late Henry Meigs.

I also ran an engine on the Mollendo, Arequipa & Puno Railroad, another road built in the 70's by the Meigs interests.

Mollendo is also a Pacific seaport south of Callao. The first division runs to Arequipa, which is 7,000 feet altitude; the second division to Vincocaya, which is 14,000 feet altitude, and the third division, which runs to Puno, is the summit, which is 14,600 feet above sea level.

Puno—at that time the terminus of the main line—a little over 12,000 feet altitude, a typical interior Peruvian town, lies on the northern extremity of Lake Titicaca, which is said to be the highest body of fresh water in the world. The lake is something over 130 miles long by 30 to 60 miles wide, and on some small islands in it are some very interesting old Inca temples and other ruins.

At the time of which I write, there was a small steamer of ocean-going type, running between Puno and other towns in Bolivia. It was about 70 feet in length and 20 feet beam as near as I can remember, which is not an important item except in connection with the fact that it was put on the lake before the railroad was built, was made in sections, of iron hull, compound marine engines, and all made to be packed on mules from Mollendo to Puno, over 300 miles over mountain trails. I forgot to mention in its proper place that both the roads mentioned above are standard broad gauge roads 4 ft. 8½ in.

Fraternally yours,

C. W. RICKARD, Div. 251.

Commends Retired List.

PHILADELPHIA, PA., July 7, 1905.

EDITOR JOURNAL: Glancing over the pages of the JOURNALS we see so many things to interest us young fellows, and as we read the writings and laments of

some of the old retired men, we have a hope that we may never grow old. Right here I want to say that the man or men or railroad company who first conceived the benevolent plan of retiring men at a fixed salary the balance of their lives after a certain age, certainly deserves a lasting remembrance of gratitude from the B. of L. E. and the country at large. The line has to be drawn somewhere; an age limit had to be fixed—no man believes he is old. "Just as young as I ever was," we hear on every side. I have in mind a case of a man dying of old age for five years, when unfortunately for him his wife died, and within one year, to hear him tell it, after he met a young woman, he was just as young as he ever was. Who better knows at what age a man should be retired than the railroad that employs him? Now the Pennsylvania Railroad has made the age limit 70 years, and as we glance about us, who wants to see a man after he reaches that age in the harness? It may have been a little hard on some of the first, but every other coming on can lay up all he can for that age and the company is very liberal in its pension roll, and it is certainly an encouragement to those up in years to be faithful, knowing that at 70 they will be retired at a fixed salary, and for the balance of their days they can go and do as they please. In fact 60 years would be nearer the mark than 70, but it is hard to draw a correct line, as many men are old away ahead of their time, while others are never old.

Now, take Brother Everett; he is a young man yet, because he never drank anything stronger than ice cream, and we have another whose eyesight has been preserved because he never used tobacco; then there are others who attribute their youthful appearance to having been three times married, others who contend because of their fast lives they are young yet. Ah! it is hard for us young men to form a conclusion of what is best to do to retain youth, by the noble examples of those we have about us.

You are all, each and every one, in your several ways right. We will praise you for the good you have done—not one word

of censure will we give you—like the cart driver who was run over by his own cart. After the coroner's jury heard all the evidence, which went to prove that no man could equal him in driving a horse and cart, and it being evident that he was drunk at the time of the accident, rather than say that he was unable to drive, they brought in a verdict that he died of alcoholism of the brain, and they buried him with his reputation as a horse and cart driver unscathed. So here is to you all that you may live long and prosper and be glad that you were not Oslarized at forty years of age.

Fraternally yours,
C. B. NIXON.

Legal Disability Benefits.

MISSOURI VALLEY, IOWA, July 29, 1905.

EDITOR JOURNAL: The minutes of the Los Angeles convention contain a letter written by Mr. A. I. Voryz, Superintendent of Insurance for the State of Ohio, and addressed to Bro. W. E. Futch, President of Locomotive Engineers' Life and Accident Association. In this letter Mr. Voryz says:

The "Substitute for Senate Bill No. 133" by Mr. West (Fraternal Insurance Bill) has passed the Senate and House, and, if signed by the Governor, it will become a law. For your purposes, therefore, I suppose the proposed changes in benefits should be considered in the light of that bill.

Section No. 5 of the bill directs that Fraternal Beneficiary Associations "shall provide for the payment of death benefits and may provide for the payment of benefits in case of temporary or permanent physical disability, either as the result of disease, accident or old age, provided the period of life at which the payment of benefits for disability on account of old age shall commence shall not be under seven years." There have been modifications of the Fraternal bill during its pendency in the Legislature, and I have not yet had time to carefully study the amended bill as a whole, and, therefore, do not now feel sure of any opinion

I may advance respecting the interpretation of any of its provisions. It seems to me, however, that this Section No. 5, while compulsory as to death benefits and permissive as to disability benefits, impliedly forbids any other benefits. If so, then your association cannot "legislate to pay members . . . because of a continuous membership of a stated number of years," and can only pay old age benefits, after the member has reached the age of seventy.

The only provision I find in the present by-laws (as revised 1903) for disability benefits is in Article XXVIII, which promises the full amount of insurance for loss of hand, foot or eye. Article I provides for death benefits. Article VIII, Section 2, also regulates amount of benefits, and Article XXI provides for carrying the certificates of members disabled or out of employment. These articles fix the contract between the members, and limit the liability of the Association and of the member. While the constitution may be amended and provide for further disability benefits and assessments therefor, such amendment would provide for a new contract, and no member would be bound by it, unless he agreed to it. No member would be entitled to such new benefits or liable to assessments for such benefits, unless he had applied for and secured a certificate to that effect. In other words, it seems to me that the Association cannot, by amendment to the Constitution, add further disability benefits to the existing certificates; but, if new benefits are to be provided in the Constitution, they should be under new contracts, and only those applying for and receiving such new contracts should be entitled to the new benefits or to assessments therefor.

I find no provision in the Constitution which authorizes the Association to make any amendment changing the benefits or rates of assessments.

The foregoing views are strengthened by consideration of Section 1 of the Fraternal bill referred to, which declares that such Association shall be "carried on solely for the mutual benefit of its

members and their beneficiaries." Ordinarily, mutuality implies equality. If so, then an arbitrary unqualified provision for disability benefits to present members of an Association of varying ages and conditions of health, can hardly be said to be based on equality.

Bro. J. F. Freenor in his letter in the March JOURNAL says: "The laws of Ohio under which we are incorporated do not permit a Mutual Association such as we are to go into the endowment business, but we can overcome that easy enough if we are willing."

I do not think that it is a good principle for the B. of L. E. to try to dodge the law on any question. If the insurance can be made better let it be according to law.

I never could believe that compulsory insurance was right. No more so than it is right for the B. & O. and other roads to compel their employees to join the Relief Associations. It looks as though it was dictating how a man should invest his money.

A man should protect those dependent on him for support by carrying some life insurance, but this should be left to his own choice.

If the Brotherhood should adopt an endowment fund, endowment policies could not be issued unless applied for. Nor could a member be compelled to surrender a policy now in force and apply for an endowment policy.

One trouble with a large number of the members of the B. of L. E. is they do not save their money after they earn it; if they did, they would be better fixed financially when they get old, and not have to depend on endowment insurance.

GEO. H. CONNER.

Home for Our Aged and Disabled Railroad Men.

To the members of the four great railroad Brotherhoods: No doubt many of you have heard of the Home for Aged and Disabled Railroad Men of America, and read of the many requests for donations to support the same that came from the management of the Home, and many

of you have followed the reports in your official publications of donations received and are no doubt surprised at the smallness of the responses to these requests, and also at the indifference shown to articles published from time to time by some interested Brother whose heart is in the cause, and the suggestion he makes to elevate a just and noble work. The Home has been in existence about fifteen years. It was started by a local philanthropist who came in contact with some of our unfortunate and disabled Brothers who through accident and disease were thrown upon the charity of the community at large, with the poor-house staring them in the face. (Shame that we, so many, with such staunch organizations, should forget one of our own who in his vigor had his shoulder to the wheel pushing our organizations to success!)

He, seeing their many needs and his love for the railroad man with whom he met in his daily travels and learned to love, brought them to his own home. This was the origin of the Home for Aged and Disabled Railroad Men of America—the origin of a grand and noble work which is and should interest each and every member of the four great railroad organizations today and for all time to come, and will in the near future with the concerted action of all Brotherhood men of America be crowned with success and stand out as a monument of our integrity, benevolence and good will to all Brothers. It has been hard work to get the Brothers of our organizations to adopt the infant of this philanthropist who began this grand and noble work, and assume the responsibility of it and make it a home, not a charitable institution, where one can go if necessity compels, without having the brand of charity or the word Charity staring him in the face. We can maintain a Home as well as any other organization, and support it with a very small per capita. Let the members of the four Brotherhoods think this over, and get together and give their hearty support to a plan for a building fund for a new Home, all for one Home, one house for all, as we live and labor together

and are working toward the same goal.

Let us live for and learn to love each other, and strive to bring out the better nature of our Brothers, and promise to look after and care for our disabled and aged ones, that their few remaining years on earth will be happy ones. But remember that we cannot maintain a Home without the co-operation of every member by extending moral and financial aid.

Dear Brothers, as I lack 20,000 of the 50,000 tobacco tags and coupons requested, I will appreciate any further donations.

Fraternally yours, for a modern Home,
M. E. MURRAY,
972 76th Place, Chicago, Ill.

In Gathering at Riviere du Loup.

LITTLE ROCK, Ark., July 20, 1905.

EDITOR JOURNAL: Through the courtesy of several railroads in the States and others in the Dominion of Canada the writer, with his family, was enabled to visit the union meeting of the Canadian Division held in the historic old Province of Quebec on the 4th, 5th and 6th of July, said meeting with enjoyable excursions and other social affairs lasting the three days. I will not attempt to describe the beautiful scenery of Eastern Canada on the St. Lawrence, the Saguenay river, Temascoula lake, and other streams, or the beautiful forest of evergreens and other trees indigenous to a cold climate, that it was our pleasure to view on this occasion. Because in the first place we would be unable to do the subject justice and in the second all such descriptions can be found in the guide books, and the official writeup in the JOURNAL will perhaps be descriptive; however, we cannot refrain from mentioning our trip from Riviere du Loup (pronounced River de Lou) across the St. Lawrence and up the Saguenay river to Ha-ha Bay and return on the palatial steamer Quebec, getting two fine meals—dinner and supper—on the boat during the trip. The mountain scenery along the beautiful and romantic Saguenay equals anything of the kind to be seen in Colorado, and is said

by New Yorkers on the boat to surpass the scenery on the far famed Hudson.

But what most impressed me on the trip, though it was no surprise, was the hospitality, I might say royal welcome, given us by the Canadian Brethren in Canada. We were treated like princes, and our slightest wish was anticipated and granted. My first impression of Canada was gained during the session of the convention held at Ottawa in 1896 and it is needless to say that they were favorable and have not changed since; in fact if it were not for the cold winters would prefer to live there rather than in the United States. But perhaps some day Canada will annex the United States and than I will reside in the former territory anyway.

The first day was devoted by the Brothers to two secret meetings, one held at 9 A. M. and the other at 2 P. M., at which the business affairs of the order were discussed, and in the evening a public meeting was held at the Opera House which was addressed by prominent citizens and the Grand Officers of each order and enlivened by vocal and instrumental music, as well as by good oratory.

If there had been no other inducement for coming than to have heard the addresses of Bros. Stone, Cadle and Futch, on the good of the order, we would have been amply repaid for our journey of 1500 miles. Our Grand Chief's two addresses, one delivered at the secret and the other at the public meeting in the evening, were both eloquent and replete with progressive and original ideas. The one at the secret meeting or rather the latter portion was devoted to advice on right living from a moral standpoint, commending honesty and temperance in our daily life, and strict adherence to the obligations confronting us in regard to carrying out agreements with railroad companies.

As I sat listening to the eloquent remarks of our Grand Chief, Brother Stone, I mentally wished that, if such a thing were possible, every operating official and every member of the B. of L. E. in Mexico, the United States and Canada

were within sound of his voice. I felt that they would have all been instructed and pleased by his remarks on that occasion.

Brother Cadle, who has been on a lecture tour among the Divisions in the Dominion for the past two months, made a very favorable impression on the Brothers present at the secret meeting, and if there ever had been any doubt of the fact, Brother Futch by his logic convinced his audience of the fact that we had the cheapest and best insurance on earth and clinched his argument by stating that the operating expenses were only 7 percent.

The 550 Brothers present in the hall reminded one of an international convention more than a union meeting. But Brother Prenter, our First Grand Engineer, handled the gavel with dignity and preserved order to such a degree that there is no doubt that he will be at home on the rostrum at Memphis when the occasion requires his services.

A great many Brothers say, "Oh, what is the good of a union meeting from the standpoint of the good of the order. They meet, have a pretty good time, resolute and accomplish nothing;" but, Brother, there is where you are mistaken. Even from a social standpoint, which is of the least importance, there is much gained. Man is a social as well as a religious animal; he requires some amusement and relaxation to compensate him for the wear and tear of the strenuous life we Americans are living, and when he gets that he can accomplish better results, not only for himself but for his employers as well in his daily work.

There is much gained, also, by occasionally touching elbows, wearing off the angular points and getting better acquainted, as I once said before a union meeting held in Little Rock, Ark., in '97; if the people of the North and South had been more intimately acquainted there would have been no civil war. Then the interchange of ideas is a valuable factor; like a pebble dropped on the placid surface of a lake, the reaction is far-reaching. The forming

of new friendships and the renewal of old ones is no mean advantage, and every one who has attended our grand conventions which are similar to a large union meeting will bear me out in evidence of the pleasant memories that linger in the mind of the agreeable friendships formed, though the association is of short duration, and we often think of them with pleasure in after years.

I have often thought of the first convention I ever attended as a delegate (Chicago, 1887), and wondered if the roll were called how many would answer to their names, and of the living, where are they, and in what occupation, etc.? By the way, I met a Brother from Div. 2 at this meeting who was at Chicago in '87. I exchanged cards with him, and if I remember aright his name is Billings. I believe that Brother Salmons was also there as a delegate at that time. I am afraid that if our Canadian Brothers continue to invite us to their union meetings held each year, the expense and burden of entertaining us will be more than they can stand. Some plan will have to be adopted whereby we can assist them financially or reciprocate by holding similar meetings near the border. Or if they could discontinue holding their meetings in the off year and attend our grand convention in larger numbers it would be better.

Would say here that I like the custom of the New York Central, spoken of in the June number of the JOURNAL, where semi-annual union meetings of the membership of the system are held, also the system in vogue on the Pennsylvania, though they meet a little too often.

ROBERT HERIOT, Div. 182.

Instruction to Delegates.

BARABOO, WIS., July 28, 1905.

EDITOR JOURNAL: There seems to be considerable disappointment among the members of the B. of L. E. an account of the referendum vote for the establishment of a financial policy not having received a majority, and some of our Brothers, in articles written for the JOURNAL, intimate that this is an indication that our

order is on the verge of collapse. In this view of the situation I cannot agree with those of that belief, and will endeavor to show our Brothers what I believe to be the cause of the failure in this matter becoming a law. Section 10 of our Constitution provides that our G. C. E. shall submit a message setting forth all legislation he deems wise to be enacted at our biennial conventions, such message to be submitted to each Subdivision not less than three months prior to the sitting of the convention. This was done by our present G. C. E. prior to our last convention, and one of his recommendations was the establishment of a financial policy. These recommendations should be, and I believe generally are, read at each meeting of Subdivisions from the time they are received until the delegate starts for the convention, and it is the duty of Subdivisions to instruct or at least express an opinion to their delegates as to how they wish them to vote on the various questions.

When the matter of establishing a financial policy came before the Los Angeles Convention, it was carried by a large majority; but when it came to the adoption of a plan to raise the money for the necessary reserve fund, there was a variety of opinions, varying from an assessment of fifty cents a year to twenty-five cents per month, and it was apparent that a great many delegates who believed we should have a financial policy lacked the moral courage to vote for the imposing of an assessment upon their members, after having such a long and expensive session, and when a motion was made to refer the matter to the membership for a referendum vote, it found a majority who seemed glad to shift responsibility.

During the discussion that preceded the final vote one delegate arose and made the remark that to refer the matter to the membership was simply a cunning device of the opponents of the plan to defeat it and urged that it be passed upon by that body.

This matter had been before the membership for three months, and by the vote to establish a financial policy it is evident

that a majority of the Subdivisions had expressed themselves in favor of it, and when our delegates failed to do their duty by enacting it into law, but referred it back to the membership for their vote for or against the plan, it certainly looked to our widely scattered membership as though there was some good reason why we should not have a reserve fund, and even the best posted members, on receiving the plan and ballot, after reading it over, put it in their pockets and said to themselves, "I will wait until I see our delegate or some one who knows why this was not passed by the convention before I vote." We are all workers and have a thousand things to think of, and before we knew it the time limit for the vote was up and the great majority of the ballots were where they were placed after being read (in the coat pocket); but if our entire membership could have heard our greatly beloved former F. G. E., Bro. T. S. Ingraham, on this subject when his views were asked for, I am sure there would have been a large majority vote in favor of it. This was one of the very last little pieces of advice received by our delegates from the wisest and best councilor our order ever had, and to me it was very impressive. He said in part (in his usual frank and honest manner): "Yes, you should certainly have a reserve fund and a financial policy. By preparing for war in times of peace and prosperity we can collect a small monthly or annual assessment from our entire membership without hardship to any one, while if we wait until we have a strike we are compelled to levy a heavy monthly assessment on those who are not on strike, which soon becomes a burden, and it has always been our experience that we have lost more members through the non-payment of these assessments than we ever have through members leaving the order on account of the trouble. In times of peace the income from the reserve fund would defray the expenses of the Grand Divisions, thereby doing away with the necessity of collecting Grand dues; besides, it would be a strong incentive or assistance in gaining our request for justice,

for the financial standing of an order is the backbone of it just the same as it is of a business institution or corporation. I therefore think it would be wise to enact such laws as are necessary to establish a financial policy."

It seems to me, after having received such advice as the above, and knowing as we do the result of the vote, it should be an object lesson for our entire membership. It should show to the Subdivisions that it is their duty to vote on matters of a legislative nature before the convention instead of afterwards, and it should be plain to delegates that it is their duty to dispose of such matters definitely at the convention, instead of referring them back to the membership for a referendum vote.

We send our delegates to convention for the purpose of revising and enacting laws for the government of the B. of L. E. and they should do their duty and not shift responsibility.

It has been plain to me for years that our financial standing was not what it should be, and I am looking forward with the hopes that our next convention will not only adopt a financial policy, but will order on assessment of not less than 25 cents per month from every active member to formulate a reserve fund so that three years from that date we will have a financial standing equal to that of our sister railway orders and what we really ought to have today.

Fraternally yours,

HENRY H. TINKHAM, Div. 176.

Be More Considerate of Your Brother.

CLINTON, KY., Aug. 4, 1905.

EDITOR JOURNAL: My JOURNAL came to hand today and, according to habit, I read the letters from the Brothers first. For quite a while it has been my intention to write a letter to see if it would be interesting enough to miss the waste-basket, and, having enjoyed the letter of Bro. "Side Track," of Div. 23, and deplored the truthfulness of Bro. J. F. Williams' statement in regard to the lack of interest shown *most* Brothers possessing a traveling card, and hunting work, by the other

Brothers (?) who have not been so unfortunate as to have lost their jobs, I felt that what I had to say might be best said now.

Bro. "Side Track" (I wish he'd sign his name) in giving his description of how he acquired his "pull," shows that success comes to the man who through his energy, watchfulness and determination to succeed, surmounts difficulties which would make others without these qualifications be counted as followers instead of leaders.

I at one time was among the active members of the B. of L. E., and when I joined, though the order stood for the best of everything in "Brotherhoodism," I have found that the old adage, "Out of sight, out of mind," applies with us many times, as well as in other institutions. I have also found, as Bro. J. F. Williams says, that a fireman will take more pleasure in receiving your transportation than an engineer, and I am not ashamed to say that I was sorry when I had to drop my B. of L. F. to stay in the B. of L. E.

Now, Brothers, this is not intended as a "wail of woe," but some facts that I know exist, and by writing them to you, it may be the means of bringing the order up to the higher standard of the King of kings, "Do unto others as you would have others do unto you."

It has been three years since I was in active service, yet as regularly as my JOURNAL comes to me, I have a touch of fever to go back to work; however, not so badly each time as it was when I was first let out. I am now selling "Jewish hardware," but take as much interest as I ever did in the boys I know on the road.

The suggestions I read from time to time in the JOURNAL are good, and if put into practice would improve the order and make it one of the grandest mediums of helpfulness on earth. Above all things, Brothers, when a Brother presents a card to you for transportation, don't—*don't* turn him down or put him off. Change places with him for the time being, and treat him as you would have him treat you under the same circumstances. Act what you profess and the list in the back of our JOURNAL

headed "Expelled," and followed by "for non-payment of dues, violating obligation, forfeiting insurance, drunkenness, etc.," would not be so large each month.

If this is good enough to print I may write again some time. I am sorry I cannot give any news of Div. 485, Louisville, and am sorrier still that I cannot see some letters in the JOURNAL from there.

Fraternally yours,

FLINT SINGLETARY, Div. 485.

Experience of a Confederate Soldier.

SPOONER, GA., July 22, 1905.

EDITOR JOURNAL: Today is the forty-first anniversary of the great battle fought between General Sherman, of the Federal army, and General Hood, of the Confederate army, near the city of Atlanta, Ga., in 1864, in which I was a participant in gray uniform. Perhaps this narrative may interest some and not others. However, I thought I would give you a small outline of my experience in war, as railroading has become a thing of the past with me, though I feel as deep interest, it seems to me, as I ever did.

On the day of the battle I was detailed on picket duty, which was an advanced line of skirmishers under command of Major Shoaff of the Second Georgia Battalion of sharpshooters. The line of skirmishers was deployed in advanced line with a guide center march of nearly two miles through one of the greatest blackberry fields I ever saw. We had marched so far in fighting position and found nothing to fight until we became careless and commenced to pick and eat the delicious blackberries. At last, to our surprise, a gun was fired within fifty yards of our front, and one of our non-commissioned officers, Roland Griffin, fell dead within six feet of myself. At the same instance up jumped the boys in blue that had fired the fatal shot, endeavoring to reach their main line about one-quarter of a mile in our front, but they never reached it, as there were too many good marksmen in close range of them. The picket line was commanded to halt, lie down and shoot to hold the enemy in check until re-

inforcements came up from our rear. We did so, repulsing two picket charges. At the close of the second charge, we, the picket line, were ordered to hold our positions and not allow anyone to cross our line, unless wounded or a staff officer. I was at a loss to know what it meant, but soon after the order was given, my comprehension was clear. Looking back over the field we had marched and fought over, I saw a full line of battle advancing towards our enemy, although Major Shoaff and his pickets were between them. As soon as the advancing line reached our line and passed over it, the command was given to Major-General Walker to charge, and the heat of battle began. The booming of artillery, the rattling of small arms, and the yells of the advancing or charging line so enthused Major Shoaff that he also commanded the picket line to charge and the command was obeyed. There was a mill pond directly in front of our line which had been recently drained, and the men undertook to charge through it, and were mired down to their waists, and I had to give up the undertaking. The charge was successful both to the right and left of the pond; but we were repulsed on the center on the pond's account, but were soon reinforced and surrounded the pond and gained possession in front of the battery of artillery that was direct in front of the pond that had slain so many of our comrades with grape and canister, together with our much beloved Division Commander, General Walker. We held the field of battle until dark, and in the shadow of the darkness the battlefield was evacuated, and a new line established back towards Atlanta in the edge of the woods we had previously marched through.

Poor me was detailed on vidette duty, which is the advanced part in hostilities. I was stationed in the midst of the battlefield, among the dead, still lying where they had fallen. Imagine, for a moment, the ghastly and horrible position I was placed in. I took a position upon my knees, so I could jump and run if necessary, with gun in hand, ready to throw it down

and run, with my head near the ground in order to keep the light of the sky close down, so if the enemy did approach I could see them before they were upon me. While in this position I took it for granted that my rear was guarded by my comrades, and had no fear of any rear approach; but here was my mistake, when I was spoken to by some one behind me that had crept up to me, but not looking for me, he was as badly frightened as I was. The first I knew of his approach was his addressing me, "Who is that?" I jumped up, wheeling around; with my gun in his face I demanded who he was. Oh, how it sounded when he told me his name, Richardson, of some Indiana regiment. He gave the number, but I did not care for it as he was my prisoner of war. He told me that he was hunting the body of a dead brother that had fallen near where he and I were, and begged me to let him go and hunt his brother, but at that time and place the Rothschild fortune could not have bought him from me, as the capture of a prisoner was the only excuse justifiable to allow a picket to leave his post, and I was determined to go clear to Atlanta with him if I could get there. So he and I started from the deadly battlefield to the rear. We had gone but a short distance when I heard the familiar walk of Lieutenant Holcomb of General Stephen's staff, who had established the picket post and placed me where I was. I hailed him. I knew his walk by the large rowels in his spurs tinkling on the gravel. He informed me that there was immediate danger of an attack from General Sherman and he was closing in the picket post and was glad he had found me. I have always thought only for me leaving the post with my prisoner, I would have been captured or killed where he had placed me, as I don't think he would have ventured out to relieve me; but my hopes were all dismantled when he relieved me of my prisoner and directed me to a new post that had been established in the woods between the battlefield and General Hardy's corps. He also said that the men were so fatigued that they had

doubled the picket post; hence, he gave me directions to go and when about three hundred yards from where we stood, I must whistle. I did so and was answered. When I reached the post under a large squatty oak I was glad to find one of my own company, John Peoples. He at once proposed to me to take turn about and one sleep at a time, as he was worn out. I told him he could sleep if he chose to, but my adventures up to that time had so enthused me I could not sleep if I tried. He removed his accoutrements and was soon snoozing to such an extent I had to keep prodding him. This was about midnight. I sat on the root of the big tree with my gun and back against it, listening with all my ears. At intervals I could hear commands given in the brush in front of me and they seemed so distinct at times, and so close, I was afraid to wake up John for fear the commands were imaginations as he was one of the greatest teases on earth. So I sat and listened. I could still hear the well understood commands—"Battalion, halt!" Heard it repeated down the line—could hear the command, "Attention, Battalion, guide center, forward, march!" At last the command to halt was so distinct and so close that I made up my mind to wake up my comrade, joke or no joke.

I had reached around the tree to where he lay asleep and given him a severe jerk; at that instant the pickets at our right line commenced a rapid fire down the line to the first one to our right. I threw down my gun at an angle of about forty-five degrees and fired, as instructed. Directly in front of me, not more than forty or fifty feet, I saw from the blaze of my gun in the dark bushes, a stand of U. S. collars and at least fifteen or twenty men's faces. My comrade and I made for the rifle pit where the picket line was established. We had to face a regular fire of arms from our own comrades in going to the pits. Poor John had his right arm shot off when he reached the pit, or shot so badly it had to be amputated.

The Federals commenced digging and putting up fortifications where they were

when the pickets fired upon them. The next morning rations were issued for the 29th Georgia Regiment for upwards of four hundred men, and I think one hundred and twenty-nine men drew them.

My company, G, was the largest in the regiment and ranked among the smallest after that day.

I hope my brother soldier Richardson still lives and may read this article and verify the correctness of it.

Fraternally yours,

B. A. PICKREN.

(To be continued.)

Why Should We Have Any Weak Systems?

NORFOLK, VA., August 4, 1905.

EDITOR JOURNAL: I beg to say that I enjoy the privilege of reading our monthly JOURNAL whenever I get the time to do so. I also enjoy the reading of our various union meetings, and the pleasure that they afford.

I feel in a sense that if a union meeting is properly conducted then it is beneficial to our order, as it gives many Subdivisions a chance to exchange views, etc., also to find out from each other what they are doing about the great tonnage and great engines that have come to stay, and how they are making out with them—both in passenger and freight service. And when I say passenger, no matter how large the engine is, she has her full tonnage to the very last coach to make the fast time that is now required of them to hold their schedules, and do not fail to exchange a few words relative to the monstrous engines that are being used in many yards for shifting purposes. Stop and think about a man standing on one of these engines for twelve hours for a day, or night, for a day's work at the small sum he receives for the same. Talk along these lines and exchange ideas how to give the best service to the company, and what is best for the men who confront all the above conditions; then I feel that your union meetings will be profitable. But I headed this article, "Why Should We Have Any Weak Systems?" In my opinion we should not; that is, if our

business is properly conducted. Now, understand me, I am not finding fault, but only writing to see if present conditions cannot be improved; therefore, I leave this open for all the Brothers to criticise to their fullest extent.

First, I do not think the union meetings or any other meeting of pleasure should have a precedent with our Grand Officers while there is important work to be done. It is true I did not attend the last convention, but was told by many delegates that there were three Grand Officers elected for the purpose of Organizers. Then, if this be a fact, why do they not go to the weak systems and stay there? Travel the systems over and over; call meetings at the various terminals; keep one or two of the good Brothers on the system; call in non-members and members, and tell them of the good of the Order and why they should belong to the Order, and stay there until the system is properly organized; bring up the percentage of men belonging to the Order, for in many cases on various systems the percentage is so small that the men dare not make a stand for what they are justly entitled to, thereby working a hardship on others that are properly organized, who ask more for the same class of service than other roads are paying many times. Coming in connection with these weak systems where they are at a standstill and no outlook for them to improve their conditions, makes a hindrance to those systems that are properly organized. I also know of some good men on these weak systems that are capable of filling any office in the Division, but keep clear of office on account of weak organization and bad conditions, knowing full well if they should accept office and try to better conditions, they would be looked upon as "kickers."

Shall such conditions continue? I am sure all companies want good men, and there is no better way to give them good service than to organize their systems and weed out the indifferent class.

Again let me say, I am not finding fault with our Grand Officers. I know them all personally; you all know them, and we all know they are the right men in the

right places. Now, if it be so that these Grand Officers cannot be spared for so long a time to organize these weak systems, then let us have more; but if we have enough, then let us change our mode of working.

Brothers, all criticise this, and tell me if I am right or wrong.

Fraternally yours,

A. M. COUSINS,

Chairman Norfolk and Western Ry.

[We would call our member's attention in this connection to Section 11, page 8, Constitution, and to the semi-annual report of the Grand Chief and Assistant Grand Chiefs from November 1, 1904, to May 20, 1905, which has been sent to every Subdivision. This report shows that 180 Subdivisions received a visit from a Grand Chief in the five months; some of them several visits. In the mean time a large amount of time was spent in committee work, sometimes requiring a month with one system.—EDITOR.]

The Snob.

GRAND RAPIDS, MICH., Aug. 9, 1905.

EDITOR JOURNAL: The article from the pen of Bro. J. F. Williams of Div. 366, entitled "Lack of Courtesy," is a matter that should interest every member of the B. of L. E. who has enough common sense to appreciate what the order has done to raise the standing, pay and condition of almost every locomotive engineer on the North American continent.

S. W. Miller, master mechanic of the Pennsylvania lines at Columbus, O., at the last Master Mechanics' Convention, made the following statement: "I do not believe that it is generally appreciated that just as soon as a man is selected from the ranks and made a foreman there is an invisible barrier between him and the men who were formerly his shopmates. It is almost the same as if a brick wall had been built up between them. He does not associate with the men any more, and frequently feels that he is a little better than they, and his wife will not call on their wives, and his children will not walk to school with their children," etc.

My experience has been that the assertion of Mr. Miller is to a large extent a fact. The snob is not only found in the shopman as depicted, but he is quite numerous in our membership. When a Brother in good standing must go to the fireman for a favor there must be a snob, or something still worse, on the right side. He may have his name on the membership list of some Division of the B. of L. E., but I cannot believe that his being a member is any credit to the order.

The JOURNAL being our medium for complaints, as well as for the exchange of thought, Brother Williams was certainly right in letting the Brotherhood at large know of the good fellowship and brotherly love that he received (nit). However, the publication of that kind of a letter adds no laurels to our organization.

The young engineer who is a member of the B. of L. F. and contemplates joining the older association, will have occasion to wonder wherein he is going to be benefited if B. of L. E. Brothers must seek from members of the B. of L. F. a courtesy denied by those who have pledged their honor to assist a worthy Brother as far as they can without material injury to themselves or family.

I have had some experience along the lines named and not only failed to get a kindly recognition, but the proverbial "pleasant look" was denied me.

A short time ago in making a plea for recognition, I was informed by the "plug puller" that he was a member, but had not been attending Division meetings, and was not posted on the work and, in consequence, was loth to make an effort in my behalf, because he was not able to prove to his own satisfaction that I was worthy of the favor solicited.

"Giving the devil his due," I am compelled to admit that this so-called Brother was quite polite and gentlemanly in giving his reasons, which to a large extent cushioned my fall. This latter affair was one where the insult was not added to the injury.

The Brother who puts up the kind of an excuse last mentioned, is but little if any better than the Brother who refuses out-

right, and both should be expelled from our Brotherhood for violation of their obligations.

I have come to the conclusion that in the future, should another case of the kind I have noted occur, I would prefer charges through my Division against the non-attendance Brother, and my advice to Brothers not receiving courtesies due them is to go and do likewise.

If a Brother, asked to extend a courtesy, cannot grant it, he has no legitimate excuse for not explaining why, and the explanation should be made in a kindly manner, with language that one expects to be greeted by when addressed by a gentleman.

There is, of course, another side to the matter in question. Brothers seeking favors must not forget that we have had members who have brought disgrace upon themselves and dishonor upon our Brotherhood by abusing the confidence of those who befriended them. It is necessary that all concerned should exercise the greatest prudence. The Brother expecting recognition should be thoroughly up in the work and be fitted out as per Division instructions. He should, if possible, look up the Brother whose influence he needs, early enough to give and receive explanations. He should never expect courtesy with a whisky-perfumed breath.

Fraternally yours,

J. W. READING, Div. 286.

Shorter Hours for Switching Service.

SPENCER, N. C., July 3, 1905.

EDITOR JOURNAL: I have just read the articles from Brother Clark of St. Louis, and a member of Division 145, in the July JOURNAL on "Shorter Hours." The Brother of Division 145 calls attention to the long hours on switch engines, and I wish to say that if there is anything that should engage the time and attention of the Brotherhood *at once*, it is the question of shorter hours, and in no branch of railway service can you find employees worse treated and as little cared for as are those poor mortals called switch engineers.

Just imagine a man on these hot summer days, hemmed in on all sides by box cars, the sun shining down in all its glory on one side—the heat from the boiler arising from the other. Come ahead—stop—go back—for twelve long hours, and then he is responsible for every rotten piece of timber that falls off a car, for every jolt and jar; "rough handling" is the copy-righted explanation given on yard accident reports generally.

I fully agree with the Brother just re-

ferred to who says running a switch engine is not what it was a few years ago. Switch engines have increased greatly in size within the last few years, and if you stop and start a cut of cars as quickly with those large engines as you have been used to doing with the smaller ones you are sure to damage equipment more or less; and if you are a "leetle" slow about making a move you are soon considered "incompetent;" while if you move quickly and do any damage you are marked up as "reckless." Switching cars today is altogether a different job from what it was when we "shoved in a cut-off."

We hear much about the long hours of cotton mill employees in the South. They work twelve long hours, they say! It is wrong. It is not in keeping with this progressive age. Twelve hours on duty is a remnant of slavery—a blot upon our civilization. We sympathize with those mill people, but could not they say to us, "Charity begins at home?" Yes, and they could also tell us something about first removing the beam from our own eye, etc.

Let other Brothers write the JOURNAL about this subject—shorter hours. Can you think of anything that is more needed now? And boys, don't forget to read your JOURNAL! You have no idea what you miss when you do not read it and keep in touch with what our great Brotherhood is doing for mankind.

MEMBER Div. 84.

Insurance That Will Stand.

FOND DU LAC, Wis., Aug. 8, 1905.

EDITOR JOURNAL: Brother Tinkham writes what appears to be a very able article in the August JOURNAL, page 689. In the start I will say that I have been a member of the insurance association fifteen years; I have held insurance in other fraternal orders and have seen them go down.

My aim is to build up one in the B. of L. E. that will stand. Brother Tinkham's only cry against my endeavors is that \$20.00 is necessary. Now, I will quote his own words, the American table of mortality which is figured at 35 years. Figuring on those tables we should pay at the rate of about \$7.50 per \$3,000; whereas, our average assessments have been about \$5.00. In consequence it is easy to understand that we are getting something for nothing. Who is going to make up the deficiency? Stop the infusion of young blood, let there be no lapsing of policies, and see the alarming increase of assessments. Brother Tinkham is well able to figure it out.

We are making no proviso for a surplus; we simply live on in the old rut. He denounces my plan as a lottery. How flimsy his charge. The man that held the policy the longest should be entitled to the benefits; he is the one that supports the association. Men going in at 50, as he says, or 40, get cheap insurance.

As to the lottery, life itself is a lottery; but I would like to have Brother Tinkham or any other Brother deny what I say is a fact. He says he can get endowment insurance as cheap as other people. Will he write up a man of 50 as cheaply as one of 21? Will he write up a railroad man for the same rate that he can a banker?

Now, I say once more, we have got to do something for the future, and that and no other reason prompted me to bring forward my plan, thereby creating an incentive to a forward movement for the benefit of our noble institution.

Nations build waterways and work years at public buildings, the completion of which the founders never live to see. What are we doing for prosperity? Living from hand to mouth, and when provisions, as it were, get so high we cannot buy them, we will simply quit living.

I have advocated using the money that we would be able to raise in building a B. of L. E. temple, thereby saving rental and pay the interest over to the B. of L. E. Insurance Department. There certainly doesn't seem to me anything wrong in retiring the oldest certificates by paying them up. Bro. Tinkham endeavors to show that my "lottery scheme," as he calls it, is not a fair one. Read his article and reflect, Brothers, and judge for yourself.

I agree with Bro. Nixon, however, that the plan I advocate will never be adopted, nor another for the release or benefit of the association, though I will continue to the end to argue according to my convictions of right and justice to policy holders. According to Bro. Tinkham's idea it is not much, but it means a saving of fifty thousand dollars the first year after the plan is put in operation. Of course, Mr. Hyde and the Equitable Association would not consider that much, but it looks like quite a bunch to me.

Now, Bro. Tinkham, I hope you will take no offense at this article, and assist me in getting up some plan for the reason stated.

Brothers, I will conclude for the present with best wishes, and with the Editor's permission I will come again.

Fraternally yours,

J. F. FREENOR.

Advertising in Our Journal.

WELLINGTON, KAN., June 18, 1905.

EDITOR JOURNAL: Every month we have from ten to twelve advertisements of medicine, and four or five firms to invest our money in. This takes up about six or seven pages for advertising. Our JOURNAL has a circulation of 55,000, and our advertising pages are headed with, "Buy of the firms who advertise in the JOURNAL." Undoubtedly a large percent of the readers of our JOURNAL reads the ads. I believe all intelligent readers read the ads for information to ascertain what there is on the market for sale. For this reason the JOURNAL's motto in advertising should be, "We advertise no firm we cannot vouch for, and will not accept ads for patent medicines or money-making concerns." How many engineers ever got well by taking medicine, or how many got rich by investing in money-making concerns advertised in our JOURNAL? Undoubtedly it is a fact that medicine does not cure; if it did there would not be a sick person on earth, or these investing concerns do not make people rich, if they would, there would not be a poor man on earth, "especially engineers."

Why not cut these advertisements out and look for better advertisements, and if better advertisements can not be found use this space for the good of the order; do as Ella Wheeler Wilcox says in her poem, Speech, "Talk Happiness, Talk Faith, Talk Health," then health and riches will come to us without taking medicine or giving some one else your money to spend, as these ads in the JOURNAL are inducing you, to take their medicine or letting them have your money to invest for you?

Here is a prescription that all engineers should take: Upon going out resolve that this is going to be the best trip in your life, lay aside all selfishness and covetousness, and in coming in off a trip resolve that this time is going to be the happiest time of your life; you are going to make all happy that you come in contact with.

Upon going to the lodge room resolve that this meeting day will be the best meeting that you ever attended in your life, that you will lay aside all impatience, hatred, malice and avarice. Make a practice of sitting on the fence and watching yourself go by, and then study yourself and see how much you can find wrong, report it and see if you can't fix it. These wrongs that you discover can be fixed. Should you find that you are a pessimist, get it fixed by studying to be an optimist. Watch your steam gauge and keep the pressure up to the highest notch, that you may be always ready for

business. Study yourself, realize that you have God's image in man within you—"the soul." Practice these things and you will extend good will to all. Joy, health, love, truth and patience will be your reward.

Patent medicines, or "get-rich-quick concerns," will never bring this, so for this reason I ask that all medicine and investment ads be cut out of the JOURNAL.

Yours fraternally,

H. E. HANSEN, C. E. Div. 344.

[If we did not accept advertising from those who make money, we would certainly have no advertisers. We, of course, could cut out all advertising and dig into our pockets for \$12,000 a year, follow Bro. Hansen's advice and look pleasant; but we are not all constituted that way. The most of us, if we have the toothache or rheumatism, begin to look for some remedy, rather than a smile of our own make. The profits of the JOURNAL go to the Widows' and Orphans' Fund, and the Editor is not at all anxious to deplete it by refusing what we consider legitimate advertising. There are four small medical ads in the August number, less than one page, instead of ten or twelve. We try not to accept any advertising that is not from responsible concerns and who will not do all they agree to do. Sometimes we have a complaint, and in that case we immediately investigate and see that it is corrected, or exclude the ad. We do the best we can for the interest of our members; advertising is their financial interest, which we guard as closely as possible, but we do not expect to please all in that or any other feature of the JOURNAL.—EDITOR.]

Noms de plume are always permissible, but to receive consideration must be signed by the full name and address of the author, and addressed to the Editress, MRS. M. E. CASSELL, 927 Dennison Av., Columbus, Ohio, not later than the 8th of the month.

The Editress reserves the right to revise, reject or use matter sent in, governed entirely on its merits.

Aspirations.

Oh that my life might be
A beautiful melody !
Borne on the wings of all breezes that blow,
Far above time and place,
Thrilling with love and grace,
Into the glorious vastness of heaven,
Into the highest, which no man may know !

Banish all worthlessness,
Teach me all nobleness,
Lord and Creator of all things that be !
Make my life true and brave
Free as the ocean wave,
Pure as the snowflakes from heaven above,
Strong, loving, merciful, hidden in Thee !

The Present Day Mother.

"Age is opportunity no less
Than youth itself, though in another dress."

We have reached a period in woman's history when the question of growing old is carefully and broad-mindedly considered. As a result we find the sisters who have left the first flowers of their youth far behind them still plucking the sweetest and most fragrant of life's blossoms.

I am so glad of this; so glad especially for the mothers of our land, who have more incentives than any other class to keep their elasticity, their vivacity and

their activity. Mothers who are still in the very heyday of existence will understand all the better how to care for their own physical charms, and can intelligently train their daughters to do the same, while those women upon whose heads the crown of motherhood has rested for many years, will be able to accept the plans devised for their rejuvenation.

Why should a woman lose her grace of person just at a time when her mental faculties are at their best ?

Experience, that wonderful teacher, has enriched heart and mind in a manner which leaves but little to be desired. If you will notice, the mother of today is a very much more important personage in society than was the mother of thirty years ago.

Then she was given a back seat, put upon the shelf as it were, as soon as the debutante daughter took her place in the world of gayety. Her duties were clearly marked out. True, she appeared now and then at social functions to which she was specially bidden, but it was in the most sober of gowns, the most unbecoming of coiffures, and with a manner that plainly hinted, "my day is over."

With the *fin-de-siecle* mother and daughter things are changed. They walk together on a more congenial plane. The daughter's friends and amusements mother makes, to a large extent, a part of her own life.

On shopping trips, at teas, receptions, dances, etc., mother is chaperon, and as such, receives attentions pleasantly tendered and quite as gracefully acknowledged. "At homes" find mother, in her prettiest costume, on hand to welcome her girl's friends, in so charming a style that the guests go away declaring, "Alice's mother is such a help to her."

It all serves to keep age and time's finger-prints at bay; this march abreast with the pleasures of youth. And only the woman whose foresight travels no farther than the tip of her nose fails to make something of a "chum" with her young lady daughter.

Mothers, don't don your grandmother's cap before the time for wearing it has come. And you, daughters, remember that a companion mother is the greatest blessing a young life can have.

NORAH O'NEIL.

Grand President Visits the East.

If all the Divisions who attended the School of Instruction in Boston, June 27, should attempt to tell what a glorious good time they had, we are afraid that an extra number of the JOURNAL would be needed, so we will try not to say too much.

There were seventeen members from Casco Bay Division 259, who boarded the train in Portland the day previous, and even a pelting rain did not succeed in dampening our spirits. On the whole we think we behaved very well when the fact is taken into consideration that both the Secretary and Treasurer were in the party, and everyone knows what light-minded young ladies they are. We overheard Sister O'Neill wishing for "Hiram," but he probably spends all of his spare time in traveling over the M. C. R. in vain hope of meeting her and Sister Huff once more.

On our arrival in Boston we were met by a committee, who escorted those who desired rooms to their destination. In the evening a theater party was made up to attend the performance of the "Earl and the Girl" at the Boston and one of the Sisters was so strongly impressed with a certain song, that in her dreams the cat concert, given on a neighboring roof, resolved itself into "Don't You Want to Spoon With Me?" Thanks are due one of the actors for procuring us good seats for the play, and if "George" and his dear little dog ever come to Portland, we will all give him a good "hand."

We were on deck bright and early the next morning, being among the first to arrive at the hall. We hadn't been there very long when we were gladdened by the sight of dear Sister Cook, who was pleased to see so many of her "children" there. Then President Rogers took her little brood in tow, and trotted them up to be presented to the Grand President. The pleasure of those who had already met her were increased by the fact that she not only remembered our faces, but our names. We were glad to see Sister O'Neill, who assisted Sister Cook at the organization of our Division. And other familiar faces, too. How good it seemed to see them all again.

We cannot begin to tell you how much we enjoyed the day and the fine work done, so we think we had better not make the attempt, but leave it for someone more skillful with the pen, but we must speak of the lunch. We have not as yet discovered the right word in the dictionary to express how perfectly delightful and delicious it was. Sister Cook evidently felt the same way, and we noticed she developed an extraordinary fondness for "frozen pudding," with which the entire table accommodately supplied her.

The reception in the evening was a very pleasant affair, and gave us a better opportunity to greet our Grand Officers, whom we feel we cannot know too well. We found the spirit of cordiality well exemplified in our Sister hostesses, and shall ever retain the pleasantest recollections of them, and our attendance at the Boston

School of Instruction. In connection with the whole affair, the committee are to be heartily congratulated upon the systematic manner in which all the arrangements were carried out.

No. 259 did not remain for the closing exercises and festivities, but returned the following day. Of course we had to do a little shopping, and it was a decidedly tired and seedy looking little procession that straggled through the big stores, with Sisters President and Treasurer in the lead. On arriving at the train, the company compared notes as to mishaps, and found that no arms or legs were missing. A few minor accidents were reported, however. A cot bed had collapsed, and the laughter that ensued had called forth a severe and sarcastic reprimand from one of the resident roomers, who wanted to know if we "wouldn't please make a little less noise, so I can get to sleep again." Needless to say, no louder sound than a whisper was heard in that room the rest of the night (snoring excepted).

Sister Jordan had had the door of an "elevated" shut in her face just as she was about to be the last of her party to step aboard. It will be one of the regrets of her life that she did not have a camera handy to get a snap-shot of the horrified expression on Sister Waterman's face, when she saw her "running mate" thus ignominiously left. But Sister J. took the next train and got there as soon as the rest of her party. Sister Jordan was the victim of another slight mishap, also Sister Emery, and we understand that some of the party who came to Portland on a later train had their individual woes.

After we all got home and washed our faces and hands, and did our mending, we were ready for our Grand President, who came to us the last of the week. And if she enjoyed this, her first visit to Portland, one-half as well as we did, then indeed she had a thoroughly good time. On the evening of her arrival, the Brothers and Sisters went to meet her at the home of President Rogers, and we lay the flattering unction to our souls that we quite distinguished ourselves as entertainers. It was a sort of vaudeville program, one of the most striking things on the bill being a "hand-to-hand" encounter between a "potato bug" of prodigious size, and a wee chicken. At least Sister Cheney said it was a "potato bug."

The next day, after a little sight-seeing, we settled down to business, and held a special meeting, where we were joined by eleven Sisters from Oriental Division 283, of Bangor, and Sister Tatterson of No. 99, of Boston. We had a very profitable and enjoyable session, and among other things exemplified the penny march, which so delighted us in Boston. We appreciate

very much the kind words of commendation which the Grand President gave us for our work, and hope to continue to merit it in the future. A remembrance from 259 in the form of a souvenir spoon was presented her. And while she modestly disclaimed having earned it, we did not feel that way about it, and it gave us great pleasure to be able to give her some proof of our affection.

In the evening a special car conveyed us to Cape Cottage, where we partook of one of the delicious shore dinners, for which this beautiful place is justly famous. Between 30 and 40 sat down to the tables, several Brothers being among the number. At one time Bro. Coleman, of Bangor, was the only Brother present, and was given a bouquet in recognition of the fact. When the other Brothers arrived, we believe he was planning to divide the flowers among them.

An hour was spent in wandering on the shore and around the grounds, and in admiring the magnificent view of the bay and islands from the Casino piazzas.

We then adjourned to the pretty little summer playhouse near by, where we laughed at and sympathized with the poor Professor's unique dilemma.

The Grand President left us Sunday noon for Bangor, en route for Riviere du Loup, where many of the Brothers and Sisters from Portland will again have the privilege of meeting her.

Come again, Sister Grand President, and we will only be too glad to show you the rest of the attractions of our beautiful little city, of which we are so justly proud.

SEC. 259.

Grand President in New Hampshire.

Our Grand President came to Concord, N. H., from the school in New York City, arriving June 22, on which date, with her, a fraternal visit was made to No. 49. She reviewed the work of the Division and complimented them on the same; made suggestions and corrections and gave a nice talk on insurance. Inspection postponed to later date.

After a few days' rest, a trip to see the "Old Man" at the Profile House, White Mountains, and an opportunity to catch up with her correspondence, which followed her by the bundle, on the evening of June 26 we started for Boston, where a School of Instruction was opened June 27 under the auspices of Divisions 99 and 256. The entire work was exemplified by these local Divisions with scarcely a correction or suggestion. Each form was warmly applauded, the Divisions sharing equally the honor and praise. The officers of both appeared in white, making a very pretty sight in officers' drill by No. 256, and in-

stallation by No. 99. Presidents Thresher and Woodman presided creditably. Past President Batchelder, of No. 99, conducted the installation entire without ritual. Both she and Marshal Chase received many compliments. The Marshals of both Divisions, Palmer and Rockwood, Getchell and Wilmot, and Guides Clark and Boyle made fine appearances and deserve special mention. Few rituals were used by either Division and the greatest praise belongs to the entire staff of officers and members. A vote of thanks was given Musician Bucknam, of No. 99, who gave us excellent service through the school. The Grand President made address of greeting, warmly received, and complimented both Divisions for efficient work. She also gave a talk on insurance, which was much appreciated.

Fourteen of the seventeen N. E. Divisions were represented, besides No. 1, of Chicago, Nos. 264 and 351 of New York City, with an attendance of about 225.

President Thresher on behalf of No. 256 presented to each Grand Officer a souvenir spoon of Boston.

Caterer Strahn served a first-class dinner in an adjoining room to about 200. The hall was beautifully decorated, and each member was given an emblematic flower.

President Thresher, of No. 256, entertained both Grand Officers during their stay of three days. The following served on committees: President Woodman, Sisters Getchell, Batchelder, Chase, Wilkins, Allen, Kidder, Lindsey, Place, Palmer and Downs, of No. 99; President Thresher, Ruth Jones, Hattie Lord and Louisa Landon, of No. 256, and to their faithful service the credit is largely due for bringing about one of the most successfully conducted schools ever held.

An evening reception to Grand Officers by No. 256 followed, and was well attended by the B. of L. E. and G. I. A. Among Brothers present were C. E.s of Nos. 312 and 439—Fletcher and Alexander—and Bucknam, air brake instructor B. & M. R. R. The receiving party consisted of Grand President, A. G. V. P. and Presidents of local and visiting Divisions. Reception Committee, Sisters Kimball, Potter and Davis. Light refreshments were served by Sisters Paige and Clark, and an orchestra furnished music.

A pleasant feature of the evening was the happy thought of No. 99 in the presentation of twenty-four beautiful pink roses to our Grand President by President Woodman, it being the 24th anniversary of her marriage. She expressed appreciation and thanks for this courtesy, when so far away from him to whom she pledged herself a bride twenty-four years ago.

On June 28, Division 99 gave to the

Grand Officers a complimentary dinner and ocean trip to Bass Point, where a happy party ate, and ate, and ate of the regulation fish dinner. President Woodman and Vice-President Brouthers and other members of No. 99 were untiring in their efforts for the comfort and pleasure of their guests. Among the places of interest passed were Forts Warren and Independence. A much prized souvenir is the "tintype" of the party of eighteen. Returning to Boston several places of historic interest were pointed out, among them Faneuil Hall and old State House.

In the forenoon of June 29, by courtesy of No. 256, a carriage drive to many places of interest was very much enjoyed by the Grand Officers, President Thresher and Chairman Jones accompanying them. A drive was taken over Columbia Road, past Marine Park, Franklin Park, Harvard, Longfellow's home, the Washington elm, under which he took command of the American army in 1775; public gardens, Boston Common, Commonwealth avenue, Mrs. Gardner's palace, Simmon's College, Dutch Cocoa House, formerly at Chicago World's Fair; Jamaica Pond, Boston's largest body of fresh water; the Arnold Arboretum, the property of Harvard, the finest tree museum in the world.

After dinner occurred the inspection of No. 99 by the Grand President. There was a large attendance, besides visitors from Nos. 49, 61, 155, 224, 256, and 351. They acquitted themselves creditably, and were complimented by the Grand President, Guide Sister Boyle coming in for her share. The examination on by-laws was fine, Insurance Sec. Wilkins being unusually well posted.

A beautiful Duchess lace handkerchief was given to the Grand President, and a cut-glass olive dish to the A. G. V. P. The hall was decorated with flowers. At the close Sister Cobb was escort to South Station.

In the evening No. 99 gave a reception to the Grand Officers and celebrated their fourteenth anniversary. This Division, the second oldest, the largest in the Northeast, and very nearly the largest of all, numbers 108. Sister Allen, their first Secretary, is still retained in that office, her books second to none. Sister Dority, their first, has been almost for the entire period of fourteen years their honored Chaplain.

Among Brothers present were A. G. C. Hurley, Grand Chaplain Dority, C. E. No. 191, Woodworth; Air brake Instructor Bucknam, C. E. No. 61, Abbott, and Chief G. B. A. Mitchell.

A first-class banquet (Sister Allen, Com.) was given and ample justice done. An orchestra was in attendance. A pink carnation was given to all, and the com-

pany was favored by remarks from the Grand President, Grand Chaplain, A. G. Chief, Bros. Abbott, Mitchell and Woodworth. Reception Committee, Getchell, Kidder, Abbott and Sharkey; the receiving party being as before, Grand Officers and Presidents of local and visiting Divisions. Here good-byes were said, the Grand President leaving Friday morning, June 30, for Old Orchard Beach, the guest of the musician of Division 99, Bucknam.

From there she went to Portland, Me., to visit No. 259, July 1. Sister Jordan, Secretary of 259, will doubtless tell you the rest. From Portland she made the trip to the Canadian Union Meeting, returning home via Buffalo, where she visited and inspected the local Divisions. After a call on Sister C. J. Hutchins, at Prospect Hill, where a pleasant time was enjoyed with Sister Palmer, of No. 99, we returned to the home of the A. G. V. P. at CONCORD, N. H.

Golden Wedding.

TOLEDO, OHIO.

The golden wedding anniversary of Bro. John G. Gale, of Division 457, and his wife, Sister Mary E. Gale, of Division 57, was celebrated at their home in this city, Saturday, July 22.

The evening before, Bro. and Sister Gale were pleasantly surprised by a party comprising Brothers from Divisions 4 and 457, and the Sisters of Division 57, who called to remind them that their golden wedding was remembered.

About fifty were present to extend congratulations. During the evening Sister Jenny, President of Division 57, presented Bro. and Sister Gale with a purse of gold pieces amounting to \$85, the gift of the Brothers and Sisters. Bro. Gale responded in a few words of thanks and appreciation for the gift and the kindly feelings which prompted it; the ladies of Division 57 then served refreshments.

A second surprise, planned by the children and grandchildren of Bro. and Sister Gale, took place on Saturday afternoon, and a wedding dinner was served. The only great-grandchild is little nineteen-months-old Gale Miller, who in an appropriate little speech presented each of his great-grandparents a ten-dollar gold piece.

Brother Gale has been in the employ of the Lake Shore road and in active service, until about two years ago, since May, 1867. Failing health compelled him to retire, and now he must content himself with an occasional trip over the road where he served so long and so faithfully.

Division 57 numbers about 125 members; very few, however, are able to celebrate a golden wedding, hence Sister Gale's was a notable event in the history of the Division.

C. E. M.

Memorial Service at Knoxville, Tenn.

In the Centenary church on the 25th of June the members of Div. 239, B. of L. E., held memorial exercises in memory of deceased Brothers of 239 and Brothers of other Divisions who are buried in the cemeteries here in Knoxville, Tenn. The floral engine was beautifully decorated by the Sisters of 71, G. I. A. Other decorations consisted of ferns and roses. The draped vacant chairs caused each one to remember one or more of the Brothers. After the voluntary and hymn, prayer was offered by Rev. J. B. Carnes, the father of our deceased Bro. J. D. Carnes.

Bro. C. A. Trainum, chief of Div. 239, gave a brief history of the Division, its aims and purposes, the motto of the order, and how striving to deal justly, being sober and truthful will help us to have pure morals, virtuous lives and noble aspirations. He called the roll of those who had been taken from the ranks. Many hearts were sad and deep feeling was manifested throughout the services. Not many persons of the large congregation present but had a husband, father, son, brother or friend in this roll call.

A duet by Misses Lena and Susie Roberts was appreciated. The pastor, Rev. T. C. Schuler, preached a sermon of One Who Died, and Now Lives Again, showing us so plainly that it is for the future life and not death that we must prepare and be ever ready. After a solo by Mrs. E. R. Zemp were talks by Rev. Carnes and Brother Trainum, each speaking lovingly and tenderly of the absent ones. Nor was our beloved P. M. Arthur forgotten, but sweet tributes of praise were paid to the wonderful monument he has built for himself and which will grow higher in the ages to come.

This is our first memorial service, but next year decorating the graves and memorial exercises will be on our program. The Sisters began this decorating, but they will be alone no more, for the B. of L. E. will join them in this fraternal work.

A FRIEND.

Picnic at Railway Men's Home.

DEAR SISTERS: Believing that you will be interested to know about our picnic at the Railway Men's Home, Highland Park, Ill., which was given by Crescent Division No. 1, G. I. A., I will try and tell you about it.

The date of the picnic was August 1, and the weather was perfect.

Our train left the depot of the C. & N. W. Railway at 10:30 a. m., arriving at the Home about 11:15 a. m., with a happy crowd of over 300 Brothers and Sisters with their families and friends.

The C. & N. W. Railway Company gave free transportation the round trip, as they have done for several years, and too much cannot be said in praise of their generosity and co-operation, thus making it possible for us to do something to help the cause of our unfortunate Brothers, into whose lives these occasions come like a ray of sunshine, brightening and cheering them in their sad afflictions.

They tell us that the memory of these social gatherings is cherished by them when the pleasant summer time has given place to the cold, dreary winter, when many of them are shut-ins.

As before, we spread a table on the lawn under the trees for the inmates of the Home, and it certainly was a pleasure to see them enjoy the lunch served them. After luncheon was over the children soon became the possessors of the contents of the grab-bag, and races were also a feature of the program.

A number of visitors from other Divisions were welcome guests, among whom were Sister W. H. Murphy, of Dallas, Texas, who is a member of Mistletoe Division 181, Denison, Texas, and Sister Sweets, who, I believe, is a member of a Freeport, Ill., Division.

We are indebted to Chicago Divisions who helped to make the day a success, especially Divisions 5 and 96.

We believe that every one who attended feels amply repaid for his share in the work, in which all cannot but be interested by the feeling of good will and harmony that prevailed, and though a tired crowd wended their way homeward, everyone was feeling good-natured.

Mr. and Mrs. O'Keefe did everything to make it pleasant for us, and we were welcome to take possession of houses and grounds for the day.

At the present writing I do not know the exact sum we will be enabled to give the Home as a result of the picnic, but feel sure that it will reach our expectations. Sisters, those of you who have not been privileged to go with us as yet, try and come next year, and we promise you a happy time. With best wishes for the welfare of all sister Divisions, I am

MRS. W. W. HAMILTON,
President Div. 1.

On Insurance.

A word in regard to our insurance. I am like Sister Castin, "let well enough alone." I, like her, could not keep up my assessments if the age limit should prevail. For, Sisters, our money comes from our husbands—hard earned money—and we must keep up their assessments, because it benefits them if they become disabled. This age limit will do for Knights

and Ladies of Honor, Court of Honor, Ben-Hur, and a great many other secret societies that take in all classes of people, but you must remember we are limited to just engineers' wives, and not all of them are members of the G. I. A., and a great many that are members of the G. I. A. are not members of the V. R. A. So, Sisters, think well for the good of the order before you cast your vote.

Division 47 is still in good running order, taking in new members, and the most of them taking out one policy and some of them two, and socially we are on the top round. One good Sister said to me, "I lay aside my work willingly to attend Division meeting, because they are so pleasant," and she is the mother of a large family. So, Sisters,

"Be swift, dear heart, in saying the kindly word:
When ears are sealed, thy passionate pleading
will not be heard."

MRS. JAMES SAMPSON, Cor. Sec.

Program of Study for September, 1905.

Sentiment—"Arise and labor, bind and prune, and dig and sow; form, build, beautify, exalt."—Jeremy Taylor.

1st Subject—Japan, Where situated, surface, soil, climate, river system. Compare area with other countries.

2d. Name and describe chief cities.

3d. Productions of Japan.

4th. Vacation experiences, Club members.

5th. The Chicago strike, Literary Digest, May, 1905; The World's Work, June and July, 1905.

6th. A Far West Exposition, World's Work, July, 1905; Leslie's Weekly, June 22, 1905, and other magazines.

7th. Booker T. Washington an exemplary citizen, North American Review, 1901.

8th. Booker Washington, A Southerner's View, April 13th, Outlook, 1901; November 9th, Outlook, 1901.

These are bound volumes and generally found in public libraries. We recommend to our club members the following books to be used in the study of Japan: Japan, Aspects and Destinies, by W. Petrie Watson; Japanese Girls and Women, by Alice M. Bacon; Japanese Life in Town and Country, by Geo. W. Knox; Letters from Japan, by Mrs. Hugel Fraser; The Gist of Japan, by R. B. Peery, A. M., Ph.D. Other histories of this country will probably suggest themselves. All profitable.

Again autumn is at hand and the trees are trimming their summer dresses with beautiful autumn colors. We will return from our summer vacation, I hope, thoroughly rested and full of energy to begin a new year of study. We hope to make this year our banner year. The Program

Committee has worked faithfully to bring about the success of the Study Club, and would not only be glad to extend to the club a helping hand, if desired, but deem it a pleasure to hear from them at any time.

The Highest Pleasure: If heaven ever touches earth, it is when mortal man finds pleasure in bringing happiness to others; when the spirit of charity is abroad, casting out the demon of selfishness from the hearts of men.

We are in receipt of a song entitled "The Men Behind the Throttle Are Heroes Every One," with the compliments of the composer, Mrs. Wm. Blake, whose husband is a member of Division 152, B. of L. E. Any one wishing a copy can procure it by sending 25 cents to Mrs. Blake, Walton, N. Y., Box 228.

New Divisions.

Greetings from Bon Ami Div. 348, of Galesburg, Ill., an Auxiliary to Galesburg Div. 644, B. of L. E., organized March 3, 1904.

This Division of the G. I. A. to the B. of L. E., consisting of thirty-seven charter members, was organized by our Grand President, Sister W. A. Murdock, assisted by Sister George Murdock of Div. 1, of Chicago, Ill. The success of the organization of this Division is due to the efforts of our President, Mrs. W. E. Chitty, and Bro. C. E. Harmon of Galesburg Div. 644, B. of L. E. After the organization and installation of officers the members were invited to the Illinois Hotel, where a banquet, given by our husbands, awaited us.

Toasts and speeches for the good of our order were made. After which the members of Bon Ami Div. 348, G. I. A., to the B. of L. E., separated with the consciousness of loyal feelings for our new order, and anxious and determined that Div. 348, organized under such auspicious circumstances, and the banner Division of the state in numbers, will keep in touch with our brother Division and to support the G. I. A. in all truth, justice, sobriety and morality. Our meetings have been instructive and well attended, and several new members have been taken into the Division since its organization. Yours in fidelity,

A MEMBER.

NEW DIVISION AT SAN ANTONIO.

In looking over the JOURNAL for June I was very much disappointed to find nothing from our new Division at San Antonio, for I expected Alamo Div. 354 to introduce herself as a member of the G. I. A. family.

I had the pleasure of organizing this Division on April 7, assisted by ten members of Mis Letoe Div. 181, and nine members of Pansy Div. 194. We met early Friday morning at K. of P. hall, organized and elected officers. Twenty-eight charter members were present. Several being absent, they decided to hold the charter open until the following Friday to receive them. In the afternoon the new

officers were installed, and the entire ritual work was beautifully exemplified by the visiting Sisters. Sister Moore, President of Pansy Division, presided in her usual gracious manner. Before closing the meeting I was presented with a bouquet of most beautiful roses, tied with our Division colors. This was the gift of Sister Morley, the roses being grown in her own garden, and needless to say such a remembrance was highly appreciated.

On the evening of April 8 a reception was given in honor of the visiting Sisters, at which the engineers and their families were guests. The large hall was crowded with happy people, a fine musical program was rendered, and several recitations by the little folks deserve special mention. Mesdames Speer and Morley presided at the punch bowls, and were kept busy during the evening, for the punch was delicious. Dainty refreshments were served in the banquet room, and each guest received a pretty souvenir card of the happy occasion. I was remembered with a lovely bouquet of pink carnations. I remained in San Antonio several days for a visit with my sister, Mrs. L. E. Mays, and was present at the first regular meeting of this Division. Was surprised and delighted at the excellent manner in which they conducted the meeting and went through the work. Five were received at this meeting, and the charter closed with thirty-three members.

On Monday afternoon as I was making preparations to start home I was called into the parlor, as "some of the Sisters had come to bid me goodby." Imagine my surprise when I found the rooms filled with smiling faces. Sister Simpson, with a big bouquet of roses and lilies to brighten my homeward trip. We were invited to the dining room where we enjoyed delightful refreshments, which they had managed to smuggle into the house. I was trying to collect my wits sufficiently to thank the Sisters for so many kindnesses, when the President, Sister Smith, in behalf of Alamo Division, presented me with a beautiful cut glass water set. I tried to thank them, but the lump in my throat got too big, and I couldn't say what I wanted to, but the thanks so poorly expressed were none the less sincere. I have just heard very encouraging reports from there. They have added to their membership, have a splendid relief committee, with Sister Simpson as chairman, who visit not only the sick members but also those who fail to attend the meetings. They are all interested and earnest in the work, and I predict that Alamo will soon be one of our banner Divisions.

Another Division recently organized, and of which I am very proud, is Springtime Div. 358, at Commerce. Was accompanied by Sisters Williams and Coppers of Mistletoe Div. 181, arriving at Commerce on the afternoon of May 29. We were met by a committee of Brothers and Sisters who gave us a hearty welcome, and entertained us in their homes during our stay. In the evening an informal reception was given at the B. of L. E. hall, where we had the pleasure of meeting a number of engineers and their families, and spent a delightful evening. Short talks were made by several of the Sisters and Brothers, among them was Bro.

Worley, Chief of the B. of L. E., and Bro. Wm. Mason. Both spoke in highest praise of the good work of the G. I. A., and expressed much pleasure that they were to have an Auxiliary of their own. Delicious refreshments were served and much enjoyed by all. The next morning we met at the B. of L. E. hall at 9 o'clock, and with Sister Williams as Secretary, and Sister Coppers Marshal, Springtime Div. 358, was duly organized, officers elected and installed. We adjourned for dinner and were the guests of Brother and Sister Barte, who were old friends, formerly living in Denison. I wish I could describe that dinner and how much we enjoyed it, but that would require more space than we are allowed, and then I am afraid the Sisters would not like it if I told how much they ate. At 2 o'clock we again met at the hall and exemplified the ritual work. This Division is small in numbers but great in courage and determination, and I am confident will be a very successful Auxiliary with such enthusiastic workers.

At the close of the meeting the President, Sister Mason, in behalf of the Division, presented me with a lovely, hand-painted china plate, which I prize very highly. While our visit was short in Commerce it was very pleasant indeed, and the kindness of the Sisters will always be a sweet memory. We are especially indebted to Brother and Sister Mason for courtesies received.

MRS. R. W. MAYS.

I TAKE much pleasure in again reporting the organizing of another new Division in California, the third within five months. All healthy youngsters that we expect to thrive and grow.

The Santa Lucia Division was organized at San Luis Obispo, Cal., by Sister Armstrong of Div. 106, assisted by Sister Bowley, Grand Chief, and Sisters Brown, Ballentine, Bushnell and Alger, also of 106, who made the 250 mile trip to be present. The day set for instituting the Division proved to be a very warm one, but all the ladies were present at the appointed time and ready for work. The instituting and election of officers being completed we adjourned for lunch, after which the officers were installed and the ritual work exemplified, the members of the new Division taking such an interest and responding so readily to instruction that we were all delighted with the appreciation of our efforts, and felt that indeed no mistake had been made by organizing the new Division, and that the officers had certainly been chosen wisely and well.

Under good of the order many interesting remarks were made, and the Grand Chaplain, in behalf of Div. 106, presented the new Division with a \$10 gold piece. Sister Miller, President of the Santa Lucia Division, responded, and in turn presented the Grand Chaplain, also Sister Brown, President of Div. 106, and the Grand Organizer, each with a beautiful bouquet of carnations tied with broad streamers of ribbon.

After the close of the meeting flowers were distributed to all, and ice cream and cake served, which was much appreciated by all, being doubly welcome on account of the heat. Some of the vis-

iting Sisters took the opportunity to remain in the charming little town for several days and enjoyed visiting many places of interest.

Much of the success of organizing the new Division is due to the work of Sister Burke, who withdrew from Div. 106 to join the Santa Lucia, and was untiring in her efforts to work up a Division at San Luis Obispo. Success to the Santa Lucia say we all.

ORGANIZER.

AURORA Div. 357, of Aurora, Ill., was organized May 3, with a charter membership of 26, through the efforts of Sister Gallispie, who was elected President. Grand President Murdock honored our Division with her presence, and after a faithful day's work, completed our organization. At noon luncheon was served, the Brothers being invited to partake of it. After this Sister Murdock was presented with a souvenir spoon, Brother Kagey making the presentation speech. Sister Murdock responded in her most gracious manner.

We were assisted into the secrets of the order by Sister Miller, who accompanied Sister Murdock from Chicago. We have since held a card party which was very remunerative, and a picnic at River-view Park, to which all railway men and their families were invited.

COR. SEC. Aurora Div. 357.

A Child Was Born.

Born on April 7, 1905, a daughter to the Sunset and Gabriel Divisions of San Antonio, Tex. These two Divisions began sweet-hearting early in the year. The wooing was done by the Sunset, visits were made, loving messages were written, and telephones were frequently heard to jingle. Sunset proposed, and its charms proving irresistible, Gabriel blushing accepted, consent to the union was willingly given by the parent (Grand President), and marriage certificate duly signed.

In due time it was evident that the services of Mrs. Mays, State Organizer, were needed. She was sent for and arrived on April 6, bringing with her as assistants Sisters from Denison and Cleburne Divisions to the number of 16. On Thursday, the 7th, the child was born, both strong and healthy, 38 members giving promise of a long life filled with good works. All being agreed it was christened Alamo, after our own beautiful Alamo City. On the following Saturday night the birth and christening were celebrated by a reception, which was attended by the visiting ladies and the members of the Sunset and Gabriel Divisions and their families, at which time the young child was presented and publicly acknowledged.

Miss Alamo is now nearing her fourth month, and we are much pleased with her growth, three new members have been added and one is in the hands of the investigating committee. She has cut several teeth, has begun creeping on all fours, and we feel sure she will soon be able to walk alone. Sunset and Gabriel seem to be very proud of her and have shown their appreciation by donating a handsome sum of money and a beautiful desk. More anon.

INFELIZE.

Division News.

It has been some time since Charity Div. 4 has been heard from through the JOURNAL, but hope our Sisters do not think we are idle. I wish to tell the Sisters of the good times we have had during the first six months of the year. Our President hit upon a plan to get all the members out and have a social time after the meeting closed if time permitted, so she had the names of every Sister written on a slip of paper and had the Guide to draw three names to entertain at the next meeting, and it is very amusing to see how the Sisters watch for the names that will be drawn. We have had some very nice entertainments in the way of musical and guessing contests; light refreshments are always served.

On June 8 we had a very nice meeting. We had planned a little surprise on Sister Furgeson, who expected to leave for her future home in Washington. In behalf of the members, our President presented Sister Furgeson with a set of beautiful silver teaspoons as a token of our esteem. Sister Furgeson could only say, "I thank you all."

After the meeting closed Sisters Watson, Cogley and Wilson had charge of the entertainment, after which snowy white lunch cloths were spread on the tables with a beautiful bouquet of flowers for each table, where ice cream and cake were served. Every one that was at the meeting enjoyed it very much. We all wished Sister Furgeson prosperity and happiness in her new home, and all went home feeling that Charity Div. 4 was growing better every meeting.

Div. 4.

DIVISION 274, St. Paul, Minn., is never wanting in means to keep care within bounds, has well sustained of late its well-earned reputation for lively interest in things social.

Among some of the recent pleasant gatherings was the surprise engineered on Sister P. J. Conley at her home, when our President, Sister Hammond, on behalf of 274, presented Sister Conley with a magnificent brooch set with diamonds and pearls. Offering was made in slight recognition of good work by a most valued officer. Refreshments materially aided the feast of reason and the flow of soul. The next occasion was the surprise on Sister J. O'Neil, who was presented with a beautiful cut glass bowl by our President, as a reminder that the donors were sorry to part with her, as she soon leaves for St. James, Minn., which is to be her home.

Another surprise was that on Sister T. Quinlan, who has been our Guide since our organization was perfected. As a reminder that her efforts in behalf of the Auxiliary were not unappreciated, a token as substantial as the good will of the givers was presented in the form of a splendid set of oak dining room chairs with leather seats, by our President, Sister Hammond, in a few well rounded words.

The function at the home of Sister W. P. Smith, on the 20th of June, to which the Division, with husbands and children, were invited, was to celebrate the twelfth wedding anniversary of Brother and Sister Smith. The rooms were decorated with ribbons of our colors, and the dining room was

literally covered with roses. The menu is best described as elegant, and could not be otherwise with such royal entertainers. Sister Smith was assisted by her sister, Mrs. Paul Weide, and Sisters Works, Durand, Keating, Willis and Anderson. A feature of the gathering was a numbered coupon presented to each guest, which called for a souvenir that will not be forgotten by the recipients.

A unique little episode was pulled off on this occasion, and one that will also be remembered by the participants as quite out of the usual order of things. Brother and Sister Smith, notwithstanding their twelve years of married life, have no children. Now, Sister Morton, always thoughtful for the happiness of others, went to the Foundlings Home and obtained a fine blue-eyed boy and presented the little fellow (who was christened Ellwood by Sister Morton) to the happy couple. The Division gave Sister Smith a beautiful linen tablecloth and napkins. It was intended that the souvenirs should be a surprise for the guests, but the surprise of the entertainers was full and complete when the heir to the Smith estate was brought out and presented in due form.

MRS. A. H. WALKER, Cor. Sec.

CENTENNIAL DIVISION forgets her obligations often and falls short of her duties. One of these occurs to me in the nature of carelessly forgetting to acknowledge the generosity of the Subdivisions who so generously responded to our call for assistance. It was a genuine evidence that they regarded the members of our noble order not selfishly, but had that true sisterly love and evinced their love by their actions. Often Divisions are weak in numbers, weak financially; the members not being able to attend regularly causes weakness. In this state of affairs is needed a revival of some description. We have had many instructive articles on how to earn money; nevertheless, Sisters, you are aware of the old maxim, "Circumstances alter cases." There are always expenses accumulating, and virtuously speaking the Brothers must remit for us unless we can manage to defray them by entertainments, etc., thereby keeping our G. I. A. self-sustaining. We are not a wealthy Division, and have members to whom it is our duty to render charity. While we are not groaning under our burden, relating this will convince you that we have not been sitting idly and allowing opportunity to vanish in the distance.

There is always something to accomplish, and with our efficient corps of officers a prosperous year is anticipated. It is the desire of every loyal member to advance the interest of this benevolent order; while our church, in my estimation, is first, yet the love I hold for this society is as fervent as the ties which bind us to the church. The one grand principle of our Auxiliary, "Harmony," if it prevails then all is Love, and we feel like one of the old saints at a soul-stirring meeting, and are able to join in with him in saying, "It was good for me to be there." Father Time is plodding on and on, and ere we are aware the year will have been closed. My desire is that the G. I. A. will continue to grow, to progress, and ever be the joy and comfort of the B. of L. E. COR. SEC. 221.

It has been a long time since Kentucky Belle Div. 45 has had a chat with the Sister Auxiliaries through the columns of the JOURNAL. Though our pen has been silent we have had many good things to chronicle. During the past year we have accomplished much for the good of the order to which we have pledged our support. We have taken in five members, have had several socials during the year which were pleasant and profitable. On July 25 we gave a picnic at a place called Parker's Mill, which was a grand success, both socially and financially. The committees and Sisters in general deserve great praise for the genial manner in which they served their guests. The dancing pavilion was managed by Sister Lester and Bro. G. L. Peffer, who worked very hard to have their department prove profitable. We extend our thanks to our many friends for the kindly interest and help they gave us.

Sincerely yours, GUIDE Div. 45.

It is a pleasure to us to let the readers of the JOURNAL know that there is a Division in existence known as the Pacheco Div. 339, Kern City, Cal. We are in a flourishing condition, with \$150 in our treasury; the first \$10 was presented by Sister Norton, in behalf of Golden State Div. 104. We have many social gatherings which are always successful, socially and financially.

On the 1st of June we received an invitation from Golden State Div. 104 to spend a few days with them about the 15th of June, which was accepted. That being their regular meeting day they had their meeting in the morning, and at noon a recess was taken for a few hours, and the doors were opened to the Brothers to enjoy a bountiful banquet prepared for us, at the dining hall of the Van Nuys Hotel. I dare say every person did justice to the occasion. After lunch a meeting of instruction was held, and talks for the good of the order. The same evening we all enjoyed a theater party. Next day, accompanied by the Brothers who were fortunate enough to join the ladies, we boarded a special parlor car and were soon at Long Beach. The weather was all that could be desired, warm, yet not oppressively so, a gentle breeze tempering the heat. The morning hours were spent sight-seeing and bathing in the surf. We also enjoyed the band concert at the pavilion and a stroll to the park where we had our pictures taken, which were a failure, as I would have liked to have sent one to the JOURNAL. The next day we were entertained at the chutes, which will long be remembered by those present. The following evening Sister and Brother Jordan entertained at a card party, prizes were awarded, dainty refreshments served, and vocal and instrumental music was very much enjoyed, when we all departed for our homes, declaring Golden State Div. 104 royal entertainers.

As this is my first letter to the JOURNAL I hope it will not tire the readers. I will close, wishing all Sister Divisions happiness and prosperity.

Yours in F. I. and P. M. H.

JUNE 14, 1905, was regular meeting day for Mistletoe Div. 181, Denison, Tex., but as our President, Mrs. W. D. Oland's birthday was also on this date

our meeting was a little out of the ordinary. We planned to surprise her by serving refreshments in the banquet room after meeting. Our plans worked well, although they were made hastily. Our meeting was well attended, and after a pleasant session of routine work we closed in regular form. Our musician had been instructed to play a march immediately after closing, and officers and members formed in line to march to banquet room. Our Grand Officer, Sister Mays, escorted our President, who was bewildered, and asked what we expected to do. She was soon shown, as the line of march led to the banquet room, where all stood at their places at the table, our President at the place of honor, with our Grand Officer on her right. Sister Mays then presented Sister Oland with a beautiful hand-painted china plate as a birthday remembrance from Mistletoe Division. Our President was so overcome with surprise that she was hardly able to respond. Our Guide, Sister Coppers, and Sentinel Sister Ford, each presented her with a bouquet, after which we were seated and served with delicious ice cream and cake. To say we spent a pleasant afternoon mildly expresses it, as we enjoyed ourselves more than we could express, and departed for our homes wishing our President many more happy birthdays. SEC. 181.

PERHAPS some may think Success Div. 159, Memphis, Tenn., is dead, as she has not put in her appearance in the JOURNAL for some time. She is neither dead nor sleeping, but is wide awake in the interest of the order. We have initiated fifteen this year thus far, with promises of many more.

Last March we gave a Birthday Party and realized a nice sum for our treasury. Our next effort was a raffle of a beautiful sofa pillow. We made \$27.50 on that. Quite often we have an afternoon tea, that is more to promote sociability and bring us closer together, yet we always make a little for the treasury then. We have adopted a sweet way this year. We remember each Sister's birthday by presenting her with a piece of cut glass, and I think as the years pass by we can look at them with such pleasant recollections. Last, but not least, we had an experience meeting at Sister Charley Barnett's; we were to earn \$1 each and tell how we earned it. It was decided that Sister Coburn and Sister Droyer carried off the palm. We did splendid with that, so you see we are doing with our might what our hands find to do.

We are using every effort to make the coming convention a success. Sisters, perhaps we can't entertain you as we were at Los Angeles, yet we will do the best we can. And we hope every Brother and Sister will be with us that possibly can, so you may see that Memphis will give you a warm welcome and a glorious time.

One word for our Insurance. It is doing fine; we have added many to our list this year, and may it remain as it is to help the old members as well as the younger ones. With best wishes for our noble order,

I am yours in F. L. and P.,
MRS. J. M. BRUSE, Sec. Div. 159.

ON Monday evening, June 19, the members of Garnet Div. 313, of Ludlow, Ky., gave a lawn fete

at which ice cream and cake were served, and from which a neat sum was realized. The lawn was tastefully decorated with Japanese lanterns and headlights. Thanks to Mr. J. H. Murphy, master mechanic, for the headlights. We wish to thank Brother and Sister C. H. Slade for the use of their beautiful lawn, also the Brothers of Div. 603, who assisted in making this a success both socially and financially.

On Thursday evening, July 27, we chartered the private car "Blue Grass," of the C. N. & C. Street Railway, and enjoyed a pleasant ride of four hours over its various lines. We had ice cream and cake and a splendid time generally.

We have had one visit from a State Organizer, from which we derived great benefit, and we hope to be honored by a visit from one of our Grand Officers as we feel a visit from them would do us a world of good. With best wishes for all,

Fraternally yours,
MRS. W. A. SAYLOR, Cor. Sec.

DIVISION 295 of Neodesha, Kan., is progressing a step at a time. We have initiations once in a while and are always glad to get new members. We have nice gatherings and good times. The members and husbands gave a pleasant surprise at the beautiful home of Brother and Sister Scheighling in honor of Brother and Sister Hendricks, who were here visiting their many friends in Neodesha. The evening was warm, consequently the ice cream served was doubly welcome. Music was furnished by Sisters Baker and Schleighing, which was thoroughly enjoyed. We departed at a late hour hoping for more such meetings.

COR. SEC.

A MOST enjoyable event took place at Lebanon, Pa., July 30, 1905. That being the day for the fifth Sunday meeting, Div. 104, B. of L. E. of Columbia, decided to attend and have their Auxiliary, Div. 326, accompany them. Transportation was secured from Columbia to Lebanon through the perseverance of Brothers Heim and Dennell.

We were met at Lancaster by members of the different Divisions of Philadelphia and their Auxiliaries, making a merry party to invade the staid and decorous old city. On our arrival we were at once escorted to the Lebanon Valley House, where a fine dinner was served in true Lebanon style. The repast over we proceeded to the Opera House where we listened to one of the most appropriate addresses ever delivered to engineers and all loyal patriots, by Gen. Gobin of the N. G. P. A very appropriate speech was also made by T. G. E. Deloss Everett, and members of the Y. M. C. A. The members of the B. of L. E. were greatly disappointed because of the unavoidable absence of Grand Chief Stone, who they were assured would be there. The singing of the male quartet was exceptionally fine.

After the public meeting the B. of L. E. held a secret conclave, and we spent the intervening time in a twenty mile trolley ride from Lebanon to Palmyra and return. All who are acquainted with Sisters Heim, Dennell, Shenk and Van Meter know what an interesting ride that was. On re-

turning, as most of the ladies were hungry, they decided to have sandwiches and coffee, but Brother Gerfin kindly escorted us to what seemed to be an elevated air castle in which we were served with everything that the inner man could desire. Nothing but fried chicken with its accessories suited the taste of "Pop and Mama" Heim.

At 6 P. M. we left the city, stopping at Mt. Gretna for a walk in that grand old forest. Our Sister Armstrong, who is sojourning there, was our escort. The quiet, beautiful old woods and walks impressed us very much, reminding us of the Garden of Eden before the serpent entered to change all things.

From Mt. Gretna the merry party went to Conewago, where a change of cars took place, the Philadelphia Division going east, the Harrisburg west, and Columbia home. All decided that the day had been spent in a most enjoyable way, no desecration of the Sabbath, every one remembering the Third Commandment and obeying it. We believe that each member of the different Divisions was spiritually, morally and physically benefited and will, with renewed zeal, prove to the world that they are in reality the noble, brave and honest engineers that the speaker, Gen. Gobin, painted them.

Div. 326, G. I. A.

VANDERBILT Div. 264, G. I. A., have been giving a number of coffee socials and luncheons at the different members' houses. The first to entertain was Sister G. Benton, where quite a few Sisters and their friends congregated and had a fine afternoon. Then Sister F. Burrows gave a luncheon, and the Sisters did more than justice to the good things which loaded the table. Sisters Munger and Craig followed in the steps, and we wished that some of our other Sisters were there to enjoy the goodies, and the fine singing and playing. Sisters Peterson and Raymond favored us with some recitations which were heartily applauded. The next was given by the Sisters Miller, and it seemed there could not be anything added either in the way of refreshments or enjoyment; the piano and vocal solos by Sisters Stroh and Elliott and Mrs. Rohl were more than appreciated.

July 17 we met at 125th St. R. R. Station where a special car had been provided for us by Mr. D. B. McCoy, to take us to Ossining, where we went to spend the day with Sister Raymond. It was a delightful outing, and a fine luncheon was served. We know from this experience that Brother Raymond runs everything on the same scale and schedule as he does the "Empire State Express." In the evening we returned to New York a happy crowd.

SECRETARY 264.

DIVISION 52, Columbus, O., is a large and prosperous one. We seldom appear in the JOURNAL. I think it is because we leave it to Sister Cassell, and she dislikes to blow the horn of her own Division. It is either that or else when space is lacking she thinks we won't kick if she leaves us out.

However, Division 52 is an active one, and we have many happy hours together. Our Division meetings are well attended. The hall is hardly

large enough to do the work with so many members. We have socials, lawn fetes, dances, etc., and so the years pass merrily on.

Just before Sister Cassell went west this summer the Division, to the number of 50, went to her home one afternoon to surprise her. She was away at a funeral, but returned about 3 o'clock, and such a surprised woman you never saw as she stepped into the parlor to remove her hat. All she could say was, "Well!" The ladies took with them all the refreshments for the occasion, and in the midst of it all Sister McConathy, in behalf of the Division, presented Sister Cassell with a beautiful jeweled comb, and a bunch of pink carnations. She responded feelingly, assuring us that the gift was appreciated, and that she would wear it with pleasure.

We will take up our work in September with renewed interest and get ready for our Inspector, good Sister Wilson of Allegheny. MORE ANON.

G. I. A. Voluntary Relief Association.

TOLEDO, O., Sept. 1, 1905.

To Division Insurance Secretaries, V. R. A.:

You are hereby notified of the death of the following members, and for the payment of these claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for the same was dated later than July 31, 1905.

ASSESSMENT No. 225.

Died July 15, 1905. Sister Elizabeth Wall, aged 70, of Div. 46, Denver, Colo. Cause of death, killed by a train. Carried two certificates, dated April, 1896, and June, 1898, payable to Chas. Wall, husband.

ASSESSMENT No. 226.

Died Aug. 6, 1905. Sister A. Brown, aged 48, of Div. 28, Erie, Pa. Cause of death, acute general peritonitis. Carried one certificate, dated Aug. 11, 1905, payable to Ansel Brown, husband, Walter Brown and Stella Lett, son and daughter.

ASSESSMENT No. 227.

Died July 12, 1905. Sister J. W. Tallmadge, aged 41, of Div. 37, Little Rock, Ark. Cause of death, tuberculosis. Carried one certificate, payable to J. W. Tallmadge, husband.

Assessment No. 227 will be paid from the Assessment fund.

Members will pay their Insurance Secretaries on or before Sept. 30, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than Oct. 10, or stand delinquent till remittance is made.

Members in good standing July 31, 1905, five thousand and forty-seven in first class; and twenty-one hundred and five in second class.

MRS. GEO. WILSON, Pres. V. R. A.
M. L. ROBERTSON, Gen'l Sec'y and Treas.

Electricity—Power Transmission.

BY ELWOOD A. GRISSINGER, E. E.

The trolley takes its current from the overhead wire, which is called the trolley wire. The size of this wire varies from No. 0 to No. 000 Brown & Sharpe gauge. It must not be understood, however, that the trolley wire carries all the current the entire length of the line—i. e., that it carries all of the current for all of the cars that may be operating on the line at the same time. It may only carry the current for the cars at the points where such cars are operating. In observing the construction of any overhead electric railway lines, it will be noticed that on the same poles from which the trolley wire is suspended one or more heavy and insulated wires or cables are strung. If the details are sought, it will be noticed that about every dozen poles there will be a wire brought out from the heavy cable and attached to the trolley wire proper. The reason this is done is to avoid carrying too much current on the trolley wire proper; for when the cars come along they will draw current through the taps, which come from the heavy cable. The current may, therefore, come from two such taps for the same car, and flowing both ways meet at the trolley pole. The natural result of this method is to increase the carrying capacity of the overhead line while keeping down the size of the trolley wire proper. In cities where the districts are crowded, and there are a great many of the feeders which supply the trolley wire with the current, it is the practice to cut the trolley wire into sections and insulate one section from the other. This is done so that if any one section breaks down it will not affect the entire system. In the power station, there is always erected a large marble or slate switchboard, upon which are mounted the switches and circuit breakers which control the different

feeders or circuits which supply the trolley wire with power. This individualizes the system, giving any particular section of the road greater stability of operation.

In any system of electric traction, it is always an advantage to have the power station located near the center of the system. When this is done, the problem of distribution is very much simplified. It is much easier to feed from a center outward than it is from one end and traverse the entire distance. Central distribution means that it is not necessary to place as heavy wiring on the poles in order to get the necessary amounts of power at the different sections. It also means that, with any given sizes of wire, a much better service can be maintained. This is because it is easier to maintain the full pressure of currents at all points in the one case, whereas, if it is necessary to carry the entire power all the way to the end of the line, greater cost of construction is entailed, while at the same time the service cannot be as good.

The distance over which a direct current at the usual pressure of 550 volts can be carried varies with the amount of power it is desired to transmit and the size of wire that will be employed. If it were desired to transmit 500 horse-power ten miles, the initial pressure being 550 volts, and it was desired to have a pressure of 500 volts at the end of ten miles, it would be found that the cost of the line copper necessary to do this would be so great as to make the undertaking prohibitory. Therefore, if we want to carry any great amount of power to any appreciable distance, we are compelled to adopt other methods than that of one power station producing the usual current for street car purposes. We can build more than one power station which will feed into the same line. These power stations can be placed at each end of a line, or one station can be in the middle and the other at either end. Another method is to place one power plant at one end of a line, send the current it generates along toward its destination, and somewhere along the line place a so-called *booster set*. The function of this device is to boost the current.

What it really does is to take the same current that comes along and increase its voltage by an amount equal to that which it lost in transit plus the amount necessary to carry it to its destination. A booster set may be operated with a steam engine, or still better, use a motor which will take current from the power line. With this motor drive the booster which is to increase the voltage. This makes a very simple means of cutting down the size of the line copper, while also keeping up the pressure at the different points of the line. But when we come to the question of carrying electrical energy over still greater distances then the booster method offers many disadvantages over more modern methods, which I will attempt to outline.

In an early article of the series, it was pointed out that the higher the pressure of a current of electricity the farther it could be carried. Therefore, it was sought to find a means of increasing the pressure. This was readily accomplished, but when it was, how was a current at such a high pressure to be utilized when it was obtained? It has not been commercially practicable to build direct current machinery that would take a current of a higher voltage than 700, and this makes extremely hazardous working in more ways than one. Recourse was then had to the alternating current, the form of electric current which was the first that was ever made, and, singularly enough, the last to be developed.

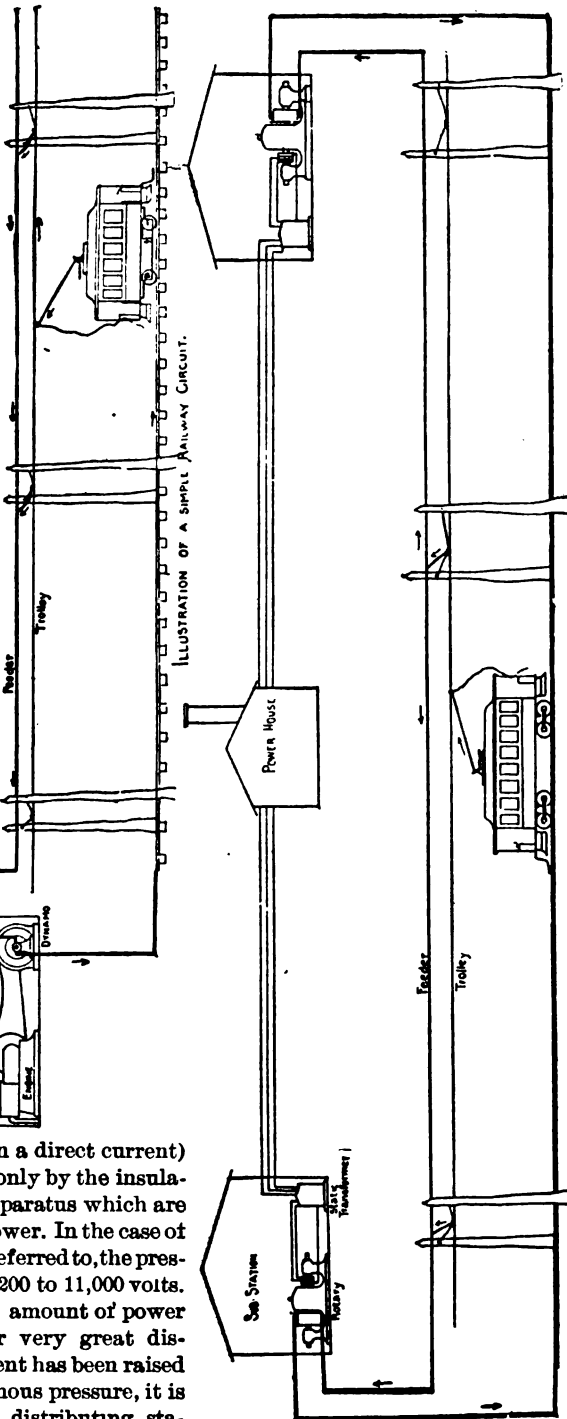

In another article it may be remembered that I said that every form of dynamo generates an alternating current; i. e., the current in every armature is alternating in character, and will remain so unless it is commutated by means of a commutator fitted with the customary brushes. The modern systems of power service on a large scale employ the alternating current at the power station. Incidentally, I might mention here that the extensive and elaborate system which is now being installed by the Manhattan Railway Company in New York, the Third Avenue Railway Company in the same city, and the street car systems and power

service of Buffalo and Niagara Falls, are built upon the same general plan. In a large central power plant, generators of large capacity, delivering an alternating current of 2,200 volts pressure, are driven by steam engines, or as at Niagara Falls, by water wheels. These generators, through the medium of the switchboard devices, deliver their energy to the same circuits. But 2,200 volts is not sufficient pressure yet for the transmission of large amounts of power within the confines of a large city or throughout a neighboring district. What is used, therefore, is *static transformers*. These simple and very useful devices have no moving parts. They can be made to increase alternating-current pressure

(they will not operate on a direct current) to any amount, limited only by the insulation of the wires and apparatus which are necessary to carry the power. In the case of the installations above referred to, the pressure is increased from 2,200 to 11,000 volts. At this pressure a large amount of power can be transmitted over very great distances. After the current has been raised to this apparently enormous pressure, it is carried to one or more distributing sta-

ALTERNATING CURRENT CENTRAL STATION. ROTARY TRANSFORMER SUB-STATIONS.

tions, which are called sub-stations. Here the same kind of static transformers are installed, which will reduce the pressure of the current to a working range. These transformers, however, will deliver an alternating current, and the street car motors will only operate on a direct current of approximately 550 volts pressure. Therefore, some means had to be devised to commutate the alternating current and make a direct current out of it after it was delivered at the sub-stations. Such a device is called a *rotary transformer*, and is as its name indicates. It is a machine looking very much like the ordinary direct-current generator, only a smaller machine for the same output. The difference most noticeable is, that on one end of the machine will be seen collector rings with copper brushes bearing on them, and on the other end of the rotating member will be found the usual commutator with its carbon brushes. What happens when the machine is in operation is, that an alternating current goes in the one end and comes out at the other a direct current, and if the alternating current that goes in has the correct proportionate pressure the direct current that comes out will be of 550 volts pressure.

The installation of the Manhattan Railway Company as an example, will have installed alternating current generators of nominal capacity equal to 5,000 horse-power each. These large machines are each direct connected, without the medium of belts, to compound condensing engines, using steam at about 150 pounds. The capacity of the power station at its utmost will be about 100,000 horse-power. All of these machines will feed into the same switchboard, and from there into static transformers, which will raise the voltage from 2,200 to 11,000 volts. This current is then transmitted by means of feeders to the different sub-stations throughout the city, of which there will be about a dozen. In these sub-stations will be found high pressure switchboard panels, which give the current to the static transformers for reducing the pressure from 11,000 volts to approximately 352 volts. It is then carried to the rotary

transformers, which transform the current into direct current at the proper potential for the street car type of motors which will be used on the elevated railroad cars. The motor equipment upon the cars will be similar to that found upon surface lines, except that the motors will be of larger size, for the reason that they will pull a number of cars. The starting devices and means of motor control will differ, no doubt, quite radically from anything heretofore attempted, and inasmuch as such apparatus has not as yet been purchased, nothing can be said about the method that will be used. As for the style of braking mechanism, it will undoubtedly be air. The operation of such type of brake is familiar to most readers and an explanation should not be necessary, except in so far as the means of procuring the air is concerned. A low-speed direct-current motor capable of operating at 550 volts pressure is directly connected, without the medium of belts, to a rotary type of air pump. By means of an electro-pneumatic device this motor will be started and stopped as automatically as the steam-operated air pump upon a locomotive. When the pressure in the air reservoir drops below a predetermined point the motor is started, and as soon as the pressure has reached the normal pressure the motor is automatically shut off. This operation is repeated just as often as the conditions demand. The motor gets its power from the trolley, so to speak. As regards the trolley devices as applied to this system, it is well to add here that there will be no overhead trolley or wiring of any sort. The cars will gather up the current from a third rail, the rails of the roadbed forming the return circuit. The third rail is permissible in this case, because the system is an elevated one and the public in general never come in contact with it.

The third rail is of heavy steel, and of a shape to suit the conditions. It is placed at the side of the track, elevated some six or eight inches above the same, and mounted upon insulators of sufficient strength to support it. At intervals along its length taps are made into as with the

ordinary trolley wire. These taps are for the purpose of distributing the current, and while the rail is much larger than the ordinary trolley wire, it is to be remembered that a steel rail does not have as good conducting properties as does copper, and must, therefore, be larger in cross section to carry the same amount of power. It is cheaper to install, though; and by tapping in current at regular intervals will answer the purpose entirely satisfactorily, wear longer, and be far cheaper to install. The car carries a shoe at its side that slides along on this third rail. This shoe will permit of the car going in either direction without its being changed. It will also keep in contact with the rail with almost uniform pressure, notwithstanding any swaying of the car and deviations due to the rounding of curves. The current travels from this shoe to the controlling devices on the cars, from whence it is disposed to the motors as the man at the controller or throttle elects. From the motors, the current seeks the rails of the roadbed proper and travels back to the power house, or rather to the sub-station from whence it came, and from the sub-station back to the power house. Such traveling, however, is instantaneous. As far as we can comprehend it, the element of time does not enter into the travel of electrical energy.

The two cuts accompanying this article are intended to show the general arrangement of feed wires, trolley wires and apparatus that go to make up the different methods of transmitting power to street car motors. The direction of the current is also shown, having assumed that the trolley wire in each case was positive, meaning that the current flowed out from the power house over the trolley and back through the rails. As to the details of the alternating current system of distribution, and how the current gets from one section to another, that will appear at greater length in the article which is to follow.

The Brick Arch.

J. W. READING.

There has been considerable controversy in the past over the value of the

brick arch in the locomotive fire-box. Considerable discussion was given to the matter in the Traveling Engineers' 1908 Convention, and the conclusion to be deducted from their arguments for and against did not leave a very large margin in favor of the arch. One member produced figures which showed quite a saving in the amount of coal consumed, but showed that engines with arch could not be gotten ready for service so quickly; that a delay of three to four hours was about the average, and this loss of time figured against the coal saving was somewhat problematical. It was claimed that without the arch fires could be cleaned more handily, flues the same, and saving in time as mentioned above when fire had to be dumped for fire-box repairs, bricks falling down on the road, flues honeycombing and stopping up immediately above the arch, arch pipes leaking, bad work with green firemen, etc.

A representative from the Santa Fe said, "*We think we save one ton in seven in the use of the arch,*" and gave the price of putting in a new arch at anywhere from \$5.30 to \$7.50.

A representative of the N. & W. said his company had entirely given up the use of the arch and claimed that on a test they made a saving of 12 pounds per mile without it. These statements are something of the nature of the game called "tug of war."

My object in writing this article is principally to give an opinion of the arch as I have found it, and incidentally to get the views of my Brother engineers on the value of the same as viewed from their experience.

I do not think but what we have lots of thinking, observing, skilled locomotive men in our ranks who have had lots of experience with and without the arch, and who are able to say something for or against its use through the columns of our JOURNAL.

My experience with the brick arch was confined almost entirely to the long fire box with arch supported by arch pipes. Before I had used the brick arch one year I figured out to my satisfaction that

the economical side of the question was a delusion. After overhauling of engine when arch and pipes were in good condition, I might get along fairly well for a dozen trips, providing I had a good fireman, one who could get the coal properly spread over the grates under the arch, instead of spreading the coal over the arch which was above the place designed for the coal to lay. The weight of the brick on arch pipes, together with the natural contraction and expansion, caused them to leak where they entered flue sheet, and when this leak started, trouble commenced; clinkers, ashes and coal would soon begin piling up on drop grate and cut out that part of the heat that was supposed to pass up between arch and sheet. I found much more inconvenience in remaining in cab when engine was not working, unless draft was forced by blower, owing to the smoke and gases trying to get out of wrong end. On an average of once in about every five weeks from one cause or another arch would part company with bars, and partially or completely mix up with the coal, to the detriment of the steaming qualities of the latter, and the natural result was that a stop for the separation of the ingredients was invariably the result.

After being convinced to my own satisfaction that the arch was far from being what was claimed for it, I asked those in authority on several occasions, when the thing was down, if they would not leave it out. I tried to assure them that I could make just as good a showing on amount of coal used and save the expense of cleaning flues, calking flues and arch pipes, and replacing arches, but met with no success. One night while engine and train were drifting down a light grade and we were approaching a slight rise in track where steam must be worked for a short distance, I hooked up reverse lever and started to open throttle when something happened. The fireman, as usual at the place named, had opened the door to look at his fire and on this occasion had put in a couple of shovels of coal and had the fire door partly closed when this something occurred. This

something was one of the arch pipes breaking off between sheets and blowing out of flue sheet. For about thirty seconds following this mishap the fireman and I had a hot old time—the hottest in our experience. The fire box landed back in the coal pit; my side window was shut while door from my side to gangway was open. I tried to get out of front door on to running board, and as usual on such occasions the door “bucked,” and I thought I was in Hades sure for the next few seconds. It seemed as if all the coal, fire, soot, ashes and brick that was in the fire box, together with all the water in the boiler, landed out in the tank and gangway and inside the cab inside of ten seconds. My clothing took fire in a number of places, while some of the *hot-footed* stuff landed next my spinal column inside my undershirt. Well, it is sufficient to say that I expected to be cremated before that window yielded to my efforts.

The fireman fared considerably worse on account of the hot water striking him, and had the accident occurred while he was looking at the fire, I don't think he would be with me now to laugh over the funny side of the affair.

As mentioned before, we were drifting down a light grade and nearing a passing track and as soon as I got enough of the debris out of my eyes so I could see, and found that fireman was not in a very serious condition, I noted that I had the maximum amount of air pressure in both main reservoir and train line, the train being only partly air braked. I instructed the head brakeman to get out on pilot and that I would try to slow down enough to admit of his running ahead and getting switch over so we could drift on to passing track. I managed by one application to reduce speed enough for switch to be opened. Seeing empty flats on siding ahead of us, I yelled for him to release their brakes and then help hold train when we got into clear. With what air I had left and the brakeman's assistance on cars ahead of me, we made as nice a stop as could be asked for. The conductor's “glim” soon appeared coming down the line, and as he approached

the engine greeted us by wanting to know what in h—— we were doing there.

I forgot to mention that our head brakeman suffered somewhat from the ruthless manner in which fire and water invaded his locality. His return from dreamland and his departure via the front door occupied less than drei augenblicke of time.

Having gotten in out of the way, we had all the time necessary to take an inventory of our hides and other effects, and cogitate as to the best methods of remedying various defects, and there and then resolved that the brick arch with its adjuncts, the arch pipes, was a snare and a delusion and that on our arrival at the home terminal we (the fireman and I) would at once hie away to the sanctum sanctorum of the "High Mucky Muck" and in the presence of his august majesty take another inventory of our hides and effects. It worked, and proved the beginning of the end of the arch in the long fire box on our line.

In looking up the performance for coal before and after, the showing was in favor of no arch, and what about the saving in time, material and labor? I will leave that for the Brothers to figure out.

I hope to read of the experience of various Brothers who have made a study of the good and bad effects of the brick arch.

The Choke in Locomotive Smokestacks.

BELLEVUE, O., July 18, 1905.

EDITOR JOURNAL: The so-called choke in locomotive smokestacks is evidently an application of the principle of the gun barrel. If that feature, which seems so general, increases the efficiency of the straight stack there is no evidence to prove it, either of a theoretical or practical nature, in so far as its influence on the draft is concerned, and if it fails in this respect it fails absolutely as an improvement over the straight stack. The function of the gun barrel is in no way similar to that of the smokestack, a fact which proves the error of applying the same principle to both. In the former the choke seems to concentrate the explosive force of the powder and the discharge of shot at a central point in the gun barrel, and the

taper of the barrel from the choke to forward end is calculated to be such as will cause charge to spread to an extent consistent with its force or killing power. In other words, the gun barrel is used as a means to convey the discharge in the direction desired to operate upon an object before it, and the force employed originates within itself; the smokestack is used to convey a force with no especial regard as to distance or direction, serving rather as a combining tube to promote draft to operate on an object behind it, and the force employed does not originate within it.

The only choke needed in the locomotive is the nozzle, which serves to concentrate the force of exhaust steam in a manner to be utilized together with the stack as a means for producing draft, and when the stack is of uniform diameter, proper proportion and set centrally above the nozzle, this combination represents the most efficient means for creating draft. Should the stack not be centrally placed above the nozzle, or the nozzle not in line with the stack, the force of exhaust would be in a measure spent by coming in contact with either side of stack in its passage through, and its efficiency, as a result, impaired. Irregularities of this kind will occur frequently enough under any conditions, but when there is a choke in smokestack the chances for such mistakes are multiplied, for the exhaust steam is bound to strike either side of the restricted part of stack, unless the alignment of the different parts is absolutely perfect.

It is a question in the writer's mind if there is any desire on the part of those who favor the choke, to have the exhaust steam pass freely through the stack, and this evidently is due to an uncertain impression of the operation of the exhaust steam while passing through it. Each exhaust from an engine starting a train acts in stack, on the principle of a piston, expelling the air within it. Under this condition the stack serves as a cylinder for this elastic piston of steam (the exhaust) to pass through. Now, it is well known that when a cylinder has varying diameters, it needs boring out, and the same may be as truly said of the stack, for even

if the steam piston is of an elastic nature, it seems reasonable to suppose that its efficiency for expelling air would be greatest in a stack of uniform diameter.

After an engine gets under headway and the exhausts follow each other in rapid succession, the stack serves rather as a combining tube through which the steam and waste gases pass in steady stream. In this case the exhaust does not, or should not, come in contact with the sides of stack, as in the former case, when it had a piston action, but should pass out in a central column, surrounded by the waste gases from fire. Now, in this case, if the choke is the correct diameter, that of other parts must be too great, and vice versa. The proper proportion would be that through which a most perfect balance between volume and velocity of circulation could be obtained. If diameter is too great, circulation is sluggish and incomplete; if diameter is not sufficient, we have velocity of circulation at the expense of volume. When the design provides a uniform diameter a nearer approach to perfection may be obtained, but if there be varying diameters in one stack they must all be wrong, excepting, perhaps, one.

It makes no difference whether the stack be placed almost wholly within the front end, as is necessary on some types of engines, its design and capacity have a more important bearing on the efficiency of the boiler as well as the development of power of the engine, than is usually conceded, and were it not for the fact that faults in design of smokestack may be counterbalanced by contraction of nozzle, the single taper, the double taper, the choke and other freaks in stack design that are so much in evidence today would never have passed the experimental stage.

T. P. WHELAN.

Whistle Valve and Answer to Brother Lenson.

MART, McLENNAN Co., TEX., July 4, 1905.

EDITOR JOURNAL: I have read the JOURNAL some lately, and I find much valuable information in "Questions and Answers," yet many points seem diversely understood among the boys, and some

think this diversity of opinion, thus laid before the reader, a virtue. Inasmuch as he has good teaching and poor teaching before him, to choose from, yet I would compare this idea favorably with that of "Feeding the horse on sawdust and bran." The greater per cent of bran you give the better the horse will thrive.

There are many points in philosophy which we can reason out positively, yet we can none of us aspire to perfection generally. This has never been reached, and we can only submit our ideas for consideration. But we can, at least, "Think twice and write once." Trying not to get too far off with our information, we should only deal with facts and good reasoning in planting this thought in the young minds. Some may be willing to accept anything you hand them, without analyzing and examining for themselves. So it follows that we should be careful what kind of ideas we impart through the columns of the JOURNAL. Those of us who diverge most from a line of right are apt to land oftenest on the minds of the aforesaid thoughtless element.

I notice in July, in reply to question of signal whistle making "Double response to each pull of cord" we are advised that it is caused by the reducing valve being held open by foreign matter allowing the signal line to attain main reservoir pressure, which, in my opinion, is erroneous, and some young readers may fail to report the right cause in this particular trouble. The sign we get when the "reducing valve is held open by dirt" is a blast of the whistle when we draw off the main reservoir pressure to recharge train line, thus giving egress to air in whistle line in direction of main reservoir. We are told that "Double response" is because reducing valve will not open and cause signal valve to remain seated, yet we are also told earlier in the article, that this reducing valve is stuck open by the presence of foreign matter under seat, and the latter is probably true, presuming valve adjusted properly, as we are troubled with high pressure in signal line. We are told that, with this reducing valve open and consequent high

pressure, the fluctuation in pipe causes it; now if this pipe were not open at reducing valve it would have some such tendency, but the signal valve is so arranged that the pressure must first be removed from above the diaphragm, so there is then more pressure below than above it; it then rises, raising valve, which allows air pressure to pass from below it, also to whistle along the flattened sides of signal valve stem. Now, when this valve is seated by pressure on top of diaphragm, this stem below is dropped down in bushing to a point where stem is almost as large as bushing, so it is seen that pressure must return to lower side of diaphragm very slowly, and diaphragm will not be affected by any light movement or reduction above it till pressure has been restored to lower side. But we have a trouble sometimes when reducing valve is in normal condition, which caused this succession of blasts, to wit: This valve stem is sometimes so small that it allows air to pass to lower side of diaphragm too rapidly when valve is seated, and as pressure balances alternately above and below diaphragm it raises and lowers valve to whistle; in other words this stem should fit so close when valve is seated that it will not permit pressure to return to space below diaphragm so fast that pressure on top of diaphragm will not hold valve to its seat after whistle has been used.

Replying to James Lenahan, Div. 32. While crew on No. 6 might have done well to make I one hour and forty minutes late, and even if they were to be hung for making such speed as to enable them to leave I five or ten minutes earlier, it would not justify crew on No. 15 in running on a first class train's time. They should not have gone by any means. Train orders mean all they say to you, let the other fellows do right or wrong.

A. E. A., Div. 620.

Air Pump Troubles.

TRENTON, N. J., Aug. 10, 1905.

EDITOR JOURNAL: In answer to Brother Thalmueller's question in the August number of our JOURNAL, I would take

down all side rods on good side because there are no side rods on the other side to help the crank past dead centers, or in starting they are just as liable to go in one direction as the other.

I would like to ask the following questions: First—If the pin that connects the graduating valve to the triple piston stem is broken, what effect will it have? Second—Why is it detrimental to a pump to give it oil through the air inlet? Third—If a $9\frac{1}{2}$ -inch pump stops how can you test, if the governor is the cause of the trouble?

These questions apply to the Westinghouse equipment. Yours fraternally,

BENJ. R. DIXON, Div. 373.

Unequal Wear of Guides.

HELENA, MONT., July 18, 1905.

EDITOR JOURNAL: Some time ago I saw the question asked in these columns why the guides on an engine wore faster on the inside than on the outside. I will say that this unequal wear is caused by the dust which is raised by the pilot in passing over the roadbed. The dust rises and passes out the sides of the engine from the inside, and the inside of the guides naturally gets more than the outside, of the dust that passes through them. To prove this you will notice that the guides on an engine with the front pair of drivers set up close to cylinder saddle and directly behind the guides wear almost even, as the drivers protect them from the dust.

Fraternally yours,

H. E. S.

Better Safety Switch Appliances.

HATTIESBURG, MISS., July 10, 1905.

EDITOR JOURNAL: I have read in the New Orleans *Times-Democrat* of June 23, of the appalling wreck on the Lake Shore Road at Mentor, O., on the Twentieth Century Limited, by a misplaced switch, which the officers say was in perfect condition. No doubt this is true. This fills my mind with horror, as it must all engineers and the traveling public as well, and the question would naturally be asked, "Who is responsible for the great loss of life and property?"

In this connection I wish to express my opinion, where railroad companies are responsible for not having enough of safety appliances to protect life and property as well in this fast age of railway movement of trains where competition on trunk lines is so strong, and the majority of roads are using single tracks.

As an engineer while employed on the Chicago & Alton, I drew up a blue print and wrote up a system which would have made it impossible to have any such wrecks at switches or meeting points, and sent it to the president of the road, Mr. C. H. Chapple, now dead. His reply was, no doubt the plan would do all it was claimed for, but the cost was too great to make use of it until competition of other roads would make it necessary to bring it into practical use. The plan I speak of is this, to have every switch on the line of road connected up by rods to the bottom of switch target, so that they could in no way be disconnected and boled up to keep snow and ice from them; and those rods running one foot from every station, connected to a semaphore which would show red or white by day or night, and if switch was left wrong by any persons the engineers, seeing them, would have ample time to bring their trains to a stop, with good air equipment which is being used by many roads of today. With this connection of semaphores, have a watchman on day and night whose business it would be to see that the switches were in the right position and see that the lamps were lighted and perform any other duties that the superintendent might require of them; these men to always stand in line of promotion to any position on the road. In this way, the company would always have experienced men to draw from.

I have read later in the Chicago dispatches to the *Times-Democrat* of June 29, that as a result of the wreck at Mentor it put nearly \$1,000,000 in circulation through the insurance companies and the railroad company for the death of nineteen persons, as if to say money would compensate for human life. One million dollars would not replace the engineer to his family and friends, and the company who

trusted him with such a valuable train, and I would say as much for the other eighteen.

This is not written with any view to criticise, but to set men thinking and bring about a better condition of safety appliances on all roads. Much more might be said on this subject.

Hoping this will not find the wastebasket I will close.

J. O. DETWEILER.

How to Release Brake.

SOUTH CONNELLSVILLE, PA., AUG. 6, 1905.

EDITOR JOURNAL: In answer to Bro. R. W. Kelly's question on page 617, July JOURNAL, turn cut-out in crossover pipe, remove plug 26 in bottom of triple, take a rod of iron and unseat check valve 15; this will allow brake cylinder pressure to escape, giving a prompt release of brake.

W. F. HETRICK, Div. 50.

Educational Kindergarten, Etc.

NEVADA, MO., JUNE 1, 1905.

EDITOR JOURNAL: Admitting there is interest and information in our technical columns, I for one (and of the majority I believe) do not approve of this system of kindergarten gratuity. Especially am I averse to conducting an educational bureau gratis for the interest (?) of railway or other corporations. They give us not anything. We purchase our salary with hard toil and our contracts with great expense to our members, when knowledge of the many evils imposed upon us incurring time and expense of the G. C. of A. to rectify or eliminate these same injustices which should never have existed; then why should we coach the world in the lines of our profession?

It has been often said that locomotive engineers on an average cost railway companies \$10,000 each for their education. If such is true (it is not far amiss) then why do engineers not receive better attention from the companies which could do well by retaining efficient experienced men, and cease the weeding out system, supplanting prime and up-to-date men with novices?

Brother Kelly of June number, page 529, is a man of heart and so much for a JOURNAL Directory not up-to-date: I do not know where Division 662 is located. In reading the current JOURNAL one must always have a back number of several months for reference when reading an article, obituaries, transfers, withdrawals or reinstatements. Not agreeing with my friend and Bro. Henry Hide of Div. 184, I will always feel a mistake was made when the Directory was abolished and twenty odd pages of advertising substituted. Advertising injures most all periodicals and newspapers of this age, as the people get disgusted and cut off subscription.

I was prompted to write a few lines after reading the May number which, in my opinion, is *very good*. The train orders of Brother Lenahan, Evans and Krause attracted my attention and notwithstanding my convictions heretofore announced, I will answer them and in return give them a couple.

Being a veteran of the war alluded to by Brother Kelly and indorsing his tone of letter as I do, I will say a few words along that line. I served two "cheap Johns" who were drawing a Division master mechanic's salary, but as to services rendered I would not make an estimate. One was a graduate of Purdue University, the other a vaudeville performer, when not engaged at a drill press. When installed at his desk the artist assembled the men in passenger service and said, "I wish to request of you engineers that when pulling your trains from a station that the reverse lever be set at full stroke until the mile board has been reached." Turning to the firemen, he remarked, "Now, you have heard my instructions to your engineers. Let yourselves be accordingly governed and have your fire in proper condition for such service with either a *light* or *full* throttle."

This identical individual once told me that were he superintendent of motive power he would remove all sand boxes from locomotives. I inquired, "In lieu thereof what would you recommend? Light trains or cog-wheels?"

"Neither," he replied. "I would engage only engineers who could give the engine sufficient steam to pull her train and not slip the drivers." What I told him was entirely sufficient.

Not long after, however, I had the misfortune to throw a spring saddle on a two by three engine which fouled between top of driving box and frame and do what I would I could not release it. I put F. driver on tilton frog, also tried B. driver, but to no avail. Taking the sand lever, which was a small gas pipe, I put the "Keeley cure" on the box and for 60 miles ran in cold, but in making a water tank the water got low and would run on the box, the last ten miles resulting in getting the Babbitt. Arriving at terminal, I brought the Nobbs in question to the pit track to explain why the engine was the roughest rider in the state, also to explain why the saddle had been displaced and to show the utter impossibility of freezing it. The engine was hung so high that her top frame rail carried the spring saddles and the pedestals carried the boxes on rough track. I requested that her hangers be lengthened to admit of lowering frame two and one-half inches. He said, "No, that must not be done, as the cellars are now only $\frac{1}{8}$ of an inch from her pedestal braces." I replied, "Christopher Columbus on Cape Cod! You don't know your business." So here is where two years on the roughest riding compounds that were ever cast came to a speedy termination.

On another occasion I had to give up a train due to a series of ailments, principally six hot driving boxes and an engine which rode so rough as to shake her fire all through the grates. In making out engine failure report I said upon it, "This engine is fit for nothing but failures and to get somebody into trouble." This was a different M. M., but discharge was instantaneous; yet, while I was asleep, mutual friends interceded and I got sixty little Browns all in one installment.

I could easily fill the columns of this JOURNAL with like experiences of myself and personally acquainted Brothers. It is for such treatment and from such

fixtures as I have described, who fire good men, cause trouble for the members individually and collectively, that we should close the columns of our JOURNAL against direct competition with the Scranton School and other grafts that we know of. Give us back the days of Sweet and Hackney, the latter who I believe turned out more genuine mechanics and saved his company more money than any man of his day or since; but in this day and age there are many places in this great United States where some two by four master mechanic will force an engineer out on a back-shop delegate, when perhaps if his heart could be read as is our JOURNAL, it would say, "May he melt the roof from her, have a collision, find a wash-out or burnt bridge." Then what report goes to his superiors and the stockholders? "That was pure carelessness on the part of the engineer and he has been discharged. That engine has just had temporary repairs to the extent of \$1,500 or \$3,000," as the case may be, such circumstances adding materially to the "shop record" of said official, accounting for material and work that was never done with any heavier tool than Faber No. 2.

Now, I do not mean to throw bricks or bouquets, so will shift gently to position 4 and return to 3 on this subject.

Now, Brother Lenahan answers correctly, but had the words, "supplement to current time table," been embodied in the order, then Brother L. would have to apply the 12-hour rule.

Of Brother Evans I would ask what clearance extras give first-class trains on his road? That will be the time first-class trains must clear extra 90.

Of Brother Krause I will ask on what authority would he leave C? He certainly *must not* usurp the authority of a dispatcher and orders mean just what they say, nothing more and nothing less.

I wish to put a problem. Question No. 1: "Engine 100 will work extra between A and L 7 A. M. until 7 P. M., protecting against regular trains."

At 3 P. M. it is necessary to obtain a running order to R and return in order to

get coal and water; arriving back at working limits at 4 P. M., would you demand another work order to finish out the day?

Question No. 2: Here is an order I once knew of between second-class trains, which resulted in hiring another dispatcher. I will substitute first-class trains, even numbers running east, and east-bound the ruling direction as per trains of the same class. A is western and Z the eastern terminal. Order No. 75: "No. 2 engine 100 will wait at H until 1:30 A. M. for first No. 1 engine 200."

Order No. 81. "No. W engine 100 and second No. 1 engine 300 will meet at H."

This later order was delivered to No. 2 at E and to second No. 1 at O. No. 2 arrives on time 1:20 A. M. at H, and second No. 1 arrives at J at the same time or later and finds first No. 1 in siding unable to make H on the time order of 1:30 against No. 2.

With no telegraph offices at H, I, or J, the road is not tied up, but which train has the right to go?

Hoping to hear more from Brother Kelly in the next issue, also to see less kindergarten work and more expressions of actual necessities and achievements, with best wishes to the fraternity and a postscript for everybody, will say good-by.

Fraternally yours,

IRA D. MAYHALL, Div. 359.

[It is a good thing to stop talking where one stops knowing. None of the space vacated by Division Addresses has been taken by advertising. On the contrary, it has resulted in 23 pages more of reading space, and this issue has 100 pages of reading matter, while our contract with our printers previously called for 70 pages. I will leave the Brothers to judge whether the 20 pages of technical matter is out of harmony with their wishes, and is a kindergarten in the interest of railroads and other corporations.—EDITOR.]

Turned Bushing, Etc.

PORTSMOUTH, O., Aug. 10, 1905.

EDITOR JOURNAL: Please allow me space to answer Brother C. B. of Div. 129. He

has a right to return to D regardless of all extra trains keeping clear of all regular trains. A dispatcher cannot give two extra a run over the same track without some meeting point and, as Brother C. B. has the run the dispatcher cannot start another extra without first getting him at L.

In reply to Bro. J. V. Blasdel, of Div. 504, No. 433 cannot leave K without getting the meet changed or the arrival of second No. 434, the order annulling engine 601 as second No. 434 does not annul the train, any other engine could be run on the train on the same date. It is not really necessary to add the engine number to an order to a regular train, the train number is all that is required. When you get the annulment of a train on a certain date there is no engine number on it, so why is it necessary when the train runs and you get a meet with it?

Bro. P. M. Ford is off on his answer to Brother Keating's question. Brother Keating plainly stated that there was nothing wrong with the valve gear or machinery of the engine. I think Brother Keating should come out in the next issue and explain the turned bushing to the boys.

In reply to Bro. F. Thalmueller, of Div. 343. The reasons that when taking down one side rod on one side its mate must also come down is: When an engine is run with only one side rod up, the main driver has to drag the second driver with it by one side only; the second pair drivers therefore lags behind the main driver and as a result the latter passes the center slightly in advance of the former, which throws a heavy strain on the side rod and its pin, and both are very apt to be bent or broken. Take no chances; take both sides down and be sure.

Question I would like to ask through the JOURNAL: What is wrong with the air signal whistle when the cord in the coach is pulled to blow one long blast and the whistle blows a number of short blasts instead of one long blast? And again on the other hand, the cord is pulled in the coach to blow a number of short blasts,

and one long blast is sounded instead of the number of short blasts?

Yours fraternally,

E. A. LINDSEY, 584.

New Time Table—Train Rights.

AURORA, ILL., Aug 6, 1905.

EDITOR JOURNAL: Referring to Brother Murphy's reply in regard to the Brother Krause order, will say, I presume that each and every one of us would balk before passing a positive meeting point, but I think we would be justified and commended, rather than censured, for not delaying a passenger train twenty or thirty minutes unnecessarily. Rule 201, Standard Code, reads: Orders must contain neither information nor instructions not essential to such movements.

It can be seen from this rule that such an order would not be issued. Time and space are too valuable to take with nonsensical questions, so we will drop this one and discuss sensible questions.

In taking up Brother Murphy's question relative to the new time table taking effect at 12:01 A. M. on certain date, I wish to call attention to Rule No. 4, Standard Code, and with this fully understood I think we will come to a common understanding in the matter.

Rule No. 4.—Each time table from the moment it takes effect supersedes the preceding time table. A train of the preceding time table shall retain its train orders and take the schedule of the train of the same number on the new time table.

To explain my view clearly we will suppose that on a certain road known as the D. E. & F., operated under Standard Rules, a new time table takes effect at 12 o'clock noon, Aug. 6, 1905. We will suppose that on a certain road known as the E. F. & G., operated under Standard Rules, a new time table takes effect at 12:01 A. M., August 6, 1905. On the D. E. & F. No. 1, a first-class train, is due to leave A, its eastern terminal, at 11:20 A. M., old time table, B 11:35, C 11:50, D 12:05 P. M. On new time table it is due to leave A at 11:35 A. M., B 11:50, C 12:05 P. M., D at 12:20. This No. 1 and No 1.

on the E. F. & G. are daily trains. No. 1 on the D. E. & F., although due to leave C at 11:50 A. M. August 6, must not arrive at D before 12:15 P. M. On the E. F. & G. (Brother Murphy's road) No. 1 is due to leave A at 11:50 P. M., B at 12:05 A. M., old time table. On new time table it is due to leave A at 12:10 A. M., B 12:25 A. M. No. 1 on the E. F. & G., although due to leave A at 11:50 P. M. August 5, must not arrive at B before 12:20 A. M., August 6.

It will be readily seen that No. 1 in either case can leave the respective stations at 11:50 old time table or wait there for the new time table to take effect, when the time would be exceedingly long to the next station.

It will be observed by the rule that the date of the train is fixed by the time table, and when this time table is superseded, the authority for the date of the train is also superseded, so there is nothing to prevent the train of the old time table from taking the schedule of the same number on the new time table.

Now, Brother Murphy, if you were on an extra leaving M at 1 A. M., August 6, the first act you should perform on arrival at your engine would be to throw the old time table in the firebox, forget all about its schedule, and be governed solely by the new schedule. This will avoid confusion. You will not happen to meet No. 1 at B at 12:05 A. M., August 6, because the following rule will not permit it:

Rule 92.—A first-class train must not arrive at a station where only the leaving time is shown more than five minutes in advance of its schedule leaving time.

You would not find a second No. 1 only in the regular way.

In reply to Brother Blasdel will say, annulling engine 601 as second 434, annulled that section of the train L to A, and gave 433 right to proceed. Second No. 434 of the same date could be run with engine 602, but the annulling order would read thus: "Engine 601 is annulled as second No. 434 from L. Engine 602 will run as second No. 434 L to A." You will observe that this order would not give No. 433 the right to proceed

from K without meeting second No. 434.

C. B., Div. 129, you have a right to return from any point between D and L on the order, keeping out of the way of regular trains. The dispatcher would not allow another extra between the points named in the order in either direction, until sending an intercepting order to you.

Referring to replies given in the August number to my question in the July number of the JOURNAL, I notice B., of Rochester, N. Y., has a doubt in regard to No. 6 arriving at I ahead of one hour and forty minutes, and keep within its rights. This is exactly the point that causes confusion. We find that the rule governing this order says that the order makes the schedule time of the train named, at and between the points mentioned, as much later as stated in the order. In my opinion, this gives but little ground for a misunderstanding. The order, in fact, gives the train an arriving and a leaving time. The leaving time is earlier than the arriving time, and there is no disputing the fact that a train has a right to leave a station on its schedule leaving time. The serious mistake made by No. 15 was in using the first movement in the order to make I. They were not entitled to that part of the order until arrival at I.

Fraternally yours,
JAMES LENAHAN, Div. 32.

Train Order Rights.

BLUEFIELD, W. VA., Aug. 7, 1905.

EDITOR JOURNAL: Please allow me space in which to give my opinion as to what is right in regard to some questions asked by some of the Brothers.

In reply to Bro. J. V. Blasdel, Div. 504, No. 433 has a right to proceed only to her meeting point, for second section of train 434. Order No. 2 only annuls the engine number and does not annul the second section of train 434, and any other engine may be run as second 434 on the same date.

Bro. E. M. Murphy, if you leave Z at 1 o'clock A. M. on the 5th on an extra, you only have No. 1 of the new time table to

look out for, as No. 1 of the old time table had been dead 59 minutes when you left Z, and it would be impossible to meet No. 1 of the old time table at 12:05 A. M. on the 5th, because at 12:01 A. M. on the 5th No. 1 of the old time table lost all rights and class and could proceed only by train order. So in each case you would have to look out only for No. 1 of the new time table, according to Standard Rules.

Bro. C. B., Div. 129, a train order once in effect is good until fulfilled, superseded, or annulled; so under these rules you would have the right to return to D on your order if you wished, keeping out of the way of all superior class trains.

Train orders issued to regular trains are void after the train becomes 12 hours late.

Yours fraternally,
B. S. LIGHT, Div. 448.

Train Rights—Answers to Bro. Blasdel.

VIADUCT, PA., Aug. 7, 1905.

EDITOR JOURNAL: In reply to Bro. J. V. Blasdel, would say the rule for annulling sections is as follows: Engine 601 is annulled as second No. 434 from L. If there are other sections following, add "Following sections will change numbers accordingly." As your order said nothing about following sections, No. 433 would proceed on its own time and rights.

In answer to Bro. E. M. Murphy: No. 1 has no right to arrive at B at 12:05 A. M. of the 5th, as they are not due to leave A until 12:10 A. M. on the new time table which took effect at 12:01 A. M. If they could not arrive at B before 12:01 A. M. they should stay at A until leaving time on new time table.

If No. 1 should arrive at B at 12:01 A. M. of the fifth, they would have to stay there until leaving time of No. 1 at that point on new time table, and an extra meeting them there would have no right to meet another train of the same number.

Answering Brother C. B., of Div. 129, would say, an engine receiving an order to run extra from D to L and return is not required by rule to protect against opposing extras unless directed by order

to do so, but must keep clear of all regular trains as required by rule.

There is no necessity of giving this order in case there is an open telegraph office at both points and this order is not usually given where there are other trains running. Under the circumstances, I think you would have a right to come back in case of a breakdown.

Fraternally yours,
L. N. SAWYER, Div. 424.

Pay for all Time on Duty.

YOUNGSTOWN, O., Aug. 1, 1905.

EDITOR JOURNAL: In reading our August JOURNAL I was more than pleased with Brother Kline's article, and I agree with the Brother in all that he has said. His statement in regard to what one engineer has worked in one month, has brought to my mind one injustice that the Brother has overlooked and one that I think that we are very lame on. I refer to the one hour and in most cases two, that is put in before starting on trip and the one hour after each trip. I cannot think of any reason why engineers are not paid for this time. Is it because there isn't any work to do in the two or three hours? I guess any Brother will agree that the hour or two that he puts in getting the engine ready is the hardest one on his trip—filling grease cups, hunting supply boy, and dodging yard engines, and trying to get your hands clean enough to handle the orders without spoiling them so no one could read them.

Is running an engine a trade? If so, is there any other trade that you can think of that the men come around from one to two hours before the pay starts to get ready to work? I would like to see engineers' pay start from the time they report at roundhouse and stop when they have finished making out their work report.

I would like to have Brothers' views on this subject. Keep after them, Brother Kline, you are on the right track.

Fraternally,
YOUNGSTER, Div. 452.

Railroad News Gleanings

Interstate Commerce Commission.

Abstract of Statistics of Railways in the United States for the Year Ending June 30, 1904.

WASHINGTON, Aug. 14, 1905.

From summaries which will be included in the Seventeenth Annual Statistical Report of the Interstate Commerce Commission, prepared by its statistician as the complete report for the year ending June 30, 1904, the figures in this abstract are obtained.

This report is, in general, similar to preceding reports in the series, and will constitute a volume of about 700 pages. The several tables containing details of mileage, capitalization, earnings, expenses, etc., by roads, form the bulk of the report, though the text contains many summaries of railway statistics.

MILEAGE AND CAPITALIZATION OF ROADS.

The total single-track railway mileage in the United States on June 30, 1904, was 213,904.34 miles, having increased 5,927.12 miles in the year ending on that date. This increase exceeds that of any previous year since 1890. The aggregate length of railway mileage, including tracks of all kinds, was 297,073.34 miles, being classified as follows: Single track, 212,243.20 miles; second track, 15,824.04 miles; third track, 1,467.14 miles; fourth track, 1,046.50 miles, and yard track and sidings, 66,492.46 miles. Thus it appears that there was an increase of 13,251.82 miles in the aggregate length of all tracks, of which 4,932.40 miles, or 37.22 per cent, were due to the extension of yard track and sidings.

The number of railway corporations included in the report was 2,104. Of this number 1,086 maintained operating accounts, 848 being classed as independent operating roads and 238 as subsidiary roads. Of roads operated under lease or some other form of contract 318 received a fixed money rental, 147 a contingent money rental, and 257 were operated under conditions not readily classified. In the course of the year railway companies owning 5,600.18 miles of line were reorganized, merged, consolidated, etc. For

the year 1903 the corresponding item was 10,486.37 miles.

The length of mileage operated by receivers on June 30, 1904, was 1,323.28 miles, showing an increase of 137.83 miles as compared with the previous year. The number of roads in the hands of receivers was 28, and at the close of the previous year 27, 6 roads having been taken from the hands of receivers and 7 having been placed in charge of the courts.

EQUIPMENT.

On June 30, 1904, there were in the service of the railways 46,743 locomotives, the increase being 2,872. As classified, these locomotives were: Passenger, 11,252; freight, 27,029; switching, 7,610. There were also 852 not assigned to any class. The average number of locomotives per 1,000 miles of line was 220, showing an increase of 6. The average number of cars per 1,000 miles of line was 8,474, showing a decrease of 66 as compared with the previous year. The number of passenger-miles per passenger locomotive was 1,948,884, showing a decrease of 30,402 miles. The number of ton-miles per freight locomotive was 6,456,846, showing a decrease of 351,096 as compared with June 30, 1903.

The aggregate number of locomotives and cars in the service of the railways was 1,845,304. Of this number 1,554,772 were fitted with train brakes, indicating an increase during the year of 92,513, and 1,823,030 were fitted with automatic couplers, indicating an increase of 52,472. Practically all locomotives and cars in passenger service had train brakes, and of the 11,252 locomotives in that service 11,113 were fitted with automatic couplers. Only 602 cars in passenger service were without automatic couplers. With respect to freight equipment it appears that most of the freight locomotives had train brakes and automatic couplers. Of 1,692,194 cars in freight service on June 30, 1904, 1,434,386 had train brakes, and 1,674,427 automatic couplers.

EMPLOYEES.

The number of persons on the pay rolls of the railways in the United States, as returned for June 30, 1904, was 1,296,121, or 611 per 100 miles of line. These figures,

when compared with corresponding ones for the year 1903, show a decrease of 16,416 in the number of employees, or 28 per 100 miles of line. The classification of employees includes enginemen, 52,451; firemen, 55,004; conductors, 39,645; and other trainmen, 106,734. There were 46,262 switch tenders, crossing tenders, and watchmen. With regard to the four general divisions of railway employment, it appears that general administration required the services of 48,746 employees; maintenance of way and structures, 415,721 employees; maintenance of equipment, 261,819 employees; and conducting transportation, 566,798 employees. This statement disregards a few employees of which no assignment was made. The amount of wages and salaries paid to employees during the year ending June 30, 1904, was \$617,598,810.

CAPITALIZATION OF RAILWAY PROPERTY.

The par value of the amount of railway capital outstanding on June 30, 1904, was \$13,213,124,679, which represents a capitalization of \$64,265 per mile for the railways in the United States.

PUBLIC SERVICE OF RAILWAYS.

The number of passengers reported as carried by the railways in the year ending June 30, 1904, was 715,419,682, indicating an increase of 20,528,147 as compared with the year ending June 30, 1903. The passenger mileage, or the number of passengers carried 1 mile, was 21,923,213,536, increase 1,007,449,655.

The number of tons of freight reported as carried (including freight received from connecting roads and other carriers) was 1,309,899,165, which exceeds the tonnage of the previous year by 5,504,842 tons. The ton-mileage or the number of tons carried 1 mile, was 174,522,089,577, the increase being 1,300,810,584. The number of tons carried 1 mile per mile of line was 829,476, which figures indicate a decrease in the density of freight traffic of 25,966 ton-miles per mile of line.

The average revenue per passenger per mile for the year mentioned was 2.006 cents, the average for the preceding year being the same. The average revenue per mile was 0.780 cent. This average

for the preceding year was 0.763 cent. Earnings per train mile show an increase for passenger but a decrease for freight.

EARNINGS AND EXPENSES.

The gross earnings of the railways in the United States from the operation of 212,243.20 miles of line were, for the year ending June 30, 1904, \$1,975,174,091, being \$74,327,184 greater than for the previous year. Their operating expenses were \$1,338,896,253, or \$81,357,401 more than in 1903. The following figures give gross earnings in detail, with the increase of the several items as compared with the previous year: Passenger revenue, \$444,326,991—increase, \$22,622,399; mail, \$44,499,732—increase, \$2,790,336; express, \$41,875,636—increase, \$3,543,672; other earnings from passenger service, \$10,914,746—increase, \$1,093,469; freight revenue, \$1,379,002,693—increase, \$40,982,667; other earnings from freight service, \$4,568,232—increase, \$101,257; other earnings from operation, including unclassified items, \$49,986,011—increase, \$3,193,384. Gross earnings from operation per mile of line averaged \$9,306, the corresponding average for the year 1903 being \$48 less.

The operating expenses were assigned to the four general divisions of such expenses, as follows: Maintenance of way and structures, \$261,280,454; maintenance of equipment, \$267,184,739; conducting transportation, \$753,238,681; general expenses, \$51,579,196; undistributed, \$613,183. Operating expenses were \$6,308 per mile.

RAILWAY ACCIDENTS.

The casualties returned by the carriers in their annual reports to the commission embrace casualties sustained by passengers, employees, trespassers, and other persons. These returns are not comparable with figures given in the quarterly accident bulletins that are based on monthly reports, which are mainly confined to casualties to passengers and to employees on duty on or about trains.

The total number of casualties to persons on the railways for the year ending June 30, 1904, was 94,201, of which 10,046 represented the number of persons killed and 84,155 the number

injured. Casualties occurred among three general classes of railway employees, as follows: Trainmen, 2,114 killed and 29,275 injured; switch tenders, crossing tenders, and switchmen, 229 killed, 2,070 injured; other employees, 1,289 killed, 35,722 injured. The casualties to employees coupling and uncoupling cars were: Employees killed, 307; injured, 4,019. The casualties connected with coupling and uncoupling cars are assigned as follows: Trainmen killed, 269; injured 3,506; switch tenders, crossing tenders, and watchmen killed, 23; injured, 420; other employees killed, 15; injured, 93.

The casualties due to falling from trains, locomotives, or cars in motion were: Trainmen killed, 457; injured, 4,757; switch tenders, crossing tenders, and watchmen killed, 25; injured, 301; other employees killed, 75; injured, 570. The casualties due to jumping on or off trains, locomotives, or cars in motion were: Trainmen killed, 116; injured, 3,926; switch tenders, crossing tenders, and watchmen killed, 14; injured, 278; other employees killed, 61; injured, 506. The casualties to the same three classes of employees in consequence of collisions and derailments were: Trainmen killed, 613; injured, 4,337; switch tenders, crossing tenders, and watchmen killed, 20; injured, 138; other employees killed, 90; injured, 854.

The number of passengers killed in the course of the year 1904 was 441, and the number injured 9,111. In the previous year 355 passengers were killed and 8,231 injured. There were 262 passengers killed and 4,978 injured because of collisions and derailments. The total number of persons, other than employees and passengers, killed, was 5,973; injured, 7,977. These figures include the casualties to persons classed as trespassing, of whom 5,105 were killed and 5,194 were injured. The total number of casualties to persons other than employees from being struck by trains, locomotives or cars, was 4,749 killed and 4,179 injured. The casualties of this class were as follows: At highway crossings, passengers killed, 4; injured, 10; other persons killed, 804; in-

jured, 1,453; at stations, passengers killed, 28; injured, 108; other persons killed, 458; injured, 525; at other points along track, passengers killed, 9; injured, 38; other persons killed, 3,446; injured, 2,045. The ratios of casualties indicate that 1 employee in every 357 was killed and 1 employee in every 19 was injured. With regard to trainmen—that is, enginemen, firemen, conductors, and other trainmen—it appears that 1 trainman was killed for every 120 employed and 1 was injured for every 9 employed.

In 1904, 1 passenger was killed for every 1,622,267 carried, and 1 injured for every 78,523 carried. For 1903 the figures show that 1,957,441 passengers were carried for 1 killed, and 84,424 passengers were carried for 1 injured. For 1895, 1 passenger was killed for every 2,984,832 carried and 1 injured for every 213,651 carried. With respect to the number of miles traveled the figures for 1904 show that 49,712,502 passenger-miles were accomplished for each passenger killed, and 2,406,236 passenger-miles for each passenger injured. For 1903 the figures were, 58,917,645 passenger-miles for each passenger killed, and 2,541,096 passenger miles for each passenger injured. The figures for 1895 show that 71,696,743 passenger-miles were accomplished for each passenger killed and 5,131,977 passenger-miles for each passenger injured.

GREATER PERCENTAGE OF AIR BRAKES COUPLED.

The Interstate Commerce Commission has issued an order calling upon all railroads engaged in interstate commerce to furnish the following information not later than October 1, 1905:

1. The number of freight cars in use.
2. The number of freight cars equipped with air brakes.
3. The average percentage of air brake cars used in freight trains, together with any instructions that have been issued respecting the use of air.

The Commission has asked for this information with a view of setting a date for a hearing on the question of increasing the minimum percentage of air brake cars to be used in freight trains. The

commission has become impressed with the danger attending the running of freight trains with an insufficient number of cars with air brakes coupled up and in use.

The original safety appliance act required that every train should have a "sufficient number of cars in it so equipped with power or train brakes that the engineer on the locomotive drawing such train can control its speed without requiring brakeman to use the common hand brake for that purpose." The word "sufficient," as used in this act, was so indefinite as to render the air brake provision of the law inefficient in its application, and for this reason the amended act of March 2, 1903, established a minimum of 50 per cent of the cars in each train which were required to have their brakes operated by the engineer of the locomotive drawing the train. The amended act also provides that, "to more fully carry into effect the objects of said act, the Interstate Commerce Commission may, from time to time, after full hearing, increase the minimum percentage of cars in any train required to be operated with power or train brakes which must have their brakes used and operated as aforesaid."

The evident purpose of the law is to ultimately require the use of air brakes on all cars of all freight trains, and the Commission is given power to bring this about as the state of equipment seems to permit. Recent accidents, involving loss of life and property, that have occurred by reason of the "buckling" of freight trains when emergency applications of air have been made on trains partially air braked, have demonstrated that such trains are really not under the control of the engineer of the locomotive drawing the train as required by law; and as the force of impact which causes this buckling is due to the presence of the unbraked cars on the rear portion of the train, it appears to the commission that the danger may be obviated by requiring a greater number of cars in trains to have their brakes operated by the engineer.

Therefore, the commission has issued the order calling upon the roads for the above information, and shortly after the first of October a date will be fixed for a hearing with a view to issuing an order increasing the minimum percentage of air brakes to be used on freight trains to as great an extent as conditions will permit.

A Record Run Over the A., T. & S. F. R. R.

The Scott special over the Atchison, Topeka & Santa Fe, in July, with a baggage car, dining car and Pullman, weighing 338 tons, was much talked about, and well it might be, for it was certainly a

wonderful performance, considering the grades and distance, and that it is a single track road.

The contract with Scott involved a payment of \$5,500 with a forfeit of \$500 if he was not landed in Chicago within 50 hours, one hour and forty-five minutes less time than the Lowe special which was thought at the time to be phenomenal, but this time was reduced more than six hours, the whole 2,265 miles being made in a little over 45 hours, with the astonishing average of 50 miles an hour for the whole distance, the speed ranging from 26 to 106 miles an hour. The train left Los Angeles at 1 P. M. and arrived at

	Miles	Pac. time.	Per hr.
San Bernardino.....	60.0	2:05 p. m.	55.4
Barstow	81.1	3:55 "	46.8

Chicago.....	134.3	11:54 "	55.1

The run from Los Angeles to Albuquerque, 888.1 miles, was made in 19 hours and 32 minutes. Average, 45.47 miles per hour; deducting dead time the speed average was 46.2 per hour. From Albuquerque to Chicago, 1,369.7, was made in 25 hours and 16 minutes. Average, 53.8 miles per hour; deducting dead time, the running time was 57.6 per hour. With grades in the mountain districts as high as 3'.37, taking a train over 2,265 miles of single track road, traversing the states of California, Arizona, New Mexico, Colorado, Kansas, Missouri and Illinois, in 44 hours and 48 minutes is certainly a wonderful performance, and is a great credit to the mountain engineers (including helpers) who handled the train.

General Passenger Agent J. J. Byrne is reported as saying that the Scott special will likely stand as the top notch in fast railroading until there is a shorter road between Los Angeles and Chicago, and said incidentally: It is the character and ability of the men which a road has at its disposal that gives it a record for speed. The officials all seem pleased with the success of the run, and that it was done without a single mishap, which indicates that the Santa Fe equipment and track are in excellent condition.

• The Journal •

CLEVELAND, OHIO.

CHARLES H. SALMONS, - Editor and Manager.

Address all matter for publication—Correspondence, Technical and Link Departments, changes in Division Addresses, Special Notices, and address of Outside Subscribers to C. H. SALMONS, S. G. E., Editor JOURNAL.

No reading space will be sold for advertising purposes under any circumstances.

All money matters should be addressed to W. B. PRENTER, F. G. E., 307 Society for Savings Bldg. Send New York or Chicago draft, Express money order or Postal order, but never send personal check. Also send the name and address of all members Initiated, Reinstated, Transferred, Expelled, Suspended, Withdrawn and Deaths to the F. G. E., as per Section 16 of the Statutes.

Changes in Address of the JOURNAL and orders for Division supplies should be addressed to D. EVERETT, T. G. E., 307 Society for Savings Bldg.

Advertising Department matter and all correspondence relating thereto should be addressed to W. N. GATES, 409 Garfield Bldg., Cleveland, O.

SEPTEMBER, 1905.

Proper Names.

We desire to call the attention of all those whose duty it is to correspond with the Grand Officers relative to the personnel of our membership. Everyone will realize the necessity of accuracy in names of persons, and while we are pretty good at reading almost any kind of writing, we receive some letter containing names at which we can only guess, or be to the trouble of writing, requesting each letter to be made plain and distinct. This, of course, requires an answer, two letters which would not need to be written if the writer will take pains and make each letter plainly in the whole name. Try and help us out, Brothers, by being very particular in making each letter in each proper name. It will save a lot of needless study trying to figure them out, with possibly a mistake at the end, unless the two letters are written, one to ask what it is, the other to explain, both of which may be obviated with a little care.

Associated Liberty.

We have approximately 52,000 members of the B. of L. E. presumed to be good

and true members of an organization formed for the mutual benefit of all, and in taking an obligation to the laws which have been found necessary to protect that common interest, each individual has restricted his individual liberty to do whatever he pleases in order to secure the benefits which accrue from an association wherein he is restricted to do what he ought in that common interest in which he shares, because of the compact; hence, personal liberty, within the law of the nation, the state, the community, or any organization within these, is the right to act without interference so long as that act is within the limits of the law to which he is obligated. Liberty without restriction is license, and if one may do as he pleases without regard to law or the interest of others, liberty would be dethroned, society disorganized, and the old mediæval principle would be enthroned, "He may take who has the power, and he may keep who can."

In this age of enlightenment, education, and moral elevation, we have a right to expect of every man that he will live in harmony with such duty as he has agreed to perform, whatever object may have induced the obligation, and it is a pleasant reflection that in our great family of obligated Brothers, there are but few who do not recognize that obligation and live in harmony with it, but there are a few in our association, as there are in all other associations, whose selfishness obliterates the principles of the Golden Rule and who would do as they please, regardless of their obligation to the laws of government to which they obligated themselves, and if there is an attempt to apply that law, resort to every means of evading their obligation, even to the extreme of appealing to the civil courts. It is unfortunate that one so short of manliness as to forget his pledged faith, should ever find his way into our family of men working faithfully to better the conditions of all our class, but one occasionally does get in, and when in, do their best to evade their obligation to the law, and when the law is applied, appeal even to the civil courts to restrain some factor from compelling them to do what they had solemn-

ly promised to do; but civil law sustains the laws governing voluntary associations such as the B. of L. E., and in the Austin vs. Dutcher case, see page 162, JOURNAL March 1901, the court says, "It is not disputed but that the rule in regard to voluntary associations of this character is that the constitution and by-laws are the sole rule that governs the relations between associations and their members, and that the courts cannot redress any action of the associations in expelling or punishing a member when such action has been taken in accordance with the express provisions of the constitution and by-laws.

The court cites the case of White vs. Brownell (2 Daly, 359) and the law as defined in that case: "Individuals who form themselves together into a voluntary association for a common object, may agree to be governed by such rules as they think proper to adopt, if there is nothing in them in conflict with the law of the land; and those who become members are presumed to know them, to have assented to them, and they are bound by them."

Justice Leventritt in the Supreme Court of New York, in a case against the stereotypers, in his decision said, "The court holds that men's relations with the union make them amenable to the rules of that organization, and that the court cannot interfere."

Any advice from whatever source which runs contrary to the principles laid down by the court as above indicated, that an obligation means compliance therewith, is disloyal to the principles of organization of whatever character and is a direct stab at the very foundation upon which rests the efficiency of organized labor to produce the benefits for which it is organized. The right of a hearing, the right of appeal to the Grand Office, and beyond that to the National convention, is and ought to be sufficient. And while it is hoped that every obligated member will abide fully by and with the law as he knew it to be when he joined, if he does not, the law should be enforced without fear or favor, but always enforced within the strict letter of the law, for herein lies the safety from action in the civil courts.

Let us conduct our business in strict conformity with the law to which we have obligated ourselves, and if necessary apply the law to those who refuse to do so regardless of contrary advice from any source. If we are shiftless in living up to our obligated duties to the order and to one another to maintain the compact, and through it secure the benefits that accrue from it, we do not deserve success. If we maintain our organization and succeed we must comply strictly with our law and see that there is compliance on the part of all who remain members. Associated liberty means that we retain the liberty to do only that which is right that we should do, and keep within the law.

Riviere Du Loup Union Meeting.

The union meeting held in Riviere du Loup, Province Quebec, July 4, 5 and 6, proved equal to every reasonable anticipation, in genuine Canadian hospitality, unqualified interest in the meetings, and in numbers very much exceeded any possible anticipations, at least of the committee to whom so large a crowd presented many difficulties, as Riviere du Loup is not a large city.

The Grand Officers (see page 737) arrived Tuesday evening with a large number of others from all parts of the country. Many had evidently preceded us, and the long platform at the station was lined with new arrivals and the committee's troubles began, the hotels and other places where their guests had been assigned being some distance and the means of conveyance meager, but eventually all were comfortably cared for.

Assistant Grand Chief Bro. M. W. Cadle had been visiting Canadian Divisions and stopped on his return to the States, and F. G. A. E. Bro. R. W. Botterell, of Ottawa, and Grand Guide F. H. Tucker, of Brooklyn, N. Y., with their wives, were present, making seven Grand Officers present—the largest number ever in attendance at any union meeting of the Brotherhood. The register where the meetings were held contained the names of 145 members of the order from the States, 103 registering "wife" or "sis-

ter," and indicated having with them fifteen children, indicating 263 from the States, and no doubt this will reach 300, as it is known many did not register, and it is not surprising that the committee found their hands full in caring for so many unexpected though welcome guests.

A very good meeting place was provided, and the 500 seats were all taken when the meeting of July 4th was called to order at 9 o'clock A. M., with F. G. E. Bro. W. B. Prenter presiding. Bro. Geo. Mills, of Div. 70, made the opening prayer, after which A. G. C. E. Cadle addressed the meeting on the good of the order, followed by Bro. W. E. Futch, President of the Insurance Department, making a very interesting meeting and cleared up many things not before well understood.

The meeting convened again at 2 o'clock P. M., and after prayer by Brother Mills, Grand Chief W. S. Stone was introduced and was received with hearty applause. He addressed the meeting at length on the good of the order, pointing out the right and wrong path of duty each owed to the order, and what each led to, and received an ovation as he closed his remarks.

Various matters were brought up and disposed of, among them the place of next meeting. St. Thomas, Ont., being a leading candidate, Brother Collison, of Div. 132, was given the floor in behalf of his home city, and on a vote being taken St. Thomas was unanimously chosen as the place of meeting for the Canadian Brothers in 1906.

In appreciation of the many favors extended, a resolution was unanimously adopted, thanking the railroads and others for courtesies extended, and the meeting adjourned until 8 P. M., when an open meeting was held at the same place, and the hall was packed with an interested audience. An orchestra of nine pieces was provided, Bro. J. R. Murphy, chairman committee of arrangements, presiding, and after a selection by the orchestra and a prayer by Brother Mills, of Div. 70, the mayor was introduced and delivered an address of wel-

come, in which he paid a high tribute to the engineers and expressed a wish that they would carry away with them some lasting memory of their city and country. F. G. E. Bro. Prenter was then introduced, and after dealing with the objects of the order and the union meetings held by the Canadian Brothers, in closing his remarks turned to the Chairman, Brother Murphy, and expressed profound appreciation for the invitation and hospitable entertainment we had received from the mayor, the committee of arrangements, and the people of Riviere du Loup.

After a selection by the orchestra, Mr. Dion, member of Provincial Parliament, was introduced and delivered a masterly address in French. Mrs. W. A. Murdock, Grand President G. I. A., was then introduced and told of the aims, objects, and growth of the G. I. A., closing with a nice compliment to the flags of the two countries. L. H. LaVassie, ex-Mayor, was then introduced and delivered a facetious address which, in his broken English, kept the house in roars of laughter.

A song, "You Never Know," was then beautifully rendered by Miss Murphy, daughter of Bro. J. R. Murphy, of Div. 204, accompanied by Miss Martin, daughter of Brother Martin, of Div. 204.

Bro. W. E. Futch, President of the Insurance Department, was then introduced, and told of the department over which he presides, and expressed appreciation of the welcome and entertainment by the people of Riviere du Loup. Miss Scott, daughter of Brother Scott, of Div. 204, then gave a piano selection, and showed both skill and excellent taste in her shadings.

Grand Chief W. S. Stone was then introduced, and after thanking the Brothers, the mayor and citizens of Riviere du Loup for their hearty greetings and kindly expressions, took up the conditions of labor in the mediæval ages, and traced them down to the present organized effort and the benefits that accrue to the members through it, paid a high compliment to our deceased Grand Chief P. M. Arthur, and closed his remarks with a compliment to the Ladies' Auxiliary, pointing out its ex-

cellent qualities and influence for good, and was heartily applauded as he resumed his seat.

Mrs. F. A. Sproule, of G. I. A. Div. 161, Toronto Junction, then made a very pleasing address on the growth and influence of the Auxiliary in Canada. With a selection by the orchestra the meeting adjourned, all feeling that the day's meetings had been a decided success.

July 5th was devoted to an excursion and picnic at Temiscouata Lake, via the Temiscouata Railway. The train left at 7:45 A. M. for the run of 51 miles through a somewhat wild and romantic section, with heavy grades and short curves, though the roadbed and service were excellent. We arrived at Cloutiers landing on the beautiful lake on time. The weather was very warm and our crowd took to the shade until dinner time, when a splendid luncheon was served at two hotels. In the afternoon some tried their hand at fishing, others enjoyed a ride in the yacht provided for the occasion. The return whistle was blown about 4 P. M. and we got off at 4:30, having spent a very pleasant day.

July 6th was the crowning pleasure of our stay, the excursion to Ha Ha Bay and Tadousac by the Richelieu & Ontario Company's steamer, which left the wharf at the Point at 7:45 A. M. The St. Lawrence River is 20 miles wide at this point, and our course is almost directly across to the mouth of Saguenay River. Tadousac and Tadousac Bay lie at our right as we enter the river, and a most wonderful river scene presents itself. The Saguenay is wide and deep, its waters exceeding blue, and its rocky banks rise abruptly, barren and bold, almost as though chiseled. No other river like this is to be seen on the American continent. It is much like the fjords of Norway, or along the Alaskan coast, where the rock seems to have parted through some great upheaval. One wonders where all the water could come from, and wonders more when we reach Cape Eternity and Cape Trinity, solid masses of rocks standing up almost perpendicular, 1,800 and 1,900 feet above the river, and we are told that the water beneath is more

than 2,000 feet deep. The interest in these massive rock banks of the river never ceases, barren beyond description, occasionally a little patch is seen where humanity could get a foothold, but must always come to the river for a roadway. The river was alive with fish and hundreds of schools of great white porpoise could be seen in their characteristic movements of coming to the surface, stick their backs out of the water and disappear.

At Ha Ha Bay the steamer turned about without stopping and returned to Tadousac, making a landing at the wharf, all on board going ashore to see the first settlement made by the French, the old church, the salmon so thick in the little bay that one feels as though he could almost walk on their backs, and the great Tadousac Hotel owned by the steamship company.

Time up, the steamer's whistle was brought into use to call all on board, and we start across the St. Lawrence for Riviere du Loup, having spent both a delightful and profitable day.

As this practically ended our stay as arranged by the committee, very many secured berths on the steamer for Quebec, and to accommodate those who desired to get their baggage, two hours was given at the Point dock, and nearly all bade adieu to Riviere du Loup, the committee who had worked so hard to make our stay pleasant, and the people who did whatever lay in their power for our comfort.

The appreciation of the extraordinary efforts of the committee, members of Div. 204, and the citizens generally, was strongly evidenced at a called meeting during the trip on the steamer. The general feeling expressed was that we should do something substantial in view of the fact that there were so many more American visitors than the committee could possibly have expected. Not knowing just what to do, a resolution of thanks was adopted, and a committee of three was appointed, with Bro. Clarence Mitchell, Chr. G. C. of A., B. & M., of Boston, as Chairman, they to work out the plan of rightly presenting tangible evidence of appreciation to the committee

who worked so hard, and under many disadvantages accomplished so much for our pleasure.

THE EDITOR.

The Resolution of Thanks adopted at the afternoon meeting of July 4th, as compiled by the secretary, reads as follows:

On behalf of the members of the Canadian Divisions of the B. of L. E. assembled in union meeting in Riviere du Loup, July 4-6, we desire to tender our sincere thanks to the mayor, city council, the citizens, the committee of arrangements, members of Div. 204, and the officials of the following railroads for courtesies extended: To the Intercolonial, Temiscouata, Quebec Central, Quebec & Lake St. John, Quebec Light & Power Co., Canadian Pacific, Canadian Northern, Grand Trunk, Central Vermont, Boston & Maine, Maine Central, Bangor & Aroostook, N. Y., N. H. & H., N. Y. C. & H. R., Boston & Albany, Erie Ry., Wabash Ry., Michigan Central, Pere Marquette, Lake Shore & Michigan Southern, N. Y., C. & St. L. (Nickel Plate), C., C. C. & St. L., Baltimore & Ohio, Chicago & Northwestern, C., M. & St. P., Chicago & Alton, Illinois Central, Chicago, Peoria & St. Louis, Denver and Rio Grande, St. Louis, Iron Mountain & Southern, Southern Pacific, the Richelieu & Ontario Steamship Co., and any others who in any way contributed to the pleasure of those attending the union meeting.

Report of committee was unanimously adopted. F. W. RIOUX, Div. 204, Sec.

Union Picnic.

The five Divisions of the B. of L. E. located in Cleveland, O., Divisions 3, 31, 167, 318 and 542, held their first annual joint picnic at Cedar Point, O., on Saturday, Aug. 5. A committee of three from each subdivision were formed into a committee of fifteen with Bro. W. B. Prenter as chairman and Bro. C. W. Sipher secretary, and they worked faithfully for success, and won out handsomely.

The committee solicited prizes from the merchants of Cleveland, and as it was the first appearance of the engineers, they contributed liberally, and we think the committee broke the record for number, there being a total of 61, headed with a 21-jewelled watch by J. W. Forsinger, 17-jewelled queen watch by W. C. Ball Co., running down to a box of candy. Tickets were sold for a grand drawing on

the twelve leading prizes, which created a healthy interest in the picnic and its results.

A ten car special train was provided by the L. S. & M. S., and it was a happy crowd that gathered at the depot ready for the start at 8:30 A. M. While waiting some one spied Mr. Ira McCormack, Supt. of Terminals, N. Y. C. & H. R. R., New York, and in his company was Mr. Murray of the Pickands Mather & Co., and both these gentlemen showed their good will for the engineers by contributing liberally to the grand drawing fund, and bidding the picnickers good luck as the train pulled out well filled with members, their families and friends.

Cedar Point is a very pleasant summer resort and bathing place. The day was just right in every way, and amusements were plentiful as there were contests galore, viz.: a bowling contest for men with six prizes, and one for women with six prizes; grand prize waltz, two prizes; engineers' race, over 50, four prizes; race, engineers under 50, four prizes; married ladies' race, six prizes; single ladies' race, six prizes; fat men's race, over 200 pounds, five prizes; boys' race, under 16, four prizes; girls' race, under 15, four prize; girls' race, under 10, three prizes; then the grand drawing for the eight leading prizes.

After hunger was appeased either from the basket or the excellent dining room service, the committee began to prepare for their hard afternoon's work, disposing of all the above events, and they succeeded admirably in getting through with it with everybody looking pleasant. The races made a lot of fun and all parties entered into it with a zest. Most of the prizes were delivered to the winners immediately. The grand drawing came last and was tedious work for the committee and the two faithful little girls who drew the large number of tickets from the boxes. The interest was keen during the entire drawing as the leading prizes were very slow in showing up, but the means employed was the fairest known, and all were satisfied that each purchaser of tickets had an even

chance. This over, the crowd began to wend their way to the boat homeward bound. On boarding the cars at 7 P. M., the baskets were opened and the good things eaten with a relish.

The picnic as a whole proved eminently successful, thanks to the earnest work of the committee. City Ticket Agent Gaul of the L. S. & M. S. Ry. looked well after the comfort of the crowd. And we believe that next year few will miss attendance when the committee sets the date for the second annual picnic of the Cleveland Divisions.

Married.

We have been favored with an At Home card announcing the marriage of Bro. Charles B. Clark, a member of Div. 589, to Charlotte Estella Howes, at the home of the bride on August 2, at home after August 15, 718 East 137th street, New York.

While we cannot call at 718 to extend personal congratulations, Brother Clark and his good wife have our best wishes for a lasting continuance of felicity. A Chinese proverb says, "A hundred men may make an encampment, but it takes a woman to make a home." May the mystic circle just formed by Brother and Mrs. Clark always make their abiding place to both of them "the dearest spot on earth."

LINKS.

Div. No. 1 will hold a system meeting in their Division rooms in Elks' Temple, Detroit, Mich., on Sept. 17, 1905, and all members of the B. of L. E. on the various railroads centering at Detroit are invited to attend. There will be held at this meeting initiation ceremonies and other business of great importance to all members of the B. of L. E. We expect to have the Michigan Central and Grand Trunk between Chicago and Buffalo fully represented at this meeting, and we also promise, if business will permit, that our Grand Chief Engineer, W. S. Stone, will be present.

J. J. ROACH,
J. S. MARTIN,
J. CARNEY,

Committee of Arrangements.

A UNION MEETING of the B. of L. E., B. of L. F., O. R. C., B. of R. T., B. of R. C., and Railway Telegraphers, will be held in Toledo, O., on Sunday, Sept. 24, at Memorial Hall, when the officers of all the orders are expected to be present and address the meeting. A cordial invitation is extended to all members of these orders to be present if possible, and take part in the social and intellectual entertainment which always attends such meetings.

Fraternally yours,

JAMES LATHROP, B. of L. E., Chr.
J. RHODES, B. of R. T., Sec'y.

UNDER the auspices of Div. 98 a union meeting will be held in Lincoln, Neb., on Thursday and Friday, Sept. 28 and 29, in Representative Hall, State Capitol Building.

Grand Chief Engineer W. S. Stone and Third Grand Engineer Deloss Everett will be present.

The program for the two days will be as follows:

At 9:30 A. M. of the first day an address of welcome by the Hon. J. H. Mickey, Governor of Nebraska.

A speech by the Hon. Norris Brown, Attorney-General of Nebraska, his theme being, "Brotherhood Reflections."

An address by Grand Chief Engineer Warren S. Stone, who will talk on "Brotherhood Facts."

Followed by Brother Deloss Everett, Third Grand Engineer, on "Further Facts."

The speaking to be interspersed with music, and the entire morning program open to the public.

At 2:30 P. M., starting from the Lincoln Hotel, an automobile ride will be tendered the visitors by the Commercial Club of the city, and immediately thereafter, a visit will be made to the Burlington shops at Havelock, a suburb of Lincoln.

In the evening, at 8:30, a joint open meeting will be held to which all railroad officials and members of the Brotherhood are cordially invited, thus to promote good fellowship, and to exchange ideas of mutual concern.

The second day will be taken up wholly in reviewing the work of general interest to the Brotherhood of the Middle West, sessions to be held at 9:30 A. M. and 2:30 P. M.

In the evening of the second day the union meeting will close with a grand ball in the Auditorium, to which all visitors will be admitted upon presentation of traveling card.

Transportation will be granted by the Burlington Railroad, if request is made by officials where employed, through General Manager Geo. W. Holdrege, Omaha, Neb.

Reasonable rates will be given by the hotels, the Lincoln Hotel being designated as headquarters.

Members of the Brotherhood and officials of the Railroads are cordially invited to be with us; remember the dates.

H. WIGGENJOST, F. A. E. Div. 98.,
Sec. Committee of Arrangements.

THE Thirteenth Annual Convention will be held at Detroit, Mich., commencing September 12, at 9 A. M. The Cadillac Hotel has been selected as headquarters and the convention hall will be in the hotel. The hotel people have made rates to our members and their families.

In order to assure yourself of accommodations at this convention, it will be absolutely necessary for you to engage your rooms in advance as the Michigan State Fair will be held at Detroit the same week that our convention will be held there, and the hotels will be pretty well filled up. However, the hotel people at the Cadillac will give the Traveling Engineers the preference up to a reasonable time before the convention opens, and if reservations are made promptly the hotel is amply large enough to take care of all of us. Arrangements have been made with the Pullman company for one-half rates for members and their families. To secure these one-half rates, it will be necessary to write to the secretary advising space required and between what points it is to be used, when the secretary will notify the Pullman people what you want and the one-half rate orders will be

mailed to you direct from the Pullman company at Chicago. It is believed that this will be more satisfactory to the members than the old way of having to go and look up your return pass after your arrival at Detroit.

Your Committee of Arrangements is endeavoring to outdo all others in the way of giving you a nice time in the beautiful city of Detroit, and it is believed that the thirteenth meeting will be the most pleasant and profitable of all.

Yours respectfully,
W. O. THOMPSON, Oswego, N. Y.,
Secretary.

BRO. OSCAR TYLER, member of Division 31, who has just served a term in the Ohio Legislature very creditably to himself, is a candidate for re-election at the coming November election, and we presume his friends will be as numerous as in his last political contest, and that after that date he will still be entitled to the prefix Honorable to his name.—EDITOR.

BRO. JOSEPH F. LINDLEY was promoted from the passenger service to Road Foreman of Engines, Pere Marquette System, on Jan. 21, 1905. He was a good loyal member of Div. 503, and worthy and well qualified to fill the position.

C. L. DOLSON, F. A. E. Div. 503.

THE many friends of Bro. J. F. Emerson, of Simpson Division 210, Macon, Ga., will be pleased to learn that he has been recently promoted to the position of Road Foreman of Engines for the Macon Division of the Central of Georgia Railroad.

J. L. FICKLING, F. A. E., Div. 210.

A UNION MEETING of the B. of L. E. employed on the B. & O. S. W. Ry., representing membership in Divs. 289, 127, 95, 65 and 39, was held in Seymour, Ind., July 24, 1905. Bro. Jas. Gabriel, of Div. 39, called the meeting to order at 2 P. M., and in a few very appropriate words, introduced A. G. C. E., Bro. H. E. Wills, to the assembly, who gave an interesting and instructive address, which was appreciated by all present. Short

talks were also made by the Brothers from the different Divisions, and arrangements were made to hold another of these meetings October 24th.

In the evening we were given a banquet by Div. 39, which was thoroughly enjoyed by all who had the pleasure of being present. The meeting closed at 11:30 P. M., and will be remembered as a success in every respect.

J. ORMSBY, Sec. G. C. of A., B. & O. S. W.

At a regular meeting of Div. 156, Birmingham, Ala., on July 9, we initiated two new members and hurried through considerable other business and closed the meeting, as it had been pre-arranged that we should have company and continue a more pleasant feature. The Ladies of Auxiliary No. 169 put in an appearance and were invited to seats by our worthy C. E., who called upon our Train Master, Mr. A. B. Bayless, who is not only always willing but always ready to help advance the social welfare in an official way, or make a nice talk, as he did on this occasion. He talked a little railroading, but soon turned to the subject of the ladies, pointing out how impossible it would be for us to keep on the strict line of duty if it were not for the influence of the good mother, wife and sweetheart, and painted a beautiful picture of home life and home influences, highly complimentary to the ladies, and very agreeable talk to all present. At the close of Mr. Bayless's address, our worthy Chief, Brother Carlisle, made some very nice fitting remarks. He is at his best talking to the ladies, and eventually led up to a subject very pleasing to the ladies, for it showed appreciation in a practical way, and in consideration of their hard work and unqualified interest in the picnic on June 22, at Germania Park, he presented them, on behalf of Div. 156, a check for \$100, telling them that the picnic could not have been a success without the help of our mothers, wives and sweethearts, and thanked the ladies, who responded in kind, making it as a whole an exceedingly pleasant gathering, which

tended toward closer friendships, the very foundation of our success in both social and business life.

W. C. BROWN, Div. 156.

An all day meeting of the members of the B. of L. E. employed on the Missouri Pacific and St. Louis Iron Mountain and Southern Railway systems, was held Sunday, July 16, in K. of P. Hall, Kansas City, Mo., and lasted from 8 o'clock in the morning until 9 o'clock in the evening. It was a very enthusiastic and important meeting. Representative men from every Division of the two systems were present to the number of 137. Bro. W. J. Rooney was temporary chairman. Bro. R. H. Brandt was elected permanent chairman, and Bro. C. B. De Voss, secretary. The meeting was under the auspices of Divisions 359, Nevada, Mo., and 491, Kansas City, Kan.

Bro. M. W. Cadle, Assistant Grand Chief Engineer of the Brotherhood, made an able and lengthy address setting forth the standing of the organization throughout this country, Canada and Mexico. He urged the Brothers to be loyal to the organization and to their employers, the company, and said that the best service could be rendered by living up to the rules of the company and the laws of the Brotherhood. The remarks made by Brother Cadle were enthusiastically received by the Brothers.

Bro. Myer Hurley, General Chairman of the Santa Fe System, also made an excellent address.

Bro. C. R. Raymond expressed his opinions of the needs of the present day in a concise and scholarly manner.

Bro. Thomas Toohey, of Div. 359, contrasted the conditions of the present with the past, and spoke of necessary changes and the means to bring them about.

Bro. M. W. May, General Chairman of the Missouri Pacific and Iron Mountain Systems, made an address and a report of work done by the committee during the past year.

Bro. H. Grover was present and made a splendid address. Many of the Brothers joined in discussions which, when taken

in the right spirit, will be of vast benefit to themselves and the organization, also to the company they are serving.

Bro. James Corrigan, at present Humane Officer in Kansas City, Kan., and F. A. E. of Div. 491, and an honorary member of the Grand International Division, was present and spoke of railroading from the standpoint of a member of 38 years' standing.

Bro. G. T. Rodgers, Div. 48, made a splendid talk, touching on the obligations we owe each other and our duties to our employer. Thus was brought to a close one of the most successful meetings ever held by the engineers in Kansas City.

C. B. D.

ON the 3d inst. a party of Brothers and families from Divisions 440, 341, 479 and 607, left for the union meeting at Riviere du Loup, Quebec. We met with some delays and were informed on inquiry that we would miss our connection at Edmundston, as the Temiscouata Railway only waited twenty minutes for our train.

This was very discouraging, as it meant the loss to us of the first day's meeting (and only after hearing the remarks of our Grand Chief and others, did we realize fully what we should have lost), but upon reaching Edmundston nearly three hours late, what was our surprise to learn that the superintendent of the Temiscouata Railway, Mr. G. G. Grundy, had issued instructions to hold No. 2 for us—a lot of deadheads.

Mr. Editor, the rejoicing over the return of the prodigal son was as nothing compared with the joy of this party of Prohibitionists at that moment, especially amongst the ladies, and if Mr. Grundy could have overheard the remarks made relative to himself for holding that train, I greatly doubt if he would have changed positions with Sir Wilfred Laurier or our Roosevelt.

The accommodations on the Temiscouata Railway are away above par. Their first-class coach was a dandy; wicker chairs in one end, plush seats in the other, and a smoking room between, and the train crew did their utmost to make it pleasant for us. The master mechanic and road master were on the train, and we found them interested in making the meeting a success, and through the JOURNAL we would thank the officials of the Temiscouata Railway for the many courtesies received.

Upon reaching Riviere du Loup, we found a crowd of Brothers and their wives, and, as I was informed, their attendance at this meeting was the largest of any ever held in Canada; so much greater than anticipated by the committee that

they were overloaded for a time, but they soon brought order out of chaos, and they deserve credit for their earnest efforts. It was a hard proposition Brother Murphy, wasn't it? You must have been lonely when we left.

The first day our Grand Officers drove it into us good and hard—what we should do, etc., and if we will do as advised, our reward will be forthcoming.

The next day we went to Temiscouata Lake for a picnic, twelve cars loaded. "My, but it was cold," yet we enjoyed it, dancing, boating, fishing, etc.; but, as is usually the case, the best thing was reserved for the last day. On Thursday we went on one of the fine R. & O. steamers, and for twelve hours enjoyed one of the most pleasant rides I have ever taken; across the St. Lawrence and up the River Saguenay, with a call at Tadousac to visit a church some 200 years old. This trip will long be remembered by all, and those who missed it lost the trip of a lifetime. You, Mr. Editor, I am sure, enjoyed it, even to the struggle for supper.

The committee worked hard to make this meeting a success, and went to great expense to give us pleasure, and they deserve credit, as it was one of the best meetings I have ever attended in Canada or elsewhere. Here's to the Brothers of 204!

C. H. SMALL, F. A. E., Div. 440.

ON Sunday, July 16th, about 200 engineers gathered together in A. O. U. W. Hall, Minneapolis, Minn., in a union meeting. The meeting was called to order at 2:30 P. M. Bro. Barton of Div. 180, then appointed the following officers to the chairs: Bro. Piper, of Div. 625, First Engineer; Bro. McLane, Div. 494, Second Engineer; Bro. Elliott, Div. 180, Chaplain; Bro. Rogers, Div. 180, First Assistant Engineer; Bro. Dunn, Div. 357, Second Assistant Engineer; Bro. Humphrey, Div. 357, Guide; Bro. J. E. Malthouse, Div. 494, Third Assistant Engineer. After going through the ceremonies of opening and closing and getting some instructions relative to work and traveling cards, Bro. Gardner, Div. 226, was called upon for the opening address and made some very good remarks. Our Grand Chief Engineer Stone was then called upon, and, in spite of the intense heat, he spoke for over two hours, every word of his remarks being the best advice and caution to the listening Brothers; advice, which, if followed, could not help but make any engineer a better man of himself, his family or his employer. At the close of Bro. Stone's address the meeting adjourned to meet again at a social session at 7:30 P. M., at which time about 200 engineers and their wives met. After Bro. Bartou

called the meeting to order, Rev. Marion D. Shutter offered prayer. Bro. Gardner was then called upon and he gave a splendid talk on "What the Brotherhood Teaches," a subject most appropriate for the time and place, and one that Bro. Gardner handled in a very able manner. After music by the Minnesota Quartet our Grand Chief was then called on and gave a most excellent talk. After more music by the quartet, Rev. Shutter made a splendid address.

Fortunate indeed were those who were able to be present and listen to the addresses, such as were given that afternoon and evening, and fortunate are those that take those words of advice and counsel home and live up to them. Everyone

This meeting was well represented by Brotherhood men from all over the Northwest.

At the close a vote of thanks was extended to our Grand Chief Engineer for his very able addresses of advice and instruction, after which the Grand Chief arose and moved that a vote of thanks be tendered the committee of arrangements for the manner in which these meetings had been arranged and the program carried out, thus closing what was the most successful union meeting that has been held in the Northwest.

In the afternoon Bro. Currie, of Div. 180, came with his automobile, and together with a party consisting of our Grand Chief Engineer and wife, Mrs.

THE AUTOMOBILE PARTY AT THE MINNEAPOLIS MEETING.

present then adjourned to the adjacent dining room where a substantial banquet had been provided and which was enjoyed by all, and all were well pleased after having enjoyed two of the best meetings it is one's privilege to attend.

The following morning after the writer had taken a couple of snapshots of the Grand Chief Engineer (which I hope you will reproduce in the JOURNAL, as Grand Chief Engineer Stone looks good to all the Brotherhood men in this part of the country) a large number of the engineers met in the same hall. Bro. Barton called the meeting to order at 9:45, and a general discussion by all took place on the current issues and Brotherhood matters in general.

Gallespie, wife of Bro. Gallespie, Chief of Div. 80, and Bro. Barton made a trip around Lake of the Isles, Calhoun and Lake Harriet. From there they went to Minnehaha, that place made famous by Longfellow in Hiawatha, returning to Minneapolis, where they visited the principal points of interest, when the writer got a fair snapshot while they were in an automobile, a copy of which is here presented. Our Grand Chief Engineer took the train that night for Oregon.

Fraternally yours,
J. N. MORRILL, F. A. E., 494.

THE members of Div. 287, Altoona, Pa., celebrated their twentieth anniversary

with a picnic at Mule Shoe Curve on July 26, which proved to be a grand affair and on a grand scale, of which we glean the following from the Altoona *Tribune*:

The second annual excursion and basket picnic under the auspices of the locomotive engineers of the Pittsburgh, Cambria & Clearfield, Pennsylvania & Northwestern and Middle Divisions of the Pennsylvania Railroad Company was held at the beautiful Mule Shoe Curve on the Alleghany Mountain along the new Portage railroad. The outing was a grand success in every respect, as the day was perfect with a clear, sunny sky and bracing mountain air, making it delightfully cool and pleasant, and the jolly engineers, with their families, other relatives and friends to the number of about 1,500 persons enjoyed themselves to their hearts' desire in the pleasant mountain retreat.

coldness and crystal clearness of its water.

The ozone of the Alleghenies is noted for putting a keen edge on appetites, and as the hour of noon drew near groups were formed everywhere and the baskets rifled of their contents, which were spread out before the hungry picnickers, none of whom appeared to have ever heard of such a thing as dyspepsia, judging by the way in which the good things disappeared.

After the appetites had been appeased the merry-makers gathered under two large butternut trees, where headquarters had been established, and "Old Glory" flung to the breeze with railroad flags, and enjoyed themselves with music, dancing and various kinds of sports.

It was indeed an old-fashioned picnic, to which all had come for a day of rest and recreation, and there was no regular program, every one enjoying himself and herself in his own way, and never

PICNIC TRAIN STANDING ON MULE SHOE, READY FOR RETURN TRIP.

The picnic train consisted of twelve coaches and two baggage cars, and left the Altoona depot at 9 o'clock with its load of happy picnickers, all in fine spirits in anticipation of a day of pleasure among the blue Alleghenies.

The ride was greatly enjoyed out the branch road, past the green fields and through the old town of Duncansville and up the mountains over the Portage road, where the magnificent scenery was made doubly beautiful by the crystal morning air and bright sunshine. The train arrived at its destination in due time, and the big crowd quickly left it and scattered in all directions, rambling through the mountains and seeking out shady, green spots to spread out the contents of their baskets. Many persons walked up the old turnpike to the famous Fountain Inn and Prince Gallitzin Spring, and those who had never before drank at the spring marveled at the

was there seen anywhere a jollier crowd or a more pleasurable outing. Trout's string band of Altoona was present and played a number of fine selections. Several solos were sung by members of the party and the assemblage joined in singing "Auld Lang Syne," "Marching Through Georgia" and many other old time and modern songs. William Cover of Jerry C. Burley Div. 287, of Altoona, led in the singing of the "Star Spangled Banner," and it was a grand burst of melody that swelled up from the singers and floated over the towering old mountain peaks which hem in the beautiful spot on all sides. Playing ball and pitching quoits were popular forms of amusement, and the pleasures of the day were greatly enhanced by running, sack races, apple and pie eating contests, wheelbarrow races, songs and speeches on graphophones, foot races between fat engineers and little girls in bloomers, etc. The organ used in ac-

companying the string band and the singers was kindly loaned to the engineers by F. A. Winter, the well known music dealer of Altoona.

Some of the picnickers took long walks over the mountains, others wandered along Blair Creek, angling for trout, and others gave their attention to wild flowers, all getting the sunshine and the healthy exercise. At 4 o'clock the engine gave four whistles calling all in the vicinity of the train, and at 4:30 o'clock gave four more whistles to get on board. At 5 o'clock the two big engines, bedecked with flags and hauling the long train, filled with merry picnickers, started on its return journey over the rest of the new Portage road around the side of old Pomroy Mountain to old Gallitzin, then down over the main line to Altoona, the train rolling into the station at 6 o'clock as the orchestra played "Home, Sweet Home."

The picnickers departed for their respective homes looking happy and fully satisfied, as they had spent a day of thorough enjoyment among the grand old mountains.

The complete success of the affair was due to the untiring efforts of the General Chairman, Bro. Wm. Cover and the following committees:

Entertainment and Amusement—A. E. Knepper, chairman; J. A. Lewis, E. A. McConnell, jr., Thos. E. Kearn, G. B. Brewster.

Baskets—W. D. Long, J. W. Fluke, C. W. Bohn, Thos. Bertram, G. B. Brewster.

Reception—W. W. Brantlinger, W. B. Deitrick, Wm. E. Brooks, W. B. Stahl, John McNellis, P. H. Masterson, Frank Davis, W. W. Ross, H. C. Stonebraker.

The cars of the picnic train were in charge of the following named corps of conductors, who attended to the passengers in a most courteous manner: Car No. 1, J. M. Miller; No. 2, W. W. Ross; No. 3, R. Winebrenner; No. 4, D. A. Reagan; No. 5, Frank Davis; No. 6, Hayden A. Himstead; No. 7, E. A. McConnell; No. 8, H. S. Stonebraker; No. 9, J. C. Rickle; No. 10, W. B. Stahl; No. 11, A. E. Knepper; No. 12, J. A. Lewis.

BRO. ALBERT NASH, member of Division 18, Rochester, N. Y., whose picture accompanies this article, was born in Alstead, N. H., July 28, 1824, and started his railroad career in the fall of 1847 on the Cheshire road in New Hampshire, from Ashburnham to Bellows Falls, and was promoted in a year to the position of engineer; went to the Vermont Central and ran between Troy, N. Y., and Birmingham, Vt. When the Niagara Falls road opened up in 1852 he went to it with David Upton, M. M., whom he had fired for on the Cheshire road, and here Bro. Nash remained from 1852 until he retired from service in 1903, running an engine continuously for 52 years, and always with

the very best of record as an engineer. He was very averse to having his picture taken and the one from which this half-tone was made was obtained on the sly with a kodak, and the only one known to be in existence. Bro. Nash's record is one very hard to beat, as his railroad life covers the greater part of the whole period of railroad construction, and all of the efforts through organization for bettering the conditions of men in railroad service.—*Rochester Evening Journal*.

MEMORIAL service of Div. 210, Macon, Ga., was held on Sunday, July 30, at the Auditorium, of which we glean the following from the *Macon Telegraph*:

The exercises passed off amid song and eulogy, and the large crowd in attendance was impressed by the services.

This was the first memorial exercise that has been held since 1887, and the roll of members that have died since that time numbers 48, and their memory was made fresh and green in the hearts of their brothers who gathered together to pay them this tribute.

Simpson Division, No. 210, was formerly Division 80, and was at first chartered in 1873. In 1884 a new charter was granted W. T. Clarke, and the Division changed to Simpson, No. 210. This Divi-

sion started out with a charter membership of 16, and today has a membership of 235 in good standing, and they are devoted to the interests of the order.

At the memorial services they marched in by twos and occupied the front seats, and enjoyed the entire services.

The music was splendid, the opening song, "Lord, When My Raptured Thought," being rendered by a quartette composed of Mrs. L. T. Stallings, Mrs. Richard Findlay, Mrs. James McCardie and Mr. W. S. Dunwoody. This was followed by a beautiful prayer by Rev. J. M. Glenn, who invoked the blessings of the Almighty upon the men who bravely stood at their posts of duty and cared for the lives of hundreds.

After the quartette sang "My Faith Looks Up to Thee," Mr. D. M. Moore, Chief of Simpson Div., No. 210, read out the death roll of members since 1887. "Jesus, the Very Thought of Thee," was then sung by Mrs. Stallings and Mrs. Findlay, and Dr. W. N. Ainsworth began his sermon, taking for his text the 14th verse, 14th chapter of Job: "If a man die, shall he live again?"

Dr. Ainsworth prefaced his sermon with the remarks that had it not been for the fact that he entered the ministry, in all probability he would have been a locomotive engineer; his impulse from early childhood was in that direction, but an allwise Providence that shapes the destinies of man decreed otherwise. His sermon was a eulogy upon the man who, at the throttle, holds the lives of hundreds in his hands, and unflinchingly and unflatteringly, forgetful of self, does his duty, even unto death. He mentioned instances of martyrdom where the railroad engineer had unselfishly given his life in the performance of what he conceived to be his duty and to protect those under his charge.

His entire discourse was a sincere and earnest tribute to the locomotive engineer and the psalm of praise was echoed in the hearts and mind of his hearers.

When the audience and quartette sang "Coronation," there was a swell of melody that filled the auditorium, which echoed "All Hail the Power of Jesus' Name," and the spirit of the congregation was prostrate in homage and reverence for those who were dead.

The services were concluded with a beautiful benediction for the dead, and upon the living by Rev. W. L. Walker.

Simpson Division, No. 210, B. of L. E., has a beautiful lot in Rose Hill cemetery, which is cared for and kept in order. Upon it are buried four of the Brotherhood, whose graves are looked after with all the care possible to bestow upon them.

SPECIAL NOTICES.

While in Winnipeg, Manitoba, some one went through Bro. E. S. Hawley's grip and stole part of his clothing and all of his clearance papers and letters from the A. T. & S. F., signed by C. M. Taylor, M. M., R. M. Division N. P., W. F. Buck, M. M., one from the Mountain Division, same

road, J. H. Sully, M. M., and several other papers, and letters from Myer Hurley, G. C. of A., A., T. & S. F., one signed T. P. Barns, a letter addressed to General Manager Ward, Great Northern, countersigned by P. Conley, Superintendent. To avoid, if possible, any misuse of these papers and to assist Brother Hawley to regain his papers, we hope this matter will be kept in mind, and if any of the papers show up, gather in both papers and man.

Will anyone knowing the whereabouts of T. G. Thomas, formerly employed on the C. & N. W., in Nebraska, 1883 to 1885, write Mr. T. B. A. Watson, Hartington, Neb.

Information is wanted of John W. New, firing on Eastern Division Erie R. R. in 1882; when last heard from was in Buffalo, N. Y. Please address his uncle, Bro. E. D. Hicks, 46 Storm avenue, Jersey City, N. J., and oblige.

Claud McVay, Dallas, Tex., desires to hear from his father, William J. McVay. Address care T. & P. Ry.

Anyone knowing the whereabouts or anything relative to T. W. Cresswell, please write to Miss E. M. Cresswell, 833 Washington street, Greenville, S. C., care Geo. R. West.

The traveling card of Bro. W. B. Roby has been lost. If presented, please take up and forward to J. C. Hamilton, F. A. E. of Div. 345.

The traveling card of Bro. O. Poulton has been lost. If presented, please take up and forward to Chas. Baguley, F. A. E. Div. 36.

Wanted—To know the whereabouts of Wm. Porter, who was running an engine on the A., T. & S. F. R. R. some years ago. Kindly address Miss B. Molloy, 346 Franklin street, Flat No. 3, Buffalo, N. Y.

Members of the following Divisions will correspond with the F. A. E. of their Divisions immediately:

<i>Division—</i>	<i>Division—</i>
199—M. M. Williams.	419—Thos. Cook.

OBITUARIES.

[In accordance with the action of the Ottawa Convention, no resolutions of condolence, obituary letters or poems will be published in the JOURNAL. All deaths will be listed under obituary heading only, with cause and date of death.]

Buffalo, N. Y., July 18, killed in accident, Bro. Jas. A. Clark, member of Div. 421.

Algiers, La., July 16, killed in wreck caused by misplaced switch by some person unknown, Bro. W. S. Wheelan, member of Div. 531.

Grafton, W. Va., July 15, of cancer, Bro. Moses Cassidy, member of Div. 67.

Decatur, Ill., July 9, killed by switch stand, Bro. O. C. Henry, member of Div. 155.

Centralia, Ill., April 4, Bro. A. M. Stone, member of Div. 24.

McDonoghville, Ia., July 22, Bro. Barney Davis, member of Div. 193.

Winnipeg, Manitoba, July 9, by accident, Bro. W. R. Lang, member of Div. 76.

Steger, Ill., July 14, killed in collision, Bro. J. L. Lyke, member of Div. 613.

Corbin, Ky., July 15, Honer Kelley Ebersole, son of Bro. E. O. Ebersole, member of Div. 463.

Way Cross, Ga., July 25, Bro. J. L. Maddox, member of Div. 648.

St. Thomas, Ont., July 27, of liver trouble, Bro. Michael Sreeman, member of Div. 529.

Jimulco, Mex., June 18, Bro. John Quinn, member of Div. 594.

Asheville, N. C., July 8, skull crushed while coupling cars, Bro. I. N. Chandler, member of Div. 267.

Richmond, Va., July 23, throat trouble, Bro. E. L. Bailey, member of Div. 532.

Fort Madison, Ia., July 26, heart disease, Bro. Jas. Carroll, C. E. Div. 391.

Lafayette, Ind., Aug. 3, appendicitis, Bro. Harry Williams, member of Div. 7.

Syracuse, N. Y., Aug. 6, killed in wreck, Bro. Thos. Dunn, member of Div. 169.

Harrisonburg, Va., July 20, paralysis, Mrs. Mary J. Conrad, wife of Bro. A. N. Conrad, and mother of Bro. W. A. Conrad, members of Div. 506.

Jersey City, N. J., Aug. 4, Bro. Wm. Mooney, member of Div. 157.

Buffalo, N. Y., Aug. 4, struck by engine, Bro. W. J. Dale, member of Div. 382.

Bradford, Pa., Aug. 3, Timothy C. Donohue, father of Bro. J. F. Donohue, member of Div. 280.

Joliet, Ill., July 27, cerebral hemorrhage, Bro. Jas. Hall, member of Div. 478.

Oneonta, N. Y., Aug. 4, killed in wreck, Bro. O. C. Beach, member of Div. 58.

Bainbridge, Ga., July 31, killed in collision, Bro. C. J. Jones, member of Div. 332.

Hoisington, Kan., July 13, paralysis, Bro. W. A. Barrett, member of Div. 433.

Springfield, Mo., Aug. 4, injuries received in accident, Bro. L. C. Ward, member of Div. 502.

Rochester, N. Y., July 29, Bright's disease, Bro. J. Euler, member of Div. 18.

Newark, N. J., ———, Mary Afia, wife of Bro. H. D. Medrich, member of Div. 54.

Howells, Ga., Aug. 8, run over by a car, Bro. S. M. Peterson, member of Div. 498.

Altoona, Pa., Aug. 10, killed in boiler explosion, Bro. N. H. Murphy, member of Div. 287.

Alameda, Cal., Aug. 1, scalded, Bro. Geo. B. Clark, member of Div. 283.

Philadelphia, Pa., July 17, Bro. Harry Adams, member of Div. 71.

Somerset, Ky., Aug. 6, paralysis, Bro. W. A. Sears, member of Div. 363.

Rowlesburg, W. Va., Aug. 3, killed by head

striking tunnel, Bro. H. A. Moore, member of Div. 284.

Macon, Ga., Aug. 8, apoplexy, Bro. E. Guilfoyle, member of Div. 210.

Cincinnati, O., Aug. 8, Bro. Wm. H. Partlow, member of Div. 11.

St. Paul, Minn., Aug. 1, appendicitis, Bro. E. V. McDonald, member of Div. 369.

Dunsmuir, Cal., July 30, paralysis, Bro. E. J. Turner, member of Div. 425.

Maysville, Wis., Aug. 9, Bro. G. F. Warblow, member of Div. 66.

Reading, Pa., July 31, Bro. H. K. Manwiller, member of Div. 90.

Frackville, Pa., July 7, Bro. H. R. Seitzinger, member of Div. 90.

Scranton, Pa., July 9, cancer, Bro. Thos. Madigan, member of Div. 276.

Oakmont, Pa., Aug. 10, Bro. David K. Yoder, member of Div. 472.

De Soto, Mo., Aug. 13, cancer of the lip, Bro. Thos. Farmer, member of Div. 123.

Winslow, Ariz., June 29, injuries received in accident, Bro. A. E. Smith, member of Div. 134.

Portsmouth, Va., July 29, Bro. J. H. Boyd, member of Div. 331.

Altoona, Pa., July 17, Margaret Bohn, daughter of Bro. C. W. Bohn, member of Div. 287.

Carnegie, Pa., Aug. 4, Mrs. Mary Foley, mother of Bro. M. J. Reilly, member of Div. 416.

Chadron, Neb., July 7, appendicitis, Bro. W. H. Nelson, member of Div. 303.

Philadelphia, Pa., Aug. 13, Bro. David I. Miller, member of Div. 45.

Richmond, Va., Aug. 10, Bro. Wm. Dynes, member of Div. 26.

Del Rio, Tex., July 21, engine turning over on him, Bro. C. E. Thompson, F. A. E.

Cleveland, O., June 21, killed in Twentieth Century wreck, L. S. & M. S. R. R., Bro. Allan Tyler, member of Div. 3.

Lexington, Ky., Aug. 7, blood poisoning, Bro. E. C. Curd, member of Div. 603.

PREMIUMS FOR JOURNAL SUBSCRIPTIONS.

We have renewed our arrangement with the Webb C. Ball Watch Co., Cleveland, O., for an unlimited number of watches as premiums; watches that are guaranteed to be O. K. in every respect, and will be given as premiums under the following conditions:

LADIES' WATCH.—For 30 subscribers named and \$30.00, the Ladies' Queen Watch, 17 jewelled, 14 karat, gold filled case, retail price, \$20.00.

GENTLEMEN'S WATCH.—For 60 subscribers named and \$60.00, Gentlemen's B. of L. E. Standard, 17 jewelled, 14 karat, gold filled case, retail price, \$42.00.

19 AND 21 JEWELLED WATCH.—For 75 subscribers named and \$75.00, either the 19 or 21 jewelled watch, in 14 karat, gold filled case, retail price, \$50.00. All cases guaranteed for 25 years.

Mr. C. H. Salmons, Editor JOURNAL:

DEAR SIR AND BROTHER:—The 19-jewelled Webb C. Ball gentleman's watch has been received O.K. The case selected by you was perfectly satisfactory, as is the watch. I think some one in each Subdivision should work for one of these splendid premiums, as well as for the interest of the JOURNAL, and through it, the order. With many thanks for the watch, I remain
Yours fraternally,

C. K. TALIAFERRO, C. E. Div. 595.

A large number of Brothers can obtain one of these excellent watches if they make an effort, and will help the JOURNAL as well as themselves. EDITOR.

If your JOURNAL address is not correct, or you fail from any cause to receive it, fill out this form properly, cut it out and send it to 307 SOCIETY FOR SAVINGS BLDG., CLEVELAND, O.

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION

Official Notice of Assessments 48-51.

SERIES G.

OFFICE OF ASSOCIATION, ROOM 803, SOCIETY FOR SAVINGS BUILDING, }
CLEVELAND, OHIO, Sept. 1, 1905.

To the Division Secretaries L. E. M. L. and A. I. A. :

DEAR SIRS AND BROS.:—You are hereby notified of the death or disability of the following members of the Association :

Four Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.00 from all who are insured for \$750, \$2.00 from all who are insured for \$1,500, \$4.00 from all who are insured for \$3,000, and \$6.00 from all members insured for \$4,500, and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25, page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or

postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries located in Canada will please remit by draft or express money order. We will not accept packages of money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

MONTGOMERY WARD & CO'S

BIG CATALOGUE FREE

The Greatest Money-Saving Buyer's Guide Ever Published.

This is the **New Catalogue**, No. 74, for the season of 1905-6, **just from the Press**. Three million families—about ten million people—are going to save a lot of good money by having on hand and ordering their goods from this massive catalogue. Those who make free use of it save from \$5.00 upwards during a year's time. We invite you to be one of them.

IT IS A NECESSITY to every Railroad employee, in every department of the service, who desires to get his money's worth and buy the best goods at the lowest known prices. We shall give **ONE COPY FREE** to every grown person who asks for it, provided his home is not in a city of over fifty thousand or in Cook County, Ill.

REMEMBER—no such offer as this was ever before made you. We offer you the Genuine, Up-to-date, Montgomery Ward & Co. large catalogue without a penny's expense to you. This is no partial list, no incomplete book, but the largest, newest, complete Catalogue—just off the press.

A WORD ABOUT OURSELVES—We are the **original, largest and most favorably known** Catalogue House in the World. We have a successful record of a **third of a century** to which we refer with pride. Our customers are our **friends**, and they are found the world over. We have honestly acquired our reputation for selling goods of **quality at fairest and lowest** prices, such as no other concern has been able to meet.

We absolutely refuse to sell **snide goods or trash** at any price.

Montgomery Ward & Co's New No. 74 Catalogue comprises nearly 1,200 large pages, full of accurate illustrations and truthful descriptions, without exaggeration or misrepresentation. It describes over 126,000 articles, such as everyone uses every day—just such goods as **you** use, but of highest quality and lower price than you can obtain them in your own home stores or anywhere else but of us. We have heretofore asked every one to send us fifteen cents to partly pay postage, as a guarantee of good faith, but we will Now **give you** a copy absolutely without charge of any kind—delivered at our own expense—providing you show your desire to possess it, by just **writing us and asking** for a copy. That's all we require. Do you want it? Do you want to **save** part of your necessary expenses? This large, complete, up-to-date, No. 74 Catalogue makes it possible and easy for you to own, use and enjoy many things of which you have frequent need, but which the usual prices asked by others have compelled you to do without. **Get this Catalogue** and consult it **freely and often**. Those who **use** it most **save** the most.

Send your name and address carefully written on a postal card, or in a letter, or attached to your next order—or fill out this coupon. Either way that is easiest. Just say, "Send me free and prepaid, one copy of your new No. 74 Catalogue." Do this **now**.

CUT HERE, fill in carefully, and send to
MONTGOMERY WARD & CO., Chicago.

Send me **FREE** and prepaid, one copy of your New No. 74 Catalogue for 1905-6. I saw your Ad. in September Locomotive Engineers Journal.

NUMBER 10.

Lady Holland's Debt.

BY SIBYL C. MITCHELL.

Stitch, stitch. How busily the bright needle darted in and out of the pretty silk, catching some stray sunbeams on its gleaming point—sunbeams that flickered first on the gilded picture frames, then on the carpet's wonderful blue roses, lastly on the curly head of the little seamstress, who sat sewing near the window. The casements were thrown wide open, and in with the sunshine came whiffs of freshly mown lawns,

sweet peas, and syringa from the old-fashioned garden outside.

The summer's beauty made the industrious worker sing lightly to herself though, heaven knows, there was not much cause for song in little Cissy Blackwood's life unless it were that she was the belle of Molesley, and had the brightest brown eyes and the sunniest curls you could wish for. And it was only the village boys who discovered how charming and refined Cissy was, and how melodious the clear voice that was now daring to carol within the gloomy walls of Holland Court.

ROOM IN RAILROAD EMPLOYEES' HOME, HIGHLAND PARK, ILL.

Mr. Anstey Cheshurst, second son of the widowed Lady Holland, found quite a number of excuses which carried him into his mother's boudoir, where the clever fingers made up elaborate toilettes for his womenfolk. Ah! those dresses, those hours of patient labor. Many a month had Cissy waited, and many a month more was she likely to wait for the money which was owing to her.

Such a large sum that it was sufficiently alarming to cause another line beneath Lady Holland's eyes as she planned and plotted each wakeful night on the difficult problem, viz., how to keep up "appearances," rank, Holland Court, and a town residence on next to nothing a year. True, her eldest daughter was disposed of to a penniless young baronet—oh dear! that trousseau, how the money did mount up—but there were still three damsels for sale. So far their education, smart dresses, and no lack of wearying accomplishments had failed to have the desired effect, and no one seemed disposed to pay Lady Holland as a chaperon seeing what a difficulty she had in settling her own daughters.

Still, rich Miss Ingots, her present guest, seemed undoubtedly impressed with her unmarried son, with his handsome bearing and ready tongue. His sole income, a legacy, was only small compared with the figures of the lady's fortune, his "wild oats" were well known in Molesey, but beauty covers a multitude of sins, so Miss Ingots approved of him, faults and all.

So far, so good. But Anstey, well aware of his mother's intentions, took a wicked delight in alternately petting and teasing the heiress, delaying all efforts to secure this golden treasure with the most irritating coolness. He knew quite well how to charm Miss Ingots, and he knew equally well how to fascinate pretty Cissy Blackwood until that simple maiden imagined him to be the perfect ideal of manly attraction. And Anstey enjoyed himself thoroughly, increased the number of stolen interviews, and looked down admiringly at the lovely face that brightened at his coming. He had always preferred wild roses to gardenias.

"You must not come and talk to me any more, Mr. Anstey; it would vex her ladyship terribly if she found it out. Please keep away," said Cissy. But her voice lacked emphasis, and Anstey did not keep away. Though tolerably in awe of his lady mother, he thoroughly enjoyed stealing a march on her and the sedate Miss Ingots, who, poor thing, could not purchase Cissy's youth and sweetness—in spite of the tempting advertisements—with all her wealth.

The first steps were soon taken, others

followed quite naturally. Anstey found out where the young seamstress lived and was to be found at the gate a great deal too often, so Cissy said, but as she smiled irresistibly up at him while saying so the culprit was not deterred from coming again at the first opportunity.

Anstey was honorable enough to feel both worried and indignant on learning the extent of his mother's debt when Cissy confided to him how very much she would like the money.

"I shall feel quite rich then," said Cissy joyfully, "for I have quite a lot of money in the bank. You see I have nobody to spend it on, for I haven't a relation in all the world."

"Lucky little woman," sighed Anstey.

"Ah, I don't know about that. You like to belong to someone and feel they care about you."

"You know I care."

The remainder of the conversation was incoherent.

"Your account shall be settled in a week or two," my lady promised with the air of one who confers an unspeakable benefit. "I have overlooked it for quite a long time, but there have been so many things to see to."

What kindness! What condescension! Cissy was surely to be envied as she folded the costly brocade round my lady's gaunt figure, murmuring inaudible thanks with her mouth full of pins. And yet the weeks passed by and no money appeared. Cissy began to feel more and more anxious. She grew restless under my lady's calm patronage.

Perhaps it was the memory of a certain face, the echo of whispered words, that caused the patient worker to wait still longer, planning fresh attire with unflinching cleverness and success. Even Miss Ingots in her Parisian creations looked over-dressed and vulgar beside the perfect taste and cut of Lady Holland's gowns. So thought my lady herself as she glided down the passage to her boudoir—still, for the want of space, a temporary work-room—and her noiseless footsteps enabled her to witness a very interesting scene within.

The half-opened door revealed Cissy sitting idly at the table, a mass of silk and chiffon lying untouched in her lap as she listened eagerly to her companion's talk. On the table, perilously near her ladyship's new bodice, sat Mr. Anstey Cheshurst leaning forward to admire more fully the brown eyes that watched him with such unfeigned admiration. I cannot actually declare that my lady's hair stood on end, perhaps had it cost less it might have done so, but at any rate her eyes flashed with indignant anger and her

bony fingers could have torn Cissy to pieces with the greatest pleasure. It would never, never do for Anstey to flirt, however harmlessly, with this ignominious little worker, (Lady Holland, a chemist's daughter, had gone to the same school as Cissy's mother, the daughter of a farmer.) Goodness could only conjecture what Miss Ingots might do if she ever suspected such a thing. Anstey must be made to see that amusement with the bourgeois was too dangerous in their present position—of course she did not consider for a moment Cissy's feelings in the matter. People of that class, my lady said, were mercifully born without feelings. Certainly she ought to have known. Anger quickened her usually deliberate movements, but she was yet too slow to prevent a scene that positively paralyzed her. Anstey, jumping lightly down from his undignified seat, said a

few loving words to Cissy and kissed her dimpled chin with ardor. His mother shivered from head to foot and glared at the unconscious pair with helpless fury.

Her scapegrace son then quitted the room as his mother swept in by the second door nearly speechless with wrath. It was a pity Anstey did not look around before he closed the door; he little guessed the tableau he left behind him, and yet, Lady Holland, what did you ever do that gave you the right to look down on that shrinking little maiden with such scorn and bitter contempt? I own she is a foolish little creature, for she pays her small bills regularly, helps those who cannot repay her, and never wins money by gambling with those who cannot afford to lose. It certainly could not have been with any feeling of conscious merit that Lady Holland frowned at the startled face, which

seemed to say, "I couldn't help it, really I couldn't. Please forgive me."

"I witnessed your disgraceful conduct with my son, Miss Blackwood. You will have the goodness to collect your things instantly and leave the house. Your services are no longer required."

The tone brought a vivid color into Cissy's cheeks, and a curious, rather teasing twinkle danced in the brown eyes as she said demurely, "I was going to tell your ladyship that I could not come any more after to-day. I only came because your ladyship wanted this dress for your grandchild's christening."

"I would rather go in rags than keep you a minute longer in this house."

What did the girl mean? Was she mad? Or had Anstey discovered the debt and paid it? Hardly possible, for Anstey and his mother were generally in a state of petty warfare, and her numerous debts were carefully hidden from his critical eye.

"Perhaps you will have the goodness to explain what you mean?"

"When I said I was paid," explained Cissy, "I did not mean it was paid in money, but I have received what is more than its equivalent. For some time I hesitated out of respect for you, but your treatment exhausted my patience. I am all alone in the world, so—so—I—"

"Finish your sentence. I have yet to

C., R. I. & P. GOLDEN STATE LIMITED READY TO LEAVE TRENTON, MO., WITH BRO. C. J. MILLINGTON, OF 471, AT THE THROTTLE, AND JAMES H. HUDSON, LODGE 33, B. OF L. F., AT THE SCOOP, D. S. CREMMENS, O. R. C., 42, CONDUCTOR.—WILLIS J. MILLINGTON, PHOT.

"Certainly, your ladyship; and my account?"

It was no use reviewing empty purses, the money was not forthcoming, so Lady Holland took refuge in righteous indignation.

"Your account indeed! After the scandalous scene that has just taken place I wonder you have the effrontery to ask me. You may consider yourself extremely lucky, Miss Blackwood, if I do not warn everybody of your most disgraceful conduct."

"And the equally unpardonable behavior of your son," retorted Cissy, facing the angry woman quite calmly. "But you are right about the money, Lady Holland, it has been paid."

learn why Mr. Cheshurst troubled himself in my affairs."

"Your son has paid me no money; he could not do so. Unworthy though I am of the honor, I am your ladyship's daughter-in-law. Anstey knew it was hopeless to invite you to our wedding, so we were married quite privately at the Church of St. Andrew's yesterday. Good morning, your ladyship."—*London Tailor.*

October.

Ah, he is there—in the forest—yonder—
With his artists true and fine;
Flashing their magic over and under,
Turning water to wine!

Giving the maple scarlet tinges
In with their vivid green ;
Weaving the willow's delicate fringes
Into a golden screen.

Saffron hue in the poplar, showing
Pale by the crimson oak ;
Stroking the sumach, red, and glowing,
Veining the juicy poke ;

Softer shades for the hazel bushes,
Changing at every turn ;
Parting the bittersweet's hood for blushes
That make her round cheek burn.

Down by the reedy brook they muster
Meeting their next of kin ;
Touching the wild grapes' purple cluster,
Kissing the color in!

Orient dyes where the woodbine masses
Over the fences lean—
And then for the grasses—the plummy grasses
A rain of silver sheen!

Thine the picture, O favored creature,
Gaze with a gladdened heart ;
Love hath wrought it in every feature,
And Love is the soul of Art!

—E. C. Tompkins.

His Word of Honor.

He was only a child of sixteen and yet they were going to shoot him.

The company of the "Communards" to which he belonged had just been overcome and put to confusion by the army of Versailles, the government troops. Captured, his weapon still in his hand, with about a dozen of his comrades he had been brought with them to the commandant's headquarters.

Struck by his youth and the astonishing serenity of his face, the commandant gave orders that he should be placed on one side and guarded while the execution of his companions was attended to.

A printer's apprentice up to the time when the demon of war was let loose over France, he had lived a contented, happy life with his father and mother, peaceful workers themselves and totally unconcerned in matters of politics.

At the beginning of the war, his father had been killed by the Prussians. The privations of the siege, the long hours of waiting before the doors of the grocers and the butchers in the snow and the ice, had brought his mother to a weary bed of sickness on which she was slowly dying.

One day, when he had gone, like so many others, to gather some potatoes at the risk of his life, on the plain of St. Dennis, a Prussian bullet had hit him, lodging in his shoulder.

Later, half to win a little something to eat and half out of fear, he had thought it his duty to enroll in the army of the

Commune. Like so many of his comrades, the battlefields caused him keen regret. He had only condemnation for this fratricidal war. And now, when he was on the point of paying with his life for a thing which he had always hated, he could congratulate himself, at least, that he had not a single death with which to reproach himself.

Still, whether he had killed anyone or not, his own life was forfeit. The thought gave him a sad idea of the logic of things. But it mattered little to him now whether he lived or died. What he had seen and suffered during the last few months caused him a real fear of life. To be sure, it was hard to leave his mother struggling in this wicked world, but he consoled himself as best he could with the thought that probably she had not much longer to suffer. When he left her, four days before, she had been much weaker. "My poor boy," she said to him, "kiss me well, for I doubt indeed if I ever see you again."

Ah, he thought, if they would only trust him; if they would only give him an hour's liberty, he would hurry to see her and then come back to those who seemed so eager to shed his blood. He would give them his word of honor to return, and he would do so. What was there to keep him?

He was lost in these sad reflections, when suddenly the commandant, followed by several officers, approached.

"It's your turn now, my man. You know what awaits you?"

"Yes, sir. I am ready."

"What! ready? Have you no fear of death?"

"Less than of life, sir. I have lived through such horrible things during the last six months that death seems beautiful in comparison."

"Still, if I gave you a chance to choose, all that you say would not make you hesitate for a moment. If I should say: 'Take to your heels and get out of here,' you would go quickly. Eh, young man? And you would not come back again?"

"Try me, sir. For the very rarity of such a thing, put me to the test. It is worth it. It matters little to you, one more or less to be shot. Liberty for a single hour, not more. You shall see how promptly I shall return and how little I fear death."

"H'm! You don't look like so much of a fool, as you take me for! Once free and away from here I suppose you will return as willingly to be shot as if you were going to meet your sweetheart! Not much!"

"But listen, sir. I know you are kind-hearted, and it is doubtless because you have a good mother, one you love more

than anyone. If, like me, you stood at the point of death, your last thought would be for her. You would bless the man who could give you the supreme consolation of embracing her for the last time. Ah! sir, do for me what you would wish someone else to do for you. Grant me an hour's liberty to say good-by to my mother and I give you my word of honor to return at the end of that time and yield myself to you."

The commandant strode up and down the room while the young fellow was speaking, rolling his mustache and trying in vain to hide the emotion that mastered him.

"My word," he muttered, "this mere lad talks like a lad of olden times."

Suddenly he stopped short before his prisoner, frowning, his face severe.

mandant, solemnly, after reflecting a moment. "You may go and say good-by to your mother. You have given me your word of honor to return at the end of an hour. Very well, I give you until this evening."

He walked away, followed by the guard. The boy was off like a shot.

Twenty minutes later he knocked at his mother's door. The neighbor who was taking care of her opened it for him. She uttered a joyful cry at the sight of the young fellow. Everyone believed him to be dead. He hastened towards his mother's door, but the woman stopped him.

"Do not go in," she said in a low voice. "Your mother is resting."

Impatient, the boy did not understand half of what she was saying. He thought he heard his name feebly called. On tip-

HOME OF BRO. A. H. KELLEY, MEMBER OF DIV. 534, TIPTON, IND.

"What is your name?"

"Victor Oury."

"Your age?"

"Sixteen the fifth of next July."

"Where does your mother live?"

"At Belleville."

"Why did you leave her? Why did you join the Communards?"

"We had to eat. And then the neighbors threatened to shoot me if I did not join them. They said I was plenty old enough to do my duty. My poor mother was frightened and advised me to do as everyone else did."

"Where is your father?"

"He was killed."

"When?"

"At Bourget."

"Oh, well, I understand," said the com-

mandant, solemnly, after reflecting a moment. He was not mistaken. She was awake.

"Victor," she said in a weak voice.

Without a word, her son clasped her to his breast. At her touch, all his courage gave way and he could only sob despairingly. His poor mother, her strength doubly restored at the sight of her beloved son, tried in vain to console him.

"Why do you weep so, dear child?" she whispered. "I shall never let you leave me again. You have nothing to fear. Tear off this horrible uniform, which I cannot bear to see. And as for me, I shall soon be well. I feel much better already, since you have come home. You shall find some work close by and soon all these hard days will seem only a terrible nightmare."

She embraced him several times, then, wearied, let her head sink back on the pillow and gave herself up to happy thoughts of the future.

Motionless, almost ashamed of his weakness, the boy tried silently to regain his self-control. When he looked up at last, strong once more, he saw that his mother had fallen quietly asleep. The sight restored all his energy. Perhaps a merciful Providence was helping thus to make more easy the accomplishment of his duty and sparing him a scene of desolation more heart-breaking than the first. He resolved to profit by it. Placing a long kiss on his mother's forehead, he watched her for a few moments while she seemed to smile at him, and then he quietly left the room and started back as quickly as he had come, without once looking around him or seeing a single person.

"What! Back already?" demanded the commandant, astonished.

"Did I not give you my word of honor?" replied the boy, steadily.

"Yes, but it seems to me you were in the d Dickens of a hurry. Without failing in your word, you might have stayed a little longer with your mother."

"Poor mother! After a scene of tears in which I felt all my courage dwindling away, tears of joy for her and tears of despair for me, she fell asleep, so calmly, so happily, that I had not the strength to wake her up in order to leave her anew forever. She was happy in the thought that I would never leave her again. Who knows, if, at the last moment, I should not have weakened? Now, sir, I have only one thing to ask of you and that is to do your duty and do it quickly."

The commandant looked at the boy, still more astonished, and in spite of himself, his eyes were wet with pity and admiration.

"And if I should pardon you and set you free?"

"Ah! sir, I should accept willingly, because of the happiness for my poor mother."

"H'm! You are an honest lad and you do not deserve so much suffering. You may go—but, first, give me your hand. Good, go now, and quickly. Return to your mother and continue to love her always."

As he spoke the kind-hearted commandant took the young man by the shoulders and pushed him gently outside.

"It would have been a terrible pity to do anything else," he said to his officers as he turned around.

Victor did not run, he flew, rather, back to Belleville. Happily, his mother was still asleep, but her sleep seemed restless. He dared not wake her, although he

longed to embrace her and have her share in his joy.

Presently she sat up, crying: "Victor!—my child! Ah, have pity! But you are here," she added awakening. "Is it indeed you?" As she spoke she pressed him closely to her, covering him with kisses. "Ah! my dear child!" she said. "I dreamed that they were going to shoot you!"

Work Precepts.

Sixty seconds make a minute,
So my father used to say;
What you've got to do, begin it,
Or 'twill not be done today;
For so fast the seconds fly,
You can't catch one—nor can I.

Sixty minutes make an hour,
So my mother used to tell;
While you've got the strength and power
Do your work and do it well;
Or at night you'll have to say,
"I've done nothing all the day."

Firefly.

Last summer I was staying for some weeks on the shores of the beautiful Lake George.

One lovely afternoon I was driving with my friend, Mrs. K—, and admiring her fine horses, who held up their spirited heads without the assistance of those detestable check-reins and waved their long, flowing tails safe from the brutal knife with which so many flint-hearted owners of fine horses hack off the tails of their helpless dumb property, and call the ugly mutilated stumps "stylish."

As we were driving along, Mrs. K— asked John, the coachman, to stop for five minutes at the house of her carpenter, and got out of the carriage to give some orders, leaving me to do what I always seize every opportunity of doing, that is, to talk with the coachman about horses.

He was a bright young fellow.

"Your horses do you credit, John," I began. "Their coats shine like satin."

"Oh, thank you, ma'am," said he, touching his hat. "I have had them going on five years, and I have never once laid a whip over their backs."

"Do you know much about horses?"

"Well, I have studied them a good deal, ma'am, and early in the summer I saved the life of a very valuable horse."

"Oh, do tell me," I cried, leaning forward.

He laughed and blushed, and said, "I'll do my best, ma'am. I must begin by telling you that all the country round about here knew of Mr. L—'s insane horse. They whipped him and shackled him, and

tried to cure him, but it was of no use, and now for two days he had refused all food, and was condemned to be shot.

"I thought a good deal about the poor creature, and the day before he was to be killed I asked Mrs. K— to let me drive over and see him. On the way I stopped at the Fort William Henry Hotel. A famous veterinary doctor, whom I once saved from the kick of a horse, was stopping there. I found him smoking on the piazza, and easily persuaded him to take his bag of instruments and medicine, without which he never traveled, and go with me.

'touch him up, Jake.' Before we could stop him Jake went into the next stall, and leaning over, gave Firefly a sharp tap on the side of his face.

"Instantly the horse threw up his head and dashed it from side to side. He backed out of the stall as far as the long strap would let him, and began to kick and prance furiously, his eyes ablaze, his nostrils distended, while the brutal crowd clapped and hallooed. The doctor and I watched him carefully, my heart full of pity, when all at once it came to me—I knew! yes, I knew what ailed him! and I suddenly cried out: 'Stop hollering, you

THE FIRST HORSELESS CARRIAGE BUILT IN DETROIT, MICH.

Bro. Thomas Sullivan, member of Div. No. 1, Detroit, Mich., put his mechanical genius to work in the early stages of the horseless carriage and had the above in running order in 1893, and he thinks he was the pioneer builder of the motor carriage in Detroit, since famous for its automobile manufactories.

"When we got to the stable there were a dozen idle fellows standing around and chaffing the groom. Poor Firefly stood trembling in his stall, with every little while a big shudder going all over him. The doctor and I went near, and he turned and looked at us. I do declare, ma'am, that I never saw such a hopeless, pleading look. It made a great choke come in my throat, and I dashed off some water from my eyes before those vagabonds could see it and make fun of me.

"'Oh, come!' said the big, rough loafer,

loafers; the horse is crazy with a jumping toothache!'

"A roar of contemptuous laughter greeted this discovery, but the doctor had already opened his bag and taken out a bottle of chloroform. He quickly saturated the towel, and watching his chance, threw it over poor Firefly's head.

"The creature lurched, trembled, and then began to sprawl like a drunken man, and we had hardly time to run to him before he fell heavily forward and rolled over on his side. With the help of two of the

more decent men, we caught him in time to lay him gently down, and then by the doctor's direction I sat lightly upon his shoulder, to prevent any possible movement, while the others held his feet.

"Then the doctor, holding the cloth over the nose of the horse, forced open his mouth. Oh! oh! What a sight it was! I hope, ma'am, never to see it again! An enormous abscess filled all one side, while the rest was purple with inflammation. Two back teeth covered by the ulcer were laid bare by the forceps of the doctor. They were decayed to the very roots.

"These have made all the trouble! he

"Upon hearing this, all the tramps and loafers lounged off.

"Presently poor Firefly moved feebly and opened his eyes. I got off his shoulder. He raised his head slowly while I patted and smoothed his flank and spoke kindly to him. 'It's all over, poor old fellow,' I said; 'you won't suffer much longer.'

"I am sure he understood me, for a soft gleam came into his eyes; then he seemed to pull himself together, and with a supreme effort got upon his legs trembling all over, while I just kept talking to him and cheering him up, the same as if he were a human being.

M. K. & T. ENGINE NO. 380, "COME ALONG" THE BOYS CALL IT. BRO. J. S. CARLISLE, E. OF L. R., 356, AT THE THROTTLE, J. STANGLE, B. OF L. F., 164, AT THE SCOOP, AND BROTHERHOOD CREW.

exclaimed, and in another minute he had yanked them out. He put more chloroform on the cloth, and taking a lancet from his bag, he cut deep into the abscess. Calling for an old towel, he softly pressed out all the stuff it held; then asking for a basin of warm water, poured some laudanum in it, and with a sponge he gently washed the suffering mouth and quivering, swollen gums; and then, removing the chloroformed cloth, he laid down the poor animal's head!

"Now, Jake," he said, 'go quickly and prepare a soft warm mash, and see if Mr. L— is in the house. I should like to speak to him.'

"By this time the groom had brought the warm mash, and Mr. L— came with him. The doctor put a strong sleeping potion in it, and I held it and coaxed him to eat. He began to eat slowly, with a wondering look in his eyes, as if he wished to know from where this blessed relief from torture had come. His mouth was still horribly sore, but the exciting cause was gone.

"We made him up a thick bed of soft hay, but the sleeping potion soon taking effect, the poor exhausted creature sank down and fell into a deep sleep. Then the doctor told Mr. L— of my 'inspiration,' as he called it, and Mr. L— begged

me to take a \$20 bill, with his thanks, but I wouldn't. I told him it was enough reward to have saved such a fine horse from being shot.

"Very well," he answered, "I will get even with you in some other way; and, as to the doctor," shaking hands with him, "you may be sure that your bill will be paid most cheerfully."

"And how did Firefly get on?" I asked, for I was very deeply interested.

"Oh, he picked up wonderfully. What with tonics and warm mashies and petting, he is one of the handsomest horses in this part of the country. Why!" exclaimed John, starting up in his seat, "I

ging each other: that is, Firefly had pushed John's hat off and was rubbing his head all over his shoulder, while John was petting the animal and calling him loving names.

Then Mr. L— jumped out of his dog-cart, and gallantly handed Mrs. K— into her carriage. John resumed his reins, and with cordial smiles and bows we went our different ways.

Don't let anyone dare to say, after this, that horses have no reason, sense or memory, as well as affection. Firefly knew well enough what John had done for him, and he never meant to forget it.—*The Horse World.*

SULPHUR CREEK DAM, FRANKLIN JUNCTION, MO.—COURTESY J. S. CARLISLE, DIV. 556.

do believe that is Mr. L— and Firefly coming this way now."

I looked up the road and saw a dog-cart with a groom behind, and a gentleman driving a splendid, bright bay horse, with no blinders nor check-reins, and flourishing a long, beautiful tail. The horse knew John instantly, and stopping of his own accord, tried to put his head into the front of the open carriage.

Just then Mrs. K— came out of the carpenter's shop, and this was the tableau she saw: I was holding the reins of her horses, Mr. L— sat motionless and smiling in his dog cart, while John, who had vainly tried to push back Firefly, had handed me the reins and jumped out, and he and the grateful creature were hug-

Bill Johnson on Religion.

I ain't no stickler, fellers,
On sich ez sects an' creeds,
But judges folks accordin'
To the natur' of thur deeds.

The man what's got religion
Dead solid in his heart
Will always face the music
An' do a hero's part.

Hit makes him give back money
Found layin' in the road,
Hit makes him help a feller
To lug along his load.

Hit makes him strong an' happy
Under any sort ov loss,
Hit makes him state pertick'le's
When tradin' off a boss.

Hit makes him hol' his temper
When wife or chillun frets;
Hit makes him save his money
An' pay his hones' debts.

No matter what arises,
He'll do the best he can,
In every deal you'll find him,
A straight, square man.

—Exchange.

Friday, Thirteen, and a Switch Engine.

"Friday 'n' the thirteenth coupled is a hard combination to play ag'in 'n' I had some misgivin's on goin' out that evenin'," said the fat engineer. "We were due to go out on No. 13, which is carded to leave at 11 P. M.

"Murphy didn't like it a bit, but I swung a bluff that it was all the same to me. We got down to the trainshed, 'n' lay 'round quite a space after our leavin' time, there bein' a wreck somewhere up the main line, 'n' the stationmaster holdin' us until they got a way through.

"As a fortified bluff on this superstitious business, I'd 'a' made Gibraltar look like the plains of peace, but I confess that my hair became less restive 'n' more apt to resume a reclinin' posture as the hands of my watch moved steadily onward toward midnight 'n' the prospects were good for two of our hoodoos bein' scratched and sent back when it got to be Saturday the 14th.

"Thirteen, the number of our train, however, would still be doing business at the old stand. However, I'm strong on grapplin' with 13 alone 'n' single-handed as a hoodoo.

"Shortly after midnight on Saturday the 14th, we got a signal to go along, with runnin' orders over the Bergen County, a short cut through the meaders, the main line still bein' blocked. This short cut 'ud make the way of the transgressor look like an asphalted boulevard, it's so rough 'n' crooked. Why, I came over there with a dairy 'n' egg train one night, 'n' when I got in the eggs were all scrambled 'n' the milk was churned to butter.

"After we got started I got my nerve again, 'n' mebbe we didn't do the first few miles of that old branch! Why, we'd 'a' made the Twentieth Century Limited look like a pushcart at parade rest.

"Goin' up through the swamps I could see a headlight flashin' 'n' scintillatin' through the trees, but paid no attention to it, thinkin' it was on the eastbound track. Just before we got to Ten Degree curve I stoops over to see what was the matter with the sand valve, 'n' when I straightened up again after gettin' it adjusted to my satisfaction, great jumpin', bumpin' blocks! if that headlight I saw

comin' through the swamp was'n't comin' straight at me on the westbound track.

"I could see it was a light engine, with no cars. It was one of 'em switchin' dinkies, 'n' looked like a watch-charm alongside the monster I was drivin'.

"My first impulse was to jam on the air 'n' do my best to stop, but by some very quick thinkin' I figured out that my engine 'n' the train behind it bein' heavy, we had more show by puttin' on full steam than if we'd slack up, so breathin' a prayer for the men on the other engine, I pulled her wide open 'n' dropped her down in the corner. From the speed we were goin' I saw that we'd come together right on the point of the curve. The light engine swingin' round, we had a good chance of knockin' her from the track.

"Murphy was down on his knees in the tank, prayin' for all he was worth, 'n' I closed my eyes in reverence, bracin' my feet 'n' waitin' for the crash. We lurched aroun' the curve as if we would leave the rails, but my engine kep' her pins. I heard a hissin' 'n' whirrin' noise by my ears 'n' a muffled concussion.

"Then I opened my eyes to find us straightenin' out on the straight track ahead 'n' movin' along as if nothin' had happened. The light engine was nowhere in sight. The thirteen was gettin' in its little knock.

"Murph, did you see an engine comin' toward us, then?" I say to Mike, thinkin' perhaps I'd been asleep.

"Sure 'n' I did," wails Murphy, 'n' we'll never git home aloive this night."

"Well, we stopped 'n' I looked aroun', assisted by the train crew. We could find no marks of a collision on my engine. The recent rains 'n' damp weather had left about fifteen inches of water coverin' the mud bottoms, to the right of the track. There was a little cloud of steam comin' off this lake, but as it was always more or less foggy there we thought nothing of it.

"The conductor thought I was givin' him a pipe dream, I guess, for, after a few minutes he suggested that we move on, seein' as we were some late anyway. I followed his suggestion.

"Before we got in with our train Saturday morning I'd fully resolved to quit the business, havin' seen so many strange things lately. When I reached the roundhouse I found a message from the master mechanic askin' me if I'd seen anythin' of switch engine 1318 along the Bergen County that night. She'd slipped her throttle at Cheechunk roundhouse 'n' the last seen of her she was beatin' it east on the westbound track at a forty-five mile an hour clip. She hadn't been seen east of Ten Degree curve.

"Well, sir, I had the solution 'n' I wired

it to 'em hotfoot. I told 'em they'd probably find her imbedded in the mud near Ten Degree curve.

"Yessir, that was her I saw comin' at me round that curve. She was goin' so fast, 'n' bein' light, with no cars to steady her, when she started to take the curve she jumped the rails 'n' buried herself in the mud 'n' water in the swamp a hundred feet to the right of the track. They dug her up, but never put her in commission again, as she was famous for runnin' away."—*New York Sun*.

"Boycott."

In his "Talk About Ireland," Mr. James Redpath describes his visit to Ireland in

need of bloodshed. You can get all your rights without violence.

"Call up the terrible power of social excommunication. If any man is evicted from his holding, let no man take it. If any man is mean enough to take it, don't shoot him, but treat him with scorn and silence. Let no man, no woman, talk to him or to his wife or children. If his children appear in the streets, don't let your children speak to them. If they go to school, take your children away. If the man goes to buy goods in a shop, tell the shopkeeper that if he deals with him, you will never trade with him again. If the man or his folks go to church, leave as they enter. If ever death comes, let the man die unattended, save by the priest,

COLORADO & SOUTHERN RY. TRAIN.—BRO. J. A. LACKY, DIV. 324, AT THE RIGHT; TO THE LEFT FRANK STREET, FIREMAN, B. OF L. F., 344.

1880. Mr. Redpath says that there was a fierce spirit brooding among Irishmen, and that if some bloodless but pitiless policy was not advocated, there would soon be killing of landlords and land agents all over the west of Ireland. Being called upon for a speech at the village of Deenane, in Connemara, he spoke before the tenants, whom American charity had kept alive since the preceding autumn, as follows:

"Well, now, let me talk very plainly about two tender topics. I honor every man who sheds his blood for his country or who is willing to do it. But there is no

and let him be buried unpitied. The sooner such men die the better for Ireland. If the landlord takes the land for himself, let no man work for him. Let his potatoes remain undug, his grass uncut, his crop wither in the field. This dreadful power, more potent than armies—the power of social excommunication—has been most used in our time by despots in the interest of despotism. Use it, you, for justice! No man can stand up against it except heroes—and heroes don't take the land from which a man has been evicted. In such a war the only hope of success is to wage it without a blow—but without pity.

"You must act as one man. Bayonets shrivel up like dry grass in presence of a people that will neither fight them nor submit to tyranny."

This was the thing. Now let us see how the name arose. We quote from "Talks About Ireland:"

Captain Boycott had won for himself the reputation of being the worst land agent in the County of Mayo. In addition to charging exorbitant rents, he compelled the tenants of the landlords for whom he was agent to work for him on his own farm at his own rates, so that they never actually received more than a dollar and seventy-five cents a week.

Mrs. Boycott went from cabin to cabin that night to coax the people to come and work for her husband at their own very moderate terms. They came.

When rent day came, Boycott sent for the tenants. His day of vengeance had dawned—as he thought—but it proved his day of doom.

Boycott issued the eviction papers and hired a process server and got eighteen constables to protect him.

Next morning when Mrs. Boycott went to buy bread, the shopkeeper told her that although she was a decent woman and they all liked her, yet the people couldn't stand that "baste of a husband of hers any longer," and they

A BUNCH OF DEER FEEDING IN COLORADO.—BRO. J. A. LACKEY, PHOT.

The land agitation suddenly aroused the tenantry to a sense of their power, which they could wield without violating any law, if they would combine and act as one man. The first use of this power against Boycott was made when he sent one summer for the tenantry of the estates for which he was agent to cut the oats on his own farm. The whole neighborhood declined to work for him. The willful old fellow swore he would not be dictated to—he had always dictated to them. So he and his nephews and his nieces and three servant girls and herdsmen went down to the fields and began to reap and bind. He held out three hours but could not stand it longer.

really couldn't sell her any more bread.

Boycott was isolated. He had to take care of his own cattle. His farm was of four hundred acres.

Boycott wrote to the *Times* and the English landlords organized a relief expedition; fifty men were hired and seven regiments of soldiers were sent to protect them. It cost the British Government \$5,000 to dig \$500 worth of potatoes.

The term Boycott was invented three days afterward by Father John O'Malley, who used it in the *Castlebar Telegraph*. The young orators of the Land League in Dublin took up the word, and it became famous at once.—*Metal Polishers' Journal*.

The Robber in the Berry Patch.

Wild strawberries were at their best when little Philip took the red basket an old Indian woman gave his grandmother long ago, and went to the pasture to get some berries, some real big ones, for his grandfather. Dot, the bob-tailed kitten, went along too. She had always been invited when anything was going on.

As he went through the sheep pasture, the old black ram stamped with his fore-foot and shook his head, but Philip got safely through the bars and found a nice patch of strawberries right there. He found some big checker berries, too, and put them in, and after a long time he

The basket was almost full when he heard a little bird call. "Tweet, tweet, tweet!" it said. "Oh," said Philip, "that means you want me to go away. Gran'pa told me that was what you meant when you said that. You have a nest here and I will find it."

Almost by accident he saw it hidden beside a stone in the long, dry grass. In it were three speckled brown eggs, no larger than the big blue bead on his mother's necklace. All the while the anxious ground-bird called to him: "Tweet, tweet! go away, go away!" Philip heard and understood, but he wanted those eggs as soon as he saw them. He knew they were not his, but

BRO. J. A. LACKEY, OF DIV. 324, WITH HIS DOG, AND MR. S. CHAPMAN, BRAKEMAN O. S. L. RY., HUNTING PRAIRIE CHICKENS, GATHERING IN NINE OF THE FEATHERED TRIBE.

had the basket more than half full. "Most 'nuff for a cake," he murmured. Then a great yellow and black butterfly came sailing by, almost as low as his head, and he had to set the berries on a flat stone and watch it till it floated slowly away over the wall.

Just as he began picking berries again, a little rabbit hopped around a blueberry bush and sat up to look at him. Its tail looked like a bit of cotton and its long ears flopped back and forth in a delightful way; but though bunny seemed asking him to come and play, Philip kept bravely at his work. "Have to get a lot for gran'pa," he said as he turned to his task again.

belonged to that dear brown bird. He must not steal. What would grandpa say if he should know? But he wanted just one. "Tweet, tweet!" cried the mother bird, coming nearer. How strange the egg looked on top of the berries! He covered it with his handkerchief as he went slowly down the hill toward the bars and the "tweet, tweet" grew fainter.

Then he thought: "That bird has two left. She won't care. Maybe gran'pa would not care much either." But just as he thought this he heard a voice calling loudly from an apple-tree: "Took, took!" How did that robbin know? She had not been there. It was not her egg. "What if I did take it?" he said to

himself, "I guess I can if I want to."

At that moment the bluejay screamed loudly from the top of a tall maple. Philip felt as if he had been accused openly. He knew what the jay said—he had heard it read from his own story-book. "Thief, thief!" called the jay again and flew away. Just at the gate of the orchard Dot came purring out to meet him. She was glad to see him, for she had given up following him when he was halfway to the pasture and now was out to welcome him back. "I guess my kitty won't care about just one egg," he said and rubbed her head affectionately. "See, Dot, what I have brought." But Dot did not understand at all, and when he put the egg before her she went off across the lot and never stopped till she was under the barn. "Oh, dear! I wish I had not picked these berries. I wish I had never seen any nest. Everything is wrong, and a very discontented boy sat down under a tree not caring to go home, not knowing what to do with that egg which he, Philip Franklin, had stolen. He wondered if God knew about what he had done, and if God really cared for one bird's egg. Yes, sure enough, his Sunday-school teacher told him once God cared for the sparrows. He was sure this was not a sparrow, but maybe He cared for all the birds.

He almost decided to take the egg back to the nest, and just then there was a rush of feet behind him and he was struck between the shoulders and knocked far to one side. His berries fell all about him. He was not sure what had happened, but it seemed as if an earthquake had killed him because he was such a very wicked boy. Then the hired man was picking him up and trying to help get the breath back into his shaking little body. "That black ram is terrible when he gets loose," the man was saying. "My! he struck you hard. I hope you are not hurt much. I was just changing the sheep over into the other pasture and I did not know you were anywhere near."

Philip choked back his sobs. He was glad it was not because he was wicked that he was hurt, but he felt that things were going wrong for him.

After a while the hired man went away and he picked up the strawberries, for they were not spoiled. To his surprise the egg was not broken, though it had fallen with the berries. He knew exactly what he wanted to do then. He hung the little red basket on the tree and carried the egg away back to the nest. A brown body whirred past as he stooped above it, and again he heard the bird calling to him to go away. "She doesn't understand," he said. But as he went

down the hill that time he felt as happy as the ground-bird that had returned to a bush above the nest, and was singing a series of soft little notes above its recovered treasure.—*Costella G. Washburn, in Sunday-School Times.*

General Joy.

With paper cap and noisy drum,
Along the street I saw him come,
A manly little boy.
I asked him what his name might be,
He smiled, and answered roguishly,
"My name is General Joy."

With head erect, he lightly stepped,
And with his martial music kept
In even, steady time;
And as the General onward strode,
Upon his face the rapture glowed
Of happiness sublime.

I asked him where his army stayed,
The little fellow looked dismayed,
But presently he said:
"I guess my soldiers are my thoughts
They haven't any guns or forts.
I keep them in my head.

"I make them put all fears to rout,
And drive each thought of evil out,
When things are going wrong.
The enemy retreats pell-mell,
To hear us shouting, 'All is Well'
Our rousing battle-song."

He looked so happy as he spoke,
That in my mind his words awoke
An army like his own,
Of loyal thoughts, all good and true.
I said, "I'll be a General too,
And lead my soldiers on."

We wouldn't mind their playful noise,
If all our little girls and boys
Like General Joy could be,
And make their soldier thoughts obey,
In study, work, or when at play,
The law of harmony.

—*Antia Trueman.*

Origin of the Thermometer.

According to Sir Samuel Wilkes, Fahrenheit constructed his thermometer from one made many years before by Sir Isaac Newton. "In the Transactions of the Royal Society for 1701 will be found the paper written by Sir Isaac Newton, who was at that time Secretary to the Society," says Sir Samuel. "He invented an instrument for measuring the degrees of heat in fluids by taking a tube and filling it with linseed oil. On this he marked the freezing point as zero by putting the tube in ice, and in the same way he marked the point when placed in boiling water. The very awkward scale which we

now use is evidently that of Newton, for, the decimal system not being then in use, he took the number 12 to denote the heat of the body; this he found, and made it the starting point of his scale, both upward and downward.

"It was some time after this that, for the sake of convenience, the degrees were divided into two, and thus the body heat was 24 above zero and boiling point 53. When, many years afterward, Fahrenheit made his instrument and used mercury instead of linseed oil, which was far more convenient, he again divided these degrees into four, so if the number be multiplied accordingly we have 212 for the boiling point and 96 for the body heat.

"Fahrenheit, finding he could get a lower temperature than freezing, made

not alleviate or avert it, but not go out seeking more trouble. We often suffer more from the trouble we anticipate than from that which really comes. In Whimlets, Mr. Stinson says:

"The greed of mankind oft is shown
In ways that we deplore;
The man with troubles of his own
Goes out to borrow more."

Some pain we must endure. Our joys would not be half so keen did we not know grief. Let us bear the pain which comes nobly as a discipline by which our characters are refined and strengthened. By suffering pain we are taught many lessons. "The burnt child dreads the fire." Let us bear the pain we must, but we are not called upon to seek trouble or go out to meet it by anticipation. We need not

G. C. OF A. QUEBEC & LAKE ST. JOHN RY.
H. O. Blanchet, Chr. A. H. Steerton. C. F. Fabyan, Div. 388.

this point zero, which brought the number 8 of Newton's to 32 of Fahrenheit. In this way the thermometer was constructed."—*Chicago News*.

The Evil of Borrowing Trouble.

Don't borrow trouble. We shall all find we have enough to bear without "borrowing" that which is not put upon us. We are apt to imagine that this or that might happen and what should we do if it should. We shall need all the strength and wisdom we can muster to meet that which does come without wasting our forces on what may never occur. Let us endure the trouble that actually comes, if we can-

be like the woman, who, sitting before a cheerful grate fire, weeps on reflecting what dire results would be the consequence if a brick should fall from the chimney and fall on the head of the infant which the stork had not yet brought to that household. She might better have taken her pleasure in the charm of a grate fire. Let us enjoy our cozy corners and happy hours when we come to them and not waste them in senseless fears for what may (or may not) happen.

It is a bad habit to be ever expecting trouble. It is squandering hours of life that might be used to better purpose. We are losing joys that should rightfully be ours. We should bear in mind that as we cannot have complete happiness without

sharing it with others, so we cannot be unhappy without reflecting our unhappiness on those about us. We create evil by constantly imagining it. We cloud the sunshine, and objects take on the distorted proportions that a heavy fog or mist gives them. Let us keep our minds clear that we may see things rightly. Let us keep hope bright and faith strong and spirit cheerful and we shall find life easier for us. We shall do more good in the world. We shall find most of that we seek. There are many proverbs on this subject, and a proverb is the distilled wisdom of ages.

"Harm watch, harm catch."

"Little things worry little minds."

"The misfortunes hardest to bear are those which never come."—Lowell.

—*Milwaukee Journal.*

The Real Issue.

There are two issues, after all
Above the ones that speech may call

Or wisdom utter;

Two issues that with me and you

Are most important—and the two
Are bread and butter.

Let patriotic banners wave,
Let economic speakers rave;

'Tis not potential

That Art proclaim or Musicing,

The Loaf is, after all, the thing
That's most essential.

Truth seeks some broader meeting place
For breed or clan or tribe or race,

For saint and sinner;

But after all the noise and fuss

The issue paramount with us
Is—What for dinner?

New theories we may evolve,
Old Governments we may dissolve,
New flags float o'er us,

And Truth may search and Wisdom think,
Still these two planks of meat and drink
Are yet before us.

So let contention hotly wage,
And let the wars of logic rage
In discourse fretted:

When all the clamor is complete
The issue still is what to eat
And how to get it!

—*J. W. Foley.*

Eastern Echoes.

The *Railway Times* of India occupies the same position to the A. S. R. S. of India as the *Railway Review* does here. Judging from its pages railway men there do not live in a paradise. The railway boy, in answer to his question, "I hear thee speak of a better land," would not

have "India" named as a "better land." However much railway men have to contend with here, they will go further and fare worse in India. But the paragraph that arrested my attention was as under. There is much more than this paragraph, quite a column in fact, about *Augwalla* and his shady dealings:—

"The same *Augwalla* that assaulted Willcox was responsible for the dismissal of George Sutton, a covenanted driver, and a man well known and loved by the Stratford Branch, English A. S. R. S. Sutton reported this man twice, but got no satisfaction, in fact, was heavily fined himself. As the reports made went against himself he decided to have personal satisfaction. He purchased a revolver and carried it on the engine. The native saw it and stole it, and handed it over to the D. L. O. For this Sutton was suspended, and subsequently dismissed for being "unsuitable for the requirements of the E. I. R." But Sutton will be fighting his own case in England ere this. And I trust when the *Railway Review* gets the issue this appears in they will give it prominence, and at the same time let us know how "George" has succeeded."

* * * * *

As Sutton was Chairman of the Stratford Branch when it was the premier one in our society, and which office he vacated for Indian service, I thought an interview with him might be helpful in inducing others to leave England for India, providing no European Alien Act came in force there, so I enlisted the service of a competent shorthand writer to interview George and he did. The paragraph was shown him and the attendant matter, and he corrected some slight though important errors, and proceeded to inform him of his difficulties there. Of course, racial difficulties there are bound to be between Indians and Europeans, that of caste raises such among themselves, and must operate even more largely still with Europeans. They are stigmatised in the interview as cunning and treacherous, more especially the Mohammedan section, and if George is right, they are hedged about with privileges which the European does not share. To use his phrase, a nigger may call a driver all the names of a practically unlimited vocabulary without fear of punishment, but the European must not retaliate whether by word or blows. A report is not followed by an investigation and punishment of the guilty one, but insult is added to injury by the complainant being himself fined, and the aggressor goes free. There are the engines, which the *Railway Times* confirms, and he mentioned one he had, which the man who

had it before him resigned rather than work it. The man who took it after him went one trip, and refused to take another with it. There is a continual change of firemen, and none of them like work, their language is inelegant. The fireman of one driver called him the son of a whore, among other choice epithets, which his religious fancies did not take kindly to, and to get a change reported it, and the driver had injury added by being transferred from Asansal to Burdwan, where he was three months, and then transferred back. One Indian fireman came on duty an hour late. When a certain stopping place was reached the driver told him to clean the front of the engine and was laughed at, and with these lazy incompetent firemen he is subject to fines—a driver is fined a rupee for every bar burned—in fact, fines are everywhere up to 50 rupees, if a native is struck in self-defence. But it would seem that occasionally wrong is righted. The paragraphs preceding this one dealt with Willcox's case, he being charged by a fireman for assault, when the magistrate decided *Augwalla* was the aggressor, and had to show cause why he should not be fined for bringing a vexatious complaint. He could not, and was

fined 10 rupees, which was given to Willcox.

* * * * *

"I suppose, Sutton, when you sought the engagement you had a glowing account given of the advantages of Indian service, and you accepted them in good faith, and went to realize them?"

"I did, but the advantages are few, disadvantages many, and good service may be rendered to like aspirants, as myself, if I name a few of the latter."

"I suppose, however, that you found official statements in England smooth as butter."

"I did, both by the company and their consulting engineers."

"What about the hours? I suppose they are short in a climate like that."

"To fire on goods trains the hours on duty are long, and no matter what their length there is no extra pay. The coal is bad, and fire must be cleaned about every 80 miles. When promoted to passenger trains the hours are not so long, but the trip is longer, and mails still more so. The mail run is about 220 miles, the average speed 42 miles an hour; an ordinary passenger 22 miles; 16 on goods, the load heavy; 56 trucks form a good load and 62

HINKLEY LOCOMOTIVE BUILT IN THE 60'S, NOW OWNED BY THE INTERNATIONAL PAPER CO., BERLIN, N. H., AND STILL DOING FAITHFUL WORK WITH BRO. T. F. NELSON, MEMBER OF DIV. 572.

empties; average capacity of trucks, 17 tons; 25 coaches on a passenger, and 18 on the mail."

"I suppose, however, you are fairly fixed at stations?"

"Oh, no, transfers are numerous, six months' stay is exceptional, the stations are unhealthy many of them, all of them swarming with mosquitoes. Snakes abound, and a lamp after dark is a necessity to prevent one treading on them; the climate is trying, the heat hard to bear."

"The dormitories, I take it, are not so up-to-date as our English ones?"

George laughed. "They are called, for courtesy's sake, 'rest rooms.' They are mostly in a very dirty condition, beds seldom made, sheets filthy, blankets stink. Mosquito nets are provided, but their torn condition renders them useless, and at some stations the servants are very dirty, and use the rest room to prepare food, and in a manner that one turns at it."

"But, surely, a complaint lodged would obviate all this?"

"You might think so; if they are reported notice is taken, and in a week they are as bad as ever."

"I see by your agreement with the company a fixed scale of wages is given; is that strictly adhered to?"

"Oh, no! a man is kept back; he is told his consumption of coal is heavy, or oil in turn, or he has been fined and must go a certain time without a fine before the increase is handled, and you will note the agreement says 'to be done and performed, and of the due and faithful and exclusive service rendered by him.' 'Due and faithful' covers a lot by ingenuity and resource. Let me give you some of the fines. I have known men to be fined 100 rupees for not signing the notice books, 50 for striking a native, 25 in one case for allowing his fireman to move the engine while he stood by to test it; 20 for a collision in the loco. yard in the dark on one driver, 10 on the other, for being late on Char line two minutes, two days' pay, four because the driver was slightly knocked by native shunter, 10 for a broken eccentric rod, 5 and upwards for hot big ends, one for broken drawbars or couplings, absent from the bungalow when a call came for duty a day's pay and so on. Wherever an excuse or exercise of ingenuity could invent a man is hedged about with fines, and you see it operates two ways, increase stopped, present pay deducted, and young drivers are often reduced to shunters, drivers on a shunting engine that is, and one man's pay was reduced six months because he, with the knowledge and consent of the loco. foreman, worked his engine home light with a broken driving axle."

"Let's get into something else or 'East Anglian' will be cutting this interview down."

"I want to show him how wages operate; but take another phase. You have heard of 'backsheesh,' of course. At some stations this palm greasing (a lighter term) is very heavy. The native fireman expects and very often gets 3 rupees per month, the second fireman 2, to have your engine cleaned 3, the shed tindal (the head man of cleaners) 3, and 1 to at least four cleaners, 3 to the coal tindal, so as not to be robbed, 1 to the coolie who doles out the oil, 3 to the fireman's tindal, so that you may not have a fresh fireman every day, one to firelighters, assistant shunters, and fitters, unless you want your engine smothered up with smoke and ashes. All want backsheesh, and they will have it. Your outlay at least is not under 25 rupees a month."

"But I cannot conceive, Sutton, that with these disadvantages you cannot seek redress."

"Redress did you say? Why, you cannot see the district loco. superintendent without your foreman's consent, unless he refuses to work till he does, and then—and the treatment then is not sufficient to encourage you. No notice is taken of reports whatever the fireman may be, or if notice is taken it is a reprimand. The native may call you foul names, refuse to work, assault you, but there is no redress. The police refuse an arrest for assault without the loco. superintendent's permission, and during the last six months of 1904 there were several cases of assault. In three cases they tried to throw a man off the engine while the train was in motion. One was struck on the head and nearly killed, while it operated in an inverse position with the driver, and a driver struck on the head with a spanner was refused permission to prosecute, but the fireman was allowed to prosecute him. The case against the driver was dismissed, and the fireman put on trial for assault."

* * * * *

The interview contains much more, but space is precious; but Sutton's warning to Indian aspirants is "Don't go;" and certainly, looking down it and the agreement, he would be well advised in obeying it. I may tell our Indian friends Sutton has found employment, and that he is negotiating with the English officials just now.—*London Railway Review*.

WAGES IN LONDON.

Mr. Charles Booth's house to house investigation in the East Side, London, covered a large section of honest, hard working people. The total population em-

braced 900,000 people. Of these 816,000 souls had an income from earnings of less than \$5.05 per week; 870,000 more had an income of over \$7.25. This was the family income, not the earnings of the head of the house, but the earnings of all members of the family. The average number of earners in each family was estimated as 2.25 workers. Approximately 700,000 had to live on an income of less than \$7.25 per week. This was in the wealthiest city of the wealthiest country in the world, a country so wealthy that its capital flows to all parts of the world seeking investment.—*London Workers.*

and contains the largest emerald in the world. The other, the gift of Queen Isabella of Spain to Pius IX., weighs three pounds and is worth \$1,000,000.—*Philadelphia Ledger.*

Generosity.

The loco. department of the L. & N. W. in the Northern division cannot be accused of over-generosity at any time, but more particularly to those whom Death—that great disrespector of persons—hath o'ercast with his dark shadow. Some time ago an L. & N. W. driver's wife had

ENGINE 784, BOSTON & MAINE RAILWAY, FITCHBURG, MASS., BRO. A. S. PLUMER, DIV. 191, AND BROTHERHOOD CREW.

What Crowns Are Worth.

The lightest of European crowns is the state crown of Great Britain, which was made for Queen Victoria 66 years ago. Although it weighs only two pounds seven ounces, its value is \$1,500,000. One enormous sapphire came from the signet of Edward the Confessor. One of the rubies has a sadly tragic history. It was at one time in the possession of one of the great kings of Granada whom Pedro the Cruel invited to his palace and basely murdered through greed for this gem. In the Pope's treasury house are two crowns which are valued at \$2,500,000. One of them was the gift of Napoleon to Pius VII.

to be removed by rail to the nearest city hospital for an operation, under which she sank and died. The usual charge of 1s. per mile was demanded by the L. & N. W. to convey the body back for interment in the God's acre of her native village, amounting in this case to over £2. Since then an L. & N. W. driver had to be removed to Glasgow for an operation from which he never rallied. The Scotch company, it is said, requested payment of about £7 before conveying the remains south. If the companies cannot carry the remains of their employees and their wives free, they might at all events very considerably modify their charge of 1s. per mile.

Labor in Germany.

The policy of concluding agreements as to the rate of wages and hours is steadily growing in favor with German employers and employees, especially in the trades. The agreements differ in being applicable to a single town, a whole district or in some cases to the whole of Germany.

General tariffs applicable throughout Germany exist for printers, bookbinders and engravers of music, while partial tariffs are in use in the following trades: Building, pottery, brewing, metal workers, tailoring, painting, etc.

Time rates are generally paid in the building trade and allied trades, whereas piece rates are the rule for plasterers, coopers, tailors, shoemakers, etc.

In Berlin, according to figures given by the *Imperial Labor Gazette*, masons and carpenters are paid from 7 to 17½ cents per hour and painters from 7½ to 15 cents per hour. Street masons are paid from 11 to 15 cents on the average throughout Germany. The brewers pay their maltsters and coopers from \$5 to \$7 per week; enginemen, stokers and drawmen from \$4.50 to \$9, and foremen from \$6.50 to \$9.25. Plasterers' wages on piecework average from 12½ to 15 cents. Woodworkers and joiners are paid less than in the building trade, and potters average from 11 to 16 cents. In the Frankfort district masons and carpenters are paid by agreement this year 11 cents an hour.

According to the same authority, the wage agreements usually make nine and ten hours a day, 63 per cent of the agreements fixing ten hours and only 1 per cent eight hours. Ninety-one per cent of the agreements are for ten hours or less, while 3.2 per cent are for more than eleven hours.

Consul Liefeld, writing from Freiburg, Germany, says that as a result of the recent strike among the masons a new tariff of wages was passed at the trade tribunal last June to take immediate effect. The agreement is to continue until April 1, 1908. Mr. Liefeld gives the following as a summary of the regulations:

"Masons shall be paid by the hour, and the hours of labor shall be arranged to suit the season.

"Overwork, night work, Sunday and holiday work shall take place only in urgent cases. The first two hours after the close of the ten hour workday shall be considered extra work.

"Wages shall be paid in sealed envelopes. Payment is to be made as far as possible at the work places and either weekly or every two weeks.

"In case of new buildings or large al-

terations the employer shall erect building sheds and closets.

"Intoxicated workmen are forbidden to enter the building place. Except during the recesses the use of alcoholic drinks during the time of labor is prohibited.

"The relation between employer and employee can be brought to a close by either party without previous notice, but only at the close of a full workday.

"Regulations, fines, etc., because of interest in any movement for increased pay or on account of membership in any labor organization, shall not be made.

"For the purpose of mutual understanding and quick adjustments of any difficulties that may arise, the employers, as well as the body of employees, shall each elect a committee of three persons still active in the mason's trade, which two committees, though distinct, can nevertheless consider matters together.

"All acts of the committee require the further vote of the two general bodies. If the conclusions of the committee cannot procure the desired harmony then the trade tribunal shall be asked by both parties to arrange matters. Up to this point lockouts and strikes are not to take place.

"The pay for first-class able masons shall be for the work hour till August 1, 10.7 cents; from August 1 till December 31, 10.9 cents; in the year 1906, 11.4 cents; in the year 1907, 11.9 cents.

"For night and for Sunday and holiday work one and one-half times the ordinary day-hour pay shall be made. For overwork an additional 3.57 cents per hour shall be made."

[The agreement is doubtless considered very fair to both employer and employees in Germany, but the contrast between Germany and the United States for this class of mechanics is very great, and very much more than any possible difference in cost of living.—EDITOR.]

Union Labor in Berlin.

From a report issued by the Berlin Trades Union Commission, which is practically the same thing as a trades council in this country, it appears that the German capital is one of the best organized large cities in the world. The commission shows that the membership of the affiliated organizations was 174,192 at the end of 1904, and an increase of over 37,000 against 1903. The metal workers number 45,000, cabinetmakers 18,700, bricklayers 13,800, transport workers 12,000, printers 8,068, bookbinders 5,856, builders' laborers 4,886, municipal employees 4,412, carpenters 4,088, tailors 3,800, painters 2,855.

—*Weekly Bulletin Clothing Trades.*

Europe's Trades Unionists.

At the close of 1904, England, Scotland and Ireland, with a population of 41,500,000, had a trades union membership of 1,902,808. In other words, 1 in 22 of the population was a trades unionist. In Germany there were 1,276,831 trades unionists in a population of 56,400,000, or 1 in 44. In France, with a population of 38,300,000, there are 715,576 trades unionists, or 1 to 53. Italy, with 32,500,000 population, reports 181,280 members of trades unions, or 1 to 180. In Austria the trades unions have 177,592 members in a population of 26,150,000, or 1 to 150. Spain has a population of 18,600,000 and trades union membership of 65,900, or 1 to 330. Hungary has 52,410 trades unionists in a pop-

of other civilizations. At a station on the main line of the East Indian Railway a train from Delhi had stopped, and one of the travelers—an officer in the Royal Engineers—began to quizz from the carriage window a "tester" who was going his rounds, striking the wheels with his hammer. "Why do you beat the wheels like that?" was the first question. "Sirkarka hookum (It is the order of the authority)," replied the imperturbable native. "But what is the use of striking the wheels?" "Khodarjani. Hum i-sa thees burs-si kurthani. Sirkarka hookum." (God knows! I have been doing this for thirty years. It is the order of the authority.) Wherein there is at least one romance and at least a dozen sermons.—*Philadelphia Press.*

GROWTH OF POWER ON THE D. & R. O. FROM 1871 TO 1905.

The small one was a standard passenger engine when the road was narrow gauge. The large engine is in freight service. Bro. August Glye, member of Div. 29, Pueblo, Colo., fired the little No. 6 and has been running the large powerful No. 904, so he has seen and had a part in this great change from narrow gauge to broad, and from small locomotives and cars to the monsters in capacity.

ulation of 19,500,000, or 1 to 366. In Denmark the ratio is 1 to 28, and in New South Wales 1 to 21.—*Weekly Bulletin Clothing Trades.*

An Indian Story.

Many a good story comes out of India, as the admirers of Mr. Kipling's works will be quite ready to attest. But here is a new one, supremely illustrative of the Eastern character, and not altogether without application to characters

Railroading in Rural Japan.

Probably one of the smallest and most interesting bits of railroad to be seen in any country runs between the pretty little seacoast town of Atami and Yoshihama, in the province of Iza, Japan, its length being about twenty miles, says the *Four Track News*.

On our recent tour through the "Land of the Cherry Blossoms" we arrived at Atami late in the day, after a most interesting twelve mile tramp over the "Ten

Province Pass." Our time being rather limited, we decided to start sight-seeing early on the following morning by visiting the 1,500-year-old temple of Izusan, three miles distant, which is regarded as one of the principal points of interest to the traveler in the kingdom of Japan. Mine host, in flowing kimono, with repeated bows and continuous smiles, informed us that Atami was quite a railroad center and that a train would convey us to the temple in quick time.

Reaching the car house we saw the miniature train back out, ready for service. The engineer on the front platform gave a long blast on a horn and we were off at a lively pace. Gripping a hand rail on each side of the rear end of the car, two powerful little coolies, pushing and puffing at a great rate, furnished the

motive power which sent us buzzing over this remarkable little route, through most engaging scenery.

When under good headway, or going down grade, the "motive power" would jump on to the rear platform and enjoy a period of rest as the car sped on of its own volition. The engineer's duty on the front platform was to apply the brake and blow a warning horn upon rounding curves, or in case anything crossed the track, it requiring considerable agility on his part to keep his station, and as we whizzed around the curves it kept him busy trying to hang on.

This miniature monopoly runs its distance through tiers of rice paddy fields and fine groves, skirting the Sea of Japan, some 450 feet above sea level. In America a trip of this character, which occu-

MEMBERS OF EASTON, PA., DIV. 259, WHEN ON A VISIT TO HAZLETON, PA., DIV. 316, TOGETHER WITH THEIR WIVES, HAD THEIR PICTURES TAKEN; SEE PAGE 724, AUGUST JOURNAL.

pies about five hours, with the services of a private car and three men, would cost several dollars, while in Japan, including the tip for coolies' tea, the entire cost was 42 sen, or 21 cents in our money.—*Express Gazette.*

China and the United States.

The 28,000 shoemakers of Canton get wages of \$5 each, or less, per month. The 16,000 shoemakers in Lynn, Mass., get \$8,000,000 per year in wages, or \$500 a year apiece.

Owed Something Himself.

"I'm afraid I'll have to charge you full fare for that boy, madam," said the ticket agent, as he issued a ticket to a sharp-featured Boston woman of middle age and held out his hand for the additional fare. "What for?" she asked. "He is more than twelve years old." "Ain't you 'Tom' Sanders that used to live in Greenwich about eight years ago?" inquired the woman, eyeing him. "Yes, but why?" "Used to buy your tea and sugar of Widder Jones?" "I believe I did." "I'm Widder Jones. Recollect the last lot of groceries you had of me; those you promised to pay for in ten days?" "Why, Mrs. Jones, didn't I—didn't I?"—"Those groceries, Mr. Sanders, ain't been paid for yet, and this boy lacked about a month of being twelve years old when you got them. Does he go?" "He goes, madam," said the agent, as he gave her a half-ticket with a sickly smile. "The boy is probably large for his age."—*Ex.*

Pleasant Meal Times.

Many people must have been stuck by the utter absence of interesting conversation that is so marked a feature of modern meals. In the olden days all the wit and brightness of the day seemed to be focussed into the breakfast and dinner hours, and nearly all the celebrated stories of brilliant repartee that have come down to us were delivered during a meal. But nowadays people talk over their worries and bothers at the table, look up trains and read papers during breakfast, and if they have got anything disagreeable to say to another member of the family, very often choose a meal time in which to say it.

Somebody once suggested that children should be trained to be bright and cheerful during meals, just as much as they are trained to eat properly, for the one habit, like the other, would cling to them

when they grow up and make them much sought after companions.

Worry is very bad for the digestion, and so is another fashion of seeing how fast you can get through your breakfast or lunch; certainly both things react upon one's neighbor's enjoyment of the hours that should bring relaxation and good humor.

Butter as Medicine.

Butter is so common a commodity that people use it and scarcely ever think what wonderful value lies in their hands in the pats of dainty yellow cream fat. But this delicate fat is as valuable as the dearer cod liver oil for the weakly thin people, and doctors have frequently recommended the eating of many thin slices of bread thickly spread with butter as a means of pleasantly taking into the bodily tissues one of the purest forms of fat it is possible to get. Butter is a carbon, and all excess of it is stored up as fat in the body. It gives energy and power to work to those who eat heartily of it. So it is not economy at table to spare the butter even to the healthy folk.

Spoiled Children.

What a difference there is among our little ones in times of sickness! The spoiled, wayward child becomes more self-willed when ill, and as a rule the thought of a doctor, or the very suggestion of a remedy or medicine throws it into a passion. We are not exaggerating at all when we say that many children's lives have been sacrificed because they were not obedient. This is especially noticed in throat cases, such as diphtheria and scarlet fever, when applications to the tonsils are imperative. We have seen cases where a spoiled child was so frightened and fought so with his nurses that the exhaustion consequent on the application and struggle did really as much harm as the omission of the treatment. Don't spoil your children when they are young. They will thank you afterward for bringing them up with loving firmness.—*Home Monthly.*

In the Sweat of Thy Brow.

It may be proved, with much certainty, that God intends no man to live in this world without working; but it seems no less evident that He intends every man to be happy in his work. It was written: "In the sweat of thy brow," but it was never written: "In the breaking of thy heart."—*John Ruskin.*

An Old-Time Locomotive.

FRUITVALE, COLO., August 10, 1905.

MY DEAR C. H. S.: I enclose a rather indistinct photo of an old-time oddity that I have often seen in service. Bro. DeLoos Everett will recognize it on sight. I also enclose letter relating to "The Old Mill," written by W. S. Hull, electrical engineer C. V. R. R., at Chambersburg, Pa., and an old friend of mine. I first saw the light in Chambersburg on or about February 18, 1886, so you see I have been on earth long enough to see some old machines. The letter from Mr. Hull follows.

As ever,

WALTER DE SANNO.

with a Northern Central engine at the crossing, badly wrecking engine and killing eighteen of the already wounded men. The engine was taken to the shops at Chambersburg, and was only in the shops a few days when the Confederate General Stuart raided the town, burning the shops, leaving the "Utility" and several of the engines in the ruins.

After the rebuilding of the shops the "Utility" was remodeled to a tank switching engine, using the same boiler, cylinders, wheels and valve gear. I have no photograph of engine as remodeled. The new "Utility" was in service in Chambersburg yards as switching engine until 1882, when the Gardner Manufactur-

LOCOMOTIVE BUILT IN 1854.

Mr. W. De Sanno,

DEAR SIR: Your letter received, and I gladly give you all the details I have. The "old iron horse," "Utility," you will remember, was built by Seth Wilmarth, Boston, Mass., 1854, for the Cumberland Valley Railroad Company, as a bridge shifter engine for use between Bridgeport and Harrisburg over the bridge crossing the Susquehanna River at that point, and was running in that capacity until 1862, when, in a collision, it was badly damaged, putting her out of service, and in appearance shown in photograph. You may remember that when she was drawing a train of wounded soldiers coming from the battlefield of Antietam, through the yard, she collided

ing Company of Carlisle bought it to work in their yard handling lumber, etc., until 1896, when they sold her to L. Legal, Altoona, for scrap. The photograph I enclose you was taken in Harrisburg yard in 1860: George Wentz, engineer; Capt. J. L. Dick, fireman; and is one I have had for some years. Will present it to you. Ever yours, W. S. HULL.

THE crookedest railway in the world is one from Boswell to Friedens, Pa., the air line distance being five miles. The road doubles on itself four times, and at one point, after making a loop of about five miles, the road comes back to within 300 feet of itself on a grade 50 feet lower,

Legal News

HOUSE OF REPRESENTATIVES.

H. R. 18974.

A BILL to better promote the safety of employees and travelers upon railroads by compelling common carriers by railroad to employ competent persons as locomotive engineers.

Mr. Hull introduced the following bill on February 14, 1905, which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That if any common carrier by railroad engaged in interstate or foreign commerce, or any common carrier by railroad in the Territories or the District of Columbia, or any officer or agent of such common carrier by railroad shall employ, engage, or hire any person as a locomotive engineer who shall not have had three years of actual experience as a locomotive fireman or one year of actual experience as a locomotive engineer, or shall permit any person not having had such experience as a locomotive fireman or locomotive engineer as aforesaid to manage, control, run, or operate, or attempt to manage, control, run, or operate, a locomotive engine on such railroad, such common carrier, officer or agent of such common carrier, shall upon conviction thereof be fined not less than two hundred dollars nor more than five hundred dollars for each and every such offense.

SEC. 2. That this act shall not be applied to nor be held to make criminal the running or operating of engines so far as the same is necessary in taking engines to or from trains at division terminals by hostlers, or in handling engines to and from engine house, or doing any work appurtenant thereto at engine houses.

MINNESOTA.

Chapter 69.—Hours of Labor of Locomotive Engineers and Firemen.

SECTION 1. On all lines of steam railroads or railways operated in whole or in part within this State the time of labor of locomotive engineers or locomotive firemen employed in running or operating the locomotive engines on or over such railroads or railways shall not at any time exceed fourteen (14) consecutive hours without an opportunity be given them for rest. At least nine (9) hours, or as many hours less than nine (9) as is asked for by said engineers or firemen, shall be allowed them for rest before said engineers or firemen are again ordered or required to go on duty. *Provided, however,* That nothing in this section shall be construed to allow any engineer or fireman to desert his locomotive in case of accident, storms, wrecks, washouts, snow blockades or any unavoidable delay arising from like causes, or as prohibiting said engineers or firemen from working longer if they do not object.

SEC. 2. Any railroad company or superintendent, chief dispatcher, train master, master mechanic or other railroad or railway official who shall order or require any locomotive engineer or locomotive fireman to labor contrary to the provisions of section one (1) of this act shall be deemed guilty of a misdemeanor and on conviction thereof shall be punished by a fine of not less than twenty-five (25) dollars or more than one hundred (100) dollars, or imprisonment not less than thirty (30) days or more than sixty (60) days; and all railroad or railway corporations operating lines or [of] railways or railroads, in whole or in part in this State, shall be liable for all injuries to said engineers or firemen resulting from their being required to labor contrary to the provisions of section one (1) of this act.

Approved March 19, 1903.

Chapter 393.—Employment of Labor—Blacklisting—Participation in Strikes.

SECTION 1. It shall be unlawful for any individual or corporation or member of any firm, or any agent, officer or employee of any company or corporation to contrive or conspire to prevent any person from obtaining or holding employment, or to discharge, or to procure or attempt to procure a discharge of any person from any employment by reason of such person having engaged in any strike.

SEC. 2. It shall be unlawful for any individual or corporation, whether acting for himself directly or through another person, agent, or agency, or whether acting as agent or employee of another person or persons, or as a member of any firm, or as an officer, agent or employee of any company or corporation, to require from any person, as a condition to any contract of employment, any written statement as to his participation in any strike, or any written statement as to his personal record, except as to conviction for crime or misdemeanor, for a period of more than one year immediately preceding the date of making application for such employment and the use or requirement by any such individual or corporation acting in any of the capacities aforesaid of blanks or forms of application for employment in contravention of the provisions of this act are hereby forbidden.

SEC. 3. Any violations of any of the provisions of this act shall be deemed a misdemeanor and shall be punishable by a fine not exceeding \$100, or by imprisonment in the county jail for a period not exceeding three months.

Approved April 21, 1903.

Co-Employees or Fellow-Servants.

For the benefit of those of our members who are interested in the various laws enacted in the several States, relative to the responsibilities of employer and employee in what is commonly known as the Co-Employee law in contradistinction to common law as handed down to us from

old English law, we present herewith quotations from the United States Department of Labor, Pan-American Exposition, edited by Charles H. Verrill, expert in charge, beginning with the first modifying act, which will be continued in this department until all such laws enacted up to 1901 have been presented. They are not only worthy of careful study, but careful consideration of what influence produced them.—EDITOR.

GEORGIA.

Many statutes have been enacted by the legislatures of numerous States which change the common-law liability and relax the strictness of the common-law rule as to co-employees or fellow-servants.

Most of these laws, however, affect but one class of employees, those employed by railroad companies, and the first legislation in this country which changed the common-law rule, and which was also the first legislation of any kind upon the subject of this article, applied in the case of the employees of railroads only. This was a statute enacted by the State of Georgia in 1856, which is now to be found in the two following sections of the Code of Georgia of 1895:

SECTION 2297. Railroad companies are common carriers, and liable as such. As such companies necessarily have many employees who cannot possibly control those who should exercise care and diligence in the running of trains, such companies shall be liable to such employees as to passengers for injuries arising from the want of such care and diligence.

SEC. 2323. If the person injured is himself an employee of the company, and the damage was caused by another employee, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to the recovery [of damages].

As was said, these sections change the common-law rule only as regards railroad employees, and the legislature of Georgia has gone no further than this since their enactment. The constitutionality of these sections has been affirmed by the supreme court of the State in numerous cases. Said court has also held that to recover damages under these sections the injured employee must himself have been free from fault; in other words, that he must not have been guilty of negligence contributing to his injury, even though in performing the negligent act he was acting under orders of a superior; that the application of these sections is not confined alone to cases where the injuries complained of were connected with the "running of trains," and that the effect of the sections is to put the employees of railroads upon exactly the same plane, in respect to their right to recover damages for injuries, that a non-employee would be on under the common law.

By decisions rendered in 1888 and 1895 the United

States circuit court for the northern district of Georgia decided that sections 2297 and 2323 above did not apply in the case of an injury to an employee of a receiver operating a railroad under direction of a court of equity. The supreme court of the State had previously made the same decision. In order to extend the benefits of these sections to the employees of all railroads operating in the State, the legislature by act approved December 16, 1895, provided that the liability of all receivers and like officers operating railroads should be the same as that of railroad companies as fixed in these sections. Said act being No. 224 of the acts of 1895, reads as follows:

SECTION 1. The liability of receivers, trustees, assignees and other like officers operating railroads in this State, or partially in this State, for injuries and damages to persons in their employ, caused by the negligence of co-employees, shall be the same as the liability now fixed by the law governing the operation of railroad corporations in this State for like injuries and damages, and a lien is hereby created on the gross income of any such railroad while in the hands of any such receiver, trustee, assignee, or other person, in favor of such injured employees, superior to all other liens against defendant under the laws of this State.

SEC. 2. Suits may be brought against either of such officers of the same county, and service may be perfected by serving them or their agents in the same manner as if the suit had been brought against the corporation whose property or franchise is being operated by them, and all such suits may be brought without first having obtained leave to sue from any court.

IOWA.

The next law of this nature to be passed was enacted by the legislature of the State of Iowa in 1862, and is now contained in section 2071 of the Code of Iowa of 1897, which reads as follows:

SECTION 2071. Every corporation operating a railway shall be liable for all damages sustained by any person, including employees of such corporation, in consequence of the neglect of agents, or by any mismanagement of the engineers or other employees of the corporation, and in consequence of the willful wrongs, whether of commission or omission of such agents, engineers, or other employees, when such wrongs are in any manner connected with the use and operation of any railway, on or about which they shall be employed, and no contract which restricts such liability shall be legal or binding.

As will be seen this law puts the employee of a railroad company upon the same level in regard to his right to recover damages for injuries as are all other persons not employees. The supreme court of Iowa has affirmed the constitutionality of this act and has decided that it applies only in case of injuries due to accidents growing out of the use and operation of railroads, and is not intended to embrace all classes of railroad employees, but only to apply to those engaged directly in the actual movement and operation of trains and

such work as is necessary to provide for the same.

It has also been decided that a receiver who is operating a railroad under the appointment and direction of a court of equity is included in the term "persons owning or operating railways" within the contemplation of this section. A recent amendment to this section reads as follows:

SECTION 1. Section number 2071 of the code [shall] be amended by adding at the end thereof the following: 'Nor shall any contract of insurance, relief, benefit, or indemnity in case of injury or death, entered into prior to the injury, between the person so injured and such corporation, or any other person or association acting for such corporation, nor shall the acceptance of any such insurance, relief, benefit, or indemnity by the person injured, his widow, heirs, or legal representatives after the injury, from such corporation, person, or association, constitute any bar or defense to any cause of action brought under the provisions of this section, but nothing contained herein shall be construed to prevent or invalidate any settlement for damages between the parties subsequent to injuries received.'

MONTANA.

In the order of time of adopting a law of this class the State of Montana stands next, and its law was originally passed by the legislature of the Territory of Montana in 1873, having been approved May 7, 1873. In 1895, after the admission of Montana as a State of the Union, the same law was included in an edition of the codes and statutes adopted by act of the legislature approved February 19, 1895, as the law of the State. It forms a section of the civil code, and is as follows:

SECTION 905. In every case the liability of a [railroad] corporation to a servant or employee acting under the orders of his superior, shall be the same in cases of injury sustained by default or wrongful act of his superior, or to an employee not appointed or controlled by him, as if such servant or employee were a passenger.

In a decision rendered by the supreme court in November, 1895, it declared that the above statute established the principle that there is a difference in the grade of the employees in a common employment, and that it gave a right of action to a servant, injured through the negligence of a superior employee, against a master, when such injured servant was without fault or negligence on his part. Subsequently a rehearing of this case was had, and as a result thereof the court decided that this Territorial statute had been annulled by the provisions of the State constitution, for the reasons that it applied to domestic corporations only; that, therefore, it placed a greater burden upon domestic corporations than upon foreign ones operating in the State, and that being so, was necessarily in conflict with section 11 of article 15 of the constitution of the State, which prohibited the giving to any foreign corporation, or the exercise by the same, of any greater rights or privileges than those possessed by domestic corporations. From the above it is clear that said section, while a law of the Territory of Montana, never really became a law of the State, and Montana is,

in effect, at the present time, without legislation changing the common-law rule.

KANSAS.

In this particular kind of legislation Kansas modifies the common law in paragraph 1251 of the General Statutes of 1889, the original act having been approved March 4, 1874. The paragraph is in the following language:

PARAGRAPH 1251. Every railroad company organized or doing business in this State shall be liable for all damages done to any employee of such company in consequence of any negligence of its agents, or by any mismanagement of its engineers or other employees to any person sustaining such damage.

WISCONSIN.

Wisconsin next, by chapter 173, acts of 1875, enacted legislation of this class. The language of the act was as follows:

Every railroad corporation shall be liable for all damages sustained by any agent or servant thereof by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this State, or when such agent or servant is a resident of and his contract of employment was made in this State, and no contract, rule or regulation between any such corporation and any agent or servant shall impair or diminish such liability.

SECTION 1. Every railroad or railway company operating any railroad or railway, the line of which shall be in whole or in part within this State, shall be liable for all damages sustained within this State by any employee of such company, without contributory negligence on his part; first, when such injury is caused by any defect in any locomotive, engine, car, rail, track, machinery or appliance required by said company to be used by its employees in and about the business of such employment, when such defect could have been discovered by such company by reasonable and proper care, tests or inspection, and proof of such defect shall be presumptive evidence of knowledge thereof on the part of such company; second, or while any such employee is so engaged in operating, running, riding upon or switching, passenger or freight or other trains, engines or cars, and while engaged in the performance of his duty as such employee, and which such injury shall have been caused by the carelessness or negligence of any other employee, officer or agent of such company in the discharge of, or for failure to discharge his duties as such.

SEC. 3. No action or cause of action now existing shall be affected by this act.

SEC. 4. No contract, receipt, rule or regulation between any employee and a railroad company, shall exempt such corporation from the full liability imposed by this act.

In interpreting this statute the Supreme Court of Wisconsin holds that it applies only in cases where the injured employee is one of that class engaged in operating moving trains, engines, and cars, and who was injured while actually so engaged. The court has also held that contributory negligence of the injured employee is a proper defense under this statute as it is at common law.

Correspondence.

All contributions to our Correspondence columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer as a guarantee of good faith, and to insure insertion.

While the Editor does not assume responsibility for opinions expressed by contributors to this department, he is held responsible in both law and moral ethics for admitting that which will injure or create ill feeling. Hence all communications are subject to revision and rejection if the Editor deems it necessary.

C. H. SALMONS, Editor and Manager.

Stinted, Calculating Charity.

The poor wretch, he begged a nickel and what mattered it what for ?

If for bread or beer, his stomach was the best judge of its needs ;

Those who pause disbursing favors all good-hearted men abhor,

They've no use for benefactors who dole charity by creeds.

He was begging, 'twas sufficient, and he looked most abject too,

Wit the mercury at zero, and the rags upon his back

Let the winds from Manitoba in a hurricane pass through,

'Twas no time for hesitation, and one's purse strings should be slack.

There be those who'll ask one's nation, his religion and so on,

'Ere their mustard seeds of gizzards to poor pleaders will respond;

They'll outstare the sad-eyed creatures, those whose lives are nearly gone,

And who stand upon the threshold of the great unknown beyond.

Think, if health and friends should leave you, and you had to face the blast,

With a stomach wild with craving, and it gnawing for relief,

Would you then bepraise the donor, who would pause and doubt your past

As he doled you out a nickel to assuage your nameless grief ?

"God rewards the cheerful giver," and the widow's mite is sure

To ascend above the planets, where recording angels stand,

To write down all benefactions which are given to the poor,

In that awful book of records kept in Canaan's happy land.

If for beer or bread, what matter, so we heed the sad appeal

To appease the fearful gnawing of the wretch who supplicates ?

And if cheerfully we do it, how much better will we feel,

When we're called for final judgment passing through the Pearl Gates.

SHANDY MAGUIRE.

Letter from a Retired Engineer to a Friend.

PLEASANT VALLEY, N. Y., Aug. 15, 1905.

DEAR DAN: We were pleased to receive your letter. We are always glad to hear from you. Let me know how you like the piston valve and what you consider its good as well as its bad points. I understand you folks are experimenting with a superheater to increase the expansive energy of the steam in the cylinders. I believe there is a certain degree of density of steam that is essential to the highest efficiency and economy in using steam expansively. When rarefied too much it loses body, lacks the heat-carrying power necessary to sustain its energy when brought in contact with the walls of cylinders, making it too susceptible to their cooling influence, and while the theory may, like many others, figure out well on paper, practice will, I think, prove superheating to be a failure under the conditions encountered in locomotive practice. I didn't intend to begin to talk engine, but the force of habit is sometimes very strong, Dan.

Old Peter Mackin, the boss wiper, went out of his way the other evening to fetch me a bundle of old letters and circulars that were addressed to me, which had accumulated in the roundhouse mail box since I was there last. I thanked him for the favor, but he said, "Never mind your thanks, Misther Kelley. We went to work on the Cinthral together when we were little more than childer, and we have worked together almost a lifetime, and it gored me to see your mail thramped under fut by riff-raff so lately come as to barely know the name of the road; and when one of thim remarks, as I picked a letter from the flure where he had thrown it, that Old Kelley is a dead one now anyhow, I lost me timper intirely, and told him some things he wont forget for a while, and Misther Kelley, I know you'd do as much for me." I assured him that I

would, and after a hearty handshake and a look that told of his sincere regard for me he left me to examine his bundle of mail, and reflect on the incident. The mail consisted of a few circulars offering mining investments, a request for a testimonial from a company manufacturing overalls, and a bargain-counter offer of a "Spring Cushion Engineers' Cab Seat." The fellow who said, "Old Kelley's a dead one," was likely having a little fun with old Peter, who "will fight at the drop of the hat," but he certainly spoke the truth about "Old Kelley," for so far as the correspondence concerned him he certainly is dead enough.

I took a ride with Bill Cooper the other night on a big new engine of the Pacific type, hauling six cars. We made the last fifty-two miles in fifty minutes, making two stops, and only made up a few minutes at that. My experience during that trip has cured me somewhat of a desire to again be in harness. We rushed through a couple of large towns at a speed that was simply terrific, and approached two interlocking crossings on short curves at a clip that left but a slight margin of safety if the signals were against us. I looked over at Bill disapprovingly, but he only shrugged his shoulders as if to say, "We must do it to make the time." I often did the same thing myself, but when one is in the harness and keyed up things look different I suppose.

The burden of responsibility carried by the engineer of the present, compared to that of thirty years ago, is as a mountain to a molehill. In trying to account for the capacity necessary to meet the requirements of modern service as shown by the engineer of today, I am reminded of a fable I read many years ago, which served as an illustration of what man could accomplish by continued and persistent effort. It ran about as follows:

"Once upon a time there was a man who owned a calf. Its grazing ground was beyond a deep stream that was spanned by the trunk of a fallen tree, and on his shoulders he would carry that calf over this stream to the grazing ground each morning and carry it back each even-

ing, in order to protect it from the wolves. He continued to do so each night and morning until the calf grew to be a cow, when he could still carry it over and back."

It is so with the modern engineer. His increased duties and more exacting service have grown upon him so gradually that he has developed capacity correspondingly; but to use a modern phrase, the passenger engineer of today is "up against it."

There is a fundamental principle that applied to train movement in former days which seems to be too old-fashioned for the present. It is expressed as follows: "In case of doubt take the safe side and run no risk." It is a beautiful motto, much broader than it is long. It covers the whole field of train operation. It is, of course, still preserved, but is a tradition of the past rather than a live, governing factor in so-called "up-to-date railroading."

When you have retired from the service, Dan, you will see these things in a broader light than at present. Each safety appliance seems to be regarded as a license for greater risk, until today, with all our much boasted progress, we are making a record of injuries and fatalities on American railroads that is, to say the least, appalling; but, Dan, there will be a reaction some day. The pendulum has swung to the extreme in the direction of disregard for human life in railroad transportation; it must soon swing back again, if not to the other extreme, at least so far as to re-establish safety as the ruling factor in train movement. This may not be brought about by the force of moral sentiment, nor statutory regulation, but rather by a more potent force than either, which is "consistent economy," for the price of excessive speed, congested traffic, ill-conditioned and over-taxed power, together with a very general disregard for reasonable limitation as to hours of continuous service of trainmen is proving to be decidedly expensive.

My eldest daughter, Henrietta, who married Harry Dalton, is visiting us. She brought her whole family with her,

excepting Harry (who, by the way, is still on the M. K. & T.). It consists of one lone solitary boy. It amuses us to hear her say, "Children are such a care." Henrietta has some very decided opinions on how children should be brought up, and freely expresses them to "mother," by way of advice. Mother, who only raised seven of her own, besides having been a ministering angel to the sick and needy of the immediate neighborhood for about forty years, listens patiently, almost pityingly, while Henrietta airs her opinions, then smiles resignedly. Henrietta's boy is named Alfred, but she calls him "Pet." He is about twelve years old and is a real nice boy, but petted to death. She fixed him up this afternoon, and sat him on a chair until she dressed for the matinee. He sat there with all his frills, and bows and curls, as quiet as a doll. Mother looked at me eloquently over her glasses once or twice, while "Pet" waited for "mommer." By contrast he reminded me of another boy of about the same age who used to "farm it" down in Erie County, N. Y., about 55 years ago. He used to arise at daybreak, or a little before, plow or work in the harvest field, or chop wood or "do chores" until dark or a little later, then hike down to the general store and listen in open-mouthed wonder to tales of the railroad, and the doings of the "reckless, dare-devil engineers," as told by some of the natives, whose knowledge of the railroad was gained while accompanying shipments of stock or poultry once or twice a year to the eastern market.

As I compared the two boys, my sympathy went out to Henrietta's, for I know he has never heard the story of the test run of stock trains between the "Central" and the "Erie," when old Jack McCarthy pulled the throttle wide open at Buffalo, never shutting off until reaching Rochester, making a run that has never been equaled since; and how, when the fuel was giving out the crew passed dead hogs from the first stock car into the tender to replenish the fire—hogs that had been scared to death during the fearful run against the Erie, and how the speed be-

came so high the engine threw off all her rods and other machinery, drifting into Rochester with nothing but the boiler, the cylinder and wheels; and how old Jack's hair, a few hours before "as black as the raven's wing," became as "white as the driven snow," as a result of the fearful mental strain he suffered while making the run that beat all previous records. No, Henrietta's boy never heard that nor a whole lot of others of its kind with which the orators of Bottsville were wont to regale their rustic audiences in the good old days when simplicity was a blessing, and when the youthful mind was capable of being fired with ambition to emulate the great deeds of those heroes of the rail, regardless of consequences. Henrietta's child has missed a great deal, according to my way of thinking, in spite of the fact that she says, "He has everything that heart can wish for."

I believed those stories, as did every other rustic, and aided by vivid imagination they made a deep impression on me that was anything but harmful, and to this day I cherish the memory of those entertainments in the winter evenings at the general store of Doylestown.

I can see the audience now, composed of boys ranging in age from ten to sixty years, sitting around the big wood stove on convenient kegs or boxes, or with feet dangling from the counter, listen to "Dick" Parsons, the raconteur of the village, who had "traveled all over the world," telling wonderful tales of the railroad. I can see old John Brainard, the proprietor, dividing his attention between the orator of the evening and the occasional customer, with a scoop-full of sugar poised above the counter scales, hesitate a moment to give attention to the thrilling climax of the story, and then ask Samantha Brown for the seventh time how many pounds of sugar did she say she wanted.

Yes, Henrietta's boy has missed a great deal thus far in his young life, and as I thought of these things while watching him seated where his mother placed him, "so he wouldn't rumple his clothes or his hair," I could not help thinking that of

the two boys he was entitled to the most sympathy. I call your attention to these things, Dan, for I know that you can look back to similar experiences with as much pleasure as myself, and I am sure you regard the time when you became old enough to be admitted to membership in the club in the general store as one of the most interesting periods of your life.

We are enjoying the blessings of good health here, and hope this rambling letter may find yourself and Mrs. Watson and the rest of your family similarly blessed. As the days roll by, and they are rolling by like a train beyond control on a down grade, I look forward to the time, not far distant, when you will join me on the retired list, and I even dare to hope that some kind fate may bring our declining years together; for, Dan, there are no friends like the old friends. Write soon.

Your friend and Brother,

JASON KELLEY.

Experience of a Confederate Soldier.

(Continued from September JOURNAL.)

SPOONER, GA., Aug. 31, 1905.

EDITOR JOURNAL: Immediately after the great battle of July 22, 1864, the siege of Atlanta commenced and lasted about two weeks. During the siege there was no fighting to amount to anything between the two infantries, but some of the greatest artillery duels known to occur up to that time. I have lain in the trenches or breastworks and have had the earth torn from beneath me. We were in such close lines or quarters to each other that it was impossible to raise our heads above the top of the breastworks on either side. We were even close enough to hello to each other from the breastworks, and without the consent being given from headquarters, the boys on both sides agreed to cease firing on each other and we had a few days' armistice. The two armies looked like a lot of birds, both sitting on top of the breastworks joshing each other and hunting their clothes for intruders, commonly called graybacks.

We were comfortably quartered until the morning of the 31st of August, 41 years ago today, when to our dismay

the long roll began to beat; the sound was too well known to all of us, and the officers began to holla out, "Fall in, boys!" We were soon in ranks, and immediately after being organized a forced march began, we knew not where nor for what purpose until we arrived at Jonesborough, Ga., I thought clear away from the fighting line of Sherman, but as soon as we were in the little town which was all in a bluster, the women and children running and screaming in every direction, we learned that Sherman had made a flank move from Atlanta and his forces were within two miles of the little city, so we were formed into line of battle, and General Hardy's corps began to march out to meet our enemy. They were formed in line in one of the finest cornfields I ever saw. The corn was so high that neither side had much warning of the approaching danger until the roar of musketry began. It was a short fight, but destructive to both sides. I also fell in the fight, wounded on the top of my head with a fragment of shell and in the left hand with a ball from a musket, and when taken to the rear to the Division Hospital, I there saw several wounded ladies. Though they were not participants in the fight, they were so close to it that they were wounded by stray balls that were fired perhaps one and a-half miles from them. One of the ladies wounded then is now a resident of San Antonio, Texas. I met her there several years ago.

I was one of the disabled for a long time, and returned to the ranks only a short time before the surrender of General Lee, and shortly after that I commenced my career on a railroad.

I have thought and dreamed of the part I took in the war, and wondered how it is, and for what purpose I escaped death up to the present time. I passed through seventeen battles and came home, and I also passed through two disastrous wrecks and am still alive. My last wreck came near ending it all, but today I am enjoying the benefits of a beautiful home and farm.

My good old mother tells me it was her

prayers that brought me safely through and begs me to be a better boy. I was at a good old-fashioned Baptist general meeting yesterday, and heard the minister tell my feelings as though I had told him. I cast a glance at mother and she was gazing at me, and I almost felt condemned. There were two brothers and two sisters of mine at the meeting and all present seemed to enjoy the sweet benefits of a Christian spirit, and I, the oldest of the five, said wondering to myself, "Am I the scapegoat of the family, or am I deceived in myself?" I have the belief they have; I put more confidence, it seems to me, in the protecting hand of a just Ruler than they have any right to, because I have experienced more disasters and come through. Why should I not place more confidence than they, after passing through what I have? I know it is through His kind and loving hands I was spared—not for anything towards keeping His commands that I merited His protection, but it seems as though I had aroused His vengeance to such an extent as to have let me fall through with the rest of the trash. I believe in Him as strongly as the strongest, and put all my confidence in Him, but I have proof of it only in my word. I am not a member of the church, because I am not fit to be. I wish I were, but to join any church without feeling my worthiness I could not do, as I have conscientious scruples against such acts. Instead of bettering my condition, I fear I make matters worse, and before I commit myself I had better close this narrative.

With best wishes to the B. of L. E., I remain
 Yours fraternally,
 B. A. PICKREN.

The Twelve Hour Shift.

ST. LOUIS, MO., Aug. 17, 1905.

EDITOR JOURNAL: Education is the one thing foremost in the minds of the more thoughtful of our officials today; they are gradually growing to a realization that in order for men to be what is termed up-to-date, they should be schooled from time to time on not only the newest equipment that has been installed or con-

ditions which affect operation or maintenance of appliances which we are to handle, but those which we are handling from day to day, in order that we may gain a thorough knowledge and thereby know when we are getting the very best service from each of them at a minimum cost. Machines are worked very much on the same principle as men, although the machine is worth more in the end, for when it is worn out it can be disposed of for a little cash as junk, but when an engineman is worn out there isn't enough left of him to make good fertilizer.

We have here at the present time an official staff of men who desire, I believe, to be fair in all things toward the men. Our extra list has been growing very fast, due largely to modern engines and improved method of interlocking, I presume. Ours is as large and as well equipped a system as there is in existence. We have 325 trains on our card and our freights are not scheduled. Those of us who still hold regular jobs have all the work one's heart could desire. There is not much danger of running signals here because you find them clear all the way. We are not annoyed by getting blocked in. The spots we used to get have disappeared. Astronomers say that some of them have appeared on the sun. I work at night and, of course, do not get to see them.

In our general service building we have all that is modern in the way of toilet, shower bath, lockers and bunks for those who desire to use them. Our instruction room has been equipped at considerable expense; it contains all the modern appliances in sections, and the air equipment of an engine and ten cars complete, and for the benefit of those who do not know it, I will say that there are instructions there on Tuesday, Friday and Sunday mornings at 8 a. m. Our Road Foreman of Engineers, Mr. C. F. Smith, assisted by Bro. W. E. Jones, are the instructors. They do not pose as men who know it all, they are as willing to receive as to give, and if the desired information is not at hand they will get it for you, and you need have no fear of being criticised for what you do not know. It is an oppor-

tunity of which you should take advantage; in fact, you are getting something for nothing if you choose, but do not choose to accept in this light. Brothers, for it is a losing game. If you cannot repay it in the class-room you can show it on your engine. I have attended the instructions from time to time and I feel very much interested in them, but I have found that I cannot attend them and do myself and the company justice without laying off. We go to work here at 6 a. m. and 6 p. m. We work twelve hours. It is necessary to get up about 4 o'clock, and at the time instructions begin I have been up 16 hours, and with two hours for instructions, one hour to get to sleep in, equals 19 hours, leaving five hours for rest, and so it is from day to day; 15 or 16 hours each day is given to our work. I get home in the morning tired enough to kick the dog off the porch, say good morning to my wife and child, eat breakfast, if I can pick up the morning paper, see what the Japs and Russians are doing, try to hold a pleasant conversation with my wife for a few minutes, then pick up a book to read or study. I soon find that I am reading the same thing over and over; the next thing I am aware of is my wife shaking me and saying, "Get up and take off your clothes, dear, and go to bed right." Of course I remember all that I had read. The next is, "Get up, it's 4 o'clock." Does this ever happen to you? If not, you are either a skookum fellow or you are not in our class. You say you do not know what a skookum fellow is? Well, in the Indian language of the tribe to which the word belongs, it is the buck that can put his mouth to the ear of a moose and blow his horns off and not loosen the teeth; but he is here known, so our instructor says, as the fellow that can put his mouth to the train pipe hose and blow the rotary off its seat without injuring the pump governor.

When I look around among these men with whom I became associated some 17 or 18 years ago, I find that some have passed over to that great unknown, and are free from this world's cares forever. Others are broken down and cast aside,

while of those remaining some are only sprung and others are badly bent. Isn't it enough to set you thinking? Isn't it worthy of serious thought? We are selling our lives, destroying the happiness of our families, in order to earn money to buy it back again, which we can never do, for we will be too far advanced, not in years, but premature old age, to derive the benefit.

I know that away down in your heart you have a feeling which dictates to you and says in the heart language, "I would like to be a better educated man, and I believe I could raise myself to a higher standard, mentally, morally, physically and financially, if I did not have to work so many hours each day, even if I did not draw so much pay."

Perhaps you are not ready to answer this at the present time, but lay it away in your memory for a few years; conditions will change in your locality, then you will dig it up and say, "I guess Canfield was about right."

I, perhaps, would not have talked in this strain a few years ago, because conditions were more favorable. Our work was not of that high tension it is today. Our calling has assumed a new name; it is now skilled manual labor and it will never be lighter. It is not the fault of the corporation officials for whom we are working; they understand as well and better than we do that what I have said is for most part only common sense. They know that they would have a better class of men and receive better service, if the men did not choose to work the hours they do, and just as soon as we have decided to reduce the hours, just so soon will they co-operate with us in framing a schedule that will be satisfactory. They justly demand the best service possible, and we must justly demand the best conditions possible.

Fraternally yours,

W. G. CANFIELD, Div. 827.

Laugh Anyway.

PHILADELPHIA, Pa., Sept. 15, 1905.

EDITOR JOURNAL: Permit me in this letter to go at random, as I have no par-

ticular thought in view and cannot tell at the beginning where I may end; or it might be like the girl who decided to have mush and milk for tea, when lo and behold she spied her beau coming up the lane. Hastily she dumped the mush and substituted toast and tea, and as they sat down around the table, her little brother cried out: "My, oh my, how things have mended! Toast and tea, when mush and milk was intended." Somewhere, during the year, I have read in the JOURNAL where a professor advised that under all circumstances it was possible to have a smile or give a laugh, and an answer was written about it, but the more I think about it the more satisfied. I am that the professor was right. It matters not what may hit you, laugh or smile over it; it will do more good than worrying about it. I read this summer of a man who had a go with a rattlesnake, and the snake, to get away, ran up his pant leg and bit him. If that had been the professor, just imagine his hearty laugh at the snake's attempt to get away, and how sickly that smile of the professor would be when he found he was bit. Somewhere else I have read a letter about the doctors and they were handled without gloves, but bless your hearts, boys, we must have them. Oh, at times how we yearn for them, particularly if it is for the first born and heir to all you have. Mother says Patrick has been sick all night, and that's enough, you must have the doctor, and that poor man often has not been in bed half an hour, and he comes. Ah, boys, some may be of no account, but there should be a bond of sympathy between railroaders and good doctors, for their hours of labor, their time at home and their pleasures with their families are about on a par.

There is one thing in life that I have never been able to account for. In yard service very often we are compelled to cross over streets in the city limits, and so often you will see a gentleman and lady walking down said street; all at once he spies the train and makes a dash to beat it at the crossing, often at great risk to his life, and then stands there with his

mouth wide open, half scared to death, looking at the train go by, while on the other side stands his wife, cool, quiet and contented, and, of course, beautiful. It beats me and I am unable to explain it. I tell you, boys, with all your bluffing you don't get ahead of them much, and methinks they don't call us down half as hard as they often could. I knew a man, it is not necessary to name him, who used to delight in being out with the boys in the evening, and all that troubled him was that his wife was a light sleeper, and generally the curtain lecture would begin as soon as he would enter the front door. One night, to his surprise, he was disrobed, in bed and comfortably settled, and just congratulating himself how nice he had done it, when she said, "You may as well turn around, for you are drunk all the way through."

Somewhere in the JOURNAL I read a good letter from a Brother located in the South, who has been compelled to give up active service, and consequently is, by our laws, not permitted to hold any position in the Division, etc. Now, men and Brothers, is this right? Is it just to the man or to the B. of L. E.? Every Division is composed of so many members—about one out of ten attends the Division, does the work, etc., and through no fault of theirs old age comes, sickness or accident befalls them; even in that condition they have more interest in the Division than 75 per cent that belong, and they should be eligible to any office in the B. of L. E. that the members would elect them to. It may not be for long in many cases, but be liberal and charitable.

As I look ahead, I know not how soon I will be among that non-eligible class. I do not like to think about it. In closing let me tell you of how easy some things are done. I met an old railroader a few weeks ago who told me all about railroad-ing in our locality forty years ago, who knew all of the old fellows of that day. At last he invited me to go to the hotel and have dinner with him, which I did. As we smoked our cigars after a fine dinner, he begged me to excuse him a few moments and left. After half an hour

the waiter became uneasy, after one hour the landlord brought in a policeman, and I explained that my friend would be back; and if he did not, I would pay the bill, but I did not wish to insult him. At last I paid the bill, and as the policeman and I started out, the clerk said, "Here is a box that your friend left in my keeping." "Ah," said I, "he will be back." "Open the box," said the officer. I said, "I will have nothing to do with it," so they opened the box and, Brothers, what do you suppose we found in that box? Why, nothing. Fraternaly yours,

C. B. NIXON.

Lack of Courtesy.

CLIFTON, ARIZ., Aug. 9, 1905.

EDITOR JOURNAL: In reading the August JOURNAL, the article "Lack of Courtesy," by J. F. Williams, is, I regret to say, all too true. There is not the assistance rendered one to another as there should be between members of the B. of L. E. To prove your standing should indeed be enough, if you require assistance in getting over a road. If we cannot receive help from our own members, to whom are we to go or ask? I have never refused a worthy applicant. I have never asked much myself, but my experience has not been pleasant when I asked favors; one would say, "Cannot do anything for you," another would not even vouchsafe an answer, another shrugged his shoulders and said, "Your case is all right, but I do not know whether you are or not." To the Brothers I would say, let us render any assistance we can to a worthy Brother, for this is our duty as well as true brotherly love.

Fraternaly yours,

OLD TIMER.

A New Order of Things Wanted.

MEMPHIS, TENN., Sept. 4, 1905.

EDITOR JOURNAL: For some time past I have been carefully looking over results of several large and expensive bodies of the G. C. of A. on several of our large systems, and it appears that some new way must be found to accomplish better re-

sults. We do not, and can never use our whole strength for betterment in our old manner. Nowadays concerted action, concentrated efforts with as small exposed front as possible must be our policy. The next convention, which meets here in 1906, I hope will prove a start in the right direction. So much has been said against the General Chairmen's Association and so little for it, I feel I must admit that only through such efforts will we better ourselves, and it behooves our members to select such men for delegates to meet here in 1906 who will give us all a voice. Remember, Brothers, one out of thirty-five engineers reaches the passenger service, yet 8 per cent of our passenger men represent us at our conventions and 68 per cent on our committees. The real grief lies among our freight men. "The long hours and ten miles per hour" condition. Doubtless our passenger men do "all they can," but, Brothers, you have read of the struggle in the East—you have read in history that when a struggle has been fought by the "real masses," victory has always followed, and I want to see the masses of our craft enter such a struggle, and therefore we should start now to gather our forces.

Reading the JOURNAL, we find so much complaining of "long hours," to break up the present condition. The G. C. of A. on some systems will never accomplish anything. No! too large a "frontage" exposed, and I would like to offer my plans for the future.

At the last convention the G. C. E. recommended a few assistant organizers (if I remember right) to go about for better results. Now, what I believe we must have is a simpler manner in going before those giant combinations of railway systems. We have paid chairmen, and those, with the unpaid, should be organized, and the G. C. E. should be at the head. This body should meet twice a year, or at the call of the G. C. E. at Cleveland, Ohio. The whole of America, Canada and Mexico should be laid out in districts; each district should have one grand officer, or organizer. Each group of roads should be included that would

come under those districts. each road still to be under the local committees. The chairman of any road or roads, in meeting the management, should be headed by the district grand officer. In this manner we would get the concerted action and concentrated efforts, those engaged not exposed to any harm, nor would they feel endangered to press, and to press hard.

A district grand officer may be selected in the district from one of the chairmen. He need not be especially paid for the name. Each system that needs his services should pay his expenses when called. In this manner three or four men could do more than those large, expensive committees of adjustment that now go up and return with "we did all we could."

So, remember whom you send to the Memphis Convention in 1906. Shall it be one of the 85 or 65 per cent?

Yours fraternally,

SIDETRACK, Div. 23.

Remembrance of the Past.

MIDDLETOWN, N. Y., Sept. 8, 1905.

EDITOR JOURNAL: Reading over the September JOURNAL I came across a letter from Spencer, N. C., which is within two miles of my old home and birthplace, Salisbury, N. C., which very naturally recalls my happy childhood days, and I feel sure our Brothers will bear with me if I write a little of the dear old home and friends before I come to the point I wish to make, for we all have a little weakness for bygone days and the home of our childhood, and as we grow older we more fully realize and appreciate "Oft in the Stilly Night," as the first strain of thought brings back bright scenes of wooded landscapes, brooks and larger streams, green meadows, fields of corn, golden grain and white cotton, the sweet singing birds of the dear old Sunny South, the deep bay of the hound, the call of the quail, the chirp of the squirrel, and the bound of the hare from under your very feet, the crack of the gun, the coming home with all the game one could desire. My dear schoolmates—where are they all? Many entered into the great beyond, and others I know not where.

Just 25 years ago I left Rowan County, and two years later embarked upon a railroad life, on the old W. N. C. R. R., which is now a division of the Southern Railway. What changes have taken place since then! A few years ago I visited Salisbury; the shade trees along the streets were most all gone, along with other changes—just a few familiar faces, among whom I found Bro. Peter Rouche, of Div. 267, and how well it recalled the days when Henry, his youngest brother, and I, as boys, trapped and hunted together; but, ah! why go on, for thought after thought crowds upon my mind presenting scenes and instances, friend after friend, new and old, that have passed out of sight, until you almost feel "like one who treads a lonesome banquet hall deserted."

If we, who are less than 41, feel like this, what must it be with those who have even passed their four scores. Brothers, when we come in contact with them we should be very kind and considerate.

Back to my subject. I fully agree with our Brother from Div. 84, and emphasize *come out from behind the noms de plume*, unless it is a familiar one whom we all know. We want to and should know each other better, and there is no better way than through the JOURNAL.

Yes, the hours on switch engines are too long. Cut them down! I have run almost all kinds of runs, from switch engines to express trains, on grades over 200 feet per mile, and on roads where I have handled 76 cars in a train, and I will say the switch engine is the hardest and poorest paid of them all. I will admit the danger is less, but the manual labor and discomfort are far greater.

Yours fraternally,

LOCK C. ALDRICH.

Necessity for Economy, Etc.

FOND DU LAC, Wis., Sept. 5, 1905.

EDITOR JOURNAL: As convention time draws near I wish to once more bring before the Brotherhood the necessity of economy as well as a provision for a pro-

tective fund. Every delegate should go instructed to the convention to vote for a law providing that no delegate should be paid except for actual time in attendance at the convention, pleasure trips to be deducted and no time allowance, except for actual time required to go to and return from the convention. I don't believe we should pay anyone for pleasure trips and no Brother should expect it.

As to a protective fund, enough has been said; we should have a fund by all means. Further, I believe in a centrally located convention city with an office building of our own, whereby we could save the present expense of rentals and instead receive rent, which could be devoted to our charity fund. Further, I think it is high time that our representation of delegates should be reduced to some method of System representatives instead of from each Division, and that the G. I. D. should pay delegates by a per capita assessment. That, with centrally located convention city, would create no hardship on the far-off Divisions as at present. Talk this matter over in the Division room; I believe it is the popular idea. The money thus saved would soon create a nice sum on the right side of the ledger.

With best wishes for the future of the Brotherhood, I am

Fraternally yours,
J. F. FRENOE, Div. 872

Question of Division Representation.

NEW YORK, Aug. 31, 1905.

EDITOR JOURNAL: Occasionally I read an article in the JOURNAL on the subject of reduction of representatives from the Subordinate Divisions to the Grand International Convention, offering for the strength and support of the article that there are too many delegates composing the Grand Body, making it too large to be handled by the Grand Chief; that out of the entire convention there are only from twenty to fifty delegates who do the business; that the expense incurred from this large number of delegates is altogether too great on the Subdivisions and

that the convention is only an excursion party, etc.

Let us pause a moment and reflect: If the Subdivisions of the B. of L. E. have a disposition to reduce representation in the Biennial Convention, page 11, Section 25, of the Constitution, gives them the prerogative, and if the Division so elect the number of delegates could be reduced one-half, making 343 instead of 687, the number of Divisions indicated by the register. The question is, Will 343 Divisions out of 687 consent to this? To judge from the number of delegates sent to Los Angeles Convention one must conclude they would not, for I believe the members of each Division have an individual pride in having one of their members chosen delegate to represent them in convention. It is but natural they should be imbued with a desire for self-government in their home affairs, in the B. of L. E., on the system where they are employed.

Many Divisions represented means many delegates and many bright and useful men, from whose brain have emanated some of the resolutions adopted by the convention and incorporated in the Constitution and By-Laws for the government of Subdivisions. If the representation were reduced it would place the legislative power in the hands of a few to act for the entire membership, and I do not believe the result would be satisfactory. I have not yet read in any of the articles published in the JOURNAL on this subject anything that convinces me it would be wise to make a change from our present good, old way, where every Division in the B. of L. E. has a voice at the convention through its own delegate, leaving the responsibility of law-making equally balanced.

The delegate being chosen from the most enlightened members of the Division, qualified to make an intelligent representative to the convention, and being guided by this intellect how to conduct himself with due order and propriety, that our Brotherhood may profit thereby, make it a gentlemanly and orderly body to preside over, as well in the future as in the past.

While it may appear that a few delegates do the hard work in convention—I think some writer said fifty, which I consider an extravagant statement—it can be easily accounted for. They are usually the delegates who represent the Division that does not make a practice of sending a new delegate to every convention; instead they send the one who has been educated at the previous convention at the expense of the members of the Division he represented. Having the benefit of this experience in routine work at the convention he knows just the opportune time and place to get in his argument, for or against, a resolution. The fact of his regular attendance at the convention as a delegate from the Division of which he is a member, has its influence, in some instances with the delegate who is making his debut. So long as Divisions continue to change their experienced delegate for an inexperienced one, it is but reasonable to expect a small increase in expense to the convention and for the Division they represent for their education while at their first convention.

Prior to the adjournment of the convention the delegates select a city where the next biennial convention is to convene. The duty then devolves upon the Divisions located in that vicinity to select the committee of arrangements. After they are organized the responsibility rests with them to make all necessary arrangements for the holding of the convention and the reception of the delegates; comfortably locating them in hotels and endeavoring to make everything pleasant for their guests—the delegates and their families—during their stay in their home city. In their untiring work to furnish some pleasure and enjoyment for their Brothers and their families, it is true, they do arrange an excursion or two, and would it be any more than right to show appreciation of this thoughtfulness by complying gracefully and kindly with their wishes to a reasonable extent?

Transportation is furnished to the delegates and families to the convention and return in most cases by the railway and

steamship companies, and they in some instances give complimentary excursions to the delegates and families for their recreation. Out of courtesy this invitation could not very well be declined.

My mind leads me to the thought that we are perhaps a little bit jealous of our Brother who is fortunate enough to be chosen delegate to the convention. "Speech is the great organ which reveals to the mind the first visible form that it gives; as is the thought so is the speech."

Yours fraternally,
J. PUFFENBERGER, 292.

Number of Delegates—Pay Off Insurance.

COLUMBUS, O., Sept. 6, 1905.

EDITOR JOURNAL: Another biennial session of the Grand Division of the B. of L. E. will be in evidence at no great distant future, and to the mind of the writer no more important subject should come before that body than that of representation. It seems very apparent that the representation to the Grand Body as it now stands is entirely too large, in fact, unwieldy. At the Los Angeles Convention, I am informed, the delegation consisted of some 500 members—just 400 too many. Let us for a moment consider the expense of sending a delegate to the convention, and many Divisions send a delegate that can very illy afford the expense. Consisting of such a large representation, much time is wasted on very trivial subjects; consequently, the time occupied in getting through the business passes all reasonable bounds. Five weeks, I understand, was the amount of time consumed at the last convention. Now, putting the actual expenses of the delegates at the modest sum of \$5 per capita per day, and they are not having a very swell time at that, you will find that it totals up the very snug sum of \$87,500, and probably \$100,000 would be nearer the actual amount. That is the money side of it, and the figures are startling enough to set us thinking. Then there is another side, which is the main cause of the cost; anybody who has attended a convention, either fraternal, political, or religious,

composed of a large number of delegates, can very easily figure out the amount of time it requires to get a question decided. Hours are frittered away on motions before a large body which would not require minutes in a smaller one.

At no time in his official career does the writer envy the Grand Chief Engineer. Think of presiding over a delegation of 500, and giving to each a respectful hearing, for they are all anxious to "catch the speaker's eye" at some time or other. If it were a body of 100 his task would be comparatively easy; and to this number, or as near it as circumstances will admit of, should the representation be reduced. A body of 100 would not consume one-fourth the time used under existing conditions.

It might be asked how this representation would be chosen so that all Divisions may have a voice in the proceedings. The railway companies have solved the question—they have kept on buying up the small lines and consolidating them into "systems." The systems are less than 100, but whatever their number may be, I venture the assertion that two-thirds of the membership of the Brotherhood are employed in the systems.

Now, within the Brotherhood there is an inner body known as the Adjustment Committee; many of the bodies have salaried chairmen, but whether salaried or not, each committee has a chairman selected for his ability in diplomacy, and a personal acquaintance with many of them leads me to believe that the members have made in each case a wise selection. Now, if these Brothers are entrusted to take your grievances to the railway officials, it is my belief that they would be the proper parties to make your laws, and by virtue of their office, be your delegate to the Grand Body. This, of course, is only a suggestion. I hope that it will be the means of bringing about a discussion through the columns of the JOURNAL and set the entire membership at least to thinking of the lot of money that could be saved and so well employed for other purposes, paying off some of the old reliable Brothers' insur-

ance, for instance, that is now used up for the purpose of sending a delegate to the convention when there is no real necessity for the expenditure; at least there wouldn't be, nor won't be, when the good time comes when the conventions of the Grand Body will be a business organization instead of the vast number of which it is now composed.

I might say before I close that the writer has no axe to grind, no ambitions to satisfy in the line of office, for the very excellent reason that he is not eligible to the most obscure office in a subordinate Division, as he belongs to that class of membership entitled "Honorary." It is written for the good of the order, which means the welfare of the entire membership.

I could advance many other logical arguments for the reducing of the delegation to the Grand Division. Criticise what I have said, my Brothers, to the fullest extent. I don't expect every Brother to agree with me that the membership of the Grand Body is too big—much too big. Fraternally yours,

"GOOD OF THE ORDER."

Make the F. A. E. Do the Collecting.

MART, TEXAS, AUG. 15, 1905.

EDITOR JOURNAL: I see many blows aimed at our present insurance system, and I believe it is only natural that men should strike when their pocketbook is attacked.

Now, the main object is to cheapen the policies without affecting the quality, which means, leave the conditions under which a policy is to be made payable, but make it cost less. I do not believe that we can radically change the insurance laws for some time to come, but there are some small changes that can be made, and give more money to pay policies. Why not stop paying Insurance Secretaries of Divisions for collecting the insurance assessments, and let the F. A. E. do this with his other work? Each Division pays its F. A. E., and the members would have only one man to look up when they wanted to pay their dues and assessments.

This would do away with some members letting their policies go delinquent, as they forget that they have to pay two collectors, and this 8 per cent paid to collect would be that much saved, as I do not think any F. A. E. could expect to get any addition to his present pay if he collected the insurance. Also why not abolish the \$750.00 policy altogether and make it compulsory for all members, not only newly initiated ones, but all old ones who have no policies and can pass the medical examination, to take not \$750.00, as is the case in many instances, but \$3,000.00; that is small enough and would be much cheaper if all had to take it than it is now.

Many of our members take the least they can, and have an accident policy as large as they can get, because the B. of L. E. policy costs too much. They only take a policy to keep in the society.

Much is being said about paying off the old policies, and to a certain limit I am in sympathy with that move, but these same old members have been letting our insurance slide along in the old rut and making no provisions for the sure to come rainy day, when they would need some of the provision.

Should every engineer in America who is eligible and would join the B. of L. E. take \$3,000.00 insurance, the policy would cost about \$2.50 per month—not much more—where now it costs from \$4.00 to \$6.00, and each Division could make an assessment of \$40.00 per year which would pay Division dues and insurance assessments. This paid \$10.00 per quarter in advance would do away with much trouble and the many cases of expelled for forfeiting insurance would be stopped.

This topic is one of vital importance to be settled at our coming convention, and instead of hammering away at less delegates and trying to put the legislative power in fewer hands, let each Division try and figure out what they think about the insurance, and so instruct their delegate, and if possible let us have a cheaper insurance; then when our Grand Chief tries again to put us on a financial footing above mere poverty and a hand-to-mouth existence, we may, like our sister organiza-

tions, have a capital to go on. It is a matter of ridicule that the B. of L. E., the oldest labor organization in existence in America, should be without a surplus, when with our membership it should have at least \$750,000 which, judiciously placed at interest, would almost pay our grand dues.

I would like to see the old members wake up and get themselves out of that old track they started in so many years ago, and try to let the enterprise of some of the young men take hold and get our financial standing both in insurance and Division matters where it should be.

Our Grand Chief may have been disgusted, but not discouraged, with the result of his effort to accumulate an emergency fund, so let us all try to assist him so that he will have the incentive to try again.

Yours fraternally,

W. E. RANDOLPH, F. A. E., Div. 630.

Why Employees' Transportation Rates Should be Less.

EL PASO, TEXAS, Aug. 17, 1905.

EDITOR JOURNAL: Realizing that I have passed over the summit, and am well advanced on the down grade of my railway life, when you Brothers gain my station then you will realize that your once iron nerve and great will power is gradually giving away, and will regret to find yourself becoming tired, looking wan from having a hard trip that a few years ago you would think nothing of. At my station of thirty-two years of handling the throttle, you will find yourself losing many and many a trip, causing the extra man to keep watch for your arrival, he knowing so well your staying qualities are not what they used to be.

Now more expensive problems come, and inform you that this old body has got to go away for repairs and recreation to some mineral water health resort, to put you where you hope to be able to drive your iron steed through the winter.

Our card for years in the past has safely taken us to and from such health resorts, which you know is quite an item when in feeble health, with great loss of time and heavy expenses confronting you. Now

present your card as in the past, and you are asked, "Are you looking for work?" "No, I am looking for health so that I can work again; have been on the sick-list most of the time for months in the past." Reply comes, "Am sorry, but you will have to get rates, which is a cent a mile." Thus the old-timer totters off, wondering what he will do as finance is low with him, having been off the road so long trying to regain his health. He has been a sober, industrious, careful man at the throttle, earning many a dollar for the several companies during his long experience, tasking his nerve and good judgment, ever bringing his train into terminal O.K., but now, alas, the old-timer is sidetracked, as he cannot ride on his card when seeking to regain his health from nature's remedies—mineral waters—thus to avoid the poison drugs the doctors would prescribe.

I wish to ask for cut rates from those railway managers who claim that employees' rates were put on to comply with the Interstate Commerce law. Very well, if so, one-fourth cent a mile to old employees would accomplish the same, as far as the law is concerned. Having such rates would enable these old broken-downs to do much in regaining their place back in the cab. When a man is young and able to stay with his engine every trip he, of course, would not notice a cent a mile much, drawing a large check every month, but listen: Such is not the case with those old silvery heads with bodily ailments coming on. Some official will say, "Old timer, you ought to have had plenty of money saved up by this time." "Yes, Mr. Manager, if my make-up had been for speculation and making money, I would not have been driving an engine for you, and again, you would not keep me in your employ if you learned that I attempted any other business outside of your services required of me."

Looking out for the company's engine in his charge, and rendering good service when called to go over the road, has ever been the greatest aim and ambition of that old engineer, who never allowed his mind to dwell on hoarding or accumulating this world's goods.

Brothers, I think it is time something is done to lessen the expense of these old, worthy, tried and true employees, who

are compelled to go away from home in quest of health, and we know there are so many who could avail themselves of one-fourth cent a mile rate, when from the long previous ill-health, the cent a mile would come hard for them, with the continual heavy expenses incurred by sickness. We call to mind that now all over the United States many rates to all parts are put on that are less than a cent a mile for everybody that wishes to go. Now, I would like to hear from others along this line who can wield a more mighty pen than I, and perhaps if taken up with the railway managers, their hearts may open in sympathy for their old employees who are earnestly struggling to hold on to life's duties a little longer, yet every year they find their staying qualities and vim of youth gradually giving away.

E. L., Div. 28.

Paid-up Policies, Pension Fund.

CAMDEN, N. J., Aug. 8, 1905.

EDITOR JOURNAL: The question of issuing paid-up policies or maturing the policies after so many years' continuous membership has been discussed in many phases through the columns of the JOURNAL, and are still hammering at the subject, with the hope that the continual dropping of the water will wear away the stones. I really believe there is an earnest desire on the part of a large majority of our Brothers to do something for our old and decrepit Brothers, worn out with years of duty on the rail, wounded and scarred with battles for this grand old Brotherhood, and in times when to admit you were a member you would lose your job. I don't think there is any record of how many lost their jobs by simply admitting they were members, and stood up and fought for the principles, and they are just the same old principles that you and I are enjoying today. Why, there are over two-thirds of you that cannot be coaxed to visit your Division room more than once or twice in the year. It is all smooth sailing now. Don't forget that it has not always been so.

I heard Brother Everett, T. G. E., make a statement the other day at Lebanon, Pa., that he could name a few—I think it was five—that kept the B. of L. E. alive on the Pennsylvania Railroad, east of Pittsburgh. Today we have five thousand on the P. R. R. systems. Then how about the R.

and R., and lots of others the same way?

I feel sure that when you meet one of those white-haired old Brothers, your hat goes off, and your heart goes out to him with profound respect, and if in the little conversation you have, he says, "Brother Tom, my little pile has run out. I can't work any more. I don't know what I am going to do," and big tear-drops start down his cheeks, as he makes this humiliating confession, words fail to express adequately my feelings, and it is not necessary, if you have but experienced just one of these cases I have pictured in feeble words to you, and may be there's a dear old wife wearing out with anxiety; what are we going to do?

Naturally, he says, "If I could have some of my insurance—I have paid every assessment for thirty or thirty-five years, and it sums up quite a bit of money—it would see me through, so that I would feel I was under no obligations for charitable bequests."

Unfortunately, there were no provisions in our insurance to meet these conditions, and as we are incorporated, I don't think the state law would allow us to do otherwise than what our charter and policies call for, no matter how much we might be so disposed. This fact should not deter us from other lines of thought and action. The aged, and the incurable helpless Brothers—what a misfortune to be crippled or stricken with some disease that renders you hopelessly helpless the rest of your life. What a terrible anxiety for this unfortunate Brother, and what a burden for his family, and as yet no provisions to meet these conditions. "Yes," I imagine that I hear some of you saying, "if a man gets old, he ought to have enough put by to take care of him in old age." This is very true, but I'll wager that there are thousands of you today if you had followed your own inclinations when you were young, what you would have saved for old age would not keep the wolf from the door very long. The influence of some good woman, mother, wife or sister, is all that saved your little pile, and it is that same influence that takes you to church every Sunday, and it is that same influence that has made men of you that this grand old Brotherhood is proud of. What a man saves after he gets 43 or 50 years of age from daily wages does not accumulate a very big pile.

We have made provisions for death, accident, sickness, funeral benefits, etc. Our Grand Chiefs, past and present, have repeatedly told us, "Take care of your money—invest it judiciously, and you will have means to take care of you in your old age." True. Now, the very best investment anyone of us ever made

has been right in this grand old Brotherhood. Nothing has ever paid such honest dividends to its shareholders. Many times our shareholders have realized 1000 per cent or more on their investments; the Standard Oil Company stock sinks into insignificance compared with it. That's all right to have some of just as a fier or side issue—B. of L. E. stock is all real—always some to be obtained where desirable parties make proper application to become stockholders, and all is guaranteed not to be watered and to be just exactly what it is represented to be. If some of the stockholders would be willing to be watered, that is, cut the liquor out, the stockholder would undoubtedly be improved very much, but the stock is just the same.

How about a pension fund in our Brotherhood, independent of the insurance and every Brother get in line? Did you ever realize what \$2.00 per month would do in this direction? Let me have your attention for a few moments. Get out your pencil and do a little figuring for yourself. I will try and give you an idea what \$2.00 will do that is approximate, but near enough to facts to make your eyes bulge. 50,000 members at \$2.00 per month equals \$100,000; in one year \$1,200,000; in ten years just \$12,000,000 to your credit and nothing said yet about interest. If you just used the interest for pensions, \$1,200,000 after the first year would net \$60,000 at 5 per cent; after the second year you would have \$120,000; after the third year \$180,000, and so on until the interest on the \$12,000,000 was coming in when it would net \$600,000 a year. After a Brother has paid in ten years, \$24 per year amounts to \$240, then let him only pay \$1 per month, \$12 per year. If he paid the \$1 per month for 30 years, it amounts to \$360—\$360 and \$240 equals \$600—the total amount you could possibly pay in in forty years.

As I showed before, the interest on \$12,000,000 at 5 per cent would be \$600,000. Now, 50,000 Brothers at \$1 per month equals \$600,000 per year, total \$1,200,000. This would just pay 2,000 pensions at \$50 per month for one year. This is estimating 4 per cent on the pension.

Now, just look, he has invested just \$600 in 40 years, and in one year on the pension he would receive \$600; in five years he would receive \$3,000 for his investment. Just a word now. Don't you think it is worth trying?

Another plan, if you would be willing to pay \$2 per month continually without accumulating any fund, 50,000 Brothers could put 2,000 on the pension at once at \$50 per month. In this way it would cost each Brother \$960, if he paid in 40 years,

and he would draw out in 19 months all he had paid in. Further, to bring you in \$600 a year you will have to lay aside \$25 a month for 40 years to accumulate \$12,000, not counting accumulating interest. If you can do this, and see your way clear to save \$25 per month, just you salt \$23 away every month in any way you think best, and the other \$2 in a pension fund in the Brotherhood, and I will guarantee you there won't be anybody around with subscription paper to take care of you in your old age, for you will have \$11,040 in the bank against \$12,000 you should have had, and the other \$2 per month you have paid into the pension has also been working. The very first month he helped 2,000 of our old Brothers to enjoy something of comfort and luxury in old age; in one year that \$2 of yours has assisted in the same benevolent act 24,000 times, and in 40 years that same old \$2 would have assisted in that same act 960,000 times; and that same \$2 per month for 40 years had been one of 50,000 to circulate \$48,000,000 of joy to our old and helpless.

Brothers, many of them that have made it possible for us to do these things through the instrumentality of our grand old Brotherhood throwing in the luxury and comforts for our families. Better pay, better conditions, protection, an insurance where about 96 per cent of moneys collected goes back to the policyholders, as against 8 or 9 per cent of the old line insurance company moneys paid in by the policyholders ever goes back to them. Think of it! We are better men—have better respect from our employers and the community—and above all, the world is better off for our being in it.

I hope I have not tired you, but this is good food for thought, and not necessarily for the B. of L. E. alone. Other noted organizations could invest a few thinks on this subject also; even with the \$2 per month added, it doesn't take us much above the old line insurance rates for the benefits we receive for accidents and death.

One more word, don't read this and cast it aside, but do a little figuring for yourself. I have tried to show you what it is possible for \$2 a month to perform—get an opinion of your own, and have the courage to go to your Division meetings and back up your convictions. Take that good old mother, wife, or sister that has been your guardian angel into your confidence, talk to her about it. The subject is worthy of every consideration, and now is the time for action on your part, if you would effect results at your convention which meets next May.

Yours fraternally,

THOS. H. JOINER, Div. 22.

Helpfulness of the Y. M. C. A.

PHILADELPHIA, PA., July 30, 1905.

EDITOR JOURNAL: In the June number we find an article in relation to the Railroad Y. M. C. A., and with your permission I would like to devote this letter to that association. I heard in a meeting some time ago a good Brother telling of the great good the B. of L. E. had accomplished in days gone by in certain sections of the country, and he gave the organization great credit for the good work done, but it remained, he said, for the Y. M. C. A. to come along and bring the work to perfection. So, if you read between the lines, these two associations, in his opinion, are one to a certain extent right, but the other, no doubt, under all conditions is right. Now, I belong to both; I have always been interested in both, but I find so much opposition to both from certain people that naturally I wonder why.

To elevate our standing in society as men is the object of the B. of L. E. Is there anything wrong or criminal in that? The Y. M. C. A. says her principles are body, spirit. Is there anything wrong or criminal in that? To do for the other fellow, to assist him, to instruct him, to advise him, to encourage him, to comfort him. Are not all these worthy of consideration on the part of all fair-minded men? Then why this contempt; these objections on the part of so many against the principles of the Y. M. C. A.? Is it through ignorance or prejudice that so much opposition is shown and so often by those to whom you would look for a better opinion; those who in childhood were taught at their mother's knee to lisp the evening prayer, who in young manhood were ever surrounded with Christian influence, who have grown hard and set in their ways against what has all through life been their guiding friend—body, spirit. Some days they get all the bodily exercise they need and more than they want upon the road. No doubt this is true, but drop self and think of the other fellow who is housed up for hours, and to bring it nearer home, think of that boy of yours. Would you not rather have him building up under Christian influences a good, strong, healthy body, than roaming the streets to do as he pleases, and in so many instances causing you to wonder in sadness where your wandering boy is tonight? Personally, if I were the whole Y. M. C. A., I would not bother about men that are over 40 years of age, hide-bound in their opinions and prejudices. But, oh! men, I would plead with you to give me your boys, who must come under

strict discipline in the association to belong to it, subject to your will to know when they are there and when they are not, under such rules and regulations as to education, games, pleasures, exercises; under medical examinations to permit not too much of anything that will injure, but allow only what will build up their bodies and make manly men of your boys.

It has been my privilege to belong to the P. R. R. Y. M. C. A., and I have seen so many boys grow up and have wandered away, some to railroad positions and some to others, and the latter, with regret, have been compelled to sever their connections on account of not working for the company. Many are living good and useful lives and are in their lives a blessing to those they come in contact with, and among the older men I have seen so many changes, so much happiness brought into homes, so much joy brought to those who have departed this life, and all this brought about through the influence of the Y. M. C. A., that I think every man who works for our company should be a member of the R. R. Y. M. C. A. Give us at least your financial assistance, if you cannot do any more, and in helping us you will help yourself.

To deviate a little I feel sorry for the engineer that does not belong to the B. of L. E. Some men advance the same reason for not belonging to it that they advance for not belonging to the Y. M. C. A. Still, I would have them open their eyes wide and look ahead into the future. The associations are advancing, are increasing. Does it denote anything—will it mean anything to you? For years railroads have advanced so rapidly that officials and men have been growing further apart, and now, after these years, we find officials at the heads of our associations and we meet in the rooms of the Y. M. C. A. as friends and all employees of the one road, and all working as we best know how, with the help of God, for the good of the other fellow.

Do you believe in this? If so, come with us. Don't whine if everything doesn't come your way. Be cheerful under adverse circumstances. Try again is a good motto. You will be none the less a man to be under Christian influence. These associations are not churches; you are not compelled to do anything, only keep your eyes and ears open, and if you do this and be true to yourself, I am satisfied that before long you will conclude that there are more good and more well-intentioned people in the world than you ever dreamed of.

Fraternally yours,

C. B. NIXON.

Economic Conditions for All.

LITTLE ROCK, ARK., Sept. 3, 1905.

EDITOR JOURNAL: The one economic condition that should be striven for in all countries, regardless of their form of government, is a more equitable distribution of wealth. This should be the paramount question for all good citizens, and if the laws and customs are such that this cannot be attained, then the laws and customs should be changed, with this end in view. The results of a more equitable system in the distribution of wealth would prevent the accumulation of such enormous fortunes as we see in this and other countries and, on the other hand, make it unnecessary that undeserved poverty should exist, thus making the very rich feel more secure in their holdings, and those not having so much of this world's goods more contented, happy and patriotic. There are numerous reasons given for the poverty existing, some of which are intemperance and foreign immigration, but to show that this view is unfounded we will point to the inhabitants of India who are very temperate, using no liquor, it being contrary to their religion, they being religious fanatics, and it has been said that more of them have died of starvation in the past year than the number killed during the same time on both sides in the Russ-Japanese war now being waged; and as to foreign immigration, it is well known that there are many countries of Europe that have no foreign immigration coming in their borders, and where there is more poverty and lower wages than exist in this country. If the above be true, then we must look to some other cause for the existence of poverty.

This rapid accumulation of wealth in this country into a few hands has been going on for the past forty years, and to protect themselves against the arrogance and cupidity of those forming this class, and for the further purpose of combating the "iron law of wages" and thus, in a measure, endeavoring to secure a wage that they could decently live on and continue to produce, the wage-earners of the country have banded themselves together in what are known as trades unions. Practically the origin of the trades union movement in the United States commenced with the organization of the Brotherhood of Locomotive Engineers in 1863, while the country was engaged in a great civil war. It is true there were some labor organizations before that period, notably the shipbuilders, but they never amounted to very much as a factor in the labor problem.

Prior to the Civil War there seemed to

be no reason for the existence of organized labor. It is true that around New York and a few other seaports there were always more or less idle laborers, but in the country at large the demand was always in advance of the supply. Before the Civil War there were large areas of virgin soil that were open to the settler, upon which he could make a good living, rent free, consequently he would not work for another man for less wages than he could make working for himself. In consequence of this the labor markets never became glutted. It is true that wages at that day, measured in the number of dollars, were not as high as they are now, but the disparity between the highest and lowest wages then were not as great as they are now, and while some of the well to do did not enjoy all the luxuries then that are now enjoyed by the prosperous mechanic, no one who would work need go hungry.

It is a well-known fact that in the past the careers of nations have been somewhat similar to that of the life of man, that is, that they have had their youth, manhood and old age, their old age and decay coming on as wealth continued to center in a few hands, and the wealthy thereby being enabled and encouraged to live idle and luxurious lives; this seems to be a law of nature, like causes producing like effects.

What is sometimes spoken of in a sneering way as the labor question is something of much greater import than many suppose. It is the question of civilization itself, or in other words, upon its proper solution depends whether our present civilization will advance or recede—whether we go back into barbarism, or continue to advance to a higher and nobler state of society.

Now, the writer in his allegiance and loyalty to organized labor believes that he stands well in the forefront, having been a member most of the time since 1873 and, considering all the great advantages he has enjoyed, he would be an ingrate to belittle organized labor, and if it had never done any other good, its educational effects in uplifting its members socially, morally and otherwise, would have paid for its outlay, not taking into consideration the increase in wages. There is no doubt but that railroad train labor, from various causes, has been benefited in a larger degree by organization than some of the other trades, and if supply and demand controlled in the labor market, railroad men would be working today for 60 per cent of their present wages.

In speaking of the labor question, however, we are too prone to think only of the one million or more railroad men, and

leave out of account the other eight or nine million, but our welfare and happiness is interwoven with theirs in such a way that we can't avoid, and this is what is sometimes called interdependence. The first time that the writer ever gave the subject of interdependence any serious thought was after listening to an address by Mr. E. T. Jeffries, before the Chicago Convention of the B. of L. E., in 1887. Of course, it did not take a very broad scope, referring only to the employees of a railroad, yet the principle was of universal application and, by the way, I never enjoyed an address more than I did this one, though later at Atlanta, Ga., in 1893, ex-Governor Northern made a very humorous and witty address on the same subject, referring to the relations existing between each of the train crew, as well as the telegraph operator and the dispatcher, showing as a result that the engineer was not the whole cheese on the train.

Thus far I have written merely as an introduction of what I wish to draw attention to and emphasize and that is, "Does any intelligent representative of the interest of labor have no higher ideals for the advancement of the material interest of the toilers of the world than our present organization?" and in thus making the inquiry I am not thinking of Marx or Ingles or their solution of the labor problem, for the simple reason that I believe that if all machinery were destroyed tomorrow, except the hammer and chisel, labor if given free access to the storehouse of nature, could reproduce it in a few years.

Primarily, there are but two factors in the production of wealth—these are labor applied to land, and in this sense land includes everything in its original state in nature, except man. Consequently, if we can give labor free access to land, not only farming land and mining rights, but valuable city land as well, there is no limit to the production of wealth, provided we do not tax the products of labor. This can be avoided by taxing only land values irrespective of improvements, and which would secure to the worker the full product of his labor, and when he gets this there is nothing more to get.

In the feudal days of England the land belonged to the crown and paid the expense of war, the poor rates, and church dues. With the advent of the industrial system this burden, by means of the excise and other indirect systems of taxation, was shifted to the shoulders of labor, and which were introduced in this country.

Herbert Spencer calls attention to this in his Social Statistics (published in 1850) in Chapter IX, entitled, "The Right of

the People to the Use of the Earth." Spencer says, "Equity, therefore, does not permit property in land. For, if one portion of the earth's surface may justly become the possession of an individual, and may be held by him and for his sole use and benefit, as a thing to which he has an exclusive right, then other portions of the earth's surface may be so held, and, eventually, the whole of the earth's surface may be so held, and our planet may thus lapse altogether in private hands."

As a slight illustration of the above, it has been frequently stated in the public press recently that Greater New York with more than three million population is owned by less than 19,000 families, thus making the former, tenants or rent payers, though there is nothing wrong about rent, it is as natural as gravitation; but where the injustice comes in is that at present labor pays both rent and taxes. Under the Single Tax system labor would be exempt from a tax on what it produces, which would mean a couple of billion dollars yearly left in the pockets of the people.

If the appropriation of ground rents by the government produced more revenue than was needed for purely government expenses, the surplus could be disposed of in the general interest of the people, such as old age pensions, free light, water, and street car transportation. The latter could be run as an elevator in an office building is now run; and in addition we could have parks, enlivened by music, children's playgrounds, public wash-houses and bath-houses, standing rewards for scientific inventions that would benefit mankind, etc.

Under these conditions labor and capital would be lined up shoulder to shoulder, and if they fought anyone, it would be attempted monopoly. Under this system of taxation the people would get the meat and monopoly be left the shell. There need be no revolution — every land owner could still possess his title deeds and call the land his own. All that would be necessary to put it into effect would be to abolish one tax after another, until there was but a single tax on land values left.

Perhaps a great many who read this article may think that it is wrong in equity, but the principles have received the indorsement of many illustrious men.

This simple tax reform would not only relieve the congested centers of labor, but make it possible to abolish the crowded tenements and tall buildings in the large cities, making slums, with their population, a thing of the past.

Fraternally yours,
ROBERT HERIOT.

Communications for publication must be written on one side of the paper. Noms de plume are always permissible, but to receive consideration must be signed by the full name and address of the author, and addressed to the Editress, Mrs. M. E. CASSELL, 922 Dennison Av., Columbus, Ohio, not later than the 8th of the month.

The Editress reserves the right to revise, reject or use matter sent in, governed entirely on its merits.

Autumn Days.

Autumn is here, treading so swiftly on the heels of summer that we have scarcely noted where the two seasons touched. But the leaves are beginning to fall in the parks in the city and from the trees on the farms and in the woods out in the country, where Nature is always at her best.

The leaves are falling slowly and silently, but still they are falling. October is here in all her majesty and beauty of coloring. The foliage will soon become "a royal crown," decking Nature with mingled hues of green and gold and red.

If the pearl of the year is June, with its fresh, gracious loveliness, then October is the ruby, a crystallization, royal, even in the rough. There is no day when October is not glorious, although it is variable.

The birds are getting ready to fly to warmer climes, where they will remain during the snows of heavy winter.

The flowers, like the birds, are also

leaving us. Few flowers besides the asters and the goldenrod linger along the roadside with some of the more lowly members of the sunflower family.

To the general eye, Nature's gay children have departed, and winter seems waiting around the corner to close the door of the year, but the true lover of flowers knows where he can still find the second blossoms that spring from the stem of the mowed-down goldenrod, ox-eyed daisies, black-eyed Susans and a score of others that those who delight in even the lowliest wildflowers know well.

The brightness of their smile will not be gone from glade and glen until the cold frost comes.

The year is fast fleeing before us, and all those who, last New Year's Day, made good resolutions which they have not as yet found time to keep, should seize the few remaining months to accomplish what they promised.

Let not January come again and find us unable to look back and say that the year that has gone has shown progress and improvement, but rather let us be able to remember in the days to come that this was the year in which we accomplished some great thing of which we may well be proud.

A Visit to Buffalo.

Through the kindness of our Grand Treasurer, I was privileged to attend the inspection of the Buffalo Divisions conducted by our Grand President. On the first day of our visit, we were the guests of Div. 79, of which our Grand Treasurer is President. The work was beautifully done, and the order was excellent, and the President was highly complimented by Sister Murdock on the success of her work in bringing her Division up to the high standard which they have attained. At the close of the morning session the Sisters were all invited to a restaurant where dinner had been specially prepared, and was fully enjoyed by all who were privileged to attend. In the evening we were given a trolley ride around the city and out to Athletic Park. On Tuesday morning, by courtesy of Sister

Watkins, we were given a carriage drive around the city, going first to Ft. Porter, where we had the pleasure of viewing the soldiers drilling, which is a most inspiring sight; going from there to Delaware Park, passing the magnificent Allbright Art Gallery, returning to lunch at Hengerer's Café, with Sister Bailey.

On the 11th, we were the guests of Div. 280, Sister Murdock again conducting the inspection. The work was very well done, indeed, the responses to all the questions being prompt and correct, showing a very good knowledge of the by-laws. Sister Murdock expressed her appreciation of the splendid way in which all the work was done, and I feel sure when the report appears in the JOURNAL, Div. 280 will stand well to the front. At the close of the meeting we were entertained at dinner by Sister Hotchkiss, President of 280, at Castle Inn.

There is a good deal of history connected with this grand old building, it being the home of the late President Fillmore. We were shown through the splendid drawing-rooms, also the bedchamber in which President Fillmore died, which is still adorned with some of the quaint old walnut furniture, conspicuous among them being a walnut bedstead of very antique appearance, and a very handsome bookcase. In the evening a reception was held in the home of Sister Hotchkiss, where we were able to renew old acquaintances and make new ones which we trust will be lasting. After doing justice to all the good things prepared, we said good-night and repaired to our homes and slept the sleep of the weary, to be ready for another day of enjoyment.

On the 12th we were the guests of Div. 232, who treated us to another carriage drive. And as the Elks' convention was being held in the city we drove up town to view the decorations which had been erected in their honor. As this was the day of the great procession we were favored with a very good view, considering the immense crowd. Elks there were from every State in the Union. And the Stars and Stripes floated bravely in the breeze as the bands played popular music.

Each State was represented by some symbol. There were the demure little Quaker maidens (with never a tuck in their dress) and the laundry men from Troy. It would take too long to tell all the wonders of that long procession, and time went all too quickly. As we were driven through the beautiful avenues of trees and down Delaware avenue, past the residence of J. G. Milburn, where President McKinley died, and a little farther on the home of Mr. Wilcox, where President Roosevelt took the oath of office. And just opposite this street and almost directly in front of Castle Inn, the city is erecting a fitting monument to that grand man whose memory is beloved and honored by all men, President McKinley. We were then driven to Hotel Broezel, where we were entertained at dinner by the President of 232. We again assembled in session and were delighted with the work done by these Sisters. At the close of this session we were all invited to the home of Sister Watkins, where a most elaborate dinner was prepared for all the Sisters. It is needless to say we most heartily enjoyed all the good things provided by the ladies.

And as the evening wore on with social intercourse and reminiscences of other days, we felt that our G. I. A. is indeed a noble order, and I for one am proud to belong to such a grand organization. As all things must end sometime we at last said good-by to our friends and to our Grand President who was to leave very early the next morning.

Sister Editress: I feel that these few broken remarks fail to do justice to the royal way in which we were entertained by our Buffalo Sisters, but I wanted to in a measure share the good time accorded Sister Murdock, Sister Peeke, of Albany, N. Y., and myself with those who had not the opportunity of enjoying it with us. And I assure you that anyone who is fortunate enough to be their guest will be sure to have as we did a pleasant and profitable time.

Yours in F. L. & P.,
A. A. SPROULE.

Through the Years.

Keep up, brave heart, and falter not, although
 The road be hard, and flowers grow not near,
 'Tis easy walking when soft grass below
 And heaven's blue above delight and cheer;
 But in the grim, dark weather, on the stones
 Which hurt us, then a steady march along
 With head upheld, and smiles, instead of moans,
 Bearing our lot; nay, helping midst the throng
 The feebler ones who faint beside the way—
 That is a life which leads to perfect day.

As time rolls on, one lesson comes to all—
 The need of patience and a sober mind
 Expecting not that at our eager call
 Within our grasp we untold bliss shall find
 That bird of Paradise, with shining eyes
 And many-colored plumage golden bright
 Which flutters o'er us, and for our sad sighs
 Shows glorious visions, bathed in seas of light,
 But visions only, like the morning dew
 They vanish as we pass the long years through.

Yet there is much of happiness on earth—
 Some days are gray, but many have the sun
 To gild their hearts; gladness then and mirth
 Attend upon them, and our footsteps run
 On mossy turf, 'neath shade of sheltering trees;
 Peace in our souls and music in our ears,
 Painless in body and a mind at ease
 Quiet, and fearing naught for future years.
 With cheerful heart and looking for the best,
 Let us then journey to the endless rest.

Thirty-Five Years of Service.

I made a very pleasant call on Brother Hugh Sullivan and wife a few weeks ago and found Mr. Sullivan enjoying a much needed vacation. The occasion being the thirty-fifth anniversary of his connection with the B. & O. line or rather combining the B. & O. S. W. and the old O. & M. road. Some of his friends declare Mr. Sullivan to be a most fortunate man; but there is, in my opinion, something more than luck in his capacity of engineer. There has been care, the ever watchful eye and the alert ear, always looking ahead for danger; every nerve strained to the utmost in his constant attention to duty, truly the service he has given to his employers is remarkable. In all these years he has never met with an accident, never but twice was he reprimanded, on those two occasions the cause was trivial, one offense was for running ahead of time a few minutes, the other for

passing a danger board a few feet in advance. Mr. and Mrs. Sullivan have a large comfortable home and their especial pets are one dozen cats and a beautiful black mare whose coat shines like satin. I must not mention Mr. Sullivan's age, it may be a breach of proprieties; but that he is a trusted and valued employee of the B. & O. S. W. there is no question. There are a great many other engineers whom I could willingly and truthfully mention as worthy men did space allow. There are Bros. Robinson, Evans, Markle, Boas, Alberty, Donnell, Towey, Smalley, Nimnicht, Stump, Lynch, Haag, Michler, Borders, Schwab, Guth, Day, Dory, McKinster, Gilley, Waggoner and others whose names I cannot now recall that have proven themselves efficient. May God guard over each and all and may they continue for many years as worthy in the future as in the past the noble engineers for the B. & O. S. W.

Their friend,

MRS. HENRY B. JONES.

New Divisions.

SISTER J. A. MORTON, of St. Paul, Minn., informs us that she wrote this office about organizing a Division at Breckenridge, Minn., giving a detailed account of the same and the hospitality extended by those forming the new Division. This letter was never received and as Sister Norton lost the original notes she felt that she could not write it up again and get it to suit her from memory. We wish to welcome this Division to the ranks of the G. I. A. and would be pleased to hear from them at any time.—EDITRESS.

WHITE ROSE Div., 360, was organized at Lafayette, La., July 6, 1905. We were met at the train by Sister Ella Carroll and Brother Gregory, Chief of F. H. Gregory Division, who told us the hall was in readiness for us. We were then taken to the hotel for dinner, and soon afterwards were ready to organize. After the Division was organized it was rather late, so we proceeded to the residence of

Brother and Sister Battorff, where we had supper and spent a pleasant evening.

On Friday morning we nominated and installed the officers and went through the work successfully and in the afternoon we finished our work rather late.

We were stopping at the home of Sister Ella Carroll while in Lafayette, and on Saturday she took us to the train, and in spite of the rain we were met at the station by Brother and Sister Battorff and Sisters Wooley and Dobbins, who bade us farewell.

Wishing this new Division success in every undertaking, we are,

Yours in F., L. & P.,
 MRS. R. ENGLER, V. Pres.
 MRS. J. R. ALLEN, Treas.

Milwaukee School of Instruction.

July 26, Grand President Sister Murdock came to Milwaukee to hold a school of instruction. She and Sister Balls, of No. 1, the Inspector for this section, came direct to the hall from the morning train. There were about one hundred sisters of different Divisions to welcome them. Among the visitors were Sister Brockman, President of Div. 347; Sister Johnson, of Div. 238; Sister Kileen, of Div. 54; Sister Powers, of Div. 196; Sister Hart, of Div. 85; Sister Dixon, of Div. 255, besides Sisters from Lacrosse and Fond du Lac. Division 54 deserves special praise for the large delegation she sent. One face that brought many smiles was that of Sister Spooner, of Div. 35. Sister Spooner organized Jewel Division, and was later one of our Presidents.

Sister O'Keefe called the meeting to order, and the officers of Jewel Division filled the chairs. They worked faithfully until 12:30, when the Sisters made merry while doing justice to well-filled lunch-boxes. It being a day for work, little time was spent in the dining room. Div. 255 then filled the chairs and proved their knowledge of the work. We should have liked to show Sister Murdock a little more attention, but as she left at 4 p. m.

there was no time for social demonstration. Dear Sister Murdock, the "spirit was willing."

COR. SEC., Jewel Div. 231.

Inspections.

BESIDES the work of the office, of which an account was given in the September JOURNAL, a fraternal visit, in response to an invitation, was made to No. 353 at Fitchburg, Mass., June 8. Two sessions were held, at one of which Sister Moss, of No. 155, was also a visitor. Both sessions were well attended, and it was a pleasure to work with a Division which manifests so much interest; paying such attention to all the details of ritualistic work that we are assured No. 353, although the youngest yet in New England, will rank among the best. While in Fitchburg, by the kindness of Bro. Mulany, F. A. E., No. 191, it was my privilege to visit Whalom Park on the Fitchburg and Leominster Street Railway, which comprises many acres of land and grove near a beautiful lake. Many cottages are on the shore whose occupants have done much toward making this resort a success. The grounds are filled with a profusion of flowers. Among the other attractions are the bathing beach and pavilion containing many rooms, with an emergency hospital, laundry and drying plant, the toboggan slide, which starts from a tower 40 feet above the surface of the water; shore drive, rustic retreats and bridges, the deer park, with moose and elk and a variety of other animals. The theater has a seating capacity of 3,000, where the Whalom Opera Company amuses the public with light opera. In its interior from 1,000 to 4,000 electric lamps are used in producing electric lighting effects.

The McKinley cruiser, which during the campaign of 1896 was run upon the railway tracks as a trolley gunboat, manned by a gallant crew of enthusiastic Republicans, floats in front of the park, covered with many colored lights at night. She is a gorgeous sight. "Beautiful Whalom" offers many attractions and inducements to outing parties, and to be

near Fitchburg in summer and not visit this popular resort would be to overlook one's opportunity.

I was met and entertained by President Mulany, who, with Secretary Crowther, Insurance Secretary Parker and Treasurer Smith, accompanied me to the station. The entire membership sympathize with the latter, whose husband was killed in a wreck shortly after.

On June 18 the inspection of No. 256, Boston, Mass., occurred. President Thresher was on hand to meet and escort me to the hall, where more than half the membership were gathered for inspection. The hall was handsomely decorated with flowers, and the officers all in white made a fine appearance. Their "penny march," seen by many for the first time at the "school," receiving at that time many deserving compliments and much applause, was, with the officers' drill, repeated at the reception in the evening, June 27, by special request. Real initiation took place at inspection and "school." The Division now numbers about eighty. The work of Guide Clark and Marshals Palmer, Rockwood and Ruth Jones in installation was highly commendable. President Thresher and her officers and members worked well, for the result obtained an almost perfect mark.

Secretary Allen, No. 99; Sister Reynolds, No. 61, and Past Pres. Rockford, No. 118, were visitors. The latter, with myself, was entertained at the home of Sister Thresher. Dinner and supper was served in an adjoining dining-room and was the success it deserved under the chairmanship of Sister Ruth Jones.

On June 14, accompanied by Sister Rockford, who also entertained during my stay, proceeded to Providence, where a social meeting was held in the forenoon with No. 118. Dinner was served to 22 in Gelb's best style, after which we re-assembled for inspection. While we regret the absence of several by illness, and missed, oh, so much, the ever familiar face of our friend and Sister Darling, for many years the respected President of this Division, who was called home in July, 1904. We feel it a pleasure to note the in-

creased membership, and to greet the new members. For the first time we were favored with both pillars and marshals, and the several forms were so well exemplified and questions so well answered that we were as well pleased to give as they to receive high markings. Guide Brown did excellent work as usual. Sister Rockford, on behalf of No. 118, presented lovely fans.

After tea, with Bro. and Sister Rockford, calls were made upon Bro. Darling and son, Bro. Dennis McCarthy and wife, meeting there Sister Robert McCarthy and little one, the pride of the McCarthy household, and whose laughing eyes one could never forget.

President Mellor, Sister Rockford and Secretary Kelley saw me aboard the train, and I hope ere this that the engineer's wife, who accompanied me to Boston, is a member of No. 118. Arriving in Boston I was met by Sisters Thresher and Hurley, taking dinner with the latter, who kindly saw me aboard the train for Concord, N. H. MARY L. COOK.

CORRECTION.—The printed inspection report of No. 256, Boston, Mass., term ending 1903, gave this Division's report as follows: Ritual, 90; average officers' attendance, 63 per cent; average membership attendance, 35 per cent; general average, 71 $\frac{3}{4}$ per cent; charity, \$25. Corrected it should read: Ritual, 99; average officers' attendance, 94 per cent; average membership attendance, 46 per cent; general average, 85 per cent; charity, \$9. This correction will be much appreciated by inspected and INSPECTOR.

Mrs. F. M. SIMMS, Grand Organizer and Inspector of the G. I. A. of the B. of L. E., accompanied by Sister J. S. McKibbin, both of Indianapolis, Ind., inspected Snow Drop Div. 167, at Gallion, Ohio, July 27, 1905.

Magazines for 1906.

As we are approaching the holiday season and the time when we subscribe or renew subscriptions for magazines, let us remember Bro. B. F. Olliver and send all

the names we can to him with orders for magazines. He is agent for all the leading ones and has taken this means to support himself since his terrible affliction sustained in a collision.

If our Sisters will favor him with their orders for subscriptions, new or renewals, I am sure he will greatly appreciate their kindness. All orders addressed to B. F. Olliver, Casanova, Va., will receive prompt attention.

Study Club Program for October.

Quotations—Current events.

Part I.

1. Russia, geographical description. Surface, soil, climate, productions. Political divisions. When acquired.
2. What is meant by Muscovite, Russia, and origin of Moscow?

Part II.

1. Compare Ida M. Tarbell and Thos. Lawson as writers.
2. The Vooruit of Ghent, Everybody's for September.
3. Ella Rawls, Reader. Everybody's for September.
4. The Lewis & Clark Expedition and Story of Sacajawea, Pathfinders of the West. Miss Laut.
5. Judge Lindsey, a friend of the children. Frank Leslie for June, 1905.
6. The Great Peace Conference. Munsey for September.

Our study of Russia for this month will require few references. Geographies or Encyclopedias will give one a good description of this country, while the histories which are found in every library will greatly aid in whatever may be the difficulty. We recommend the following:

The Russian Advance, by Albert J. Beveridge, also Russia, Her Strength and Her Weakness, by Wolf von Schierbrand. Russia, by Alfred Ramband.

The clubs are at perfect liberty to substitute other authors. An excellent list will be found in the Ladies' Home Journal for September.

COMMITTEE.

We have received the report of the Jolly Hard Workers, G. I. A. S. C. of Springfield, Mass. This is a new club, comparatively, and though small is doing good work. Its membership is but eight, but will increase this coming year. All programs have been enjoyed.

MRS. C. D. FLAGG, Director,
MRS. H. D. VINING, Secretary.

Dear Club Members:

Let us be early at work this season. Do not deny outsiders the privileges of your clubs. There are many who would enjoy meeting with you. Do not forget that they may be of great assistance to you, even as your club benefits them.

PROGRAM COMMITTEE.

Division News.

ESCHSCHOLTZIA Div. 350, Point Richmond, Cal., has an encouraging report to make. Our Division was organized on March 9th of the present year, as reported in a previous issue of the JOURNAL, by our Grand Organizer, Sister Lizzie D. Armstrong.

The name Eschscholtzia is the botanical name for our State flower, the California poppy, and is pronounced esholtzia or escolisia.

We started in with an enrollment of 21 members and have added four to our list, two of these coming in on transfers.

On March 23, Div. 553, B. of L. E., to which we are auxiliary, sent us a check for \$25, for which we were very grateful.

On May 18 we gave a grand benefit ball and banquet, clearing over \$50. The committee on arrangements, Sisters Hopkins, Rich and Hicks, left nothing undone to make the affair a success, and all members worked with a will. Much credit is due to Brothers McCabe, Fitzpatrick, Runyon, Ellis, Rich and Hicks of Div. 553, B. of L. E., who assisted in decorating the ballroom and banquet room and acted as door-keepers and floor managers. The grand march was led by our President, Sister McCabe and Brother McCabe, and over 200 couples fell in line. Sisters Runyon and Hicks assisted as floor managers and caused each guest to feel that he was personally looked after.

The following members served as reception committee and assisted in serving supper: Sisters McCabe, Hopkins, Ellis, Adams, Rich, Megraw, Allen, Selvy, Fitzpatrick, Collett, Baker and Whitcomb.

The local Press had this to say of us: "The ball given by the ladies of Eschscholtzia Div. 350, G. I. A. to the B. of L. E., was the grandest affair ever given in this city, everything passing off smoothly and not an unpleasant incident to mar the pleasure of the vast throng. The decorations were both beautiful and unique. Bunting in the Division colors was draped in long streamers from the dome to the side walls, and from the ceiling hung

dozens of railroad lanterns and flags. The stage on which the orchestra was seated was a bower of plants and ferns, and on either side were placed glowing head-lights. The decorations in the banquet room were scarcely less beautiful, and the food was in keeping with the occasion. The ladies of the G. I. A. had personal charge of the banquet, which is a sufficient guarantee of its excellence, for they have gained a well-earned reputation of being royal entertainers. Of those who enjoyed the hospitality of Div. 350, we can only say that they comprised the best people of Richmond, the terminal City of the Santa Fe."

The ball being such a gratifying success both socially and financially, we have decided to give one annually.

MRS. J. MEGRAW, Sec. 350.

MISTLETOE DIV., 181, at Denison, Texas, again comes to the readers of the JOURNAL, with an account of a delightful party given Aug. 31, in honor of Mrs. P. McCarty, our Vice-President. It was arranged as a surprise and was one indeed. Her daughter, Mrs. Lizzie Williams, planned such a perfect scheme that we had only to arrange to meet at Sister Clark's, her next door neighbor, and we would be informed when all was ready. We were given the signal and took possession of Sister McCarty's house. At the same time she was summoned home from a neighbor's and her surprise was complete. Our President, Sister Oland, in behalf of Mistletoe Division, presented her with a handsome present, expressing the love and high esteem of all officers and members. Sister McCarty was scarcely able to respond, being so overcome with surprise and emotion. A number of Sisters then took charge of the dining-room and when we were invited out for refreshments it was indeed a beautiful sight. The large room with its tables and sideboard was decorated with roses and our colors in ribbon. Dainty ice-cream and cake were served and during the time Bro. Mays made a speech which was much enjoyed. The large crowd of Sisters and Brothers and their

families who spent the afternoon with Sister McCarty and her family, will long remember it as a time spent in real enjoyment. Sec. 181.

ONE of the most delightful and brilliant functions of the season was the luncheon given by Div. 156, Oakland, Cal., in Fraternal Hall, Seventh and Peralta streets, Oakland, at Wednesday noon.

The hall was very prettily decorated; the color scheme being pink and white, which was carried out with clever and artistic taste. In the center of each table stood a massive bouquet of pink lilies and their heavy perfume added much towards making it a most enjoyable affair.

A very dainty and delicious luncheon was served at 1 o'clock, after which a meeting was called to order by the President, Mrs. C. B. Chase. Divisions from Point Richmond, 350, and Division 106 from San Francisco were present and speeches and eulogies were given by Mrs. Boley, Grand Chaplain; Mrs. Armstrong, Grand Organizer; Mrs. McCabe, President of Div. 350; Mrs. Brown, President of Div. 106. They afforded much pleasure until the lengthening shadows began to fall, after which all adjoined happier in every way by the brilliant success which crossed their paths, and which they would not soon forget. Words cannot express the praise and appreciation of the visiting Divisions for the cleverness in which the affair was conducted from beginning to end.

Another happy event was a clever and delightful surprise tendered to Mrs. J. Luhr at her beautiful residence, 1903 West Berkeley, near Tenth street.

An informal program was arranged for the earlier part of the evening, in which Miss Hazel Chase rendered several piano selections. Little Miss Luhr sang several pretty little songs, and rendered many like recitations. Mr. Luhr gave a number of zither selections, after which the guests participated in cards and dancing, in which the old Virginia reel afforded much merriment.

They soon afterwards withdrew to the spacious dining hall, where a sumptuous

repart awaited them, and to which all did ample justice.

At a late hour the guests departed, declaring that they had had a splendid good time, and hoping that many more such clever surprises were in store for them.

MRS. D. B. CHASE.

(One of the party present.)

PRIDE of 475, Div. 307, Smithville, Texas, entertained quite royally on the 22d of July in honor of their second anniversary, and it proved to be one of the most enjoyable events in the history of their Division. Sister H. B. Dain kindly consented to our using her house, which is always attractive, but was made doubly so on this occasion. The pretty lawn had been lighted with electric lights, and proved to be quite a pleasure resort for the young folks. The committee on decoration showed what could be done in the way of decorating by a few ladies with good taste and a few yards of tissue and bunting. The arch between the reception hall and dining-room had been draped to form portieres, and directly in the center was the star and crescent with large letters forming G. I. A. suspended underneath. The dining-room had been decorated in the same material and it all looked very pretty and had quite a significance for us, it all being in colors. Invitations had been issued to all the Brotherhood men and their families. After all had gathered and been made to feel at home by Bro. Dain's amiable family, a splendid address was delivered by our President, Sister Young, in which she presented clearly and forcibly the aims and purposes of our order, urging all B. of L. E. men's wives to join us. After the address the following program was given:

Piano and violin duet, Miss Thatcher and Leonard Young; recitation, little Ruth Francis; violin selection, Master Herbert Gallegley; vocal solo, Miss Thatcher, accompanied by Miss Janssen; piano and violin duet, Leonard and Lorena Young; vocal solo, little Errin McGowan. Charades, contests and other games were enjoyed, but owing to the lateness of the hour quite a number had to

be left out that the committee had prepared. Before the guests separated for the evening delicious refreshments were served. The hostess was ably assisted by Sisters McGowan and Donovan. We hope all felt amply repaid for coming, for it certainly afforded us much pleasure, and added one more link in the already long chain of pleasant socials.

FROM A MEMBER.

AS IT has been some time since you have heard from Olympia Division 219, Wilkensburg, Pa., and as we are still in good running order, we take this opportunity to tell you of some of our good runs. On July 20th we gave a birthday social, it being well attended by our Brothers and Sisters and families. Our hall was beautifully decorated in Japanese lanterns and our colors. Our admission was a penny for each birthday past. Some of our good Brothers and Sisters owning up to their age, and some of our Brothers being a hundred years old, we collected quite a nice sum in our treasury. Music, games and dancing were enjoyed until 10 p. m., when a delicious lunch was served. A very pleasant and social time was enjoyed by all. Hoping to have more in the future, I remain

Yours in F. L. P.,

PRES. 219.

THE members of Div. 310, Derry Station, Pa., held their second annual picnic at Idlewild Park on Aug. 19, 1905, which proved to be a success in every detail. The following description is from the *Derry Gazette*:

The B. of L. E. picnic last Saturday was the event of the season for Derry people, nearly all of whom attended and enjoyed a day of pleasure in the romantic Idlewild Park. For once the weather man was favorably disposed towards a Derry outing and the day was all that could be desired. The long train was made up and at the station at 8:30 and soon crowds of people in holiday attire were flocking to the train. The handsome gowns of the ladies were given a charming touch of color by the pretty

badges provided by Billy Murphy, whose stock of 1000 was soon exhausted. A better behaved, better dressed or better looking crowd of excursionists has never assembled at the famous Park. Everyone was out for a happy time and no one was disappointed. It was a great big family party without one unpleasant feature to mar the charm of the happy occasion. The able manner in which the big excursion was handled showed the skill of the men in charge. The ride, under the inspiration of the occasion, was one of the pleasing features in itself and was quite different from an ordinary railroad journey. Certainly Mr. Gipson and his able assistants deserved the praise they received.

When the Park was reached the merry excursionists spread all over the place, singly, in pairs, in groups and in crowds, all bent on enjoying themselves to the fullest extent. Many had baskets and little family picnics were formed, but the majority depended on the Ladies' Auxiliary for dinner at the big dining hall and no one was disappointed, for the dinner served by those popular ladies was one of the best ever prepared at the Park. There were games of all kinds, with all the usual amusements provided by the Park facilities. The dancing pavilion was the center of attraction to most of the younger set and there, to the excellent music of Key's orchestra, they indulged in the mazy dance with that prince of prompters, W. S. Murphy, in charge. One of the most unique and interesting games of baseball was witnessed by a large crowd of enthusiastic spectators. It was composed of two "pick-up" teams of home people, who soon got warmed up and played like veterans.

Amid so much pleasure it was no wonder the day seemed so short, for all too soon the hour of departure arrived and the warning whistle called all to the train. The return trip was safely made and all arrived home tired but happy and full of pleasing memories of the delightful outing of 1905.

The committee desire to extend the thanks of the Order to the merchants and

the public in general for their patronage and assistance in making their outing the grand success it proved to be. They appreciate this show of good will very highly and will remember it with gratitude.

ABOUT thirty-five members of the G. I. A. tendered a pleasant surprise to Mrs. B. Craig last Friday evening at her home on Elm street, Hornellsville, N. Y. While Mrs. Craig was out, the guests took possession of the house, bringing with them an elaborate collation, which was all ready to serve when the unsuspecting hostess returned. They also brought with them a handsome leather traveling bag which they presented to Mrs. Craig for remembrance, as she leaves the city soon for the South, where she will make her future home. Just before leaving a flashlight picture was taken of all present, which will be a valuable souvenir for Mrs. Craig.

On July 29, Mrs. John Henney, Div. 351, held a lawn party at the home of Sister P. S. Trafford, 3rd Street, Westchester, N. Y. It was attended by a great many Sisters and Brothers of Div. 589, B. of L. E.

The lawn was prettily decorated for the occasion with Japanese lanterns and headlights loaned for the occasion by Mr. McCabe, road foreman of engines. The evening was pleasantly spent in playing euchre on the lawn, Mrs. W. R. Marley, President of the Division, being the winner of the ladies' prize, a pretty Bohemian glass rose jar, and Brother Fitzgerald was awarded the gentlemen's prize, a handsome pack of cards, inclosed in a leather case. Brother Marley, Chief of Div. 589, in behalf of our President then presented Bro. Trafford with a very appropriate picture, entitled "Our host of the evening."

The umbrella drill was also a feature of the evening, Sister Trafford winning a very handsome G. I. A. cake, specially designed for the evening, after which the guests repaired to the dining-room, where a table loaded with all kinds of good things was spread and which everyone enjoyed.

At midnight the Sisters and Brothers

departed for their homes very jolly after the good time spent and voting Sister and Brother Trafford a genial host and hostess.

SECRETARY 851.

SINCE being introduced to our JOURNAL friends by Sister McBride, who so efficiently organized us last December, I thought that Burlington Division 843, Burlington, Iowa, should say a little in a modest way about ourselves and what we are doing. Our membership is steadily increasing and our Division is in a flourishing condition. The members work in perfect harmony and each one strives to do her best for the welfare of our order. Our first social affair was in the nature of a surprise party tendered to Sister Williams who has been unable to attend our meetings for some time on account of prolonged illness. The afternoon was pleasantly spent with music and sociability, after which ice-cream and cake were served. On the evening of July 31, Brother and Sister Long invited us to their home to assist them in celebrating their wedding anniversary. Our President, Sister Richards, in behalf of the Sisters of the Division, presented them with a beautiful Haviland china berry set. Several musical selections were rendered on the piano by different ones present and the hostess served dainty refreshments. This being our first meeting with our Brothers of Div. 151, a very pleasant and sociable evening was spent and we left for our homes wishing Brother and Sister Long many more happy anniversaries.

On August 2, our Sisters, accompanied by their families and well-filled lunch baskets, went out to our beautiful Crapo Park on the banks of the Mississippi, where the afternoon and evening were spent in recreation and in doing justice to the ample picnic supper spread in tempting array on the tables. After supper we adjourned to the band pavilion where dancing was indulged in and a general good time followed. The Burlington Division meets every second and fourth Monday afternoon in Elks' Hall, where all visiting Sisters will be gladly welcomed.

Yours in F. L. & P.,

MRS. HARRY TURNER, Sec. 343.

G. I. A. Voluntary Relief Association.

TOLEDO, O., Oct. 1, 1905.

To Division Insurance Secretaries, V. R. A. :

You are hereby notified of the death of the following members, and for the payment of these claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for the same was dated later than August 31, 1905.

ASSESSMENT No. 228.

Died Aug. 11, 1905. Sister Phebe J. M. Davis, aged 52, of Div. 66, Port Jervis, N. Y. Cause of death, phthisis. Carried two certificates, dated May 10, 1900, payable to Alfred Davis, husband.

ASSESSMENT No. 229.

Died Aug. 23, 1905. Sister Meda Fischer, aged 29, of Div. 282, Atchison, Kan. Cause of death, strychnia poisoning. Carried two certificates, dated December, 1902, payable to Albert W. Fischer, husband.

ASSESSMENT No. 230.

Died Aug. 26, 1905. Sister Ellen M. Hans, aged 50, of Div. 50, St. Louis, Mo. Cause of death, gastro enteritis. Carried two certificates, dated September, 1901, payable to Lottie A. Hans, daughter.

ASSESSMENT No. 231.

Died Aug. 9, 1905. Sister Lucy S. Brown, aged 34, of Div. 137, Harrisburg, Pa. Cause of death, tuberculosis. Carried one certificate, dated November, 1903, payable to Geo. N. Brown, husband.

ASSESSMENT No. 232.

Died Aug. 17, 1905. Sister Christina Hindmarsh, aged 65, of Div. 131, London, Ont. Cause of death, Bright's disease. Carried two certificates, dated April, 1897 payable to Lizzie Hindmarsh, daughter.

ASSESSMENT No. 233.

Died Aug. 30, 1905. Sister J. M. Putney, aged 48, of Div. 134, Hornellsville, N. Y. Cause of death, carcinoma of breast and stomach. Carried one certificate, dated May, 1904, payable to J. M. Putney, husband.

Assessment Nos. 239, 231, 232 and 233 will be paid from the Assessment fund.

Members will pay their Insurance Secretaries on or before Oct. 31, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than Nov. 10, or stand delinquent till remittance is made.

Members in good standing Aug. 31, 1905, five thousand and fifty-one in the first class; and twenty-one hundred and fifteen in the second class.

The date of Sister Brown's certificate was Aug. 11, 1904. See September JOURNAL, Assessment No. 226. Error made in copying.

The Westinghouse Improved Locomotive Equipment.

R. H. BLACKALL.

The Westinghouse Air Brake Company is just introducing an improved brake equipment for the engine and tender. This equipment has been installed on a number of different roads.

This article is not supposed to give a detailed operation of the different mechanism, simply to tell what can be accomplished with it and giving the uses of the different positions of the brake valve

FIG. 1. STRAIGHT AIR BRAKE VALVE.

and the results which will follow their use.

What is known as the distributing valve, with a small reservoir to which this valve is attached, takes the place of all of the triple valves and auxiliary reservoirs now used with the present standard equipment on both the engine and tender, there being nothing on the tender except the brake cylinder and a pipe connection from it to the distributing valve.

One of the special features of the valves and parts employed is that they may be used in any class of

service, be it switching; freight, in which either 70 or 90 pound brake-pipe pressure is used; and passenger service used either with the 70 or 110 pound brake-pipe pressure.

The use of the Straight-Air during the past three or four years has convinced the different railroad officials as to the necessity for this device. The new equipment includes this, and hence will be available on passenger as well as freight and switching engines. Not only has it all of the advantages of the combined automatic and straight-air, but it has the additional advantage that permits of an independent release of the driver and tender brake in case the wheels are being over-heated or slide.

The automatic brake valve also includes additional features. These permit of the train brake being released while retaining those on the engine and tender as long as desired; they, of course, can be released with the train brakes if so desired. In releasing the driver brakes they can, if desired, be graduated off, the same as can be done with the straight-air brake.

It will thus be seen that either the locomotive or train brakes can be applied at the same time or independently. If they are both applied they can be released together or they may be released independently at the will of the engineer.

FIG. 2. AUTOMATIC BRAKE VALVE.

These additional advantages have been obtained by adding one more position to the automatic brake valve and by adding a straight-air brake valve. The straight-air brake features are obtained by adding this straight-air brake valve only without the necessity for the other accessories now used when the straight-air brake is employed. This means that both of the double check valves are dispensed with as is also the second line of pipe for the straight-air, the two safety valves, and the reducing valve and bracket.

From this very brief description it will readily be seen that while the advantages over the present equipment are very marked, these advantages have been obtained while at the same time the number of pieces of apparatus has been materially lessened.

It will be seen by referring to Fig. 2 that one new position has been added to the brake valve; this is called the "holding" position, and is midway between the running and lap position. With the brake valve handle in this position the brake pipe will be charged to 70 pounds, but the brakes on the locomotive will not release. The release position is the same as "holding" except that the brake-pipe pressure will equalize with that in the main reservoir if the handle of the brake valve is permitted to remain in this position. These two positions, aside from the usual functions, permit the slack of the train to remain bunched and tend to greatly reduce any tendency for the slack to run out and break the train in two when release is made at slow speed. If steam were used under these circumstances very little power would be exerted by the locomotive as long as the brakes were applied on the engine and tender. If there were any reason why it was desirable to release the locomotive brakes this could be done by moving the brake valve handle to running position or by moving the straight-air brake valve to release position.

The other positions of the valve are the same as with the present valve.

Please note that when double-heading, the brake valve on the trailer engine is

carried on lap position instead of running position as at present. Carried in this position the brakes on the trailer engine will act the same as a car when the lead engineer uses his brake valve. This point will be described more fully when the operation of the new equipment is described in detail. In this connection would say that the trailer engineer also has an independent release for the brake on his engine and tender available in case there is any call for an independent release of these brakes due to sliding, overheating, etc.

The following gives a brief description and explains what will result with the automatic and straight-air brake valve handles placed in the different positions.

In the *Full Release Position* of the automatic brake valve the main reservoir and brake pipe are directly connected and these pressures will equalize if the valve handle is allowed to remain there. In this position the brake cylinder exhaust on the locomotive is closed and these brakes, if applied, will not release. If desired to retain the locomotive brakes and not overcharge the brake pipe, move the brake valve handle to holding position.

Running Position—In this position the pressure which feeds through the brake valve to the brake pipe is reduced to some predetermined pressure by a feed valve the same as the present standard valve. In this position the air which controls the brake cylinder pressure is exhausted and the locomotive brakes will release.

Holding Position—This is the same as *Running Position* except that the brakes on the engine and tender will not release in this position, as the port through the brake valve which controls the release of these brakes is closed. As already explained, this position produces the same results as *Full Release Position* except that in it the brake-pipe pressure is controlled by a feed valve.

Lap, Service and Emergency Positions in this valve are the same as the corresponding positions in the present standard or G 6 brake valve.

The positions of the Straight-Air Brake

Valve will be understood by the notes attached to the cut Fig. 1.

To apply the automatic brakes on both the locomotive and train, proceed the same as at present with the G 6 brake valve.

To release both locomotive and train brakes with the automatic brake valve: Go to Full Release Position with the automatic valve to release the train brakes. When desired to release the locomotive brakes move the automatic brake valve handle to running position.

To release the train brakes and hold the brakes on the locomotive by the use of the automatic brake valve: Go to Full Release Position to release the train brakes. The brake pipe will be overcharged if the handle of the valve is left in this position; to avoid overcharging and still retain the brakes on the locomotive, place the handle in Holding Position. When desiring to release these brakes place the handle in Running Position. If desired to release these brakes slowly, move the handle from Holding to Running Position intermittently and thus obtain a graduated release of the brakes, the same as is now done with the straight-air brake.

To hold train brakes and release driver brakes: With the brakes applied, permit the automatic brake valve to remain on lap and place the handle of the Straight-Air Brake Valve in Release Position, see Fig. 1.

To apply locomotive brakes only, the automatic brake valve handle being in running position: Place the Straight-Air Brake Valve handle in the fourth or service position, until the brakes are applied with the force desired; then move the handle to Lap Position.

When double heading: Put the automatic brake valve handle on Lap Position on the second engine, and close the cut-out cock under the brake valve; the brakes on the second engine can then be handled by the lead engineer the same as if this locomotive were a car, the same as with the present equipment. If engineer on the second engine desires he can prevent the application of the brakes on the second engine by placing the straight-air brake valve handle in release position. If

these brakes are applied they can be released in the manner just described. If occasion arises later for applying the brakes the engineer can accomplish this by placing the straight-air brake valve in service position.

When either the automatic or the straight-air brake valves are not in actual use they should be carried in their respective running positions.

If the straight-air brake valve handle is left in release position the brakes cannot be applied on the locomotive when the automatic brake valve is used.

The brakes cannot be released by the use of the automatic brake valve unless the straight-air brake handle is in running position.

QUESTIONS AND ANSWERS.

Q.—J. G.—I would like to know what difference the equalizing reservoir they put on engines now makes in the application of the brakes. The one they have on the old engines is 12 inches long, but the one that comes with our new engines is 14½ inches. I should think that the larger reservoir would make a slower application of the brakes as it takes a little longer to make the same reduction through the preliminary exhaust port of the brake valve.

A.—It is as you say that, owing to the larger volume, it takes longer to make a given reduction of pressure in the equalizing reservoir, but this has no effect on the quickness of the brake application except on very short trains. When a train of any considerable length is considered, the speed with which the air can be taken from the equalizing reservoir has comparatively nothing to do with the speed of application, since, with a long train, it is a question of how long it will take for the air to escape through the train-pipe exhaust of the brake valve. This, on a train of 50 cars, requires about 45 seconds, in response to a reduction of 20 pounds. It takes but about six seconds to make this amount of reduction from the equalizing reservoir, hence the reduction has been made from this reservoir and the brake valve handle returned to lap long before the equalizing piston has seated. The

reason for making this reservoir larger was to make the brake pipe slightly slower on short trains, and thus to reduce the possibility of undesired quick action to a minimum.

Q.—W. F. G.—When handling long freight trains will you tell me what is most likely to cause brakes to stick?

A.—About the most likely thing that will cause brakes to stick is to make a light reduction and then, in an effort to release them, place the brake valve handle in running position. This practice will not only stick brakes on long trains but will occasionally on short ones as well.

Running position of the brake valve should never be used to release the brakes and, if there are any poor packing rings in the triple valves, there is a likelihood of the brakes on the cars on which these rings are, sticking even when the release position of the valve is used. When it is possible, and especially when the train is long, a 15 or 20 pound reduction of brake-pipe pressure should be made before trying to accomplish a release. There are many conditions, of course, where this practice cannot be followed, but the idea we wish to convey is that the heavier the reduction made up to the point of equalization, the easier it is to accomplish a release. The heavy reduction results in a greater excess pressure, which means that the driving head is greater with which to "hit" the triple valve at the rear of the train.

Q.—J. B. O'D.—I am studying the air brake and should like to have this question explained: If you have 100 cars with the Westinghouse brake cut in and the engineer makes a ten-pound reduction, how many pounds pressure will he get in the brake cylinder on the last car? He has about 3,000 feet of train pipe; will the piston pass the leakage groove?

A.—With Westinghouse or New York brakes the question of whether the brake on the 100th car will apply is a very uncertain thing. The result depends largely on the condition of the triple valve.

The air brake for freight cars was originally designed and based on results obtained with trains of 50 cars as a maxi-

mum. With a train of double this number the action of the brakes is quite different than with a train of half this length and it is quite doubtful if the last brake would apply with this reduction on a 100-car train. If it did, the resultant cylinder pressure would probably not be more than sufficient to compress the release spring in the cylinder.

Because a triple valve is the last in the train it does not necessarily follow that this is the one most likely not to apply, although, of course, this is much less likely to apply than the ones near the engine. The condition of the triple as to sensitiveness, also the condition of the feed grooves, are important factors. If the piston moves sluggishly there is a much greater chance for the pressure from the auxiliary reservoir to feed back into the brake pipe, thus allowing the brake pipe and auxiliary reservoir pressure to remain equal, with the result that the triple piston fails to move and the brake does not apply.

The longer the train the greater chance for the brakes failing to apply. This is not alone because there is a larger volume of air to be handled, due to the longer brake pipe, but there being more feed grooves, more air feeds from the reservoir back into the brake pipe. This back feed presents an additional amount of air for the brake valve to handle and the final reduction desired is prolonged correspondingly.

Q.—T. H.—I tried an experiment a while back to see if the triple valve on my tender would work all right if I put it back dry after cleaning. It seemed to work all right for two or three months and I took it apart to see what it looked like. When I took the piston out of the slide it seemed to have the proper amount of oil on it, but the piston was dry. What I want to know is how the oil got on the slide valve.

A.—If you wanted to be sure that the slide valve would be dry you should also have taken the oil out of the brake cylinder. The air passing from the cylinder through the exhaust port of the triple undoubtedly carried oil with it so that suffi-

cient oil was conveyed to the seat of the triple slide valve to lubricate it. The movement of the slide valve transferred some of the oil to the seat of the valve.

Electricity—Alternating Currents—Transformers.

BY ELWOOD A. GRISSINGER, E. E.

Mention was made in the last paper of the advantages associated with the use of an alternating current for the transmission of power over great distances, chiefly because of the fact that it was possible to produce currents of much higher pressure than by any other method. Alternating-current generators, as a rule, are made to generate a current at a pressure of 2,200 volts, though 11,000 volts is not uncommon. In some cases, as low a voltage as 220 is used. When 11,000 volts is delivered direct by a generator, the latter differs radically in design from the other and older forms. A type of machine known as a *revolving field* generator is used for high voltages. This style has its field magnets so mounted that they will rotate with the shaft and the armature will be stationary. This is necessary, so as to minimize the danger of armature conductors breaking down under the high pressure. When an armature is in motion at a high rate of peripheral speed, there naturally occurs a strong centrifugal pull on the conductors. If the coils do not fit perfectly tight and snug mechanically, and any pair of them get to rubbing together on account of the rotatory movement, it will not be long until something gives way. When the voltage of the generator is low, however, step-up transformers must be used. These do not differ materially from the regular styles of transformers, except so far as the ratio of transformation is concerned.

A transformer is one of the most useful devices ever brought out in the form of electrical apparatus. It is a compact device, has no moving parts, can be placed most anywhere, and is highly efficient. Transformers are built upon the principle shown in an article appearing in a pre-

ceding issue of the JOURNAL, and shown more particularly in Fig. 4 of that issue. It consists of primarily an iron core, which is so made that it has a closed magnetic circuit. Analogous to this, I would say that an iron ring has a closed magnetic circuit. A transformer core does not have an iron ring for its center, but it has a closed circuit similar. Upon the one side of such core a certain number of turns of wire are wound, the size of the wire depending upon the amount of current that is to be carried, and the pressure that it is to carry will determine the number of turns that are to be placed upon that side. We will suppose that there will be 100 turns of wire on this side of the core, and that it is to carry 100 volts. Upon the other side of the core is to be wound a coil of wire that will carry 1,000 volts and the same amount of electrical energy. The last coil of wire will need to have 1,000 turns of wire. That is to say, if we have a potential of 1,000 volts, and we wish to transform to a pressure of 100 volts, it will be necessary to use a transformer that will have a primary of 1,000 turns and a secondary of 100, or, more correctly speaking, the ratio of transformation must be 10 to 1, i. e., there must be ten times as many turns of wire on the *primary* or high pressure as there are on the *secondary* or low-pressure side. This rule is invariable. The actual count of the turns can differ from the arbitrary figures chosen, but the ratio of transformation remains the same all the while. On the other hand, if it is desired to raise the pressure of an alternating current after the same leaves a generator, all that is necessary is to employ the same kind of a transformer. If we desire to raise from a pressure of 100 volts to 1,000 volts, it will be necessary to use a transformer whose *primary* for 100 volts has one-tenth the number of turns that the *secondary* has for 1,000 volts. The primary of a transformer is always that section into which the current is fed, whatever the voltage, and the secondary that part from which the current travels after having undergone the transformation. The

primary and secondary wires are not connected together. Each side is connected to its own circuit.

In Fig. 4 of previous issue, above referred to, the elementary principle of a transformer is shown. Here is shown one coil of wire wound upon a wooden spool and connected to a cell of battery. Upon the same spool, interlaced with the first coil, wound upon the top of it or beneath it, it matters not which, is a second coil of wire, which is connected to some sort of an indicating instrument, preferably a galvanometer. When the battery is thrown in circuit with the first coil, which we will now call the primary of a transformer, and a current flows through it, the needle of the galvanometer will show a deflection, which we will say will be to the right. If the current be taken off of the primary, the needle will again show a deflection, but in the opposite direction to what it did the first time. A deflection of the needle is only caused when the current is made or broken. If we now reverse the direction which the current will take through the coil and close the circuit again, it will be noticed that the needle will be deflected in an opposite direction to what it was the first time. If the circuit be again broken, it will be noticed that the needle will be deflected in the same direction it was the first time. Every time the current is thrown on or off there will be a deflection, and every time the direction of the current is changed there will be a deflection. This is precisely what happens in a modern transformer, only that the current is always on the transformer, but it is always changing its direction, and consequently a neighboring coil to the one in which the current is flowing will show the presence of a current.

The reasons for this action are as follows: When the current is caused to flow in the primary, that coil becomes a solenoid with magnetic properties. If it has an iron core, it has more pronounced magnetic properties, because the lines of force have been gathered in, as it were. These lines of force at the same time thread their way through and about

the turns of wire which go to make up the secondary. At the moment when such lines of force make their appearance, by virtue of their movement about and across the secondary turns, a current is induced in those turns. This induction of a current will continue so long as there is a movement of the lines of force. If those lines of force were always to move in the same relative direction, there would be a current of electricity induced in but one direction, but as such is impossible, and as the lines of force are increasing in one direction one part of a second, and in an opposite direction another part of the same second, the induced current will be alternating in character. It will change its polarity, so to speak, and will alternately be plus and minus. The number of times that this change of direction of current takes place depends upon the generator which supplies energy to the lines. Whatever the generator does, all the rest of the apparatus on the lines will do. For the modern service of incandescent lighting, a frequency of 7,200 alternations is used, or, as it is commonly called, 60 cycles per second. A current of 7,200 alternations means that the same changes its direction of flow at the rate of 7,200 times per minute or undergoes 60 complete cycles per second. These terms are also called frequency. For the purposes of power a frequency of 3,000 alternations is becoming quite common. If an incandescent lamp be used on a current whose frequency is 3,000 alternations per minute or 25 cycles per second, a well-trained eye can just about see the reversals of current in the lamp filament. As you go below this number of alternations, the reversals of current become more and more apparent to the eye until you reach a point where you can actually see the lamp light up and go out, etc. On the other hand, the higher up you go in the frequency of the current, the less possible it is to distinguish the changes. Sometimes a flickering of the lights can be observed, but this is traceable to a variation in the speed of the generator or some other cause.

In every city and town using alternating current distribution, transformers from 10 lights to 100 lights capacity may be seen hanging from poles in front of or alongside of stores and residences. These are the devices that reduce the pressure of the current to such proportions as will make it safe to carry into buildings. What is really seen is but the case of the transformer with the wires going into it and the wires coming out of it. The core, which has been mentioned, and upon which the primary and secondary coils are wound, is supported within the case upon blocks of wood. In some instances, the cases are filled with oil to increase the insulation of the windings. Oil is one of the best insulators we have. An electric spark cannot exist in oil. Therefore, it has been argued that if oil were placed in a transformer case, and some of the insulation on the wires gave way, the oil would immediately fill up that space and the insulating property of the particular coil be unimpaired. Oil-insulated and dry types of transformers have been almost equally successful, and it is still an open question as to which is the best. In large sizes of transformers where it is necessary to take care of 500 horsepower, and, in fact, quantities of power up to 3,000 horsepower, the use of oil-filled transformer cases serves a dual purpose. In large sizes of transformers, the heating effect becomes considerable, and it is necessary to get rid of the heat in the most practical way. Consequently, within the case a spiral of wrought iron pipe is placed. This looks much like a still. Through this piping a steady stream of water passes when the transformer is in operation. Surrounding the coil of pipe and the transformer coils is the oil which, as before mentioned, serves also as an insulator. The heat that comes from the coils is taken up by the oil, and the latter is set in circulation within the case just as hot water in a boiler circulates. The hot oil goes to the top of the case, and there it comes in contact with the coldest part of the coils, for at that point the water enters. The oil imparts its heat to the water as it passes, and in this way it

is carried off. Transformers are designed for the work they are to perform just the same as are dynamos and motors. Transformers of the same design and characteristics can be coupled together on the same circuit and their combined energy fed into the same secondary circuits. Each transformer will take its share of the load.

Generally speaking, a transformer will show the same amount of energy in both primary and secondary. The number of watts in each circuit will be approximately equal to the product of volts times amperes. What difference there is will represent the losses in the transformer itself. As an illustration, we will suppose a transformer of ten horsepower capacity. The primary voltage is 1,000. Ten horsepower equals 7.5 kilowatts equals 7,500 watts, which divided by a voltage of 1,000 gives 7.5 as the number of amperes appearing in the primary when the voltage is 1,000. The secondary voltage is to be 100. Divide this into 7,500 watts and the amperage is 75. The primary voltage is high, its amperage low—the secondary voltage low and its amperage high. This is invariably the rule of transformation. Increasing one factor decreases the other, and vice versa. In the above case, if the transformer loss was 5 per cent, then there would have to be 5 per cent more watts in the primary to give ten horsepower of energy in the secondary; or if the primary wattage was not more than 7,500, the secondary would show 5 per cent less than that amount. There are other features connected with transformers which are more technical in their nature and which it is deemed advisable to omit.

Fig. 1 shows an elementary type of transformer in which C is the core. It is made of rings of soft iron laid upon one another. On one side the primary P is wound. On the other the secondary S. Both coils are insulated from one another by virtue of the insulation on the wires. Modern types of transformers have the primary and secondary interposed with one another, each being divided into sections. This increases efficiency, reduces

weight and size. Fig. 2 is the general method of representing a transformer and its connections. P is a primary, S the secondary, I an incandescent lamp, IA an incandescent arc lamp, and M a motor.

In dealing with alternating currents, it may not be amiss to refer to other designations of the same which have been in use and which have come into use within the last few years. In the early days of the work the transmission of power was delayed in development because of the fact that motors were not available that would operate upon an alternating-current circuit. This was at a time when there was nothing known of a *single-phase* alternating current. In such a circuit, there is but one current. Later on, it was found possible to generate a *two-phase* current, a *three-phase* current,

both phases must be used at the same time and in the same motor.

When it was found that a two-phase current could be produced, it was not long afterward that the beautiful principle of the rotating magnetic field was discovered. If we take a ring of iron and measure it off into four equal parts and upon the diametrically opposite divisions wind a coil of wire, these being connected together and to the two phases of a two-phase circuit, and then place a piece of metal of small size in the center of the ring, turning the current on, both phases will cause the metallic substance to revolve at approximately the same speed that the generator does which feeds the coils. This rotation is brought about by a so-called revolving field. The magnetic lines of force which are alternating in

FIG. 1.—ELEMENTARY TYPE OF TRANSFORMER,

etc. In the case of a two-phase current, there are virtually two currents. One current starts at the zero point and the second one starts at the 90 degree point, or a fourth of a revolution later. The one current lags behind the other, as it were. This is accomplished by simply changing the connections on the armatures of the generators and bringing them out to four collector rings instead of two. The outside circuit will therefore carry four wires instead of two, as in a single-phase system, or as in the direct-circuit system. There being four wires, each pair of them will represent a single-phase circuit in themselves, but when taken collectively, it is two-phase. From either phase incandescent or arc lamps may be operated, but in order to operate motors,

character, and which alternate at different times in the two sets of coils, set up a shifting magnetic field, which shifting is perfectly regular and extends through the entire 360 degrees of the circle. The metallic substance becomes magnetized and suffers the changes which are induced in it and in endeavoring to keep up the shifting of the field, being free to move, sets about to catch up, if possible, with such changes. So long, therefore, as these changes continue, the metallic substance will continue to spin and will remain in the center of the field. This is the principle of the two-phase or three-phase, or more commonly, the *induction motor*. This motor is the most advanced type of motor in existence and combined with the alternating-current system of

distribution as in use today throughout the United States forms the most perfect means of utilizing power that there is. Indeed it will be a great many years, no doubt, before any type of motive power can be devised that will surpass if equal this system. This system in its completeness and its simplicity, its reliability and its economy of operation, has made possible the commercial utilization of the world's vast water powers. These were hitherto undeveloped and the problem of distributing power over distances such as 50 miles only a dream. Today, it is a realization. The world's greatest development is to be seen at Niagara Falls, in the State of New York, where some 65,000 horsepower is now in use and plans for

Shades of hades! This is something startling—a revelation, in fact, to me. For the last 34 years I have been laboring under the impression that there were several grades of coal, principally three grades as follows: good, medium and poor, and now after all these years I am practically informed that all the various delays I have had trying to coax heat enough out of what I called poor coal to keep ice from forming in the fire-box was not a necessity, simply a lack of education on my part as to proper methods. "Gee whiz!" What a money loss the old "plug pullers" have caused the various railway corporations in the years gone by; how unfortunate for these same companies that a modern Moses was not

FIG. 2.

200,000 horsepower additional well under way. This is the age of electricity.

No Poor Coal.

J. W. READING.

Mr. T. F. Adams, General M. M. of the St. Louis & Southwestern, addressing the last Master Mechanics' Convention, among other things said: "It has been demonstrated beyond reasonable doubt that the excuse of an engine failing on the road because of poor fuel is not tenable, from the fact that there is not any coal used in this country today, that I know of, that, if properly used, will clinker, and I believe the word 'clinker' is not the proper word to be used in connection with fire-box refuse; it should be ashes only. As a matter of fact, if the cinder is burned up there will be no lumpy material."

found years ago to pilot the "drivers" and "stokers" out of the wilderness of ignorance. I will quote further from Mr. Adams:

"On our road we take into consideration the education of the engineer and fireman on the fuel question. We adopted a method under which, if the engineer loses any time on the road on account of not steaming, we bring the engineer and fireman into the office and ask the cause. If the statement is made it was on account of poor fuel, we ask him to explain what he intends us to understand when he says 'poor fuel,' and in that manner bring out his idea of it and instruct him accordingly. *It has had a wonderful effect;* the effect has been that we have run our 20 switch engines, 20 x 26, four days and four nights without cleaning the ash-pan, and we have shaken the fire down and out in 15 minutes. We have run a 20-inch en-

gine on the road on a run of 250 miles with Illinois coal and have not shaken the grates or cleaned the ash-pan, and at the expiration of the trip we have shaken down the fire out of the engine in 15 minutes."

You will note that Mr. Adams does not go into detail as to the amount of work performed by the various switch engines, nor have we the particulars as to tonnage and gradients on the 250 mile feat.

No locomotive man of good common sense will attempt to dispute the fact that improper methods of firing cause delays, even with good coal, and there cannot be a shadow of a doubt but what a systematic training of enginemen will bring good results, if persisted in; but even then you must have other conditions favorable to the men. There is nothing on earth that goes so far as a general kindly treatment. The conditions existing on many of the roads of our country make the work life of enginemen a very serious burden, but little hope among firemen, and practically nothing better expected by engineers. New power comes now and then, increased in weight and cylinder capacity; more cars must be hauled; more coal must be shoveled; more care must be observed in handling the train; traffic department insist on the maximum tonnage regardless of fogs or rail conditions; engines in pool; work not always reported, and often not done when reported; air inspection fizzles; trains stalling on account of train-line leaks. This increased care and responsibility makes delays which rapidly ripen out into hours, and in consequence of these delays the men become unfitted for their duties.

Talk about the "white man's burden," it is becoming more and more in evidence among the railroad enginemen as time advances.

Where the conditions I have named exist those in authority might as well try to fly as to bring about a friendly strife or competition for the saving of coal. With burdens added until only the *straw* is needed to make the final finish, competition is out of the question; it is not and can not be forced into the nature of mankind.

I met a Brother engineer a few mornings ago who was on his way to the Superintendent's office. He had met a switch engine in a fog, both going slowly; result—a broken pilot beam on switch engine. It was an old beam and had previously been damaged. This Brother was taken from his run and caused to lose a round trip; the switch engineer must come from some distant terminal and probably lose two days—for what? To explain, of course, how it could be possible that two engines might touch each other while working on a single track with fog or smoke thick enough to hew out in chunks. This brother said to me, "Jim, I'm so damned badly discouraged, I would not care if they told me I never could go out again." I fancy in my mind's eye that I see this Brother in the Master Mechanic's office taking a few lessons on the no poor coal theory. I fancy further that I see him decidedly interested in what the "boss" says to him regarding best methods for his, the engineer's, instructions to "green" firemen as to how to get over the road, make time, save fuel and never shake the grates. I fancy further that later I see this Brother taking a very active interest along the lines advocated—(only I don't).

We have Brothers on Mr. Adams' road who might instruct us further regarding methods on their lines, they might give to our organization particulars as to grate area, kind of grates, size of ash-pan, total heating surface, size and kind of nozzles, size of stack, position of baffle plate, size and length of petticoat pipe (if any), the size of mesh in netting, tonnage, what per cent grades, etc.

Knowledge is what is wanted. Why not tell us more regarding the feats they have accomplished, and impart to us the valuable information gleaned from their audience with their M. M.? If they have got anything good down on that line, why not pass it around?

In looking over my September copy of *Railway and Locomotive Engineering*, I find an article over the signature of R. M. Willis, address Jonesboro, Ark., which does not seem to conform to the state-

ments made by Mr. Adams. I will quote from a portion of the letter from Mr. Willis: "According to certain articles that appeared in *Railway and Locomotive Engineering* several years ago, the best proof of good firing is the absence of black smoke. If you make that the basis of judgment of the engines running on the St. Louis & Southwestern, they are far from showing a good example. Firemen in this country do not sit up at nights trying to figure out how to keep her hot on smokeless firing, and the Southwestern engines are as smoky as any to be found in Arkansas. After I read the article about what Mr. Adams said, I made it my business to visit some of the ash pits on his road, and I have seldom seen more clinkers for the quantity of ashes dumped."

In the summer of 1881 I had charge of a Baldwin mogul on the Dakota Division of the N. P. This engine was one of the two first moguls purchased by that line. The other engines running west of Fargo were standard eight-wheelers, 16 x 24, and 16 loads was the limit for west-bound trains. The Baldwin people had figured out that the mogul should take 24 loads over any of the hills between Fargo and Bismarck. When they loaded my tank for first trip west of Fargo they would dump one bucket of good coal and two buckets of lignite, or what the boys called "baby mine" coal, which was found in abundance along the right of way through the bad lands of Dakota between Bismarck and Glendive, which was then the western terminus of the road. The directors of the N. P. had visions of fortunes saved through fuel economy in burning the stuff. The locomotives were loaded with it as mentioned, and the fireman promptly unloaded it along the right of way whenever opportunity offered him a chance to do so. In all my experience as a locomotive engineer I never had such a time trying to get steam and get somewhere as I did that summer trying to burn "baby mine" coal. If a man had said to me on that occasion that there was no such thing as poor coal, he would have been promptly shot. To add to my

troubles I was continually bucking up against the alkali taken into the boiler with the feed water.

I found out by repeated trials that 22 loads was the limit for the mogul, and to add further weight to the "Pilgrim's Progress load" I was carrying, the superintendent told me the engine was rated at 24 loads over the division, and if I could not pull that many cars, they would have to get another man on the engine. I told him to put him on and I "yumped my yob."

I went direct from there to the Gulf of Mexico and secured a position, and about the first thing I ran up against was something they call English coal, sold for ballast to shipowners. I never quite exactly knew what they call the stuff; it might have been either dust, slack or dirt, and the picnic was continued.

When a man says to the locomotive engineers in this country that there is no such thing as poor coal, he is placing himself in the position of the man who flaunted a red flag in the face of a bull.

I am in receipt of a letter from a Brother working on a double-track line. In this letter he makes a statement and asks advice, as follows: "I left a terminal with a train of 70 cars, 18 loads on head end, all the rest empty. It was after night and very dark. Coming around a curve I discovered the train was broken in two. I told the head brakeman that we would go to the next siding about four miles further on, sidetrack what cars we had and go back with light engine. I asked the operator if he knew where we had left rear portion of train, and his answer was that it was near the second telegraph station 12 miles back. There was a high-class passenger train going in our direction due in one hour, and another one then due going in the other direction on the other track. Now, the question is, how would you have gone after that rear end, taking everything into consideration?"

Never having worked on a double-track railroad, I am not posted as to rules and methods. Would be pleased if some of our Brothers would answer this question in the November JOURNAL.

Wear of Driving Wheel Tires.

For a subject so full of interest to anyone who will take the trouble to investigate its causes and far-reaching effects, that of wear of tire of locomotive driving wheels seems to be the least understood of any of the many relating to the operation of locomotives. That it is a matter of some practical importance is proven by the efforts occasionally made to avoid it, as evidenced by odd designs of driving wheels, in which the amount of and location of counterweight is calculated to prevent the same, and all efforts in that direction merely serve to show a want of clear understanding of the cause of the evil. Counterbalancing bears so little relation to the subject as to be unworthy of consideration. Steam distribution, by strange designs of valve gear, or a peculiar adjustment of those in general use are equally fruitless of results, and while the writer does not believe a radical change will follow this discussion of the subject, he hopes it may serve to enlighten some of our craft on a matter that has ever and seems yet to be shrouded by a gloom of mystery.

There are several causes for the increasing prevalence and extent of irregular tire wear. One is the great increase of weight on driving wheels in late years without a corresponding proportion of bearing or rail surface. Another is the demand for fast service, which necessitates the forcing of trains into full headway quickly, but the chief cause is an almost general want of intelligent effort in keeping up the power, or rather that part of the engine through neglect of which the damage to tire and machine generally, as well as track, bridges and permanent way, results. I refer to the main driving boxes.

When we look into the movement of the main driving boxes while engine is working in forward motion, and the effect on movement of wheels, we can see the cause of the flat spot that is present in any engine, in a measure proportionate to the condition relating to it, after a few months' service.

The left main tire wears most irregularly on account of the peculiar effect power applied to the right side has upon the left side of an engine. The point of excessive wear on left main tire is at that part of tread of wheel bearing on rail when left crosshead leaves the forward center. At that time the main pin on right side is at lower quarter, and the effect of power applied on the right side against main axle causes the opposite end of it to hold left driving box against forward jaw with the result that when steam is admitted to the left side, the box must be forced back against the rear jaw, or wedge, before any propelling power can be exerted on that side, and as the wheel cannot roll in a direction opposite to which the engine is going, it must necessarily slide back whatever distance the lost motion, due to ill-fitting box, improperly tapered, or loosely adjusted wedge, will permit, and it is this sliding of the left main wheel on the same part of tire once during every revolution of the wheel when the engine is working strong in forward motion that produces the flat spot to be found in all engines in more or less degree, depending upon the fit and care of the main driving boxes. All other coupled wheels are, of course, in some measure affected by the irregular wear of the left main tire.

It was believed that the irregular wear of the tire was due to "an imperceptible slipping action." A test was made to prove this by hauling a heavy train up a grade and then letting it drift back to the starting point. The number of revolutions proved to be the same in either direction, proving the fallacy of the slipping theory. There is still considerable evidence at hand in the shape of freak designs of driving wheels to prove a need of some light on the subject, for in spite of the "report" of those whose faith blinds them to fact, or whose efforts to please warp their judgment, or whose natural habit of life is to take the safe side in case of doubt, excessive tire wear goes on unceasingly until the utter uselessness of the so-called preventative demonstrates itself beyond any possibility of doubt, and another takes its place, giving the same

promise, the same "report," and the same results.

What is really needed in these days is to return to the practice of former days, when we pretended less but accomplished more. As power becomes heavier the need of care of it grows even in greater proportion, but the opposite seems to be the case. When the motive power department, as a measure of economy, ceased to wipe engines, a very long step was taken in the wrong direction. Weeds of wisdom, like all other weeds, thrive in almost any soil or climate, and when the company set the example of "Let her go, she's good enough," the enginemen went one better, until today things are considered good enough that would not have been tolerated a few years ago.

Much of the discarded practices of the past might better have been continued. Those methods, among which cleanliness was a ruling factor, developed a class of engineers that were never so badly needed as at present, for scrupulous care and skillful handling means more in these days of monster locomotives than ever before in the history of railroading. So long as the present system continues, the habit of neglect will become more general and deeply rooted, until a condition is reached that will make the problem of improvement a difficult one to solve. There is no doubt but that we are progressing with rapid strides in some respects, but in the care and management of locomotives there is ample evidence to prove that we are not by any means abreast of the times.

T. P. WHELAN.

Rods Down on One Side, etc.

PRINCETON, IND., Sept. 10, 1905.

EDITOR JOURNAL: In looking over the September number of the JOURNAL, I notice Bro. E. A. Lindsey, Div. 584, and Bro. Benj. R. Dixon, Div. 373, have answered my question in the August number of the JOURNAL, and both Brothers answer about the same way. I will now endeavor to explain my idea of the question. I do not think it would be necessary to take down

all the rods on the good side, for the simple reason that you have no power on the opposite side, namely no main rod up on broken side.

When a side rod must be taken down on account of a defect or breakdown, the corresponding side rod on opposite side must be taken down—for the good side may perhaps be caught on center, when there would be danger of the main wheel slipping by having the main rod up on both sides, and the side rod that is left up would buckle, break or bend, or the pin may break, but when all rods are down on one side, including the main rod, I don't see how the good side could buckle, break or bend, or break a pin. As there is no main rod up on broken side, and no power, and if the good side should be caught on center there is nothing to get engine off center but a pinchbar or another engine, and in that case if engine would be pinched or moved off the center by other power, all the wheels would move the same way and distance, and the engine would move herself, when the front and back wheels would move off the center just as much as the main wheels, and they would be moved along with main wheel by the power transmitted through the side rods to them. I would like to have the opinion of the Brothers on the subject.

I will now endeavor to answer Bro. Dixon's questions. To his first question I will say that if the graduating valve pin broke, the triple would go into emergency position, etc.

To his second question I will say that oiling the air cylinder through the air inlets will cause the air passages to close by gum; also will cause the valves to gum up, reducing their lift, and will cause the pump to overheat sooner or later.

To his third question, if pump should stop, and to find out if the cause would be in the governor, would be to tap the steam pipe close to governor, as it may be stuck when the pressure had been pumped up and if pump stops before the pressure had been pumped up to standard, the trouble would be in the governor not being adjusted properly, or the pin valve being held

off the seat by dirt. Notice if air blows at relief port C; if so, then the cause is that the pin valve is being held off its seat.

Fraternally yours,
FRANK THALMUELLER, Div. 343.

Broken Triple—Oiling Pump—Train Orders

CHANNING, MICH., Sept. 11, 1905.

EDITOR JOURNAL: In answer to Brother Dixon, Div. 373, on page 805, September number, will say first, that a triple valve broken as he describes will destroy the service application feature, and the brake on that car will not set until the train line has been reduced sufficiently to bring valve in emergency position, then it will set with an emergency application, as the pin being broken, there is nothing to remove the graduating valve from its seat and no air can go into brake cylinder until it moves into emergency position.

Second, the air end of the pump should not be oiled through inlet, as it forms a gumming deposit on the valves. If a pump is gummed up I have found that by disconnecting exhaust pipe leading to main reservoir at the pump and pumping a tub full of a strong solution of lye or soda ash and water through it and afterwards enough clean water to thoroughly rinse it out, it will clean the pump nicely and by keeping a good swab on the piston, pump will do fine work and run cool.

Third, open the bleed cock in the steam passage of the pump, and if the steam comes out good it shows that the governor is open and admitting steam to the pump O. K., and that the pump is at fault; but if no steam escapes it proves the governor is closed and allows no steam to go to the pump and the governor is defective.

We have just inaugurated a new idea in train orders here which I think is a good thing. Every order which is sent to two or more offices, each operator receiving it must check each word of his copy, underscoring it as it is repeated to the train dispatcher by another operator, and sign the office call of the office he checked with, together with the word "Check," as "Check Rn," which will insure each copy

being the same, and we are not allowed to accept an order if every word is not underscored and the word "Check" and the call of the office repeating the order to train dispatcher written on the bottom of the order.

Yours fraternally,
ROY C. MEAD, Div. 297.

Whistle Valve and Answer to Bro. Dixon.

MASSILLON, O., Sept. 8, 1905.

EDITOR JOURNAL: Although there are but few parts in the air-signaling system, it requires good judgment to locate defects that cause incorrect signals to be given. The signal system, like the automatic brake, if in good condition will work all right if handled properly, but if we get too much sawdust with the bran the apparatus is likely to soon wear out, just as the horse would; but we cannot always blame the signal apparatus for the improper response of the whistle—it may be that the cord is not handled properly. In transmitting signals with the air signal system there are certain precautions to be observed. If the whistle gives one long blast when the cord is pulled twice, it may be that the reductions are made too close together or the diaphragm stem fits too tight. When a reduction is made in the signal pipe, it causes a reduction in the signal valve and the diaphragm stem, making a snug fit, the pressure above the diaphragm reduces faster than the pressure below, and the diaphragm is forced upwards, raising the diaphragm stem, opening the exhaust valve, the stem is raised until the groove is above the bushing and air below the diaphragm escapes quickly through the groove and milled spaces to the whistle. It will be seen that air also escapes from above the diaphragm to the whistle.

The same reduction of pressure that opens the signal valve opens the reducing valve, allowing air to flow into and raise the pressure in the signal line, this increase of pressure following the closing of the car discharge valve and immediately after the reduction in signal valve increases the pressure above the diaphragm faster than below, forcing the diaphragm down and seating the exhaust valve;

therefore if the stem is of loose fit the valve will not be affected by leaks, or it won't respond to a light quick reduction in signal pressure. If the train is short the signal valve will respond to a reduction on any of the cars, but on a long train a reduction from the rear car may not be sufficiently rapid at the signal valve to open it and the whistle would not sound; again, the whistle is liable to give two blasts when the cord is pulled once if the stem is of too loose a fit. The reason for this is that both chambers charge at nearly the same rate and the diaphragm will vibrate, causing it to rebound, opening the valve and causing the second blast. There should be time allowed for it to raise, whistle, seat and equalize, if the valve is O. K. We will admit that the fit of the stem has considerable to do with the proper handling of the valve. If it makes too tight a fit the whistle will give one long blast instead of two.

If the whistle blows every time the brake is released, there is a direct connection between reservoir and signal line. It is caused by the supply valve being held open by dirt on its seat or the regulating spring having too much tension; or in the old style valve, the supply valve spring being broken or too short. Main reservoir pressure in the signal line can be detected by the whistle screeching as the bell of the whistle is adjusted for 40 pounds pressure and not for 90 pounds.

ANSWERS TO QUESTIONS

First—If the pin that fastens the graduating valve to the triple piston stem is broken, the graduating valve will be held on its seat by auxiliary pressure and the brake will not apply until a sufficient reduction is made to move the slide valve to emergency position. Emergency valve gummed up will have the same effect.

Second—Oiling through air inlet gums up the air valves and reduces their lift, and closes the air passages. The air valves should have $\frac{3}{8}$ of an inch lift, and if they are reduced it will result in overheating the pump.

Third—Open drain cock in steam supply passage of pump.

Fraternally yours,

FRANK L. DAVIS.

Air Pump—Switches—Journal Space, Etc.

PORTSMOUTH, O., Sept. 5, 1905.

EDITOR JOURNAL: Please allow me space to answer some questions asked by our Brothers in the September number of our JOURNAL.

In reply to Brother Dixon, of Div. 373, with the pin broken that connects the graduating valve to the triple piston, the brakes will in each case apply in the emergency application, when a service application was only drawn from chamber D. The reason is the graduating valve is held on its seat by auxiliary pressure, and the brakes on that car will not apply until a sufficient reduction is made to move the triple slide valve to emergency position, causing quick action of the brakes with only a light reduction. The auxiliary pressure acting on the triple piston is not sufficient to compress the graduating spring, but when a second reduction is made in train-line pressure, the auxiliary pressure is sufficiently greater than train-line pressure to force the triple piston out and compress the graduating spring, and the triple then assumes emergency position. A gummed up graduating valve will have the same effect as a broken pin.

It is detrimental to an air pump to give it oil through the air inlet, because it gums up the receiving and discharge valves and reduces their lift and causes trouble.

To test the pump governor for $9\frac{1}{2}$ -inch pump stopping, open the drain cock in the pipe leading to the pump; if steam escapes freely at this cock the governor is not at fault. To test with the 8-inch pump, you haven't this cock to test by, so you have got to test by other methods. If the governor is at fault it can be determined in this way: With governor controlled by train-line pressure, close the cut-out cock underneath the brake valve, place the brake valve in service position. This reduces the pressure in chamber A of the pump governor and the force of the regulating spring 41 will have a tendency to close the pin valve, which gradually increases as the pressure is exhausted, and if the pump doesn't start when the

pressure is exhausted, the trouble is in the pump, and not the governor. If the governor is controlled by main reservoir pressure, close the cut-out cock under the brake valve and then place the brake on lap and disconnect the air pipe to the governor at the union; if the pump then starts, it indicates that the governor is at fault, while, if the pump doesn't start, it is the pump at fault and not the governor.

I note that J. O. Detweiler thinks that the railroad companies should get safer switch appliances. The C. & O. Ry. has, I think, the best appliances I have seen. The switches have a signal connected to them one mile from the switch, which changes from safety to danger when the switch is thrown for the siding. There cannot possibly be a wreck unless the engineer runs a red block one mile from the switch.

In reply to Bro. Mayhall, of Div. 359: First No. 1 has got to use second No. 1's rights from J to H. This is all the way out of such a block, I think. Work extra 100 will not need new orders unless the work order is annulled.

In reply to his criticism, and to the Editor, will say that I don't think that we could use twenty pages for any better purpose than technical matters. There seem to be a good many Brothers interested in these studies.

I notice a great deal is being said about the brick arch. I fired engines four years with a brick arch and can recall the time when a brick arch fell down and we reduced train to get into the shops. I think with a brick arch the life of the flues is longer, but I cannot think it pays the railroad company to have them for one reason: When the engine comes in with flues leaking, it takes from six to seven hours to get the work done, and the engine out again, while without the arch it takes about two hours. I don't see that we burn any more coal without the arch than we do with it, and the steaming qualities are better, I think, without the brick arch. We were not having much trouble those days with flues leaking, like we do now, but the tonnage is much greater now and the engines have got to be

worked to their full capacity; this makes the difference mentioned.

We have had several driving wheels flattened here in the last six months and our road foreman of engines has got his knife ready for the next engineer that happens to flatten a set of driving wheels. The general excuse when a set of wheels is flattened is, that an air hose bursted, causing the emergency application of the brakes, which caused the drivers to slide and before they could be released the flat spots were made. This is a wrong excuse; the triples on the engine and tank are the old style and don't set one pound harder in emergency than they do in a full service application. The brakes set quicker but not with any more braking power. The cause is, too short a piston travel, or the use of the reverse lever and the brake together. The latter is the most common cause of this trouble; and we have had considerable trouble here with scorched crown sheets, and in several cases bolts pull through the crown sheet, and have fine water too. It has been bad this season with mud, but not so bad as to cause a man to burn a crown sheet. The most common excuse for this is the water glass fools them. This is all a mistake; a competent runner will notice this in a second by the water not moving up and down in the glass. Our road foreman told me that in each case in the future he was going to use the knife on the guilty party in either a burned crown sheet or flat driving wheels, so our Brothers of the N. & W. Ry. may know that the penalty is set for the future.

Fraternally yours,

E. A. LINDSEY, Div. 584.

How to Oil Pump, Etc.

TIPTON, IND., Sept. 3, 1905.

EDITOR JOURNAL: In answer to Brother Dixon's questions in the September number, first, if the graduating pin was broken that triple would go into emergency and could not get a service reduction on that car. Why? Because the pin being broken, the valve would go over and uncover emergency port, caus-

ing an emergency application on that car.

Second, to oil a 9½-inch pump through inlets will, if followed up, stop up ports leading from air valves through pump; also will stop up the strainer. To oil the air end of a pump, start your pump slowly and oil through oil plug on top of air cylinder when it makes its down stroke. This can be done if your pump does not blow through too badly; if so, you cannot get much oil in, even that way.

Third, if your pump should stop on account of governor trouble, there would be no steam in pump, as about the only thing in the governor that would cause it to stop would be the steam valve stuck shut on account of grease and dirt around stem.

Fraternally yours,

A. H. KELLEY, Div. 534.

The Brick Arch.

MARQUETTE, MICH., Sept. 14, 1905.

EDITOR JOURNAL: I was interested in the article on the brick arch in the September JOURNAL, and commend Brother Reading for the course he has taken. Instead of condemning it he has given his experience and invited the opinion of others. If this course were adopted in our JOURNAL and some evidence given of the defects and remedies, it would probably save much time and expense in experimenting.

As I understand the brick arch, it is to delay the gases and distribute them, so that a higher degree of heat can be maintained from the same amount of fuel; and it seems to me the principles are good and in the interest of economy, with proper firing and draft appliances. We experience many of the troubles mentioned by Brother Reading. To remedy this a larger space was out between flue sheet and arch, which has proven a success on engines with fire-boxes varying from seven to eleven feet. The arches are now made with six-inch space in front, with three-inch lug on arch flues, two-inch space in sides, length 46 inches, with 8-foot fire-box. With this shape arch we run 3,000 miles with an average of fifteen or twenty flues choked or having arch cleaned or repaired. I certainly favor it in this section

of the country, with so much snow and often extremely cold weather. We are not troubled so much with leaky flues, which seems reasonable to me, for with so much heat retained in the arch and delayed by it, we have a more even temperature and consequently not such sudden contraction.

Another thing in its favor is it changes the current so as to bring the flame more in contact with the heating surface and causes gases to be consumed that would otherwise pass away in smoke.

The choice of the arch has been demonstrated with engineers and firemen; within the last two months we were short of brick and several of the engines ran without it, and in almost every case there was a complaint. Of course, there are so many different styles and sizes of fire-boxes, and as many different draft appliances that the arch may not be a success in all cases.

I would like to hear from others on this question, believing it would be profitable, especially when fuel is one of the important factors in the operation of railroads.

Fraternally yours,

JAS. A. PEARCE, Div. 94.

Switch Engineers' Hours.

NORFOLK, VA., Sept. 12, 1905.

EDITOR JOURNAL: Having read several articles recently in the columns of the JOURNAL in reference to long hours which the enginemen employed in switching service are subject to, I thought I would write a few words regarding the same.

I am employed in switching service, and being a little modest I felt a delicacy in starting this subject, but as it has been started I hope that it will not be allowed to stop. The member of Div. 84 is correct when he says that the long hours are not in keeping with this progressive age.

In the writer's opinion this matter could be adjusted at the next convention. The Brotherhood of Locomotive Engineers is one of the best labor organizations in the world, and why should the members be subject to the longest hours

and receive less compensation than other branches and trades? Why, Brothers, I recently learned that members of the order are running switch engines on a branch of a large system for two dollars per day of twelve hours for the day.

The switch engineers have been less looked after by the committees than any other service. A few years ago these were hospitals for the injured and old, but now if you are not young and vigorous you cannot hold up your end, and as the member of Div. 84 says, if you move a little slow you are incompetent.

Mechanics cannot be secured in the city of Norfolk for five dollars per day eight hours, and if they work overtime they receive time and a half, and Sundays and all holidays double time, and if they make a mistake of five minutes they do not get dismissed for a collision and damaging the company's property, which is the case of the switch engineman.

I hope the members will not allow this subject to drop, but keep it going; even this will be some consolation for the poor switching engineer.

And now a word to the delegates to the next convention. Think this matter over and see if you cannot think of some way to shorten these hours. Say to yourselves I have a good passenger or a freight run, and why not do something for the poor switching man who pays as much into the treasury for the benefit of the salaried chairman as the others, and we *must* do something for them.

MEMBER, Div. 456.

Where Did the Babbitt Come From ?

HELRNA, MONT., Sept. 6, 1905.

EDITOR JOURNAL: I was running a cross compound engine a few trips ago and engine was doing good work; both valve and piston tight, no blows by packing. After making a stop I cut engine into simple and she coughed out that extra exhaust as usual when cut simple, and about one-half pound of babbitt very hot came out of top of stack and lay on top of pilot beam, some spots of it over headlight, number plate, and front end of smoke

arch. I saw it go out of top of stack and went to see what it was. There was one piece about two by three inches, about as thick as heavy paper, and the rest was in spots. Where did it come from and what gave it the heat ?

Respectfully yours,

FRANK NEWTON.

Pin Broken in Triple Piston—One Side Connected—Train Order.

SPOKANE, WASH., Sept. 5, 1905.

EDITOR JOURNAL: In answer to Brother Dixon's question in the September JOURNAL, would say:

First—If pin breaks, graduating valve will be held on its seat by auxiliary reservoir pressure, and when a service reduction is made the triple piston and slide valve will go to service position, but no air can pass from auxiliary to brake cylinder. By making further reductions in train line the pressure in auxiliary will be enough greater to force triple piston to emergency position against the tension of graduating spring and brake will go into emergency; this triple will then be a dynamiter or kicker.

Second—Air passages and valves will become gummed up if oil is put in through air inlets.

Third—Opening drain cock in steam pipe between governor and pump will determine if steam gets past governor.

Brother Dixon says in answer to Brother Thalmueller's question in the August number of the JOURNAL, that if side rods are left up on good side, cranks are just as liable to go one way as another when starting. I would like to ask what would cause them to go the wrong way? The engine depends on momentum only to carry the cranks past the center and why would not the back and forward cranks be carried past the same as the main one? Brother Thalmueller's question is a good one and I would like to hear more about it.

I saw a ten-wheel engine run over 100 miles with rods all down on one side, and rods all up on other side, and no damage resulted. I think I would be tempted to

leave side rods up on good side if I had to take main rod down on disabled side.

In answer to Bro. I. D. Mayhall, would say:

First—Orders once in effect remain so until fulfilled, superseded, or annulled. Engine 100 would not require another working order.

Second—According to Standard Code rules, First No. 1 may assume the rights of Second No. 1 (train order rights are all that is necessary in this case) and proceed to H; there take siding for No. 2. It would also be well to inform the crew of No. 2, that you are not Second No. 1 and that Second No. 1 is following. This would be the only practicable way out of the mix-up. Yours fraternally,

E. E., Div. 147.

Cylinder Bushing Turning.

JASPER, TENN., Sept. 7, 1905.

EDITOR JOURNAL: I have been reading several articles recently in the JOURNAL in regard to the turning of bushings in cylinders, and if I may use the expression, I think this would be almost a mechanical impossibility. Nearly all of these bushings are the whole length of the cylinder and are held in place by the front and back head. They are also turned a fraction larger than the bore, and the cylinder warmed and the bushing slipped in while cool, and I must insist that it would speak very badly for the workmanship if one was to turn, don't you think so?

Yours truly, H. D. HALL

Time Card Rights.

HOUSTON, TEX., Sept. 12, 1905.

EDITOR JOURNAL: Replying to Brothers Light and Sawyer who answered my question on change of time in the August issue of the JOURNAL, will say, that our Board of Examiners of the C. E. & W. Ry. instructed us to look out for two No. 1's all the way over the division. They claim that the No. 1 that leaves on the old card has a right to run, leaving the initial point on time on old card, and according to rule 4 B, Standard Code, takes up the corresponding number of train on

new card and proceeds. The new card then gives authority for starting a No. 1 out of initial terminal after new card takes effect and there is nothing to prevent it from running to the end of the division.

The above ruling was sustained by the General Managers' Association.

I would like to ask Brother Lenahan, if he burned his old time table, how would he know whether or not he was complying with the second paragraph of Rule 4 B, Standard Code? Of course, he might remember, but that would be no authority if all time tables of that number were destroyed.

Brother Lenahan, the copy I have of the Standard Code does not contain the five-minute clause that you speak of. Rule 92 merely says that a train must not arrive at a station in advance of its arriving time. The leaving time at the last station is the arriving time with us.

Fraternally yours,

E. M. MURPHY, Div. 139.

Main Pedestal—Distribution of Power.

CHAMBERSBURG, PA., Sept. 7, 1905.

EDITOR JOURNAL: I would like to ask a question through the columns of the JOURNAL. With an engine running ahead, which main pedestal has the most strain, front or back, and why does one have more than the other?

Yours fraternally,

E. D. NUCKELS, Div. 685.

What is Wrong With the Pump?

KIMBALL, W. VA., Sept. 10, 1905.

EDITOR JOURNAL: Will someone tell me through the columns of the JOURNAL what is the cause of an air pump pumping ten pounds of air and then stopping for about a minute. It was first thought that it was caused by a defective governor, but that was changed without results; then someone suggested that it might be in the pump, and one newly overhauled was substituted, but the same thing continued. Where was the trouble?

Fraternally yours, W. P.

CLEVELAND, OHIO.

CHARLES H. SALMONS, - Editor and Manager.

Address all matter for publication—Correspondence, Technical and Link Departments, changes in Division Addresses, Special Notices, and address of Outside Subscribers to C. H. SALMONS, S. G. R., Editor JOURNAL.

No reading space will be sold for advertising purposes under any circumstances.

All money matters should be addressed to W. B. PRENTER, F. G. R., 307 Society for Savings Bldg. Send New York or Chicago draft, Express money order or Postal order, but never send personal check. Also send the name and address of all members Initiated, Reinstated, Transferred, Expelled, Suspended, Withdrawn and Deaths to the F. G. R., as per Section 16 of the Statutes.

Changes in Address of the JOURNAL and orders for Division supplies should be addressed to D. EVERETT, T. G. R., 307 Society for Savings Bldg.

Advertising Department matter and all correspondence relating thereto should be addressed to W. N. GATES, 409 Garfield Bldg., Cleveland, O.

OCTOBER, 1905.

Unity of Action.

A oneness of purpose is the essential factor in the success of associations of any kind; confidence is built upon trust, and trust upon confidence in one another's integrity, so it follows that if we are to possess the confidence of our associates in fostering and advancing special interest, we cannot divide our allegiance; and in organized labor associations, every man should obligate himself to that class to which his labor in kind belongs and personal interest is in harmony with. This is no bar to that common interest all true advocates for the betterments of laboring men feel for all others who are organized for higher moral, mental and financial conditions. An obligation to that special class to which one belongs by occupation, with every honest man, is not only a guarantee that he will do nothing to injure any other class of organized labor, but a singleness of that obligation is essential to confidence in his integrity, and unity of action depends very materially upon confidence, and to secure the best results every engineer should belong to the B. of

L. E., and his membership have in it no question of doubt as to his earnest efforts in the direction of betterments for engineers. Even the most conservative can find little excuse for not adding his personal influence, even if for no other purpose than maintaining the desirable conditions the progressive element of the order has secured in the past.

That engineers should belong to the B. of L. E. if they are to foster their personal interests is a growing sentiment was particularly emphasized in the large class initiated into Div. No. 1, of Detroit, and into Div. No. 260, at Ashtabula, noted in the Link columns of this issue.

The time will surely come when dual obligations will be understood as divided obligations, which are always inconsistent with unity of action, and detract rather than add strength to any movement whatever its nature. When we join and obligate ourselves to that class our kind of work represents, we obligate ourselves to the principles of organized effort, which is a better assurance than any dual obligation can be that we will adhere to those principles and do nothing that would injure any other class of workmen. If we are obligated to two or more, each of these may well look with suspicion upon an obligation so little fixed in its purpose, and which may at some time compel one so obligated to be unfaithful to one or the other.

Let us be consistent in and faithful to our one obligation to organized labor and we will be in the best condition to foster our own interests and demonstrate our honest friendship for all other classes of organized labor.

Industrial Workers of the World.

The presumed successor to the American Railway Union was given a start at a recent meeting in Chicago, Ill., at least so far as a name goes, by some of the same factors that were in the A. R. U. movement, and whose excesses put that order into oblivion.

The Industrial Workers of the World sounds well, but whoever has given any

time to the study of human character and the motives that actuate most of us, will need no prophet to tell the future of such a conglomeration of interests, and an attempt to merge all laboring men into one organization, whatever the obligation may be that is imposed upon membership. There never has been, and never will be, a condition wherein men of thrift and intelligence who become experts in what they undertake, can be yoked by any sort of an obligation that will hold good, to another class of mediocre, indifferent men, whose value as laborers varies as much or more than their energy and intelligence. With all the mean conditions of the laborer of Russia, that country has always found enough of the laboring class to carry and use guns, to hold in subjugation millions of their own countrymen, and it is not a pleasant reflection that in all the walks of life men may be found, if the right inducement is offered, to do what every right thinking person must condemn; and if we are to have obligations of value and are to feel that they mean something, we cannot go too far from that which will, or at least, is believed, to foster personal interest.

The attempted new order with a name as large as the industrial forces of the United States is, in fact, purely political in intent, and even as a political organization cannot be held to one line of action by any sort of an obligation.

It would be a queer proposition for members of any labor organization to obligate themselves to an organization which in its declaration of principles insults organized labor by declaring that, "the trades unions aid the employing class to mislead the working class into believing that the working classes have interests in common with the employers, etc." They propose a condition wherein men in all industries cease work whenever a strike is ordered. A moment's thought ought to be enough to satisfy anyone, and an engineer in particular, that such condition could not possibly obtain, and that an attempt would be its immediate destruction, and if, as they say, all toilers come together in the political as well as the industrial field,

they could not be held in line to do that which is inimical to personal interest; so an obligation to such an organization would be a farce, and we trust at least that no member of the B. of L. E. will be guilty of such an obligation even if his obligation to the Brotherhood is a weak tie. A dual obligation of any kind which promises to do one thing for one labor order and another thing for another, if circumstances required, is doubtful enough, but for a member of organized labor to obligate himself to every kind of interest, regardless of its character or demands, would show such indifference to an obligation that no one would have confidence in it. The Bible says: "No man can serve two masters," and all honest men know that they cannot honestly promise to pay Jones and Smith on the same day with only enough to pay Jones.

Liability or Co-Employee Law.

We present in the Legal Department of this issue, pages 861-2-3, a synopsis of the enactment of the legislatures of the various states on the subject of the liability of the employer to the employee, which deviates from common law as handed down to us from English law. These will be continued until all the laws enacted up to 1901 have been reproduced in the Legal Department. We would advise careful reading of all these efforts to amend the law so as to place the employee on somewhat of an equal footing with those not employees. It will be noticed that these laws apply exclusively to railroad service, and the conclusion is easily reached that the influence which brought these modifications and benefits, came through the influence of those to be benefited by them, and is a compliment to the various Legislative Committees.

Members Out of Work.

We desire to call attention to Section 90, Page 43, Statutes, relative to members out of work. This section is not complied with as it should be unless it is a fact that there are few, if any, members

out of work. Quite a number of engineers could have been directed by the First Grand Engineer where to apply for positions if the name and address of those desiring positions had been filed with him.

Another important omission which not only weakens the Grand Office record, but is, in fact, a lack of common courtesy, is a failure on the part of many of those who have been directed where to go for employment, and obtained it, to notify the F. G. E., even when requested to do so. Certainly those who are benefited through the efforts of the F. G. E. should appreciate it enough to notify him as to the result; besides, it is desired to keep a record of all who secure employment through this channel and from whom, and we hope more interest will be shown in this matter by all concerned.

Married.

Rea, daughter of Brother and Mrs. H. B. Dain, of Smithville, Texas, was married to Mr. Robert A. Walker of the same place, on Sept. 14, 8:30 p. m. At Home after October 1, Smithville. The Editor was remembered with an invitation to be present, but distance forbids acceptance, though it does not prevent extending sincere congratulations. Marriage is a new start for happiness and usefulness, the real cornerstone of society. May every anticipation of happiness be with them as long as life shall last.

LINKS.

BRO. R. H. LANHAM of Div. 123 has been promoted to traveling engineer on the Missouri Division of the Iron Mountain Railroad, headquarters at De Soto, Mo. Brother Lanham is fully qualified and well adapted to fill the position, and the company has made an ideal selection for the position. Brother Lanham is up-to-date in ideas, which he will put into practice. Fraternaly,

F. MOYER, A. C. BRENNECKE, Div. 42.

BRO. CHAS. MONTGOMERY, who resigned Aug. 15th as traveling engineer for the Iron Mountain Railroad to accept a very

prominent position with the Pere Marquette system, was entertained at a banquet in St. Louis, Mo., while on his way from his former home, De Soto, Mo., to Grand Rapids, Mich., his new headquarters; and as a token of good will he was presented with a handsome diamond pin by his friends on the Missouri Division. When we say the presentation address was made by our genial Brother Frank Moyer—"nuff sed." Brothers on the Pere Marquette are to be congratulated on having such an efficient and amiable gentleman in their midst, and we can truthfully say the longer he is known the better he will be liked. Fraternaly,

A. C. BRENNECKE, Div. 42.

R. H. LANHAM, Div. 123.

ONCE again the members of Div. 290 feel they have been honored by the appointment of Bro. C. J. Whereatt to the position of road foreman of engines, with headquarters at Superior, Wis.

A MEMBER OF DIV. 290.

SUBDIVISION 686 entered the galaxy of Subdivisions in September, when several Brothers under the guidance of Bro. W. Wowder, C. E. Div. 123, proceeded to Bonne Terre, Mo., to organize B. of L. E. Div. 686. The Brothers from St. Louis and De Soto were met at Riverside by a committee and conducted over the Scenic Railway to Bonne Terre, where they found several engineers of years of experience awaiting their arrival, and we were conducted to Hotel Shepard, which is managed by that noble-hearted lady, Mrs. W. Frey, who always has a welcome, with a table full of all the good things the market affords. After the Brothers had satisfied the inner man, we all repaired to the hall which had been procured for the occasion, and after the necessary preliminary arrangements the several good men in waiting in the ante-room who wished to join our noble order were presented to the representatives, who soon converted these Brothers into a Division of the B. of L. E., after which a recess was taken and a trip to Mrs. Frey's hotel was made, where we found a spread that was fit for a king, which these good

Brothers had prepared for us, and once more having satisfied the inner man, we repaired to the hall at 7 p. m., when we learned that several more engineers desired to join; and in the course of the evening we initiated twelve good men into the order, and after the instructions had been imparted to the new officers and members, it was unanimously agreed to name the new Division, Parsons Division 686, after the Second Vice-President, who bears the best wishes of the men and always has them at heart. A vote of thanks was extended to the officers of the Mississippi River & Bonne Terre Railroad for their many courtesies to the engineers of their road, as well as the visiting Brothers, and especially to Mr. T. U. Young, the always smiling Superintendent, and to that worthy official, the Master Mechanic, I. F. Kehrman, in whom we found a true Brother, member of Div. 48, and his ever-willing right hand bower, Bro. J. Bowman, of Div. 48, who worked for some of the men that they might be at the meeting; and too much cannot be said in praise of both the officials and men.

This place has to be seen to be appreciated, as the railroad is located in one of the richest lead belt districts in America and has its own railroad and mills, and contains some of the finest machinery in the country, both in locomotive shops and mills. There is installed in these plants among the machinery some of the latest up-to-date air compressors, lathes and presses, and one of the first air brake rooms fitted, with all the half-tone cuts pertaining to the air pump, lubricator injector and model engine, with the installing of one of the most complete electric plants in the country; and when we find one of our Brothers in charge of such vast machinery as is Brother Kehrman, we may well feel proud of him.

With best wishes and success to our new Brothers, and to those who were so courteous to us, I remain, A VISITOR.

DETROIT Div. No. 1 held a system union meeting (M. C. R. R.) at Elks' Hall, Sunday, September 17. Grand officers W. S. Stone, G. C. E.; Wm. B. Preuter, F. G.

E., and W. E. Futch were present. The meeting was well represented by delegations from every division on the whole system, as follows: Divisions 900, 182, 338 and 2, and from Divisions 93 and 122 Grand Trunk System, and Div. 248 L. S. & M. S. Ry., and that which makes an occasion of this kind most interesting and enjoyable, out of a class of twenty who were eligible for initiation, fourteen were present waiting to be initiated into the mysteries of the B. of L. E. This ceremony was performed by C. D. Brown, Chief Engineer, and his assistants in a very creditable manner and pleasing to the members present.

Bro. Wm. B. Preuter, F. G. E., gave a very interesting address on the financial end of the order, making a splendid showing, being the very best in the history of the order. This was very gratifying to all present, particularly to the rank and file, and many who are not conversant with the general financial end of the order. Bro. Preuter was highly complimented and we all feel proud of him.

Bro. Futch, President of the Insurance Department, addressed the meeting on insurance and the duties of insured members in the prompt payment of their assessments, giving figures and facts showing beyond a doubt the B. of L. E. insurance is the cheapest for the risks taken of any insurance in this country or any other. For the past seventeen years it has averaged \$17.79 per thousand. Think of it! He spoke particularly on the duties we owe our families, the uncertainty and danger of our calling and how little we know of what is ahead of us on what may be our last trip, and urged every member to take out and carry every dollar of insurance the B. of L. E. offered for the protection of their loved ones at home and themselves in case of accident. Bro. Futch's remarks were well received and set the boys thinking, judging from the remarks of many of the Brothers after the meeting.

Bro. W. S. Stone, G. C. E., then addressed the meeting on general conditions and growth of the order, which was most gratifying and instructive. He spoke of

non-attendance at Division meetings—how a large majority of the Brothers are careless about their own business, allowing the minority to handle it for them, never attending Division meetings for months and even a whole year until something happens to them or they have a grievance, then they are the first one there waiting for the door to be opened. We all know these to be facts. Brother Stone said, "I am a crank on three things. First, good citizenship; second, sobriety; third, saving a part of your earnings for your old age or in case of accident," and spoke of the selfishness of some of the Brothers in trying to get something that did not belong to them, causing dissension among the members, urged every Brother to do his part in furthering the interest of the B. of L. E. by supporting the committees from local to general, and he guaranteed then they could get anything within reason; in fact, Brother Stone gave the Brothers a heart-to-heart talk in that good old man-to-man fashion that did every Brother present good, and I am sure will have a lasting effect.

Bro. Donald R. MacBain, Div. 132, followed with some very pleasing remarks; Bro. E. R. Webb, Div. 1; Bro. Frank Billings, Div. 2; Bro. Cal Lawrence, Div. 132; Bro James Caulkins, Div. 248; Bro. Chas. Haskins, Div. 1; Bro. M. J. McAndrews, C. E., Div. 132; Bro. C. D. Brown, C. E., Div. 1; Bro. Chas. Baker, Div. 1; Bro. Frank Pimlott, Div. 1, and many others. The meeting closed at 7:30 p. m. and, after a general hand-shake all round, the Brothers repaired to the Elks' dining room for a banquet given by Division 1, assisted by Division 17, Ladies' Auxiliary, and the wives of the members, who had the tables handsomely decorated and a six course dinner was served in up-to-date style.

Bro. James J. Roach, Chairman of Committee of Arrangements and toastmaster at the banquet, had a surprise for us in the way of a musical program.

The Misses Corrinne and Mabel Smith gave a piano and violin solo, Miss Eleanor Trahey, piano selection, and Master

George Pimlott, recitation. All the above are sons and daughters of members.

Brothers Stone, Prenter, Futch, C. D. Brown, Frank Pimlott, Donald MacBain, E. K. Webb and many others responded to toasts. Everyone present enjoyed the remarks from the Brothers mentioned, and it was unanimously agreed that the first system meeting held by Division 1 was a complete success in every detail. The time was 11:30 p. m. when, amid good-bys and hand-shakes, they all departed for their respective homes well pleased with their day's work.

Too much cannot be said in praise of Bro. James J. Roach, Chairman of Committee of Arrangements, for his hard and untiring efforts in making our meeting a success. However, I am afraid he has gotten himself into trouble; he did so well that from this an nobody else will be thought of on occasions of this kind, and we will have more of them. CORKEY.

THE twenty-first anniversary of Sub-division 260, Ashtabula, Ohio, occurred on Tuesday, September 19, which, in addition to other pleasant features, was made notable by the initiation of a class of eighteen new members, bringing their membership to 153.

An invitation had been extended to the grand officers to be present, F. G. E. Bro. W. B. Prenter responding for the initiation ceremonies, and the Grand Chief, Bro. Stone, and Bro. Prenter for the evening.

The afternoon meeting was called at 2 p. m. in the Elks' Hall, Bro. H. F. Bates presiding as Chief Engineer, who after calling the meeting to order, stated that the Division was organized in 1884, and that the 19th marked the twenty-first anniversary of the Division, and, as an evidence that it had kept the faith, was in excellent standing and progressing, he was pleased to say that there were eighteen engineers, good and true men, present to join the Division by initiation, making forty since January 1, 1905, to take their rightful places in the ranks of the B. of L. E., and add their moral force and strength to the order which has done so much in

the past for the engineers, in bettering their conditions—socially, morally and financially.

The class was then brought forward and the ceremony of initiation gone through with in a most commendable manner, after which F. G. E. Bro. W. B. Prenter made a short address on the good of the order, the duties we owe to each other, and the benefits of that community of interest which comes with all working for one purpose, the benefit of all engineers.

After announcement by the presiding officer that in harmony with the arrangements of the committee there would be a banquet at 7:30 p. m. in the adjoining hall of the Knights of Columbia, the meeting adjourned.

At the appointed time the Brothers, families and friends gathered in the banquet room, where covers were laid for 300. The spread was a most inviting and palatable array of goodies, served in the best possible style by the young ladies of the members' families and prepared by Mrs. Kitson.

After the banquet the company repaired to Huskell's Hall, next door to the Knights of Columbia Hall, where the dance was held. Here Mayor McMillan gave an address of welcome to the visiting engineers and their friends, F. G. E. Bro. W. B. Prenter responding. G. C. E. Bro. W. S. Stone was then called upon for an address and responded, though briefly, owing to the time of train for Cleveland.

The platform was then given to Richardson's orchestra and the grand march opened the ball, which continued until everybody was tired enough to go home, well pleased with the twenty-first birthday of Div. 260.

The Committee of Arrangements was composed of Brothers C. C. Cooke, C. Britcher, William Keeler, P. S. Brown, C. Gilbert and G. E. Moore, and they had reason to feel satisfied with the result of their efforts.

Among those from out of the city were General Yardmaster S. D. Wilcox, Roundhouse Foreman W. S. Jackson, C. A. Tuttle and Mr. and Mrs. William Lewis,

Youngstown; Mr. and Mrs. William Bond, Buffalo; Mrs. J. J. Keefe, Collinwood; Chief Engineer J. J. Rossiter, of Div. 273, and wife, Mr. and Mrs. J. W. Cherry, Mr. and Mrs. Frank Hubbard, Mr. and Mrs. King, Mr. and Mrs. A. O. Belding, Mr. and Mrs. E. E. Strock, Mr. and Mrs. J. F. Stone, W. J. Raynor, F. J. Welch, Miss Clara Fitzsimmons, Mesdames F. Vogt, J. L. Dwyer, W. B. Blaisdell, A. B. Elliott, J. Griffith, Ralph Stone and J. McMillan, Conneaut.

We, Massachusetts beaneaters, have enjoyed the presence of Assistant Grand Chief Engineer Bro. E. W. Hurley, on several occasions lately with different systems and Divisions in our section, the last time with the Brothers of the N. Y., N. H. & H. at a system meeting held in the hall of Div. 57, at Providence, R. I., and after a very interesting meeting about 100 of us enjoyed an old-fashioned Rhode Island clam dinner. Perhaps some of you do not know from experience what that means, but if you will come on here in the summer, we will be glad to provide a way for you to get the experience. There is nothing we enjoy better than a clam dinner.

These system gatherings cannot be held any too often, for it strengthens the structure of the Brotherhood by bringing the Brothers closer together, and gives them better understanding of associated duties and of what may reasonably be expected from the order. It is a good place for the kickers to attend, and to find out how little they have to kick about.

E. E. POTTER, Div. 439.

DIVISION 347, B. of L. E., held an interesting meeting Aug. 8, 1905. A special was called for that evening, as the Chief Engineer received a telegram that Bro. E. W. Hurley, A. G. C. E., would be with us that evening and following day. The remarks of Brother Hurley were interesting and very instructive. He impressed on the minds of the members present their duties as Brotherhood men, and what strength there is in being well organized, and the respect shown them when they conducted themselves as men. His

remarks lasted about two hours and were listened to with a great deal of interest. Brother VanDervort, from Div. 87, Troy, N. Y., addressed the Division with a few remarks. Several of the members also made a few remarks.

The following day Brother Hurley was with the G. C. of A., advising with them on matters pertaining to Brotherhood business. The unanimous opinion of the members is that they hope to see Brother Hurley with them again soon.

C. F. DENNIS, F. A. E., Div. 347.

A SPECIAL MEETING of Omaha Div. 188 was held Aug. 23, in honor of a visit from Assistant Grand Chief Herman L. Wills. Brother Wills stated that he desired to have a heart to heart talk with the members of our Division, and occupied the floor for one hour and forty-five minutes, giving much good and wholesome advice, and presenting conditions as he had found them to exist in some Divisions he had visited throughout the country. He urged the members to be more punctual in their attendance at meetings, and advised that it was more to their interest to look after the money they had invested in the Brotherhood from time to time than to put in the hours elsewhere, or go fishing meeting days and nights. Brother Wills was listened to very attentively and applauded, and voted to be the right man in the right place.

It was announced that the ladies of P. M. Arthur Division 304, G. I. A., who were in session in the hall above, would be pleased to meet Brother Wills and hear a few words from him, and Bro. A. A. Campbell was delegated to escort them to the Division room. The Chair gave them a cordial and hearty welcome, and thanked them for the four vases of beautiful flowers with which they had adorned our pedestal and tables.

Brother Wills was then introduced to them and gave them a very high compliment for their energy in upbuilding and maintaining their noble order.

Bro. W. H. Whitney, eighty-one years of age, and one of the pioneers of the Brotherhood of the Footboard, as it was

known in the early sixties, and a continuous member for forty-three years, was then introduced and gave quite a lengthy history of the dark days of the order, the small wages paid, no seniority of rights, and bad conditions generally, and compared them with the wages now received and rules now in vogue throughout the country, all brought about by the efforts of the Brotherhood.

The ladies now gave us a very pleasant and welcome surprise in the way of huge dishes of ice-cream and plates of cake, which was thoroughly enjoyed by all. Everyone expressed himself as well pleased and said he was glad he came.

T. C. LIVINGSTON.

MONDAY, Sept. 11, Bro. M. W. Cadle, A. G. C. E., visited Div. 144, at Staples, Minn. Owing to the absence of Chief Engineer T. F. Willis, whom Brother Cadle notified he was coming, we had no notice until he arrived on the train from Duluth, where he had met with Divisions 395 and 290 on Sept. 10. A special meeting was called and a lot of new call boys, all old engineers, appointed to round up all the members of 144 and 474 who were in. This they succeeded in doing so that we had a fair-sized audience to listen to Brother Cadle's address, and for about two and one-half hours he told the Brothers present many things about the B. of L. E. and the benefits they derived from it, that many of them had never heard or thought of, particularly the younger men. He explained to them the difference between conditions existing now in the rates of pay, contracts, seniority rule, pay for overtime, etc., all brought about by the B. of L. E. committees through organization and united effort, and the conditions existing when the classification of pay was in effect on most railroads; when an engineer was promoted he ran one year for third-class pay, then a year for second-class pay and was lucky if he was not fired before he served long enough to get first-class pay, and where many times in getting a job after getting fired he would have to start over on second-class pay again. This, with

the old rules of no overtime or overtime two or three hours after schedule time, also the difference in pay for the same service, was explained by Brother Cadle in such a way as to make a lasting impression on the members present. Brother Cadle also spoke on other subjects and B. of L. E. matters and his visit here will be productive of good results. A resolution was passed by members present thanking Brother Cadle for his eloquent address, also thanking Grand Chief Brother Stone for sending him.

Hoping Brother Cadle will come again,
I remain
JOHN HORAN.

READING DIV. 75, B. of L. E., and Guiding Star Div. 307, G. I. A., held their annual outing at Carasonia Park, August 2, which was well attended, considering the rush of work on the road at the present time. They took in all the attractions at the park and indulged in numerous games and enjoyed themselves very much. There were visitors from Tamaqua, Lebanon, Phoenixville, and other places, and all had a very enjoyable time, especially with the estates, by the way they were disposed of. Brothers Reber and Waters showed their skill as cooks by the quality of coffee they made, and Sister Madden introduced a guess box for the benefit of the G. I. A. at 5 cents a guess and realized a snug sum for their treasury. The children especially enjoyed themselves, romping through the woods and on swings, etc. The day sped so fast and the time came to return to our homes long before we would have wanted it, but we had to go, hoping to have the same repeated next year by all who were present this year and all the other members of both Divisions for whom there is a good time in store, and no member that can avail himself of this opportunity should miss it, as I do not think that those that were at this meeting will miss it next year.

Yours fraternally,
J. CLINTON SHUGARS, Div. 75.

KEYSTONE DIV. 298, and H. W. Oliver Div. 452, held a reunion and picnic August 14, at New Rock Point Park, Pa., on the Pennsylvania Lines, a special train leaving Bennett, Pa., at 7 o'clock a. m. and another special leaving the Union Depot, Pittsburg, Pa., at 7:30 a. m.; both were well patronized and a large and jolly crowd went forth for a day of pleasure and enjoyment. After their arrival at the park the committee proceeded to entertain their Brothers and their families and friends. Their attention was first called to the many contests which had been arranged, Bro. C. R. King, chairman of the committee of sixteen members of Div. 298,

and Bro. T. G. Henry, chairman of the committee of fifteen members of Div. 452, assuming charge of the different contests and proving themselves equal to the occasion. Bro. Henry is excelled by none when it comes to running a picnic, and Bro. King certainly understands his business. They proceeded to award the many fine and valuable prizes which had been donated by the merchants of Pittsburg and Allegheny.

The guessing contest by ladies of G. I. A. Divisions 20 and 122—1st prize won by Mrs. Poland; 2nd prize won by Mrs. Wilson, both of Division 20. A game of horseshoes between members of Divisions 298 and 452—1st prize won by Div. 452; 2nd prize won by Div. 298. A free for all foot race won by Bro. Shriver of Div. 452. Running race for girls six to eight years old, won by Margaret Nichols, daughter of Bro. Nichols of Div. 452. Running race for boys six to nine years old, won by Master Tim Dillon, son of Bro. P. Dillon of Div. 452. Running race for girls fourteen to sixteen years old, won by Edna Stahl. The hop, skip and jump, won by N. J. Frawley. Guessing contest for members of the B. of L. E. over fifty years old, won by Bro. C. R. King, of Div. 298. A game of horseshoes by members of the committee—1st prize won by Bro. Keys of Div. 298; 2nd prize won by Bro. C. J. Smith of Div. 452. Great interest was taken in the voting contest between Bro. E. E. Jordon, F. A. E. Div. 298, and Bro. M. H. Butler, F. A. E. Div. 452, for a gold watch-chain and charm, won by Bro. Butler. Then came the baseball game between members of Div. 298 and Div. 452. More interest could not have been taken in any league game of the season than in this one; for the time being friendship ceased and the crowd was divided, each side showing their colors—the P. R. R. vs. the B. & O.—this was quite noticeable among the ladies in the grand stand, the ladies of G. I. A. Div. 20, standing by the P. R. R. and the ladies of G. I. A. Div. 122, by the B. & O. Division. 298's team showed the result of practice and looked like winners at the start, but 452's team rallied in the third inning and it was close in the fourth and fifth innings, but from the fifth to the finish 452 had things their own way and won by a score of 12 to 10. During the game old and gray-haired engineers who care little or nothing for a league game could be seen jumping and yelling as though their lives depended on having their side win, but after the game was over harmony and good fellowship prevailed.

Div. 452's team had with them Master Jerry Cavanaugh as their mascot, who

carried the colors. Jerry attracted much attention among the crowd. He is a son of Brother Cavanaugh of Div. 452, and a "chip of the old block."

The balance of the day was spent dancing and in many other ways until 8 o'clock p. m., when the crowd departed for their homes well satisfied with the pleasure and enjoyment of the day.

"ECHO OF 452."

DIVISION 526, Belle Plaine, Ia., had the pleasure of a visit from Assistant Grand Chief, Bro. H. Wills, when a meeting was held in our Division room and Bro.

Brother Wills talked of the means of raising the standard of the Brotherhood and the credit due home influence, and the wife and mother.

Rev. R. S. Osgood was then called upon, who made a short but very interesting talk on the character of the order and the commanding position occupied by our late Grand Chief, P. M. Arthur, as the highest type labor leader with the highest of moral ideas in all his teachings.

The tables were then cleared away, and after a social hour, the members by appointment again met in our Division room for another session.

AT THE BANQUET GIVEN BY DIVISION 526.

Wills delivered a stirring address on the good of the order and our duties as members, which was very much appreciated by all present.

At 5 o'clock p. m., as prearranged, our wives, sweethearts, and friends joined us, assembling at the Burley House for a supper arranged in honor of Brother Wills. Stopping at the porch of the hotel, we were photographed by Keyser, and proceeded to the dining room where we were served with an elegant supper.

At the close of the meal Brother Wills was introduced by Bro. Wm. Tidball, who said the Assistant Grand Chief would confine his remarks to the ladies, as he had given the men all the advice they could live up to in the next few months.

THE eleventh annual reunion of the old A. & G. W. R. R. employees was held at Oakwood Park, Meadville, Pa., on Aug. 19th, and an unusually large representative number, over 300, with their families were in attendance. The day was bright and pleasant and was all that could be desired for an outing.

A sumptuous dinner was served in the Casino by the ladies and gave evidence of their culinary skill. Between 500 and 600 partook of the tempting viands. After dinner a picture of the assemblage was taken by photographer I. E. Hall, who later made one of the old employees.

Occupying seats on the stage were Hon. Wm. E. Reynolds, John Dorley, Judge John J. Henderson, Mayor John E. Reynolds, D. S. Dockstader, D. D. Hughes, C. Cassidy, President Charles Sweetman and Secretary W. E. Nichols.

After music by the Young Northwestern Orchestra the annual meeting was called to order in the auditorium at 2:30 o'clock by President Chas. Sweetman, who welcomed the visitors in the name of the association, and expressed pleasure in the response made and in the large attendance. After a few well chosen words President Sweetman introduced Mayor John E. Reynolds, who said:

Mr. President, Ladies and Gentlemen: It gives me great pleasure to a second time welcome you, and in the name of the citizens of Meadville, to offer you the hospitalities of our city. Your organization is a most worthy one, and as years go by these reunions should become more popular. It is a great benefit to our country to have organizations which celebrate at certain times to com-

Meadville from the railroad; today the number is over 1,000. It is no wonder that the city of Meadville should take an interest and pride in this old railway, which has since developed into one of the great trunk lines of the country and is of such great benefit to the financial and industrial welfare of our city.

The singing of the "Star Spangled Banner," by H. S. Robinson, the audience joining in the chorus, was followed by a short address by Hon. John J. Henderson, judge of the superior court, who said: "There are many here, from the venerable president to the humble track walker, who meet to renew old associations. Many are gone and rest from their labors. We pledge ourselves anew in these old-time friendships. We may make new

MEMBERS OF THE ATLANTIC & GREAT WESTERN RAILWAY ASSOCIATION.

memorate some event. Your organization marks and makes historical one of the early and famous railroads of our great country.

The building of the Atlantic & Great Western Railway marks an epoch in the history of Meadville as well as other towns so fortunate as to be located on the line of the road. Before 1865 Meadville was a borough, but with the building of the railroad she had to take on city airs and have a special city charter. The building of this road had not a little to do with the early development of the oil industry in this country, which has since assumed such vast proportions, and the old company also had its share in the development of the great West.

In 1865 about 400 men received their living in

acquaintances, but we never forget old times, old friends, old acquaintances. We have another occasion for meeting today. Of all industries in which men engage, there is none that calls out the heroic as the grand work of transportation. Diligence, faithfulness, integrity, these qualities are found in railroad employees. There is none that calls so much for condemnation as the railway men. When financial conditions were in peril, this organization of the A. & G. W. R. R. was undertaken for the development of towns and the extension of service. It must be a subject of congratulation now in the evening of life to see the fruit of their labor, in a happy family and the development of a great country. The employees have been the bone and sinew of this great com-

monwealth. We are indebted, as citizens, to you gentlemen for your industry and your devotion to your work.

"I congratulate you on this occasion, and trust it may be full of happiness and that Providence will crown you with new blessings and bring happiness to your soul."

A recitation by Miss Vera Cummings was well given and elicited deserved applause. Music by the orchestra followed.

Christopher Cassidy, who spent several years in that country, spoke interestingly on "Panama, Its People, Climate and Canal."

A solo, "Bendemerr's Dream," was given by Harry S. Robinson, who graciously responded to

Mr. Hughes paid a tribute to the ladies and spoke of the pleasure in meeting and greeting so many old-time friends.

The secretary read some verses, "Thirty Years Ago," sent by John Coughlin of Bellevue, O., and then stated the object of the meeting. There are at present 1,022 names enrolled on his books.

Since the last meeting there have been 27 deaths as follows:

A. Wheeler, H. O. Wait, Salamanca, N. Y.; E. Haynes, Buffalo, N. Y.; E. Collopy, Union City, Pa.; Michael Schmidt, J. D. Carmont, C. J. Kelso, Wm. Propy, E. S. Griswold, A. L. Dunbar, John Stein, Veith Stein, Meadville; C. H. Moore, Sam Briggs, H. V. Warren, E. C. Stockwell, Cleveland,

GROUP OF MEMBERS WITH THEIR WIVES AND FRIENDS.

an encore. A recitation by Miss Vera Cummings, and music by the orchestra preceded a few remarks by D. D. Hughes, who said:

"We feel truly thankful that so many of us are yet left to enjoy the greeting of friends, who in years gone by helped by their labor to construct what was known as the Atlantic & Great Western Railway. With the advance of time, so advanced the facilities, and better construction of the old line to meet the growing needs of the people of today. The name first given to the road would be more appropriate today than at the time the road was built, for the reason that it now stretches from the Atlantic ocean and terminates in the far West, connecting with lines reaching to the Pacific."

O.; Fred Keller, J. A. Columbus, Galion, O.; Geo. B. Wright, Columbus, O.; J. H. Barrett, Chicago, Ill.; George Howden, M. Rodenbaugh, Kent, O.; A. M. Mosier, Cleveland, O.; C. R. Fitch, New York, N. Y.; A. P. Powell, Huntington, Ind.; Jas. Doyle, Sedalia, Mo.; Joseph Newham, Kent, O.

Regrets were received from J. E. Brown, Minneapolis; P. H. Boyton, Allegheny; Miss Bertha Gehring, Chicago; Wm. Garstrong, Indianapolis; Charles Shoemaker, Bradford; Capt. E. Day, Lakewood, O.; Geo. M. Kant, Melrose, Mass.; R. H. Wallace, N. Y.; John Branen, Bellevue; Thos. Hindreth, Mansfield, O.; Ward H. York, St. Augustine, Fla.; H. Hornberger, Council Bluffs; C. S. Rhodes, Indianapolis; O. S. Lyford, Chicago, and J. S. Diesen, Garden City, Kans.

A resolution was adopted recommending P. F. Keefe of Rochester, N. Y., to fill a vacancy on the board of railroad commissioners of New York State.

Mr. Keefe is a member of Division 8, O. R. C., Rochester, N. Y., also of this association, and is a candidate for the appointment; therefore, be it

Resolved, That this association heartily and unanimously endorse Brother Keefe and respectfully urge Hon. Frank W. Higgins, Governor of New York, to appoint him as Railway Commissioner to fill this vacancy. W. E. NICHOLS, Sec.

The resolution was adopted as read.

Mr. Keefe was introduced and spoke of the honor conferred and expressed great satisfaction to receive the endorsement and good-will of the association, and complimented the association on having so worthy a secretary who is interesting in his efforts to secure attendance.

A. B. Gaston made a motion that a hearty vote of thanks be tendered Secretary Nichols for his work. Carried.

The place of meeting lay between Meadville and Kent. A strong plea was made for Kent, which secured the place on the second ballot. It is the present home of Joseph Newhall, the first man pledged on the pay roll of the A. & G. W. and its first roadmaster. He is now in his 83d year and hope was expressed that he be able to attend the meeting in 1906.

The election of officers resulted in the choice for president, C. T. Bortz, Kent, O.; first vice-president, B. E. Tilden, Chicago; second vice-president, M. Ricksecker, Gallon, O.; secretary, W. E. Nichols, Meadville; treasurer, J. E. Eckert, Meadville. The presidency was tendered Charles E. Sweetman, who declined.

Among the prominent ones attending the reunion were: John Dorley, Chicago; John Russell, Parsons, Kan.; O. H. Jackson, Prescott, Arizona; George Keller, Pittsburg; O. E. Gleason, D. D. Hughes, Titusville; Frank Brown, Warsaw, N. Y.; Philo Brown, Salamanca, N. Y.; Wm. Fuller, former superintendent of motive power, Cleveland, O.; Frank Eckart, Chicago; F. Hammond, Painesville, O.; C. Ramsey, Kaylor, Pa.; Owen Hagen, Port Jervis, N. Y.; F. Shirtleff, E. M. Kane, George Hines, E. Herman, E. B. Conrad, Kent, O.; W. P. Shultz, T. H. Keau, Dayton, O.; E. E. Lawrence, Tallmadge, O.; C. R. Powell, J. Carroll, C. G. Pettingill, Corry; J. Fitzmaurice, Union City; M. Whittecombe, Kent, O.; Richard Starsmer, Kane; Jerome Mecusker, St. Paul, Minn.; Joseph Terry, Watts Flats, N. Y.; D. W. Guernsey, Oil City; W. Headley, Portland, O.; Byron Newberry, Kent, O.; Frank Brown, Rochester, N. Y.; R. A. Thompson, Kent, O.; W. C. Newberry, Salamanca, N. Y.; P. F. Keefe, Rochester, N. Y.; W. G. Bronson, Toledo, O.; Thomas Dill, Youngstown, O.; M. Jackson, Indianapolis, Ind.; James Giles, Randolph, N. Y.; A. R. Tilden, Le Boeuf.

The Reception Committee was composed of C. P. Harris, chairman; D. N. Winegar, M. Haugh, F. H. Honeywell, H. Dowdell, Martin Doulin, J. F. Wheeler.

Entertainment Committee—Mrs. W. S. Murray chairman; Mrs. D. N. Winegar, Mrs. John Eckart, Mrs. J. M. Wilson, Mrs. A. G. Strachan, Mrs. A. Noxon, Mrs. W. R. Fordyce, Mrs. A. Heckman, Mrs. C. M. Mosley, Miss Ella Haugh, Miss Gertrude Harris, A. G. Strachan, C. M. Mosley, all of whom are entitled to great credit for the success and pleasure of this meeting.

BRO. JOHN C. VEEDER, who joined Div. 46, Albany, N. Y., in 1864, has just completed a half century of service for the New York Central & Hudson River Railroad Company, says the *Albany Times-Democrat*:

He is one of the most popular, faithful and efficient engineers in the employ of that company and is as capable, trustworthy and expert in guiding one of the monster machines of that railroad system as he was in his prime twenty-five years ago. Although he has passed the three score mark in life some seven years since, he does not look to be over fifty years of age. There is scarcely a gray hair in his head or in his beard. His extended youth, his strong physique, his perfect vision and unshaken nerve are the reward of a faithful adherence to the rules of sobriety and temperate living that this great railroad corporation has always endeavored to induce its employees to follow.

Mr. Veeder entered the service of the company when a boy of sixteen years. He began his connection with it as a fireman. Serving eight years

BRO. JOHN C. VEEDER.

in that capacity he was made an engineer and for the past forty-two years has been in charge of an engine, first in freight service and then on the passenger runs. He has never been before the company officials on any charge whatsoever. His record is a perfect one. No accident due to his negligence or inattention to duty has ever happened while he had charge of a train. He was in but one accident and that was a slight one, in which no one was injured and the cause of it was no fault of his work. He has run the best trains on the Mohawk division of the road and was for three years one of the pilots of the Empire State Express. He is now the engineer of a milk train which runs between this city and Oneida. During his service he has had charge of numerous special trains and has carried two Presidents—James A. Garfield and William McKinley.

Mr. Veeder was born in Glenville, Schenectady county, and comes of old Revolutionary stock. His grandfather, Nicholas V. Veeder, was the oldest surviving soldier of the American Revolution in New York State and the third oldest in the United States, being buried with military honors at Schenectady, in 1861. He had fought under General Montgomery and was one of those who defended the Mohawk Valley from the invasion of the British, which threatened Albany at one stage of that conflict. His son, Joseph Veeder, was the father of the present John C. Veeder.

The latter entered the grocery firm of G. J. Carley, of Schenectady, when a boy, as a clerk. In that service he succeeded the late P. M. Arthur who left the grocery business for railroading, and who subsequently became Grand Chief of the Brotherhood of Locomotive Engineers.

When Mr. Veeder became a fireman on the New York Central, as it was then called, Erastus Corning, of this city, was its president. This was before its consolidation with the Hudson River railroad and the Vanderbilts were not yet connected with it. At that time the local division ran west to Utica, and the late Chauncey Vibbard was General Manager and Superintendent, and Major Priest Division Superintendent, men who were powers in the railroad world in their day. Mr. Veeder is laden with a wealth of reminiscences of the early railroad days, but he very rarely speaks of them when there is a chance of their finding their way to print.

FORTY-THREE YEARS in railroad service is the record of Bro. Owen Hughes, of Div. 379, whose picture accompanies this article. Believing a brief sketch would be interesting to many, I would like space for the following:

Brother Hughes was born in Wales and began firing there in 1860 on the old London & North Western Railway, the locomotives of that date being open engines, having neither cabs nor pilots. He came to the United States after 21 years on the English road, and entered the employ of the Wisconsin Central Ry., and contin-

BRO. OWEN HUGHES, DIV. 379.

ued until June, 1908, when he voluntarily left the service.

In 1884 he became a member of Div. 80, but subsequently transferred to Div. 379, which he represented at the Atlanta Convention in 1892, and was later chosen as a delegate to the convention at Ottawa, Canada.

Brother Hughes resides at Abbotsford, Wis., a division terminal of the Wisconsin Central lines, out of which he used to run. Although he no longer grasps the throttle of a "Standard" or a "Battle-ship," he still maintains an active interest in the business of the road and the affairs of the Brotherhood, and is always warmly welcomed at the meetings of the order.

Yours fraternally,

A. F. J.

SPECIAL NOTICES.

Anyone knowing the whereabouts of Rodney Gillis, formerly an engineer on the St. Paul & Duluth, will confer a favor by notifying Wm. Ryan, 720 Ninth avenue North, St. Cloud, Minn.

Mrs. Mary Anderson, Brighton, Mich., desires to know the whereabouts of Hugh D. Anderson. When last heard from was running out of Denver on the U. P. Ry. Settlement of an estate is involved. Please correspond with the above.

Bro. Mike Conner, formerly in the employ of Mike Elmore, grading contractor, will please correspond with Bro. H. Wiggenjost, F. A. E. of Div. 98.

Anyone knowing the whereabouts of Adam McLaren, formerly a member of Div. 98, supposed to be in Mexico, will confer a favor by writing to Bro. H. Wiggenjost, F. A. E. of Div. 98.

The traveling card of Bro. B. Meehan, member of Div. 678, was lost. If presented, kindly take up and forward to Bro. Wm. H. Warner, F. A. E. Div. 678, and oblige.

Information is wanted of the whereabouts of Jas. F. Meynardie, who when last heard from was on the Burlington in Missouri. Kindly address Bro. F. M. Shield, F. A. E. Div. 460.

Information is wanted of the whereabouts of Harry Henry MacCoy, an engineer formerly employed on Vandalia Lines out of St. Louis, Mo. Please address Fred MacCoy, Box 866, Raton, N. Mex.

The traveling card of Bro. C. I. Lott, member of Div. 210, was stolen at High Point, N. C. If presented, please take up and forward to Bro. J. L. Pickling, F. A. E. Div. 210, 713 Second street, Macon, Ga.

Bro. H. M. Thurston, member of Div. 284, while in the Pennsylvania Railway Depot in Washington, D. C., lost his pass book containing traveling card, membership certificate issued by Div. 284, Grafton, W. Va., and letter from Mr. R. P. Sanderson, Superintendent of Motive Power, B. & O. Ry. If any of these are found or are presented for favors, they should be taken up and forwarded to Bro. Geo. A. Deck, 344 Washington street, Grafton, W. Va.

Anyone knowing the whereabouts of Geo. Burkhardt, who fired on the C., N. O. & T. Ry., out of Somerset, Ky., in 1886-7, will please address Bro. J. W. Little, Teeswater, Ont., Can.

Horace Altemus, once an engineer on the D., L. & W. Ry., later a blacksmith, quit that and went West, will please address Bro. R. W. Cox, F. A. E. Div. 276, Box 30, Scranton, Pa.

Members of the following Divisions will correspond with the F. A. E. of their Divisions immediately:

PREMIUMS FOR JOURNAL SUBSCRIPTIONS.

We have renewed our arrangement with the Webb C. Ball Watch Co., Cleveland, O., for an unlimited number of watches as premiums; watches that are guaranteed to be O. K. in every respect, and will be given as premiums under the following conditions:

LADIES' WATCH.—For 30 subscribers named and \$30.00, the Ladies' Queen Watch, 17 jewelled, 14 karat, gold filled case, retail price, \$20.00.

GENTLEMEN'S WATCH.—For 60 subscribers named and \$60.00, Gentlemen's B. of L. E. Standard, 17 jewelled, 14 karat, gold filled case, retail price, \$42.00.

19 AND 21 JEWELLED WATCH.—For 75 subscribers named and \$75.00, either the 19 or 21 jewelled watch, in 14 karat, gold filled case, retail price, \$50.00. All cases guaranteed for 25 years.

Mr. C. H. Salmons, Editor JOURNAL:

DEAR SIR AND BROTHER:—The 19-jewelled Webb C. Ball gentleman's watch has been received O.K. The case selected by you was perfectly satisfactory, as is the watch. I think some one in each Subdivision should work for one of these splendid premiums, as well as for the interest of the JOURNAL, and through it, the order. With many thanks for the watch, I remain

Yours fraternally,

C. K. TALIAFERRO, C. E. Div. 595.

A large number of Brothers can obtain one of these excellent watches if they make an effort, and will help the JOURNAL as well as themselves. EDITOR.

If your JOURNAL address is not correct, or you fail from any cause to receive it, fill out this form properly, cut it out and send it to 307 SOCIETY FOR SAVINGS BLDG., CLEVELAND, O.

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION

Official Notice of Assessments 105-108.

SERIES G.

OFFICE OF ASSOCIATION, ROOM 803, SOCIETY FOR SAVINGS BUILDING, }
CLEVELAND, OHIO, Oct. 1, 1905.

To the Division Secretaries L. E. M. L. and A. I. A.:

DEAR SIRS AND BROS.:—You are hereby notified of the death or disability of the following members of the Association:

Four Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.00 from all who are insured for \$750, \$2.00 from all who are insured for \$1,500, \$4.00 from all who are insured for \$3,000, and \$6.00 from all members insured for \$4,500, and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25, page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries located in Canada will please remit by draft or express money order. We will not accept packages of

money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

THE Greatest Mercantile Establishment in the World

Remarkable Expansion in Buildings to Meet Wonderful Business Growth

PRESENT ENORMOUS PLANT OF MONTGOMERY WARD & CO.

FURTHER EXTENSIVE ENLARGEMENTS IN CONTEMPLATION THE MOST SUCCESSFUL ENTERPRISE OF THE AGE

The wonderful growth of Montgomery Ward & Co. from a single room in 1872 to its marvelous mercantile palaces of the present time, as shown in the accompanying illustrations, is a magnificent tribute to honest merchandising.

Today the business of this great concern towers above its imitators and would-be competitors as high as its lofty tower on the Lake Front of Chicago towers over the passerby on the street below.

The seven mammoth separate and distinct structures entirely occupied by Montgomery Ward & Co. exclusively for the transaction of its colossal business, would, if gathered into one grand group, be recognized as one of the wonders of the world.

Each of these magnificent buildings is a giant in itself, and the total realty holdings of Montgomery Ward & Co. are the very largest of any mercantile establishment in the world.

Every foot of the many acres of floor space represented in these structures is crowded with merchandise of every description, fully set forth in their marvellous catalogue, and still there are insistent demands for additional space to accommodate the increased and increasing business.

Already magnificent plans are in view for further enlargement during the coming year, which will give due consideration to future possibilities, permit of unlimited expansion and development to any magnitude.

Not only is this great house the original, the very first in the world to develop the Catalogue idea of selling everything direct to everybody—it is also the leader in magnitude of business done, in growth of its patronage, in maintaining its old customers for the longest periods and in expansion of area year by year to meet business requirements.

Its catalogues and its customers are everywhere.

It ships goods regularly to every country on the globe, to every inhabited island of the seas, to every state and county of the United States, Canada, Mexico, Central and South America, as well as to Europe, Asia, Africa, Australia, and Oceania.

The magnitude of the business transacted by this vast concern is almost beyond human calculation.

As is its custom, Montgomery Ward & Co. issues this year a large, new, annual Catalogue, Number 74, containing the economical bargains and choice selections in every line of merchandise, for the season of 1905-6. This large, illustrated book is the standard Buyer's Guide of the world, and comprises nearly 1200 pages, 126,000 different articles, quoted at the very lowest prices.

This catalogue is the leading and recognised authority on everything that may be purchased in any store, to eat, wear and use. It is the largest city store brought right to your door. Always complete; always has the latest things; always absolutely trustworthy, containing lowest prices on honest goods of the exact quality represented, without exaggeration or falsehood.

The policy of the firm is to make its catalogue the undisputed leader, far in advance of anything others can ever hope to equal.

Our readers who desire a copy of this new catalogue can have one sent, postage paid and free of all costs whatsoever, by simply sending their name and address on a postal card asking for Catalogue 74 and mentioning this magazine. Address your request to

NOVEMBER, 1905.

NUMBER II.

From Peru to Bolivia.

South America has constructed about 25,000 miles of railroad, narrow and standard gauge, the larger part of which has been constructed by Brazil and the Argentine Republic, some of these countries having less than 100 miles. Peru has approximately 1,000 miles of road. Correspondence with Bro. C. W. Rickard, whose letter appeared in the September JOURNAL, page 771, brought me the photographs from which the accompanying illustrations were made. The Molendo, Arequipa and Puno Railroad (now called the Southern Railway of Peru),

from Molendo, the seaport town on the Pacific Ocean from which it starts, to Arequipa, while it gains an altitude of 7,000 feet, does not encounter the engineering difficulties that are met with between Arequipa and Puna. Of this a writer for the *Chicago Record-Herald* says:

"It took a great deal of nerve to build the road to Puna, but it was American nerve and American genius that overcame the Cordilleras and the deserts and found a path through the gorges and along the mountain sides in a manner that will always be a source of amazement to ordinary people and admiration

AREQUIPA, PERU, SOUTH AMERICA.

to engineers. It is often said that money and science can accomplish everything. Even Archimedes offered to raise the world if someone would give him another planet to stand on, and that principle is illustrated by the Puna railroad. It was a triumph of energetic and brainy men, who, however, did not have to count the cost. The government of Peru paid the bills at a time when the republic was rolling in riches, when the mines of the Andes were pouring out a silver stream and the islands of the sea were furnishing even more valuable contribution to the public treasury in the form of guano.

"It was the first great mountain road to be built. It was the pioneer in that

months of consultation and comparison of notes had laid out the profile of the road, Thorndike, their chief, put a blue print in his pocket, got aboard a mule and started up the line proposed. He rode for two days without looking at the blue print, but made a careful examination from the path that the goats had surveyed in their search for the bunch-grass that grows in the sand. Then he returned to his office at Lalay and with his pencil laid out the line.

"Passenger trains leave Arequipa for Puna on Thursdays and Sundays at 7 o'clock in the morning, and consist of an engine, one first-class and one second-class passenger car and a box car for

AREQUIPA RAILROAD BRIDGE 6,000 FEET LONG, WITH RAILING AND WALK ON EITHER SIDE OF TRACK.

line of engineering which carves a right of way on the breast of a precipice and adopts the longest possible distance between two points to make the grade. There may be more remarkable pieces of railway construction in Colorado nowadays, but there was nothing to compare with the Puna road when it was built from the ocean over the backbone of the continent and climbed 14,666 feet across a desert a distance of 228 miles.

"John L. Thorndike, of Boston, was the engineer. He still lives in Lima. It is said that after a gang of his assistants had gone up and down the different gorges and over all the mountain trails, and after

mails, baggage and express matter. Freight trains run every day. The locomotives and the first-class cars are on the American plan. The second-class cars are similar to those seen in Austria and Italy, with four long benches running lengthwise opposite each other and ventilated by lattice work like a stock car. It is said that they were constructed in this way to allow the passengers to gossip with their friends outside, because it was found difficult to get them back in again if they were once allowed to alight at the stations.

"The track climbs around the base of the volcano El Misti, rising nearly 500

feet during the first forty-four miles. The mountains are bare, and seem to be composed of alternate layers of rocks and baked clay. The latter looks like chalk and cuts like cheese. It was very convenient and useful for grading purposes, and on the mountain sides are great cavities, which were shoveled out for this purpose, whose walls are as regular and as smooth as if they had been done with a carving knife. At intervals of a few miles are lovely valleys, allowing where the water has been gathered and utilized for irrigation, for the soil is rich and produces anything that man may plant in a most prolific manner. Sugar-cane and wheat grow side by side, cotton and corn intermingle their foliage, and

with such confusion as to suggest that some Titan had lifted a mountain and put it back upside down. It is a field of marvels for the geologist. At one place the track encircles an ancient crater about twelve miles wide, which is filled with ashes and lava to an unknown depth. While Misti is semi-active and vapor continually escapes from its crater, the volcano of Ubinna, which is over 16,000 feet in height, is continually active, although its eruptions are not severe and no damage has ever come from them.

"Within sight of the car windows, besides these two monsters, we have frequent views of Coropuna, one of the highest peaks in America, which measures 22,800 feet, Charchani, 19,400

AREQUIPA, PERU, MT. MISTI, 20,320 FT. HIGH. ONE OF THE RENOWNED CRATERS IN THE WORLD.

potatoes and melons and ordinary vegetables and fruits grow as they do in California.

"At an elevation of 13,413 feet the railway passes through immense deposits of chalk, with occasional outcroppings of lava. This is followed by a number of mountains that seemed to be composed entirely of baked clay, showing evidences of intense internal heat and tremendous upheavals from the neighboring volcanoes. There is another curious phenomenon that nobody seems to be able to explain. One hill will be composed of chalk or baked clay, without the sign of a stone, while the next hill will be composed of stones entirely, piled up in enormous masses

feet, and Pichu, which is 17,800 feet."

Passing the 14,000-foot level we descend to Puno on the shore of Lake Titicaca, 12,846 feet above sea level, said to be the highest lake in the world. It is 120 miles long and from 80 to 60 miles wide. Passengers bound for La Paz, Bolivia, take the steamer to the south landing at the little town of Ohillilaya; there a stage coach of primitive character, with teams of six or eight mules traveling at a gallop, covers the forty-five miles over fairly good roads to La Paz, the most progressive town, and capital of Bolivia.

From Puno another division of the railroad runs nearly north to Cuzco, a somewhat longer distance than the road from

Molendo. It would hardly seem possible that such altitudes would be productive, but this correspondent says:

"The soil improves with the elevation because it is moistened almost daily by the clouds that wrap the mountains, and as we reach Canaguas, which is 18,380 feet above the sea, the mountain sides are covered with gray bunch-grass, which makes excellent grazing. A few wild flowers are seen along the sides of the track and little streams come rippling down from the melting snows in a most

carry their knitting and spinning spindles with them and sit down among the rocks as contentedly as if it were a most comfortable fireside. At occasional intervals a rough shelter is built, in which they can seek protection in case it storms. It is usually a roofless well of stones six or eight feet in diameter and five or six feet high. The wind often blows with great violence through the mountain gorges and across the plateaus, and it was only the other day that a cyclone tore down a substantial brick building that was used as a station house by the railway company. Large corrals are provided for herding the sheep and vicuna, but the cattle are allowed to take care of themselves under all circumstances.

"In the high plateaus are plenty of springs, and water can be obtained at an elevation of 14,000 and even 15,000 feet by driving wells into the sand. There is supposed to be an artesian basin fed from Lake Titicaca and its twin, Poopo, which has no outlet except under ground, and it is a mystery where all the water goes to. There are many small lakes in the hollows at an elevation similar to that of Titicaca which have neither inlet nor outlet, but catch the surfaced drainage when the rain or snow falls. The snow line is about 16,000 feet. The ice line begins at Canaguas, 18,380 feet, and a film forms over standing water every night. There is no timber on any of these mountains, and the only fuel is llama dung and the yareta, a sort of peat which looks like cauliflower or pumice stone and grows in the swampy highlands, where it is cut out of the soil about a foot thick. This remarkable plant seems to grow downward,

OLD CHURCH, AREQUIPA, PERU.

cheerful and audacious manner, but are soon swallowed up in the thirsty sands. These streams contain a delicious fish that looks like a smelt and is called a pejerrey. Herds of fine cattle, large-boned animals with spreading horns, are seen in every direction, and vast droves of sheep, including many alpacas and vicuna, both being limited in their habitat to Bolivia, southern Peru and some parts of Chile. The alpacas look like dwarfed llamas, the vicunas resemble our deer. The sheep and cattle are herded by women, who

ward, for the top is always almost even with the surface of the soil and looks like green mold. The peons cut it out, spread it on the ground to dry in the sun and the wind, and then bring it into the settlement for fuel. It burns like peat.

"Wheat is one of the chief crops, although the supply has never yet been sufficient for home consumption, and much flour is still brought in from Chile. The grain is cultivated in the most primitive manner, as it is in Japan, where people have no idea of the value of time. The

ground is plowed with a crooked stick, hauled by a team of oxen or mules. One man keeps the stick in the ground—usually the trunk of a tree whittled off to a point—while the other howls at the animals. The seed is sown by hand and then the soil is raked over with a sort of harrow, home-made and of curious pattern. When the crop is ripe the women go into the field with long, straight knives, like the machetes used in Cuba, cut the stalks by the handfuls, lay them carefully in piles, tie them with strings and carry them on their backs to the headquarters of the hacienda, where, after the harvest is done, they separate the finest wheat from the stalks kernel by kernel with the fingers, while sitting on the pavement of a patio. The best of the straw is then separated from the remainder for manufacturing purposes and carefully tied up in bundles as big as one's arm. The remaining straw is spread on the floor of a circular corral called a cancha, which has a sort of windlass in the center with a long pole in the hub. Animals of all kinds are hitched to this arrangement—oxen, mules, horses or burrows, anything with hoofs—and they are driven round and round upon the straw until the grain is thoroughly tramped out of it. Then the straw is poked up into piles by men with forked sticks and stacked for fodder,

NATIVES OF PUNO, PERU.

for thatching houses and other purposes. "Barley, which is another of the staples of the country, is treated in the same way.

"According to tradition, wheat was introduced in Peru by a curious accident. Inez Munoz, the wife of Alcantara, a half brother of Pizarro, and the first European woman who landed in this country, brought with her a bag of rice. One day, shortly after her arrival, while cleaning some of the rice to make a pudding for her brother-in-law, the Marquis, she came across a few grains of wheat, which she carefully laid aside, and afterward planted in the northwest corner of the main plaza of Lima, just in front of where the city hall now stands. They yielded

NATIVE INDIAN CANOES, PUNO, PERU.

abundantly, and the next year the little crop was distributed among the settlers for seed. This was in 1535, and in 1539 the production was so extensive that the first flour mill was erected.

"In 1660 the same lady, having meantime become a widow, introduced the first olive trees into Peru, which were also planted in the plaza of Lima. All of them died except two, one of which was stolen by a Chileano and became the parent of all the olive trees in Chile, while from the other sprung all of the groves in Peru."

The Road to Yesterday.

Heart of mine, the twilight deepens to a denser,
duller gray,

By the voice of Youth, grown merry in the care-
lessness of play,
And the sunshine was all mellow as we passed
along that way.

Heart of mine, I pledged thee greatness and I prom-
ised thee a crown

Fashioned by the hands of Effort from the jewels
of renown.

But, alas! I bring thee nothing from the years but
temples gray

And a dream that lies all broken on the road to
Yesterday.

And I plucked a radiant flower on the rosy way of
Youth,

'Twas a blossom, fair and fragrant, from the
spreading bush of Truth,

All my life I swore to keep it and to cherish it—so
rare

Was its leaf and stem and odor and its beauty was
so fair;

STEAMER ON LAKE TITICACA, PERU, 12,846 FEET ABOVE SEA LEVEL.

Let us link our arms and wander down the road to
Yesterday;

And, as sweethearts stroll together down a leafy
way and long,

Let us gather blooms of memory and weave them
into song.

Heart of mine, we may discover as we wander on
and woo,

All those little lanes and byways that our eager
childhood knew,

And perhaps we'll bear some sweetness from our
journeying away,

As we wander on together down the road to Yes-
terday.

Here I pledged thee fame and riches—ah, we both
of us were young.

And we heard no note of music but the song of
Promise, sung

But the struggle grew so bitter, and so denser grew
the throng,

That the heart where I enshrined it could not keep
it overlong.

And I thought we might discover as we wandered
on our way

Its poor bruised and broken petals on the road to
Yesterday.

But O Heart, if hopes lie shattered all along the
weary way,

We are better for the sorrows on the road to Yes-
terday;

Cleansed of arrogance and evil, purged of all our
foolish pride,

Chastened, humbled, better fitted for what fortune
may betide.

If I bring thee naught I promised, I will offer thee
instead

Nobler aims and sweeter dreamings—for my little dreams are fled.
And the sweetness of Contentment leads my cherished soul away
From the dreams that lie all broken on the road to Yesterday.—*From Cleveland Leader.*

A Special Thanksgiving Day.

BY MARIE BOTHILDA.

"We shall meet as usual on Thanksgiving day?"

"Without fail. Not a Thanksgiving day shall come without seeing us together at the festive board."

So saying, Ned Jones and Harley Smith

as we shall see and provided otherwise. It was not a case of a willing spirit and a weak flesh, but—well, men could fly in the air, but—fate comes usually in the shape of a "but."

"When we marry, I shall have a beautiful daughter," said Harley one day when the two were discussing the future they had laid out for themselves, "and you will have a noble son. The two shall marry."

"Agreed," said Ned, extending his hand and gripping his friend's in token of his hearty approval.

Ned performed his part of the agreement by marrying, and having a son, but Harley had not yet prepared to comply

LLAMAS, PUNO, PERU.

shook hands and parted at the railroad depot.

Friends they had been always, boon companions and schoolmates; indeed, both had graduated at the same time and from the same class. The two young men went into business together and determined to become captains of industry, but fate in the shape of the Chicago climate determined otherwise, so Harley went West to purer air, and Ned remained behind to flirt with fortune.

Thanksgiving had always been their particular day; they never missed one; it was their red letter day, hence at parting it was provided for. Fate again interfered

with his part of the agreement, and when the friends parted at the railroad station, Ned's boy was two years old with his eye-teeth out, and Harley still a bachelor.

"Maybe it will happen out West," intimated Ned; "that's where the best ones are found."

"Depend upon it, my boy, it is bound to happen; I do not belong to any race suicide club," whereat both laughed.

The strenuous life of the far West agreed with Harley, and he staked out a permanent home, finding a partner who suited him to bind him to the West by more tender ties than those of business. He forgot the East, though he continued

corresponding with his friend in Chicago. Thanksgiving day approached, the first one since they had parted, and each wrote the other a cordial invitation to partake of friendly hospitality. The invitations were mutually accepted, in spirit only, for business interests forbade their actual meeting for sentimental purposes.

"It grieves me not to be able to meet you, my dear Ned, but I have something for which you will give thanks as much as I shall. I have a beautiful little daughter—that is she will be beautiful if she takes after her mother, which she surely must—so you see, our compact is liable to be perfected—your boy and my girl—do not forget."

So wrote Harley to Ned, and the latter replied with congratulations and solemnly

The boy and the girl were constantly impressed with the wishes of their parents, and taught that their destiny could only be accomplished through compliance. They heard so much about each other's perfections from their parents that they ended by hating each other, and they rebelled. "I hate that Marina Smith," blurted out young Jones after his father had told him for the thousandth time what a beautiful wife he was to have. "I fairly despise that Harley Jones," petulantly exclaimed the lovely Marina after her father had dilated upon the perfections and manliness of her future husband for the two-thousandth time. But Fate was working overtime, and in their case, as in all other cases, he was attending to business.

So twenty years passed and the friends

REPUBLICA STREET, CAMAGUEY, CUBA.—COURTESY P. O. RICKMAN.

renewed the agreement. "They shall be trained for each other," said he, "and when they grow up they will be made to understand that they are to be the means of uniting our families in the bonds of a closer friendship if that be possible."

But Thanksgiving days came and went and the friends never met, never stretched their legs beneath the same mahogany, never prophesied their future by pulling the turkey's wishbone. They corresponded, however, with regularity, and poured out pages of infantile cuteness, which as the years passed, grew into accounts of youthful precocity. Still further along in the trend of time, maidenly beauty and manly perfection were the subjects which occupied the pages of the fond parents' correspondence.

sorrowed for their much neglected, often interrupted Thanksgiving days, but as the twentieth anniversary approached, both determined to lay aside all other business and meet at all hazards to celebrate the day as of yore. There was another and more pressing reason why the families should be brought together; the boy and the girl had grown up into a young man and a young woman. The junior Harley Jones had attained twenty-two years, and the maiden, Marina Smith, had developed into the womanly graces belonging to the age of nineteen. It was time for them to meet and begin preparations to fulfill the destiny that had long awaited them.

Having once made up his mind, it was easy for Mr. Smith and his family to start

on their eastward trip, and they accordingly took the train they expected would carry them to Chicago. Arriving at Omaha, Smith père was confronted with an annoyance in the form of a clean-limbed, athletic young man who boarded the train, and seemed inclined to take possession of Marina as his own property. What was aggravating was the fact that Marina not only did not object to the attentions of the stranger, but encouraged them.

The cause of this attraction between the fresh young man and Marina was this: About a year previous, the young girl was visiting some friends in the city of Denver, and being unaccustomed to the hurry and bustle of that bounding city, got in the way of one of the Stout street "electrics," which like time and tide wait for

while carrying her to safety, he had squeezed her just a trifle more than was customary without a previous introduction. But as he had saved her life, she could not censure him for that; moreover, it afforded her a pleasant sensation whenever she thought of it. She had not seen him since his brave act, but he was ever in her thoughts, being romantically inclined at her age. She happened to be thinking of him when he entered the car, and the recognition was mutual, and from their earnest talk, she all blushes and he all smiles, it looked squally for the Smith-Jones agreement.

Smith did not interfere, because he did not know what he ought to do, so he waited hoping something would occur to cause a diversion. By waiting long enough

HOTEL CAMAGUEY GARDENS, CAMAGUEY, CUBA.—COURTESY P. O. RICKMAN.

no man, or woman either, for that matter, but tear through the town as if possessed, imperiling the lives and limbs of pedestrians. Marina, confused at the roar and the clamor of the gong, stood paralyzed in the path of the destroyer and would have been rent limb from limb had not a strong, vigorous youth hurled himself directly at her, and gathering her up in his arms, the impetus of his rush carrying both out of danger in the nick of time.

She had often thought of the young man, who was entirely unknown to her, and who disappeared before she could express her gratitude, and his face was impressed upon her mind, perhaps upon her heart, for she sometimes fancied that

something generally does happen, though not always in the way expected, and in the present case there happened an event which brought the destinies of all concerned to a sudden focus.

The Smith family were scattered about the car, all but the young man and Marina. They were close enough together, but the father watched them out of the corners of his eyes, resolved to put a stop to it should they go so far as to hold hands.

Suddenly, without the slightest warning, and when the car was running as smoothly as an infant's cradle, there was a tremendous splitting crash, a rending, grinding roar, and the passengers were thrown helter skelter, and over and over

as the car rolled down a steep bank. There was a moment of deathlike silence, then a shrieking, screaming, groaning, with a diapason of loud curses. Soon this uproar ceased and the victims of a railroad disaster began feeling their limbs to learn whether they were whole.

The girl found herself pinned down under a splintered seat, and face to face beside her, with his arm under a heavy timber, lay the young man. By a sudden inspiration he had flung his arm out over the girl to protect her, and, strangely enough, he had saved her life at the expense of his broken and crushed arm, for the timber would have crushed the girl's head as though it had been an egg shell. Both were badly bruised and felt their last hour had arrived, for a cry of fire was raised, and in their helpless condition

wishes of my parent. It was for that reason that I disappeared, but Fa'e was stronger than I, and now in the presence of death, I declare my love for you, and for you alone."

The girl listened with tears streaming down her cheeks, and confessed her love.

"You have always been in my thoughts since that day you saved my life, your image has always been uppermost in my heart. Strange as it may seem, my father destined me as the bride of a man I do not know and whom I never saw. I do not even know his name except that his name is Jones, while mine is Smith."

"Smith, Jones," repeated the young man. "Pshaw, it is a mere coincidence, the reality of such a thing could not happen in a million years. I repeat that my heart is all yours, and—My God!"

LA CARIDAD CHURCH, CAMAGUEY, CUBA.—COURTESY P. O. RICKMAN.

there was no chance of escape unless chopped out, and they could not tell the extent of the accident. So they lay facing death and in anticipation of it.

"I have always loved you," blurted out the youth, "ever since that day in Denver. It perhaps seemed silly to you when I disappeared without a word, but I was held back by a reason which I feel justified in telling you without committing a breach of confidence. My father has destined me since infancy for a young girl, whom I have never seen, and whom I have never cared to see. Her praises were rung into my ears so continuously that I hated her, and wandered away from home to get rid of my parent's importunities. As I say, I loved you from the first, but believed it my duty to respect the

The girl had fainted from pain and the dread of the fire which she could see creeping upon them. His frantic struggles to reach the girl, all the while shouting for help, the young man also lost consciousness, and when he recovered he was lying on a bed in a farm house, his arm bandaged and suffering from a high fever. In the next room lay the young girl, who was constantly crying out for her preserver. They had been chopped out of the wreck and rescued in the very nick of time, and happened to be the only persons seriously injured.

There was no possibility of moving the two for at least ten days, the physician forbidding it absolutely on account of internal injuries received by them. Of course this was an obstacle in the way of

any Thanksgiving day celebration with the Jones family, for the girl's father refused to leave her side, and her mother remained with her husband like a faithful wife and mother.

Urged by his daughter's pleading the father consented to see the young man. What passed in that interview is not known, but enough cropped out to acquaint the boy with the real state of affairs, although he kept his knowledge to himself for the purpose of creating a sensation.

When able, all the family, including the young man, left for Chicago, and on arriving in that city Mr. Smith gave him the address of the Jones at whose house he contemplated stopping for an indefinite period. The young man went to a hotel, hugging his secret to himself.

Marina in astonishment. Why, that is the man who saved my life twice, the one I love more than all the world!"

Further conversation was cut short by the appearance of "Harry," who took Marina in his arms, to the astonishment of Smith's niece.

"Look here, young man, I admire your gall, but there are others who have something to say about this."

The elder Jones burst out laughing:

"It's all right, Smith; it's only our Harry, and the two are submitting to the destiny you and I prepared for them before they were born."

"By George, this beats me," exclaimed Smith. "What did you mean by telling me your name is Rutherford H. Jones?"

"Oh, the boy thought that name sounded better than plain 'Harley,' so he had it

FRANCISCO SUGAR PLANTATION, CAMAQUEY, CUBA.—COURTESY P. O. RICKMAN.

There was much disappointment in the two families, the girl steadily refusing to marry anybody but her preserver. What to do neither of the fathers knew, the mothers siding with the girl. "I think my Harry is the noblest boy in the world," said his mother, "but you shall not be compelled or even worried into marrying him. These cradle marriage arrangements are stupid and wrong. Now, you just dry your eyes, my sweet Marina, and I know your young man will prove to be just what you fancy. Why, there is Harry, the naughty boy. Do you know, Marina, he refused to come home for Thanksgiving because he did not want to see you?"

"That, Harry, your son?" exclaimed

put on his cards," and Mrs. Jones smiled knowingly.

"Shake hands, Smith," said Jones, "We have something to be thankful for even if Thanksgiving day has passed."

"Indeed we have," agreed Smith, "and in honor of the occasion we must have a special Thanksgiving day. We haven't had one together for twenty years, and it is time to have one."—*Eldon Weekly Forum*.

The Earth's Bounties.

Through the gray dawn in the meadows we heard the reapers singing—

The song of men who conquer and who know their triumph's worth.

Like the bare blades of an army the keen, swift
scythes went swinging,
And golden in their wake lay piled the goodly
spoils of earth.

And I said: "Give thanks, O Heart of mine, as
conquerors may do
With sound of acclamation when the battling is
through,
To Him who gave us strength and skill to force
the stubborn soil,
For glory of the gaining and the triumphing of
toil."

At full noon in the orchard we heard the maidens'
laughter—
Bare-armed among the laden trees they pulled
the branches low;
Home at twilight went the wains, with us to fol-
low after,
Light of step and gay of voice, as merry chil-
dren go.

And I said: "Give thanks, O Heart of mine, with
very mirth for meed

over, and the way he did it would have
frightened an old-timer. I had wanted
to fire a locomotive ever since the first
day I saw one, and now was my oppor-
tunity.

"Well," said the master mechanic,
squinting and readjusting his spectacles,
"if the engine were to stub her toe and
start to bucking the ties, what would you
do?"

"Firemen usually jump," I answered
innocently.

"Yes, usually," he grunted sarcastic-
ally. "That's the trouble with you fel-
lows; the minute the old girl hoists her
head a little and the tank gives a hop-
skip-and-a-jump, the fireboy drops his
scoop and joins the birds—it's a fine way
to get done up. The man who established
the precedent ought to have been knocked
in the head with a coal pick. Stay with

A CUBAN TOBACCO FIELD. SETTING THE PLANTS.—COURTESY P. O. RICKMAN.

To Him who gave us knowledge of the cunning
of the seed,
For beauty of the growing and the joy of blo-
soming
And granting of the harvest from the promise of
the Spring."

The praise of words for things of earth, O tender
Heart of mine,
But never yet gave mouth of man meet thanks for
gifts divine;
Nor mirth nor acclamation but to Him who grant-
ed love
The great, glad tears of gratitude and silences
thereof.

—Theodosia Garrison, in *Harper's Bazar*.

"Dad" Ledsinger's Fireworks.

BY JO CUSTER.

They sent me down to see Bob Richards,
the master mechanic, for him to look me

her, young man, by all means stay with
her!"

They chalked my name under that of
James Ledsinger. The boys called him
"Dad" for short, and I afterwards learned
that he was so christened on account of
his marrying after he had passed the 50
mark, and because he made such a to-do
over the advent of his little boy. The
youngster was soon to celebrate his sixth
anniversary, and "Dad" always pur-
chased the trimmings in Center City, the
end of his division.

I reported for duty several hours before
the yardmaster had made up the train.
The hostler at the roundhouse told me I
was too enthusiastic, and that it wouldn't
be long until the call-boy would have
to pull me out of bed when I was due
out on a run. And when "Dad" Led-
singer saw my bundle of paraphernalia

his fat sides shook with laughter. "Where in the world did you get the white overalls?" he shrieked. "Did you take this for a baggage run? Did you bring a pink tie to go with them?"

"My brother is an expressman, Mr. Led-singer, and he gave me the overalls," I replied, a little indignant. "I thought they would do; everybody has to learn."

"Sonny, all you need on this run is a cake of tar soap and a newspaper; you can wipe your hands on the paper and throw it away."

I soon found that "Dad" was a fine fellow, and I warmed up to him. We got a delay of an hour waiting for the fast mail, and he pulled the coal down for me. Every chance he got he would fire for me and let me "look for cows," as he called it. With his assistance I made the run fairly well. My kid gloves were worn through and my hands were nearly in the same shape.

He split his sides when he beheld those gloves. "Now, I guess you'll go and get yourself a pair of 'buckskins,' he advised, good-humoredly.

So I got the "buckskins," the regulation overalls, the cake of tar soap and the newspaper. When "Dad" returned he was loaded to the gunwales with packages.

"What have you there, fishing poles?" I asked.

"Naw; Roman candles and sky-rockets. Tomorrow is the kid's birthday, an' I'm goin' to let him whoop 'em up."

"What's this?" I questioned, taking up a big round package; "must be a cheese."

"Pinwheels, boy, pinwheels—half a dozen of them," he grunted, as he placed them in his seatbox and chuckled softly to himself. "That youngster will have a big time with these," he added, smiling.

"I would like to see that boy," I said. I knew that the old fellow would appreciate it, and he did; I had struck him in the right spot—the boy was all the world to him.

"Dad" commenced to take an unusual interest in me from that time. He showed me all the different tricks of the trade, and explained all the parts of the locomotive to me. He gave me a long lecture about what it took to make a successful engineer, and the "knack" of firing, the way to save coal and at the same time keep the gauge up to the standard.

At Baker's we took the siding for the "Limited." When we got away we were one hour and forty minutes late. The engine of the "Limited" had broken down beyond the water tank at Shepard's and caused the delay. "Dad" took it good-naturedly. "It's no use to complain," he philosophized. "You never know you

are going to get home until you see the hostler run your engine into the round-house."

It was growing dark when we stopped for water at Shepard's. "Dad" turned on the headlight and got out for orders. He came back presently and gave the fluttering tissue to me:

"Train No. 36, engine 663, and train 37, engine unknown, will meet at Mitchellville. Train 37 will pull by and back in."

"I'll bet a month's pay that McPherson is on 37; he's always running an engine unknown to the dispatcher," said "Dad," grinning. "I'm glad he's got to back in and give us the right of way, if he is on that preferred run. If he gets a layout of twenty minutes he will imagine those bananas and pineapples are going to spoil on his hands. So we will do all we can to keep him from worryin'."

"Dad" hooked her up in the brotherhood notch and let her jog along. When he struck the Big Hatchie bottom, the

GROUP OF ENGINEERS EMPLOYED ON THE CUBA CO.'S RAILROAD, CUBA.—COURTESY F. O. RICKMAN.

big mogul was making the rails hum. Then the headlight went out. He took a wrench and went to remedy the trouble. He worked at it for a few minutes, and then came back, shaking his head.

"It's no use," he muttered, "the old dynamo is worn out."

He had just seated himself, when the darting rays of an electric headlight shot through the trees.

"Gee whillikins!" he exclaimed, "there comes that fool McPherson. He has disregarded orders and run by Mitchellville. If we are not quick," he yelled, plugging the old mogul and throwing the air into emergency, "he will be running by us, or over us."

I had dropped the scoop and was standing upon the step, ready "to join the birds," as the "old man" had put it.

"Come back up here, you little idiot," he growled.

THE STEAMER MURRAY BAY AT TADOUSAC WITH EXCURSIONISTS ATTENDING RIVIERE DU LOUP UNION MEETING.—BRO. W. H. NORRIS, DIV. 46, PHOT.

I came back and stood in the gangway. "What are you going to do?" I asked, shivering in every limb and my teeth chattering.

"Do!" he thundered into my ear, and I fell over against the coal gate. "You take this Roman candle and touch it off when you see him whip around the curve. I'm going to lay this big rocket in the front window and aim it at him. I hope it will bust under his nose and make him think all the stars in heaven have fallen about his head."

Right there we celebrated. "Dad" fired the rocket, then grabbed a pinwheel and ran down the boiler side. He hung it on the knob of the headlight and then applied the torch to the fuse. There was a whirling and a spitting of red, green and yellow fire for a few moments, and "Dad" hung up another one.

"Save that one, Dad," yelled Alex Suthers, the conductor, "he's got her stopped."

All of us ran down to the other train. "Dad" was as mad as a yellow-jacket.

"I thought you fellows a lawn party," said McPherson, sheepishly. "Where is your headlight?"

"Headlight!" shrieked Dad, climbing into the cab; "you wait till the 'old man' gets you up 'on the carpet,' you sleepyheads, an' you'll think you've run into two headlights, when he cuts those cat-eyes at you!"

Thanksgiving Blessing.

Set down Lindy! Whar's yo' manners?
Hain't yo got no raisin', chile?
Don't be reachin' 'cross de table!
'Possum sets you chill'n wile,
Don't you know dis heah's
Thanksgivin'?

We's agwilter have a pra'r
'Fo' we teches dat dar possum
Er dem taters—git back dar!
Now, ole 'oman, keep dese chill'n
Wid de haid's all bowed down
low
Whilst I offers up de blessin'
Fer der famly—hands down, so!

"Lawd, we don't know how to measure
What you does up dar'n de sky,
But we knows in all yo' givin'

Dat you never pass us by;
An' we grateful for de good things
You continues to dispense
From de cawn crib an' de smoke-house
Uv yo' lovin' Providence!
Thank de Lawd for all His blessin's,
'Specially dem dat He ordains,
Sich as red-meat watermillions,
Storin' up de nat'ral juice

BROTHER T. P. FLEMMING, DIV. 603, AND BROS. WM. AND EUGENE M'SWEENEY, DIV. 129, AT HAPPY HOLLOW, HOT SPRINGS, ARK.—COURTESY MRS. WM. M'SWEENEY.

Uv de summer time's bes' honey
 For de bones' nigger's use!
 An' we thank you, Lawd, for roasin'
 Years an' de yaller yam,
 Fer de cawn cake in de ashes
 An' de hambone in de ham!
 We remembers you mos' kindly
 Fer de bacon an' de beans,
 And fer good potlicker extry
 Wid de jowl and turnip greens:
 An' dey hain't no mawtal music
 To us niggers heah below
 Lak de gobblin' uv de gobbler
 An' de rooster's lawdly crow!
 But we lif' de chune up higher
 In de deah ole 'possum's praise,
 Kaze we shouts in hallelujahs
 Fer de makin' us dis bees'
 Ez de covnant wid de nigger
 In dis heah Thanksgivin' feas'.

An' de gravy in de skin!
 An' we thanks de Lawd fer givin'
 Niggers edjucated taste
 So's at dey can eat de 'possum
 W'dout a single drape of was'e!
 Angels, look down on dis picture!
 Chill'n waitin' fer a piece,
 Ever' little mouf a-drippin'
 Wid thanksgivin' at de feas'!
 An' de parents bofe a-praisin'
 Him from whom all blessin's flow,
 Him dat keeps the blackes' nigger
 Same as dem dat's white as snow!
 Lawd, we honors de traditions
 Uv de nigger to de end!
 Bless us while we takes de creases
 Out'n our stummacks now. Amen!"

Lawdy mussy! Whar's dem 'possums?
 An' dem taters—dey's gone, too!

R. OF R. T. PICNIC TRAIN, M., K & T., GREENVILLE TO HUGHES SPRINGS, TEX.—Bro. Joe Zingraft, Div. 573, at the throttle, R. Boatright, fireman, and group of the 1,500 picnickers.

"Link, whut mek yo' mouf so greasy?
 M'randy, whut yo' munchin' on?
 Stop, yo' sackerligious varmint!
 Whar's dat bigges' tater gone?
 Drop it back dar, Lizzy; heah me!
 Dis heah ain't no eatin' race!
 Now, ole 'oman, min' de chill'n
 While I finish sayin' grace!
 "Lawd, dey tells me 'dat de 'possum
 Am de oldes' critter yit.
 An' he knows dat you's preserved him
 Fer de nigger's benefit.
 An' we thanks you, Lawd, fer dese two.
 Kaze dey was so fat an' hale
 F'm de whiskers on de nostrils
 To de cold and naked tail,
 To de marrar bone and chittins,

An' de gravy done sopped out'n
 Bofe de platters clean ez new!
 Link! M'randy! Zeke! Ole 'oman!
 Ef de las' one hain't cut out!
 May dyspepsy hant dey stummacks
 An' dey feet swell wid' de gout!
 Me-a-prayin' an' er praisin'
 To de Lawd dat never fail;
 Dey er stealin' at de altar,
 Leavin' nothin' but de tail!
 Yet I ort to've known dat nature's
 Powerful weak aginst de strain
 Twixt a nigger's empty stummack
 An' a guawin' hunger pain!
 An' dis heah sets me to thinkin'
 Dat de congregashun's min'
 Hain't on hearin' whilst you' prayin',

Thout yo' prayin' mighty fine!
 Deze long prayers befo' de public
 Hain't de kin' wid which to win,
 Kaze, though d-y's a private virtue,
 Ginerally dey's a public sin.
 Leeseways dat's how come me losin'
 All dis heah Thankgivin' feas'
 'Cept de tail mixed up wid memories
 Uv de missiu' 'possum grease.
 Knocked clean out'n all de glory
 Uv de luxuries dat done gone,
 Kaze I didn't ax de blessin'
 'Fo' I blowed de dinner ho'n!
 Deyn't gwine to be none heahafter
 (Forgive me, Lawd, if dis is wrong)
 Er 'f I'se bound to ax it,
 'Tain't gwine be so fetched long!

—L. H. Penner, in the Nashville Banner.

Bob was the twelve-year-old porter, whose duty it was to run errands, fill ink-wells, and save the busy clerks in a large terminal freight office as many steps as possible by making himself generally useful, and, in spite of his delinquencies, was a favorite with the boys. But his mind was not on his work, for his whole heart and soul was with the engines in the yard, and the moment he was unobserved he would slip away, either to stand around and watch the hostlers "rubbing down" the steaming panting locomotives that had just delivered their burdens and were being made ready for their well-earned rest in the roundhouse, or he would climb

B. & O. ENGINE 1615, WITH BROTHERHOOD CREW.—Left to right: C. A. Beel, fireman, 432, B. of L. F., G. W. Seaman, engineer, 97, B. of L. E., A. J. Roberts, brakeman, 413, B. of R. T., J. H. Murphy, conductor, 453, B. of R. T., J. E. Moore, brakeman, 453, B. of R. T.

The Fast Freight.

BY RENE BOUCHELLE

(From the Nashville Children's Visitor—A Story Without Truth or Moral.)

"BOB, bring me the ink." Without looking up from his work, the clerk kept rapidly on with his waybills, that must be ready for the fast through train. No one appeared in answer to this command, and once more he called: "Bob, you little black scamp, bring me that ink, quick!"

But safely enconced in the driver's seat of one of the big switch engines in the yard, Bob, the small porter, neither saw nor heard; and after waiting several minutes, the tired clerk rose hastily and took the ink-well to the storeroom to fill it himself.

on the driver's seat of some waiting switch engine and ask innumerable questions about every bolt and screw, lever and valve in sight, and the proudest moments of his life were when some soft-hearted engineer allowed him to grasp the lever in his little black paw and guide the engine across the yard.

Two years passed, and Bob still managed to hold his job, attending to his duties when forced to by dire threats of what would happen if he neglected them another minute, but as usual slipping away to the yards at every opportunity and becoming more and more familiar with his beloved engines. The men treated his thirst for knowledge as a joke, and good-humoredly allowed him to stay around and on the engines a good deal more than the rules governing such matters permitted.

But a change had come over the force, and instead of the good-natured chaffing and bantering with which the engineers and conductors greeted each other as they passed to and fro from their work, there was now only a quiet word, and the look on all faces betokened something unusual in the atmosphere.

This had its effect on Bob; for instead of being allowed to clamber around and fool with the engines as heretofore, he was peremptorily ordered to keep his hands off and stay where he belonged. Puzzled and grieved, he hung around, an observant listener, hoping to catch some explanation of the strange state of affairs,

fair warning, and they have refused to even hear our demands, much less accede to them. You, Jim Delong and John Belden, pass the word among the others that when the six o'clock whistle blows every man quits work, not to return until some agreement is reached between the officers of the road and our union."

"But," spoke a small, quiet-looking man who had been an attentive listener, "can't this be postponed until to-morrow? There are twenty-five cars of perishable fruit and live stock on the yard to-night, and its not going out means a dead loss to somebody besides the railroad, to say nothing of the suffering of the stock."

ONE OF THE P. R. R. HEAVY LOCOMOTIVES USED IN CLEVELAND, O.—W. R. Daily, engineer, Div. 167, Thomas Hanlon, fireman, and train crew.—Phot'r. D. W. Daily, son of W. R.

and his persistence finally had its reward.

A group of engineers and firemen were holding a conference in an out-of-the-way corner of the yard, and did not notice the small black figure crouched near them.

"Are all of the men with us?" asked one who seemed to be in the lead.

"Yes," was the reply. "The minute you say the word every man on the place, except the office force, will walk out, and without the train crews they are helpless to move a pound of freight."

"Listen!" The leader's voice was low and tense, "We have given the officials

"Not another hour," replied the leader. "It is not our fault, and the road has had fair warning."

With this the conference broke up and the men returned to their posts of duty, grave with the import of the crisis that lay before them; for this was the beginning of the strike of 1890 on the S— Road, when the wheels of traffic were completely blocked for six weeks, with the exception of one fast freight that went out that night after the six o'clock whistle sounded the strike on. The fast through freight, loaded with fruit and live stock

for the Northern markets, was due to leave the terminal at 6:15, and when the six o'clock whistle sounded it was standing on a siding made up and all ready for its onward journey. But no conductor or engineer came to the yard office to sign the time register or to receive the package of way-bills covering the contents of the train, and, getting impatient, the yardmaster started out to investigate, as it now lacked only five minutes until leaving time, and this train of all others must go out to the minute in order to make its Northern connections. The men, however, had disappeared almost as if by magic, and a Sunday quiet pervaded the yard, instead of the usual hurry and bustle that reigned at this time of the day. The fires in the engines had been banked and the firemen and engineers had evidently gone to stay.

The yardmaster knew at once the cause of the trouble, and knew too the uselessness of trying to get others to take out the train; but he also realized that something must be done and done at once, or he would in a measure be held accountable by the officials for the heavy loss that must ensue if the fast freight did not get out in time to make its connection.

A small black figure crept near and regarded anxiously the look of trouble and perplexity on the yardmaster's face. "Marse Sam, what you gwine ter do? De men dun struck, ca'se I heayrd dem giv' de word erwhile ergo." There was no reply, and the small voice began again. "Marse Sam, I tell you whut. Dis here train sho' is got to go out; en' ef you will just fire for me I kin run her, ca'se dese got old 76 hitched onto her, en' I know every bolt en' screw en wheel erbout her. I sho' kin run her, ef you'll jes' go wid me en' fire fur me."

The idea seemed so ridiculous and preposterous that even in his perplexity the yardmaster found time to smile, and advised Bob to seek some warmer climate, as he didn't have time to fool with him. But the black shadow dogged his footsteps and followed him upstairs and down, from telephone to telegraph instrument, while messages flew in every direction in his efforts to meet the crisis.

Seven o'clock and no engineer in sight, and the train must leave in thirty minutes or lose connection. What should he do?

Again a persistent voice pleaded: "Marse Sam, please let's try. I know I kin do hit ef you'll jes' fire fer me."

By this time the yardmaster was ready to take desperate chances, and after looking earnestly for a moment in the little, eager, intelligent, black face, he started for the train, saying: "Well, Bob, come on. It won't be any worse to wreck the

train than to let her stand here."

Some of the clerks offered to go with Bob and take the risk; but the yardmaster refused, and, after giving orders to the train dispatcher to give them as clear a track as possible he followed his small, black satellite downstairs, feeling, it must be confessed, a little foolish about the risk he was running in taking the train out with such an engineer, as he himself knew nothing about the handling of an engine.

Not so with Bob. He recognized that the opportunity of his life had come, and, with "Marse Sam" to back him, felt that he could carry the train not only to the Northern terminal, but to the ends of the earth, if necessary. His small black figure was trembling with eagerness and excitement as, after fires had been rekindled and the steam began to rise, he opened the throttle and, grasping the lever, started on the run of his life. The engine yielded to his guidance, at first with jerks and jolts; but gradually settled down to her work with the long, easy strides of a race horse as the hand on the lever grew steadier and its owner's nerve came back to him. A grim fireman, whose stern face was already streaked with soot and dust, kept ceaseless watch on the engineer and the steam gauge, not, however, remitting any of his own self-appointed duties, but shoveling the coal in like one accustomed to the work as they moved faster and ever faster through the darkness.

An hour or two of steady running was broken by the engineer saying: "Marse Sam, dat's de siding where we's got ter wait fur de passenger. You get out en' throw de switch, en' wave your han' when de tail end ob de train is clean in on de side track." Such was the engineer's first order, which was explicitly obeyed by his one-man crew. The lumbering train was guided to its place of safety, while the down passenger glided swiftly by, little dreaming that the force on the siding, manning their crack through freight, consisted of only two men, and one of them a fourteen-year-old negro boy.

Once more on a clear track they speeded toward their destination, both fireman and engineer too intent on their task to speak unless necessary. With marvelous precision Bob, who had been over the route once or twice before, remembered the exact location of the sidings, and never failed to have his train in a place of safety in time for the passage of other trains. But as the hours stretched out the little arms grew tired of the intense strain, and in the dim light of the cab the yardmaster could see that the engineer's black face was growing gray with fatigue and the red lips, so often parted in a

happy grin, were compressed into a mere thread across his face. But the hand on the lever was still steady and the light in his eyes unquenched, when just as dawn was glowing in the east, they pulled into the yard at Chattanooga.

With a last spurt of strength, Bob brought the engine alongside of the freight house, and, dropping from his perch into the outstretched arms of his fireman, managed to say before overcome by faintness and fatigue: "We done hit, didn't we, Marse Sam?"

[*The Children's Visitor* containing this nauseating mess was sent in by one of our members who has two children attending Sunday school, where it is supposed they

trend of the matters which are or at least ought to be intended, to teach truth, or, if fiction, involve a high moral lesson. If it has a good moral it cannot have a lie for the basis of the story. The statement of the yardmaster subjecting himself to the mental faculties of a twelve-year-old negro boy ought to have been enough to condemn the story, besides there was no occurrence upon which such statements could be based.—EDITOR.]

Where Would the Ball Stop?

"Now, what I want to know is this," he said. "If a train of flat cars is running sixty miles per hour and on the last

ERIE ENGINE 3992.—Bro. Wm. Coonan, member of Div. 235, B. of L. E., and family, and Stanley Maston, Master of Lodge No. 349, B. of L. F.

are to learn truths and such morals as Christ taught, and our Brother is naturally disgusted that such lies, without the slightest foundation for the story, and absolutely void of a moral lesson, should be fed to the minds of his children. We are charitable enough to believe that the church officials had not analyzed what this edition of *The Children's Visitor* of September 8 contained, for we do not believe they would willingly feed the minds of their Sunday school scholars with Dick Turpin stories. But we cannot be so charitable to the editor of that paper. The paper is not so large that at least enough attention could not be given to know the

car is a cannon. Suppose the cannon was to be fired and the projectile travels exactly sixty miles per hour. If the cannon be pointed at the engine, what I want to know is whether the ball would hit the engine, whether it would drop just in front of the cannon, or whether it would drop back of the train?" Having propounded this conundrum, the man hooked his thumbs into the arm-holes of his vest and looked wise.

It happened at Porter's hotel and there had been various riddles asked, including that antique one concerning the tree and the squirrel and whether a man who went around the tree also went around

the squirrel. This had sharpened the guessing proclivities of the crowd, and the new riddle was hailed with much acclaim.

"It would hit the engine," said one.

"It would drop on the cannon," said another.

"It wouldn't do either," said a third.

"It would fail to come out of the cannon."

"How the dickens do you make that?" asked the first and second.

"Well, the explanation is simple. The train would be traveling the same speed at which the cannon ball would go and this would prevent the cannon ball from leaving the cannon."

"It would hit the engine," said the first, "because the cannon would be a stationary object while the ball would be traveling."

"That's just what I maintain," said the second, "that it would drop in front of the cannon. The shot would be fired all right and the projectile would leave the cannon, but by the time it had made its way to the engine the last car would be there, since both are traveling sixty miles per hour, and so the ball would drop just in front of the cannon after having traveled all the way to the engine just in time to be received on the last flat car."

Before the discussion closed there were some hard names called and one or two remarks concerning dunderheads in general and these particular puddin' heads. Each maintained that he was right and the balance couldn't tell the difference between prairie straw and breakfast food. Figure it out yourself—where would the cannon ball strike?—*The Mexican Herald*.

Thanksgiving Optimist.

BY WILLIS D. HAWKINS.

Ab Aiken was the patientest, most uncomplainin' man

That ever lived, I cal'late, sence the human race began.

He had a way of reasonin' that made the toughest luck

As pleasin' to his notion as a puddle to a duck.

No matter what might happen, he c'd make it out to be

About the richest blessin' anybody ever see.

So ev'ry time the sun came up it seemed to him to say:

"Good mornin'. Ab! I've brung another glad Thanksgivin' day."

While other folks were swearin' at the mud the rain had made

Ab Aiken called attention to the dust that it had laid.

An' when the dust was blowin' till it riled their very blood

He told 'em he was thankful that the sun had dried the mud.

Whichever way the weather turned 'twas jest what he was wishin'—

The flood filled up the cistern, an' the drought improved the fishin'.

So, wet or dry, Ab al'ays went his calm, contented way,

An' seven times a week he had a real Thanksgivin' day.

I mind the time he broke his thumb above the middle j'int—

He 'lowed it was a blessin' that it broke at jest that p'int.

An' when it healed as crooked as ole Brindle's crumpled horn

He said that how it made a handy hook fer shuckin' corn.

You might as well have tried to stop the earth from rollin' round

As try to down his spirits, fer he wouldn't have 'em downed.

No matter what misfortune came, he al'ays made it pay

An' turned the sad occasion into glad Thanksgivin' day.

At last a sickness kep' him in his bed fer 'most a year,

But not a mutter of complaint did anybody hear.

Indeed, from what he said you'd think he actually chose

To spend his time in bed an' save the wear an' tear o' clo'es.

Then when the doctor fin'ly said the end was drawin' nigh

There came a beam of happiness in Abner's dimmin' eye

Which seemed to them who saw it as if he would like to say

That dyn' was the climax of a glad Thanksgivin' day.

I dreamed a dream the other night in which I seemed to see

The soul of Abner Aiken lookin' calmly up at me, An' I heard the voice of Satan in a long continued wail

As he beat his breast in anger an' in fury switched his tail.

Then I woke an' lay a-wonderin' if it possibly was so—

That Ab had taken his abode in regions down below,

An' robbed the devil of his power by findin' out a way

To turn the night of sheol into glad Thanksgivin' day.

Christianity and Unionism.

BY CHARLES STELZLE.

Here comes the editor of a Western Socialist paper, who accuses me of trying to "swing the workingmen into the church," and immediately declares that I am insincere in my motives.

I do not expect to make every reader believe that I am perfectly sincere. I do not propose to try it; but there is nothing like plainly telling another man just what you believe and why you believe it.

Recently I declared with emphasis that I stand for organized labor, and I gave my

reasons for this position. I'd like to know why it is inconsistent for a man to believe in both the trades union and the church; and if I believe in the church, why should I hesitate to tell men so and try to persuade them that it is a good thing, just as I would tell them that trades unionism is a good thing?

I do not think for a moment that any sane workingman would believe me if I pretended that I do not care whether he is indifferent to the church, and that for which it stands.

And so I would say without fear of losing caste with my fellows, that just as I stand for organized labor, so I stand for

against a fellow-worker on account of creed, color or nationality. To defend freedom of thought, whether expressed by tongue or pen. To educate ourselves and our fellow workers in the history of the labor movement. We promise that we will never wrong a brother, or see him wronged, if in our power to prevent it. We will endeavor to subordinate every selfish impulse to the task of elevating the material, intellectual and moral conditions of the entire laboring class."

Every Christian man and woman could subscribe to these principles. There is nothing in them that is contrary to the

WARASH ENGINE 347, ON EAST MAIL, MOBERLY TO KANSAS CITY.—Bro. T. A. Butterly, member of Div. 86.—Photo. by Bro. J. H. Blackwell, Div. 86.

the organized church. And just as I would persuade a man to identify himself with one, so I would seek to have him identify himself with the other, because, however they may differ in some of their methods, they have very much in common.

The pledge of the man who unites with the American Federation of Labor commits him to "the emancipation of our classes from poverty, ignorance and selfishness; to be respectful in word and action to every woman; to be considerate to the widow and orphan, the weak and the defenseless, and never to discriminate

pledge of the man who joins the church. Need I be ashamed, therefore, of asking a man to identify himself with an organization which stands committed to these high purposes?

When the church was started, two thousand years ago, it was organized by a company of workingmen. Its leader was a carpenter. When it spread to other cities it was received most cordially by the workingmen who formed the great labor guilds of the day—labor unions we would call them now. And it is not impossible that Jesus Himself was a member of a carpenters' guild in Nazareth.

I can see no reason why workingmen should not rally around the church of Christ, accepting Him as their leader and their champion. I believe the day is approaching when this will come to pass; when with the power that can come alone from Him, the pledge of the unionist and the vow of the Christian looking toward the complete emancipation of the whole body of workingmen, physical, mental and moral, will be lived out for the sake of our brother men.—*San Antonio Weekly Dispatch*.

Italian Railwaymen.

Interesting History.

[The organized efforts of the Railwaymen in Italy in the past and in the present, and their battles for improving the economic position of all the employees.]

Mr. Branconi, Milan, secretary of the railwaymen's union, has sent a report of the recent trouble to the secretary of the International Transport Workers' Federation, which we publish for our readers, from the *London Railway Review*, May 12:

"Dear Comrade Joehade,—It is impossible for me to write you a complete report just now on account of the present movement of the Italian railwaymen, and I can only in short communicate to you the most important items to inform the comrades of all countries about the movement.

"The Italian railways, which at present have reached about 15,000 km bought, are the property of the Government. In the year 1885 they were let to banking companies, which are called 'Rete Mediterranea,' 'Rete Adriatica,' and 'Rete Sicula.' As soon as the companies were in receipt of the railways they began to take advantage of the staff in a very unheard of way. Certain rights of the staff which were transferred from the Government to the companies, as: Periodical increase of wages, kilometer money, dearth increase, dress money, indemnification for illness in fever districts (malaria), etc.; all this does not exist for the companies, although they granted the staff all these claims by dispositions and publications. The whole railway personnel was given into the hands of a sort of profit-hungry capitalists, as they cannot be thought worse.

"At last the staff stood up against this real capitalistic trick, causing some delegates to put a question about this predatory excursion of capitalists. But the Government, as the superintendent authority, did not think itself obliged to interfere, but, on the contrary, tried to ignore the complaints. Through this behaviour of the Government the railwaymen got their eyes opened. They conceived

that they could not rely upon the Government if they wished to reach something, but they ought to try themselves to obtain the necessary respect by the companies. On the 4th of June, 1890, therefore, the 'Fascio Ferroviaria' was founded in Genoa, in which 50,000 members were united in a very short time.

"The purpose of this union was to force the companies to fulfil the rights of their appointees. Unfortunately, they employed citizens and advocates as leaders of the union, which, instead of showing the organisation the right way, made it to a sport for selfish political speculations.

"In the year 1902 some conscientious railway labourers tried to give the organisation another direction, but they were locked out by the leaders of the organisation, which were not railwaymen. The labourers were presented as rioters of the people and hodmen of the companies.

"With this violent measure the locked-out labourers were not silenced, but they founded the union of the railway workers (Unione dei Ferrovieri), in which in less than two years all the better members of the Fascio joined. By this the Fascio lost its importance, and soon disappeared altogether. The Unione dei Ferrovieri and the smaller associations and the rest of the Fascio joined together in the Association of the Italian Railway Workers (Liga Ferrovieri Italiani), which was broken up for the first time in November, 1894, because it belonged to the Socialistic party. But the organisation was restored, and in the year 1898 it was broken up again for the second time in the great fight against the workers' organisations which stand on the ground of the class war.

"In spite of its short existence, the union (Liga) had been able to draw the attention of the public to the impossible conditions, so that the Government was obliged to appoint an examination committee. The collections of this committee, which are put together in four volumes, were quite unfavourable for the companies.

"In September, 1898, the organisation began to move again, through the paper *Il Treno*, but every other form of organisation was suppressed by the Government. There exist now two firm organisations, these are 'Il Riscatto' and the 'Federazione dei Sindacati Ferrovieri.' The first growth in the principle: One for all and all for one, while in the Federazione every grade has to care for itself, but both have the same objects.

"As soon as in the two organisations the fourth part of the railwaymen (80,000) were united, in 1902, they handed to the Government a memorial in which they made them understand that if their demands were not fulfilled it would surely come to a strike.

"At that time there were men in the Italian Parliament with Liberal varnish, which protected the movement of the railwaymen, assisted by the Socialist delegates and the Republicans.

"The present Minister-President Giolitti was at that time Minister in the Interior. He was sorely put to it; because he was urged by some Socialist delegates of great influence to accede to the demands of the railwaymen. The railway bankers, too, brought heavy pressure to bear because they tried to exculpate the loss, which they had by the improvement of the railway workers, upon the Government. Then the Ministry determined to receive

1905, at which time the term of the recent contract is at an end and the Government receives the railways back again. Till that time the wishes of the railwaymen for improvement are to be talked over and definitely regulated.

"After the promises which they got in the year 1902, the organisations put their claims together in another memorial and presented this to the Government through their committee on the 2nd of December, 1902. The Government promised, through the Minister-President and the Minister of the Official Affairs, to examine the memorial and do their best to satisfy the railway men.

NEW YORK, ONTARIO & WESTERN JOINT COMMITTEE OF ADJUSTMENT.

the delegates of the railwaymen, to talk over the demands of the people. The negotiations, which extended over ten days, took place in the Parliament of the official affairs, in the presence of the Under-Secretary of the Government, who was representing the Minister. But the obtained concessions were not satisfactory. These concessions are worth money, about 24,000,000 lire, which sum counts from the 1st of January, 1902, till the 30th of June,

"From the 2nd of December till now the reactionary press is kept back by the railway bankers. The last elections have strengthened the reaction, as a great majority of reactionaries has come into the Parliament. Just now a stormy battle has taken place, because they want to force the Government not to deal with the representatives of the railwaymen, and they are making great efforts to prove that the railwaymen have great privi-

leges, although these gentlemen know very well that many thousands of the railway workers get real hunger wages, as 1.50, 1.60 lire, or even less per day.

"The Socialist delegates, nearly all of whom are reformers, have retreated, perhaps, in consequence of our resolution on the congress. On our last congress, which took place in Rome in November, it was resolved to carry on the negotiations with the Government alone without the assistance of a political party. But we do not believe that the Socialist delegates are offended by this resolution, because some of them belong to our central committee, as the secretary of the corporations in Italy, Cabrini, who is also a member of the directory of the Socialist party, and Corradi, a member of the workmen departments in Milan, who took an active part in the general strike in September, 1904.

"About 50 under-committees, which are dispersed all over Italy, superintend the local groups and establish connections between these and the central committee. Everything is so arranged that at the given moment, if necessary, the strike can break out over all the railways at the same time. The reports of the different under-committees are good. We shall not be immodest in our claims, because we know very well in what miserable condition the Italian proletariat is, upon which we do not want to burden the cost of our improvements by increase of taxes. Therefore, we shall fight a great battle for getting the railways nationalised, that the profit, which now flows into the pockets of the railway bankers, is received by the country.

"If the blindness of the Government and the citizens is pressing us too much, we are going to obstruct as a right and strong weapon of the strike. The railway workers, who are forced to work, because they stand under the military laws, must keep the regulations very conscientiously and through this the service is held up through absurdity of the rules and through influence of the superior, because the service could not go on without such incidents, as all the means, i. e., tracks, stations, material and personnel, are very insufficient.

"On the 7th of February, a meeting took place to settle the last agreements for the case, that the Government is going to remain in its silence. It seems this meeting did not take place without impression, because on the 10th of February notice was given to us that the Minister of the official work was charged to receive the representatives of the railwaymen to talk with them over the demands of the people.

"But we will not believe the resolu-

tions of the Government, and, therefore, we must be more attentive than ever.

"We shall go united into the battle, if they are going to put us off with promises because we have endured the injustice of the profit-hungry clique of capitalists long enough. Only a strong organisation has the necessary support, and that we have.

"Hurrah for the movement of the railwaymen, which stands on the ground of the class-conscious workers' movement.

"With greetings.

"EMANUEL BRANCONI"

Good Old Times.

As late as in the seventeenth century and in such civilized and advanced countries as Scotland, Spain, Germany and France, the barbarous instrument known as the "boot" was commonly used to extract information from reluctant witnesses, or to extort confessions from accused persons. Sometimes the boot was made of iron and heated to an unbearable degree on the foot of the helpless victim. In his novel, "Old Mortality," Sir Walter Scott alludes to it as made of this metal. But in those rough times four stout planks hastily nailed together often sufficed for the purpose. Between the side of the case and the leg of the person it was desired to torture wedges were inserted and hammered in. The result was excruciating agony.

A curious custom once in vogue at the court of the kings of England was ended by the quick temper of King George II. It was anciently the custom of an officer of the court to attend the royal banquet on the evening of Ash Wednesday and to crow like a rooster. The exhibition was meant to remind the revelers of the bird whose crowing called back Peter. But George, newly come from Germany, when he first witnessed the performance knew nothing of what it was intended to signify. The officer stood up, craned his neck, and crowed ten times with all his might. The Prince, thinking that some insult was meant, leaped angrily from his chair and would not be appeased. The performance was never repeated.

According to one of the old English chronicles, royalty in 1284 had nothing for a bed but a sack of straw. Even in the day of Queen Elizabeth at least half of the population of London slept on boards. Blocks of wood served as pillows. The sleeping chamber of the queen was daily strewn with fresh rushes. Carpets were unknown. Henry VI. immediately on arising tossed off a cup of wine. Tea, coffee and chocolate were, of course, unheard of at that time. Sugar was to be had only in drug stores and then by the ounce.—*Chicago News.*

Legal News

Co-Employees or Fellow-Servants.

(Continued from October.)

MASSACHUSETTS.

In this group of States which have passed special legislation affecting the liability of railroad companies, Massachusetts comes next, and in an amendment to section 212 of chapter 112 of the Public Statutes of 1882, the amending act being approved June 16, 1883, its legislature enacted the following:

And if an employee of such [railroad] corporation being in the exercise of due care is killed under such circumstances as would have entitled the deceased to maintain an action for damages against such corporation, if death had not resulted, the corporation shall be liable in the same manner and to the same extent as it would have been if the deceased had not been an employee.

It is clear that this law did not so change the rule of the common law as to make the railroad company liable for the death of an employee caused by the negligence of a fellow-servant, and, in fact, the supreme court of the State has expressly so decided. It does nothing more than to give the right to the heirs or legal representatives of a deceased employee to maintain an action for damages for his death, a right which did not exist at common law, in such cases as would have entitled him to have recovered damages for his injuries had he lived.

MINNESOTA.

Minnesota was next in order to pass a law of this character in an act approved February 24, 1887, and now contained in section 2701 of the General Statutes of Minnesota of 1894. Said section is as follows:

SECTION 2701. Every railroad corporation owning or operating a railroad in this State shall be liable for all damages sustained by any agent or servant thereof by reason of the negligence of any other agent or servant thereof, without contributory negligence on his part, when sustained within this State, and no contract, rule, or regulation between such corporation and any agent or servant shall impair or diminish such liability: *Provided*, That nothing in this act shall be so construed as to render any railroad company liable for damages sustained by any employee, agent, or servant while engaged in the construction of a new road, or any part thereof, not open to public travel or use.

In language this somewhat resembles the Iowa law above, although not containing the Iowa provision limiting the application of the law to those cases where the injuries were "connected with the use and operation" of the road. The supreme court of the State has, however, decided that the application of the statute is so limited, and that unless the employee was engaged in the operation of the road when injured he cannot recover damages under this section. It has also held distinctly and on numerous occasions that damages

can be recovered under this section when the negligence, which was the proximate cause of the injury, was that of a fellow-servant. Two other points have been settled by the same court to the effect that the act does not apply to street railways, and that it does include within its provisions a receiver operating a railroad under the appointment and direction of a court of equity as well as "railroad corporations."

In this connection Minnesota has enacted a statute which stands by itself as the only law of its kind in this country. It is chapter 324, acts of 1895, was approved April 24, 1895, and reads as follows:

SECTION 1. In any action where a verdict is hereafter rendered awarding damages on account of the negligence of a co-employee or co-employees, fellow-servant, or fellow-servants of the injured party, the court, upon request of either party, made before the case is submitted to the jury, shall direct the jury to name and it shall be their duty to name in their verdict such co-employee or co-employees, fellow-servant or fellow-servants, if the evidence shall disclose their name or names; and if the evidence does not disclose the name or names, then such co-employee or co-employees, fellow-servant or fellow-servants shall be designated by words of description, having reference to class of service, nature of employment or otherwise, so as to identify them as far as possible under the evidence.

Provided further, That this act shall not apply to cases where the name or description of such person or persons is not disclosed by the evidence.

This act can only apply in the case of suits against railroad companies, as only against such companies can verdicts be legally rendered which award damages on account of the negligence of fellow-servants. Its object appears to be to fix the responsibility for the negligence which caused the injury upon some particular employee or employees for the benefit of the railroad company.

FLORIDA.

Next to follow Minnesota in the order of legislating upon this subject was the State of Florida which, in an act approved June 7, 1887, provided that if an employee of a railroad company was injured without fault or negligence on his part, and the damage was caused by another employee, his employment by the railroad company should be no bar to his recovery of damages. By an amendment approved May 4, 1891, the wording of the act was changed so as to limit the injuries for which damages can be recovered in such cases to those caused "by the running of the locomotives, or cars, or other machinery" of the railroad company. The following, to be found on page 1008 of the Revised Statutes of 1892, is the law in its present form:

SECTION 3. If any person is injured by a railroad company by the running of the locomotives, or cars, or other machinery of such company, he being at the time of such injury an employee of the company, and the damage was caused by negligence of another employee, and without fault or negligence on the part of the person injured, his employment by the company shall be no bar to a

recovery. No contract which restricts such liability shall be legal or binding.

The supreme court of Florida has decided that under the provisions of this statute an employee of a railroad company cannot recover damages from such company for injuries sustained by him on account of the negligence of another employee, unless wholly without fault himself, even though in performing the act that resulted in the injury he was acting under the orders of a superior.

Ohio's law, the next in order of passage, is contained in section 3 of an act passed April 2, 1890, to be found on page 149, acts of Ohio of 1890. It is in language as follows:

SECTION 3. In all actions against the railroad company for personal injury to, or death resulting from personal injury, of any person, while in the employ of such company, arising from the negligence of such company or any of its officers or employees, it shall be held in addition to the liability now existing by law, that every person in the employ of such company, actually having power or authority to direct or control any other employee of such company, is not the fellow-servant, but superior of such other employee, also that every person in the employ of such company having charge or control of employees in any separate branch or department, shall be held to be the superior and not fellow-servant of employees in any other branch or department who have no power to direct or control in the branch or department in which they are employed.

MISSISSIPPI.

The next State to pass a law of this character, affecting railroad companies only, was Mississippi, and in section 193 of its present constitution, adopted November 1, 1890, it greatly relaxed the severity of the common-law rule, and declared that the legislature might extend the benefits provided therein to any other class of employees. Said section is in the following language:

SECTION 193. Every employee of any railroad corporation shall have the same right and remedies for any injuries suffered by him from the act or omission of said corporation or its employees, as are allowed by law to other persons not employees, where the injury results from the negligence of a superior agent or officer, or of a person having the right to control or direct the services of the party injured, and also when the injury results from the negligence of a fellow-servant engaged in another department of labor from that of the party injured, or of a fellow-servant on another train of cars, or one engaged about a different piece of work. Knowledge by any employee injured, of the defective or unsafe character or condition of any machinery, ways, or appliances, shall be no defense to an action for injury caused thereby, except as to conductors or engineers in charge of dangerous or unsafe cars, or engines voluntarily operated by them. Where death ensues from any injury to employees, the legal or personal representatives of the person injured shall have the same right and remedies as are allowed by law to such representatives of other persons. Any contract or agreement, express or implied, made by any employee to waive the benefit of this section shall be

null and void; and this section shall not be construed to deprive any employee of a corporation or his legal or personal representative, of any right or remedy that he now has by the law of the land. The legislature may extend the remedies herein provided for to any other class of employees.

The supreme court of Mississippi, in a case decided in 1892, held that this section abolished the defense of contributory negligence in actions against railroad companies by employees for damages for injuries, unless the negligence was willful or reckless. In a later case, decided in 1895, it held that the statute did not go so far as to abolish this defense, but merely abrogated the common-law rule to the effect that knowledge by the employee of the defective or unsafe character of the machinery or appliances should preclude his recovery of damages for an injury. It has also been decided by the court that an engineer or conductor of a train while engaged in the routine duties of operating the train cannot be considered to be "the superior agent or officer" or "the person having the right to control or direct the services" within the meaning of the section.

In the Code of Mississippi, edition of 1892, which was adopted as official by the legislature of that year first appears, in section 3559, what was practically a duplicate of section 193 of the constitution. By a subsequent amendment, passed by the legislature in 1895, the form of this section was changed, and it was made to apply against all classes of corporations, not being confined to railroads alone. This law will be discussed further along.

NEGLIGENCE—EVIDENCE—MORTALITY TABLES—DISSENTING OPINION.

Opinion filed December 1, 1903.

Plaintiff, W. T. Hamilton, an engineer in charge of defendant's train, was injured by the derailment of his train, and the theory of the plaintiff was that the rails spread, either because the ties were rotten and would not hold spikes, or the section men had failed to spike the rail properly.

HELD: 1. That there was evidence from which the jury might find that the ties were rotten and would not hold spikes. (Grant, J., dissenting.)

Refusal of court to admit testimony showing that plaintiff's expectancy of life was greater than that shown in the mortality tables on account of the advanced age of his father and grandfather, held proper.

Refusal of court to admit in evidence a plaster cast showing a dent in the rails held not reversible error.

Grant J., dissenting, holding the facts in the case to be ruled by *Whipple vs. M. C. R. R. Co.*, 9 D. L. N. 110, a case growing out of the same accident in which the plaintiff in the present case was injured.

Error to the circuit court for Monroe county; Harry A. Lockwood, judge.

Action by Wm. T. Hamilton against Michigan Central R. R. Co.

Plaintiff had verdict. Both parties bring error.—Affirmed.

W. Baldwin and Weier & Waite, for plaintiff and appellee.

C. A. Golden, for defendant and appellant. (O. A. Butterfield and Henry Russel, of counsel.)
—*Detroit Legal News.*

Correspondence.

All contributions to our Correspondence columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer as a guarantee of good faith, and to insure insertion.

While the Editor does not assume responsibility for opinions expressed by contributors to this department, he is held responsible in both law and moral ethics for admitting that which will injure or create ill feeling. Hence all communications are subject to revision and rejection if the Editor deems it necessary.

C. H. SALMONS, Editor and Manager.

To Norah O'Neil.

My Norah dear,
With joy sincere,
I welcome your returning,
To wield again
Your pleasing pen,
For all to read, mavourneen.

In dear old days,
I lilted lays
Conjointly with you, Norah ;
And others, too,
Helped me and you
To chorus them, achora.

In prose and verse
And language terse
You gave us moral reading ;
We always sought
What Norah brought,
It was good mental feeding.

Some pens have ceased
In hands deceased
Since last you came to greet us,
We'll never more
Peruse, asthore,
The gifts to which they'd treat us.

The time will come
When we'll be dumb ;
I'm now a grandsire hoary,
And, Sw etness, you
Have grandkids, too,
Redounding to your glory.

But while we live,
We'll aim to give
Our very best endeavor,
To please the crowd,
Of whom we're proud,
Who'll be our friends forever.

So sing or croon
Or prose, aroon,
Just as your fancy pleases ;
And I'll assist,
I can't resist
When inspiration teases.

SHANDY MAGUIRE.

Letter from a Retired Engineer to a Friend.

PLEASANT VALLEY, N. Y., Sept. 4, 1905.

DEAR DAN: The dear old JOURNAL arrived this morning, and it being a hazy, lazy, rainy day, with nothing to disturb me, not even an occasional peddler (for no one but railroad men and teamsters work outside when it rains), I enjoyed reading it very much. To its many other claims for distinction must now be added the dignity of age, for the JOURNAL, like ourselves, Dan, is now "an old-timer," and we who have watched its growth from a mere pamphlet to its present dignified proportions, take a pride in it: just the same pride we feel in the success of any friend of our youth. The development of the JOURNAL is, of course, not a matter of accident, but however strenuous the efforts of Brother C. H. Salmons, he has reason to be proud of the results, for there is no effort, however great, that cannot be fully compensated for, and the measure of success of our JOURNAL ought to be a source of satisfaction to him, as it is to all of us, for it stands easily at the head of its class; and yet there are some who have the temerity to criticise the judgment of our Editor. It is charged by one writer that the Technical Department represents money spent in the interest of the railroad companies and other corporations. That, of course, is true, but only partly so. Any great good is far-reaching in its effect, and if through the influence of the Technical Department the railroad companies are benefited, it is because of the higher standard of intelligence among engineers, resulting largely from interchange of opinions and experiences through the columns of the JOURNAL, and the higher the standard of merit attained, the less liability of butchers, or bakers, or candlestick-makers breaking in to our business, excepting by the old-fashioned legitimate way of the scoop.

Besides, Dan, we have not a monopoly of technical knowledge. There are other sources of information besides the JOURNAL, and to think ourselves benefited by eliminating all educational matter relating to our business would be in line with the reasoning of the foolish ostrich that

buries its head in the sand of the desert to hide from its enemies.

To a person looking on who doesn't quite understand the game, things don't always look just right, Dan, even when they are the best possible under existing conditions. I had a fireman for a trip some years ago who was about the poorest that ever burdened an engineer. The engine was a good steamer for anyone else, but in order to get anything out of her with that fireman I had to fill her up with water when shut off so as to have steam when working, for the fellow could not keep her hot with the injector on. Every time we started, the boiler was full to the top of the stack, and when I shut off it would be out of sight in the glass, but we did get over the road after a time. When we arrived, my partner told the roundhouse committee that of all the pumpers he ever saw I was the worst, and that it was impossible to keep an engine hot for me. That kind of criticism is the result of not knowing better, and much fault-finding is due to the same cause.

Mother sprung a surprise on me the other day, Dan. She invited Jim Potts, Pat Hanlon, and "Old" Jake Shreider to spend Sunday afternoon and evening with us. I was just listening to the Erie Express pulling out, the engine of which was lame, and had been for a month or more. If there is anything I detest it is a lame engine. I never could run one more than a trip. But while listening to her gallop away like a runaway horse on a hard pavement, I heard a rap at the door, and a moment later mother piloted the trio above named into my presence. They were hardly seated when they inquired about you.

Mother noticed I was a little lonesome of late and knew that what I needed more than anything else was a little railroad-ing, and she knew who could give it to me, for she has heard them now and then as one or the other would drop in on me to spend the evening and stay nearly all night talking railroad.

Well, the cigars were passed. Jim Potts took one, but little Jake, with his big meerschaum already lighted, declined

the luxury, while Pat, who, by the way, originally came from Pittsburg, Pa., fished from out his clothes a stogie as long and as black as a cellar bolt, waiving aside the proffered box of "Perfectos" almost disdainfully. We talked for a while on topics of a general nature, finally drifting into our favorite current of thought. We designed engines that could beat the world, and applied remedies to every kind of breakdown known to the craft. We ran engines with the full throttle, also with the light throttle and, of course, made the time in either case, even if we did not come to an agreement as to the better method of the two. We argued the merits of the fixed and variable lead for valves in passenger service, also the effect of the long and short eccentric blades on the variations of lead in different cut-offs; and if we didn't come to one general uniform understanding as to which brought the best results, we made the time in every instance. We set the valves blind on freight engine until they could "start anything with two ends to it" and we gave them lead until they could not haul so much, but we didn't double a hill on the road. When the petticoat pipe fell down we just threw it on the back of the tank and she never steamed any better with it in the front end. We fired with one scoop to a fire, until the engine was as free from smoke as an electric motor, and we fired with three and four and more scoops to a fire, and while each of us still preserves his own individual choice of methods of firing, we all gave "entire satisfaction" that afternoon, in so far as the service was concerned. We keyed up the main rods on the forward upper and lower back eighths position of pin, also on the centers, and they seemed to go all right either way. We set slipped eccentrics by the spokes, by the links, and by the marks on valve stem; we also set them by those not slipped, and a more square lot of engines you never heard in your life, Dan. On a 20 x 24 engine, having a 6-inch throw eccentric, Richardson balanced valve, with $\frac{3}{8}$ outside lap and line inside, working at different cut-offs, with

full and partly closed throttle, having 200 pounds pressure, we took indicator cards showing preadmission, initial pressure, expansion, exhaust, back pressure, and compression lines that represented the ideal steam distribution in the locomotive cylinder. We used smokestacks with every conceivable choke and taper, not omitting the old diamond type. We used the single and double nozzles, both high and low, with and without petticoat pipe. We set the baffle plate before and behind the nozzle, and designed an arrangement of netting that would produce engines, not only "absolutely free from smoke and cinders," but also the finest steamers in the world. We talked combustion, counterbalance, lap and lead, fuel economy, the care of bearings, etc. I am not going to say to you that we agreed on everything, and it may even occur to your mind as being strange if we agreed on anything, and perhaps you will not be far wrong, for how could one expect old-timers like us to relinquish our grip upon (call them cherished illusions if you will) old theories that had become so deeply rooted in our minds that logic, nor even dynamite, could move them.

Nor did we confine ourselves entirely to matters mechanical, for we established a sinking fund the interest from which not only covered a great portion of the expense of maintaining our organization, but which also gave us a prestige, the leverage from which enabled us to accomplish all reasonable aims in dealing with the railroads, on the principle that nothing is so conducive to peace as preparedness for war.

We increased our efficient corps of Assistant Grand Chiefs until the whole field of the B. of L. E. was so thoroughly worked that each and every member knew something of the aims and objects of our Brotherhood, as well as his own responsibilities as a contributing factor to its success. We reduced the representation at conventions until the convention hall resembled a village schoolroom on circus day, and we unanimously agreed that the men best fitted for the work and most worthy the honors of delegate to be

those who were at the time General Chairmen of their system. We perfected a plan whereby those holding insurance policies for a certain number of years were paid the full amount of same and, strangely enough, each one present was entitled to the privilege. Having, by virtue of our increased missionary force, dispensed with the need of holding conventions here, there and everywhere, to the great expense and inconvenience of all, we built a home for the B. of L. E. on a lovely site overlooking Lake Erie, where all general business of the Brotherhood could be transacted, and fitted up a museum in it, in which was kept not only odd relics marking the different stages of progress of locomotive development since the time of the "Grasshopper," the "Mud-turtle," and other pioneer types, but also contained many other features of interest relative to the progress of our order dating back to the time the first little group of engineers got together and mutually agreed "They Wouldn't Stand For It."

Oh, Dan! we had a feast of castle building that was certainly enjoyable, and if we did not accomplish any tangible results, we at least viewed our rainbows with delight, and considering the purpose of our meeting, it was a grand success.

Such affairs tend to add renewed interest in things about us, Dan, and go a long way toward breaking the monotony of existence of a retired engineer; and when mother and I had bid our company good-night, after repeated handshakings and promises to visit that may never be fulfilled, the thought occurred to me that life is worth living if you only live it right.

I would like to hear from you soon, Dan, but until then we will hope that yourself and family are enjoying the most bounteous blessings.

Your friend and Brother,
JASON KELLEY.

Old Time Railroaders.

NIAGARA FALLS, ONT., Sept. 21, 1905.

EDITOR JOURNAL: I have written several articles on old-timers in railroading,

and I have decided to write one more, which will interest some of the old members of the New York Central & Hudson River Railroad. I have been appointed a delegate to the Twelfth International Conference of the Railroad Department of the Y. M. C. A., to meet in Detroit, September 28th, and it has brought back to my mind the hard times we once had in getting a place to sleep after an all day and half the night's run. It came back to my mind in full force the other day in visiting an undertaking establishment and seeing the outside burial cases used for covering the caskets. In the early 60's the boarding houses in Buffalo were very limited, and it was "first come, first served," so that an engineer coming in late at night on going to his boarding house would often find every bed occupied and would have to go back to the roundhouse and take the cushions of the seats, lay them on the deck of the engine and amid the smoke and steam try to get a little sleep, but he would often find the place occupied by his fireman who had found his boarding house full. Well, one day myself, with several other engineers, petitioned the Superintendent to order the Master Mechanic to fit up the upper part of a small building in the yard back of the roundhouse for a bunk room, which was done. A large table was made and a number of chairs and box for each of the engineers. These boxes were exactly like those now used by the undertakers, only they had hinges on the lids and were locked with a padlock, with the engineer's name on the lid. We furnished our own blankets and a pillow. In coming in late at night and climbing the rough stairs, which were on the outside of the building, we would enter as quietly as possibly so as not to disturb those already asleep, and lighting the old oil lamp, would unlock our box and prepare to turn in for a few hours' sleep, but before doing so would look into the open boxes to see who was in them. It was an uncanny sight and recalled the description of the immortal Burns in his Tam O'Shanter of "Allawaiy's Auld Haunted Kirk," where

"Coffins lay around like open presses,
That showed the dead in their last dresses."

The engineer to be called for an early run in the morning, chalked the time of his run on the lid of his box so that the callboy would not awaken the wrong man, who would resent being disturbed by waking up the rest of the sleepers.

Many a time after doubling the road on freight, I have come in at 1 or 2 in the morning and crawled into the little nest in my box, tired almost to death and covered with smoke and sawdust, for we burnt wood in those days, and nature's sweet restoratives would knit up the ravaged sleeve of care and weight my eyelids down and steep my senses in forgetfulness, and my sleep would be as sound as it will ever be after I am dead. But let us now compare the difference between that bunk room and the fine Y. M. C. A. building in the same city. They say corporations have no souls. Well, if they haven't themselves, they have helped to save some other souls, and the Y. M. C. A. is working on that line. The railroad employee need no longer sleep on the deck of his engine or his caboose. He finds after returning from a long hard run a beautiful warm building, with marble wash-bowls and a marble bath tub, and a soft bed with a quiet room all to himself, and in the morning he finds a fine breakfast in a clean beautifully lighted dining-room; and after breakfast, if time will permit, he can read the morning papers in a cozy reading room or enjoy a smoke in the smoking-room. The building is fitted up with the elegance of a first-class club, and all this with a cost far less than that in the days of the dilapidated boarding houses and beer saloons.

The advance in railroad equipment is being followed by the advance of the railroad branches of the Y. M. C. A., and the better conditions of the men in all the departments. This is a great benefit to the railroad companies as well as the employees, and if cleanliness is next to godliness the railroad corporations, in furnishing the means for their employees to keep clean, are bringing themselves to God.

W. H. H. WEBSTER, Div. 328.

The Injunction—Ramsey.

GRAND RAPIDS, MICH., Oct. 8, 1905.

EDITOR JOURNAL: I have before me some clippings from the daily papers which give the particulars of a suit for injunction against the directors of the Gould lines by Joseph Ramsey, President of the Wabash, to prevent the said directors from firing him out of their service. It seems to me this is an entirely new departure in the injunction business. I have heard of railroads serving injunctions on their employees to prevent their quitting, also to keep them a mile from the company's property should they succeed in getting out of the company's service.

The injunction infant, as applied to railway service, was born during the Ann Arbor strike. Judge Taft was the father of the prodigy. The injunction at that time was to prevent the enginemen on connecting lines from refusing to handle cars tendered by the Ann Arbor. From that time on the injunction plasters have applied quite freely, and now if they can be used to prevent a man being discharged, they may result in some good to the "horny-handed sons of toil."

I know nothing of Mr. Ramsey, only what I have lately read in the dailies. There seems to be considerable slobbering over the achievements of the President of the Wabash. They tell a wonderful story of how once upon a time when he was the president, general manager and superintendent of a "dinkey" narrow gauge line 88 miles long, with only two engines and both off the track, he feloniously and with malice aforethought deliberately "swiped" an engine from another "dinkey" narrow gauge affair and pulled his engines on the track. I wonder if there were no ox teams in the country which his "dinkey" traversed. I can go that story two better in Michigan pine woods history.

Another story told of Mr. Ramsey is to the effect that he was on a number of occasions seen doing such "stunts" as running ahead of a locomotive and spreading sand on the rail. This may

have been a revelation to Joseph Walton, the late coal king, but to the average railroad man who might have seen him, it would attract about as much attention as the imprint of a horseshoe on a muddy road.

If all the railroad men of our country who have run in front of locomotives and shoveled sand on the rail could be made presidents of railroads, I figure we would have not less than ten thousand presidents for each road.

Another past feat recorded of Joseph Ramsey, Jr., was his wading knee-deep in water in order to see if the track was in condition for a train that he was in the act of piloting. This last named "stunt" is a little out of the ordinary, but probably on this particular occasion the train and enginemen all had bad colds and were afraid of getting their feet wet.

As mentioned before, I do not know much about the personal habits of Mr. Ramsey, particularly regarding his treatment of the Wabash employees. I am in hopes to read that he was in the habit of going to the engineer and fireman, after a safe run over the road and shaking the grimy, oily hands of both, and thanking them for piloting him safely over the line. I am in hopes to hear that he has on various occasions ordered his special train sidetracked long enough for the engineer and fireboy to come into his car and get a "square." A story that the rank and file would like to read is not often published because deeds as above described are about as scarce as "hen's teeth."

The stories of Ramsey, as far as I have read them, are tame, slobbering gush, and entitle him to no more credit than thousands of other men, who have no "pull," should have.

Years ago a light engine was sent out as first section of a fast express. The light engine broke both back tires and went off track, the fireman was slightly injured, while the engineer was knocked senseless to the deck. The fireman, with lights, started back to flag the express train following, and had gone only a few car lengths when he fell into an open cul-

vert, severely injuring himself. Nearly fainting from the pain of his injuries, he crawled and hobbled back far enough to flag the express in time to prevent serious injury to either life or property. When the express stopped, the tank of the disabled engine was up on the pilot beam of the express engine, while the engineer of the disabled engine was still unconscious in the cab.

I personally investigated this affair and wondered how the fireboy, injured as he was, ever got back far enough to stop that train. My thoughts at the time were that it was about the most heroic affair that ever came to my attention, and I have heard of nothing since that exceeded it. That boy ought to have been pensioned; he got it (in the neck). He was discharged not long afterwards for some minor offense.

Fraternally yours,
J. W. READING, Div. 286.

Carelessness in Paying Dues.

TEMPLE, TEXAS, Oct. 7, 1905.

EDITOR JOURNAL: Judging from Bro. Randolph's letter the F. A. E. of Div. 620 must have a very easy time, and the Brothers of Div. 620 must be well drilled in the matter of prompt payment. I would like to exchange desks with him, or, better yet, would thank him to instruct me in his system of collection.

Speaking of the Brothers having but one man to look up on pay-day, I will say my books are in the bank from the first until the last day of each month. This bank is open six hours per day, six days per week, and is where nine-tenths of the pay checks are cashed, and yet I have to use my own funds in order to keep the careless ones in good standing. I have from two to six each month that must be run down and held up to get my money back. Their excuse is they did not have a chance to go to the bank. The real reason is they are too busy making 150 to 250 miles per day; but it is all right for the F. A. E. to lay off a trip and hunt them up or pay their assessments out of his own pocket.

No, Bro. Randolph, I cannot help but

think the F. A. E. earns all he gets. However, I would like to see a plan evolved by which we could save that three per cent, or a great deal of it, and would suggest the following: Handle all the business of collecting direct from the home office. It would not take many more clerks. Take the average monthly assessment for the last ten or fifteen years and levy an assessment on January first for the entire year or, rather, twelve assessments, each of a different number, and mail each member his twelve coupons. He could then remit each month the amount of one assessment, or pay as many as he wished at once. The Grand office could mail him a post card receipt, and this receipt with the additional clerk hire would be the greatest item of additional expense, as all the expense of printing is at present born by the association. Each coupon to bear the date of the month for which it was issued, and to be payable within thirty days, with a further limit of fifteen days before forfeiture of insurance. Each Brother would then be handling his own insurance and dealing with those to whom he was a stranger and I believe this would do away with a large part of the carelessness which is at present causing so much trouble. The Brothers would realize they must pay up or lose out, and there would be no such thoughts as, "Well, the F. A. E. is all right. He will not let me become delinquent."

Of course, if a Brother could not meet his payments, he could ask the Division to advance him the money and the law as regards being carried by the association need not be changed.

I see by the JOURNAL that Bro. Futch in addressing the Brothers of Div. 1, at Detroit, Mich., September 17th, stated the average cost of insurance in our association for the past seventeen years was \$17.79 per thousand. That would make a \$1,500 policyholder average \$26.89. Why could not a yearly assessment of \$37 be levied, to be paid in twelve installments, the amount to be doubled for \$3,000 policyholders, and so on? I think we could save two and a half, or at least two out of

the three per cent now paid for collection and the F. A. E. could easily handle the small amount of insurance business that would be left in his hands.

Brother Salmons, if this letter is not too long I would like to see it in the JOURNAL and hope the Brothers will discuss it pro and con. I also would be pleased to have comments by Bro. Shay, as he is the chief of all the Insurance Secretaries. His troubles must be legion.

Yours fraternally,
M. E. HAMILTON, F. A. E. Div. 206.

Write for the Correspondence Department.

PHILADELPHIA, PA., Oct. 10, 1905.

EDITOR JOURNAL: I promised you that I would endeavor to give you a letter for each month's edition of the JOURNAL for the year 1905, and I had two objects in view, the first, because in keeping out the Division Addresses it left a great deal of space for correspondence, etc., which I believe the members should interest themselves in and not expect you to do it all. My second reason was to try to get others interested in writing for this department something that will be of interest to our readers. I have not had the pleasure of ever having met you or any of the good Brothers who have during the year interested themselves in the various subjects in this department, and methinks that if a young fellow can give you twelve letters in one year that surely in this Brotherhood there are Brothers who can write something about the locality in which they live, the road and the various places along which they run, that coming from the north, south, east and west, they would be interesting reading and more instructive than anything I can write about, remembering that the Correspondence Department will be just what we make it.

Now, I want to speak on a subject that so many take very little interest in, and that is the Holy Bible. In all Division rooms I have ever visited, about the first thing I see is the Bible open. In my day I have seen Divisions opened—but it was years ago—by a chapter being read, and I

would like to ask the question how many never read the Book. Upon the table is an air brake book, a book of rules of the railroad, the Holy Bible, and the B. of L. E. JOURNAL. Not one of these dare I go shy on if I want to keep up-to-date on the railroad, or posted in the affairs of our Brotherhood, and such being the case, why dare I neglect the other, for it teaches me how to live, and as we live, generally we die. With your kind permission I would like to give a few reasons that come to my mind why we should read the Bible. Begin at the beginning of it and read it carefully through. I care not for what reason—it might be for fun—it might be because you do not believe it; however, don't go out of the world without having read it through, and as you read it all the surprise will be on *your* side, not on the side of the writer, because it is God's Book and written to be obeyed, and it is the Book of books and has forced its way where no other book has gone, for it is the Book of the whole world, and often as I visit homes and see it hidden under a glass case or wrapped up in fancy paper, the leaves yellow with age or having the appearance of having never been opened or read, it makes me ashamed. Why have it about and afraid or ashamed to read it? Better to

Let us own its supremacy,
Bow to its authority,
Confess its sufficiency,
Cling to its integrity,
Walk in its light;
Let us expect every prophecy,
Obey every precept,
Cherish every promise,
Heed every warning,
Believe every fact, and
Be what it demands.

But it is impossible to be what it demands unless we read it, and I appeal to all the members of this Brotherhood to read the Book, and I can assure you that as you read you will become interested and that life will become brighter, and that in time you will become blessed with better thoughts, better and purer desires, old things will pass away and new and sweeter things will appear, as it so often has to

Yours fraternally,
C. B. NIXON.

Golden Wedding.

Bro. Solomon Williams, member of Div. 19, and his good wife, celebrated their golden wedding at their home in Joliet, Ill., on Sept. 8, in the home in which they have lived for 86 years. Of the celebration the *Joliet News* says:

Amid scenes of happiness and good will, so characteristic of their lives, surrounded by nearly a hundred admiring relatives and friends, the center of congratulations on every hand, Mr. and Mrs. Solomon Williams of 214 Mississippi avenue, celebrated the golden anniversary of their wedding last night.

The home was prettily decorated in white and gold for the occasion. Streamers of tissue paper were hung from chandeliers set off by asters and pumpkins. Dinner was served to the guests and the evening given over to renewing acquaintance with the bride and groom.

BROTHER AND MRS. S. WILLIAMS.

A pretty feature was the giving of a pot of gold to the happy couple in connection with many other valuable and useful presents. The gold was accompanied by an original poem by one of the donors. The verses were typewritten on a broad, golden ribbon. The poem, as follows, was read during the evening by Rev. George McGinnis:

"Accept dear friends, this little gift
'Tis like yourself, of purest gold;
It comes from friends who know the worth
Of hearts like yours that ne'er grow old.

"Tho' since your marriage, time has gone
Till fifty years have passed away
So tranquilly the stream has run
It seems but one long happy day.

"In life's fair morning, first you met
And each to other pledged a vow;
You thought you loved each other then
You know you love each other now.

"May golden autumn days be yours
Each one with life's good gifts be blest
And when life's evening shadows fall
May your last days have been the best."

Among the other gifts received were a gold-headed cane for Mr. Williams and a chair for his bride, four pieces of Bohemian glass, pin tray, two clocks, fancy silverware, candelabra, Brotherhood button, book and table cloth.

Mr. Williams is the well-known Alton engineer. He has been with the road for 42 years, and began railroading in 1849 in the East. He is the oldest engineer in years and term of service on the Alton road, and perhaps in Illinois and the Middle West. In fact, Mr. Williams says:

"I don't believe there are many other men in the United States who began railroading as early as I did and are still at it."

Neither he nor his wife show their years—one is 72 and the other 74. When Mr. Williams was handed the cane he said:

"I shall have to put this away for several years yet. So far I have had no use for a cane."

And his good wife is just as young and spry. Both are members of the Eastern Avenue Baptist church in which Mr. Williams is a deacon. He is also a member of the Masonic fraternity and the Brotherhood of Locomotive Engineers.

Solomon Williams and Sarah Stocker were natives of New York State. They were married at Elmira, Sept. 8, 1855, and moved to Illinois the next year. They first settled in Peru, where Mr. Williams was in the employ of the Rock Island, but moved to Joliet in 1860 and settled on Scott street between Van Buren and Clinton. Joliet was then a city of 9,000 and Mr. and Mrs. Williams have watched it

grow to its present size and prestige. They have lived at 214 Mississippi avenue for the past 36 years.

Mr. Williams began railroading on the old New York & Erie Railroad, at present a part of the Erie system, and later went to the Canandaigua, Elmira and Niagara Falls road. On coming West he was engineer on the Rock Island and the Michigan Central, and in 1863 went on the Alton, where he has remained ever since.

Several times he held the record for fast running on the road. In the early days he made the record time from Chicago to Bloomington. A party of directors including President Blackstone and Superintendent Hale had to make the trip in a hurry and Engineer Williams drew the train with an old Swinburne switch engine.

Three children were born to Mr. and Mrs. Williams. Mrs. Seward Dillman, who lives at 214 Mississippi avenue, and Harry Williams, of Pueblo, Colo. James A. Williams, a dentist, died a few years ago.

Among the relatives present at the celebration

last night or who were there earlier in the day were Mr. and Mrs. Seward Dillman and family; Mrs. Harry Williams, who was formerly Miss Patterson of this city, Leonard Williams, a grandson of Chicago; J. D. Williams and wife of Chicago, Mrs. Frank Hall and daughter, Marian, and Mrs. Esther Drake and daughter, Mamie, cousins of Mrs. Williams, Mr. and Mrs. William Waddell and Mr. and Mrs. John Frye.

Mr. Williams has obtained a leave of absence from his duties with the road and intends visiting relatives and friends at Glens Falls, N. Y. His wife may accompany him on the trip.

Four Generations of McCalls.

Reading from left to right they are James McCall, James M. McCall, Sr., James

could dance." Instantly, or like a flash, he was on his feet, saying, "I can't, can't I?" and commanded his granddaughter who was at the piano, to give him something quick and devilish, which she proceeded to do by giving him Fisher's Hornpipe and the Devil's Reel. The old gent went at it hammer and tongs, with his head thrown back and breast thrust out, a youthful fire in his eye, executing the shuffle better than many a man of half his years, and shortly after sang several old Irish songs of a rollicky nature, which proved that dancing did not cut his wind.

FOUR GENERATIONS OF M'CALLS.

M. McCall, Jr., and John T. McCall, or "Loughrea." The great-grandfather, or the one at the left of the picture, was born in County Donegal, Ireland, nearly eighty years ago, and despite his years, there is not one drop of senility in his whole makeup. On the day this picture was taken while on a visit to his daughter (my sister) who resides in historic Germantown, we had a sort of a family reunion. Someone remarked, "I wonder if grandpap can dance yet." I remarked in a semi-caustic tone, "Naw, he never

The reader can imagine how proud I am of the little one I am holding in the picture. LOUGHREA, Div. 104.

On a Vacation.

CAMAGUEY, CUBA, July 29, 1905.

EDITOR JOURNAL: On July 18th at 12:40 p. m., the writer said to Bro. W. Wikle, "Bill, let's go to the United States." "All right," says he, "we will go right now." We immediately walked to the roundhouse, which is a mile away,

secured leave of absence and transportation and at 8 p. m. we were on our way home. We arrived at Cardenas at daylight the following morning and spent six hours there while waiting for the steamer. We had expected to see only a small seaport town there, but instead found ourselves in the midst of a beautiful city of 30,000 inhabitants. It looked like an American city, broad streets and wide sidewalks and beautiful parks, and looks like some parts of Louisville, Ky. Acres of sugar were piled up in warehouses. We did not think there was that much sugar in the world. We saw where Lieutenant Bagley of South Carolina was killed on the Winslow. The sea was smooth and we had a pleasant voyage. We spent most of the time on deck and smoked long black Havana cigars.

Approaching Key West we sang "My Country, 'Tis of Thee." It makes a fellow feel mighty good to see his native land when absent a few months. We arrived at Punta Gorda, Fla., at 4 a. m., and immediately telephoned to Mrs. Rickman to let chicken blood flow like wine and beer. We spent three days there, ate chicken and dumplings, and "sopped" thick pieces of corn bread in chicken gravy until we could eat no more. We visited the orange groves up and down Alligator Creek and found them in a luxuriant condition and loaded down with fruit. We went in bathing and taught some young ladies how to swim. While rambling around in the woods we met a lonely pedestrian, evidently a victim of "tiger whisky," who hailed us and said he was from Alabama, "Born in the piney woods, with three rows of jaw teeth and room for more and never been hurried below the knee." We told him we did not have a currycomb, gave him a cigar, which he bit into in the middle and began to chew and proceeded on his way.

From home we went to Ft. Myers, now the extreme southern terminal for the Atlantic Coast Line R. R., situated in Lee County on the beautiful Calloosahatchee River. We visited the magnificent home of Mr. T. M. Lybass, known

as the Cattle King of Florida; also the winter home and laboratory of the "Wizard of the World," Thomas A. Edison. We also sat on the porch of millionaire Dean's residence, which is in the midst of a 75-acre orange grove, and imagined we were millionaires for about thirty minutes. It's the right kind of a feeling too, if it would only last. From there we drove down to Punta Rassa, made the cable office a visit and found the same operator has been there on almost constant duty for 38 years. He came from Massachusetts when quite young, expecting to die with consumption. He now is hale and hearty and has made a fortune there. I forget his name. We went fishing there and assisted some ladies to bait their hooks. We asked them what they were fishing for and they said "suckers." We also took a swim in the Gulf of Mexico. Our trip from Punta Rassa back to Camaguey was without incident; in fact we slept the most of the time.

On our arrival we found one of our room-mates and also the most prominent member of the Funmakers' Division had been appointed Traffic Manager of our road. The members of the Division were immediately summoned to a special meeting and the following resolutions were unanimously adopted without debate:

WHEREAS: SENOR J. W. Harwood has been appointed Traffic Manager for the Cuba Railroad Company, which makes necessary his removal as charter member of the Funmakers' Division, therefore be it

Resolved, That no member shall make, or cause to be made, clowns of themselves or others, and all the members of the Division will smoke their pipes in silence for a period of two days; but after a period of two days, from 1 a. m. until bedtime, champagne and chicken blood shall flow like Niagara Falls. Be it further

Resolved, That the expense of same shall be defrayed by our departing Brother. Be it further

Resolved, That this action is made necessary to show the high regard and esteem in which our departing Brother is held by all members of the Division. Be it further

Resolved, That this action shall be recorded and the Great Seal of the Division put thereon.

(Signed)

BENNIE VANHORNE, Grand Mogul,
H. RAYMOND, Grand Vizieer,
P. O. RICKMAN, Grand Keeper of Records and Seal,

DAN WILDER, Grand Guide,
 WM WIKLE, Grand Inside Monkey,
 PETE ZEMET, Grand Outside Monkey,
 FRANK ECHARD, Grand Kicker of Kicks,
 THE DIVISION, Grand Keepers of all that comes in.

Two years ago Mr. Harwood was a brakeman, promoted to conductor, then to auditor's office, and now Traffic Manager of our road. He is quite a young man, not yet 25. His friends predict a bright future for him.

P. S.—While in Florida Brother Wikle and myself bought an option on a large tract of land, situated upon the beautiful Calloosahatchee River, with the intention of making a B. of L. E. colony, and as soon as plans are completed we will call attention to same through the advertising columns of the JOURNAL. Come down and see my orange grove near Punta Gorda, for which my wife and children deserve the credit of making.

Fraternally yours,
 P. O. RICKMAN.

Hours and Tonnage.

KENOVA, W. VA., Sept. 19, 1905.

EDITOR JOURNAL: The letter in the September JOURNAL by Bro. A. M. Cousins relative to "weak systems" should attract attention from members generally, especially from members on systems where the moral, social and financial conditions of engineers are anything but satisfactory. It is palpable evidence of weakness upon any system where there is discord and dissatisfaction among engineers; and where practices are in effect created by agreement which have bred selfishness and self-interest among the men to such an extent that the obligation of the B. of L. E. has but little significance and power, and engineers work for personal gain and to gratify ambition and will do so at the expense of a Brother, forgetting sworn allegiance to the order.

Systems that enforce long hours of duty, excessive tonnage, dilapidated engines, basing the rate of pay, regardless of service, upon the rate paid by competing lines, unjustifiable and unmerited discipline—all such conditions are evidence of weakness on the part of the

engineers and can be attributed to one cause.

Should there be any systems where above-mentioned conditions exist, have the General Chairmen of such systems make an appeal to the Grand Chief to furnish an officer, arranging a schedule whereby the Grand Officer could meet with all the subordinate Divisions upon that system. If not, it would be a good idea for the Grand Chief to send his assistants to certain systems to investigate the conditions, visiting all Subdivisions on said system, recommending what is needed to strengthen the system and see that it is put into effect.

I do not think it prudent for engineers to air their troubles and expose their weakness in the columns of the JOURNAL, but I can closely foresee what the order is coming to unless we enforce the methods that bring the engineers closer together, educating them to a standard that is essential to a full confidence in their ability and a full knowledge of their rights.

Yours fraternally,
 A. L. JACKSON, Div. 511.

Not So Bad as Painted.

ARGENTA, ARK., Sept. 17, 1905.

EDITOR JOURNAL: Vindictory of the B. of L. E. by Bro. John Tracey, member of A. M. Machin Div. 585, McGehee, Ark. (Now, laugh if you want to), in answer to the roasts of Bro. J. F. Williams, Div. 366, and Bro. J. W. Reading, Div. 286, in the August and September JOURNALS.

In regard to courtesies shown members of the B. of L. E. while traveling, I wish to say I have just returned from a ninety-day trip, traveling from Little Rock, Ark., to the Pacific Coast, returning by a different route, traveling through seventeen states, including 1,500 miles through Canada on my return, making a grand total of 7,000 miles, and in no instance did I meet with conditions referred to by above complaining Brothers; but in my entire trip I used good judgment in giving my Brother plug-pullers ample time to comply with my request. In

some instances I found them underneath their engines. I did not expect them to immediately get out and probably cause an engine failure on my account; and I think if traveling Brothers would give due consideration to the existing circumstances I see no reason why they should have to ask the fireman for these favors. If the traveling Brother is up in the work as per Division's instructions, and for the good of the order I would like to hear other Brothers' opinions on this subject, and I am sure the members of the B. of L. E. will do all in their power to assist a traveling Brother when necessary.

Yours fraternally,
JOHN TRACEY.

Space Used to Good Advantage.

HATTIESBURG, MISS., Sept. 25, 1905.

EDITOR JOURNAL: I have read September number with much interest, and the space used for Division addresses is well filled with good reading matter, and I do not see any good reason for Brothers to make any complaint about it.

On page 806 correct my statement so as to make it read rods or wires boxed up, keep out snow, ice, dust and rain, and should read 1,000 feet from the station connected to a semaphore, with this correction it would make it read so engineers could do business.

I was also very much pleased in reading Jason Kelley's letter to his old friend Dan, also J. F. Freenor on page 784. The plea that he is making for the future of our mutual insurance, also J. W. Reading on page 801, giving his experience with brick arches, and I could never see where the economy came in for the railroad company using them. The Pennsylvania R. R. Co., at Altoona, Pa., at one time used what was known as a water grate, which was discarded years ago because it was a continual source of trouble on account of leaking and collapsing, and making things very unpleasant for the engineer and boiler-maker.

On page 774, M. E. Murray of 972 76th Place, Chicago, Ill., making a plea for the Disabled Railroad Men's Home, which is commendable, and in or-

der that this institution may live in the future it will be necessary for the Brotherhoods to take some definite action at the conventions that will insure a permanent income for some endowment plan, organize and own the home, and then with the gratuitous giving they would flourish. Fraternally yours,

J. O. DETWEILER, Div. 336.

Weekly Indemnity.

LITTLE ROCK, ARK., Oct. 9, 1905.

EDITOR JOURNAL: I am willing to admit that primarily the main reason for the existence of the B. of L. E. is for the purpose of maintaining fair wages and just conditions of employment; but at the same time I believe there are other functions that the order can assume looking to the general welfare of the membership, that in the end will revert to the solidity and wellbeing of the organization as a whole.

It must be remembered that we are living in an age of co-operation, which, from past experience of those who have practiced it, proves that the principle is sound, and leaving out all love of altruism, which is a good thing in itself, enlightened selfishness would dictate that at the next convention we make an effort along the above lines.

I believe the order stands in need of a weekly indemnity insurance against personal injury done, some organized effort of the five orders for the maintenance of an Old Men's Home and, lastly, a pension fund. The latter never suggested itself to my mind until at Riviere du Loup at the Canadian Union Meeting in June. I heard Bro. Stone say in his address, "Yes, and if the membership desires it, we can have our own pension fund also." But for the present I believe the indemnity insurance is the most important of the three propositions, for the simple reason that it would prove a revenue producer and money is what we need.

There is no doubt that each insured member in a company run at cost by the order could save twenty dollars per year on what is now being paid the commer-

cial companies for accident policies; supposing then that only 25,000 of our members took out an accident policy in this fraternal insurance, see what the total saving would amount to in a year—enough to inaugurate a pension fund or more than would pay all Grand and Division dues for a year for the entire order.

Fraternally yours,
ROBERT HERIOT, Div. 182.

For the Good of the Order.

DETROIT, MICH., Oct. 7, 1905.

EDITOR JOURNAL: Why do men join labor organizations? It is certainly not for their health, but for the purpose of bettering themselves financially, and their conditions generally. That being the fact, it suggests itself to me that anything an organization of this kind can do to strengthen itself, and make it more independent of capital, should have been done for a long time back. There has been, and it appears as strong as ever today, a feeling of antagonism between the members of the B. of L. E. and the B. of L. F. It matters not how, or by whom engendered, it is there, and should not exist, and so long as it does exist just so long will the interest of the men on both sides of the locomotive be injured by it to a greater or less extent.

There are no classes of labor today who should be more closely bound by the feeling of good fellowship and friendship, than the engineer and fireman, nor men who should be more loyal or more in sympathy, working as they do in the close confines of a locomotive cab day and night, sharing hard knocks, bad weather, poor power, as well as some of the good things that come their way, occasionally each depending upon the other to a great extent for his success. Why, then, should this feeling exist, and what remedy shall we apply to overcome it?

The fireman of today will, in a few weeks, months or years, as his term of service entitles him, and business demands, be the engineer of tomorrow. He is the man who will fill our places, as we did the places of those who have gone. He is the man whom we expect, and

rightfully, too, after he is promoted, to join the ranks and strengthen our order and be a good Brother. Would it not be a better plan to make a Brother of him to a certain extent, from the beginning of his career? Would it not be a good idea and a great help toward strengthening the order if at the next convention the Constitution and By-Laws of the order would be changed, making it an order of two degrees, the first for the man who had fired a locomotive for a given length of time, and second for the man who was promoted and had run a given length of time, or had been a member a certain number of years. One is not obliged to give it much thought to realize the benefits of the increased membership. We would have the strongest labor order in existence, expense for the maintenance of the order would be decreased per member, as well as the expenses of insurance, and everything would be peaceful and harmonious, as it should be.

As to the B. of L. F., I know nothing personally, the B. of L. E. being the only labor order of which I was ever a member and have been in its ranks for 18 years.

My ideas may be wrong, they are merely suggested for the "Good of the Order." Would like the expression of others on the subject. FAIR PLAY.

[The engineers and firemen have been in one order in England for about 40 years and they have accomplished nothing. They say themselves that they work for the same pay they did 40 years ago, though the work is much harder, and as for peace they have no more of it than we do.—EDITOR.]

Defective Ties Won Case.

DETROIT, MICH., Oct. 1, 1905.

EDITOR JOURNAL: Inclosed please find Supreme Court decision in my case. (See Legal Department this issue.) It is a little late, but it may be of benefit to some Brother or some Brother's widow. There have been a good many derailments, rails spreading, and engineers getting killed, and I know that there is a liability on the part of the railroad companies for those who get killed in that

way if the proper evidence is produced in court. I looked up all the evidence in my own case. I was an engineer on the Michigan Central Railroad for 28 years. November 9, 1899, my engine and train suddenly left the track, running about 55 miles an hour. My fireman and I were thrown from the engine and I was seriously injured. The Michigan Central Railroad Company claimed that the wreck was caused by trainwreckers, and I proved that the wreck was caused by a defective condition of the ties or track, and beat the M. C. R. R. Co. in all the courts of Michigan. You may publish this decision in the ENGINEERS' JOURNAL, Legal News, if you think best. The amount of my judgment was \$5,560.

Fraternally yours,

WM. T. HAMILTON, Div. 1.

Pronounced Color-Blind.

INDIANAPOLIS, IND., Oct. 6, 1905.

EDITOR JOURNAL: As it has been some time since I wrote anything for the JOURNAL, I will try my hand once more. I wrote under the nom de plume of "Cincinnati," but as I wish to gain a little benefit for myself now, I will sign my name when I get through. Now, don't look what it is until you read this. I have talked air brake, hammer, block, lead and lap, until it would make you dizzy, but the Big Four Railroad Company judged me color-blind (or their expert did) in 1896, and I have run steam shovels, worked on traction lines, and done anything I could get since then. As that is not losing a leg, arm or eye, I have still got to work or go to the poorhouse, although I have been running an engine since 1872, or I mean that is when I was promoted, and have been a member of the B. of L. E. since 1873. I am now a member of Div. 121, Brightwood, Ind., in good standing, and carrying \$3,000 insurance; and say, did you ever stop to think? After making \$100 a month and then come down to \$50, it is kind of hard; but I have a salve I would like to get introduced among the members of the B. of L. E., or anyone else that wants it. A sure cure for carbuncles or boils, or any old

sore. I will send to anyone on receipt of 85 cents a two ounce box. I gave the medicine to Bro. H. E. Whiting, 24 West Main street, Peru, Ind., when he was not able to be up, and he can tell you what it did for him.

If any of the Brothers throughout the country know of any company wanting a first-class steam shovel engineer; one who can take care of his own shovel and overhaul her and her engines when necessary, either friction or engine swing, it will be a favor to me if they will let me know.

J. H. BROWN,

3426 East 25th St., Indianapolis, Ind.

The Cause of Increase of Drink.

MEMPHIS, TENN., Oct. 2, 1905.

EDITOR JOURNAL: I remember when our G. C. E. was in Memphis he spoke of hearing complaints from different managements of the constant increase of the drinking habit among the engineers. Since then I have seen several Brothers lose their jobs, not directly because they drank, but the drink was really the cause behind, and in such cases it is hopeless to try to do anything for either re-employment or reinstatement. I heard the superintendent of motive power say, "One of our engineers may burn an engine and I'll take care of him; but if he gets drunk, I'll have no more to do with him." It is so serious and still we do not take heed. I would utterly fail if I should attempt to give the reason why some start to drink, but I do believe and I can prove that some of our railroad officials drive some of us to drink. They in their mad rush for great results totally forget the men who have been placed in their charge; for instance, we have a crew that has been out with a drag for twenty-four hours. About 40 miles from terminal they get an order to do local work from there in. Could anyone in the world that knows how that crew feels blame them for feeling sore and going and filling up right there or the nearest place where they may get the stuff? Such happens daily.

That something must be done to stop drinking we all admit. To overcome an

evil one must first find the cause and then the remedy. Simply to discharge the poor drunkard will never stop the balance of them, nor will the discharged reform. We must adopt other measures. Each of us knows the promise he gave. Those who do not drink and those who lead a moral life should on every occasion when it comes to their knowledge and at the proper time, get the Brother up in the Division room and caution him in such a manner as would best suit the condition and temperament of the offending one. By such kindly action, before it is too late, many Brothers may be saved. Pulling up and preferring charges against them when they have been discharged, is like pouring oil on fire, to me.

It also appears to me that if we would approach our officials on this subject in a proper manner, they could in a great measure help to overcome the drinking habit; for instance, Brother So and So is drinking, but only when off duty. We believe that if the management would give him a kindly admonition and advice, he would stop. There is always someone among the engineers on a system who is almost perfection. Those men can approach any reasonable official on such delicate affairs.

Our internal and moral affairs in our order have been to a great extent neglected. We need to strengthen ourselves from the very foundation that we may accomplish betterment even for our souls. We know those that drink, and those that drink only in a moderate form—those "moderate" fellows hate to say yes or no. Well, the snake has not crept out yet and the "moderate" fellow keeps on until at last the stuff has got him, but he is like he was at first, "nobody knows I drink," and right then he is drunk. Some of us have seen him for a couple of years, maybe, going down. Did one of us take him aside at any time? No, no! The next morning at the corner or at the roundhouse you meet someone. "Say, Bill, did you know Brown got fired for being drunk?" "No! Well, I expected that," and you know the rest.

SIDETRACK, Div. 28.

Railroad Employees' Home.

Communications for publication must be written on one side of the paper. Noms de plume are always permissible, but to receive consideration must be signed by the full name and address of the author, and addressed to the Editress, Mrs. M. E. CASSELL, 922 Dennison Av., Columbus, Ohio, not later than the 8th of the month.

The Editress reserves the right to revise, reject or use matter sent in, governed entirely on its merits.

Thanksgiving.

Summer's blush and summer's glow

All her wealth of languid light,
 Paled and perished long ago,
 Daisies dropped their petals white
 And the late red roses' flame
 Faded when the asters came.

All the Autumn's red and gold
 Flashed and spread and died away;
 Seas of vapor tossed and rolled
 Round the hilltops, dim and gray.
 Latest bloom was dull and dead
 When the Indian summer fled.

What of that? the radiant blaze
 Shining on the cottage wall,
 Makes the Autumn's latter days
 Warmly welcome unto all,
 Like a parting sunset ray
 Come, at last Thanksgiving Day.

Then with signs of goodly cheer
 See the pantry shelves arrayed—
 Ruby jellies, crystal clear,
 Rich preserves and marmalade,
 And a streak of sunshine lies
 In the row of pumpkin pies.

Ah! the contrast! who can tell
 What the Pilgrim fathers bore—
 All the hardships that befell
 Exiles on a foreign shore?

Yet their thanks to God were sent;
 They with freedom were content.

We have corn and wheat and fruits,
 Peace dwells with us all the day;
 Who our liberty disputes?
 Who can wrest our rights away?
 Let us then our blessings heed
 And our thanks be thanks indeed.

November.

The eleventh month of the year was styled by the ancient Saxons wint-monat, or the "wind month," from the gales of wind which are so prevalent at this season in Northern Europe, but it may be doubted if March does not merit that distinction.

A more descriptive name would be the "gloomy month," since less enjoyment is derivable in it from external objects than in any other month of the year.

November may be regarded as the pioneer of winter who comes with sharp winds and keen frosts to cut down every bit of green to make room for the coming snowflakes.

A November landscape is always dreary, with bare fields, ragged trees, and the dull, leaden sky over all.

What sunshine there is gives out a pale glow, and the days are so rapidly shortening that the end of the month practically ends out-of-door sports. This is the dark side. There is a bright side to November as well as everything else.

This is the month when we have that brief but beautiful period known as Indian summer, when the weather seems to halt for a period before plunging into the severity of winter. Unfortunately only a limited portion of our country is blessed with this season, and it prevails in greatest beauty along our northern boundary west from Lake Erie to the mountains of Montana. The leading characteristics are a golden haze spreading over the landscape and the prevalence of a warm and gentle breeze. After the Indian summer comes the time when indoor games and evening enjoyments resume their sway.

The very dreariness outside—the whistling winds, the sullen rain or spitting

know—enhances the enjoyment of the bright fires and the radiant lamps within.

So it is possible to extract some pleasure from the gloomy month, after all; and, since much of our enjoyment lies within ourselves, it may be possible to make November as merry as if Nature had assisted us with her sunniest smiles.

Self-Culture.

How wife and mother can keep in touch with the times—some part of each day should be devoted to this duty.

Keep in advance of your boys and girls. Be prepared to lead them, and do not, as you value your husband's love, allow him to develop and improve while you lose your hold upon those things which contribute so largely to a woman's attractiveness.

I see about me every day Sisters who, when they married, were, I haven't a doubt, intellectually equal if not superior to the men with whom they cast their lot. In some occult fashion they drift apart.

Here is the rub. A man in his daily contact with bright minds, in his traveling, thinking, planning, reading, unconsciously grows away from the woman of his choice, unless she is in turn keen-witted enough to make up her mind that this shall not be the case.

A man likes at night when he puts on his slippers and settles down for a smoke, to discuss the topics of the moment and not babies and the delinquencies of the cook. Where one woman can do this a dozen would be utterly at sea if an attempt were made to lure them away from the to them always fascinating themes, kitchen and nursery.

Be wary, lest in your devotion to sewing machine, bread board and broom you allow blessed opportunities for self-culture to slip by, until you find yourself a target for somebody's commiseration.

The other day I heard one lady say to another in speaking of an acquaintance: "Wonder what on earth such a bright man as Mr. B. ever married such a narrow-minded woman for!" "Narrow-minded?" was the reply. "Why, the girl he mar-

ried was the brightest member of our class at college. You can depend upon it it is a mistaken idea of duty that has wrought the change."

That's just it, thought I, a mistaken notion of duty ties women down to petty details when many precious moments might be given to something that might elevate and refine. "Oh, it is all very nice to talk!" says someone; "but when a woman has a growing family and but little means she has just got to put her nose right down to the grindstone."

This is the honest opinion of the wife and mother. She actually feels, I believe, that she is sinning against her dear ones if she hasn't a needle, dust cloth or scrubbing brush in her hand.

I have been myself in communities where I am positive a housewife would have seriously compromised her standing if she had set aside an hour a day for reading, music or the toilet.

"Shiftless!" would have been the condemnatory term, and yet not a woman in the country round would have had a word to say had this sister spent weeks over patchwork quilts, rag mats or knitted socks.

To come right down to practical truths, too much time is given to ruffles and puffs, to scrubbing and sweeping, to toiling; and in fact, that the young people of the household may enjoy themselves; little by little the frail shoulders of the mother are overweighted, and after a time you will hear her say: "Oh, I am getting too old to do this or wear that! I leave all the folderols to the young folks."

The soft, pretty complexion grows hard looking, veins stand out on the hands that were once so fair and dainty. One by one her charms of person disappear, until, from a sweet and lovely woman, with a mind capable of housing the cleverest thoughts, she degenerates into a household drudge.

The boys and girls may love their mother but this love is tempered with a critical consciousness of lack of refinement. Her girlish admirer may still be true to her, but even his loyalty cannot shirk the palpable fact that lines and sallowness, ugly

gowns and a dulled mind have obliterated the many charms of person which, but a few years ago, were so captivating.

It won't do! You owe a duty to husband and children, to care for soul, body, manners and mind.

Accept this truism before it is too late; and whatever your duties make them subservient to higher ideals. Do this, and old age, as it creeps on apace, bringing silver-threaded locks and softly etched lines, will but give an added graciousness to your individuality.

A Word of Sympathy.

The Grand Officers and members of the G. I. A. all over the land extend the hand of sympathy and the heart of Fraternal love to Brother Salmons, Editor of the JOURNAL, in his great affliction, occasioned by the death of his beloved wife, which occurred October 5th.

Many of us were personally acquainted with her and knew of her lovely character and charming personality, and we know how sadly she will be missed in the home and life of Brother Salmons.

Words are inadequate to express our sorrow, but we know there is a Higher Power that will comfort him in this hour of sadness.

A Song for November.

Oh, the good old days with their cheery ways
That my happy childhood knew!
As, wild with delight, o'er the snow so white
To grandfather's house we flew.

Oh, the greetings sweet that we used to meet
From the dear ones at the door!
Oh, the pumpkins red in the old cow-shed,
The games on the big barn floor!

How the shouts did ring if we chanced to swing
Till we touched the rafters high,
Oh, the stories told o'er the pippins gold,
As the joyous hours sped by!

Oh, the turkey vast at the great repast,
They served on that day of days!
Then the little pig, with the apple big,
Graced the festive board always!

Oh, I'd like to try such a pumpkin pie—
Yea, the mince and apple, too,
That a jolly elf, something like myself,
In grandmother's pantry knew!

Oh, the snapping logs on the great fire dogs,
And the chestnuts roasting there;
Oh, the shake, shake, shake as our turns we'd
take
With the "popper" in the glare!

Oh, I wonder why that the times gone by
Are so pleasant to our view?
Were we young again would we think them then
As gay as we used to do?

Some Useful Receipts.

Have you ever tried cologne for removing candle-grease spots?

Toning up your appetite by means of the beaten white of an egg, eaten half an hour before meal time?

The juice of Irish potatoes for removing mud stains?

Adding a little milk to the water your oil cloths are washed in?

Chamois skin and water for polishing up rose-wood furniture?

A soft cheese cloth, wet in alcohol, to wipe off plate glass and mirrors?

Ammonia and water to clean jewelry, using an old toothbrush?

Soap and water to wash oak furniture?

New Divisions.

Permission having been granted Div. 81 to transfer its charter to Newport, Vt., where Div. 163, B. of L. E., to which Div. 81 is an auxiliary, is located, a special meeting was called Sept. 6 at Woodsville, N. H., where Div. 81 has had its home since its removal from Lyndonville, Vt., a few years ago. About half the members were present, St. Johnsbury, Lyndonville and Woodsville being represented. Sister Harvey, Guide of Div. 81, brought a large basket of beautiful flowers, which with those of other Sisters were used for decoration. The forenoon closed the business of Div. 81 at Woodsville, N. H. A very congenial party of 22 dined at the Johnson House, after which we re-assembled to organize Mary L. Cook Div., 861. Twenty charter members were present, composed of sixteen withdrawn from Div. 81, one transferred from Div. 49 and three new members. Three others, formerly of Div. 81, were unavoidably detained,

for whom the charter was held open one meeting. Sisters Harvey and Addison, Guide and Sentinel of Div. 81, rendered valuable assistance at this organization. A vote of thanks was given Div. 81 for assistance. At the close, President Burkett presented organizer a beautiful berry spoon (Sister Harvey, Div. 81, having share in same) engraved "M. L. C. Div., 861." On reverse side "Organized Sept. 6, 1905."

Div. 861 starts out under most favorable circumstances loyally supported by Div. 572, B. of L. E., and we wish them all success and prosperity, hoping there are many who will join, thus enabling them to carry on the good work encouraged by increased membership.

In the evening I left for Newport, Vt., accompanied as far as St. Johnsbury by Sisters Fulford, Johnson and Hurley, Sisters Harvey and Wheeler leaving me at Lyndonville. Arriving at Newport, was met by Sister Shattuck who entertained. Tuesday Sister Buckley joined me there. Sept. 7, dined with Sister Oakley.

A "special" to practically reorganize Div. 81 in its Newport home was called in the afternoon. A valuable and encouraging addition was made by six resident members joining this Division.

The B. of L. E. favored its Auxiliary with use of hall in Lane's Opera House Block. We hope the discouragements of the past will only tend to more strongly bind these Sisters to each other, and there will be a resolute endeavor to make Div. 81 an unqualified success.

Left for Woodsville on the evening train, accompanied to the station by Newport Sisters, the Lyndonville Sisters my companions to their destination. There had been no time to see the beauties of Newport so pleasantly situated on Lake Memphremagog, but anticipate the same in the future. M. L. COOK.

Toledo Union Meeting.

It was my pleasure and privilege to attend the union meeting at Toledo on Sept. 24th. While in the city I was the guest of Sister Leyman and family. This Sis-

ter was formerly a member of Div. 52, Columbus, and we are always sure of a warm welcome from her. We enjoyed the afternoon meeting, where each representative of the various train orders told of the valor and importance of the men in whom they were most interested, and each one in turn spoke words of praise for their Auxiliary which made our hearts glow with the feeling that comes from being appreciated. Brother Futch ably represented the B. of L. E. in the absence of Brother Stone, and I don't know how it happened but I never got the chance to shake his hand or to greet him. All was hurry and bustle, and as the evening meetings were held apart I failed to speak to Brother Futch, much to my regret.

Our meeting of the various Auxiliaries in the evening was a very pleasant one. The hall was filled with ladies, and the President of the local Division of the O. R. C. ladies made a most able presiding officer. Grand Officers from the O. R. C. ladies, the B. of L. E. Auxiliary and the B. of R. T. society were present and some good addresses were made.

The addresses were interspersed with vocal and instrumental music and recitations, which added much to the program. At the close of the meeting cream and cake was served to all present, and sociability prevailed. The meeting was a success, and I wish we might have more of the same kind, bringing together all wives of men in the train service. We cannot meet too often or know each other too well.

It is gratifying to hear of each Order doing its work of love, and making progress in every way. We are all working on very much the same lines, and each one should point with pride to the success and growth of the other.

Our thanks are due to the ladies of the railroad fraternity in Toledo for the hospitality extended and the entertainment afforded so many visiting Sisters.

MARY E. CASSELL.

In Camp Escambia, Fla.

At the above is situated the R. R. relay camp where the boys who have runs on

the P. & A. Division have been stationed since about the middle of August. The railroad company is doing everything possible to made the camps comfortable, but with all that to say that the boys are homesick is expressing mildly their longings to see and be at that dear place.

The families of Brothers Butler and Hall and Conductor Thigpen are also camping a short distance from the R. R. camps. We are right near the bay (in fact during the recent storm of three days' duration we were uncomfortably near) and of course have the pleasure of fishing at any time. This, going huckle-berrying and seeing the trains pass are about the only pleasures allowed us, but our troubles are many. For instance, when the wind blows from a direction to force all the smoke the wrong way through the stovepipe we are forced to leave the cook room and abandon all hopes of having anything to eat until the wind changes. Again, we experience considerable difficulty in keeping the tents dry during heavy rains; and other disadvantages too numerous to mention almost makes life a burden, but when our better halves come home and we know that they can be with us during their lay-over time, we feel amply repaid for all the hardships we have to undergo and consider ourselves much more fortunate than those who are forced to stay in town not even to have the pleasure of seeing their "own dear one." They certainly have our heartfelt sympathy and it is to be hoped that the situation will so change in the very near future (although we do not expect it until frost) that we will all be at home again with all this dreadful period a thing of the past never again to return. We are greatly indebted to Messrs. R. E. Nobles & Sons for every favor that has been within their power to extend to us since we arrived here.

With best wishes to all, I am,

Fraternally,
 SECRETARY, Div. 225.

Inspections.

On September 20 a visit was paid to No. 259, Portland, Me., a special called at

Rossini Hall for the purpose, met by and dined with President Rogers. The meeting was well attended, all officers being present. This Division, organized four years ago, now numbers 63. Treasurer Waterman entertained at her pleasant home in Oakdale. Secretary Jordan, my room-mate at Los Angeles, took tea and passed the evening with us. The inspection occurred in the afternoon of the following day. Quite a delegation of Div. 259 attended "school" in Boston, and were loud in their praise of the work exemplified there by Nos. 99 and 256. We are sure this visit created enthusiasm and interest, and, if I may say it, a determination to try and do as well. Their efforts have not been in vain; the work at inspection was excellent; few, if any, rituals being used.

The officers appeared in white, with pink carnations in their hair. They made a pretty sight in officers' drill and penny march. President Rogers, in behalf of No. 259, presented a pair of towels to the Inspector. A reception and tea was held at the home of President Rogers, in Pleasantdale, in the evening. The house was beautifully decorated with the colors of our order, and flowers adorned the tables where a happy party of forty or more enjoyed the many good things provided by the members of No. 259. It was a privilege and pleasure as well to meet so many of the B. of L. E., who favored us with their company on this occasion. The night was passed with President Rogers, whose husband accompanied me to the station September 22, where I was met by Past President Thompson, who entertained me at her home in Lewiston. This visit was very pleasant, the time being most agreeably passed. A car ride about Lewiston and Auburn was enjoyed. Many fine public buildings attract one's attention.

Saturday passed, on to Richmond, and Sunday found me the guest of Sister Minnie Nickerson at Bangor. Arrangements were made to hold a "special" Monday afternoon, which was well attended by resident members. This Division has 51 members, 26 of whom live

quite a distance away, thus preventing regular attendance.

Tuesday, September 26, we arrived in Henderson. Sister Ryder took me to Sister Small's, with whom we took dinner and enjoyed a nice visit until afternoon, when we met at the hall for special. President Spaulding and Treasurer Grimshaw were ready with welcomes. This Division is small in number and needs every member present when possible. About half the members were present at this and the regular session on the day following. A large percentage of No. 205 are insured, and the insured members should not forget requirements necessary to hold membership. We hope the coming fair will be a financial success. We were entertained by Sister Tant at her home. No. 205 was inspected Wednesday, September 27, with the same number present, and the work well exemplified as possible without Pillars and Marshals. The by-laws examination was very good, and Pres. Spaulding and the regular attendants deserve special mention for faithfulness. Vases of flowers were at the stations, and before we left by stage for Brownsville, en route to Bangor, through the thoughtful kindness of Sister Small a fine spread, provided by the members, was served. This was a surprise, as was the gift of cash from No. 205 and handkerchiefs, personal from the President, were gratefully appreciated. The few minutes before leaving, passed at Sister Crandall's, were enjoyed with several members, where good-byes were said.

On our way to Bangor, the objective point, we were met by Sister Spear, who appeared at Oldtown, and on arriving at Bangor, we were two of a theater party composed of Bro. W. Coburn, wife and mother, to enjoy "David Harum" at the Bangor Opera House.

The inspection of No. 233 was attended by a majority of the resident members, some being unavoidably detained. It was our regret not to meet all, including the sisters from Waterville, who, if but few, have always been present heretofore. Flowers were at the several stations, the officers were dressed in white, and the

Pillars in white waists and black skirts, wearing carnations and smilax. They tried and successfully carried out officer's drill and penny march. The exemplification was highly commendable, and the Sisters must feel encouraged when they see what can be done, once the attempt is made.

President P ilpot, on behalf of No. 233, presented, in he regulation jewelry box, a gift which, to our surprise, on opening the same, proved to be a bright, new gold piece. We were all ready to do and surely did justice to the bill of fare at Whiffin's. We were the guest of Sister Spear for the night, after a call on Secretary Coburn. The day following we were entertained by Sister Coleman, Sister Nickerson joining us at dinner. It was my privilege, with Sister Spear, to take an electric ride to Oldtown.

At Bro. O'Leary's home ice-cream and cake was served. We are looking for a Division of the G. I. A. to the B. of L. E. at Houlton, in the near future, assisted by Bro. O'Leary, who is the C. E. of that Division of the B. of L. E., No. 588.

We left Bangor Saturday, September 30, making a short stop at Waterville, where Insurance Secretary of No. 233, Sister Butler, awaited us.

While in Maine we have seen many places of interest.

With appreciation and thanks for all courtesies and kindness of the Sisters in Maine, New Hampshire and Vermont.

MARY L. Cook.

Study Club Program for November.

"Whosoever acknowledged himself to be a zealous follower of Truth, of Happiness, of Wisdom, of Science, or even of the Faith, must of necessity make himself a lover of books."

SIR JOHN LUBBOCK.

1. Educational system of Japan. Marriage customs of Japan. Funeral customs of Japan. Religious customs of Japan.
2. For two centuries the ports of Japan had been closed to the world. Who opened them? Under whose administration did it occur, and what were the benefits derived?
3. Give a biographical sketch of Commodore Oliver H. Perry. Describe his famous battle on Lake Erie, Sept. 10, 1813.
4. Recitation or Reading, "The Victory of Perry." By Alice Cary.

5. The first Thanksgiving. Why appointed? Losing United States History or others.
6. How should this day be observed? Discussion by members of club.

A report from the G. I. A. S. C. of Indianapolis, Ind., shows a good membership, and indicates an interest in the work. Two efficient officers have charge of the club—Mrs. J. Howland, President, and Mrs. Myra Noble, Secretary.

They have 18 members one only outside of the Auxiliary. We believe that our Study Clubs would derive more benefit from the course of study could they meet twice a month. Please send in your reports.

Your work is well begun for 1905 and 1906. Let us hear what has been done in the past year.

PROGRAM COMMITTEE.

Indoor Substitutes for Outdoor Exercise.

The shut-in days are overtaking us. Every chill little breeze brings with it a hint of cooler winds, every sullen little cloud reminds us that summer skies are changing. The glad, free, healthful out-of-door life will soon be for the most of us only a memory until another season.

But the muscles cry out for activity just the same. Gymnasiums, of course, offer excellent substitutes for out-of-door exercise. For the majority of people, however, especially for women, they require too much time, or are too expensive or inaccessible.

And so, save for a spasmodical "constitutional" now and then, woman's tendency is to give up exercise altogether through the winter months and to let the muscles become flabby and the whole system to grow sluggish and apathetic.

Such physical neglect together with lack of a proper amount of fresh air will soon tell its own tale. The rosy color of health will vanish from her cheeks, her eyes will lose much of their sparkle, and her body its graceful sprightliness.

The preventive is simple and sure. It is regular physical exercise conscientiously and earnestly performed. It may seem more or less of a bother at first, but with the exhilaration and bodily vigor sure to result from it, it will soon become a pleasure. And just because it is a little trouble no sensible woman is going to abandon what will give her suppleness of form, grace of carriage and healthy color.

Breathing exercises are as important as they are neglected. They should be taken every morning before breakfast and repeated again before going to bed. This is true of all indoor physical exercise.

An excellent breathing exercise is practiced by lying flat on the floor or bed, and raising the arms over the body, while inhaling deeply. Hold the breath for five counts and then lower the arms again, exhaling slowly. Repeat ten times. Or take the breathing exercise while standing, with the arms hanging relaxed at the side. Breathe in slowly, distending the abdomen as much as possible. Hold the breath a few seconds, then exhale, first lowering the chest and then contracting the abdomen. Stronger chest muscles and lungs, a

firmer and better developed bust, a more erect body, an improved circulation and digestion, all these are the benefits to be derived from the faithful practice of deep breathing exercises. Follow the breathing exercises with the morning spray or plunge and then take a run. You need only a small space to take it in, for all you need do is to practice the running movement (that is, springing lightly from the ball of one foot to the ball of the other) in one spot. Increase the number of steps each day. This exercise is a splendid stimulant to the circulation and at the same time develops the leg muscles and makes the ankles flexible. The running will of course produce perspiration, and it is well to have on hand a good toilet powder to use under the armpits. One of the best powders of the kind is made of one-half pound of borax, one ounce of soda, and one drachm of primrose sachet.

If a remedy is needed for constipation, no better can be found than to lie flat on the floor, arms at the sides, and keeping the legs perfectly straight, raise them till they form a right angle with the body, then lower them slowly as possible. When the exercise has become easy through practice, repeat it seven times each morning.

To lengthen the waist, stand erect, arms stretched overhead, and then lower the arms, without bending the knees, until the finger tips touch the floor. This exercise, faithfully practiced, will help wonderfully toward producing a tapering waist.

These simple methods of physical training will do all that is claimed for them to do in giving woman health and beauty and equipoise, if (and it's a very big "if") she'll keep up the spirit of them all through the day's occupations.

Remember, for instance, to stand as erect as possible when doing any kind of housework. If you have to bend over, be sure to straighten out again when the task is finished.

Breadmaking is a splendid muscle-developer for the arm, and scrubbing exercises the shoulders and the internal organs admirably, if you remember to keep your back straight and use first the left hand and then the right. Your hands will not suffer from this work either, if you use borax soap for scrubbing the floors and carpets. Save all the bits of soap from the kitchen and bathroom, and boil it in water with a little borax until it makes a substance like jelly.

When sweeping, don't forget to change the broom often from one side to the other, so that the hips will be developed equally by this truly scientific exercise.

Imagine it's in-door golf and enjoy it.

Above all continue the deep breathing in all kinds of housework when hanging out clothes in the fresh air, when washing windows, when walking about the house, whenever and wherever you can, and you'll find yourself growing stronger, more beautiful and symmetrical, without the aid of a gymnasium or a physical teacher.

One word more, don't in your zeal overdo the physical training or get too fatigued from hard work. Learn the value of relaxation and repose,

both bodily and mental. Establish a proportion in living. Keep cheerful and optimistic and take life each day a little more easily, a little more buoyant than the day before.—*Brookfield (Mo.) Gazette.*

Lemon Has Many Uses.

The usefulness of the lemon begins in the morning, even before you are out of bed. The juice of half a lemon squeezed into a glass of water and drunk unsweetened the first thing in the morning is an excellent remedy for bilious disorders.

If girls appreciated the lemon's usefulness as a beautifier, they would always have one at hand. The fingers or finger nails may have stains that refuse to yield to soap and water, in which case a little lemon juice will usually prove successful. Before manicuring the nails you should always soak them for at least five minutes in a basin of water in which are a few drops of lemon juice. The skin which grows so offensively around the nails is pushed back by orange-wood sticks first dipped in lemon juice; and as for the teeth, no more effective cleanser or purer, mouth wash can be found than half a dozen drops of lemon juice in a wineglass of water.

After washing the hands; lemon juice and water makes a splendid bleach, but one curious thing should be remembered. Lemon juice pure darkens the skin, so do not make the mistake of rubbing in plain lemon juice, instead of diluting it with water.

Lemon juice and glycerine is good for chapped hands. If you have a hoarse voice in the morning lemon juice, squeezed on to soft sugar till it is like a syrup, and a few drops of glycerine added, relieves the hoarseness at once, while a cold on the chest, or consumption itself, finds a formidable enemy in the following prescription:

Squeeze the juice of three lemons over three whole eggs, shell and all. In two or three days' time the shell will have softened because of the effect of the lemon's acid on the lime composition of the shell. Then add a pint of rum and a pound of pulverized brown sugar candy. You can bottle this, and take a spoonful every morning before rising. It is simply wonderful as a tonic.—*Chicago American.*

For a Cold.

The daily cold bath is one of the most effective safeguards against taking cold. Of equal importance is abundance of fresh air in the sleeping apartment. Upon the first symptoms of "a cold," deep breathing exercises in the open air or in a well ventilated room should be taken at frequent intervals. In nearly all cases where this simple treatment is taken, there will be no further development of the cold, and the symptoms will disappear. A doctor connected with a large institution for children recently tried this method upon the inmates with surprising success.

"There is nothing," he writes, "more irritable than a cough. For a time I have been so fully

assured of this that I determined, for one minute at least, to lessen the number of coughs heard in a certain ward of the hospital of the institution. By the promise of rewards and punishments, I succeeded in having the children simply hold their breath when tempted to cough, and in a little while I was myself-surprised to see how some of the children entirely recovered from the disease.

"Let a person when tempted to cough, draw a long breath, and hold it until it warms and soothes every air cell, and some benefit will soon be received from this process. The nitrogen which is thus refined acts as an anodyne to the mucous membrane, allaying the desire to cough, and giving the throat and lungs a chance to heal."

Hot Water Hints.

The best toilet preparation in the world is plain hot water. Here are some of the uses to which it may be put:

Drink a bowl of it every night, if you want a good digestion, a good sleep and a clear complexion.

Put a bag of it at your feet when you have a cold; to your back when you have a backache, or at the nape of the neck when you have a headache or feel sleepless.

Bathe the eyes with it when they are inflamed.

Soak the feet in it when they are tired.

Soak the hands in it before manicuring.

Steam the face with it once a week for your complexion.

Bathe the cheeks in it when you want them to be rosy.

Bathe cold sores, fever blisters and pimples in very hot water in order to dry them up.

Like a patent medicine, a single dose of "hot water bag" will cure toothache, neuralgia, rheumatism and pain of a 1 kind. Try a free sample of it from the fami y tea kettle.—*New York Press.*

Little Home Truths.

Advice or reproof does more harm than good when it is so rudely or roughly given that it brings humiliation or indignation.

If from your real affectionate regard for a relative you wish to point out to her or to him an error or correct a fault, do so as gently and as cautiously as you know how, and do not try to correct mistakes or point out shortcomings too often, says the *Washington Star*.

Give your advice in private, and always give less advice than sweet, complimentary speeches. A compliment is not less but more relished when it comes from a member of one's family than when it is a tribute won from a stranger, and these signs of appreciation that you give of some dear one's wit, wisdom, or beauty are little home truths that are ever affectionately remembered and come ever like gentle dews to refresh the seeds of affection and loving-kindness that are planted in our hearts.

Division News.

WILL you and our hundreds of readers travel with me over memory's railroad and view, in imagination, my trip through the West. In endless mile after mile I have viewed the sweets of nature far and wide, from the sun-kissed plains of the far West where the horned toads gambol I send the greetings. I have been over the sunny South where the magnolias bloom, and sweet honeysuckle and the fragrant jessamine, but give me the dear old mountains I have learned to love, they bring to the lonely heart comfort, and show God's handiwork in every scene of nature. I bade farewell to friends and relatives in Kansas City on the 23d of August, and boarded one of the luxurious trains on the great Rock Island system for El Paso. This road presents to the traveler a never ending panorama of the most magnificent scenery on the American continent; the beautiful scenery spread out before me during this trip consisted of falls, canyons, gorges, mountains and sun-kissed prairies. On the 25th I arrived at El Paso. It is a very picturesque city, nestled among the mountains, and is a typical western town. On September 29 the Sisters of Div. 138 gave a banquet at their hall to the Brothers of Div. 192, the hall being artistically decorated with the colors of the B. of L. E. A grand supper was served, the tables being decorated with carnations and smilax, which was very appropriate for the occasion. Their hospitality was without stint.

There was an excellent program selected by each Sister that included the families of the B. of L. E., everyone did honor to their talent, and were applauded again and again. I must say the Sisters are up-to-date in their work, especially in the officer's drill, and the Sisters and Brothers in the above Divisions have won a warm spot in my memory that shall live while life remains. Wishing them success, I will close. MRS. N. J. KIRBY, Div. 150.

It has been some time since Helping Hand Div. 86, Clinton, Ill., has had an article in the JOURNAL, so I will try to tell you

how we are getting along. We still have our sewing society, and are getting ready for a bazaar, as we are anxious to get our piano paid for. We held an experience social from which we realized quite a little sum. We were surprised greatly with an invitation from Sister Clifford, of Clinton, to spend the day with her and eat fried chicken. Twenty-one Sisters and two lone Brothers, A. G. Turlay, Traveling Engineer, and G. E. Brooks, who naturally became chaperones, went. We were met at the depot with fine double carriages and conveyed to their country home, where a delightful day was spent. At noon we sat down to a dinner of three courses that will never be forgotten. The tables were decorated with the choicest flowers. Particular mention is made of the chickens which were cooked and served in proper style. As we approached the premises the fowls thought the M. E. Conference had arrived ahead of time, and sought every available place of safety. One old fellow (should judge he was aged by his name), whose name was Luke, ventured out at a late hour. The Sisters spied him and led him a merry chase, and finally succeeded in capturing him for the conductor, as we promised him one (nothing said about age). During the evening Brother Turlay granted him his freedom, saying that "Seniority always prevails" (among the Brothers). In the afternoon they all became children again, playing games. The men, though few in number, were not idle. Brother Clifford captured his mule and held it with Brother Turlay at the head and Brother Brooks on the other side, and posed for their picture, as Sister Hediger came prepared to get pictures of the crowd. We stayed for supper and then were driven over to former city to view the town. The Sisters gave Sister Clifford a set of solid silver spoons for her anniversary present; this was quite a surprise. We bade our Brother and Sister goodbye, all saying their entertainment was extraordinary. COR. SEC.

THE Division at Breckenridge, Minn., is moving along nicely. We have news

from them telling of the good times they are having and of new members joining them which is gratifying.

The lawn social given at the residence of Mr. and Mrs. D. Auman was a great success. The evening was ideal and the crowd taxed the seating capacity of the lawn. The piano had been placed on the piazza and the program partook of the nature of an open air concert, which was highly enjoyed. The lawn was decorated with Chinese lanterns, flags, etc., and brilliantly lighted with locomotive headlights. The ladies are to be congratulated on their work.

In the past month I have visited Divisions in Newark, Chillicothe and Bellevue, O. At each place I received a most cordial welcome and enjoyed the meetings held. At Bellevue supper was served in the hall, to which the husbands and children were invited, and it was a merry crowd that sat down to the feast prepared by the Sisters, after which a program was given by the wives and children of the B. of L. E. men that was a credit to them. President Rodenberg, in behalf of the Division, presented me with a souvenir of the occasion which I value highly.

This Division at Bellevue at one time was the banner Division in Ohio in the ritual work, and if the members would be faithful in attendance they could still be in the front rank, as it is composed of bright, active women. We are all getting ready for inspection and I hope to see good reports from all these Divisions.

GRAND VICE-PRESIDENT.

BELIEVING you are all interested in the union meetings of the G. I. A., I will tell of the very delightful one Div. 219 had the 5th of October, when they met with Divisions 20, 59, 122 and 142, at Pittsburg, Pa. The ritual work was beautifully exemplified.

We regret very much that the other Divisions expected could not be with us. After the meeting refreshments were served, which all present enjoyed. We anxiously await the next union meeting.

INS. SEC., Div. 219.

Good Dressing for Burns.

For burns use a dressing of saturated soda or equal parts of linseed oil and lime water, vaseline, sweet oil, butter—any bland oil—but on no account glycerine, which is irritating.

G. I. A. Voluntary Relief Association.

TOLEDO, O., Nov. 1, 1905.

To Division Insurance Secretaries, V. R. A.

You are hereby notified of the death of the following members, and for the payment of these claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for the same was dated later than September 30, 1905.

ASSESSMENT No. 234.

Died Sept. 9, 1905. Sister Geo. E. Gilmore, aged 38, of Div. 332, Philadelphia, Pa. Cause of death, acute nephritis. Carried one certificate, dated July, 1903, payable to husband, Geo. E. Gilmore.

ASSESSMENT No. 235.

Died Sept. 16, 1905. Sister Anna K. Claffy, aged 32, of Div. 298, Two Harbors, Minn. Cause of death, pleuro-pneumonia. Carried two certificates, dated October, 1903, payable to Lawrence Claffy, husband.

ASSESSMENT No. 236.

Died Sept. 23, 1905. Sister Ella Goldsworthy, aged 36, of Div. 143, Elkhart, Ind. Cause of death, tuberculosis of lungs. Carried one certificate, dated June, 1900, payable to John Goldsworthy, husband.

ASSESSMENT No. 237.

Died Oct. 3, 1905. Sister Geo. Goodrode, aged 56, of Div. 246, Joliet, Ill. Cause of death, exophthalmic cachexia. Carried two certificates, dated May 5, 1898, payable to daughters, Althea and Lucretia Goodrode.

Assessment Nos. 236 and 237 will be paid from the Assessment fund.

Members will pay their Insurance Secretaries on or before Nov. 30, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than Dec. 10, or stand delinquent till remittance is made.

We sincerely hope that all will pay these assessments promptly, as no one who is reported delinquent on November sheets, can be counted as a member on convention reports.

Members in good standing Sept. 30, 1905, five thousand and seventy-six in the first class; and two thousand one hundred and twenty-two in the second class.

MRS. GEO. WILSON, Pres. V. R. A.

MARY L. ROBERTSON, Gen'l Sec'y and Treas.

Contributions for this department must be received by the Editor on or before the 12th of the month to be in time for the succeeding issue.

West Seneca Tests.

R. H. BLACKALL.

During August a series of tests were made on the Lake Shore tracks just out from the West Seneca yards. These tests were witnessed by about 200 prominent railroad officials.

They were made with a fifty-car steel train of B. & O. cars, hauled by a Pennsylvania Railroad engine having a weight on drivers of 173,000 pounds and a tractive effort of about 40,000 pounds.

The train was equipped with both the present standard triple valve and the new triple known as the Quick Service triple valve, either of which could be cut in by the turning of a suitable cock. It was also equipped with Westinghouse Friction Draft Gear, the Automatic Air Coupler, the American Brake-Slack Adjuster and the Double

Pressure Retaining Valve. This train represented the most up-to-date railroad train as the piston travel was regulated automatically, the cars could be coupled up without its being necessary for trainmen to go between them; the friction draft gear took care of all usual, and would absorb most of the unusual, strains obtained in service; the new triple valve gives a greatly improved stopping power and positive acting brake in service as well as emergency application, and makes possible the release of brakes on long trains without danger of a break-in-two; the double pressure retaining valve provides for both moderate and severe grade work, the light capacity being used on light grades and the heavy capacity on heavy grades.

The tests made comprised triple valve, friction draft gear, and coupling tests, and proved conclusively that the different equipments employed would greatly simplify many of the problems of present day transportation, and would at the same time provide for a greatly increased efficiency with reduced cost of maintenance.

It is hardly necessary to describe any of the apparatus except the Improved Triple Valve and the engine equipment which was also of the improved type; a considerable number of these are already

in service. The other apparatus has already been described in the columns of the JOURNAL.

Quick Service Triple Valve: The original Westinghouse triple valve was designed for use with trains of a maximum of fifty cars. Since the advent of the much longer trains the corresponding action has not been obtained, and it was necessary to make some modification which would obtain the same results with 100-car trains as was obtained with the shorter ones. This has been accomplished by the features embodied in the Quick Service triple. With this valve, not only is a quicker response obtained, but it is obtained positively, and is susceptible of more graduations with even longer trains than can be operated satisfactorily with the present standard valve.

A valuable addition also has been made in the release feature, by means of which the brakes on the rear of a long train may be released before those at the front are off. This feature permits the release of brakes on long trains when in motion without danger of breaking the train in two, as now results if a release is attempted when the speed has been materially reduced.

One of the problems that confronts the engineer of today is that of releasing the brakes at the rear of the long trains handled. A novel feature in the new triple valve provides a means by which it is possible to get more air to the rear of the train. This feature is known as the "retarded recharge." By a proper arrangement of ports the feed grooves retard the charging of the auxiliary reservoirs at the head of the train, thus leaving a greater amount of air to be forced back to the rear with the result that a quicker rise of pressure is obtained at this point. This results in a more positive release and there is no doubt but that this feature will have a strong tendency to greatly reduce the number of slid flat wheels.

The "retarded recharge" also provides a means by which the auxiliary reservoirs throughout the train will be charged much more uniformly; this will result in a more uniform braking power than is now ob-

tained, where in hastening a recharging on heavy grades the reservoirs at the front are charged considerably higher than those at the rear. With this condition of pressures only the brakes at the front respond to a light reduction, and as a consequence these have to do much more than their share of the work in controlling the train.

Aside from the advantages obtained when all cars are equipped with the improved valves, the gain is proportionate in all trains according as the number of new valves increases or diminishes.

The benefits obtained by the use of the new engine equipment have already been outlined in the columns of the JOURNAL.

The tests made at the West Seneca yards proved conclusively the following:

That the Quick Service brake will stop a fifty-car train in 84.6 per cent less distance than the present standard brake when both are set with full service application. (See tests Nos. 1 and 8.)

That the Quick Service brake with a light application will stop a fifty-car train in substantially the same distance as the present standard when set with full service application. (See tests Nos. 2 and 1.)

That the old and new brakes operate in perfect harmony and with increased advantage in proportion to the number of new brakes in the train. (See tests Nos. 4 and 5.)

That it is possible to release brakes at low speeds, when a train is equipped with improved brakes with greatly reduced draft gear strain; 45,000 pounds greatest tension in release with Quick Service brake; 169,000 pounds greatest tension in release test with present standard brake.

That with the Quick Service triples a light reduction results in a prompt and positive response from all valves. This action is not obtained on long trains with valves at present in use.

That the Automatic Air Coupler accomplishes a great saving in time with increased efficiency.

That the Westinghouse Friction Draft Gear provides an amount of yielding resistance sufficient to afford protection to cars under present-day conditions.

That the Automatic Brake Slack Ad-

juster produces ideal conditions as to distribution of braking power and precludes the necessity for hand adjustment, with delays to transportation incident to same.

The curves on the foregoing diagram show the results of the stops that were accomplished with the two kinds of triple valves, the old and the new. It will be noted that each point on the curves refers to a particular test and a list of the tests will also be found.

The curves show the results that can be obtained with this train and equipment with the results all reduced to the same speed, that is, all stops were reduced to corresponding results at a speed of 22 miles per hour.

The records of the tests proved conclusively the following:

That a five-pound reduction with the new triple valves will stop a fifty-car train in 76 per cent of the distance required by a 20-pound reduction with the present standard triple now in use.

Comparing the five-pound reductions the new valves will stop the train from the same speed in $34\frac{3}{4}$ per cent of the distance required by the old valves.

With trains of mixed valves the benefits derived are in proportion to the number of new valves in the train. (See tests 4 and 5.)

That the old and new valves scattered throughout a train operate in perfect harmony and with increased advantages.

It is possible to release the brakes at slow speeds, with trains equipped with the improved triples, without damage to the draft gear.

That the Friction Draft Gear would afford a yielding resistance that will practically eliminate break-in-twos and add greatly to the life of cars by dissipating most of the shocks encountered in yard and road service to an extent that no damage will be done to the car.

Tests 1 to 6 are shown on the curves illustrated and show the comparative stops that can be accomplished with different reductions and with the different combinations of triple valves.

Tests 7 to 10 inclusive, were release tests made with the old and the improved triple

valves and with different reductions. When the release was made at slow speeds steam was used and the resultant shock measured by the recording apparatus in the dynamometer car which was located the 26th, in the train.

The greatest tension records with the improved valves was 45,000 pounds while with the old valves the maximum tension was 169,000 pounds, and in one of the release tests with the old valves the train was broken in two back of the 19th car. With the improved valve, if the engineer tries to make a release when the speed is very low, the retardation in the release of the head brakes will stall the train so that it can not be pulled by the use of steam. The release of the brakes before the train comes to rest permits the shoes to be jarred from the wheels so that it will be an easy matter to get the train in motion without taking the slack. With the old valves, where the brakes can not be released until after the train has been brought to rest, it is usually necessary to take the slack to jar the brake shoes from the wheels.

FRICION DRAFT GEAR TESTS.

A number of tests were made to show the absorbing power of the Westinghouse Friction Draft Gear. The figure given after each test shows the record of the tension or buff made in the dynamometer.

Test 11. Train backing at 8 m. p. h., engine reversed and full head of steam used. Jerk 95,000 pounds.

Test 12. With slack bunched and reversed lever in the backward position, lever thrown suddenly ahead and full throttle used. Jerk 98,000 pounds.

Test 13. Ten rear brakes applied and slack bunched; lever thrown ahead and full throttle used. Jerk 118,000 pounds.

Test 14. At speed of 15 m. p. h. and engine working full throttle, the emergency application was applied from the rear car. Tension 87,000 pounds.

Tests 15, 16, 17 were buffing tests. The train was cut in three pieces at the 10th and 15th cars, and the front portion backed into the others. The following shows the maximum buffs, also the speeds at which these buffs were obtained at dynamometer car:

4 to 6 m. p. h.	0 pounds.
6 to 8 m. p. h.	42,000 pounds.
8 to 10 m. p. h.	100,000 pounds.

Buffing tests were made at 6 and 8 m. p. h. with the cut made back of the 29th car. The respective buffs were 172,000 pounds and 430,000 pounds.

In none of these draft gear tests was there any damage done, and the tests showed conclusively that the friction draft gear is ample to take care of the shocks incident to train transportation.

With all cars uncoupled from the 10th to the 20th the cars were backed together and coupled. The time was then taken to see how long it would take to cut in the air throughout the train between the cars that were cut. Forty-two seconds were required.

A test made later with all cars equipped with the ordinary hose and coupling showed the corresponding time to be two minutes and two seconds.

As a matter of interest three emergency tests were made to determine what would be the result and buff due to the emergency application from the engine when the cars are equipped with friction draft gear. One hundred per cent air.

The following resulted:

First test. Speed $33\frac{3}{4}$ m. p. h. Stop 506.6 feet. Time 14.8 seconds. Maximum buff 41,000 pounds.

Second test. One hundred per cent air. Speed $6\frac{1}{2}$ m. p. h. Stop 14.3 feet. Time 8.4 seconds. Maximum buff 104,000 pounds.

Third test. Fifty per cent air. Speed 10 m. p. h. Stop 49.6 feet. Time 6.4 seconds. Maximum buff 345,000 pounds.

No damage whatever was done in any of the emergency applications.

QUESTIONS AND ANSWERS.

Q.—S. D. W.—The other day I had a long train of mixed freight, and something happened that was a new one to me, and I would like to know the reason for it if you can tell me.

I had made a service reduction and was slowing down pretty fair when I made another reduction. All of a sudden the equalization piston closed, we stopped and

the train was broken in two. I don't understand why the brakes should have acted that way. One of the boys said I probably had a kicker at the rear, for we broke in two near the head end.

A.—The kicker theory is entirely probable, but while this may have been the cause for the action described, it was not necessarily so. The position of the empties and loaded cars in the train has considerable to do with the break-in-twos that occur and it may be that the equalizing piston closed because of the break-in-two and not because of a kicker. Such an action is usually laid at the door of a triple valve that is working improperly, as this is the simplest way of accounting for the difficulty. If a little thought is given to the conditions which obtain when the brakes are used on some classes of trains, it will be understood why the blame should not always be placed on the triple valve without some thought as to the make-up of the train.

Suppose the train had consisted of thirty-five loads next the engine and fifteen light cars at the rear, the loaded cars being loaded to their maximum capacity and the fifteen cars empty. The braking power, in an emergency application, would approximate 20 per cent on the loads and would be 70 per cent on the empties, a difference of 50 per cent in the retarding effort produced, and there would be a strong tendency for the front of the train to run away from the rear portion.

When the reduction of brake-pipe pressure is made, the brakes at the front of the train apply first and the slack bunches. When those at the rear finally apply, the tendency is for the slack to pull out harshly, with the result that some defective draft gear will fail because of the heavy strain put upon it. The action obtained under these conditions depends largely upon the speed of the train at the time the brakes are applied. The slower the speed the more likely is damage to follow. It is a very simple matter to make up a train that can be pulled apart with a service application and the train can then be coupled up and the empty cars switched to the front or even a little farther

ahead, and no more trouble will follow.

Q.—M. H. J.—I run in freight service as a rule, but the other day I was called for a passenger run, and was puzzled a little because it took longer to charge the train than it seemed to me it ought to. After the train had been made up and put in the station we coupled on and started to pump up. I don't know how long it took before we were ready to try the brakes, but I do know that it seemed to take longer than it ought to. We only had nine or ten cars, but it took about as long to pump up as it would a freight train of 50 cars. I looked at the pump and it seemed to be taking the air in first class and was working at a good gait. We couldn't find any leaks, but there must have been some. Can you tell me where they might have been where we didn't look?

A.—We presume from the description of your experience that you had a passenger train a part of which was either chair cars or sleepers, and perhaps the coaches also had a water-raising system on them. As you know, there is always a large reservoir to be filled in connection with these systems. These are not filled until a certain pressure is obtained in the auxiliary reservoirs and the pressure feeds to them slowly through a governor located between the two reservoirs.

Supposing that all of the cars were equipped with fourteen-inch brake cylinders, 16 x 33'' reservoirs are used with this size of cylinder and the volume contained in them is about four times that of a reservoir used with an eight-inch freight equipment. This being true, the reservoir capacity of this train would be the equivalent of a forty-car train of eight-inch equipment, not considering the additional volume presented by the reservoirs of the water-raising system.

Q.—W. M.—We often haul trains on road with 80 and 100 cars coupled up and we sometimes have trouble getting the brakes off. I heard one of the boys say the other day that he got around the stuck brakes by not using the brakes when he was going slow, but he used the reverse lever. That doesn't seem right or

necessary to me and I would like to know how the brakes can best be released on these long trains so that we can be sure that they will get off?

A.—It is hardly possible to tell just what is the matter, not having any details about the size of main reservoir or the pressure carried. We presume that you are conforming to practice, that the main reservoir capacity is not less than 50,000 cubic inches, and that the pressure is 100 pounds. With this capacity and pressure you should be able to release the brakes on a 100-car train if you follow the proper method. The most trouble is encountered by trying to release after a light reduction. If this is done, say after a five-pound reduction has been made, there is an excess pressure of but 25 pounds, where, if a 20-pound reduction has been made, there is an excess available with which to release of 40 pounds. With this excess there will be no trouble in accomplishing a release if the brake valve handle is left in release position the proper length of time.

Men handling these long trains, and where it is possible to do so, it is better to make at least a 15-pound reduction before attempting to release.

With a train of this length a five-pound reduction will not apply all of the brakes; as a result there will be a number of triple valves in release position. When the brake valve handle is moved to release position, the rise in brake-pipe pressure will not be as fast as desired, not only because of the length of the train, but also because the feed grooves will absorb the air and thus destroy the chance for a rapid rise of pressure in the brake pipe which, at best, is slow at the rear of such a long train. The friction of the pipe is sufficient to be overcome without also having to overcome the absorption of air that is being accomplished by the feed grooves. The feed groove effect plays an important part in any event, but is very much magnified with the conditions cited.

Good Engines vs. Disabled Enginen.

The conditions that confront the locomotive engineer while off duty are, in a

great majority of cases, not what the intelligent engineman would like to have, for circumstances often seem to combine for his discomfort; in fact, it seems at times as if all nature, animated and unanimated, had gone into a trust to defeat the aims of a man who must sleep, when 95 per cent of the rest of mankind are up and doing, doing all they can to prevent the other 5 per cent from sleeping.

After thirty years of experience on different kinds of locomotives and on a number of various railroads, I consider that anything I write on conditions as I have found them, while off duty, will coincide with the experience past and present of almost every brother locomotive engineer throughout our country.

In the language of the politician I shall in this contribution, "hew to the line, let the chips fall where they may." Some of the landlords and landladies of the various boarding and soup houses throughout our vast domain may not take kindly to my remarks. Well, they will have to catch me before they will be able to hang me, and being quite a sprinter I feel safe in taking a chance in this particular case.

Taking up first the matter of boarding houses I can say that I have found a few that had some of the comforts of a home, and on the whole were very good, and that I have run up against a great many that were very, very bad. It has been my misfortune to find a great deal of the sameness in all of the latter a med kind of abiding places. In the language of the poet I have found

"The same old coffee, the same old slop,
The same old baker's goods, of last year's crop;
The same old soup bone in the same old stew,
The same old 'liver pads,' nothing new."

Some of my readers may begin to wonder where the disabled engineer comes in. Well, my answer to that question would be that he is not as badly disabled in coming in as he is in going out after he has had a butting collision with the "grub" and beds found in a great many of the various "hash foundries."

Mickey Dolan, a good engineer, one who had never mustered up courage

enough to ask his best girl to have him, and thereby have a "roost" of his own, did considerable migrating from one boarding house to another, at the various terminals, with results that did not warrant the expenditure of the time, money and effort.

Meeting him one day when he seemed to be looking somewhat blue, I said to him, "What's the matter, Mickey? You are looking kind of 'glum' this morning." "Glum," says he, "Glum don't begin to cover the territory. Jim, I feel like hell." "What's the cause?" says I. "Nothing but cause with oceans of effect," says Mike. "Explain," says I. "I will," said he. "You see, Jim, I got in only an hour ago, after one of the toughest trips I ever made. I had that big 'consolidator,' leaking like a sieve, trying to get over the 'pike' with full tonnage. The rail was as slippery as the 'sow belly' furnished me for supper and lunch, and the fog so thick that a monument might have been carved out of it, and besides, I was badly disabled myself. I was only working one side and it seemed at times as if my valves were out, and the truth of the matter is I feel now as if I was a candidate for the back shop."

"Oh, go home," says I, "and go to bed and get a good rest. You will be called out again before midnight."

"Say, Jim," says Mike, "the man that continually goes up against the combination that confronts him in the average boarding house, and lives, must of necessity have a large amount of cast iron in his makeup."

"I do not quite grasp the situation," says I. "Explain what meaning you intend to convey by the word combination."

"By combination," says Mike, "I mean the 'grub,' the bed, the heat, the noise, the flies, the kids, the neighbor's gramophone, the musical voice of the huckster, the street cars, the whistle of the locomotive opened by the engineman who whistles not wisely, but too well, and last, but not least, the jangle of discordant tones forced out of the piano by some would-like-to-be performer.

"I went up the line night before last,"

he continued, "and had twelve hours in which to rest and 'buck' the combination, and when called to leave on my return trip last night I felt that the combination had worn out and left me with the main rod down on one side and my valves askew, as heretofore mentioned.

"Say, Jim," he continued, "have you ever tried to sleep on one of those beds that look like a profile, or bird's-eye view of the Rocky Mountains?"

"Hundreds of them," says I.

"Ever eat many of those kinds of meal which make a man feel as if he had just returned from the funeral of a dear friend, and expected to leave this 'vale of tears' himself in a few days?"

"Thousands of them," says I.

"Then," says Mike, "I know I have one friend who cannot but sympathize with me in this 'the winter of my discontent.'

"Say, Jim," he continued, "that bed on which I tried to rest yesterday was a corker—a corker in more than one sense—the humps in it resembled huge corks; corks big enough to plug the opening of an eight-gallon jar. There seemed to be only three points of contact between myself and the straw stack, one was under my head, another of extraordinary size under my spinal column, the third under my heels. I was suspended, as it were, and the comfort I derived from my attempt to sleep was about as trying to my spiritual soul as a barefoot test on sand burrs would have been to the soles of my pedal extremities.

"Say, Jim," he continued, "the M. M. and 'Supe' think it strange that a man could possibly fall asleep on duty; they sit in their offices and theorize on road conditions while these conditions are continually confronting me. Too many hours getting over the road and the 'bucking' of the combination has nearly stopped my clock, and I have about concluded to ask for a job working on a sewer."

I met Mike again not long since and asked, "Just come in?" and he answered:

"I've not been out."

"Did you quit?" I inquired.

"Faith, I did," said he, "and I am now the 'chambermaid' in a livery barn, and while I am not making so much money, I have a bed and a good one, and Katie—you know Katie—takes care of that. There are no hills and valleys in it."

"Married, eh?" says I.

"Of course," says he, "and it will be mighty hard times for the two of us before I will ever try another siege of 'bucking' the combination and endeavor to run a locomotive working one side only."

Things were somewhat better with Jack Smith, another "plug-puller" on the same line. Jack was a married man, and had the comforts and discomforts of a home life at the home terminal. He, of course, was up against the combination at the other end of the line, and often seemed to be at outs with everybody by the time he had returned from a round trip. Jack, no doubt, had his troubles, especially on his return trips, and could, if he would, give some interesting data of his efforts to give good service when he felt more like being buried than he did like making an effort to pilot some of the "scrap-heaps" over the line.

Jack came in one morning after an unusually hard journey. His rest at the other end of the division, owing to the various causes heretofore mentioned, had been considerably abbreviated. After looking his engine over, and booking the work, he examined the board and found that he was marked up to go out on 62 at 1 a. m., and as it was then nearly noon, he cogitated to himself as follows:

"Ma will have dinner ready when I get home and as soon as the meal is over I must hustle to the barber shop and get a shave and return to the house and get to bed as quickly as possible, for I must have a good sleep at this end of the line, as I got no rest worth mentioning at B yesterday."

Jack felt quite weary and it was evident from his gait that the elasticity was out of his limbs. When he neared the home the fragrant smell of a boiled dinner—corned beef and cabbage—greeted his olfactory senses. Now, if there was anything more than another that Jack liked

for a "square" it was a boiled dinner. "Ma" knew this, and hence the effort to surprise and please "Pa." Jack was quite hungry and did ample justice to "Ma's" dinner. After "loading up," Jack, as planned, started for the barber shop; he had not gone more than a block before he met Hank Swift. Hank was doing a 15-day lay off on account of being too swift. He had an order to not exceed a speed of 15 miles an hour over a portion of the track where they were changing steel. He ditched the caboose, with two other cars immediately ahead; the conductor and rear brakeman spilled themselves out of the cupola windows and testified at the funeral with the "Supe" that Hank was making 40 miles an hour. Most of the boys, however, thought if the truth were known, Hank was not making more than 25 miles an hour, and that the "con." and rear "shack" were too dead to skin at the moment the leading car went adrift. When Jack and Hank met, Hank commenced to explain the situation. He went into detail regarding the whole event, and Jack, more from courtesy than any desire to learn any particulars, took in the whole "tale of woe" and, of course, sympathized with Hank. When Jack got to the barber shop he waited 20 minutes for his turn. After leaving the chair he took a look at his watch and it was 2:45 p. m. He had hardly got outside the shop when he met three or four more of the boys, and was halted and obliged to exchange the usual courtesies. He was "pumped" as to his interpretation of a circular letter lately issued by the superintendent. When at last he tore himself away from his friends it was 3:25 p. m.

When Jack reached home "Ma" informed him that Tom Jones with his wife and daughter were coming over after supper. They had, "Ma" said, been invited to come some evening when "Pa" was home, and "Ma" said they would certainly have a nice visit, as both Mr. and Mrs. Jones were such splendid entertainers. Jack groaned and began to expostulate and wished the whole Jones tribe in purgatory, and said things that made tears come to "Ma's" eyes; then "Pa"

got ashamed of himself and tried to apologize, and said, "Inasmuch as you have asked them over and ordered some ice cream and cake, we will try and exchange a little feed for entertainment." Jack was somewhat out of humor; he did not feel very good, and told "Ma" that he felt as if he was going to have the grip (Jack's boiled dinner was getting in its work about this time), and said if he was not so hard up he believed he would take a lay off.

Jack went to his room for a rest, but seemed to be out of whack, and his description of his feelings to me was about as follows:

"By the time I was ready to lie down the whole universe seemed to be out of joint. After going to bed I had a light headache and felt as if a millstone of about one ton in weight was resting on my 'bread-basket.' I was extremely nervous and flopped first on one side, then on the other, and tried every other position possible except standing on my head, but got no sleep worth mentioning, and after about three hours and thirty minutes of this burlesque on rest, "Ma" announced the arrival of the Joneses, and when I got out to the dining room "Ma" had a cup of tea and lunch awaiting me, and the principal part of the lunch was some of the cabbage and beef left from the previous meal. Somehow or another, it seemed to me as if the stuff had lost its charm, if not its fragrance and taste, and from that day to this I will cross the street if I happen to run into a zephyr laden with the perfume of boiled beef and cabbage. I tell you, Jim, I have soured on the stuff."

It is needless to say that Jack ate no supper; a few spoonfuls of tea seemed to crowd his capacity, and he felt about as cheerful when he met the Jones family as he would have been had he been ushered into the presence of the dead. However, Jack was in for it, and did the best he could to harmonize the situation.

Tom was a boilermaker who worked daytime at flue-calking, and other light boiler repairs, and while the women "chimed" about style and society events,

the drift of the conversation between Tom and Jack was about the locomotive boilers. Tom said that since the introduction of the automatic air tools he could do three times as much work as he could under the old way of hand work. Jack said that since the advent of the air tools the different "tubs" he had been running strained about three times as much water through their fine sheets as they did in the old days, and in consequence it took him about three times as long to get over the road.

The conversation was getting heated and somewhat personal, when "Ma" suggested that Marie, Tom's daughter, play and sing something. Jack wondered how much longer they were going to stay. His mind was continually reverting to the "caller" and his call like the man condemned to be hung. Jack was growing more and more uneasy, as his time grew shorter.

Marie started for the piano, and poor Jack groaned almost audibly. When Marie got squared before the instrument, she got the loud pedal down and started to play and sing "Under the Old Apple Tree," and Jack half wished he was under the sod. After some further jangle of chords and discords "Ma" brought out the ice cream and cake. Jack, more to show his sociability than for any desire to eat, partook quite freely of the congealed fluid, the pound cake and angel's food. As far as Jack was concerned, the eating of the stuff was like adding fuel to flames, and in his talk to me afterwards, said that he was quite positive that the reason one chunk of the dough was called pound cake and the other angel's food was because one square inch of the first named would weigh a pound, and the other would make an angel out of anyone who was fool enough to eat much of it.

After the lunch Mrs. Jones said they would have to go, as she had to get up early to get Tom off to his work in time. "Ma" said, "What's your hurry, it's not late. Won't you sing just one song before you go, Marie?" Jack nearly fainted, but still showed a brave front to the enemy. Mrs. Jones insisted and Jack

and "Ma" were left alone as the clock struck ten. Jack was out of humor and said some words about the Jones family and other things in general that would not look good in print. "Ma" cried, and Jack started for his room to get two hours' rest. The boiled dinner was still with him, and the added mixture of cream and cake, together with the thoughts of what he had said to "Ma," proved a combination too much for Jack's physical makeup and another two hours' tossing was the sum total of results.

Jack was called at the time expected, and was told by the caller that he got 352. This was quite pleasing to Jack, for the 352 was the best steamer on the road and was out of the back shop only six weeks. Jack took his lunch bucket and started for the roundhouse, and he told me afterwards that "the thing never before seemed to be so far away." Jack got ready for his run as quickly as his condition would permit. The fireman neglected needed rest the same day and was somewhat "grouchy" when asked to do anything not strictly in his line of work. The fact of the matter was that Jack was down on one side with a cracked steam chest and flues stopped up, and the fireman had lost a valve and his steam pipes were leaking.

Train 62 got away on time. About 20 miles up the line Jack began to have trouble keeping awake, and took the "grub" bucket out of the seat-box, thinking it might help matters if he would eat something. When he lifted the cover he found some more of the boiled dinner and immediately dumped the bucket and contents into the firebox.

At a small station called M, about 35 miles out, he got a "will meet" order, reading trains 62 and 53 would meet at J, and that 62 would take the siding. Jack was awake and shut off steam nearly a mile from J and took hold of the handle of the brake valve with the intention of gradually bringing the train to a stop before reaching the switch. The fireman climbed onto the seat-box when Jack shut off, and was taking a tour through dreamland before the train had drifted 20 car lengths. The head brakeman, as usual, was mak-

ing spasmodic efforts to polish the toes of his shoes with his nose. Jack drifted—outraged nature had at last asserted herself. When the driving wheels struck the switch rails Jack "came to," and the first thing that greeted his sight was 53 pulling up the main line about 40 car lengths away. Jack's train had gradually slowed down and when the brake-valve handle went into emergency position they were not moving over 25 miles-an hour and had the crew on 53 realized conditions and immediately stopped, it is possible that the two trains would not have collided hard enough to have proven serious. Jack called to the fireman and jumped and brought up head first against a switch tie, cutting a gash over his right eye that took five stitches to close up. No injury to the rest of the crew—damage about \$2,000. In a future number I will tell you more about Jack.

I have not drawn entirely upon my imagination in telling you the stories of Mike and Hank. I believe were all the enginemen of our country standing before me, and I should say to them, "All present who have, to greater or less extent, experienced the trials, discomforts and conditions told in the story of Mike and Hank, hold up your hands," there would be a sea of hands before me.

No locomotive engineer, no matter how learned, can give his best service when he continually violates nature's laws. A good engine cannot remedy the defects of a disabled engineer.

J. W. READING.

The Top Wear in Cylinders.

ANGELS CAMP, CAL., March 1, 1905.

EDITOR JOURNAL: Some time ago a question appeared in the *Railway and Locomotive Engineering* as to why piston rings and cylinders of locomotives have a tendency to wear more at the top than at the bottom. The answer given—that the cause was probably due to guides being lined too low, or the unequal pressure of piston rings, etc., though good, hardly covered the ground.

The packing rings—sectional or otherwise—and the piston rods and cylinders

of all horizontal engines whose crank pins when moving above the central line turn toward the cylinders, as in the case of a locomotive going ahead, sustain like the crosshead the greatest friction on the upper side, and if an engine is heavily loaded, the top wear will in a short time be considerable if the cylinder lubrication is not constant and plentiful. The cylinder of a vertical engine is free from the weight of its piston, but the side pressure of the piston, like that of the crosshead, is unequal—the strain being greater on the right or left side, according to which motion the engine is running. In either motion, however, the difference between the pulling and pushing of a piston induces more cylinder friction on one stroke than on the other.

A locomotive crosshead rises, so to speak, on both strokes (engine going ahead), but the upward pressure of piston is greater on the forward or pulling stroke than it is on the back or pushing stroke, and the amount of piston pressure on the upper wall of cylinder depends upon the speed, resistance of load and weight of piston—the faster the speed, heavier the load and lighter the piston, the greater will be the top wear, especially if priming occurs, when oil should be fed to the cylinders as rapidly as possible, which will enable the engine to use less steam, and thus reduce the priming by slowing the current between the boiler and the steam chests. There is no more disagreeable sound than the groaning of pistons and valves in distress, the vibration from which afflicts the whole anatomy of an engine, causing rough riding, loss of temper and undue consumption of fuel. If priming results from bad water or other causes, it cannot always be helped, but the evil can be remedied by a liberal flow of valve oil to the cylinder at the beginning of the trouble.

The crosshead and piston rod are in one sense extensions of the piston, all rigidly connected and moving in the same plane; but if there were a knuckle joint between the crosshead and piston rod the piston would rise while pulling the crank pin

through the upper half of its revolution, because the pulling stroke of piston tends to bring it and the wrist pin connections of main rod into horizontal line or on a level with the crank pin, as at the front dead-center point. If a crank on one side were placed on the upper quarter and the drivers blocked so they could not move, the piston and crosshead on that side, if unconfined by top guide and cylinder, could be moved ahead to the extent of drawing them and the main rod into a straight line.

If a crosshead is allowed to run with too much space worn between top of shoe and guide, the upper side of piston rod will suffer from the upward strain of the forward stroke, and the back stroke will raise the crosshead and cant the piston, especially the starting load. Assuming that the top shoe and guide are either adjusted or worn enough to permit undue elevation of the crosshead—a condition most conducive to top wear of the rod and piston—then the difference in the reciprocating strokes is that the back stroke pushes the crosshead upward and out of line, and the forward stroke pulls it upward and the piston up into line with the crosshead—that is, the forward stroke will so raise the piston if the upper sides of packing gland, rod-bore, and cylinder are so badly worn that they do not interfere; if they do interfere, the upward strain of pulling stroke will be greater on the piston and rod than when the crosshead runs true and each of the three parts bears its share of the top friction.

With crosshead properly lined, a locomotive piston will not "drag" on the back stroke when the engine is under way. The greatest pressure on the upper wall of a cylinder is due when the crank arrives at the top quarter, where the pin reaches the limit of its travel from the central line of motion, and the shorter the main rod in proportion to the length of crank the greater will be the strain on crosshead and piston at this point of the forward or pulling stroke, causing unequal wear at central part of cylinder if lubrication is poor.

The foregoing refers to the "under" or go-ahead motion of a locomotive with horizontal cylinders set at the front end. This motion is the proper one for horizontal engines, so far as wear of crosshead and cylinder is concerned; for when the "over" or backing motion of a locomotive is employed the resistance of load pushes the crosshead down on the out-stroke of piston rod and pulls it down on the in-stroke of rod; and the pressure exerted on the bottom of cylinder and lower guide by the pulling stroke is increased by the weight of the piston and crosshead.

If an engine be reversed after closing throttle and thus be converted into an air compressor, so long as the drivers turn forward or until something breaks, the effect on the crossheads and pistons will be the same as though the engine were running backward—the momentum driving the pistons against resisting air transfers the pressure of crosshead to lower guide, the back stroke of crank becomes the pulling stroke, and the compression in the crank end of cylinder pulls the piston down with the crosshead.

I have endeavored to show that a piston is subjected to about the same lateral strain that a crosshead is, and that the cylinder lubrication should be constant and plentiful to insure economy. If any reader thinks otherwise, it may be pertinent to say that a locomotive piston presses heavier on the bottom of the cylinder than it does on the top when steam is shut off and the engine is not in motion; how, then, could the pressure and wear be greater at the top unless the piston rises when steam is applied and the engine set at work?

FRED W. CLOUGH.

Valve Motion.

As far back as memory reaches the writer has heard this very familiar remark that may be so often heard today, "She has good valve motion," or, "poor valve motion," whichever is supposed to most aptly fit the particular case referred to. To the valve motion is often credited all

the merit for good performance, as well as all the blame for the opposite kind. Where the faith is strong, facts are of course immaterial, and while it is clear that criticism will not dispel illusions that have taken root in the minds of men for generations past, and are carefully preserved up to the present day, yet it is interesting to note the prevalence of that faith, and is sometimes really amusing to hear that mystifying remark made in explanation for the failure of some ill-proportioned, badly conditioned, and unskillfully managed engine—"She's got poor valve motion."

The boiler may be too small, the draft appliances of wrong design, or improperly adjusted, necessitating in either case the use of a too small nozzle, thus restricting power of engine in a measure; the wedges may be anywhere, allowing main boxes to be slammed back and forth in the jaws of frame, thus very materially affecting the distribution of steam in cylinders, as the eccentrics which control the valve motion (being on the main axle usually) are subjected to the same motion as the boxes. The engine may be running to one side, cutting flanges so as to cause considerable resistance; her valves may be out of square and cylinder out of true. She may be burdened by any or all of these ills in addition to poor handling, which frequently follows conditions referred to, and is indeed the crowning fault, and yet her failure to render first-class service is frequently charged to "poor valve motion."

The writer believes the difference in performance of engines to be more a matter of men than anything else. The man who does good work with an engine, not today nor yesterday, but every day and all the time, must necessarily keep his engine up; while the indifferent runner almost invariably has an indifferently kept engine. The good engines are those that are properly cared for and skillfully handled; the poor ones are those lacking both care and management, and this rule applies so truly that the exceptions are exceedingly rare, in spite of a widespread belief that "valve motion" is the ruling factor in the performance of locomotives. T. P. WHELAN.

Pump Stopping One Minute.

TRENTON, N. J., Oct. 8, 1905.

EDITOR JOURNAL: Brother W. A. in his question on air pump failure in the October number of our JOURNAL, did not say the size of pump or amount of steam pressure, but I should judge it was an 8 inch pump with 120 or 130 pounds steam pressure. The only thing I know of that would cause the pump to act in such a manner is an obstruction in the discharge pipe. The obstruction has been such that it would allow but a small quantity of air to pass it and register 10 pounds on gauge, but on the air pump side of the obstruction the space being small, the pressure would mount up so rapidly that it would exceed steam pressure and stop the pump. During the time (one minute) the pump was at rest, sufficient air would leak past the obstruction to lower the pressure, so that the pump would start to work to be again stopped when air pressure exceeded steam pressure. Yours fraternally,

B. R. DIXON, Div. 373.

Bushing Will Turn.

PORTSMOUTH, O., Oct. 10, 1905.

EDITOR JOURNAL: Please allow me space to state that Bro. H. D. Hall is wrong in his opinion that it is impossible for a cylinder bushing to turn. I saw one that had turned on the N. & W. Ry. It turned at Peeples, with Bro. W. J. Ritter, and was a complete puzzle to all.

Yours fraternally,

E. A. LINDSEY.

Change of Train Schedule.

NEW ALBANY, MISS., Oct. 7, 1905.

EDITOR JOURNAL: I would like to ask Brother Murphy of Div. 139 in regard to the change of time card, what he is going to do with the rule reading no more than one train of the same number can run over the same piece of track on the same date. If No. 1 of the old time table takes the schedule of No. 1 on the preceding table, how can the other fellow proceed? How is he going to register at the terminal? B. B. DAVIS, Div. 140.

Oldest Locomotive at Work.

CAMAQUEY CUBA, Oct. 11, 1905.

EDITOR JOURNAL: In looking over the JOURNAL for October I notice an old engine and I send under separate cover a photo of an engine for which I claim honors. This engine was built by the M. W. Baldwin & Co. about 1847, and is still in actual service, being in charge of a native engineer for 28 years and now in charge of the writer. This engine is equipped with hook motion and for the benefit of those

part. This stack was for wood, but now it burns coal. The engine has no engine truck such as are now used with modern engines, wheels being all of the same size and connected by driving rods, four pairs of rods being necessary to connect up engine. All or nearly all of the original engine is still in service as sent from the works. Great credit should be given the Baldwin Locomotive Works for so creditable a piece of machinery being in service for over half a century, and it is said that the Baldwin Company has offered

BALDWIN LOCOMOTIVE BUILT IN 1847.

not familiar with this motion, I will give a few details. The engine has six eccentrics, two on each side for ordinary steam admission and one for exhaust, making six in all, two reverse links, one for steam admission and one for exhaust; cylinders 16 x 26, double boiler head (an idea in vogue in the early days of locomotive building); two scales for safety valve, also left engine being lead engine. By the photo you will notice the large stack, which is 7 feet 4 inches in height and 4 feet 6 inches in diameter at the largest

the Cuba Company a new engine for her, but the Cuba Company seems loath to part with this relic of early locomotive building.

FRANK ECHARD, Div. 200.

Interest in This Department.

No practice will conduce more to fix in the mind what we learn than the practice of writing for the JOURNAL, as we not only set the mind at work, but study references and fix in mind the correct idea and we hope the Brothers will write for their own good and good of others.

CHARLES H. SALMONS, - Editor and Manager.

Address all matter for publication—Correspondence, Technical and Link Departments, changes in Division Addresses, Special Notices, and address of Outside Subscribers to C. H. SALMONS, S. G. E., Editor JOURNAL.

No reading space will be sold for advertising purposes under any circumstances.

All money matters should be addressed to W. B. PRENTER, F. G. E., 307 Society for Savings Bldg. Send New York or Chicago draft, Express money order or Postal order, but never send personal check. Also send the name and address of all members Initiated, Reinstated, Transferred, Expelled, Suspended, Withdrawn and Deaths to the F. G. E., as per Section 16 of the Statutes.

Changes in Address of the JOURNAL and orders for Division supplies should be addressed to D. EVERETT, T. G. E., 307 Society for Savings Bldg.

Advertising Department matter and all correspondence relating thereto should be addressed to W. N. GATES, 409 Garfield Bldg., Cleveland, O.

NOVEMBER, 1905.

A Word to the Wise.

Under the above heading the Editor of the *B. of L. F. Magazine* writes five columns, and that the subject may be better understood and a better knowledge gained as to who is the aggressor, we quote the following from the editorial:

There is nothing that is more essential to the happiness of the human race than peace and harmony amongst individuals and nations. There is nothing more essential to the successful attainment of the aims of organized labor than goodwill and co-operation amongst the individuals and bodies of individuals constituting it. These facts are self-evident, yet quarrels have not been discontinued between individuals nor wars between nations; neither has the time arrived when differences between bodies of organized wage-earners have ceased to arise. In all conflicts one of the parties to the controversy must necessarily be the aggressor, and the nation, labor organization or individual who, when assailed by an adversary, fails to assume the defensive, must stand convicted of cowardice in the eyes of the world, and forfeit that respect and confidence upon which success, if not existence itself, depends.

No organized body of men was ever more desirous of maintaining peace and harmony with mankind in general, or of extending the open hand of warm good-fellowship to sister organizations in particular, than is the Brotherhood of Locomotive

Firemen. Conservative, tolerant and generous, it would rather brook an injury than resent it; but when assaults are insidious, continuous and pre-meditately calculated to injure its most vital interests and impair its efficacy in carrying out its mission of protection by obstructing its free exercise of the sacred duties it owes its individual members—when silence, born of a love of peace and harmony is mistaken for submission and becomes liable to assume the appearance of cowardice, it proposes to assert itself, and with a determination strengthened by the consciousness of being absolutely in the right, and with a power at all times judiciously exercised and wisely directed, defend by the use of every honorable means at its disposal those rights, interests and principles dear to it as life itself, no matter from what source such assaults may be directed, or who the assailants may be. Since occasion has arisen to justify the foregoing declaration, it is but right that the membership should be familiar with the situation which prompts it as it exists.

In Official Circular No. 7, appearing in the August issue, the Grand Master states that numerous inquiries have reached his office from members of our Order who have joined a sister organization at the earnest solicitation of the members of the latter, as to whether or not they can be expelled therefrom in the event they fail to withdraw from the Brotherhood of Locomotive Firemen within a period of ninety days or at any other time after joining said organization, and with a view to correctly informing such members stated that the question had been carefully gone into by our legal department, same having advised that section 27 of the constitution of the said sister organization was wholly insufficient and incapable of being construed so as to warrant or impel any division or officer of the said organization to expel a member therefrom simply because he refuses to sever his connection with the Brotherhood of Locomotive Firemen. He states further that an expulsion of this kind attempted or actually carried out would be absolutely illegal and void, and that our Brotherhood stands ready to assist its members in enforcing their rights in the premises. Legal proceedings have already been instituted with a view to this end.....

Membership in the Brotherhood of Locomotive Firemen constitutes a weighty consideration in favor of an applicant seeking admission to other organizations, and why men should surrender such an advantage as a condition to joining an order composed of other railroad employees who are their constant companions and associates in the performance of perilous duties, and in whose comradeship they constantly face danger, and many of them meet death, can not be explained on any fair, reasonable or justifiable grounds.....

The Brotherhood of Locomotive Firemen, as stated by Brother Maier, has always supported the Brotherhood of Locomotive Engineers loyally and unflinchingly when it was in the right, and will continue to do so. But we do insist that its attitude towards our organization should be one of consistent courtesy and fraternalism compatible with the

close ties that bind the members of each together in their daily associations. As before stated, we want peace, harmony, good will and uninterrupted co-operation—providing we can enjoy such conditions with honor to ourselves.

First of all we desire to say that there is no disposition on the part of the engineers to quarrel with the firemen, and under no ordinary circumstances would we use the columns of the JOURNAL in a discussion of any differences that might arise between engineers and firemen, who certainly ought to be friends. It is bad enough to know ourselves that there is any disagreement, without crying it out from the housetops for the edification of those not of us, and who perhaps may read of it with great satisfaction, possibly believing it means that by working one against the other, the usefulness of both as a means of redress of wrong will be at an end. But since there is so much of the vindictive in this editorial and the letter from Third Vice Grand Master Maier we feel that it is necessary to use some space, not to foster a quarrel, but to state a few facts relative to the causes which induced the enactment of law found in our constitution of which the firemen complain, coming more from misconception than fact. If the B. of L. E. would do just what the B. of L. F. wanted them to do, and let the B. of L. F. do just as they pleased in encroaching upon the natural province of the B. of L. E., we suppose we would have that peace the Editor desires. However, for the sake of a better understanding of the causes which led to the enactment of laws of which they complain, and to better understand who is the aggressor, we will go back to 1884 when the first law of which they complain was enacted. There was no restriction then, and a large part of the members of the B. of L. E. belonged to both orders, and the ill feeling created by it was of a local nature, and bickerings and blackballing from the dual membership was quite common in both orders, a fireman applying for membership in the B. of L. F., disliked by the engineers who held dual membership, the door could be easily locked,

and an engineer the fireman did not like could be just as easily barred from membership in the B. of L. E. The action of the San Francisco convention, however, came from a concerted action on the part of the dual members to elect delegates to that convention, and they succeeded to such an extent as to make such legislation as the B. of L. E. desired almost impossible, and the resolution adopted at that convention, which angered the dual members to an extent that some withdrew from the B. of L. E., could not be passed until the last day's session, though many efforts had been made from the time it was demonstrated that nearly half the delegates were member of both orders. That resolution reads, "That no member of the B. of L. E. who is also a member of the Brotherhood of Locomotive Firemen shall be eligible as a delegate to the G. I. D. B. of L. E." Who was the aggressor in this instance? If the B. of L. E. was to conduct business in the interest of those it represented, what else was left for them to do? The delegates at San Francisco felt that the best interests of the B. of L. E. were jeopardized by dual representation and met it with the only cure—the election of members of the B. of L. E. with undivided allegiance, to make laws for engineers. This was no evidence of ill feeling toward members of the B. of L. F. It was a necessity forced upon them by the aggressiveness of the dual members. It was two families under one roof and the house was not large enough for both and live in peace. We believed then, and do now, that the best interests of both orders are best conserved by engineers legislating for engineers and firemen for firemen, and we are quite as sure that if the B. of L. F. convention should have a sufficient number of dual members attend their convention to throttle legislation in the direct interest of firemen, they would exclude the dual members, as did the San Francisco convention.

The next thing they complained of, and perhaps more strenuously, was the action of the following convention at New Or-

leans in 1885, when the convention enacted an addition to the qualification for membership in the B. of L. E. as follows: "and is not a member of any other labor organization at the time of his election." This was not intended to harm members of the B. of L. F. in the least. The writer, as a delegate, voted for this measure, and we do not believe that any fireman who was ever associated with him or was in the same locality where his influence was felt, will say that he had not always been a friend to them. On returning to his own Division he told the dual members why he thought it best that they should be under a single obligation; that they should not occupy the position of go-betweens, and they withdrew, and both felt it for the best. But to better understand why the law was enacted, a little more history is necessary.

The B. of L. E. has always stood for the absolute maintenance of contractual relations with every employing company who would make contracts to govern pay and conditions, and at the period of the New Orleans convention, the Knights of Labor were a large factor in organized labor affairs, and many members of the B. of L. E. had joined them, and other engineers not yet members of the B. of L. E. were members of the K. of L., and it was felt that this dual membership and obligation was not only incompatible with the interest of engineers, but would make our obligation to contract a nullity in case of a strike of other orders to which such members might have obligated themselves. Whoever was at the New Orleans convention will remember that there were no reflections cast upon the B. of L. F. and, on the contrary, that they were enlized by many who took part in the debate of this important proposition; but the majority, recognizing that the K. of L. occupied a large place in the affairs of organized labor, did not desire to antagonize them by making a specific law applying to the K. of L. only, and, as a compromise, enacted the law that applicants for membership must not be elected to membership if a member of any other labor organization, and we do

not believe that law or, others of a like nature which have followed, have been of the slightest injury to the B. of L. F. as an organization protecting the interests of those for whom it was organized—locomotive firemen. The present Secretary and Treasurer of the B. of L. F., Bro. W. S. Carter, in a letter to the B. of L. F. magazine in January, 1894, page 64, said an undeniable truth in a paragraph which reads:

"The lack of harmony between labor organizations can be ascribed to three causes: 1. Personal ill feeling between representative grand officers. 2. *Mixed organizations infringing upon class organizations.* 3. *Trivial incidents that will arise just as long as man's humanity to man is a characteristic of Adam's progeny.*"

In the magazine of February, 1896, page 128, while Bro. Carter was editor, in answer to a tirade of Eugene V. Debs against the old railway orders, he said: "*Class organizations are the only labor organizations that will endure. The printers, the carpenters and the bricklayers are going up hill, while organizations based on the principles of the A. R. U. are going down hill.*" That is just what the B. of L. E. has thought of dual obligations, and our position does not come through any ill feeling toward any laboring class. That man who subscribes by oath to the law of one labor organization, subscribes to the cardinal principles of all, and will not be found doing that which is detrimental to any other class; but we may well be skeptical as to the value of an obligation to two or more masters.

With the dual organization of engineers and firemen in England, having an age nearly equal to our organization, they acknowledge that they work today for the same wage they did 40 years ago, with many added responsibilities. The Amalgamated Society of Railroad Servants has fared no better, and a writer in *The Locomotive Journal*, Leeds, England, of October, 1905, page 480, "after discussing conditions of 'we railroad slaves,' I may call ourselves," tells what the spinners have accomplished, and asks, "Why?" *Simply because they are combined in their own par-*

ticular union to a man. The spinners don't quibble about the combination of all the workers in the mill; they simply join their own society and believe in their own strength. To all locomotive men I would say "go thou and do likewise."

We not only believe in every man belonging to that order his labor represents, but that he should take a single obligation to that, and that none but singly obligated defenders of that class should be allowed to represent them in a business way. That man who is obligated to more than one interest must be very astute to make both interests believe he is loyal, and they often go to extremes detrimental to both, in an effort to prove loyalty to the one he is put in position to defend. This truth can be verified by pointing to specific incidents where dual membership has not only created great cost in time on committee work, but at a cost of benefits received to both organizations. This accounts for the law in our statute books prescribing against any member of the B. of L. E. serving on a committee representing members of the B. of L. F. and vice versa.

Now, as to official circular No. 7, which our Brother Editor quotes, we unhesitatingly say that it emanates from a vindictive spirit, and that there is nothing fair or even commendable in it, and we very much doubt its approval by a majority of the members of the B. of L. F. In conformity with this circular, their legal department was called into service in New Mexico enjoining Div. 251 from expelling a member who joined the B. of L. F. in violation of his obligation to the B. of L. E. Brother Donnelly withdrew from the B. of L. F. years ago, and was insured in the B. of L. E., and had ample opportunity to take all of its insurance if he desired, but failed to do so until age limit prevented giving him more policies, so he makes application to the B. of L. F. and is accepted, and of course Div. 251 applied the law and the attorney, under instructions of the Grand Officers of the B. of L. F., enjoined the Division from expelling him; and in order to get standing in court declared in his petition that

the B. of L. F. was not a labor organization. The injunction was not granted, but the animus was clearly shown in the attempt to interfere and annoy the B. of L. E. They charge that the B. of L. E. are coercing their members and compelling them to join the B. of L. E., and they call that the closed door. Let us see how much truth can attach to that statement.

To say that any man is compelled to make application for membership in the B. of L. E. will appear ridiculous to anyone with any knowledge of the facts, and if one had any serious objections to what is contained in the application, he would not be at all likely to sign it. The fact that he does sign the following blank application, which reads as follows:

Proposition for Membership

In The Brotherhood of Locomotive Engineers.

To the Officers and Members of Division No.

I, the undersigned, being a Locomotive Engineer..... years' experience, running on the Railroad..... years of age, can read and write, residing in the of do hereby offer myself as a candidate for the mysteries of the Brotherhood in your Division. I am not a member of any other labor organization, except..... and I agree, if admitted, that I will withdraw from all other labor organizations within ninety days from the date of my initiation into the B. of L. E. and will abide by and conform to all the provisions of the Constitution and By-Laws of the Order, and will take out and carry one or more policies in the B. of L. E. Mutual Insurance Association.

is evidence that he desires membership. He must have run an engine long enough to demonstrate that he is a qualified engineer, and his character must meet the approbation of the members of the B. of L. E. before he can be elected to membership. The ninety days in which to withdraw was given so as not to jeopardize the insurance of the applicant if he should fail at his medical examination or election as a member of the B. of L. E.

We do not think that it will be denied that in signing this application he binds himself to abide by the conditions and law of the order to which he asks admission, and now we would ask, if an engineer applies, obligating himself as he does in signing the application, and signs it with the deliberate purpose of violating not only his word in signing the application,

but his solemn obligation taken when initiated, if the officers of the B. of L. F. can commend their own action in putting their legal department at work in an effort to defend such palpable fraud? Are they trying to secure justice for men who are void of honor, or are they doing this to be vindictive and resort to every means to disturb social relations, and widen the breach of their own making? The Editor says they want peace, but from their present attitude, it must, of course, come at any price to the B. of L. E. if there is peace. 'But we believe we are doing that which is for the best interest of both orders, that success is best conserved by each belonging to the organization his work represents, that in committee work and in all official places, engineers should represent engineers and firemen represent firemen; then the interests of each will be honestly looked after and good-will maintained. Dual membership is the cause of the ill-feeling on the part of the B. of L. F. and the only cure is to discontinue the dual obligation, an untenable position for any man to occupy.

Third Vice Grand Master Maier, under the heading of *The Question of Jurisdiction, or A Victory for the Open Door*, occupies twelve pages of the magazine, much of which is directed to the officials of the Northern Pacific road. Space will not permit a reproduction of his long article, so we will be content with comments on some of his most salient points. In the beginning he says:

I wish to refer to the *Open Door* policy of the Brotherhood of Locomotive Firemen, which means the right of our organization to represent its engineer members in matters of grievances before railroad managements.

That various efforts have been made by our sister organization—the Brotherhood of Locomotive Engineers—to have the "closed door" policy put in force and effect is a well-known fact, several attempts having been made during very recent years to have railroad companies adopt such a rule.

The open and closed door suggested in the above would seem very far fetched. We had supposed the closed door meant no employment unless they were members of the labor organization demanding that the door be closed. We will cite one

of a number of cases of the door being closed by a B. of L. F. committee. In 1886 the firemen and engineers' committee on the Erie Road met the officials. Several of the firemen's committee were engineers and, as we have said before, were in that questionable position that they must be rabidly radical to prove their loyalty to those they represented. At all events, the firemen's committee demanded that the doors be closed against the hiring of engineers and that all men be promoted, they would not recede from it, and the doors were closed and remained closed. This policy was followed to such an extent that the Atlanta convention appointed a committee to meet the delegates at the firemen's convention in Cincinnati and see if some arrangements could not be reached whereby engineers out of work could find an opening, but the majority were opposed to making any concessions. This is what we understand as closing the door.

The members of the B. of L. E. are not attempting to deny any man place, but we believe we are absolutely consistent, so long as the influence of the Brotherhood of Locomotive Engineers secured the contracts under which engineers serve, in demanding that it be their province to see that the contract is lived up to, and in doing this we are not encroaching upon the province of firemen, and when we agree to look after the grievance of every engineer, when asked, and whether a member of the B. of L. E. or not, it cannot have much of the element of the closed door in it, and cannot possibly harm members of the B. of L. F. who are still pursuing the duties of locomotive firemen.

Brother Maier asks:

Is it because the engineers are so anxious to take up our grievances, or that they are particularly interested in the future welfare of ourselves or our families that they are making this demand? . . . We cannot believe so. The indications are that the idea emanated from a few who were actuated by selfish motives, possibly not realizing the enormity of its injustice or the effect that would follow.

To his first proposition, the B. of L. E. in demanding that engineers look after

the welfare of engineers are indirectly doing that which is for the welfare of locomotive firemen, for they are the natural heirs to all the good we can create. As to his second proposition, we would ask Brother Maier to turn the searchlight upon himself and see if he does not find personal aspirations, as his own motive rather than the best interest of Locomotive Firemen he officially represents.

Again he says:

We have been informed of numerous cases throughout the country where they have served notice on engineers who were members of both organizations to withdraw from the Brotherhood of Locomotive Firemen, under penalty of expulsion from their order. Is this in accordance with American principles and American ideas of liberty?

Brother Maier is not fair either to the engineers or firemen in making such ambiguous half statements. He leaves out the cause and, of course, with the purpose to deceive. The expulsions alluded to are for violation of a solemn obligation which was made in making application and in obligating himself when initiated. Even in Brother Maier's extremity to find excuse for his vindictive attitude, will he maintain that he is representing the general sentiment of the members of the B. of L. F. in defending men with so little honor that their obligation is a lie, and will he maintain that the members of the B. of L. F. desire their legal department to be put at work and their money spent to compel the B. of L. E. to accord membership to such violators of their word of honor? We cannot believe he represents the sentiments of the B. of L. F., whose members are as honorable as any other class of men and who would not tolerate dishonor in their own ranks. No man is compelled to join the B. of L. E.; he always applies of his own free will and obligates himself both in his application and obligation when initiated, and the courts sustain the laws governing voluntary associations, and we will continue to put in force the law governing the Brotherhood whenever there is infraction or violation of obligation, and if our members comply strictly with our law in enforcing it, we need not

be afraid of the courts, whoever is behind the prosecution.

Wrong coloring has been given to controversy over jurisdiction in several places, and that it may be better understood, we append the following relative to the N. Y., N. H. & H. and Great Northern railway.

THE NEW YORK, NEW HAVEN & HARTFORD RAILROAD COMPANY.

NEW HAVEN, CONN., March 20, 1905.

"Supplementing circular of February 13 (signed by the First Vice President, approved by the President), regarding the company's position in the matter of the controversy between the General Committee of Adjustment of the engineers and the General Committee of Adjustment of the firemen, I am glad to advise that a settlement satisfactory to both parties has been arrived at.

"For the information of the public and the employees in the train service of the company, the following statement is made:

"On February 14, Mr. Shea, Second Vice Grand Master of the Brotherhood of Locomotive Firemen, and the Firemen's General Committee, met a committee of five of the directors of this company and went over the points at issue with that committee.

"The committee of directors, after earnest consideration of the matter, decided as follows:

"Mr. Timothy Shea, Second Vice Grand Master, Brotherhood of Locomotive Firemen:

"Dear Sir: Agreeable to promise made by the special committee of the board of directors at the hearing with the Committee of Adjustment of Locomotive Firemen, held at Grand Central Station, New York, on Tuesday, February 14, 1905, the committee advises you of its conclusion as follows:

"The question at issue is the following:

"That in the case of engineers who have been disciplined and are members of the Brotherhood of Locomotive Firemen, upon taking an appeal from the decision of the officers applying the discipline to a higher officer, that a com-

mittee of engineers, members of the Brotherhood of Locomotive Firemen, should take up his case with the management instead of the Engineers' Adjustment Committee.

"The Committee have carefully considered the statements made at the hearing, having examined the records of the company in regard to the question at issue, and having consulted with the officers of the company concerning the same, has reached the following conclusions, namely:

"That any aggrieved engineer is guaranteed an opportunity to be represented by an advocate before the officers of the company, by the provisions contained in Article I. of the schedule made with the locomotive engineers in our employ, in effect January 1st, 1904, in which article it is provided that 'All engineers will be given a fair chance to defend themselves against charges in holding investigations. All engineers who are interested will be allowed to choose a disinterested engineer to represent or accompany them on boards of investigation, if they so desire, when an appeal is made after the first investigation.'

"The committee is in entire accord with the position taken and decision rendered in this matter by the President and executive officials charged with the operation and management of the company's railroad, namely, that the claim of your committee cannot be conceded and believe that this decision is for the best interests of the company.

"The decision of the President and executive officers, as already communicated to you by them, is therefore sustained.

"Yours truly,

(Signed) "CHAS. F. BROOKER,

Attest: "Chairman.

(Signed) "JOHN G. PARKER, Sec."

"Representatives of the firemen then went before the National Civic Federation in New York, but after two hearings the National Civic Federation decided that the case was not one which they could adjust.

"The firemen then, as had been suggested to them by the executive officers of the company months previously, during

their conferences on the subject, requested the engineers to hold a joint conference which was granted by the engineers, and as a result of this conference a joint communication was finally submitted to the company proposing that the phrase in Article I. of the company's agreement with its engineers, which now reads:

"'All engineers who are interested will be allowed to choose some disinterested engineer to represent or accompany them'—be changed to read:

"'All engineers who are interested will be allowed to choose one or two disinterested engineers to accompany and speak for them on boards of investigation, if they so desire, when an appeal is made after the first investigation.' And with an addition to Article I., to read as follows:

"'It is further agreed that in event engineers selected as per Article I. fail to adjust grievance, the matter can be taken up and disposed of in accordance with the practice now in vogue on system, the case to be disposed of under the supervision of the engineers selected.'

"To this the company assented carrying out the position that it had assumed from the first; that it was willing to make such a change in Article I., provided the engineers would give their assent, but not otherwise.

"The company's assent was given upon the following conditions:

"1. That for the sake of clearness the phrase in Article I. at present reading 'on boards of investigation' be changed to read 'before boards of investigation' and that the words 'in the employ of the company' be inserted after the words 'disinterested engineer.'

"With these changes Article I. will read:

"INVESTIGATIONS.

"All engineers will be given a fair chance to defend themselves against charges in holding investigations. Superintendents and Master Mechanics will be careful to get all the information possible and hold investigations as soon as practicable. Engineers who are suspended and afterwards found innocent at the time of the original investigation shall receive pay for the time lost. All engineers sus-

pended will be notified of the cause and length of suspension in writing.

"All engineers interested will be allowed to choose one or two disinterested engineers in the employ of the company to accompany and speak for them before boards of investigation, if they so desire, when an appeal is made after the first investigation.

"It is further agreed that in event engineers selected as per Article I. fail to adjust grievance, the matter can then be taken up and disposed of in accordance with the practice now in vogue on system, the case to be disposed of under the supervision of the engineers selected.

"2. That Article I. of the company's agreement with its firemen shall be changed to correspond with the amendments proposed to Article I. of the company's agreement with its engineers.

"3. (a.) It is agreed, both by the Engineers' General Committee of Adjustment and by the Firemen's Joint Protection Board, that inasmuch as it has been previously ruled by the company that firemen or the firemen's committee cannot be permitted to handle cases of engineers, it must be agreed that engineers cannot handle cases of firemen.

"(b.) This means that the regular Engineers' General Committee of Adjustment cannot handle cases of firemen, and also means that the firemen's committee must consist entirely of firemen in the employ of this company, and should any fireman serving on the firemen's committee be promoted to the position of engineer he shall retire from the firemen's committee at the expiration of his term as a committeeman.

"(c.) Should any engineer serving on the engineers' committee have to go back to the position of fireman for any cause whatever, he shall retire from the engineers' committee at the expiration of his term as a committeeman.

"4. In the case of an engineer temporarily going back to duty as a fireman, while he is serving as a fireman, his case will have to be taken up and handled in accordance with Article I. of the firemen's schedule as amended.

"5. The paragraph that has been added on to Article I. in the schedule with engineers and in the schedule with firemen, means that any engineer or fireman who desires to appear before the officials must have the opportunity to elect whether he shall appear, if an engineer, through the regular engineers' committee or with one or two engineers of his own selection, and he must adhere to the same method until his appeal has been finally decided upon. He cannot elect to be accompanied by one or two engineers before one official and later appear before the same or another official with the committee, or vice versa.

"The same method to apply to firemen desiring to appear before the officials.

"The above conditions have been accepted by both.

"This ends a controversy which has extended over a very long period, and which has led to more or less feeling between the engineers and firemen employed by this company, and consequently to more or less bad service, from which the company and the public have suffered severely, and it is the hope of the management that, now that this question has been settled to the satisfaction of all, the men will make a determined effort to improve the service and to carry out their existing agreements with the company, and also the company's rules, in the same good faith that the company is carrying out its obligation to them.

"SAMUEL HIGGINS,
"General Manager."

BROTHERHOOD OF LOCOMOTIVE ENGINEERS. G. C. OF A.

GREAT NORTHERN RAILWAY LINE.
ENGINEERS' SCHEDULE

Taking effect September 1st, 1905.

"By agreement from Sept. 1, 1905 (superseding all previous agreements), the following rules will govern the pay of engineers and define their rights as agreed to, understood and arranged between the Great Northern Railway Company, the Montana Central Railway Company and the Willmar & Sioux Falls Railway Company, by their officers and a committee

of engineers, whose names are hereto attached, and who represent *all* of the engineers employed by the said companies, and they will remain in effect until changed by mutual consent."

"GREAT NORTHERN RAILWAY CO.,

"MONTANA CENTRAL RAILWAY CO.

"WILLMAR & SIOUX FALLS RAILWAY CO.

"By GEO. H. EMERSON,

"Supt. Motive Power.

"Approved: GEO. T. SLADE, Gen. Supt.

"For Engineers' Committee:

"WM. RYAN, Chairman.

"H. S. LANDIS, Secretary."

The engineer who does not desire the B. of L. E. committee to take up his case if he gets in trouble, may choose one or two of his own class and conduct his own case, but the case must be disposed of under the supervision of the engineers selected. The G. C. of A. of the B. of L. E. will always be found ready to assist any engineer in trouble if he is not so prejudiced that he will not ask them to do so, and we do not think in that case he has much ground for complaint. In closing we desire to say again that the B. of L. E. believe the best interest of any class of laboring men is best conserved by a single obligation to the order representing that class.

That dual membership is a trouble breeder.

That he who undertakes to serve two masters is in a position where the enemy of both masters would look for assistance.

That the B. of L. E. is not unfriendly to the Brotherhood of Locomotive Firemen regardless of the strenuous efforts of the Grand Officers of that organization to make it appear so.

At Rest.

In the preparation of this number the Editor has labored under great stress of mind, as Mrs. Salmons, wife of the Editor, member of Div. 65, G. I. A., and who will doubtless be remembered by a large number who met her in her travels, and at the Los Angeles convention, submitted to an operation on Sept. 30th for what was supposed to be an ovarian cyst,

with little danger, but proved to be of a fibroid nature involving so much that she gradually slipped away out of our life into God's keeping, on Oct. 5th.

Services were held in Cleveland, Ohio, and Rutland, Vt., and we take this occasion to express our lasting appreciation to the many friends who paid loving tribute to their exemplary friend, to Div. 65, G. I. A., to a loving sister, to the officials of the L. S. & M. S., N. Y. C. & H. R., Delaware & Hudson Ry's for special courtesies, and to the General Manager and officials of the Rutland road for special train, and especially to Brothers of Div. 347, B. of L. E., and to Sympathy Div. 119, G. I. A., Rutland, Vt., who attended in bodies, and rendered every assistance possible; to the Baptist Sunday school, and the many friends in Rutland, who added their loving tributes to their life-long friend. With this explanation we trust that whatever may be found amiss in this number will find excuse in the distress of the Editor.

Election of Officers.

While it is presumed that the officers and members of all Divisions are familiar with the laws by which they are governed, yet time moves on quickly, work is plentiful, and lest some may forget, we desire to call attention to the fact that nominations for the various offices defined in Sections 3 and 5, pages 21 and 22 of the statutes, must be made at the first meeting in November, elected the first meeting in December, and to be installed the first meeting in January 1906.

The qualifications of members for these offices is quite an important consideration, and in this connection we call your attention to Section 2, page 21.

Care should be taken not to elect any member whose seat can be contested because he is not within the standing prescribed by the law as above cited.

Divisions cannot expect the convention to excuse a disqualified delegate, nor can the Division consistently expect every member will stand within the law if the Division is at all lax in living within itself.

Facing Death When Duty Calls.

Those out of the range of yellow fever have little conception of what it means to remain in and perform the various functions demanded in the interest of humanity in the fearful atmosphere of an epidemic where death is more than probable. Self-protection is one of Nature's first laws, but there are those who put duty first, whatever the consequences, and there were many of these in the South during the fearful epidemic now fortunately nearly, if not quite, stamped out. Among the great needs in such trying times are men to keep the railroads moving at least sufficiently to supply the needs of the various localities, and the following letter is characteristic of one who not only risks life in the performance of duty but represents many who are always found ministering to the wants of suffering humanity, regardless of self, and who deserve the highest encomium for their personal sacrifices and benevolent deeds. The letter and extract from the *New Orleans Picayune* follow:

LAKE PROVIDENCE, LA., Oct. 17, 1905.

Mr. C. H. Salmons, Editor of the *Locomotive Engineers' Monthly Journal*, Cleveland, O.

DEAR SIR: The railroad men who volunteered to stay in our city have so nobly done their duty during this epidemic of yellow fever that the past two months has decimated our city and parish, that I feel like asking you to reproduce in your monthly *JOURNAL* this tribute to their self-sacrifice, that appeared in the *New Orleans Daily Picayune* of Oct. 15. By reproducing this clipping you will greatly oblige,

Yours respectfully,

C. MAHVE,

Catholic Priest.

FAITHFUL EMPLOYEES.

LAKE PROVIDENCE, LA., Oct. 14.—The railroad officials and employees of the Memphis, Helena & Louisiana Railroad that traverses this section have faithfully done their duty and much more than their duty during this fearful epidemic that has visited the town and parish. At the beginning of the epidemic General Superintendent W. T. Tyler placed a train at the disposal of Col. Joseph L. Fischer, the executive officer of the Parish Board of Health, telling him to use it as he thought best to serve the wants of the people. Roadmaster A. J. Parkhill, Conductor Rilev Ferrier, Telegraph Operator J. T. Lindsey, Engineer G. B. Gouch and Fireman W. M. Latham, volunteered to stay during the epidemic. Conductor Ferrier was stricken at his post and died September 22; one week later Operator Lindsey died, hav-

ing been taken sick; as he was sending to the *Picayune* the message that announced the death of his friend Ferrier. Fireman Latham is yet at the hospital, where he has been confined since the 3d inst. with an attack of the dreaded disease. For the past two weeks Roadmaster Parkhill has been on duty, combining the various offices of roadmaster, station agent, conductor and telegraph operator.

The people of Lake Providence feel more than grateful to those heroes each one in his sphere of action, and they are glad that their valuable services have been highly appreciated by the officers in charge of the road. Each one of the survivors has received a personal acknowledgment of his work from Assistant Superintendent R. E. Cahill, but all, with their well-known modesty, kept it to themselves. The *Picayune's* correspondent was, however, permitted to read the letter addressed to Engineer Gouch, which is as follows:

"LAKE VILLAGE, ARK., Oct. 4, 1905.

"Mr. G. R. Gouch, Engineer, Lake Providence, La.:

"DEAR SIR: The faithfulness of our employees in the face of such an epidemic as Lake Providence has suffered from has been the source of much gratification to me, and I take this means of expressing my appreciation of the services of yourself and fireman.

"Now that reports are becoming more favorable, I believe the danger is almost over, and earnestly trust that you will continue enjoying your good health.

"Very truly yours,

"R. E. CAHILL,

"Assistant Superintendent."

C. W. Pease Selling Transportation.

C. W. Pease, who was expelled from the B. of L. E. in March, 1903, as the following letter will show, is posing as being in good standing with members of the B. of L. E., and by so doing secures favors, which he offers for sale, an offense not exceeded by any other under the law of the B. of L. E. Bro. C. W. Jeffries sent in the following letter and requests its publication:

CHIHUAHUA, Oct. 6, 1905.

MR. C. W. JEFFRIES, Engineer, Chihuahua,

MR. E. C. PARIS, Engineer, Jimulco:

GENTLEMEN: I am in receipt of the following letter from Mr. Provence, Superintendent of the Chihuahua Division, advising as follows:

At Jimulco on Sept. 16, Engineer C. W. Pease came to me and asked me for transportation to El Paso and return with his wife, saying that he was waiting to go up and bring her down and that he expected that she was in El Paso at that time; also stating that he had made request for transportation to you. I told him that it was not the proper thing to do, and that if I issued transportation, the request to you would bear fruit and we would have two sets of transportation issued to

the same party, but in order to accommodate him, I wired my office asking if you had made request for such transportation, and my clerk wired me that you had not. I then issued pass for him to El Paso and for himself and wife to return to Jimulco.

While I was in El Paso last week, I learned through our Commercial Agent at that place that this pass No. I-1259, in favor of Mr. A. D. M. S. Pease, El Paso to Jimulco, had been offered for sale to a broker. The pass was immediately bulletined and no one was carried on it.

This man has acted very ungentlemanly in this affair and has proved himself to be anything but a man who should be employed by any railroad company. I would request that you show him on your record as discharged for attempting to dispose of free transportation granted by the company for himself and wife. I further desire that you hand a copy of this letter to the local Division of Engineers (if there is one in Chihuahua), and ask them to do the right thing. I do not believe they wish to hold a man of that stripe in their order.

I hope you will do the right thing in this matter, as I also think you would not care to have a man of this kind in your order. Yours truly,

A. J. WILCOX, Master Mechanic.

March 11, 1905.

Every member of the order will regret that the confidence and good will of Supt. Provence should have been so villainously misused, and every official can rest assured that any member of the order guilty such an offense would be expelled immediately and, advertised besides. There is no place in the B. of L. E. for such men if they are found out.

LINKS.

A UNION MEETING of the B. of L. E. will be held in Cleveland, O., on Thursday and Friday, November 16 and 17, under the auspices of Subdivisions 3, 31, 167, 318 and 542, assisted by the local Divisions of the G. I. A. 62, 65 and 278. Energetic efforts are being put forth to make this meeting of great interest to all who attend, and a most cordial invitation is extended to all.

Bro. P. H. Morrissey, Grand Master Brotherhood of Railway Trainmen, Grand Chief Engineer Bro. Warren S. Stone and other prominent speakers will be present and address the assemblage.

Thursday, the 16th, will be devoted to secret meetings for the discussion of subjects affecting the organization. Meeting will be called to order in the Hollenden

Hotel Auditorium at 9 a. m. and 2 p. m. Second day, 17th, 9 a. m., continuation of previous meetings. During these meetings a ladies' committee, representing the G. I. A., will provide for the entertainment of lady visitors. At 2 p. m. Friday, public reception and exercises will be held at the Chamber of Commerce, when there will be an address of welcome by Mayor Tom L. Johnson, and addresses by Grand Chief Engineer Bro. Warren S. Stone, Bro. P. H. Morrissey, Grand Master B. of R. T., and others, to which the public is cordially invited.

In the evening at the same place will be held the second annual ball, and we desire enough members to come to give it the title of grand ball. All visitors will be admitted to the ball on presentation of traveling cards.

The Hollenden Hotel will be headquarters and first-class rooms can be secured at the rate of \$1.50 per day and up, and plenty of good accommodations can be secured at other hotels at rates to suit everybody.

Transportation will be granted members of the Brotherhood to attend this meeting if proper request is made through officials where employed, to any of the railway systems running into Cleveland.

A general good time is expected, and it is hoped all who possibly can will avail themselves of this opportunity to get into social touch, hear the discussion of subjects in which they are interested as engineers, and visit the headquarters of the Brotherhood, where your Grand Officers will be glad to extend a welcome hand.

BRO. M. W. CADLE of Cleveland, O., Assistant Grand Chief Engineer of the B. of L. E., spent Monday and Tuesday in Ellensburg exemplifying the work, and being an old friend of Bro. H. W. Eldred, whom he had not met in twenty-five years, he remained over a half day to visit with him. He was pleased with the valley and delighted with our climate and said he would like very much to live here. The engineers of Decapod Div. 402 were very attentive and well pleased with the work.—*The Ellensburg Dawn.*

Div. 639, New York City, Borough of Brooklyn, had the pleasure of an official visit from Assistant Grand Chief Engineer Bro. E. W. Hurley at a regular meeting in their Division rooms on Sept. 17, 1905, nearly three-fourths of the membership being present, and I wish that every member could have been there.

After business was transacted Brother Hurley spoke to the Brothers at great length, setting forth the conditions of our organization as they exist today, how we are growing in membership, duties we owe to the B. of L. E., to the employer, to our family, and to ourselves. He asked the Brothers to attend their Division as regularly as possible and take an interest in its affairs. He explained many things in different parts of the country where he had visited, called on the Brothers to live strictly up to the constitution and by-laws, also admonished them to lead temperate lives, and a great deal more that the writer cannot think of now, which was all good, wholesome advice. Come again, Brother Hurley.

F. H. TUCKER, Div. 639.

EDITOR JOURNAL: According to Prescott, Cortez did not complete his conquest of Mexico until more than a year after he "discovered" it. That was 385 years ago, however, and times have changed since then. We are living in a more rapid age. Bro. H. E. Wills discovered Mexico on September 15th, and within a few days had completed his "conquest."

The General Board of Adjustment of the Mexican Central and the Mexican National were both in session at the beginning of the month and Bro. Wills, in response to instructions from the G. C. E., came to Mexico to render what assistance he could. Bro. Wills met with both the committees, and his strong, forceful manner and magnetic personality instantly won the confidence and respect of all.

On September 17th Bro. Wills was present at a joint meeting of Divs. 669 and 224, at which there were present one or more members from eleven of the twelve Divisions in Mexico. Div. 669 is a very young Division, having only been established a few months since, but it was evident that Bro. Wills was well pleased with the evidence of earnestness and industry exhibited by the officers and members. The Division is particularly fortunate in having for its Chief Bro. Renaud, whose brisk, business-like manner of presiding, together with his tact, good humor and keenness of comprehension cannot fail to act as an inspiration to all.

After the regular business had been disposed of as hastily as possible, Bro. Wills was introduced and for two hours and a half held the undivided attention of

his hearers while he delivered what was undoubtedly the best discourse ever heard in a Division room in Mexico. Those who have had the pleasure of listening to Bro. Wills need no assurance that there were no dull sentences in his address—no platitudes nor glittering generalities. Every sentence was packed full of ideas, and every idea was sound, fresh and original. Several times Bro. Wills endeavored to close, but was urged to continue.

After Bro. Wills finished speaking Bro. I. M. Hutchinson, an honorary member of Div. 224, and President of the Mexican Car and Foundry Company, was called upon and responded with a brief but pointed speech, in which he expressed his appreciation of what Bro. Wills had said, and spoke of the peculiar difficulties encountered by engineers in Mexico, as compared to those in European countries which he had recently visited.

At the close of the meeting Bro. Hutchinson invited Bro. Wills and several other Brothers to the American Club, where he acted as host until the lateness of the hour forced an adjournment of what all concerned considered a very enjoyable occasion.

Bro. Wills remained in the City of Mexico until the 29th, as the committees did not complete their work until the latter part of the month, and he was untiring in his efforts to assist the committees in bringing what was a very difficult and delicate undertaking to a successful issue.

During the interval between meetings an effort was made by the committees to entertain the Assistant Grand Chief Engineer as well as possible.

Brothers Holmes, Kearns and Blake, of National Committee, acted as the committee on sports, and took Bro. Wills to a bull fight, since without that a trip to Mexico would not be complete. One of the cruel spectacles is enough, however, and I doubt if he would care to witness another. Bros. Willis, Paris and Rice, of the Central Committee, steered him through the National Museum and explained the wonderful Aztec calendar stone to him. They made his hair stand on end while they described the horrid rites of human sacrifice, and showed the sacrificial stone upon which the victims lay while their hearts were torn out, and pointed out the coach of the ill-fated Emperor Maximilian, and the thousand other things of interest. Bros. Jeffries and Ealy were desirous of arranging several social functions in Bro. Wills' honor, but upon his insisting that he was not a "society man," they gave up their plan and turned him over to the exploration committee, who took him out on the electric lines over the old battlefield of Churubusco, through the quaint old town of Cayacan,

where he was shown the old home of Cortez, with a flat stone marking the spot in the courtyard where formerly was the well in which he was said to have drowned his wife. After wandering through the old church and monastery, with its ruined cloisters and the sun-dials telling the time today as accurately as when the monks walked there three hundred years ago, a trip was made to San Angel where a magnificent view of the mountain of Ajasco was enjoyed.

The church and miraculous well at Guadalupe were visited and the miraculous picture of the Virgin seen, and then a climb to the height of over 200 feet into one of the towers of the cathedral gave him a bird's-eye view of what the great

with him from Mexico as pleasant recollections as he leaves behind.

Faternally yours, H. J. KAY.

The eventful days of our Brotherhood are many. Two additional ones were added during the past week, when on Sept. 28 and 29 a union meeting was held in Lincoln, Neb., under the auspices of Div. 98. We had been looking forward with glad anticipation to these two days, and we now look back with supreme satisfaction as they have gone by, for they mark an epoch in the history of our local Division, from which great benefit will result; not alone to us, but all others that took part. We feel that we are bound into a closer relationship as viewed

BRO. WILLS, ASSISTANT G. C. E., AND G. C. OF A. MEXICAN CENTRAL SYSTEM.

scientist and traveler, Alexander von Humboldt, said was the grandest sight in the world—the city with its tiled roofs and myriad churches, spread like a map below the valley, with its crystal lakes, its graves and villages stretching beyond, and around all the grand and gloomy barrier of mountains, culminating in the snow-capped Popocatepetl, with its slumbering volcanic fires, and its companion, Ixtaccihuatl (the white woman), with the clouds hanging half way between base and summit.

There is no space to tell of other places visited, and the writer in closing can only express the hope that Bro. Wills carries

from a fraternal standpoint, and that our duty to employer and fellow-servant has been more firmly established.

The results above cited are not to be attributed to our merely meeting together, but are the results of two days' deliberation and counseling on the part of those to whom we look for guidance and advice. Our Grand Chief Engineer, Warren S. Stone, and Third Grand Engineer, Deloss Everett, were with us as invited guests, and to them all praise for the good accomplished; for, let it be recorded, that the regular meeting of our Division on the day following the union meeting was the best in all its history;

it was a veritable love feast, a revival meeting it might be said, showing beyond a doubt that a distinction exists between a Brotherhood man in reality and one in name only.

Our union meeting had been well advertised and talked about, many had planned and promised to attend, but the immense amount of business on the railroads at this time made it difficult for many engineers to secure the needed leave of absence; in fact many found it utterly impossible. For those who attended we had planned an interesting and enjoyable time, and perhaps not one of the 118 engineers who came to visit us went away dissatisfied with his trip.

On the evening previous to the opening day, a free street show of moving pictures was given, with a band concert, which was repeated on the following evening. The meeting proper opened on the morning of Sept. 28 in the Auditorium, with a program of speaking and music, open to the public. The address of welcome was given by the Hon. John H. Mickey, governor of Nebraska, who felicitated the audience upon their coming together in our city and state. He welcomed them as the chief dispatcher of the state of Nebraska, and assured them no red lights or misplaced switches would be encountered while in their midst. He said in effect, that the engineers as true men stood at the head of the labor organizations of our country in the matter of honor, sobriety, steady nerves and iron constitutions; that he never met a man of this stamp without a desire to remove his hat to him. He was glad that the Brotherhood was founded on the golden rule, and that its motto was sobriety, truth, justice and morality. He warned the Brotherhood that it must not depart from the broad principles which now govern and control its deliberations. He paid a high tribute to our state and its resources, and told of his early experiences as a pioneer. He dwelt upon the attractions of our beautiful city, and made everyone feel that they were indeed among friends.

Grand Chief Stone followed with a speech, the subject being "Brotherhood Facts," and to those whom he addressed he told of facts about our Brotherhood that were a revelation to many. He stood squarely for the conservative course of the organization in the future, as distinguished by the common sense policy of our late Grand Chief Arthur. He asserted that capital had its rights as well as labor, and in the settlement of differences which arise from time to time, labor should be willing to meet the representatives of capital face to face in fair and honest discussion of their difficulties; the public

that pays the freight, also had rights that both capital and labor should respect. He said that as long as the Brotherhood holds to the golden rule, and remains founded on sobriety, honesty and human rights, it will continue to grow and prosper. He stated that 90 per cent of the engineers from the Atlantic to the Pacific, and from the ice-bound regions of the north, to the City of Mexico on the south, are members of the Brotherhood; our members are being added to at the rate of over 4,000 per year. He asserted that when the danger and the responsibility that faced the engineer are considered, he does not receive half enough pay. He pointed out that in the insurance department fifty-six death claims were pending for September, about half of them due to accidents on the rail.

Brother Stone spoke for more than an hour, during which time much wisdom, information and advice were imparted to his hearers.

Third Grand Engineer, Deloss Everett, took for his theme "Prosperity." Before delving into his subject a few pleasant stories were told by him, as it seemed necessary for him to give vent to his feelings. It afforded him evident pleasure to address the gathering, and during the course of his remarks he dwelt upon existing conditions as well as ancient history. He warned the Brotherhood of the fate of great nations of former times that had departed from the high ideals that had brought them to the pinnacle of greatness. He cited the Jewish nation and the Roman empire as shining lights of decay and consequent ruin through the departure from the teachings of God. The fate of these nations and of others, he said, is the fate of associations, no matter for what motive they may be organized—for charity, business or for any other honorable or commendable purpose, no organization can prosper without it follows the divine command, and follows the teachings of the golden rule. He asserted that eternal vigilance is the price of continued prosperity and success. The Brotherhood had been in existence for over forty years and its career of prosperity had no parallel among labor organizations. The Brotherhood, said he, was founded upon divine law, and it should not forget the heroic labors of those who had founded it, the legacy being, over 52,000 members, over 44,000 in the insurance, \$38,000,000 carried in insurance, nearly \$15,000,000 paid out in insurance, besides more than \$2,000,000 dispensed in charity to widows and orphans, so much for prosperity and success, God grant that the good work may go on.

At this session vocal music was furnished by the Locke Male Quartette, and instrumental music by Quick's Brass Quartette.

In the afternoon a trolley ride was given the visitors by the Commercial Club about the city and suburbs, and in the evening a theater party was given in honor of the visiting ladies, moving pictures and band concert on the streets, and afterwards a joint open meeting between the officials of railroads and the engineers, which developed much good feeling and expressions of good fellowship.

The second day was taken up with morning and afternoon sessions in exemplifying the work, and discussing matters of interest to the members in general. At the morning session Grand Chief Stone spoke for over two hour for the good of the Brotherhood, this being supplemented by Brother Everett with such timely remarks that the result could not have been otherwise than as stated in the beginning of this communication. The sessions held on the second day were well attended, representatives being present from Cleveland, O., Chicago, Ill., Galesburg, Ill., Ft. Dodge, Ia., Creston, Ia., Ellis, Kan., Fremont, Neb., Parsons, Kan., Millwaukee, Wis., Denver, Colo., Plattsmouth, Neb., Fairbury, Neb., Beatrice, Neb., Laramie, Wy., Sedalia, Mo., Ottumwa, Ia., South Omaha, Neb., Palatka, Fla., City of Mexico, Mex., Macon, Ga., Sheridan, Wy., North Platte, Neb., Deadwood, S. D., Chardon, Neb., Escanaba, Mich., St. Joseph, Mo., St. Louis, Mo., Omaha, Neb., Kansas City, Mo., Alliance, Neb., Cheyenne, Wy., Evanston, Wy., Kansas City, Kan., Huntington, Ind., Rawlings, Wy., Wymore, Neb.

The crowning event of the union meeting was the grand ball in honor of the visitors on the evening of the second day. Previous to the actual dancing, a variety of moving pictures were displayed on the stage, comprising scenes in Nebraska, and views of the city of Lincoln, with portraits of Grand Chief Stone, Deloss Everett and the writer; in addition illustrated songs and other varied amusement features were rendered, to all of which the visitors were admitted free of charge.

The grand march, which, by the way, was composed by Brother Everett himself, was led by Grand Chief Stone, with Mrs. H. L. Beatty, and Bro. Deloss Everett with Mrs. J. E. Johnson, more than a hundred couples taking part in the same. Several hundred people in addition to the dancers enjoyed themselves to the wee sma' hours; to each was given a pink carnation, souvenir buttons with picture of our Grand Chief, and other tokens of good will. Thus is recorded briefly the

first union meeting held by Div. 98, an event of which we may feel justly proud.
H. W., Div. 98.

On September 20th Bro. Joseph Warren was appointed General Foreman of the T. & O. C. shops at Walbridge, Ohio. It is highly gratifying to the members of Div. 651 that one of its members has been selected for this important and responsible position. We feel that the company has made a wise selection, as Bro. Warren is qualified in every particular to do honor to himself and to give satisfaction to the company in his new position.

M. B. MARTIN, C. E. Div. 651.

BRO. ROBERT COLLETT, of Div. 285, has been appointed Road Foreman of Engines, Southern Division of Frisco, from Springfield, Mo., to Birmingham, Ala., headquarters at Memphis, Tenn.

Brother Collett has been a member of Div. 285 a long time, and before promotion was local chairman for this Division, where he gave satisfaction to everybody. He has also been a successful engineer. His promotion is the first from the ranks of our Division.

The members of Div. 285 desire to express their unqualified approval of the company's selection and feel that Brother Collett deserves all the good fortune that can come to one who has honored himself by the performance of every duty to the company and associates.

COMMITTEE, Div. 285.

Div. 112 received an invitation on Aug. 31st from the Sisters of Green River Div. 281, G. I. A., to join with them in a basket picnic at Mountain Park, Holyoke, Mass., and a few Brothers availed themselves of the invitation. We took the electric car at Main street at 10 a. m. and had a delightful ride through Old Deerfield, South Deerfield, Hadley and Northampton, arriving at the park about noon. We took a look around the park and were enjoying ourselves when we heard someone say, "Come on, boys." Of course we asked where. They said, "Up the mountain." So we took the car for the summit of Mt. Tom. We engaged a table at the Summit House and the Sisters spread out the lunch, and you can bet the most of it went out of sight, and in short order, too, for we were pretty hungry.

After lunch we visited the theater, and then took in the sights to be seen in the different rooms in the house. Of course we had to take a look at ourselves in the mirrors; in one we looked as though we were nearly starved, and in another we looked as though we had eaten a house and all in it.

From the windows of the Summit

House can be seen old Mt. Monadnock and Mt. Greylock, the city of Hartford, Conn., and a number of smaller towns. After taking in the sights at the summit of the mountain, we returned to the park and took a ride on the merry-go-round, then took in the play at the Casino, after which, as it was getting late, we took the cars for home.

When we arrived at Northampton the ladies presented us with cigars, thinking to keep us quiet the rest of the way home, but we found a basket with a lot of food in it, and there was no peace as long as the sandwiches, cake and pickles lasted. The day was altogether too short, for we certainly did enjoy ourselves. We arrived home at 7:30 p. m.

The Brothers of Div. 112 sincerely thank the Sisters of Div. 281 for their kind care of their Brothers and their safe return to their homes. Oh, Sisters! do so some more. Fraternaly yours,

EDWIN WARREN, F. A. E. Div. 112.

SUNDAY, Sept. 17, regular meeting of Little Miami Div. 84, Columbus, O., had the pleasure of enjoying a visit from one of our old time members of this Division, way back in the sixties, Bro. A. T. Blauvelt.

He was a member of the Brotherhood of the Footboard, the writer was also a member of that order, before the B. of L. E. was organized, and was initiated in the B. of L. E. a short time after its organization, and was a member of Div. 34 for sixteen years, now a member of Div. 77, New Haven, Conn.

The last time Bro. "Andy" Blauvelt met with us was thirty-four years ago, and he has been a true and loyal member all these years. Brother "Andy" is now nearly 74 years of age, too old for active service, but still, although he feels his old age, is fairly well. We trust he may be with us for many years to come.

Chief Engineer Thomas E. Humphreys invited Brother "Andy" to address the Division, when Brother Blauvelt gave us a good talk with history of some troublesome times we had in the sixties, and advising the young members to be true to the teachings of the B. of L. E., so that when they become old they will be able to look back with satisfaction as he has, at the many benefits brought to the engineers and their families by the B. of L. E.

Brother Blauvelt ran an engine at the "Front" during the late war of the rebellion, employed by the Quartermaster General as a locomotive engineer, and was honorably discharged from the service after the war closed.

Fraternaly yours,

CHAS. H. FISHER, C. E., Div. 34 in 1873 and 1874.

The accompanying photograph is that of Bro. B. F. Oliver, a member of Div. 401, of Roanoke, Va., who was so badly injured in a wreck over six years ago that he has not been able to do any active work since. For a while after receiving injuries he was almost entirely helpless, but finally began to improve some, and is now able to walk a little on crutches, and for the last few years he has been soliciting subscriptions by correspondence for all of the leading magazines, to help towards making a living, and to take necessary medical treatment. His present address is Casanova, Va.

BRO. B. F. OLIVER, DIV. 401.

BRO. LYMAN S. ROACH, member of Div. 496, who was appointed postmaster at Texarkana, Tex., by President Roosevelt last January, and who has been a very important political factor, having been twice elected as assessor and collector of Bowie County, alderman and city treasurer of Texarkana, and a candidate for Representative to the Texas Legislature in 1904, is having many nice things said of him. The *State Republican* in June said of him: "Republicans and Democrats of Texarkana on both sides of the state line are well satisfied with Mr. Roach's appointment. It was the best thing for the city of Texarkana that the President made the appointment that he did." That Bro. Roach has an important position and that he is rendering com-

mendable service is evidenced by the following from a local paper:

"The fact that Texarkana will have a first-class office July 1, shows more than anything else how the city is growing. Not many years ago no one dreamed of a first-class office for Texarkana, but our city has grown by strides and bounds in the last few years and the population and amount of mail handled warrants an office of the first water, and all business men of our city will feel proud that we are to have a first-class post-office.

"It has been suggested by various business men of the city, that a public demonstration of some kind would not be out of place on the last day of June or the first day of July, to celebrate the

BRO. LYMAN S. ROACH, DIV. 466.

beginning of the first first-class postoffice in the city and the third first-class office in the state of Arkansas. Although the office is an Arkansas office here, yet the date mark reads 'Ark. Tex.,' which means that it is to be used for both the East and West Side.

Since the appointment as postmaster Col. Roach has strained every nerve to make the service here as efficient as possible. He has been aided by a competent force of mail clerks, carriers, assistant postmaster and others in the postoffice employ here. Gradually he has managed to get concessions from the department. He has secured new equipment, scales, facilities for handling mail, etc."

The annual outing and Rhode Island clambake of the Echo Club, of Div. 269, was held at Port Jefferson, L. I., on Brother Townsend's farm Sept. 24, 1905. A special car was attached to the 10 a. m. train from New York. About thirty of the Brothers boarded the train at Long Island City and were met at Jamaica and Mineola by Brothers and friends of other Divisions. It certainly was a happy crowd when they all got together. Bro. Pat Connelly was not on hand, being unable to get off. The boys missed him very much on account of his telling comical stories, but Bro. Fred Smith and a few other Brothers were on hand and took Pat's place and were out for a good time, and all had a good time and a pleasant trip on the train except Brother Colligan, who was at the throttle. The Brothers did not know whether Brother Colligan was trying to put up a job on the boys or what kind of a game he was playing. He stalled about every other station for steam, but nevertheless he arrived at Port Jefferson at nearly 1 p. m. instead of 11:58 a. m., but Brother Flanagan was getting hungry and went out and asked Brother Colligan if he would get the boys together and get some wood. Another fellow said, "Shut the injector off and give the fireman a chance," but Brother Colligan would not listen to anyone. He was a little angry to think he gave the boys such a poor ride. Brother Colligan joined the bunch at Port Jefferson and had just as good a time as the rest of the boys.

The bake was opened about one hour late on account of the train arriving late, but Brother Colligan put it all down on the engine. The bake was all right. Brother Townsend, Brother Murphy, Mr. Reeves, and the committee deserve a great deal of credit for getting up such a great feed. The ball game was a failure, the Main Line team did not have much practice and put up a poor game. Umpire Wilkerson called the game in favor of the North Shore team, 15 to 5, and told the boys to practice up for next year. Brother Brozy played a good game of ball, but Brother Pellit ran the bases for him. Bro. T. McNeary caught a fly ball. The Brothers said the Main Line had two ball players. The fat men's race did not come off because the fat men were tired, but I think if they tell the truth, they ate so much of the bake that they could not run, unless it was to save their lives. After the fun was all over at the ball grounds, the boys went back and finished up the bake and started for the 6 p. m. train, all hoping they would meet and have the same old time over again next year. Brothers and friends got off at different stations along the line. The

train arrived at Long Island City on time, with Bro. Van Bayliss at the throttle.

Yours fraternally,
H. M. ASHMEAD, Div. 269.

We, the undersigned committee, representing the O. R. C., B. of R. C., B. of L. E. and B. of L. F. in Oklahoma and Indian Territory have been duly selected by our respective organizations to issue a call for a Union Legislative Meeting to be held in Shawnee, Okla., Nov. 23-24, 1905, to organize Legislative Boards according to our different constitutions, to take up and discuss any other matters which may come before the body pertaining to legislation in the new state to be, Oklahoma.

The different organizations in Shawnee realized the necessary for someone to take the initiative in this matter, and being nearly centrally located in the two territories, came to the conclusion that the meeting should be held in Shawnee for the reason that the organized bodies of this city have in previous years maintained a Legislative Board in the capitol at Guthrie.

You are all well aware that if we are to have any legislation placed in the constitution of the state of Oklahoma that will be beneficial in any way to railroad employees, we have got to fight for it and fight hard; therefore it becomes our duty to get organized, and organized thoroughly, for you are certainly aware of the fact that corporations are well organized.

We have made this an official call on each Division and lodge of the organizations in the two territories to send one delegate to attend said convention with credentials to represent said organization so that we may take up and talk over the question of legislation from each section of the two territories and organize Legislative Boards according to our different constitutions. We will also take up the question of devising ways and means of handling legislation to the best interest of the railroad employees in the coming state of Oklahoma.

We give the firm opinion that "a stitch in time saves nine," so let everybody put his shoulder to the wheel. And let us, as railroad employees, get in on the ground floor, for we believe the time is not far distant when we will have a new state and a constitutional convention to make laws for us.

We most sincerely ask each Division and lodge in surrounding states having members running into and out of the two territories to join us in this meeting and to send delegates to meet with us who can give us some of their experience in

legislative matters in the adjoining states.

Now, Brothers, take this matter up in your Division or lodges, and elect and send to the meeting delegates to act in this matter for the benefit of the railroad employees.

Meeting will be held in O. R. C. hall, corner Main and Broadway, at 10 o'clock a. m., Nov. 23-24, 1905. Members of the different organizations that can be earnestly requested to attend the meeting.

Signed,

N. C. WOOD, O. R. C.
J. R. COLEMAN, B. of R. T.
W. L. BLESSING, B. of L. E.
O. C. STRODE, B. of L. F.
Committee.

SPECIAL NOTICES.

The traveling card issued to Bro. M. J. Sheehan, member of Div. 26, was stolen in Sherard, Miss. If presented for favors it should be taken up and forwarded to Bro. J. W. Hamilton, F. A. E. Div. 206.

The traveling card of Bro. C. A. Mays, member of Div. 68, has been lost. If presented, kindly take up and forward to Bro. C. H. McGowan, F. A. E. Div. 68.

The traveling card of Bro. J. D. Berry, member of Div. 20, has been lost. If presented, please take up and forward to Bro. C. O. Bower, F. A. E. Div. 20.

The traveling card of Bro. J. F. Clark, member of Div. 210, has been lost. If presented, kindly take up and forward to Bro. J. L. Fickling, F. A. E. Div. 210.

Wanted—To know the whereabouts of W. A. Stafford. Kindly address Mrs. W. A. Stafford, 370 Willow street, Meadville, Pa.

Wanted—To know the whereabouts of John David Johnson, age 16, dark brown hair and eyes, height 5 feet 3 inches, weight 140 pounds. He left home on the 23d of February and has not been heard of since. Any information will be thankfully received by his mother, Mrs. Rebecca Johnson, Covington, Va.

Information is wanted of the whereabouts of John C. Thurston. When last heard from he was running an engine on the Mexican Central Railroad out of Chihuahua, Mex. Any information concerning him will be thankfully received by his brother, H. M. Thurston, care Capitol Inn, Raleigh, N. C.

Information is wanted of the whereabouts of Elmer P. Bennett, employed on the C. V. R. R. in 1900 and 1901. Kindly address Bro. J. W. Mead, F. A. E. Div. 63.

Anyone knowing the whereabouts of Michael J. Dermody, running on the Great Northern Railway between Breckenridge, Minn., and Larimore, N. D., in 1896, will confer a favor by writing to Miss Cora Dermody, Elma, Ia.

Information is wanted of J. L. Kuhloff, known as "Baldy" Kuhloff. When last heard from he was working on the International & Great Northern Railroad out of San Antonio, Tex. If he will correspond with L. Stapp, passenger conductor, I. & G. N. Ry., San Antonio, Tex., he will learn something very much to his advantage.

Will anyone knowing anything relative to Jerry Cutler, who, when last heard from 28 years ago, was working on the Flint & Pere Marquette Railroad, please correspond with G. Vanderburgh, R. F. D No. 1, Chatham, N. Y.?

Information is wanted of the whereabouts of H. S. France, who ran out of St. Louis, Mo., for several cars. Kindly address Bro. W. B. Hampleman, 1744 B Inout avenue, East St. Louis, Ill.

Members of the following Divisions will correspond with the F. A. E. of their Divisions immediately :

<i>Division—</i>	<i>Division—</i>
453—E. H. Wilmot,	135—Heber S. Smith.
W. D. Schilling.	33 All absent members.

OBITUARIES.

[In accordance with the action of the Ottawa Convention, no resolutions of condolence, obituary letters or poems will be published in the JOURNAL. All deaths will be listed under obituary heading only, with cause and date of death.]

St. Louis, Mo. Sept. 17, killed in wreck, Bro. E. A. Allen, member of Div. 42.

Fairmont, W. Va., Sept. 12, paralysis, Mrs. Bridget Fleming Murphy, mother of Bro. Peter Fleming, member of Div. 477.

Port Jervis, N. Y., Sept. 15, Bro. Merrit Turner, member of Div. 54.

Buffalo, N. Y., Sept. 21, typhoid fever, Bro. Wm. Harris, member of Div. 421.

Minneapolis, Minn., Sept. 17, Bro. John D. Steizer, member of Div. 494.

Lynchburg, Va., Sept. 22, Bro. J. L. Akers, member of Div. 401.

Hornellsville, N. Y., killed by being run over, Bro. K. L. Dwight, member of Div. 641.

Freedom, Pa., Sept. 19, burns received in collision, Bro. Elmer D. Brown, member of Div. 590.

Cranbrook, B. C., July 18, killed in collision, Bro. E. Brown, member of Div. 563.

South Omaha, Neb. Sept. 24, heart failure, Bro. Fred Frusnard, member of Div. 183.

Wabash, Ind. Sept. 28 consumption, Mrs. F. I. Rowe, wife of Bro. E. I. Rowe, member of Div. 461.

Beardstown, Ill., Sept. 28, Bro. Wm. A. Yagow, member of Div. 665.

Oshkosh, Wis., Aug. 30, cancer, Bro. Harry W. Kockefeller, member of Div. 225.

Memphis, Tenn., Sept. 7, killed in collision, Bro. Adam H. Williamson, member of Div. 225.

Clarion, Ia., Sept. 28, malaria fever, Bro. J. S. Mather, member of Div. 654.

Rathm. I. Pa., Sept. 24, Bro. Wm. L. Keagle, member of Div. 244.

Ridgely, W. Va., Sept. 29, killed in collision, Bro. Chenowith Deibaugh, member of Div. 640.

Greenville, S. C., June 15, killed by engine turning over, Bro. C. L. Cauble, member of Div. 84.

 ber JOURNAL as being expelled from Div. 473 for
 forfeiting insurance. Action was declared illegal,
 and ordered expunged from all records by G. C. E.

PREMIUMS FOR JOURNAL SUBSCRIPTIONS.

We have renewed our arrangement with the Webb C. Ball Watch Co., Cleveland, O., for an unlimited number of watches as premiums; watches that are guaranteed to be O. K. in every respect, and will be given as premiums under the following conditions:

LADIES' WATCH.—For 30 subscribers named and \$30.00, the Ladies' Queen Watch, 17 jewelled, 14 karat, gold filled case, retail price, \$20.00.

GENTLEMEN'S WATCH.—For 60 subscribers named and \$60.00, Gentlemen's B. of L. E. Standard, 17 jewelled, 14 karat, gold filled case, retail price, \$42.00.

19 AND 21 JEWELLED WATCH.—For 75 subscribers named and \$75.00, either the 19 or 21 jewelled watch, in 14 karat, gold filled case, retail price, \$50.00. All cases guaranteed for 25 years.

Mr. C. H. Salmons, Editor JOURNAL:

DEAR SIR AND BROTHER:—The 19-jewelled Webb C. Ball gentleman's watch has been received O.K. The case selected by you was perfectly satisfactory, as is the watch. I think some one in each Subdivision should work for one of these splendid premiums, as well as for the interest of the JOURNAL, and through it, the order. With many thanks for the watch, I remain
Yours fraternally,

C. K. TALIAFERRO, C. E. Div. 595.

A large number of Brothers can obtain one of these excellent watches if they make an effort, and will help the JOURNAL as well as themselves. EDITOR.

If your JOURNAL address is not correct, or you fail from any cause to receive it, fill out this form properly, cut it out and send it to 307 SOCIETY FOR SAVINGS BLDG., CLEVELAND, O.

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION

Official Notice of Assessments 150-153.

SERIES G.

OFFICE OF ASSOCIATION, ROOM 803, SOCIETY FOR SAVINGS BUILDING, }
CLEVELAND, OHIO, NOV. 1, 1905. }

To the Division Secretaries L. E. M. L. and A. I. A.:

DEAR SIRs AND BROs.:—You are hereby notified of the death or disability of the following members of the Association :

Four Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.00 from all who are insured for \$750. \$2.00 from all who are insured for \$1,500. \$4.00 from all who are insured for \$3,000. and \$6.00 from all members insured for \$4,500, and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25, page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries located in Canada will please remit by draft or express money order. We will not accept packages of

money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

MONTGOMERY WARD & CO.

CHICAGO,

are now distributing their new, large No. 74 Catalogue, which is sent FREE and POSTPAID.

Thousands of requests are coming in from Railroad men, on every line and system, and in every division of the Railway service.

Have you received your copy yet?

Have you sent in your name so that you could get one?

We gave you a small coupon to fill in, on this page of the September number of this magazine.

This month we give you a bigger one.

If you have not already sent in to Montgomery Ward & Co. for that big, new catalogue No. 74, for 1905-6, just off the press, don't fail to do so now. This big coupon is your chance.

Cut out this coupon, fill in carefully and send to Montgomery Ward & Co., Chicago. Don't worry about the postage. We will take care of that.

COUPON

Send me FREE and postpaid one copy of your new No. 74 Catalogue for 1905-6. I saw your ad. in Nov. Brotherhood of Locomotive Engineers' Journal.

Ring the Joy-Bells !

" Sing, for the Yule-tide is here once again,
Merry, Merry, Merry Christmas !
Sing out & your carols in sweetest refrain,
Merry, Merry, Merry Christmas !
On this birthday of the Lord,
Children, sing in glad accord;
Loud yo ur thankful anthems raise,
Bring your choicest gifts of praise.

" Sing, while again the sweet story is to'd,
Merry, Merry, Merry Christmas !
Sing of the Shepherds who watched by their fold,
Merry, Merry, Merry Christmas !

Angels chanted in the sky:
' Glory be to God on high.
Peace, good-will to all below.'
Sing once more their wondrous song.

" Sing, till the world with your music is
filled,
Merry, Merry, Merry Christmas ;
Sing till all discord and anger is stilled,
Merry, Merry, Merry Christmas !
In your hearts now crown Him King;
To His feet your offering bring,
Love, the royal diadem
Of the Babe of Bethlehem."

THE BABE IN BETHLEHEM.

Water Supply for Great Cities.

The census accords Boston, Mass., sixth place among the cities of the United States, but this does not include the outlying towns in which live many of Boston's business men, the employees who work within its limits, and the vast number whose livelihood depends entirely upon Boston as a business center. Within a radius of fifty miles from the State House, Beacon Hill, the last census shows 2,500,000 souls, a million and a half of whom live within twenty-five miles, and one million of these within ten miles, or what is called Greater Boston, and whose entire dependence for a living comes from Boston's varied industrial in-

their homes with water of the best to be found. Many of these are perpetuated in history by the names being appended to streets, etc., and not a few of the large buildings in the business district are at the present time being supplied with drinking water from those same long time honored springs used by the early settlers; but as a rule the wells are out of use, by force of health conditions.

An additional supply of water was a subject for the town fathers of Boston as long ago as the city received its charter in 1826, and was a bone of contention among the political factions till 1846, when Jamaica Pond was made use of and water taken by aqueduct into the

PUMPING STATION, BOSTON WATER SYSTEM.

stitutions, and their water supply for home consumption as well. Hence it becomes one of the great problems in these great congested districts to find ways and means of supplying the necessary water for fire protection, manufacturers' and domestic use, and Boston is spending millions for this purpose, our illustrations showing some of the great work now nearing completion in order to meet the growing demand.

William Blackstone, the first settler of Boston, located his homestead near a spring of flowing water that to this day is to be seen in the humdrum of a busy city. Several others of the early settlers located similarly, near a spring to supply

most congested part of the city, the pipes being wooden logs, some of them being still in good state of preservation, the supply from that source not being entirely dispensed with on account of the new supply being introduced.

The supply from Jamaica Pond not being adequate at the outset caused the city to look further and many propositions were entertained. The realization of the fact that Boston's ever increasing growth must be looked after, prevented the local lakes and ponds from being confiscated for their use. The most feasible hope left to them was the taking of Lake Cochituate in Natick, being distant about eighteen miles. This work was begun

and after the labor of several years was completed in 1869.

By this time Boston had grown to such an extent that she had almost outgrown the provision for water, and movements were at once effected whereby the neighboring locality at Natick and the adjoining towns of Framingham and Ashland eventually were used to reinforce the Cochituate supply. Natural ponds were used, reservoirs constructed and to all this the Sudbury River was called into service. This, what is called the Cochituate and Sudbury River service, took almost the entire water supply of a territory nearly the size of the state of Rhode Island, which was not

dry times called for all the curtailment possible in the use of water in the homes and factories. With the marvelous increase of demands incumbent upon a thickly settled locality came the one inevitable necessity—sewerage. This had been only locally cared for by the municipal districts of Boston.

The addition of Roxbury, Dorchester, Brighton and Charlestown to Boston a generation ago, brought water and sewer plants with them, being as local as those that existed in the neighboring towns and cities.

With water and sewerage of a "one horse" nature, the citizens at large came to realize that the lack of system and of

HOLLY PUMPING ENGINE, SPOT POND STATION, BOSTON WATER SYSTEM, CAPACITY 20,000,000 GALLONS.

enough to meet the demands of the growing district. Manufacturing, public, private and sanitary services required a constant and never failing supply, and even with the millions of attendant expense, Boston was nearly at her wit's end to know how to meet the demands for water.

Meanwhile, the immense growth of her outskirts, which are in the valleys of the Charles, Mystic and Neponset rivers, were in the same predicament as to water. Some of the neighboring towns and cities were supplied, but none had any more than they needed, and shortage in the

water was a grave problem and they began to take immediate steps for its solution, culminating in the Metropolitan Water and Sewerage Board, created through legislation. The sewerage board constructed an extensive sewer system for Boston and her outlying towns, and the water board took steps for arranging for an ample supply of water. This was ten years ago. The Metropolitan Water Commission immediately settled upon the lower branch of the Nashua River, and with a dam at Clinton, taking parts of the towns of Clinton, Boylston, West Boylston and Sterling. Within this

locality were several manufacturing villages, and the greater part of the thriving village of West Boylston.

There were several thousand inhabitants, and manufacturing plants representing hundreds of thousands of dollars, farms as valuable as any in the state, and six and a half miles of the Central Massachusetts Railroad, and a portion of the Worcester and Nashua, both operated by the Boston and Maine.

The accompanying view from Clinton, looking over the Lancaster Mills toward the site of the dam indicated by a cross, shows how individual interests must give way to that of the many.

The natural location was a broad and fertile interval enveloped in hills that rose more or less abruptly, and the site

priation of \$27,000,000.00, and which would later require several millions more, as the sum is to reach forty millions. Besides the removal of the people, business, buildings, etc., there were cemeteries in all containing several hundred interments to be cared for, a new location for the Central Massachusetts Railroad, and the entire removal within the reservoir site, also for a given distance from its proposed shore, all to be seen that was the handiwork of man.

The buildings removed numbered in the hundreds, which included those of six large cotton mills making several kinds of goods, several churches, and other institutions of various kinds.

Almost immediately below the dam are

CLINTON, MASS., LOOKING TOWARDS LOCATION OF DAM.

selected for the dam, just above Clinton center, was at a narrow place where the hills almost met, and the bed was practically solid ledge. The height of the dam as proposed would flow back a distance of about thirteen miles, following the winding of the river, and give a varied breadth of from one to about three miles at its widest place, and a shore distance of thirty-five miles, containing in all 4,195 acres of overflowed land, and when filled would contain 68,068,000,000 gallons of water.

To carry out this immense undertaking called for a small army of help and of many natures, for ten years during the process of construction and for an appro-

the Lancaster Mills of Clinton which were directly affected, not only as to water rights at that point, but owned above the dam at Boylston village a large brick mill and village, of all of which, like Jerusalem of old, at its destruction, "one stone is not left top of another." Added to this was the removal of all soil to a hard stone or gravelly bottom, trees, mud, or any loose material whatever. This was undertaken soon after the beginning of operations.

Our view is of locality of dam soon after beginning its construction, and showing partly constructed bridge made necessary to get railroad tracks out of the valley. Mill pond and buildings give some idea of

THE ACCOMPANYING ILLUSTRATIONS WILL GIVE SOME IDEA OF THE GREAT EXPANSE OF TERRITORY TO BE SUBMERGED WHEN FILLED TO ITS FULL CAPACITY.

changes made necessary and buildings torn down or moved.

The view, with the easterly part of West Boylston village in the background,

shows the relics of the Clarendon Mills, and some of the many former homes of its employees. The roadbed of the Central Massachusetts Railroad

BRIDGE NECESSARY TO CHANGE ROUTE OF THE CENTRAL MASSACHUSETTS RAILWAY,

runs through this valley and can easily be discerned. The houses beyond are near the W. & N. Division of the B. & M., as the road passes from Oakdale to Worcester. The former station and lower village of West Boylston were just a little to the right of the ruins of the Clarendon Mills.

The prospect of disturbed business relations and the moving or tearing down of houses within the territory to be occupied by the great reservoir, created an antagonistic sentiment, and the towns affected raised money and fought the enterprise, but eventually the wiser ones saw the futility of standing in the way and took advantage of good prices and

reservoir caused quite a little attention to be given to the Central Massachusetts road for a new location, and after several surveys the road was diverted north of its original location just west of West Berlin and to pass north of the site of the new dam, and connect with the Worcester and Nashua Division of the B. & M. R. R., and run to Oakdale, then coming back to the west end of the Central Massachusetts at the Oakdale station. .

The station at Oakdale was removed and tracks elevated on account of water limit so as not to interfere with the limit of high water, but for about a mile at this point the W. & N. Division of the B. &

NECESSARY DESTRUCTION OR REMOVAL OF STRUCTURES.

moved to other places, and the estates were purchased by mutual agreement or legal process, and property rights respected as far as possible under such circumstances. The southerly part of Clinton and the town of Boylston are seen in the accompanying cut.

To provide for the conduit for the supply of water from the reservoir a tunnel two miles in length was constructed through a ridge of hills to the Assabet River valley in West Berlin, thence by a masonry aqueduct and open channel to the Sudbury River Reservoir in Southboro, whence it is conveyed to the service of Greater Boston. The rugged country immediately east of the great

M. passes through and along the edge of the reservoir.

A regular railroad was constructed in the basin limits, some of it double track, and twenty-seven trains of gravel cars were seen in operation at one time. Some of the places were eighty feet below the proposed surface, while some were near the water's edge, and not a few above the water line, but "too near" according to the proposed plan of preventing pollution.

The changing of many original routes of travel has caused the building of several new roads at the expense of the state, which are excellent thoroughfares, some of which pass through portions of the pond,

REMOVAL OF OAKDALE STATION, B. & M. RY.

the bridges all being granite masonry of best possible construction, also a state road will

entirely encircle the water when completed. The slopes, after being cleaned of all

THE GREAT WORK OF LEVELING THE BASIN ABOVE THE WACHUSETT DAM.

material, have been paved with stone, thus preventing any wash, and above the paving grass sward is already planted in many places. An effective police force is always on duty to guard against intruders or offenders and strict rules adopted that the public are bound to respect.

In the ridge surrounding the new lake two low places appeared, and at which dikes have been placed, they being at opposite sides of the dam and known as the North and South Dikes. The south one is the summit of the ridge where the Central Massachusetts road originally passed, and is eighteen feet in height to the water line.

The distance across the valley at the crest of the main dam is 1,250 feet, and

brought from West Chelmsford, Mass.; of other material that entered into the construction, 50,000 barrels of cement were used. The work upon the dam was begun Oct. 19, 1900, and the first stone was laid June 5, 1901, and the last stone June 19, 1905, making in this one part of the undertaking an aggregate expense of \$1,603,635.

Several of the towns and cities of Greater Boston, coming into the new system, after negotiations, entered the new service and with Chestnut Hill reservoir in Brookline, Spot Pond in Stoneham (which had for years supplied Melrose, Malden, Medford and Everett), also was used, the two being connected, they being used to distribute locally the water of the

WACHUSETT DAM PRACTICALLY COMPLETED.

the waste weir placed at an angle with the main body of the structure makes the total length of the dam 1,400 feet. The top of the dam is 145 feet above the bed of the river, and about 200 feet above the bed of the rock foundation on which it rests at its deepest point.

To prepare for locating the stone work of the dam 360,000 cubic yards of earth and stone were removed, 280,000 yards of masonry were constructed, making an excavation of 376 feet in width at the top and a width at the foundation of 211 feet. A nearby quarry on the state's premises furnished much of the granite for the dam, while the finer stone used was

great system, and known as the Low Service supply.

The pipes used are forty-eight inches in diameter and of two separate lines, so one cannot interfere with the other in case of accident. The capacity of the aqueduct from the reservoir at Clinton to Sudbury River basin is equal to over 300,000,000 gallons daily. From the Sudbury basin an independent line is also constructed to Chestnut Hill with a capacity of over 250,000,000 gallons daily.

The conduit through West Berlin having been completed for some time, water was turned into it for the supply of Greater Boston long before the dam was

WACHUSETT DAM, RAILROAD BRIDGE AND APPROACH, BENEATH STONE ARCH OVER WASTE WATER RETAINED FOR MILL PURPOSES BELOW.

completed. A gatehouse was also constructed below the dam, where the supply and overflow of water can be governed at will. Below the gatehouse is constructed

what is known as the "spillway," where water is allowed to proceed in certain quantities in its natural course, according to the contract with the companies using

VIEW OF THE FACE OF THE WACHUSETT DAM, SPILLWAY AND GATEHOUSE COMPLETE, WITH TROLLEY DERRICKS WHICH WERE USED IN CONSTRUCTION STILL IN PLACE.

it as water power below and for whose riparian rights it forms a partial settlement with the various companies on the Nashua and Merrimac rivers, all of which had to be considered and dealt with as a part of the gigantic franchise.

The Central Massachusetts Railroad before referred to enters from West Berlin through the tunnel of 1,800 feet in length, enters on a viaduct nearly 1,000 feet in length, 135 feet above the river bed, just below the dam and passes close to it, traveling the west shore, enters a 65-foot cut in solid ledge and along the shore near the north dike, which it follows a short distance, where it soon comes to a junction with the Worcester and Nashua Division.

dated as early as 1790, much of it being granted for service in the Colonial Wars, and against the Indians. It is full of history, having been written in both prose and verse.

Within the limits of the town of West Boylston was born in 1814 Erastus Brugham, LL.D. and inventor, the founder of the town of Clinton, which was incorporated through his influence in 1850, and of which he was a promoter of many of Clinton's valuable industries. Robert B. Thomas, celebrated for his "Old Farmer's Almanac," was born here in 1760, and died in 1846 at the age of 86 years. The "Vale of West Boylston," long celebrated by a beautiful ballad, is located here

VIEW OF SPILLWAY BELOW THE DAM. THE WATER BELOW IS THE POND OF THE LANCASTER MILLS AT CLINTON.

June 15, 1903, the old road through the reservoir was given up, and the new line over the viaduct first used by passenger trains, while as yet some of the old line is used as a siding by the commission for supplies, the new line having been constructed in lieu of the old on account of the dam.

Few people can realize the enormity of the undertaking represented in this the largest dam in the world, and the immense amount of water stored behind it when full. Three miles away the depth will be sixty-five feet, and there will be very little shallow water on account of its steep sides.

A greater part of the locality was set-

and will form a portion of the southerly part of the reservoir.

In the depths of the foundation the stone of each side of the valley met, the east side being schist, while the west side was granite, the first being an older stone, and the latter appearing to have come in a molten state firmly adhered to the schist, filling every crack and fissure, and in its present case furnished much food for thought to the geologist, as it plainly shows, its action by contact with the schist, in having turned up an edge of a wave-like appearance before cooling off.

The extent, expense and volume of the Metropolitan Water System is second to none in the world, save one in France,

which is about on a parallel with it. While attended with expense, it has been so constructed that it is a model of all that could be asked for in nearly if not every part of the enterprise and is an everlasting monument to the progressiveness of the people by whom it has been reared. The space allotted to this subject in our JOURNAL is by far insufficient to do justice to the great work, and to be appreciated it must be seen.

W. F. BUCKNAM,
Cor. Sec. Div. 61.

Lucy's Christmas Ride.

BY ALLEN FRENCH.

Caleb was looking at some papers when Lucy came into the room. He thrust them into the pocket of his overcoat.

"Caleb," said Lucy, "you've dropped a letter."

Caleb started, muttered, and flushed. Lucy was already stooping for the letter. "Why," she exclaimed, "it's addressed to me!"

Caleb's wife came to his rescue. "Caleb forgot to give it to you. He got it last night, after you were in bed. The post-office was open late, on account of Christmas eve."

"I see," said Lucy. But the others looked anxious; they watched a frown gather while she read. "I don't understand," she murmured. There was no heading to the letter; she looked at the postmark for a name and date. The mark was blurred. She finished reading, then folded the letter and thrust it into its envelope.

"Come, Caleb," she said. "We'll be late to church." A glance of relief passed between the other two.

As they went out into the street, leaving his wife to cook the dinner, Caleb took off his overcoat and hung it over his arm.

"Won't you find it cold?" asked Lucy. "It's a rather raw day."

"A little raw," said Caleb, moving his shoulders as if he felt the cold. "But there, I'll soon warm up. You see, the coat's the only one I've got, and it's so old I don't like to be seen wearing it on Christmas Day."

"Perhaps I——" began Lucy impulsively. She checked herself; she would get him a new coat and surprise him. Caleb turned his head away, and hid a smile.

"John has written me such an unreasonable letter," she said. "One would think that he was living in the next town. And he writes as if he had written before; I must have missed one of his letters. He asks me to come today to his Christmas dinner."

"He does?" exclaimed Caleb. "But I thought you and John had quarreled!"

Lucy winced. Caleb had touched a sore spot. "At any rate," she said hastily, "I can't travel two hundred and fifty miles to John this morning. He says that since I won't come to spend several days, he will have dinner at noon, so that I can go and come before night. Why, that's impossible."

"Strange," said Caleb.

"I don't see what he's thinking of," said Lucy.

They walked a while in silence, and Caleb shivered so that Lucy should see. It inspired her with a desire to get to church quicker. "Caleb," she said, "let's take the short cut."

The town was not large; its main street lay on a curve, and by a path through the fields they could save distance. But at the railroad crossing a freight train blocked the way. "Oh dear!" said Lucy. "These trains sometimes stand here for hours."

"We might climb through," suggested Caleb.

"If the train should start!"

Caleb peered up and down the train. "I see no engine."

"Well, then," said Lucy. "You go first."

Caleb crossed in safety. "I'll leave my coat on the couplers so you shan't dirty your dress," he said. "Now, Lucy."

She climbed until she was seated on the beam jutting above the coupler. With care she swung her feet across, and faced the further side. "Now," she said, "are you sure you can lift me down?"

"Sure," said Caleb. Standing between the cars, he reached up to take her.

She grasped the brake rod with a scream. "Oh, Caleb, listen!"

Jarring and groaning along the line of cars. There was an engine! Her car started with a jerk; the other followed. Caleb was forced to move in the train's direction. "Jump down!" he cried.

"Never!" she answered firmly. "Caleb, you'll get hurt."

He drew out from between the cars, and as the train went faster ran alongside. "Lucy!" he gasped in consternation. "Lucy!"

"Caleb!" she responded, helpless. The speed increased; she had a last glimpse of his fat, fair face. Then he was left behind.

A brakeman appeared at the top of the car. "Sure, mum," said he, "you're in for it."

"Stop the train!"

"I can't."

"How far are we going?" cried Lucy. "Miles."

Lucy was wise. She knew the laws of

tides and railroads, and accepted the situation calmly.

"Can you keep your place?" asked the brakeman. "You'd best not try to climb up here."

"Indeed not!" she answered. "I will sit here." The beam was narrow, but Lucy was thin. She was secure.

"Make yourself comfortable, then," he said. "You'll lose that coat from the couplers if you don't look out. Put it behind you to ease your back. No, wait, I'll do it."

He ran down the ladder—Lucy envied him the ease of movement—and reaching over with one hand, picked up Caleb's coat. A pipe tumbled from the pocket

of them were old, worn, and dirty. Bills, no doubt, and unpaid. Caleb, though her own cousin, was so shiftless. She thought of the letter in her pocket, but she could not get at it. She tried to remember what it had said; its ending especially. It was almost pathetic; something like this: "You said once I wanted your money. I don't. Now that I am well off, you must believe me. Spend it on Caleb's family, but let me have the satisfaction of being on friendly terms with my only sister. We are old enough to lay by our former differences."

There were tears in her eyes, and Lucy felt ashamed. If the brakeman should come he would see them. She looked

ENGINE 936, N. Y. C. & H. R. R., BRO. T. BRISSETT, C. E. DIV. 145, AT PILOT.—BRO. W. A. RAUCH, PHOT.

and disappeared beneath the train. "Oh, dear!" cried Lucy.

"No use, mum," he said. "Here, we won't lose anything else." Standing braced he searched the pockets, and drew out a pair of old woolen gloves, a handkerchief, and Caleb's package of papers. These, as Lucy sat crouched upon her shelf, he put into her lap, and stuffed the coat behind her. Then Lucy was left to her thoughts.

It was dreary, it was cold. She was sheltered from the wind; the train moved with the even motion of a heavy body. She looked at the letters in her lap. Most

again at the letters in her lap, and pretended to be looking them over. To her surprise, her own name, in her brother's writing, looked up at her from an unopened letter.

Oh, that Caleb! So forgetful! She had but one hand free, but she managed to open the letter, draw it from its envelope, and unfold it. It was short.

Why do you not answer? Lucy, please don't still be angry. We want you, so much, to come for Christmas. You've never seen the children. For their sakes, let bygones be bygones, and come to see
Your brother JOHN.

This was the letter she had missed.

And yet it seemed to speak of still another. Lucy sat and puzzled. Perhaps it was also among Caleb's papers. She looked further. There it certainly was, as if it had traveled long in his pocket. The date, when she had opened it, she found to be December 1. A month in Caleb's pocket!

DEAR LUCY: Here we are, bag and baggage, in Sherman, only fifteen miles away from you. My business—

In Sherman! She almost dropped the letter from surprise. Then she read on. —takes me here. We had scarcely got settled before I met Caleb in the street.

Yes, Caleb often went to Sherman. Why had he not told her? Lucy frowned.

I write this in haste for him to take to you.

A form appeared, stepping from car to car above her head. The brakeman looked down. "Are you comfortable, mum?" he asked politely.

"Brakeman," she screamed, "stop the train!"

"I'm sorry, mum," he said, "but it's only ten minutes more."

"Stop the train," she repeated in great agitation. "I must get off. I must get to Sherman this morning."

The brakeman grinned. "That's all right, then," he said. "It's to Sherman we're going."

* * * * *

"But, Lucy," said her brother, after the twentieth welcome. "How did you

N. Y. C. & H. R. R. EXPRESS, BRO. T. BRISSETT, C. E. DIV. 145, AT THROTTLE.—BRO. W. A. RAUCH, PHOT.

Will you not come to see us? Come for Christmas. Let us forget a part of the old times, and remember all the rest. Please come, for the sake of

Your brother JOHN.

Oh, that Caleb! It was all clear to her now. After all that she had done for him, the money that she had spent on his wife, his children, himself! The very turkey now cooking in his oven she had bought. And he would keep her brother's letters from her! Oh, that Caleb! And now it was Christmas Day; John's dinner would be waiting for her, perhaps at that moment he himself was watching at the station. But could she ever get to Sherman now? come? I went to two trains, and then I gave you up."

Lucy pursed her lips. "I didn't come on a regular train," she said.—*Munsey.*

The Bachelor's Christmas.

AS TOLD BY THE BACHELOR.

It was Christmas Eve. Snow had been falling fast ever since three o'clock. The usual roar of traffic was being dulled by the great soft flakes which seemed determined to cover the whole metropolis with a mantle of purest white and thus fit-

tinely celebrate the nativity of the Christ. The "old man" felt particularly good that afternoon—our holiday trade really had been exceptional—and at four he dismissed us all with a "Merry Christmas and enjoy yourselves, boys."

Having two hours on my hands I walked home, watching the crowds of anxious buyers wearing happy smiles, or that peculiar look which a shopper has when he doesn't find what he wants; I walked slowly, gazing in on the wonderful Christmas exhibits and now and again allowing myself to be carried along by the ever hurrying crowd. Christmas was in the air. Even the bells of the electric cars sounded less harsh, and the pleasant odor of thousands of balsam Christmas trees perfumed the atmosphere. Sooner than I expected I found myself on the little side street, where I make my home in a modest little boarding house. My apartments are on the top floor, and I revel in the possession of a grate. My landlady is fond of warm rooms and when I come home evenings I always find a pleasant glow there.

Shaking the snow from my overcoat, donning smoking jacket and slippers, I pulled the old arm chair up before the fire and lit the old pipe. From where I was I could just dimly see the tops of the houses opposite, looming out, their chimneys looking like ghostly sentinels.

As I sat there, gazing into the coals, now and again blowing a perfect ring of tobacco smoke and following it to the ceiling, I dreamed of other Christmas eves, long before I battled alone with the world.

I could hear the engine puffing up the hill, the noise, excitement and general confusion, the cheery "hallo's," which were part of the train's arrival. I could see the old 'bus and the double and single rigs, could hear Carlo bark his welcome. Joe, our driver, had a hearty handshake for me, and deep from his great fur coat came a "How d'ye do, Mr. Jack! Glad to see you home for Christmas." Then the short ride to the house, the welcoming kiss of mother, the quiet greeting of father, and the contrastingly noisy one of the younger members of the family. How solicitous they all were of my welfare! What innumerable questions were asked and answered! Here and there a stray joke stole in, when someone's name was mentioned. The tea and meat and bread all tasted so good! And after the supper, when the youngsters had been bundled out of the room, grips were opened; a little memento for each. Then the joy of giving and receiving. Mother's tears of thankfulness and the hearty kisses of sister Nelly. How proud Tom is of his sweater and Charlie of his new neckties!

And best of all the tree, all ablaze with candles.

There were presents for everybody. For father a new pipe, several boxes of cigars, perhaps a new fur cap or some other equally useful article. For mother, father had purchased a new bonnet and cape and more than likely some household article which she had long been wishing for. Her love for flowers was gratified, too, for had I not brought the best I could find in the big town? Sister Nelly was proud of a new muff or better still a gold watch, and came over for a brotherly kiss when she discovered a small locket—my gift. Charlie has disappeared to try on a new suit, and his brilliant neckties, while Tom is jumping around excitedly because he has discovered under the table a new harness for Dobbin. Baby Marjorie is wearing the sunniest of smiles, cuddling a doll bigger than she, gazing at the big tree with awe. One by one the candles are extinguished, Charlie and Tom outdo each other in blowing out the remaining ones, and we listen to the poems the children have learned. Even now, so many years after, I can hear Nelly beginning:

" 'Twas the night before Christmas,
And all over the house
Not a mortal was stirring—
Not even a mouse."

Or Charlie, in stentorian tones, with great dignified gestures, declaiming Webster's "Reply to Hayne." Tom, roguish Tom, recites some funny piece, perhaps one of Saxe's, forgets his lines, and Charlie helps him out.

The holiday week is spent in looking up old friends, sleigh rides by day and by moonlight, with former schoolmates, former "flames," who are now married, and come with their husbands to enjoy the talks of other times. In the morning I convulse the younger brothers by trying my skill on skates down on the little pond not far from home, and later in the day when I feel safer Nellie comes down with a friend or two and we skate some more.

Of course I have my old room. Charlie sleeps with Tom. But how different it looks. Charlie's taste is not mine. He has decorated the walls with giddy pictures, such as he had at boarding school. But I do see some of my old friends in the bookcase, and I get one down and read, long after all the others are in bed.

We go on a hunting expedition, Charlie and I, coming home with frozen noses and little game, but it's fun nevertheless, and I allow myself to be inveigled into the same hunting trip every succeeding holiday season.

There are the consultations with father and mother, when business and home

affairs are discussed. Charlie wants to be a merchant and we——

"There now! I just knew it! I knew you would sit here mooning, letting the fire go out and forgetting all about the lamp! Have you been dreaming of college days again?" Kitty came into the room, her arms so full of bundles that I wondered how she opened the door. Her cheeks were as red as could be, and the snow on her cape completed the prettiest picture I know. I frowned a little when she deposited all the bundles on the table—so many,—but she paid no attention, rushing off into the kitchen to get a lamp. I remained in my chair.

"Get up, Mr. Jack, and see to the fire,

"P-p-p-sh! Nothing of the kind, wise Mr. Man. I only spent twice as much as you told me to, and oh! Jack! everything was so cheap!"

"But Kitty, if you buy everything that's cheap we'll soon sell out cheap ourselves," I remonstrated.

"Now look!" she answers, "here are two wreaths for the windows. Aren't they pretty? And they only cost thirty-five cents."

"Um."

"And here is some Christmas cake and a pudding, and some meat, and bread, and butter, and sausage, and a nice little goosey for tomorrow, with cranberries and stuffings. See, I knew you'd smile!

N. Y. C. & H. R. R. ENGINE 3892 BRO. TRACY WHEELER OF DIV. 145 AT THE CYLINDER.
—Bro. W. A. Rauch Phot.

and, besides—you haven't given me a kiss yet."

So right there in the middle of the floor, she with the lamp in her hand and I with the poker, embraced each other.

"Hurry up, Jack, I can't hold the lamp any longer."

Then, seeing me frown at all those packages again, she tossed her head a bit and said:

"Now, Jack, I wasn't extravagant at all. Just guess how much I spent."

"From the number of packages, about three times more than you should have."

I just brought the loveliest little Christmas present for that bad boy of mine. Look!" She unwrapped a bundle, trying in her haste to cut the strings with a fork, and soon held up before me a new smoking jacket.

"Now will you be good! And stop scolding the best wife you ever had and let me put my things away to get supper."

In a few moments all the bundles, packages and parcels had disappeared, the table cloth was spread and the water was boiling merrily over the little alcohol

lamp. I donned my new smoking jacket and took my seat on the sofa, my wife to my right at the upper end of our small table. The deep red shade of the lamp cast a pretty glow on the table. Kitty was busy spreading butter on my bread and pouring out tea.

Is there anything nicer than to have a lovely little wife who always is dressed neatly, always has a smile of welcome when you come home, looks out for your every comfort? Kitty was very, very busy with my bread, the butter was quite hard, and I could see by the twitching around the corners of her mouth that she had something up her sleeve for me. She was enjoying it hugely and was so engrossed that she failed to see me watching. Suddenly she looked up.

"Why don't you eat?"

"You haven't given me anything."

"Well, here, take some of this; isn't it good?"

"Um."

"Did you see anyone down town today?"

"Um."

"Um! Um! Um! Whom did you see?"

"Oh! Nobody in particular. Will Waters."

"Nobody in particular? Don't you consider Will Waters anybody? Why, he was my first sweetheart!"

"What?"

"Eh, I mean,—well you know we used to go to school together and Will was always very attentive to me, but later I met you and forgot all about Will."

This with such a frank, sincere look that I needs must apologize and peace reigns once more.

"Whom else did you see?"

"Oh, I met John Carroll, and Tommy Wright, Charlie Trumbull and his brother Dick; they all wish you a 'Merry Christmas.' I have invited them to call."

"When are they coming?"

"Oh, I don't know. By the way, the old man called me into his office today and said he was very much satisfied with my work. He is going to raise my salary soon and perhaps give me charge of more departments. He felt very good this afternoon. The year's business has been excellent, due somewhat to the efforts of your humble servant."

"Then you'll buy a new bonnet at Easter?"

"How like a woman! Wait until Easter comes. Besides, I have a little surprise for you."

"I knew that (now, Kitty always said 'now'), old fellow, tell me what you brought me for Christmas."

"Wait until we have our tree trimmed." A thankful look for this.

"You have ordered a tree? How good of you; but tell me what I am going to get."

"Wait until we have the tree trimmed."

"Well, then, I won't tell you what you,—what I—am going to give you soon," said Kitty, a rosy blush spreading over her features.

"Why, Kitty!"

Now I knew why she was so busy with the bread and butter. And I jumped up to kiss the little woman. We were silent for a long while. Kitty was smiling, then she began to look worried, her brow contracting.

"What is it, dear?"

"Oh, Jack! I was just thinking whether milk was better than infant's food and I am so worried," she said, coming over to sit on the sofa, where I was stretched out full length.

"Little woman,"—I could not repress a smile—"I really don't know."

"But Jack, maybe milk won't agree with him and then we can't tell which food to use."

"With *him*?"

"Why, of course it will be a boy; a fine boy just like his papa—good, manly, straightforward, honest, a perfect gentleman."

"And just like his mamma—kind, gentle, forgiving."

"And we'll have all your folks and my folks come for the christening and we'll name him Algernon Schuyler Manning."

"No, we'll name him Charles Manning."

"We won't!"

"We will!"

"We won't!"

"We will!"

"We won't, we'll name him Jack Manning after his papa, so there!" Kitty got hold of the ends of my mustache and bent down to—

* * * * *

In my doze I heard some noisy fellow coming up the stairs. Somebody was knocking next door.

"Oh! Isay, Jack! Confound you, Jack! Great Heavens! The man's asleep."

"Eh? What?"

"Jack, you old sleepyhead; wake up, man! Aren't you going to Franklin's for the Christmas Eve party?"

"All right. Kitty, in a minute! Oh! it's you, Harry, is it?—Where am I? Where's K—? Oh!"

"Ye gods, what's the matter with the man! Hurry up, it's after eight," said Harry, and then I realized that after all it was not reality but only another idle dream of a bachelor alone in the world.—*The Dolgeville Herald.*

Number Three.

One winter night, as the westbound express was pulling out of Omaha, a

drunken man climbed aboard. The young superintendent, who stood on the rear platform, caught the man by the collar and hauled him up the steps.

The train, from the tank to the tail-lights, was crammed full of passenger people going home or away to spend Christmas. Over in front the express and baggage cars were piled full of baggage, bundles, boxes, trinkets, and toys, each intended to make some heart happier on the morrow, for it was Christmas eve. It was to see that these passengers and their precious freight, already a day late, got through, that the superintendent was leaving his own fireside to go over the road.

The snow came swirling across the

back. The thief was discovered on the blind baggage and turned over to the "city marshal" at the next stop.

Upon entering the train again the superintendent went forward to find a seat in the express car. It was near midnight now. They were coming into a settlement and passing through prosperous new towns that were building up near the end of the division. Near the door the messenger had set a little green Christmas tree, and grouped about it were a red sled, a doll carriage, some toys and a few parcels. If the blonde doll in the little toy carriage toppled over the messenger would set it up again, and when passing freight out he was careful not to knock a twig from the tree. So

NORFOLK & WESTERN ENGINE 358. BRO. W. A. M'QUIRT IN CHARGE.

plain, cold and wet, pasting the window and blurring the headlight on the black locomotive that was climbing laboriously over the kinks and curves of a new track. Here and there, in sheltered wimples, bands of buffalo were bunched to shield them from the storm. Now and then an antelope left the rail, or a lone coyote crouched in the shadow of a telegraph pole as the dim headlight swept the right of way. At each stop the superintendent would jump down, look about and swing onto the rear car as the train pulled out again. At one time he found that his seat had been taken, also his overcoat, which had been left hanging over the

intent was he upon the task of taking care of this particular shipment that he had forgotten the superintendent and started and almost stared at him when he shouted the observation that the messenger was a little late with his tree.

"'Tain't mine," he said, sadly, shaking his head. "B'longs to the fellow 't swiped your coat."

"No!" exclaimed the superintendent, as he went over to look at the toys.

"If he'd only asked me," said the messenger, more to himself, than to the superintendent, "he could 'a had mine and welcome."

"Do you know the man?"

"O yes, he lives next door to me, and I'll have to face his wife and lie to her, and then face my own, but I can't lie to her. I'll tell her the truth and get roasted for letting Downs get away. I'll go to sleep by the sound of her sobs and wake to find her crying in her coffee—that's the kind of Christmas I'll have. When he's drunk he's disgusting, of course, but when he's sober he's sorry. And Charley Downs is honest."

"Honest!" shouted the superintendent.

"Yes, I know he took your coat, but that wasn't Charley Downs; it was the tarantula juice he'd been imbibing in Omaha. Left alone he's as honest as I am, and here's a run that would trip up a missionary. For instance, leaving Loneville the other night, a man came running alongside the car and threw in a bundle of bills that looked like a bale of hay. Not a scrap of paper or pencil mark, just a wad o' winnings with a wang around the middle. 'A Christmas gift for my wife!' he yelled. 'How much?'" I shouted.

"'O, I dunno—whole lot, but it's tied good,' and then a cloud of steam from the cylinder cocks came between us and I haven't seen him since.

"For the past six months Downs has tried hard to be decent, and has succeeded some, and this was to be the supreme test. For six months his wife has been saving up to send him to Omaha to buy things for Christmas. If he could do that, she argued, and come back sober, he'd be stronger to begin the New Year. Of course they looked to me to keep him on the rail, and I did. I shadowed him from shop to shop until he bought all the toys and some little trinkets for his wife. Always I found he had paid and ordered the things to be sent to the express office, marked to me.

"Well, finally I followed him to a clothing store, where, according to a promise made to his wife, he bought an overcoat, the first he had felt on his back for years. This he put on, of course, for it is cold in Omaha today, and I left him and slipped away to grab a few hours' sleep.

"When I woke I went out to look for him, but could not find him, though I tried hard and came to my car without supper. I found his coat, however, hung up in a saloon and redeemed it, hoping still to find Charley before train time. I watched for him until we were signaled out and then went back and looked through the train, but failed to find him.

"Of course I am sorry for Charley," the messenger went on after a pause, "but more so for the poor little woman. She's worked and worked and saved and saved and hoped and dreamed until she

actually believed he'd been cured and that the sun would shine in her life again. Why, the neighbors have been talking across the back fence about how well Mrs. Downs was looking. My wife declared she heard her laugh the other day, clear over to our house. Half the town knew about her dream. The women folks have been carrying work to her and then going over and helping her do it as a sort of surprise party. And now it's all off. Tomorrow will be Christmas and he'll be in jail, his wife in despair and I in disgrace. Charley Downs a thief—in jail! It'll just break her heart!"

The whistle proclaimed a stop and the superintendent swung out with a lump in his throat. This was an important station and the last one before Loneville. Without looking to the right or left the superintendent walked straight to the telegraph office and sent the following message to the agent at the place where Downs had been ditched.

"Turn that fellow loose and send him to Loneville on three—all a joke.

"W. C. V., Superintendent."

In a little while the train was rattling over the road again and when the engine screamed for Loneville the superintendent stood up and looked at the messenger.

"What'll I tell her?" the latter asked.

"Weil, he got left at Cactus sure enough, didn't he? If that doesn't satisfy her tell her that he may get over on No. 3."

When the messenger had turned his freight over to the driver of the Fargo wagon, he gathered up the Christmas tree and the toys and trudged homeward, looking like Santa Claus, so completely hidden was he by the tree and the trinkets. As he neared the Downs' home the door swung open, the lamplight shone out upon him, and he saw two women smiling from the open door. It took but one glance at the messenger's face to show them that something was wrong, and the smiles faded. Mrs. Downs received the shock without a murmur, leaning on her friend, and leaving the marks of her fingers on her friend's arm.

The messenger put the toys down sadly, silently, and, feeling that the unhappy woman would be better alone, the neighbors departed, leaving her seated by the window, peering into the night, the lamp turned very low.

The little clock on the shelf above the stove ticked off the seconds, measured the minutes and marked the melancholy hours. The storm ceased, the stars came out and showed the quiet town asleep beneath the robe of white. The clock was now striking 4 and she had scarcely stirred. She was thinking of the watchers of Bethlehem when suddenly a great

light shone on the eastern horizon. At last the freight was coming. She had scarcely noticed the messenger's suggestion that Charley might come in on three. Now she waited, with just the faintest ray of hope, and after a long while the deep voice of the locomotive came to her, the long black train crept past and stopped. Now her heart beat wildly. Somebody was coming up the road. A moment later she recognized her erring husband, dressed exactly as he had been when he left home, his short coat buttoned close up under his chin. When she saw him approaching slowly but steadily she knew he was sober and doubtless cold. She was about to fling the door open to admit him when he suddenly stood still. She watched him. He seemed to be wringing his hands. An awful thought chilled her—the thought that the cold and exposure had unbalanced his mind. Suddenly he knelt in the snow and turned his sad face up to the quiet sky. He was praying and with a sudden impulse she fell upon her knees and they prayed together with only the window glass between them.

When the prodigal got to his feet the door stood open and his wife was waiting to receive him. At the sight of her, dressed as she had been when he left her, a sudden flame of guilt and shame burned through him, but it served only to clear his brain and strengthen his will power, which all his life had been so weak and lately made weaker for want of exercise. He walked almost hurriedly to the chair she set for him near the stove, and sank into it with the weary air of one who has been long in bed. She felt of his hands and they were not cold. She touched his face and found it warm. She pushed the dark hair from his pale forehead and kissed it. She knelt and prayed again, her head upon his knee. He bowed above her while she prayed, and stroked her hair. She felt his tears falling like rain upon her head. She stood up and when he lifted his face to hers looked into his wide, weeping eyes, aye, into his very soul. She liked to see the tears and the look of agony on his face, for she knew by these signs how he suffered and she knew why.

When he had grown calm she brought a cup of coffee to him. He drank it and

then she led him to the little dining room, where a midnight supper had been set for four, but because of his absence, had not been touched. He saw the tree and the toys that the messenger had left and spoke for the first time. "Oh, wife, dear, have they all come? Are they all here? The toys and all?" And then seeing the overcoat that the messenger had left on a chair near by, and which his wife had not yet seen, he cried excitedly, "Take that away—it isn't mine!"

"Why, yes, dear," said his wife, "it must be yours."

"No, no," he said. "I bought a coat like that, but I sold it. I drank a lot and only climbed on the train as it was pulling out of Omaha. In the warm car I fell asleep and dreamed the sweetest

MEMBERS OF DIV. 269 AT A RHODE ISLAND CLAMBAKE.

dream I ever knew. I had come home sober with all the things, you had kissed me, we had a great dinner here, and there stood the Christmas tree, the children were here, the messenger and his wife and their children. We were all so happy! I saw the shadow fade from your face, saw you smile and heard you laugh, saw the old love light in your eyes and the rose coming into your cheek. And then! 'O, bitterness of things too sweet!' I woke to find my own old trembling self again. It was all a dream. Looking across the aisle I saw that coat on the back of an empty seat. I knew it was not mine, for I had sold it for two miserable dollars. I knew, too, that the man who gave them to me got them back

again before they were warm in my pocket. This thought embittered me, and, picking up the coat, I walked out and stood on the platform of the baggage car. At the next stop they took me off and turned me over to the city marshal—the coat belonged to the superintendent.

"It is like mine, except that it is real and mine, of course, was only a good imitation. Take it away, wife—do take it away—it haunts me!"

Pitying him, the wife put the coat out of his sight and immediately he grew calm, drank freely of the strong coffee, but he could not eat. Presently he went over and began to arrange the little Christmas tree in the box his wife had prepared for it during his absence. She began opening the parcels, and, when she could trust herself, began to talk about the surprise they would have for the children, and now and again to express her appreciation of some dainty trifle he had selected for the children and herself.

She watched him closely, noting that his hand was unsteady and that he was inclined to stagger after stooping for a little while. Finally, when the tree had been trimmed, and the sled for the boy and the doll carriage for the girl were placed beneath it, she got him to lie down. When she had made him comfortable she kissed him again, knelt by his bed and prayed, or rather offered thanks, and he was asleep.

Two hours later the subdued shouts of her babies, the exclamations of glad surprise that came in stage whispers from the dining room, woke her, and she rose from the little couch where she had fallen asleep, already dressed to begin the day.

It was 4 o'clock in the afternoon when she called the prodigal. When he had bathed his feverish face and put on the fresh clothes she had brought in for him and come into the dining room, he saw his rosy dream of the previous night fulfilled. The messenger and his wife shook hands with him and wished him a merry Christmas. His children, all the children, came and kissed him. His wife was smiling, and the warm blood leaping from her happy heart, actually put color in her cheeks.

As Downs took the chair at the head of the table, he bowed his head, the rest did likewise, and he gave thanks, fervently and without embarrassment.

That day was the dawn of a new life for the little Loneville family, and every Christmas since they have celebrated that one over again.—S. J. Tucker in *Cleveland Leader*.

The Song of the Angels.

It came upon the midnight clear,
That glorious song of old,
From angels bending near the earth
To touch their harps of gold ;
"Peace to the earth, good will to man
From Heaven's all-gracious King."
The earth in solemn stillness lay
To hear the angels sing.

Still through the cloven skies they came
With peaceful wings unfurled,
And still celestial music floats,
O'er all the weary world,
Above its sad and lowly plains
They bend on heavenly wing,
And ever o'er its Babel sounds
The blessed angels sing.

O ye, beneath life's crushing load,
Whose forms are bending low,
Who toil along the climbing way,
With painful steps and slow,
Look up! for glad and golden hours
Come swiftly on the wing ;
Oh, rest beside the weary road,
And hear the angels sing.

For lo, the days are hastening on,
By prophet bards foretold,
When with the ever-circling years
Comes round the age of gold :
When peace shall over all the earth
Its final splendors fling,
And the whole world send back the song
Which now the angels sing.

The North American.

The Labor Leader—A Preacher's Tribute.

BY CHARLES STELZLE.

"It opens the eyes to come into personal contact with the leaders of labor. It robs one forever of the vision of the labor leader which pictures a hulking bully, thick-necked, hard-fisted, arrogant, preferring a fight to a job, an agitator."

So wrote my friend, the Rev. Warren H. Wilson, who for a year has been the fraternal delegate in the Brooklyn Central Labor Union, representing the Presbyterian ministers of that city.

"The members of the Central Labor Union of Brooklyn are not trouble-makers, neither are they bullies. They are a cordially fraternal company of thinking men, among whom, aside from the other considerations, it is for a thinking man an honor to be numbered. From the writer's first appointment as a fraternal delegate to the Central Labor Union, he was met with intelligent and thoughtful cordiality. The labor men welcomed the appointment, and one after the other, although it was a new departure, they assented to it; until in a meeting of the Union it was greeted with a surprising unanimity and emphasis.

"The meetings of the Union have been to me experiences of surpassing interest.

They open up a new world to a Christian minister. The more is the pity that it is a world from which a Christian minister should be shut out. Here are discussed matters of vital interest to the poor of this Borough, and those of meager means—the very people for whom the Master had the most direct message—and with a finely intelligent grasp of principles, mutual forbearance and sincere brotherliness. The word 'brother' as a term of address lives here with the full force of John Wesley's days. So far as one can observe, the leaders of labor in Brooklyn are religiously trained men, more than a majority of them members of churches. They appreciate, too, an essential agreement in the fundamentals underlying the faiths of the various churches of this city. And they conceive that their Union, being a purely advisory body, a forum of discussion of interests common to those who toil with their hands, is an agency for the carrying out of religious purpose.

"That is, they believe that the war on the sweatshop, the crusade against child labor, and the agitation for a better place for the laboring woman, are interests which are, or should be, high in the esteem of religious people. They believe too, that the increase of wages will introduce into a multitude of homes in Brooklyn the possibilities of religion and of righteousness. They believe that the shortening of hours in trades like that of the bakers, who today toil for eleven hours or twelve in overheated quarters, who recently in many cases had to sleep by the side of their ovens, will tend to the restoration of these men to their families and will be the beginning of religious and moral life for a multitude of persons.

"I am frank to say that in these things I agree with them."

The Chinese Must Not Come.

There seems to be a well defined policy of interested parties to induce Congress at its forthcoming session to let down the bars to the hordes of Chinese coolie laborers so that they may come into the United States and its possessions. Some ministers of the gospel also are consciously or unconsciously giving their service to this venal project. If consciously, they appear to be more concerned in the welfare of the Chinese than of the American people. If unconsciously, they should study the facts and the history of Chinese immigration into the United States and other countries.

Of course, there is reason for complaint against the indiscriminate immigration of people from other countries, and all realize that some better regulation and

restriction are essential in regard to this, but such classes of immigration can not be considered on parallel lines when discussing the immigration of Chinese laborers.

The Chinese are unassimilable. Their civilization is entirely at variance with that of the American people. The Chinese and the Caucasians can not live, prosper, and progress side by side in the same country. The whole history of Chinese immigration to any country on the face of the globe in appreciable numbers has demonstrated this time and time again. They have dominated wherever they have entered, unless they have been driven out by the force of arms or excluded before their numbers were permitted to attain an overwhelming influence. Their domination is not because of higher attainments, but because of their subtlety, their lack of wants, interests, or desires; because they are cheap laborers and cheap merchants, and thus industrially and commercially freeze out their competitors, the American workmen, and even the American business men. This has been demonstrated on the Pacific coast and in the Sandwich Islands, as well as in the Philippines.

American workmen realize the great danger, not only to them and their interests, but to all the people of our country. Business men, students, and observers are in entire accord upon this question of the necessity of excluding Chinese laborers from coming to the United States.

Workmen are second to none in their regard for their fellow men without consideration whence they hail; but they would be less than human did they disregard the lessons of the past and the dangers which would threaten not only their standard of life, but every hope for the safety of themselves in the present and those who will come after them.

The economic, social, religious, and political life of our entire people is at stake in this question, and they will not tamely submit to a false sentimentality to please the few sordid profit mongers who, for a slight momentary gain, would endanger the future of our republic. Aye, they will not submit even to the possibility of this backward movement though it ruffles the sentimentality and vanity of a few ministers of the gospel who, by the way, might better devote their talents and energies to the effort for the uplift of the workers of our own country.

The so-called Chinese boycott of American products, the activity of the sugar planters of Hawaii who have again evinced their love for the Chinese, the subtle tactics pursued in certain quarters by employers antagonistic to organized

labor, the effusions of some preachers—all bear the stamp of a carefully concocted plan to "modify," with the hope of ultimately nullifying, the entire policy of the American people to keep the Chinese from coming to any place where our flag flies.

The American workmen, the American people, must be equally, if not more, alert than those who would, either for the greed of gain or a false sentimentality, undermine our civilization.

The bars must not, and will not, be let down for the Chinese.—American Federation of Labor.

Curse of Idleness.

BY REV. THOS. B. GREGORY.

In a recent address on the subject of amusements, a New York clergyman used these words:

"Let me say at the outset that there are some people whose business in life is to seek amusement."

It will be remembered that during his journey through Hell the great Dante happened to get his eyes on a class of whom it was said that they were "hated by God and by the enemies of God," hated by the good and the bad, hated by everybody.

It was the same class that the clergyman had in mind—the class of the idle rich, who have nothing to do but to think of the ways by which they may amuse themselves.

They toil not, neither do they spin. In the great activities of the world they take no part. Their hands, their brains are idle. They are human drones.

Poor creatures! Let us pity them, for in all the world there is no misery like that which is their constant lot. Their very indolence is a hell, their very satiety is weariness and sorrow.

Let them flit hither and thither, like the butterflies that they are, searching for the honey which they hope will relieve the bitterness of their pleasure-jaded lives.

Don't hate them. They are beneath hating. Don't scold them. They are mentally so dead and morally so far gone that they would not know what your scolding meant.

Leave them, uncursed by you, to the round of their silly, senseless pleasures. It is a disgusting life that they are leading—disgusting as worthless—but it is all that they know anything about, all, perhaps, that they are fitted to follow.

In the meantime, the rest of us will heartily join in the slogan, "God bless the man who first invented work!"

Labor—the being steadily engaged with

some useful, world-helping task—is the grandest thing under the sun.

No pleasure of the idle is equal to that which belongs to the man or woman who is doing something every day toward the material, moral and spiritual uplifting of humanity.

To the worker life is real—beautifully, entrancingly real. The poorest laborer, honestly trying to do his humble part in the world's work, has, in the midst of his toil, the experience which not all the millions of the idle rich could buy.

Labor makes all that we eat and drink taste good to us. Labor gives the sound, refreshing sleep that no opiate can supply. Labor insures the good digestion and rich red blood that no prescription of the apothecary is able to give.

More than this, labor confers the priceless boon of self-respect. The worker is a man—the rest are mere manikins—puppets in an idle play.

Those who do their part of the world's work, thereby advancing the world's progress, have the proud consciousness of being useful.

With no alien feeling they walk through the world. Upon the varied industries whose united effort is pushing out the frontier of civilization they can look with the consciousness that they are a part of it all, a living, vital part.

To the grandeur, material and moral, which rises more and more imposingly about them, they feel that they are contributors, since it is by their muscle and brain, by their labor of hand and head, that it has all come about.

And is it not a most exhilarating thought! Can the petted, pampered darling, lolling in his luxurious idleness, have the glory of such thought bought for him with all his money?

Let no man bemoan the fact, then, that it is his lot to labor. It would be a piece of supererogation to say that labor is "honorable." Not since the French Revolution has the world thought otherwise.

But labor is more than honorable—it is glorious and blessed. It gives a tinge to the cheek and a glow to the heart. It makes a man manly and self-respecting. It confers the proud consciousness of co-partnership with the advancing world.

Find something to do, then, and do it. Look about you for some useful task to which you may seriously and lovingly dedicate your energies; and be glad and proud of the opportunity of finding one.

Be a man, not a manikin. Be a worker, not a drone. Thus shall you find the only pleasure—that of knowing that you are doing something toward making the race of mankind wiser, happier and better.

Arrest of Population.

When the Iowa census this year showed a loss in population of 15,000 in five years, from 1900 to 1905, it was credited to the decrease in farming population. Every city over 5,000 in population had gained, the total being 77,000. In all the towns under 5,000 population each and the farming districts had lost in five years some 92,000 population. Minnesota proves by its census to have grown in five years but 225,000, credited wholly to the village and city population. In the last decade Minnesota gained one-third, 33.7 per cent in ten years, or 3.87 per cent in a year. In the past five years it has gained only at the rate of 2.6 per cent. The farming population has ceased to grow.

But it is not only the farming population which suffers arrest. Massachusetts, which is more than half city or town over 5,000, has a disappointing return in its census for 1905. Taking the increase in the previous decade, a growth in population was expected and predicted of 375,000. The actual increase is barely half this, 193,612.

The rate of increase, 6.9 per cent, is half that for twenty years back. It was about the same, 7.9 per cent, in 1875 to 1880, and 8.9 per cent, 1880 to 1885; but this is the only time it has ever been as low, and of the earlier decade, the first five years, 1875 to 1880, were years of great financial depression.

The past five years have been years of overflowing prosperity. Yet the increase in population in Massachusetts drops one-half. The addition to population in five years is no larger than it was thirty years ago in five years when the inhabitants of the state numbered only half as many as now.

This same arrest of population is in progress all over the country. No state is likely to show in this decade the increase of the past. Our national increase, which has been jogging along at about 25 per cent in ten years, is about to make a drop to 12 or 15 per cent in ten years, a little above the average of thriving European countries like Germany and England.

Our birthrate is decreasing. The size of families is smaller. The weddings are as numerous. The christenings are fewer. Half of the immigrants who come over go back. Each year the proportion of those who return grows a little bigger.

Our population is fast coming to the European rate of increase. But wealth grows. The amount paid out in wages increases. The average paid each worker grows. There is more comfort, more house, more meat, more bread, more clothes and more shoes per person.

If the increase of population shows an

arrest the increase of wealth and its distribution yearly advance.—*Brookfield Gazette.*

Railroad Men Stir Detroit.

Furnished by the International Committee of Young Men's Christian Associations, 3 West 29th Street, New York City. Released for Use, Thursday, October 5th.

There has just closed at Detroit the greatest meeting of Christian railroad men that has ever assembled. There were 1,487 delegates representing the 212 railroad Young Men's Christian Associations from Mexico to British Columbia and Nova Scotia and from every section of the United States. The railroad companies furnished them all free transportation. Some presidents of railroads, general managers and superintendents came a thousand miles or more to attend, although the engineers, conductors and other men in the operating service were in the majority. The meeting aimed to make men efficient in Christian influence with fellow employees, and was a tremendous religious force in Detroit. Nearly 9,000 men employed in the 42 shops and factories in and about the city were addressed at noon of the second day of the conference by its leaders. Attentive and sympathetic audiences listened to the messages, which were a stimulus to personal development in everything that makes for Christian manhood. On Sunday night 51 great men's evangelistic meetings were attended by at least 12,000 men in the churches and addressed by the evangelistic leaders of the body. In these meetings 1,295 men, beside the pastors, took active part. One church alone distributed 25,000 invitation cards to the Sunday evening men's meeting. The great Sunday afternoon meeting at the Light Guard Armory, addressed by Fred B. Smith, was attended by 3,000 men. Every one of the 8,000 railroad men of Detroit, including street railway employees, was personally invited. Detroit has been stirred to its center, and religious meetings will be continued in the shops and factories.

President Stevens of the C. & O., in speaking to the conference, said in part: "We carry 3,500,000 passengers and 43,000,000 tons of freight a year, and last year lost but two employees and not one passenger's life. I give large credit for this condition to the influence of the Young Men's Christian Association." General Manager W. A. Garrett, of the Queen & Crescent, caught the applause of the mass of men by the fair and square way he talked on the rights and relations of the man and manager. Other railway officials were introduced. Miss Helen

Miller Gould was a constant attendant upon the convention, and her entrance to the hall was a signal for bursts of enthusiasm. Her most recent gift was one of \$150,000 for a building for the St. Louis Railroad Association. Secretary of the Treasury Leslie M. Shaw came from Washington because he "wished to talk to men engaged in a rugged work which makes rugged character." It was recognized in these meetings that the greatest foe of railroad management and of public safety in travel is the saloon, and to take its place the majority of the companies in North America sustain Associations, giving \$300,000 last year for their support and equipment, the employees giving nearly as much. The companies are abandoning the reading rooms and club houses, finding that the Association is the kind of a club that beats the saloon. The 212 Associations have 74,000 members, with an attendance of 34,000 men a day, and their rest rooms were used last year 1,144,457 times. In educational and practical railroading classes they had 2,664 students, and in Bible classes 4,183, representing gains of nearly 50 per cent. One short road which, five years ago, made a test of the Association's influence among its men at a terminal point, gave \$30,000 last year for its maintenance at every terminal point.

The city of Detroit spent \$2,000 entertaining the convention. Representative men were on its committees and automobiles were at command upon occasion. A leading hotel, however, did not welcome the delegates, declaring "That is not a paying crowd; they spend no money at the bar or for 'extras.'"

The dramatic feature of the convention was the statement of Surgeon-General Suzuki, of the Imperial Japanese Navy, who, being introduced by Col. John J. McCook, chairman of the sessions, said: "I was christened twenty years ago, but I confess that I am not a good Christian." He alluded, with deep feeling and satisfaction, to the conversion and baptism of his wife and six children, and concluded by saying, amid the deep hush of eager attention: "What I wish you would do is to send us good men, able to convert our hearts to the real meaning of Christianity." The testimony of this eminent Japanese officer, following the address of Mr. Colton on extending the Railroad Associations abroad, as has been begun in India, and is supported by Railroad Associations in America, had a tremendous effect on this audience of big-hearted, sympathetic men. From the first address of the convention by Dr. John Potts, the eloquent Canadian, to the virile messages of John R. Mott, Fred B. Smith, Robert Speer, Allan Stockdale and George

Truitt; and of such Christian business men as James G. Cannon and Hon. H. B. F. Macfarland, there was a constant note of dominant Christianity, which lifted the purpose of these militant men, who seriously believe that they are responsible for the moral welfare of their 1,000,000 associates in the railway service.

Overwhelmed by Immigrants.

If we had an Immigrants' Day, as we have a Labor Day, and if a parade containing all the unnaturalized immigrants, those who have landed within the last five years, should march side by side with all the organized workers in the country, the immigrants would outnumber the unionists by fully a million.

Think of what that means! After 75 years of agitation and education, unionism has succeeded in bringing into orderly organization two and a half millions of American workers. It has battled for a rational workday and a fair wage. It has struggled for a decent standard of living and a self-respecting, independent manhood.

But in five years, only five years, three and a half millions of unorganized, untrained, un-American toilers have been poured into the country to compete with our workers, to labor long hours for small wages, to degrade our standard of living, and to combat, in every possible way, the great work being done by the unions.

Already the coke industry has entirely passed into the hands of the Huns and Slavs. The iron and steel trade has been flooded by men of the same nationalities. The Lake Superior ore mines are being captured by the Finns. In the coal and the clothing trades the unions have conquered only after long and strenuous struggles. Railroad construction is almost completely dominated by the unorganized Italians.

Unionism is a great nation-wide factory, taking in the raw material of humanity and making of it intelligent, self-reliant men, fit for citizenship in a self-governing country. But the best factory in the world will fail if continually supplied with poor raw material. Doubly will it fail if overstocked, overtaxed, overwhelmed with a supply increasingly beyond its utmost working capacity.—*Lydia Kingsmill Commander, in Weekly Bulletin, Clothing Trade.*

"Yes," said the railroad president, "I've found out how we can make every one of our men live to be a hundred years old."

"Wonderful! How do you do it?"

"It is only necessary to pension them off after they get to be sixty or seventy."

—*Chicago Record-Herald.*

Legal News

Co-Employees or Fellow-Servants.

(Continued from November.)

TEXAS.

In this group of States Texas next appears, having passed an act, approved March 10, 1891, and amended in 1893, which defines the meaning of the terms "vice principal" and "fellow-servant" in the case of railroad companies, changing the common-law rule thereon. Said act is now contained in the following sections of the Revised Statutes of Texas of 1895:

SECTION 4560f. All persons engaged in the service of any railway corporation, foreign or domestic, doing business in this State, or in the service of a receiver, manager, or of any person controlling or operating such corporation, who are intrusted by such corporation, receiver or person in control thereof, with the authority of superintendence, control, or command of other persons in the employment of such corporation, or receiver, manager, or person in control of such corporation, or with the authority to direct any other employee in the performance of the duty of such employee, are vice principals of such corporation, receiver, manager, or person controlling the same, and are not fellow-servants of such employee.

SEC. 4560g. All persons who are engaged in the common service of such railway corporation, receiver, manager, or person in control thereof, and who, while so employed, are in the same grade of employment and are working together at the same time and place, and to a common purpose, neither of such persons being intrusted by such corporation, receiver, manager, or person in control thereof, with any superintendence or control over their fellow-employees, or with the authority to direct any other employee in the performance of any duty of such employee, are fellow-servants with each other: *Provided*, That nothing herein contained shall be so construed as to make employees of such corporation, receiver, manager, or person in control thereof, fellow-servants with other employees engaged in any other department or service of such corporation, receiver, manager, or person in control thereof. Employees who do not come within the provisions of this section shall not be considered fellow-servants.

SEC. 4560h. No contract made between the employer and employee, based upon the contingency of death or injury of the employee, limiting the liability of the employer under this act, or fixing damages to be recovered, shall be valid and binding.

The supreme court of Texas has affirmed the constitutionality of this statute. It decided that the original act did not include the employees of a receiver of a railroad, but the amendment of 1893, approved May 4, 1893, provided that it should so apply. In decisions rendered in 1895 and 1896 the court held that the act did not include street railways within its provisions, and in 1897, by an

act approved June 18, of that year, the legislature enacted a law very similar to the above, but applying to street railways as well as to trunk lines. Said act being chapter 6 of the acts of 1897, is as follows:

SECTION 1. Every person, receiver or corporation operating a railroad or street railway the line of which shall be situated in whole or in part in this State, shall be liable for all damages sustained by any servant or employee thereof while engaged in the work of operating the cars, locomotives, or trains of such person, receiver, or corporation, by reason of the negligence of any other servant or employee of such person, receiver or corporation, and the fact that such servants or employees were fellow-servants with each other shall not impair or destroy such liability.

SEC. 2. All persons engaged in the service of any person, receiver, or corporation, controlling or operating a railroad or street railway the line of which shall be situated in whole or in part in this State, who are intrusted by such person, receiver, or corporation with the authority of superintendence, control, or command of other servants or employees of such person, receiver, or corporation, or with the authority to direct any other employee in the performance of any duty of such employee, are vice principals of such person, receiver, or corporation, and are not fellow-servants with their co-employees.

SEC. 3. All persons who are engaged in the common service of such person, receiver, or corporation, controlling or operating a railroad or street railway, and who while so employed are in the same grade of employment and are doing the same character of work or service and are working together at the same time and place and at the same piece of work and to a common purpose, are fellow-servants with each other. Employees who do not come within the provisions of this section shall not be considered fellow-servants.

SEC. 4. No contract made between the employer and employee based upon the contingency of death or injury of the employee and limiting the liability of the employer under this act of fixing damages to be recovered shall be valid or binding.

SEC. 5. Nothing in this act shall be held to impair or diminish the defense of contributory negligence when the injury of the servant or employee is caused proximately by his own contributory negligence.

SEC. 6. The short duration of the special session of the legislature, and the fact that the existing fellow-servant law is inadequate to accomplish its purposes, and the fact that a large portion of our citizens have no adequate remedy for personal injuries sustained, create an emergency, and an imperative public necessity exists, that the constitutional rule requiring bills to be read on three several days be, and the same is, hereby suspended, and that this act take effect and be in force from and after its passage, and it is so enacted.

This act would appear to practically supersede the older law, but as it contains no repealing clause, either general or special, the older law must be considered, in theory at least, still in force.

NEW MEXICO.

The next law of this character was passed by the Territory of New Mexico and was approved February 17, 1893. It is now contained in the three following sections of the Compiled Laws of New Mexico of 1897:

SECTION 3216. Every corporation operating a railway in this Territory shall be liable in a sum sufficient to compensate such employee for all damages sustained by any employee of such corporation, the person injured or damaged being without fault on his or her part, occurring or sustained in consequence of any mismanagement, carelessness, neglect, default or wrongful act of any agent or employee of such corporation, while in the exercise of their several duties, when such mismanagement, carelessness, neglect, default or wrongful act of such employee or agent could have been avoided by such corporation through the exercise of reasonable care or diligence in the selection of competent employees, or agents, or by not overworking said employees or requiring or allowing them to work an unusual or unreasonable number of hours; and any contract restricting such liability shall be deemed to be contrary to the public policy of this Territory and therefore void.

SEC. 3217. It shall be unlawful for any such corporation knowingly and willfully to use or operate any car or locomotive that is defective, or any car or locomotive upon which the machinery or attachments thereto belonging are in any manner defective, or shops or machinery and attachments thereof which are in any manner defective, which defects might have been previously ascertained by ordinary care and diligence by said corporation.

If the employee of any such corporation shall receive any injury by reason of such defect in any car or locomotive or machinery or attachments thereto belonging, or shops or machinery and attachments thereof, owned and operated, or being run and operated by such corporation, through no fault of his own, such corporation shall be liable for such injury, and upon proof of the same in an action brought by such employee or his legal representatives, in any court of proper jurisdiction, against such railroad corporation for damages on account of such injury so received, shall be entitled to recover against such corporation any sum commensurate with the injuries sustained: *Provided*, That it shall be the duty of all the employees of railroad corporations to promptly report all defects coming to their knowledge in any such car or locomotive or shops or machinery and attachments thereof to the proper officer or agent of such corporation and after such report the doctrine of contributory negligence shall not apply to such employee.

SEC. 3218. Whenever the death of an employee shall be caused under circumstances from which a cause of action would have accrued under the provisions of the two preceding sections, if death had not ensued, an action therefor shall be brought in the manner provided by section 2310 of the Compiled Laws of New Mexico, as amended by chapter XLIX of the Session Laws of 1891 of New Mexico, and any sum recovered therein shall be

subject to all the provisions of said section 2310 as so amended.

This act differs in form from most of those preceding, and apparently does not wholly do away with the common law fellow-servant rule, but only holds the railroad corporation liable when the negligence of the employee on account of which the injury was incurred could have been avoided by the use of reasonable care and diligence by the corporation. It also makes it unlawful for the corporation to use defective cars or locomotives, defective machinery and attachments thereto, and to operate defective shops or machinery and attachments thereof, and makes the corporation liable for injuries incurred by employees which were due to such use and operation, providing the defects might have been ascertained by the corporation by the use of ordinary care and diligence. No decisions of the supreme court of the Territory bearing upon this statute can be found.

ARKANSAS.

By act approved February 28, 1893, the State of Arkansas next fell in line and removed railroad employees from the operation of the fellow-servant rule of the common law. This statute was practically a copy of the original Texas statute of 1891, above referred to, and is now to be found in the three following sections of the Digest of Arkansas of 1904:

SECTION 6248. All persons engaged in the service of any railway corporations, foreign or domestic, doing business in this State, who are intrusted by such corporation with the authority of superintendence, control or command of other persons in the employ or service of such corporation, or with the authority to direct any other employee, in the performance of any duty of such employee, are vice principals of such corporation, and are not fellow-servants with such employee.

SEC. 6249. All persons who are engaged in the common service of such railway corporations, and who, while so engaged, are working together to a common purpose, of same grade, neither of such persons being intrusted by such corporations with any superintendence or control over their fellow-employees, are fellow-servants with each other; *Provided*, Nothing herein contained shall be so construed as to make employees of such corporation in the service of such corporation fellow-servants with other employees of such corporation engaged in any other department or service of such corporation. Employees who do not come within the provisions of this section shall not be considered fellow-servants.

SEC. 6250. No contract made between the employer and the employee based upon the contingency of the injury or death of the employee limiting the liability of the employer under this act, or fixing damages to be recovered, shall be valid and binding.

In three recent cases the supreme court of the State has held that under this statute if neither of two employees of a railroad company has superintendence over the other they are fellow-servants, and the corporation is not liable for an injury to one caused by the negligence of the other, but if

one of them did exercise such superintendence or control then he is a vice principal, for whose negligence the corporation is liable. Under this interpretation an engineer was held to be a vice principal as to his fireman and the foreman of a section gang a vice principal as to the members of the gang.

SOUTH CAROLINA.

By section 15 of article 9 of its present constitution, ratified Dec. 4, 1895, South Carolina seems to have made her first departure from the common law rule, and provided that railroad companies should be liable for the injuries of their employees when, in any particular case, the injury resulted from the negligence of (1) a superior agent or officer, (2) a person having the right to control or direct the services of the injured party, or (3) a fellow-servant engaged in another department of labor from that of the party injured, or engaged on another train of cars or about another piece of work.

This statute appears in full below.

SECTION 15. Every employee of any railroad corporation shall have the same rights and remedies for any injuries suffered by him from the acts or omissions of said corporation or its employees as are allowed by law to other persons not employees, when the injury results from the negligence of a superior agent or officer, or of a person having a right to control or direct the services of a party injured, and also when the injury results from the negligence of a fellow-servant engaged in another department of labor from that of the party injured, or of a fellow-servant on another train of cars, or one engaged about a different piece of work. Knowledge by any employee injured of the defective or unsafe character or condition of any machinery, ways or appliances shall be no defense to an action for injury caused thereby, except as to conductors or engineers in charge of dangerous or unsafe cars or engines voluntarily operated by them. When death ensues from any injury to employees, the legal or personal representatives of the person injured shall have the same right and remedies as are allowed by law to such representatives of other persons. Any contract or agreement, expressed or implied, made by any employee to waive the benefit of this section shall be null and void; and this section shall not be construed to deprive any employee of a corporation, or his legal or personal representative, of any remedy or right that he now has by the law of the land. The general assembly may extend the remedies herein provided for to any other class of employees.

MISSOURI.

Next in order of passage in this class of laws is the statute of Missouri, to be found on page 96 of the acts of 1897, and approved February 9, 1897. The last three sections of this act are quite similar to the acts previously discussed, of Texas and Arkansas defining vice principals and fellow-servants, and the first section resembles the laws of Iowa and Minnesota already referred to. Said act reads as follows:

SECTION 1. Every railroad corporation owning or operating a railroad in this State shall be liable

for all damages sustained by any agent or servant thereof while engaged in the work of operating such railroad by reason of the negligence of any other agent or servant thereof; *Provided*, That it may be shown in defense that the person injured was guilty of negligence contributing as a proximate cause to produce the injury.

SEC. 2. All persons engaged in the service of any railroad corporation doing business in this State, who are intrusted by such corporation with the authority of superintendence, control or command of other persons in the employ or service of such corporation, or with the authority to direct any other servant in the performance of any duty of such servant, or with the duty of inspection or other duty owing by the master to the servant, are vice principals of such corporation, and are not fellow-servants with such employees.

SEC. 3. All persons who are engaged in the common service of such railroad corporation, and who, while so engaged, are working together at the same time and place, to a common purpose of same grade, neither of such persons being intrusted by such corporation with any superintendence or control over their fellow-employees, are fellow-servants with each other: *Provided*, That nothing herein contained shall be so construed as to make any agent or servant of such corporation in the service of such corporation a fellow-servant with any other agent or servant of such corporation engaged in any other department or service of such corporation.

SEC. 4. No contract made between any railroad corporation and any of its agents or servants, based upon the contingency of the injury or death of any agent or servant, limiting the liability of such railroad corporation for any damages under the provisions of this act, shall be valid or binding, but all such contracts or agreements shall be null and void.

The reporters as yet contain no decisions of the supreme court of Missouri which interpret or construe this statute.

English Law a Century Ago.

George Brewer and Michael Doyle were tried for assaulting Jeremiah Haragan on the King's highway, and robbing him of a silver watch and a handkerchief, were found guilty and given sentence of death. John Chester, for stealing a mare, was found guilty and the death penalty fixed. John McNeal, an elderly man of very respectable appearance, was tried for burglariously breaking and entering the dwelling house of William Ridgeway, and stealing therein several articles of men's clothing and of plate. * * * It being doubtful whether the offense was committed in the daytime or at night, the jury found the prisoner guilty of stealing in a dwelling house to the value of 40s., which made it death.—*London Times*.

THE United States supreme court has decided that a railroad company is not liable for damages to a passenger riding on a pass. This decision was given in the case of Louise H. Adams, et al., vs. Northern Pacific Railroad Co.

Correspondence.

All contributions to our Correspondence columns must be in not later than the 10th of the month to insure insertion.

Articles must be written on one side of the paper only. Noms de plume may be used, but every article must be signed with full name and address of the writer as a guarantee of good faith, and to insure insertion.

While the Editor does not assume responsibility for opinions expressed by contributors to this department, he is held responsible in both law and moral ethics for admitting that which will injure or create ill feeling. Hence all communications are subject to revision and rejection if the Editor deems it necessary.

C. H. SALMONS, Editor and Manager.

Likes and Dislikes.

I love an off-hand manly chap,
 However greasy is his cap.
 If rich or poor, or gay or lorn,
 One just the same at night or morn,
 Without a shadow of pretense,
 Whose brain has got some common sense,
 Whose heart at times is tuned to glee—
 Such is the chap adored by me.

I do not care a picayune,
 If he's an animated ruin,
 If his old duds are tattered rags,
 Or if he shakes from frequent jags;
 If nature planted in his breast
 The seed of manhood, then the rest
 Is surely there, for he'll be brave,
 Instead of being a fawning slave.

A railroad aristocracy,
 Shall much too soon around us be;
 We now can note the haughty smile,
 When Judy struts in latest style,
 Who six or seven years ago,
 When walking, saw her sockless toe
 Cut through her shoe. She's now a bird,
 And most precise in every word!

Her husband's head's expanded bad,
 He used to be a social lad
 When we tossed blocks together; now,
 He thinks there's no one like his frau;
 He minds not days when engineers
 Had less of pay-check smiles than tears,
 When Julia hadn't satin gowns,
 Or on her pock-marked features frowns!

It isn't right to soar so high,
 Beneath an ever-changing sky;
 Today you're rich, tomorrow's sun
 May light you on the downward run,
 Without a friend close at your side,
 To help you stem misfortune's tide.
 Should that time come, you'll wish to God
 To be six feet beneath the sod.

SHANDY MAGUIRE.

Letter From a Practical Railroad Official to His Son.

FT. WAYNE, IND., Oct. 24, 1905.

MY DEAR SON: I am in receipt of your letter of recent date informing me that you have finished your course of studies at the mechanical institute, also that you are to be at home in a few days, at which time you will be ready to "jump right into the railroad business."

It pleases me to learn that you have finished your studies with creditable standing, and that you are soon to be at home, for I know they are all lonesome for you there; but about your "jumping right into the railroad business," that is a matter for more extended comment. Your desire to "jump right in" is all right enough, is even commendable, but your way of stating it suggests to me a rather hazy understanding of what you are going up against. My manner of expressing the situation may not be just according to the most approved form as taught in any modern rhetorical school, and it may not be to your liking, but it will prepare you for your entrance into that great practical institution of learning, namely, the Railroad World.

When you say you want to jump right into the railroad business it sounds much the same to me as to hear a six-year-old child talk of butting into the grammar school. There is no such thing as getting into the middle of the railroad game with any hope of succeeding, if we measure success by efficient service, which is the only true gauge of merit. Of course I, as General Manager of the Central, could "place" you somewhere and keep you there, however unfit you might be for the position, but I would not be doing the right thing by the company, nor by you, nor by myself. The stockholder could stand it, and I could tolerate you possibly if I tried, but you would represent to me a broken link in a long chain of efficient employees—a chain that I have labored long to construct, and in which I take no little pride, and I would dislike very much to weaken it by "placing" you where you would fit like a round plug in a square hole, even were you to be benefited there-

by which, however, would not be the case. No, it would not be doing the fair thing by you.

In any undertaking, whether it be the building of a house, or locomotive, or a successful railroad man, there should be a definite starting point, a beginning. First, start right, then build as the progress made warrants. You say you wish to enter the mechanical department of the service, so we will lead our discussion along that line. I will again refer to your expressed desire to "jump right in." It suggests going in at the top, while the fact is you must commence at the bottom, and your progress will be marked by your ability to climb up rather than to jump down. The climbing process may be the slowest of the two, but it is the most interesting because of the many valuable nuggets of knowledge that may be found on the way, and the most profitable as it leads in the direction of success.

You may not at first relish this kind of logic, it being so different from that you have been feeding on, but I want to remove from your mind some of the worthless impressions gained during your term at college. Of course, I sent you there and paid your way, but the fact of having paid for things worthless does not enhance their value. Your baseball and football cannot be regarded as a poor investment, as they both contribute to your physical welfare, and vigor of body is as necessary as vigor of mind in the affairs of the outside world; but I do wish to remove from your mind the impression that prevails among college graduates, that when they leave their alma mater they are qualified for taking hold at some advanced stage of any business—that they are fit to "jump right in," as you have put it. Of course, an institution of learning must be in a measure self-supporting, like any other concern having goods to sell, but commercialism, as practiced today, seems much out of place in that branch of commerce. Sharp competition for patronage causes them to stoop to tricks of trade that are not on a level with their lofty purpose. Each has its so-called traditions, among which are cer-

tain forms of license that are defended by those who are logically on the defensive, but the logic of their reasoning does not appeal to the practical mind, at least not to mine, and I have noticed that popular sentiment is bringing about a change, a modification of some of the college customs, especially that of hazing, which seems to be the chief offender of the public taste. Yes, it is too bad, if it is really necessary, that our educational institutions must in their competition for patronage be compelled to "truckle to the trade" when they rightfully should blaze the moral and intellectual way. But the crowning fault is the impression that the "college man" can begin near the top and win out. This is merely a sop thrown into your education for good measure, "to please the trade," and is more like bait than like fish. I don't like to call that practice downright dishonesty, but it reminds me of Old Rube Tompkins who ran a farm near where I lived when a boy. The products of the farm he sold to the people of the town, and we looked forward to his periodical visits much the same as we did to the coming of Santa Claus. Rube was a model of thrift and honesty, and made the most of every opportunity to impress that belief upon the minds of those with whom he had dealings, especially those to whom he sold, and he had, by his tact, so firmly established himself in the confidence of the people that everybody wanted to buy from him. His cider, and his fruit and vegetables were the best, and when he made his regular trip in the fall never failed to give each of us children a nice big apple, sometimes supplementing the gift with an affectionate chuck under the chin. Besides, his measure was the most liberal. This went on for years until one of our neighbors (a milkman, by the way, who, as was proven later, also practiced some tricks of trade) discovered that Rube Tompkins' measures had false bottoms and were as a result considerably shy of the legal dimensions. And so it is with the college that leads its students to entertain an inflated opinion of their importance as factors in the progress of prac-

tical affairs, that makes them believe they are fit to "jump right in" near the top. It is a deception just as pure and simple as that practiced by Old Rube Tompkins, and is infinitely more harmful and far-reaching in its effects, for it often causes discouragement at the outset of the career of a young man who has not the faculty of being able to see things as they are, instead of as represented, and who consequently wastes time and opportunity trying to start in the middle of the game instead of the beginning; besides, early discouragements are likely to have a lasting effect.

Now, Arthur, I am not one of those who think that because I commenced as a water-boy on the gravel train it is necessary or expedient for one aspiring to high position in railroad work to begin there, but I do believe it is best for you to start there if that is the only position you are qualified to fill. I also believe that in order to properly direct the work of any department, or understand when it is so done, one must have some practical knowledge of the affairs of that particular branch of the service, and it can only be gained by actual experience.

And, my son, it is not alone the technical side of your training that needs development, for if you aspire to high office you will need executive ability, skill in the management of men, and that faculty can be best developed by personal contact with the men engaged in the several stages of service that mark your advancement. You will likely begin as locomotive fireman, and if you succeed in that position I can assure you that you will find employment for all the brawn and talent you possess.

I want you to think over the suggestions contained in this letter and not come home top-heavy with the impression that you are "it," or that you have a "big pull" here with me. My experience has taught me that people with a pull have little push, and the stronger the pull the weaker the push, and permit me to impress this fact upon your young mind that push is one of the chief requisites to success in the railroad world.

Speaking of a pull calls to mind the case of my old friend John Brascomb, who was general superintendent of the Midland some years ago. Well, a nephew of his graduated from some Eastern college as a mechanical engineer, and being highly educated, which meant everything to John, it being natural for people to admire in others that most lacking in themselves, and all that, together with some family pressure, induced John to appoint the young man to the position of master mechanic of the Northern Division, without any preliminary practical training whatever. He couldn't do much harm in that position, filling it "acceptably" for about a year. About that time the superintendent of motive power resigned, and John appointed his nephew to fill the vacancy, and how he filled it is a matter of history that will long be fresh in the minds of all concerned, particularly the Brascomb family, for their troubles dated from that period.

Just as soon as John's nephew assumed charge of affairs he found everything in that department to be wrong, and in his efforts to set them right he created a confusion that was the means of ending his brief official career. For a time he knocked the senior rule to smithereens, tried to inaugurate what he called a plan of equalization of wages that did not equalize to the satisfaction of the engineers and firemen, and when his trusted lieutenants told him what Jack and Jim were saying about his new-fangled plans he grew wrathful and to stem the tide of general disapproval he got right down among the animals and began to twist their tails right and left, fired some of the old-timers and upset things generally. Well, he soon reached the end of his rope, for the president chose to remove him in preference to having the system tied up, and it was not long until old John himself had to walk the plank.

I may have some shortcomings, yes, many of them, but that weakness peculiar to most people which makes them unable to see any shortcoming in their own, or seeing, tolerates them on the ground of kinship, I will not plead guilty to, so you

can make up your mind that our relationship, while it puts us on an equal footing at home, has no bearing whatsoever in our business relations after you once take service with the company. It may even be a real disadvantage to you, for necessity is the parent of resource, and you must feel the need of absorbing all possible information if you wish to succeed in any capacity in any department of the service, and one requires no very keen perceptive faculty to see that the most successful men in any walk of life have been those who actually needed to know things, while those who relied upon their "pull" have been and are today being crowded out of the way by ambitious and energetic men who can deliver the goods.

Your loving father,

JAMES GREGORY.

Not a Dream.

(ON THE ENGINE.)

The westbound freight was slowly toiling up the winding grade,
The moon was quite obscured by the smoke the mogul made,
While the noise of her exhaust, on that cold December night,
Together with the pounding of the brasses, was a fright.

She was leaking at the mud ring, and the flues were leaking too,
And it really was a caution how the piston packing blew;
While the packing of the piston rods and valve stems it is said,
Leaked so badly that a house on fire could not be seen ahead.

The engineer with anxious look was busy spading slack,
For he knew that if he didn't lend a helping hand to Jack
They would not get to Boone, which was fifteen miles away,
In time to meet the limited, and there'd be the deuce to pay.

In the corner on the fireman's seat, swaying gently to and fro,
Sat a figure grim and silent, not a worry did he know,
No trifling thing like failure to make Boone for Number Three,
Could cause the least anxiety to one as cool as he.

When Boone was reached the fireman gave the silent one a poke,
Which after being repeated several times the lad awoke,
And after he had thrown the switch, and gave the signal too,
Said he unto the engineer, "I'm going back to chew."

(IN THE CABOOSE.)

"What's the matter," said the flagman, that we don't make better time,
Here we've only got to Boone, when we ought to be at Lyme?"

"Why the engineer is buckin'," said the one who came to eat,
He who swayed so long and silently upon the fireman's seat.

"Yes, the engineer is buckin'," said he in louder key,
Then the drowsy "con" awoke and yawned, and wisely thus spoke he,

"You're right, Old Pard, the engineer is buckin', for I know,
There is no reason I can see why this train should run so slow,

And he woke me up at Mayfie'd when he set the air so hard,

I knew then he was buckin';" "You're right," chimed in "Old Pard."

"Yes, he most woke me up too that time and I'll call him down for fair,
If he ever jars me so again; he's a 'butcher' with the air."

Said the "con" with look of wisdom and the air of one who knew,

"That engine has a yard of leed and big expanshun too,

And I have heard Bill Blazes say that she could climb a tree,

And Bill, you know, has been a 'con' on this line since ninety-three.

"When an engineer is buckin' or don't savey to the game,

No matter how we hustle, the results are just the same;

If he don't know how to work the leed, and the expanshun too,

He's a burden to the company and a Joner to the crew.

"If I was General Manager I'd fire some engineers, Who have been running engines on this man's line for years,

And I'd put the old conductors who from service had retired

On the engines in the places of the engineers I fired.

"Then there would be something doing on this line for sure,

And then complaints would ne'er be heard about the coal that's poor,

While such things as foaming boilers would be stories of the past,

And the time that trains would make then would be nothing else but fast."

The conductor, quite exhausted by the logic he'd expressed,

Again reclined his weary form to resume his broken rest,

And when the mogul whistled off on that cold December night,

The "high ball" that the flagman gave, they say was just a sight.

JASON KELLEY.

Reserve Fund—Pay One-Half Policy.

BARABOO, WIS., Oct. 29, 1905.

EDITOR JOURNAL: When I began writing articles on the subject of insurance I

did not expect to be able to convince Brother Freenor that his plan of endowment insurance was full of holes, neither was I afraid of anything of the sort ever becoming incorporated into our insurance laws, for the reason that a large majority of our representative men are open to conviction and are far-seeing enough not to allow any permanent injunction to stand in the way of progress. The matter of paying off our old policyholders at a stipulated age or while they are yet alive has been advocated for years and the most conservative writers do not seem to realize that the day of experimenting with permanent life insurance has long since passed by, and that buying insurance is a business proposition just as much as is the buying of any commercial or necessary commodity. My only object in writing these articles was to try to show our Brothers who have not taken the time to look the matter up, that they have only paid for straight life insurance and that it is just as impossible for the B. of L. E. Insurance Association to pay them the full amount of their insurance at a given age or number of years as a policyholder and exist, as it would be for their merchant to sell them flour at half price and stay in business, unless some very liberal fellow comes along and pays the other one-half. In the case of our insurance the young engineer we are trying to induce to join our order would be the one to bear the burden if he joined, and surely no one would desire conditions that would deter him from doing so.

Brother Freenor says in his September article that my main objection to his plan is that the \$20.00 is too much. I think any one with a reasonable amount of knowledge of insurance in reading my articles over with the idea of being fair would say that \$20.00 from each member would only make a respectable start toward a legal and just endowment insurance, but that 20 cents is too much to be spent by each member for a something the direct opposite of business principles.

I am not often surprised at anything,

but I must confess that Brother Freenor gave me quite a jolt in his September article when he made the statement that this life was nothing but a lottery, and then defied contradiction to his statement. I am not hunting for an argument but am free to admit that I am glad that I cannot agree with him on that score. If I read history correctly, the people of the dark ages believed in lotteries, and not only the people but the tribes and governments practiced them, but as civilization advanced it dawned upon nearly every one that there was a law of system and regularity that pervades all life and nature. If this was not true we need not be racking our brains to formulate new and better laws or work for a higher state of education in our family and country.

No, my good Brother, this life is not a lottery. Some men are more fortunate than others, but we are all, to a large extent, responsible for our own condition. At the present time lotteries are illegal in nearly all civilized nations and if your plan should ever carry in a convention, the laws of my own country would very likely throw it out of business.

In answer to the question asked, "Can an engineer get old line insurance as cheap as a banker?" While I do not wish to make this appear as an advertisement I will mention the names of three companies I know who write endowment insurance to an engineer as cheap as to anyone else. They are the Michigan Mutual of Detroit, Mich., the Penn Mutual of Philadelphia, Pa., and the Union Mutual of Portland, Me. I carry insurance in the first named company.

No company and few societies will insure a man at the age of fifty at the same price as at twenty-one years. The B. of L. E. does for a limited amount, and there is a reason for it. One reason is that about one-third of our claims are from accidental causes. In September they were over one-half, and a man in our occupation is just as liable to be killed, in fact, more liable to be killed when young than at an older age.

In closing his article Brother Freenor asks me to assist him in formulating a

plan for the revision of our insurance, but we are so far apart in our ideas of what is right it seems almost useless to say another word on the subject. However, as he has found out what it actually costs for permanent life insurance, I will venture to make a suggestion that I believe might be safely adopted with little, if any, additional permanent cost, and at the same time make it possible to help out unfortunate members who had been long enough in the order to be entitled to it. The idea I am going to present is not altogether a new one, as a number of years ago Brother Futch recommended a plan with the view of formulating a reserve fund and eventually making a cash value on our policies after a given number of years. It did not meet with the approval of the majority at that time and I doubt if it will now for the reason that the most of our dissatisfied members want the full face of their policy or nothing at all. However, I believe a law could safely be passed giving all totally and permanently disabled members that have been so disabled for the space of one year who have held continuous membership for twenty years or over, the privilege of having their policies canceled and receiving therefor one-half their face value; also all Brothers who have held their membership thirty-five years should have the same privilege.

I would not recommend this feature without first raising a reserve fund sufficient to keep the monthly assessments from fluctuating or going above \$2.50 for a \$1,500 policy, as we have no way of telling how many would take advantage of this feature the first few months. On the long run our insurance would cost no more, as few, if any, totally disabled Brothers, twenty years a member, or any other Brother thirty-five years a member, would live long enough to pay in the other one-half.

Of course, this feature might have a tendency to lessen lapses, which is one of the main reasons for our insurance remaining cheap, but it would also be an inducement for our members to take out all their insurance at as young an age as possible, and would thereby lessen the

cost of insurance for all. A feature of this sort, even though it were not as liberal as I have above stated, added to our present laws would cover a long-felt need without giving any opportunity for the greedy to receive benefits they have not paid for, and yet it would give to the unfortunate Brother who has no one to look after him in his declining years, or in his state of total disability, an opportunity to use his own money instead of leaving it to someone who does not care enough for him to make him comfortable.

The fact that this feature would be optional to all after a stated number of years makes it use everyone alike. A Brother who is totally disabled after twenty years a member would, if he so desired, receive nearly one-third more than he had paid in, besides having had twenty years' protection for face of policy, and the Brother who has remained a member for thirty-five years has had thirty-five years' protection and then receives in cash within about \$125 as much as he has paid into the society on each \$1,500 policy.

The above is merely a suggestion and may set some of our Brothers to thinking, but of course I do not ever expect it will become a law.

I once heard a story of an Englishman who, with a number of others, was watching Stephenson firing up his first locomotive, and after casually inspecting everything, the doubting Englishman stepped back, shook his head and said, "She never will go—she *never* will go—she *never* will go;" but as the work progressed, the engine began to make steam and finally the inventor mounted his machine and started her down the track. Then the awe-stricken and astonished Englishman threw up his hands and exclaimed, "She never will stop! She *never* will stop! She *never* will stop!"

Lest the Brothers should think of me as the Englishman did of the locomotive, after it had gotten started, I will close on the subject of insurance for the present.

"With malice toward none and justice for all," I beg to remain

HENRY H. TINKHAM, Div. 176.

When Officials and Employees Work Together.

PHILADELPHIA, PA., Nov. 10, 1905.

EDITOR JOURNAL: For the fourth time I have read and re-read Brother Joiner's letter in the September JOURNAL, page 877, of what two dollars could do, and every word he utters is a solid fact; then why has it not been done long ago? For ten years I have advocated that "money makes the mare go," and what was true ten years ago is more than true today. If you do not believe it, read the account of the investigations of the different life insurance transactions now or those which have been held in New York lately. Money gave the officials of these concerns the chance to drive things just to suit themselves and at a high old rate. Whose money? Yours and all others' who have been foolish enough to invest until, according to the papers, a million dollar property is worth less than half its value; but we do not need to be so foolish. We as an organization could be wise by becoming a money power and having it legitimately invested in what we as engineers are interested. Take all the railroad organizations, and if they were what they should be—financially interested in the corporations that employ them—would they have an influence for good or bad? Strikes would be unheard of because it has been proven that they injure both sides, harmony and good-will would prevail all along the lines, men and officials would work together and try to make all they could for the stockholders, and we would be a big part of that class with as little friction as possible. Long hours on freight or in yard service would in a few years become relics of the past. Why can it not be so? Let me in my simple way tell you. Why! we are too selfish one with the other; whereas on the other side, six or eight men go together and drop thousands into the lot. They elect a treasurer, secretary, and president, and are equipped for business. They do not lie awake at night in fear and trembling that some of their officers will rob them. No! but they work to-

gether to turn those thousands into millions and then the world at large, when they are successful, all yell at once, "Tainted money."

So, did we adopt Brother Joiner's plan with our membership we would become a money power and soon the cry, "Tainted money;" and if we adopted Brother Freenor's plan in the insurance, it would be all for the old man and these cries would come more particularly from members of our organization than anybody else. No doubt this is Brother Joiner's particular hobby. I have mine—reduce the number of delegates and the G. C. of A. of our systems—Brother Freenor is on the old man in the insurance—each one of us thinks we have the best for the general good, and let me tell you of two local members. We on the New York Division have two Brothers, both in a measure with a hobby, and that is to buy certain rugs for their families. One is a great big fun-loving man whose picture has graced the pages of our JOURNAL and he comes out ahead because he is the better judge of colors, or his wife is easier pleased, while the other is handicapped with a "pet" for months back, and that "pet" is his big toe. He has nursed it, he has petted it, he is careful of it, he admires it—oh! he dotes on it, and when I go near him and say, "The JOURNAL has 55,000 subscribers now," he exclaims, "Be careful." He has fallen over the track with it, he ran it up against a door, he has abused it in many ways, and the big fellow consoles him, but at present nothing has any attraction for him but the love he bestows upon that big toe.

So with all the letters for the good of our membership in general: they are passed by because the minds of all of us are particularly on ourselves and not for the general good, and as the world goes along soon when self doesn't do, they become Socialists. I do not know that I did right, but as it has been given to me, I tried to practice it on one who was a Socialist by putting my hand in my pocket and saying, "Have you any money?" "Oh, yes." "Throw it on the bench," says I as I put ten cents

down. His was a dollar. "Now," said I, "you believe in an equal divide. Is that right?" "Well, yes," said he. "Then," said I, "let us divide the money;" but, oh, my! I wish you could have been there to see the kick.

I thank you Mr. Editor, for all the kindnesses during the year, and as this will be in the December JOURNAL, I wish all readers the compliments of this month.

C. B. NIXON.

An Unusually Long Record.

FOND DU LAC, WIS., Oct. 27, 1905.

EDITOR JOURNAL: Please permit me space to speak of one of our old members, as I

BRO. CLARK SMITH.

think he deserves mention. As there has been a great deal said of old members, I think we can boast of one also. The accompanying photo is a correct likeness of him. Bro. Clark Smith, a native of York State, wandered away out west when a boy to the wilds near Chicago in 1852, entered the service of the Galena & Chicago union as a locomotive fireman, firing the Pioneer, then a wood burner in charge of engineer John Ebberts, afterward master mechanic. He was promoted

six years later or in 1858, and went running the same engine between Chicago and Freeport, which position he held until 1861, when he went on the C. A. & St. L., and in 1862 joined the Brotherhood of the Foot Board in Bloomington at a private house, where Div. 19 was then located. In 1863 he went on the Ohio & Mississippi R. R., where he was assigned to duty hauling soldiers. From there he went on the Michigan Central under Allen Sweete, superintendent of motive power; was in the meantime transferred to Div. 2 at Marshall, Mich., when the name in the interval was changed from the Brotherhood of the Foot Board to the Brotherhood of Locomotive Engineers in 1875. He left the Michigan Central and went on the Burlington South Western, where he served as locomotive engineer till 1880, after which he came to the Wisconsin Central, where he still remains, still hale and hearty, running an engine on a passenger run between Fond du Lac and Chicago. He is a respected member of Div. 372, carrying an insurance policy for \$3,000 ever since it has been in force; he has paid as high as \$11 a month into the protective fund during the Reading strike. He has ridden a locomotive for fifty-three years, is proud to be a member of the B. of L. E., and does not regret a cent of the expenditure. He is one of the first to pay his dues and assessments. Of course, we hope to keep Brother Smith with us a good many years to come.

J. F. FREENOR, Div. 372.

Evidence of Luck.

OGDEN, UTAH, Oct. 14, 1905.

EDITOR JOURNAL: In one of your recent numbers a Mr. Nixon said, "Permit my letter to go at random, as I cannot tell where it may end." I will change one word so it will read, "I cannot tell where I may end," when Thomas Lindsay and Frank Neesly read my account of their fishing trip.

This story commences in Morgan, Utah, where Fred Kramer lives. He is a retired engineer who lives in Morgan on a blooded stock farm. He knew how to

save his money, and how to spend it, so now lives off his investments. Tom and Frank belong to Div. 55, and have been going up to Morgan fishing for years. They always came back full—of fish stories of the beauties and great number of fish caught—but no one else ever saw them or tasted them either.

Finally they went up on their last trip for the season in September, 1905, and came back loaded to the brim—with fish;

wonder they wanted the JOURNAL to send their pictures broadcast?

Of course, it would not be fair to tell (family secrets) how much money Tom took with him, and I don't know how much Frank took, for his wife won't tell me.

When Geo. Leidig sees this bunch won't he gnash his teeth, for he had given up trying to catch—fish. I don't know what a La Forge spoon is, but the

NO DOUBT ABOUT THE FISH THIS TIME.

and knowing how everyone had said to them on previous occasions, "I am from Missouri or Texas," they concluded the only thing they could do was to show them, for they now had something to show. A telegram was sent ahead to have a photographer meet them at the home of Frank Neesly—with Frank to the left and Tom to the right and the 65 pounds of fish in front of them. Is it any

fish were caught with one. I wonder if it is similar to a net? The catch looks like it. Don't you think so?

"COLLAR BUTTONS."

Annual Passes to Employees.

DENISON, TEX., Oct. 28, 1905.

EDITOR JOURNAL: In the March JOURNAL of 1904 I saw an article where the engineers on the Southern Railroad had

been granted annual passes over their divisions and system. I called the attention of our G. C. of A. to the favor granted the engineers on the Southern Railroad, and asked them to try and get the same favor granted to engineers on the Houston & Texas Central.

They having failed to get the favor granted, I stated to some of the Brothers that if I could get one of the old engineers to volunteer to go with me free of charge, and get the consent of the G. C. of A., I would go before our General Superintendent and ask the favor. Bro. E. Lalumiere volunteered to go with me.

Having obtained the consent of our General Chairman, with the best wishes for our success, on the 25th of last June Brother Lalumiere and myself asked for a few days' layoff, which was granted. Arriving in Houston we had a twenty minutes' talk with our generous Superintendent, Mr. G. F. Hawks, Bro. Sam Millican, acting Supt. M. P. and M., being present. We asked for annual passes for engineers who had been in the service fifteen, twenty and twenty-five years.

Mr. Hawks stated he would take the matter up with the Vice President and write us the result.

I enclose you a true copy of Mr. Hawk's letter to Brother Lalumiere and myself, which will explain the result of our twenty minutes' talk with the General Superintendent.

However, I must say we all have our annual passes, for which we are very thankful, and they were granted for five years less in service than we asked for.

Hoping this may lead other Brothers to ask the same favor of their officials, I remain,
R. A. BOOTHE, Div. 242.

Have F. A. E. and a Collector.

AUGUSTA, GA., Oct. 15, 1905.

EDITOR JOURNAL: I beg to differ a little with Brother F. A. E. of Div. 620 in trying to save the 3 per cent for collecting of insurance by doing away with insurance secretaries and putting it on the F. A. E. without increasing his salary. The 3 per cent now paid will neither make, break, set us up in business nor keep

us out of the poorhouse, but will afford a safer foundation by a more uniform collection of assessments and prompt returns of same and at the same time save each Division money. For the F. A. E. to attend to the duties properly his Division must pay him a decent salary to enable him to serve his Division exclusively and not have to work elsewhere. You may say some Divisions use the F. A. E. for insurance secretary also. This is true, but I'll venture to say if you investigate, you will find neglect either in F. A. E. department or in the insurance. I know of a sister Division nearby that has F. A. E. and insurance secretary all in one, and when it came to Division business, I don't know of a more slack Division anywhere. I served my Division for years as F. A. E. and I know what it is to look after the Division's best interests and try and make it thrive. When you see a thriving Division you can safely say, "That C. E., F. A. E., and S. A. E. all are certainly pulling together for the best interests of their Division and the order."

Our boys got so big-hearted at one time (from a charity standpoint) that we found ourselves a little weak financially, and the F. A. E. was cut down to \$50 per annum for a while, or about 20 cents per day. During that time I found it necessary several times to throw up \$1.25 and work for 20 cents in order to get F. A. E. work out on time. It was a personal loss to me, but I had the pleasure of seeing our Division stay out of debt and flourish, and finally they restored the old salary. But had I had the insurance on me too, it would have been more than I could have done. \$75.00 per annum, the regular price paid our F. A. E., would not support self and family; consequently, I would have had to half do one job or the other. So if we pay our F. A. E. a decent monthly salary to enable him to devote his entire time to these two offices and keep them up in a businesslike manner, it costs each Division more money and I fail to see the savings of the 3 per cent. In other words, we pay out dollars to save a few cents. Again, we pay one of our craft to do this

work for us. We say to corporations, "We want an honest day's pay for an honest day's work." Why not do unto our own as we would have others do? If we work any of our Brothers hard, pay them for it. A servant surely ought to be worth his hire. You seldom find two men who run an engine exactly alike; neither do you often find two men with exactly the same idea. This is my idea, though I may be wrong.

ENCOURAGEMENT.

members of Div 815. Considerable sport was made over Si and Maud, calling Bro. Turley Si. The other picture is the ladies with the Brothers. Pictures were taken by Sister Hediger.

ELLA ROBINSON, Sec. Div. 86.

Division Representation.

AUGUSTA, GA., Oct. 16, 1905.

EDITOR JOURNAL: I note with interest an article in the October number from Brother "Good of the Order," and really

BROTHER TURLEY, MAUD, BROTHER CLIFFORD AND BROTHER BROOKS.

A Day Out on a Farm.

CLINTON, ILL., Oct. 5, 1905.

EDITOR JOURNAL: I send you two pictures by mail asking your kindness to put in JOURNAL. As we do not come very often, I hope you will do this favor for us. The one standing at the head of mule is Bro. A. G. Turley, traveling engineer of Springfield Division of I. C. R. R.; the next one is Brother Clifford, with whom 21 members of Div. 86 were spending the day on his farm; the next one is Bro. G. E. Brooks, all

the Brother advances some real good financial arguments; if for the good of the order it would fit all sections encircled by the B. of L. E. It is nearly time for another convention and doubtless many will want to express opinions on representation and other matters likely to come before that honorable body when it convenes. As representation has been agitated for some little time, not wishing to take up too much of your valuable time or try your patience too much, yet with your consent would like to briefly express a few ideas along that line,

Railroading used to be a profitable pleasure, but that is something of the past, as railroad monopoly has had a tendency to make worse than slaves of us, for there are many like myself started young, spent their best days railroading, and naturally enough, feel like they cannot do anything else, hence try to make the best of it. One monopoly is enough, so for God's sake, Brothers, let's not have a monopoly in our convention. Let each Division that so desires send a worthy delegate with power to act. This delegate better knows

arrangements to that end. That Brother when he came home set several times to come and make a report and instruct us, but never did get a chance to do so, and we did as best we could until the next convention, which was very unsatisfactory. The other time alluded to we decided to try Charleston and did so. This delegate got sick and went home, turning things over to the delegate from Florence. This time we heard nothing at all, only what our pro rata part of expenses were. Later the Brother from Florence began

BROS. TURLEY, CLIFFORD AND BROOKS, AND MEMBERS OF G. I. A. DIV. NO. 86.

the interest of his Division and just what will suit his section than does a representative for some system of road who, naturally enough, wants to benefit his system, and possibly aside from that, others are strangers to them, and there are other reasons too numerous to mention.

Twice my Division got the cheap idea fastened on to it, and I for one have never seen the good derived from it. Once they thought they could save money by getting Atlanta to represent them and completed

running into our city, and after we had been blundering along in the dark for nearly a year he found out our ignorance, and was surprised that Charleston had not instructed us, and kindly told our C. E. if he would call our meeting in the forenoon instead of regular time in afternoon (as his trip went out in afternoon) that he would come up and instruct us; and I tell you we felt good when we got out of the dark.

What about that big five hundred at

Los Angeles? Yes, we sent a delegate there too to help swell it—one worthy the name and honor of delegate and Brother—and when he came back, made his report and instructed our Division, we felt like we were paid for sending him. We felt like we knew as much as anybody else.

From experience I say, let every Division that can and wants to, send a delegate. I for'one am satisfied we will get better and more satisfactory results. Nobody knows your own need better than does one of your own members.

FOR REPRESENTATION.

The Steam Whistle.

LITTLESTOWN, PA., Nov. 7, 1905.

EDITOR JOURNAL: Some time since I noticed an article in one of our Eastern papers the drift of which was to dispense with the steam whistle on locomotives. Paralyzed be the tongue and withered be the hand that would say or do aught against retaining this life saver.

In my quarter of a century of running a locomotive, I have saved, with the aid of my whistle of warning, as many lives as there are hairs on my head, and I'm not bald-headed yet. Ye lawmakers take notice: That it should be regarded as a capital crime for an engineer to withhold this warning when a life is in danger, nervous people who do not like the noise to the contrary notwithstanding.

I am aware that most railroad companies give strict orders against whistling within the limits and suburbs of cities and large towns, but if engineers are arbitrarily compelled to obey such an order and loss of life ensues, then the strong arm of the law should smite the company and not the engineer; and if there is no law to cover this, it should be speedily put on the statute books of every state in the Union.

Many a time, when running at a high rate of speed, and unable to stop, I would have killed or maimed people, but for eternal vigilance and a noisy whistle; for instance, approaching a very noisy mill where the noise of my approach could not be heard by the party on the track, or running on middle track with trains running on each side.

Remember, dear reader, 75 years ago they had nothing but horns on locomotives, which the engineers blew before reaching dangerous crossings.

In 1833 an English farmer's cart was run down on the way to market, and 1,000 eggs, 100 pounds of butter, two horses and a man were lumped up in one great omelet on the rails. The railway had to pay the damages. The president sent for George Stephenson and said an-

grily, "Our engineers can't blow their horns loud enough to clear the tracks ahead. You have made your steam do so much—why don't you make it blow a good loud horn for us?" Stephenson pondered. An idea came to him. He visited a musical instrument maker and had constructed a horn that gave a horrible screech when blown by steam. From this horn the whistle of today descends.

Now, if it was necessary at that time, it is doubly so today. The saving of life is a far greater virtue than to save shocking a few purse-proud nervous people.

LOUGHREA, Div. 104.

Shorter Day, Betterments for Switch Engineers.

OSKALOOSA, IA., Nov. 6, 1905.

EDITOR JOURNAL: In your issue of several months past my attention has been called to some excellent articles on the subject of shorter hours for railroad work, and methods best suited to bring about the much desired and also needed result. Take up the question as to whether it is an engineer's duty to put in the extra hours he is now required to do in preparing his engine for the trip without additional compensation, and you have a burning issue and the outcome depends entirely on concerted action of the Brotherhood. There is not now, and never has been, any doubt or contention that the laborer is worthy of his hire, but we all know that in many cases he does not get his just dues, and it looks like a reasonable conclusion that the extra time and work referred to above is one of the instances where the engineers have to take what is handed out to them, and are misnamed "kickers" if they refer to unfair treatment. In no other line of duty, outside of the transportation department, is any employee asked to be on duty before his actual work or run commences; consequently, there is no just reason why an engineer should be required to do extra service without being paid an equivalent for such extra duty. We fully understand the kind of an argument the officials would put up to counter any change in the now general practice, and one that has been worked effectually to the detriment of the engineers. Railway officials will tell you there is no economy in overworking men and they do not intend to exact any unusual work, and yet it is going on continually, notwithstanding these assertions.

The Brotherhood of Locomotive Engineers stands today at the head of the class of all labor organizations, and so much good has been done by their constant and conservative line of action that it would

seem to be an easy matter to settle this point in controversy without the assistance of national legislation fixing the hours of labor at eight, that fixes the division according to the Bible traditions—eight hours for work, eight hours for sleep, and eight hours for refreshment. Still, there are propositions connected with the operation of railroads where it is at times necessary to deviate from these rules or any other ironclad rule, and at this point is where the good sense and judgment of the B. of L. E. officials and the various committees do their best work that long experience has, along with the other talents, so well fitted them for the service; and no doubt when they take up this matter it will be settled, and settled right.

But, Mr. Editor, I did not intend to go into the above matter in this letter to any extent. My purpose in writing to the JOURNAL was on another and, as I view it, a matter of more vital import to the craft—that is, what is going to be done and when is the proper move to be made, to regulate one of the greatest wrongs that exist today in the machinery department of railroads; and what seems so strange, this evil has existed in a general way ever since the organization of the order of engineers; in fact, to many it has the appearance of neglect on part of the men who should know, and no doubt do know, that engineers, if switching engineers, are both underpaid and overworked.

Switch engineers seem to occupy the position of neglected orphans in the Brotherhood. When the importance of the position is fairly considered, they are to all intents and purposes the equal of any other member of the craft, and deserve better consideration than they are now receiving, for when schedules are taken up for consideration, there seems to have been an oversight of the rights of this especially worthy class of men.

As a matter of fact, we know that the railroad officials have rated this class of service too low, and endeavor to create the impression that there is no special importance to be attached to this class of men, but that is only for effect. The fact remains, they are, as a rule, practical and skilled men. Though they are the fewest in number on any line and not disposed to urge their rights is no reason why they should be kept in this condition. It is a common remark among railroad men that yardmen, ordinary switchmen, draw more pay than the switch engineer; and this can be attributed to the fact that the yardmen have pressed forward and with a solid front won out in their contentions. The engineers of switch engines may have been lacking in the necessary push, but that is no reason why the craft in general should allow

them to be thus discriminated against.

Now, as to the proper remedy to apply to relieve these worthy men, there may be a difference of opinion. An eight hour law by the General Government would fix the matter, as some of the Brothers contend, but it is more likely that most of the present generation will have passed over to the great majority before Congress is induced to pass such a law; and whether such a law, even if passed or enacted, would stand the constitutional test in the courts, is a mooted question.

Governments and courts hold all contracts that are legitimate and equitable as sacred deals, and do not care to inject themselves into what might be properly termed private business matters. So, considering all these things, I am impressed with the idea that the order of the B. of L. E. should take up the question and if they pursue it along the lines they usually adopt in correcting inequalities where they find them, they will be successful in their efforts; and to assure an early start in the proper direction, it would be a good move to have the matter taken up in the Divisions and referred to the proper committees, who in turn should present the matter to the Grand Chief and his cabinet in order to obtain concerted action.

There ought not to be any delay in this move, for it is a most worthy and deserving matter, and inasmuch as I am not a switch engineer you observe I could not be personally benefited, and my sole aim and object is to give these men a square deal.

J. T. REDMAN.

New Order of Things Wanted.

MEMPHIS, TENN., Oct. 24, 1905.

EDITOR JOURNAL: Since I wrote my last letter to the JOURNAL, which appeared in the October number under this heading, I have been asked to explain more fully my proposed plan of reorganizing our present G. O. of A. system.

As you all know, our present G. O. of A. is composed of men running an engine on the system they may represent. So as to give some figure, I'll mention one of our large systems and number of men. The Gould Southwest System it appears had March 24, 1904, 756 men represented by sixteen committeemen and one paid chairman. A special meeting lasted from March 24 to May 4, and cost those 756 \$4,536.00.

Those sixteen "exposed," one immune, went before this large combination of capital and brainiest men that can be found to get some concession. I do not know what results came out of this special meeting, but I know it was an expensive one.

If my proposed plan had been in opera-

tion, let us see what this meeting would have cost, and how many men would have been exposed. This system has a cause. The several Divisions meet with their local committee, and in contact with the paid chairman—the one “immune.” He would then notify the district grand officer to call the executive committee, or him, if he should happen to be their officer. All would meet at place where the adjustment should be made, present the grievance to the heads of the system. Right here we would have concerted action, “a small exposed frontage,” and at the expense of the regular monthly payments of the paid chairman. Suppose we say the committee calls in Chicago on this occasion. You can see they call in every headquarter of all the great and small railway systems, for this body is in contact with the general chairman of this whole organization, which should meet at Cleveland twice a year. “Immunes,” with our whole prestige, is what we need. In our Division rooms, in our convention halls, we may with perfect freedom speak of what is and should be best for our profession.

Let us meet those large combinations with combinations at as small an expense as possible and with a small exposed frontage.

If some of the money we now spend on the G. C. of A. could be turned into other channels, say for an instance our insurance, or maybe we would be able to pay some poor disabled Brother that through long hours and hardships has been called up for physical examination and pronounced unfit for service.

The results of my proposed plan would be of manifold good. We would at all times have a grand officer near at home, our paid chairman would come in contact with men of other roads, our meetings would be more interesting and maybe bring out a better attendance. Yes, I believe it would produce a general effect which I cannot now see.

One Brother has accused me of passing unjust judgment on our passenger men. If my first letter is so understood, I wish that all who so construed my letter will feel otherwise after my explanation. It was not my intention. The fault was I did not take enough time for my first letter so all who read it could fully understand me. Still, I'll say it is an error to select our passenger men for committeemen on the G. C. of A. When one of us reaches this branch of the service, he is well up in years, and for him to be placed on the G. C. of A. is to him dangerous, for if he accomplishes what you have sent him for he is a “target.”

Human nature will ever be what it is. His “all” may depend upon his “stand,” or his “receding” when the representation of the men's grievance is taken up, for it has and always will be that upon those representing, not upon the represented, rests the blame.

A committeeman that accomplishes much now will sooner or later be looking for a job. Maybe he gets one, and maybe a poor one it is. Too old! The age limit has put a banishment upon him. I have met poor old Brothers whom I personally know, who had good jobs, and carried the men's trouble with a good heart, but who could not or would not take the “hint.” It is a sad sight to see those who have given up their “all” for others, and be so soon forgotten. It is true a few who lost have been taken good care of, but they are so few. Can you blame your committeeman if he fails to get you what you sent him for unprepared?

Let us change our faulty system; send men who may well laugh at “hints,” send a committee to your heads of your system protected, send one that when they call in one place they know that far away they are backed as well as at home.

The convention is drawing near, the month for election is upon us. Let us select the right man—the up-to-date man—a fearless and interested member. So much is expected from this coming convention and all depends on us in our selection, that we may not be left behind in this mad rush of our present age.

HARRY E. BRADFORD.

Number of Delegates—Chairmen's Association.

PINE, COLO., Oct. 20, 1905.

EDITOR JOURNAL: With the possibility of having ulterior motives attributed to me, I wish to respectfully suggest certain changes in the machinery of our Brotherhood. Having been frequently honored by appointment to committee work I believe I have served my full time as a committeeman. During the periods of association with thoughtful interested Brothers, I learned what I am convinced to be some items of importance to the best interests of the Brotherhood in general.

I wish to advocate two changes in the mechanism of our fraternity. They are both unpopular in our conventions, for reasons which seem almost mercenary. The rank and file of our membership have given but a passing thought to either question. Believing the “press is more powerful than the sword,” I am going to call attention to them through the courtesy of “our press.” The two changes alluded to, are:

First—Reduction in the number of delegates to conventions.

Second—The institution of a general chairmen's association.

How do I know them to be unpopular? First, because at every convention for many years, numerous resolutions have been introduced advocating the cutting down of the number of delegates, and each time they have been "knocked out" in the first round by an emphatic "No."

Second, I have a vivid recollection, that, at the Milwaukee convention, upon the presentation of a plan whereby the various committees throughout the country might have a common center to diffuse knowledge of the methods pursued by others, the project was hooted down and its authors denounced as schemers.

Bro. J. M. Watson, the salaried chairman of the New York Central, and your humble servant, after long years of faithful committee work for the improvement of our craft, fully realizing the degree to which we were handicapped, by lack of an adequate knowledge and understanding of the best methods to pursue in formulating schedules and conditions of employment, decided to call a meeting of the chairmen of all systems present at the convention, and lay before them the plan we had conceived. I think there were thirty-eight general chairmen present at the meeting. After presenting our ideas as being the most essential need of the Brotherhood at the time, they unanimously agreed that our plans were feasible. A committee was appointed by the meeting to draft plans to be presented to the convention for consideration. And lo, what was the result? The scheme was vehemently hooted down, and had its promoters been less courageous they might have sought police protection.

Again on March 20, 1904, a meeting was called in Chicago, chiefly instigated, I think, by our present A. G. C. E., H. E. Wills. It was largely attended by men who had done more for the building up of the best interests of the Brotherhood than any like number that could be selected. They realized the necessity of affording our schedule makers better facilities for educating themselves in what is, in fact, the most important work of the entire Brotherhood. They even went farther than we did in Milwaukee—they actually perfected the organization of the general chairmen's association. This body was ready to start off on its grand work, with but the Los Angeles convention to say the magic word which should give it life. But no. Instead of giving it life, a death blow was dealt. And now it pops up again in Colorado.

I hope I may not appear egotistical if I discuss these questions from the stand-

point of one who has had some experience in conventions, is a veteran committeeman, and who has given the question of the number of delegates a very careful and deliberate consideration. Anyone who has been a delegate to one of our conventions will readily agree with me that a great deal of time has been consumed in the passage of a few laws, when with one-tenth the number of men of good business methods, and better fitted for this work they might have been more quickly passed. With the present enlarged size of the order, and great number of Divisions, the time is past when each Division should have its own delegate. On this score there are two foolish notions to be combated, namely: the sentimental notion of local loyalty to one's own Division being represented, instead of the higher and grand loyalty of bettering the condition of the whole. And then, there is the more mercenary idea, that too many delegates allow themselves to be governed by, that, should they enact a law reducing the size of the conventions, they will, in fact, vote to keep themselves at home, from the next and all other conventions. Any one who has observed the attitude of the vast majority of delegates, can but conclude that five hundred men go to the conventions, and involuntarily or otherwise, watch one hundred "wheel horses" do the work.

I should like to express with all the power within me, what I firmly believe to be the most pressing need of the oldest, most conservative and highly respected labor organization of America. I refer now to the absolute necessity of surrounding our committees of adjustment with better facilities for studying methods of serving us in the matter of schedule making, and the making of contracts governing the conditions of employment. I will grant that the best talent that we have is usually selected from our general committeemen. It must be remembered, however, that as a rule, after leaving the common schools, our entire time is passed on an engine, and we have but little time or opportunity to improve our native talents by contact with men outside our craft. We must choose our generals from our rank and file, to cope with men of the highest educational attainments. Our generals, trained in their craft only, must meet and make terms with our employers, who have every advantage over us in business training and diplomacy. They are paid handsome salaries to make dividends for their respective companies, but, like the "man from Missouri," they have to be "shown" that certain results will return larger dividends; when that showing is made, however, the "result" comes to us, and the "dear people" pay

the bill, as they do all other bills. But, my Brothers, how can you expect a party of men, who never came in contact with men and methods, except those identical with their own, to make the most acceptable terms for us with the general manager, who is not only a member of an association of his peers, but a man surrounded by any and all information bearing on the question at hand? It is to be wondered at that our committees, handicapped as they are, do as well as they do.

I hope I shall not be misinterpreted as proposing unduly aggressive or hostile measures with the railroad managers, generally, on the assumption so frequently adduced, that they are our common enemies. On the contrary, I regard the general managers as our best friends, but as I have said, they are there to produce dividends or to explain to their board of directors why they have failed. When we can convince them that our arguments and claims for increased rates are correct, there is but little doubt of their granting them, but the claim has to be made in a way that gives the manager a substantial reason for granting it.

I should like to ask, with not the least idea of criticism, but prompted wholly by interest in our order, "Is our Brotherhood keeping up with the procession? Are we napping, in our snug self-satisfaction, while younger and less potent railroad organizations are passing us in the great race to better their conditions, by getting increased rates for increased responsibilities?"

I most sincerely hope that every member of our noble order may read carefully what I have written and ponder over my suggestions, and further, that they may conclude that there is "more truth than poetry" in what he reads. Go to your Divisions, Brothers, and instruct your delegate to the Memphis convention, to vote for the reduction in size of the conventions—he will find plenty of resolutions there bearing on that question. Also instruct him to introduce or favor some means that will afford our general committee the necessary light in their business to serve us in the most acceptable and profitable way, and above all, my Brothers, do not raise unjust objections to paying a small assessment for committee work. Do not feel that you are doing your committee an invaluable favor by appointing them to such positions, and that it is a condescension on your part to pay such bills. The committeeman makes nothing more out of the deal than he has made for you. He is no more interested than you should be. He has nothing more than his own job to protect, but you have chosen him because of his peculiar fitness for committee work.

I hope those who take issue with me will kindly refrain from personalities and set forth their views in arguments supported by solid facts. I am not making a "grand-stand" play, neither do I hope to feather my nest, for I have served my full quota of committee work, and am no longer in it, but I still feel a deep and abiding interest in the Brotherhood that has long been very dear to

W. W. HALL, Div. 186.

Drink and the Worker.

MISSOURI VALLEY, Oct. 29, 1905.

EDITOR JOURNAL: The most important question that confronts the working class at the present time is that of using intoxicating liquors. In relation to this question, *Leslie's Monthly*, in a recent issue, said:

It is the patronage of the rum shop far more often than it is the low wage that spells squalor in homes, heartbreaks for wives, and every woe for the helpless and dependent. Hence come rags, hence comes desolation, hence comes every form of brutality, vice and crime that disgrace humanity. Few wives are beaten, few homes are turned into hells, because of hard work and low wages; it is the drink devil who wields the whip and brings in the hell. There is no taskmaster who drives so cruelly as he or lays on so heavy a lash. Much labor both in its character and in its rewards may be akin to slavery, but there is no bondage so galling, no servitude which exacts so much and gives so little, as the slavery of strong drink. Among all other good and true aims set before them, let the trade unions declare an unalterable and deadly enmity to the drink traffic, and they will achieve a larger good for workingmen than in all other efforts to which they can put their hearts and hands. Boycott the saloon, order a general strike along this line, and there will be a result in the homes and by the firesides of the world's toilers that will rejoice and bless humanity.

All classes of people drink more or less, even some of the clergy like to take a little "schnapps," but the working class consume more liquors than any other class because they are vastly in the majority; consequently, there are to be found more drunkards among the workers.

It would be a grand thing if organized labor should "boycott the saloon and organize a general strike along that line," but a strike of this kind would not have the sympathy or get the support from the people it should because the liquor interests control politics.

The heavy tax imposed upon the manufacturer and sale of intoxicating liquors are for the purpose of raising revenues to pay the expenses of the government, and also to help maintain the public schools. This method of taxation has been adopted in order to have the consumer pay the tax, and as the working class are so much in the majority, they pay the larger

portion of it. The large profits or revenues received by national, state and municipal governments is the cause of liquor interests controlling politics, because if there is no profit there are no politics.

The wealthy distiller and brewer are in favor of a high license law because it gives them a better opportunity to monopolize the manufacture and sale of liquors.

The rich man favors high license because he realizes that if revenue is not raised from this source the United States Supreme Court may reverse itself and decide an income tax constitutional.

The members of the different churches also favor it, at least a majority of them do, the members who are prohibitionists favor high license if they cannot get prohibitory laws enacted. Other members favor it in order to escape a direct tax. They may not use intoxicating liquors, but at the same time vote for the taxation of it.

The liquor dealers have an association and it has a great influence in politics, and when they use that influence they can elect any candidate for office that best suits their interests. Each liquor dealer in every precinct can control a certain number of votes, and they are mostly workingmen's votes because, as Bishop Potter says, "The saloon is the poor man's club room."

In the year 1904 the people of the United States consumed spirits, malt liquors and wines to the amount of 1,605,-851,455 gallons; this includes both domestic and imported. In the year 1904 the national government received in revenues from spirits and fermented liquors \$184,898,474.

Millions of dollars are collected annually through high license laws. Greater New York alone for the year ending April 30, 1904, issued 7,827 licenses to sell liquors; this includes hotels, saloons and club rooms, and for which the city received \$11,516,898, and the working class paid the most of this great amount of money. And this is not all that is collected from the sale of drink, another tax is imposed on those who go out for a good time and next morning find themselves in the police court.

If the working class can be educated to keep away from saloons and save their money, business would get dull in the criminal and police courts, but of course a large number of "Jim Crow" lawyers, political "grafters," and hangers-on would be out of a job.

GEO. H. CONNER.

A Vital Question.

EAST ST. LOUIS, ILL., Nov. 7, 1905.

EDITOR JOURNAL: Allow me a little space for the airing of a subject of vital

importance to each and every member of the B. of L. E.

Our present insurance laws leave much to be desired. A member losing a hand, a foot, one or both eyes, receives the amount of his policy; so far so good, but how about the hundred and one other causes of disability from which he is not immune? Paralysis, Bright's disease, ophthalmic troubles, or any of a long list of ills to which human flesh is heir may incapacitate us for the service—what then? We find ourselves adrift in the world almost as helpless as when we came into it, with a family to support, assessments to be paid and nine times out of ten not a dollar in the bank, all our earnings, over and above living expense, having gone into our insurance, and the best we can expect is that on proper proof of our inability to meet our assessments our Division carries us, money thus expended to be deducted from the amount of policy when payable, while the insured who, in some cases, has already paid in enough to start him in some little business venture that would mean a living for his family and the saving of his own self-respect, drifts around doing anything he is physically able to do at any price he can get for his work, in order to keep him out of the poorhouse.

When a young man begins life as a railroad employee with a determination to succeed in his particular department of the service, he puts his whole energy into his work, and with long hours and arduous duties, has no time to fit himself for other than his chosen occupation; and, therefore, after ten, fifteen or twenty years spent in the service, he finds himself incapacitated for further duty along that line, there is no choice of professions open to him and often, after a life of hard-earned independence, he finds himself, through no fault of his own, reduced to a life of penury, dependent on the charity of others, and in some cases even forced to live separate from his wife.

This need not be if our insurance protected us as it should. What we need is an insurance that covers the whole ground—death, disability, accident and sickness, and if our present insurance laws cannot be amended, create a new department. Issue policies for not less than \$1,000 and as high as wanted, paying weekly indemnity for sickness or accident, insured to receive a full amount of policy for total disability from any cause. Such insurance would greatly benefit all concerned and do away with much of the charity work now necessary, and with Brother Heriot I believe it would be a financial improvement both for the order and the members.

Now, Brother "Eagle Eye," wake up,

get out your "Constitution and Statutes," and turn to page 85, Sec. 42, and read it carefully. If, after a careful perusal of Sec. 42, you consider yourself and family sufficiently protected, rest easy; but if, on the contrary, you desire a better protection, go to work for it. This movement means just as much to you as to me, so let us pull together and try to do something along this line at our next convention. Let us discuss this question pro and con and never give up unless it is clearly proven disadvantageous to the cause of the B. of L. E. Let us hear from everybody.

Fraternally yours,
GEO. HOLMES, Div. 512.

Child Labor.

COLUMBUS, GA., Sept. 5, 1905.

EDITOR JOURNAL: When Jesus was on earth He said, "Suffer little children to come unto me and forbid them not, for of such is the Kingdom of Heaven."

The owners of the cotton factories say, "Little children, come into my poorly ventilated institution of Child Labor, and work for me from early morn until dewy eve for a bare pittance. For your daily and almost unremitting toil I will only pay you enough to buy you a few clothes to cover your little thin emaciated forms; I will pay you enough to buy a few morsels of bread. I will employ you while you are young. The work I give you to do will make you old while yet in your teens. Your faces will grow pallid from long confinement in a stifling atmosphere. You will grow up uneducated and illiterate, and you will perhaps help support your strong father who has virtually sold you into a condition that borders on to slavery. You may be herded together in factory boarding houses where disease and misery reign supreme. When you drink from a tin cup and very hurriedly eat your indigestible food from a tin plate, I will drink from a cut-glass goblet and eat my meals in leisure surrounded by every modern luxury. I pay for this with ill-gotten gains that I have wrung from little children who work for me for a paltry sum.

"I have children myself, but they are not like you. They are too human and too well bred to be like you. My children are God's children. You are not.

"On each beautiful Sabbath morning I will have my children dressed in robes of finery; on their fingers I will place sparkling jewels, all of which I have wrung from you in defiance of God's law, and I will send them to Sunday school—one that you cannot attend, because if you were welcome you haven't clothes suitable to wear on such an occasion.

"I will each Sabbath attend services at

a magnificent church which I helped to build with money made for me by your wee baby hands, and there I will listen to a golden sermon preached by a golden preacher who is afraid to mention your pitiful condition for fear he might hurt my feelings and he depends on me to contribute a liberal share toward his salary.

"Some of the shekels I wring from you will go towards charity that will not reach you. To give a little helps my standing in the community in which I live.

"I will exercise a form of tyranny over you, and the law, which my money and influence to some extent control, will protect me as an oppressor of children. I sell my stock to the most influential men in our land and this gives me power. You cannot hurt me at the polls because I have kept you too ignorant to vote for a man who would improve your condition. I am a member of a brilliant society, and am highly connected; you have no advantage of fortune or connection. You must wear the bitter yoke, while I lash and drive you."

Brothers, is this condition right? You who love your little ones, shall not this great evil be put aside? Let us say to the men who own these factories, "You may grind the lives out of strong men, but in the name of God and humanity, you must keep your gluttonous hands off of the children."

Let us strike the shackles from their little limbs. Let us educate them and give them a fair start in life, that they may become useful and intelligent citizens of this great land of which we proudly boast and call free.

Child labor as it exists in a great many localities is a menace to our future civilization, and we should assert the rights of these little children in such a manner as to terminate such disregard for human feeling.

We must have laws that will permanently restrain the men who own these factories from veritably crushing the lives out of little children. There should not be the apathy of class towards class as does exist, but every American citizen should strive for the common good of all, and more particularly the education of children in preference to slavery in cotton factories.

Men who work children or employ them in cotton factories lack moral sensibility, because they know the life in cotton factories does not tend to elevate the morals of those so employed. Let us emancipate the children, and tell these institutions of slavery that they may prosper, that in fact we want them to prosper, but that they must obey the dictates of humanity and free the children or refuse to employ them in their youth.

The masters of these institutions believe the ruin of children a small matter compared with their love of gain and comfort. Let these men know that they must employ men at men's wages, and not destroy the health and happiness of children. To be a benefactor of these children is carrying out the wish of our Saviour; to persecute them is but carrying out the dictates of some one even worse than Satan. We should sympathize and tenderly care for the little ones, and shrink from doing them harm, and forever shield them from a condition that borders onto slavery.

The voice of right is the voice of freedom, and it should reverberate from one end of this broad land of ours to the other, proclaiming freedom for children. The meaner a man is the more lasting is the bitter memory of him in the minds of those who knew him as an unjust and unrighteous man; and the man who is responsible for working children in factories, knowing the evil consequences, will live in the minds of men as one devoid of a drop of "the milk of human kindness."

We want our coming generation to progress, and not deteriorate; and if we allow children to work ten or twelve hours a day in stifling factories, their forms will be stunted and their mental faculties impaired to such an extent that they will be useless except as human machines.

Every good man should be a worker in the cause of humanity and should denounce in no uncertain terms child labor in cotton factories. To ruin and destroy a race of men is no small wrong, and the destroyer should be forced to leave off his accursed work. The only believers in child labor are those who have an interest involved, and that an utter selfish one.

We want our nation to grow in truth and right, and not in sin and degradation. The privilege of education, of culture, and religion should be as free to the factory employee as it is the owner of the factory. Men often think they are doing right, from their point of view, when a close analysis of their actions would show their destructiveness. The owners of the cotton factories in working children attempt to condone a grievous wrong to suit their actions, from their view-point, when such actions are very destructive to a large per cent of humanity.

W. A. KLINE, Div. 409.

Noms de plume are always permissible, but to receive consideration must be signed by the full name and address of the author, and addressed to the Editress, Mrs. M. E. CASSELL, 927 Dennison Av., Columbus, Ohio, not later than the 8th of the month.

The Editress reserves the right to revise, reject or use matter sent in, governed entirely on its merits.

Christmas Carol.

The bells are ringing, ringing loud and sweet ;
Beneath the adoring angels' feet,
And in our hearts glad thoughts are born
Remembering that first Christmas morn.
When in a manger poor and low
Was born the Christ-child long ago,
And shepherds on the hills afar
Were told the tidings by a star.

Oh, ring, glad bells, ring loud and sweet,
The song that centuries shall repeat,
And angels sing on Christmas still
Of peace on earth, to men good will.

Oh, story by the ages told—
Oh, song that never will grow old—
O Saviour, born a cross to bear,
That we at least a crown might wear.
Let us our grateful tribute pay
Of love and gratitude today,
And worship Thee while angels sing
In praise of Him, our Lord, our King.

Oh, ring, glad bells, ring loud and sweet,
The song that centuries shall repeat,
And angels sing on Christmas still
Of peace on earth, to men good will.

Oh, Babe in Bethlehem's manger born,
What gladness filled that glorious morn,
When wise men came in holy quest
And found Thee on Thy mother's breast—
What joy was theirs to see Thy face,
As in that humble, heavenly place

They knelt before Thee, offering
Their homage to the newborn King !
Oh, ring, glad bells, ring loud and sweet
The song that centuries shall repeat,
And angels sing on Christmas still
Of peace on earth, to men good will.

The Mistletoe.

"Forth to the woods did merry men go,
To gather in the mistletoe."

In the far golden days, this beautiful parasite was regarded as a sacred plant. Whether because it was found oftenest upon the oak and the apple tree—trees which were regarded as sacred, particularly the oak—is not very clear, or perhaps because of its airy, mysterious origin. At all events, the gathering in of the mistletoe was hedged about with imposing form and ceremony.

Among the ancient Druids it was called all-heal, and the branches were cut with golden sickles or upright hatchets of brass, and carefully preserved in a white cloth. We read that in later times numbers of these hatchets have been found all over the British Isles.

The very name, mistletoe, suggests a world of enchantment in its lingering and musical syllables. What matter where it came from? The pictures and the memories that cluster about it are always the same, and ever new. Many a chapter of the "old, old story" is hung upon its graceful stems, and poetry and romance have long ago claimed it for their very own.

What matters whether we get the charming word from Icelandic *mistiltein*, meaning a slender staff, or from the Celtic *mwsogl*, signifying moss? It is to us just the mistletoe, lovely and mysterious, with its tender, greenish blossoms and its white, waxy berries.

As if to connect it with the more earthly plants, the berries contain seed—one each.

But, again, seeming to "scorn the sordid soil," the very birds are enticed into perpetuating its ethereal existence. They are said to be fond of the berries, which have a viscous quality that makes them adhere to the bills of the little creatures, until to be rid of the encumbrance they persistently strike them upon the barks of trees, and thereby plant the seed indefinitely.

Naturally the mistletoe would be prominent in mythology.

We read how Baldur, the northern god, was killed by an arrow made from this magic plant.

The story runs that his devoted mother, Frigga, exacted an oath from everything except the mistletoe, that they would never harm her son.

Loki, his enemy, knowing this, hastened away with a branch of mistletoe to the place where Baldur was amusing himself in sports with his friends.

Among the deities was one called Hod, who was blind.

He stood sadly apart, and the artful Loki, seeing him, asked why he was not shooting arrows like the rest. Hod replied that he had no arrows to shoot, and if he had, he could not see to shoot them. But Loki urged that he ought to try, in honor of the great Baldur, and, putting an arrow into his hands, made of the mistletoe, directed it himself with such precision that Baldur was pierced through the heart.

Aeneas would never have been admitted to the infernal regions, except through the mystic agency of the mistletoe, which is known to all readers of the classics as "the golden bough."

In a very ready way the mistletoe lends itself to superstition. The Austrians laid a branch at their bedroom doors, as a preventative against nightmare.

In the mountains of Switzerland it is believed that the mistletoe is guarded by a serpent. But if the serpent can be caught, the victor will acquire great treasure, as well as the power of rendering himself invisible. In our own day it is not regarded with the mysterious sanctity of old, but as the chief decoration of our Christmas festivities.

It is desirable, of course, to have as many berries as possible, for each berry represents a kiss from some fair damsel who is caught beneath its mystic bough.

A Delightful Night in 315.

I'll tell my tale and I'll sing my song,
I'll laud the right and denounce the wrong,
So reader, dear if you'll come along
And take this seat beside me,
We'll banquet grandly by the way,
We'll hear what others have to say,
I'll linger till the break of day,
No matter who'll deride me.

The night of October 12 last will always be a memorable one to the members of Div. 315. They gave a banquet to the Brothers and their wives in their rooms, and that same banquet "is the subject of my story." The room that on the commouest occasion could lay claim to beautiful adornment, on this evening was trimmed in a magnificent manner with flowers and bunting; and from the frescoed ceiling were suspended eight songbirds in their cages, which vied with the vocalists underneath them in their outbursts of melody. The first course of the banquet was served at 9:30, but the doors were open at 7. For the

entertainment of all, the melodiously toned piano, costing about \$700, and purchased by the ladies of Div. 315, who are not more than eighteen months organized, was kept discoursing music.

Mrs. Chas. E. Miller, the President, seated the guests. Eleven courses were served. The flowers were white carnations and pink, with this quotation from St. Clair:

May our Order like our chosen flower,
Shed beauty and fragrance through every hour.

In due time the substantial feast terminated, then came the "feast of reason and flow of soul."

The President called on Brother F. M. Williams, who was a charter member of the Division when it was organized over thirty years ago. His response was prompt. His reminiscences were highly interesting, and were listened to with profound attention. Ere closing, he recited the following original lines, and resumed his seat amid enthusiastic hand-clapping:

Tonight 'tis glorious to be here,
Amid our wives and kindred dear,
Enjoying gifts from those we love,
Who for this banquet nobly strove,
Who have our welfare most at heart,
And ever play a loving part,
As proof, behold this royal cheer!
Tonight 'tis joyful to be here.

October's tints are on the trees,
A touch of fall is in the breeze;
But here, beneath the electric lights,
We're feasting in sublime delights,
'Mid song and jest we chase the hours,
The notes of birds perfume of flowers,
Substantial feast, and smiles so dear,
Declare 'tis joyful to be here.

L. J. Boynton, the chief of the Division, was the next speaker. He waived aside all dignity to be the first speaker, by virtue of his office, to give the charter members the floor. His remarks occupied but five minutes or so, yet "brevity was the soul of wit" in his case as he went along, and was roundly applauded when he closed.

Moore's sweetest song, "Believe Me If All Those Endearing Young Charms," was then sweetly sung by Mrs. Wm. O'Hara, and the refrain was caught up by the assemblage and was a rare treat. That song will never grow old, so long as love lasts on this planet.

A ten minutes' talk was next given by Brother Cahill. It was interesting and instructive, and at its close Bro. W. A. McCarthy was called on.

"Ladies and Gentlemen," said "Justin," as he is endearingly called by his associates, in complimentary terms and willingness to give him a relation-

ship to his great namesake, "I am no speaker, as you all know; however, I am not altogether dead when it comes to chanting a few lines of a song, so if you keep silent and let myself and the birds—in the cage—have the floor, I'll give you a few staves flung together for tonight." He then began in a fine tenor voice:

'Tis really joyful to be here,
 Within this bower of beauty;
 Longaide our wives and sweethearts dear,
 Partaking of such splendid cheer,
 Tonight released from duty!

In sentimental song I raise
 My voice to thank our donors,
 They're worthy of our warmest praise,
 Dear guardians of our nights and days,
 These grand old girls, our owners!

If Paradise can equal this,
 We'll use our best endeavor
 To reach that home of perfect bliss,
 Whate'er betides or comes amiss,
 And there remain forever.

The song of Brother McCarthy had the effect of getting all the other Brothers up to respond, as their names were called, which number includes Michael Welch, another charter member, and everyone of them a practical thorough locomotive man, in active service and second to none in the land.

The evening's pleasures were now drawing to a close. Mrs. Miller and Mrs. Cole, the secretary, distributed cards containing the following verses, which were written by Miss Kathryn Rothrock for the occasion, to be sung by the whole assemblage, after which the memorable time came to a delightful close, with a "God send us about twelve such nights a year." Said the boys as they were going out of the room:

GOOD NIGHT.

Good night, good night, a kind good night,
 No longer can we stay
 Amid such scenes surpassing bright,
 'Tis near the dawning day.
 Our other duties call us hence,
 And thither must we go,
 From where we had such joy intense,
 In friendship's genial glow.

Good night, good night, again good night,
 The purple streamers soon
 From Orient skies, shall greet our sight,
 And dim the waning moon;
 Although we go where duty calls,
 This merry night shall live
 A guest, we hope, in memory's halls
 Your homage to receive.

Good night once more, a last good night,
 God speed our parting guests,
 May genial feelings of delight
 Pervade your kindly breasts;

And soon again, 'mid speech and song,
 And toothsome viands, too,
 We'll chase the gleesome hours along
 Dear kindred, here with you.

CAROLINE MAYBERRY.

A Week in the Hoosier State.

It was my good fortune in the middle of October to be the guest of our genial Grand Secretary Sister St. Clair, whose home is in Logansport. From the minute she greeted me at the station until I bade her good-bye a week later we had a real genuine good time. It happened to be the week in which Div. 845 held its meeting, and true to our principles we sallied forth to pay our respects to the Sisters of this Division. They gave us a cordial welcome and with the President Sister Louderback in the chair, the ritual work was smoothly done and the meeting one which we greatly enjoyed.

Refreshments were served and we bespeak for this young Division a bright future. Thursday we went over to Peru and witnessed the inspection of the Division. Sister Horning of Fort Wayne was the inspector.

It was a pleasure to witness the work done by this Division, under the guidance of the bright President Sister Bickle. Sister Mead, one of our organizers and a very capable one, is a member of this Division, and it was a pleasure to greet her in her own Division. After the meeting a splendid lunch was served in the hall, after which we retraced our steps back to Logansport.

Sister St. Clair informed me that a new Division was to be organized the following Saturday in Wabash, and that Sister Simms of Indianapolis was the organizer. You see St. Clair knows everything that takes place in the G. I. A., so I said, "Let's go over and surprise them."

She was willing and we arrived there in time to help them eat a splendid dinner, served in the hall by the Daughters of Liberty. Sixteen Sisters came over from Elkhart, and between us all, I guess this baby Division was pretty well started.

Sister Simms, the organizer, is conscientious in her work, and I never saw a Division start with better prospects. The ladies seemed so enthusiastic and the Brothers so ready to help them along.

I have been hugging myself ever since because I happened to get to Wabash in time.

Both Sister St. Clair and myself declared the day well spent and as we pulled into Logansport some time before midnight, we felt amply repaid for the visit and we cordially welcome Wabash Valley Div. 864 to our ranks.

The following week I had the pleasure of meeting with Div. 128, Indianapolis, upon the occasion of their inspection by Sister Sursa, of Howell, Ind. As Div. 128 has always been considered a "crack" Division, we expected great things of them, and we were not disappointed. Sister Sursa knows her business and does her work in a kindly way that makes everyone her friend. Her visits must be a benefit to any Division.

The president of Div. 128, Sister McKibben, is a lovable woman and one who seems to have a personal interest in all her members, and a kindly welcome for all visitors, thus making them feel at home in the Division room. The members of this Division must live "on the square," for I never saw Sisters, one and all, turn such square corners as they did.

At the close of the meeting the president in behalf of the Division presented Sister Sursa and myself with a souvenir of the occasion, which was appreciated I assure you.

The next thing we knew we were piloted to a restaurant where thirty-six of us sat down to a good chicken supper; from there we went to the theater and the evening was one of enjoyment.

The next morning Sister Goldstein took us around the city in her carriage, and we decided that Indianapolis was indeed a fair city. Sisters Kingery and Viquesney of Terre Haute were on hand to enjoy the inspection and Sister Simms entertained us all to dinner, after which we said good-bye to Sister Sursa who left for Louisville, Ky., to resume her work there.

While in the city I was the guest of Bro. John Williams and wife, who made my stay one of great pleasure.

Long will I remember these visits made to the Indiana Divisions. During the month of October I also visited Chilli-cothe Division in company with Sisters Zinn, Lambert, Haines and Colburn of Div. 52. We were entertained at the home of Sister Walters, president of Div. 12. We all passed an enjoyable afternoon in the Division room, and my surprise nearly overcame me when the president in behalf of the Division gave me a beautiful hand-painted vase. I prize it greatly as coming from the first Division I ever organized. And thus the work goes on; a new Division here, an old one there, each one doing its duty. Our members seem to be more enthusiastic as the years roll on and this begets confidence. We have so much to live for and the upholding of the principles of the twin organizations (as Brother Everett calls the B. of L. E. and G. I. A.) is one of our most sacred duties. As the holiday season is at hand, I wish one and all a "Merry Christmas." M. E. CASSELL.

"A MERRY CHRISTMAS" is the wish I send thee
from my heart,
A life all full of love, in which no sorrow finds a
part;
Or, if some pain fall to thy lot, love-guarded
though it be,
May He who came at this glad time then make it
bless'd to thee.

Study Club Program for December.

Roll Call—Christmas Quotations.
Russian System of Government.
Japanese System of Government.
Music.

Christmas Customs in Foreign Countries. Clubs to assign the work to different members. As Mrs. A.—England. Mrs. B.—Norway and Sweden, etc.

How many days formerly constituted the Christmas season?

Recitation or reading.

Current events for month of November. Any Magazine for November.

The Maidservant in England and America. September number of "The World Today."

A Merry Christmas and Happy New Year to all our Club Members. May the season's pleasures with few of its perplexities be yours. It is not the money value of the gifts you bestow, but the spirit that goes with them. Remember those whose lives are darkened by poverty and affliction. "Good Will to Man" is shown by acts of tender sympathy.

By consulting your encyclopedias you will find good articles upon Christmas. There is scarcely a poet of any note who has not made this season his theme. A book published by Frederick Stokes, "Saints and Festivals," is an excellent reference. Many others will suggest themselves to our students.

Now may we not hear from you all? Reports come in slowly. Another club is added to our circle. We welcome Augusta, Ga., G. I. A. S. C.

PROGRAM COMMITTEE.

Inspections.

The following inspections occurred in October: Div. 49, Concord, N. H., on the 11th; Div. 107, Hartford, Conn., on the 17th; Div. 177, New Haven, Conn., on the 18th; Div. 61, Springfield, Mass., on the 19th, and Div. 119, Rutland, Vt., on the 25th. Div. 49, the oldest New England Division, did its usual good work. President Young presided acceptably; few rituals were used and the floor work of Guide Whiting, Marshals Hall and Woods, and Buntin, as Marshal in installation, commendable. About one-third of the members were present.

It has been the custom of this Division to carry flowers to the cemeteries for the graves of deceased Sisters of Div. 49 and Brothers of Div. 335. We noted in the report of the chairman that 97 bouquets had been so disposed of this summer. At the close of the meeting ice-cream and cake were served by a committee.

At Hartford, Conn., I was met by the chairman of the committee, Sister Giddings, Div. 107's delegate at Los Angeles, then a resident of Pasadena, and with whom at that time I passed a few pleasant days. Secretary Osmond and Insurance Secretary Smith greeted me at the home of Sister Barnes where I was entertained. An all-day session was held, giving some time for practice, which I find necessary and think advisable in small Divisions where irregular attendance hinders up-to-date work. Secretary of Div. 61, Springfield, Mass., was a visitor and rendered much appreciated assistance in the exemplification. A happy party of fourteen, including Sister Sterner, of Div. 61, dined out. President Hyde and about half the members were present acquitting themselves creditably, Sister Giddings acting as marshal in installation. This Division has an excellent guide, but feels the loss of a musician. A night was passed with Sister Sterner when a call from Mrs. Howard, a former member of Div. 107, was enjoyed, and she accompanied me to take the train for New Haven.

President Ralph, Secretary Tracey and two non-president members were there to meet me. Vice-President Sister Minor entertained. There was a large attendance and the work was finely done. Very noticeable the excellent work of Guide Bennett, so familiar in this office, and Marshal Thayer in installation. President Ralph, in behalf of Div. 177, presented a beautiful Royal Worcester vase. Twenty-one took dinner at the Davenport, where we were pleased to have Brother Minor one of the party. The majority adjourned to Sister Minor's home, where I joined them after a call upon Sister McNeil, of Div. 351, and Insurance Secretary Witherell's home. We regretted her absence from home. Sister Mailey accompanied me. Ice-cream and fancy wafers were passed and a jolly party enjoyed the hostess' hospitality. By our absence we lost a part of the entertainment which furnished so much amusement.

Brother Minor and President Ralph saw me off for Springfield the following day. Secretary Smith was right there, soon joined by President Stickney. We dined together, then repaired to the hall to meet Div. 61. We have always had fine work in this Division and this was no exception. President Stickney, officers and members share alike merited congratulations on their appearance. There was real initiation. Sister Dennis always gives them the best music. Guide Harris is pleasing and graceful. Past-President Flagg is one of the few who conducts the entire form of installation without a ritual. Sister Sawyer, absent for the first time in our visits, was detained by accident. Secretary Smith took her part as marshal in installation very creditably without previous practice. The work of Star and Crescent, Sister Meade, perfect. Beautiful chrysanthemums and red carnations were given me (which were quite fresh two weeks after), and while at supper in an adjacent room President Stickney, in behalf of individual members, presented a box containing seven fine linen handkerchiefs. President Stickney's daughter kindly assisted in preparing and serving supper. We

called upon Sister Nelson whose sorrow is so great, her daughter Grace being the victim of a trolley accident in September, and Sister Chapin an invalid for years, but whose interest in and devotion to the G. I. A. is as ardent as ever. She always thinks and speaks of "meeting day," and longs to be there.

The night was passed with President Stickney and I left early next morning for Rutland, Vt., where President Sullivan and Vice-President McIntyre met and escorted me to the hall, when a meeting was called for practice. Treasurer Bashan entertained. Sister Sullivan, of Div. 272, Jamaica, N. Y., was present. In the evening a delightful reception was given the B. of L. E. and their families. Officers of Div. 119 assisted in receiving, Guide and Sentinel acting as ushers. Among those from out of town were Brother and Sister Brown and daughter, of Green Island, N. Y. Refreshments were served by a caterer, and excellent music was furnished for concert and dancing. The inspection was well attended, the Division only numbering eighteen, but we were pleased to meet some new ones, and glad to learn of prospective applicants, for with sufficient members the work of Div. 119 would average with the best. A very large percentage are insured, twelve members carrying seventeen policies. A beautiful venetian glass dish was presented.

On Sunday C. E. of Div. 347, Brother Sullivan, and wife, President of Div. 119, Secretary Mahoney, Sister Hastings, Guide Thompson, husband and daughter, called.

Rutland was the home of our late Sister Salmons and the B. of L. E. and G. I. A. expressed their sympathy to our bereaved Brother in many ways by floral tributes and accompanying the remains to Cullingsville. We called upon Mrs. Young (Mrs. Salmons' mother), but she was absent from home.

Monday morning I left for home after a week's absence in this work of inspection. President Sullivan, Vice-President McIntire, Treasurer Bashan, Sisters Hastings and Starks seeing me aboard the train. And to Sister Sullivan, who provided fruit for lunch, each and all who contributed to my comfort and pleasure during the week, I would express thanks and appreciation.

MARY L. COOK.

On October 17, Sister Sproule, G. O., accompanied by Sisters Bouskill and Johnston, left Toronto for London to inspect Div. 131, were met by Sisters Clark and Adams, taken to Sister Clark's house for lunch. After partaking of the good things provided by Sister Clark we proceeded to the Division room, twenty-one Sisters being present. The work was gone through and duly inspected, and afterwards Sister Mains presented Sister Sproule with a souvenir spoon, and Sister Bouskill a souvenir flag. In the evening we were escorted to an excellent concert by Brother and Sister Clark. Wednesday a. m. we rose early to take the train for St. Thomas and through the kindness of Sister Lowe passes were procured over the Pere Marquette Railway to St. Thomas. Notwithstanding the pouring rain twenty-one Sisters of 131

courageously turned out to take advantage of the said passes. We were met by Sisters Miller and Nesbitt and taken to a restaurant for luncheon. After the hurry and bustle of getting away so early in the morning were in excellent humor for the appetizing things provided, and they disappeared as if by magic. The said luncheon was provided by the ladies at that time. Now, Sisters, I will say right here that they cannot be beaten for kindness and hospitality. We then sallied to the B. of L. E. hall, there meeting fifty-seven ladies waiting to be organized. With fifty-seven resident ladies twenty-one from 131 and three from 161, also a few busy Brothers greetings were numerous and hearty indeed.

At 3 o'clock the meeting was called to order by the Grand Organizer. From the platform to look upon the eighty-five eager and expectant faces was a most interesting sight, especially to one who is used to seeing at the most twenty, and I did so wish for a camera to take a snapshot of them, but the time was too short. Division 352 starts out with the brightest of prospects, fifty-seven charter members and Sisters energetic enough to say before long would have one hundred, which certainly is the banner Division in Canada. As Sister Sproule said in her address it was the largest Division she had the pleasure of organizing. They also have many youthful and talented Sisters, a good hall, helpful Brothers, and I am sure will get along splendidly. In fact, can get up concerts and "at homes" of the very best right in their own Division, and may prosperity attend them. The concert in the evening was largely attended, Brother McAndrews presiding in a most genial and most courteous manner. A number of Brothers were called upon for speeches, and responded in an able manner. In fact, I think some of them had taken lessons, they were so complimentary, one in particular said he had to take his soup off the corner of the kitchen table in order to get to the concert in time (he got there), and everything passed off successfully, everybody enjoying himself, before the close of the program. Brother McAndrews gave the new Sisters some good advice and useful hints which I am sure will be helpful.

Yours, etc., CELIA.

On October 5th I inspected Div. 104, Los Angeles, Cal. The ladies assembled at their hall of meeting; the President, Sister Norton, was in the chair. The forenoon was devoted to ritualistic work. The ladies seemed glad to welcome the Inspector back again, this being the second appointment for that city. At 1 o'clock they all assembled at the hotel for dinner, which was a credit to the landlord, and all did justice to such a bountiful repast. At 2 o'clock we again met at the hall, it being regular meeting day. The members are very deserving for their good work.

I wish to thank Brother and Sister Norton for their hospitality in entertaining me in their lovely home while in the city.

The following Thursday I inspected Div. 243, San Bernardino, the Sisters of Los Angeles joining me, and Sisters from Needles and Kern City

Divisions, and we held an all day session, the day concluding with a reception at the home of Brother and Sister W. R. McNeil's in honor of the inspecting officer. A number of the visiting Sisters from Los Angeles also attended.

The work of inspection occupied the entire day. They adjourned for lunch at noon, the luncheon being an elaborate six-course affair served at the Stewart. The guests were all seated at one table, which was beautifully decorated with pink carnations, the emblem of the order. Two new members were received, Mr. R. J. Milligus of that city, and Mrs. Thayer of Barstow.

The next day the three Divisions spent the day at Harlem Spring. A fine lunch was served in the pavilion, the New York Kitchen catering.

While in that city the Inspector was entertained at the home of Sister Warboy, and she certainly knows how to make a Sister feel at home.

Both Divisions have done good work and lots of charity, and I hope in the future inspectors may have as much pleasure in the good work when appointed by the Grand President.

Yours in F. L. & P.

MRS. KATE FORD, G. I. A. Inspector.

As there has been nothing said about Lorain Div. 333 being inspected must tell the Sisters how nicely they did their work, they being a new Division, and having never sent a delegate must say that they are up-to-date in their work.

On the 25th of July they gave a picnic at the lake, and Sisters, if you could have seen the amount they had to eat, and the number of ladies and their husbands and families that turned out to that picnic it would surely have encouraged you to go right home and talk picnic. Mr. Howard and myself were entertained at the home of Brother and Sister Dike.

Next was the inspection of Div. 2, at Grafton, W. Va., on October 11, and to say that Brother and Sister Swisher are fine entertainers is putting it very mildly. Sister Huffman, of Div. 41, was with me and can say, as well as myself, what a nice dinner and supper Brother Swisher can get while his wife and ourselves were out sight-seeing; now if any Brothers or Sisters doubt this just go down and stop with them. Yes, really, Sisters, there are some men that can cook and entertain as nicely as the women.

Then came Div. 117, at Cumberland, Md. We were met at the train by Sister Arnold, that dear good Sister, who is the soul of hospitality. There we got a good night's sleep, and as it had been planned for an all day meeting on the 13th, it seemed that all the Sisters tried to be there that day. And if you had seen the way they flew around getting a nice warm dinner, the table fairly groaned under so much to eat, everything you could think of, even ice-cream and the loveliest home-made cake, after all that dinner. My, I wish I had some of it now. Then the work of the afternoon began. After it was over the President stepped forward and presented Sister Howard with a nice centerpiece of hand-made work, which she would not part with, as it is very much

appreciated by her, then in the evening we attended the theater.

On the 16th came the inspection at Martinsburg, W. Va. We were met at the train by several of the Sisters and escorted to the hotel. The next day they took us to gather chestnuts, which we all enjoyed, and after the meeting of the next afternoon the ladies met at the home of Sister Dawson, where a most enjoyable evening was spent. The tables looked lovely with beautiful bouquets, and ice-cream and cake was served.

Now, Sisters, I'll have to tell you something—it would just do you good to hear Sister Dawson play the violin. We hope to see her and as many of the other Sisters of Div. 111 that can come to Newark some time.

On the 18th Div. 110, at Baltimore, Md., was inspected, and they have a real nice division. After the work of the day was over ice-cream and cake were served in the hall. We were entertained at the home of Brother and Sister Hall, and it seemed as though Sister Hall could not do enough for us. After supper some of the Sisters came by and we were entertained at the theater. The next day Sister Hall and her sister took us all day to different points of interest in and about the city, also to Johns Hopkins Hospital, where there was one of the Sisters from Grafton, W. Va., and although we were all strangers how glad she was to see us, and we sincerely hope the Sister is at present able to be again at home with her loved ones. Sister Hall, we want to come again.

On the 20th came the inspection of Div. 172. There was quite a number of ladies present. After the meeting about 6:30 p. m., ice-cream and cake were served down stairs in their banquet room.

On the 25th Div. 88, at Albany, N. Y., was inspected. Was met at the train by Sister Vedder and Sister Peek and taken to the home of Brother and Sister Yater; after dinner we went to the Division room where the work was well done. Here too, the Sisters made an extra effort for one to enjoy themselves. The same evening we attended an Eastern Star musical.

The next morning Sister Vedder came by and we took the trolley for Schenectady, where we would like to have met with the Sisters but had not the time. That afternoon the ladies all met at the home of Sister Yater where euchre was played until supper was announced. Just as we were about to be seated Brother Yater, in a few well chosen words, presented the Inspector, Sister Howard, with a lovely bouquet of pink carnations, the flower of the order. And, of course, as she could not hold them and eat supper too it was a scramble between Brother Yater and Sister Lawrence which would get to wear them, Brother Yater coming out victorious. You can just imagine you see him strutting around with that immense bouquet on, and just have a good laugh yourself.

Will have to say in closing that the Sisters of Albany Div. 88 are a nice lot of ladies, congenial and pleasant with one another, and we hope to meet with them some time again.

MRS. F. M. HOWARD, Inspector.

Division News.

ONE of the most successful, delightful and social events in the history of the different Divisions took place at the Chickies Park, August 10, 1905, when Chickies Rock Div., 326, G. I. A., gave a picnic in honor of her first anniversary. The Division was organized August 9, 1904, with a membership of 21, by the Grand Organizer, Sister Smith, of Philadelphia, assisted by a corps of efficient ladies. The officers who were elected at that time were unanimously re-elected in December.

We have passed a very successful and happy year and have added member after member until now we have a membership of 46. Not many differences have occurred to disturb our serenity. Sister Heim still "seats the Division" when the occasion demands it; she, I must add, has been very faithful, not having been absent from one meeting, always at her post to do her duty.

Sister Worrell's "spice box" has not been used very often, just enough to keep the Division well seasoned. Sister Seiple is still our calm and smiling Chaplain. Sister Shenk still relates her fairy tales. Sister Bennett still gets chased around very lively no matter how black she looks about it. Our Sentinel, Sister Quinn, is very faithful, allowing no intruders to interrupt our work. Our Vice-President, Sister Armstrong, growls occasionally in her far-away chair; she too has been very faithful, always present at every meeting of the Division. And, last but not least by any means, I mention our beloved President, Sister Dennell. To her we owe our success, for, as I have said before, she is one of the most lively, wide awake and energetic Presidents that ever a Division was blessed with. The members all love and esteem her highly.

So much for the officers. Now to the picnic. My pen is inadequate to describe it. Such a jolly crowd of men (members of the B. of L. E.), women (their Auxiliary 326), and children. The dear little children.

"Ah, what would the world be to us,
If the children were no more?
We should dread the desert behind us,
Worse than the dark before.
What the leaves are to the forest,
With light and air for food,
Ere their sweet and tender juices
Have been hardened into wood.
That to the world are children;
Through them it feels the glow
Of a brighter and sunnier climate
Than reaches the trunks below."

Such a hungry set of Brothers! They wanted to begin to eat as soon as we reached the park, but Sister Armstrong looked so stern and determined, they finally calmed down and waited in hungry impatience for the feast to begin. To amuse themselves in the meanwhile, some played ball, others took walks and others consoled themselves with cigars and conversation. At 12 o'clock sharp dinner was announced and as all were seated around the tables filled with all the deli-

cattessen of the "Good Old Summer Time," Sister Dennell ordered silence. Instantly there was a great calm. She then in behalf of the members of Chickies Div., 326, presented a gold recognition pin to the Secretary in appreciation of her services. To say that the Secretary was surprised poorly expresses her feelings. She was speechless and could not even thank the dear Sisters for their kindness; not for the intrinsic value of the pin, but for the love and sisterly feeling which prompted it. She hopes to always be faithful and merit their favor and good will. That little intermission made the appetites keener, and all did ample justice to the bountiful feast spread before them. After dinner the G. I. A. entertained their guests with samples of their marches, choosing the most intricate ones, which were so loudly applauded they had to be repeated over and over again. Dancing and games of all kinds were then indulged in, the old-fashioned "Bingo" being the most popular.

Photos were then taken of the G. I. A., members of the B. of L. E. and of the table as it was prepared for supper. Eighty-eight persons were seated at the first and about sixty at the second table. I must add here that Sisters Bosler and Worrell are our champion cake bakers. After supper we had marching and dancing, the Brothers trying to rival the Sisters, but they could not, they were not "in it." Then as the

"Summer's sun was sinking low,
Only the treetops redden and glow;
Only the weathercock on the spire
Of the neighboring church is a flame of fire;
All is shadow below.

"O, beautiful, awful summer day,
What hast thou given, what taken away?
Life and death, and love and hate,
Homes made happy or desolate,
Hearts made sad or gay.

"On the road of life one milestone more!
In the book of life one leaf turned o'er!
Like a red seal in the setting sun
On the good and the evil men have done,
Naught can this day restore!"

We all arrived home safely, deciding we had the most enjoyable picnic of the summer.

SEC., 326.

FIDELITY DIV., 32, Conneaut, O., extended a most cordial invitation to Ingraham Div., 62, of Collinwood, O., and Welcome Div., 147, of Ashtabula, O., Thursday, Oct. 5, which was duly accepted. Twenty-three Collinwood and eighteen Ashtabula Sisters helped to make this event a well remembered one. At 12 o'clock a most tempting luncheon was served in the Division room. Meeting was called to order at 2 p. m. by President Belding. Eighty-one members were in attendance, counting the visiting Sisters. Two candidates were initiated into the mysteries of the Division. Fancy drills were given and great credit is due the captain for the fine work put on the floor.

Meeting adjourned and the visitors were escorted to the "W. R. C." rooms, where an elegant

dinner awaited us, all doing ample justice to the repast. After dinner we were again conducted to the Division room, where all were invited to a pleasant game of cards. About 8:30 p. m. ice-cream and cake were served. Thus ended our grand day's remembrance in our minds never to be forgotten. Many thanks are extended from Ingraham and Welcome Divisions to Fidelity Division for their untiring cordiality extended to us on this day, also to President Belding and her Division for their grand hospitality.

MRS. GEO. F. DAVIS, Div. 62.

GENEROSITY DIV., 37, Little Rock, Ark., comes again for admission to our circle. Our Auxiliary has been having some pleasant socials as well as some sorrowful duties to perform.

In April a successful surprise or housewarming was given on Sister Klein who had recently moved into a pretty new home. Several Brothers with their families and friends were present; all enjoyed a most delightful evening. Splendid music was rendered by the sons and daughters of Sisters Schimelpfenig, Stansberry and Leopard; cake and ice-cream were served.

The first day of May being adopted by Div. 182, B. of L. E. as their annual decoration day they notified our Division and asked that we join them. On that afternoon quite a number of Brothers and Sisters visited Oakland cemetery, taking with them a large quantity of beautiful roses to decorate the graves of our deceased Brothers and Sisters.

On June the 8th a very enjoyable donkey and ice-cream party was held at the home of Sister Terry. Sister Calhoun had the donkey (minus the tail) ready when we arrived. Each one with a handkerchief over their eyes marched to the donkey to pin his tail on in the proper place, which caused a great deal of fun. Prizes were given to the one pinning the tail nearest the right place. Our President won the ladies' prize, a beautiful vase.

Splendid music was rendered during the evening, also cream and cake were served, from which we realized a neat little sum. Many thanks to Sister Terry.

On June the 20th the Sisters planned another surprise, this time on Sister Mangel who was soon to leave for her new home in Carthage, Mo. Dear Sister Mangel was so completely surprised she could not speak for several minutes, her parlor carpet was up and some things packed. She was very still about her packing, thinking she would be off before we knew it, but we were on the lookout. After two of the Sister did some cakewalking, Sister Mangel was allowed to exchange her dressing sacque. She then invited us over to her daughter's next door to spend the rest of the evening. After refreshments were served, another surprise was in store when our President in behalf of our Division presented Sister Mangel with a beautiful handbag as a small token of our love and esteem for her. Sister Mangel thanked us for our token of love to her. We were sorry to have her leave us and wish her every blessing in her new home.

On August the 30th we gave another one of our

delightful boat excursions on the Arkansas river. It was a grand success socially and financially, clearing \$132.. We wish to thank the Brothers of Div. 182 for their kind assistance. About 250 people were aboard. The music was fine. Every one enjoyed sailing down the Arkansas river, even the ladies who did the serving, especially the cashier who stole a few minutes off to spin around the dancing hall with Sister Seymour.

With best wishes to all Sisters,
LITTLE ROCK.

MANILA DIV., Brooklyn, N. Y., has not been idle this past year although the JOURNAL readers may think so, but the truth of the matter is, the correspondent who has been doing duty in the past has hoped against hope that someone else would take her place; as no one seems inclined to do so, and as our President has requested me to write something, there is nothing left for me to do but fall in line and obey. It is hard to know where to begin. We have had good, successful and instructive meetings most of the year. Our Division numbers seventy now, and at our next meeting we hope to have another member. The President was fortunate in the choice of a chairman for the entertainment committee this year, and she is making us hustle most of the time I can tell you. First, if I remember correctly, she had us get ready for an apron and fancy sale. The articles came in in goodly numbers and were soon, for the most part, disposed of, adding to our treasury quite a little sum. We had just got nicely over that when we had to get ready for a euchre party. We went at it heartily and had a large congenial gathering. The prizes were many and varied. Prizes were also awarded the non-players, thus making it doubly interesting. After the game tables and chairs were removed and dancing was indulged in for a while.

During the summer an outing was planned for Coney Island, and as the attractions there are many one could not help having a good time. Our anniversary comes on Labor Day, but as we have been celebrating that occasion with a theater party two years, thought September most too warm for that kind of amusement, and consequently have postponed the anniversary until October. We did the same this year; saw the Charity Ball, were received by the actors and actresses, and then proceeded to a nearby hotel where, amid laughter and gaiety, we had a fine dinner. How many courses we had I do not remember, but do know they were all good, and I imagine if they all felt as I did they must have been "too full for utterance." Our chairman has now a very handsome gilt clock for which we are selling chances at 5 cents each. We expect to be inspected at our last meeting in November. Of course you all know how we feel. Our hope is that we will come through with flying colors. I know all Divisions hope the same, so you will not think we have any better opinion of ourselves than any other Division. We are to raffle off our clock that evening and hope to have a real jolly social time.

We are to surprise one of our members tonight and no doubt will get a good deal of enjoyment

out of that. Perhaps our next scribe will tell you of that. Hoping this will reach headquarters in time for the next publication will wish each and everyone a very Merry Christmas and a bright and prosperous New Year. Yours in F. I. & P.

ALICE R. BROWN.

G. W. STEVENS Div. 124, of Hinton, W. Va., wishes to call attention to the fact that her silence has not been caused by any deadening of activity but that she is very much alive indeed, and we are steadily increasing in numbers while the interest in all Division work keeps pace with the growth in membership. We have instituted a social hour at the close of the first meeting of each month, which is a deservedly popular feature and might be followed by other busy Divisions whose members have not as much time as desirable for social intercourse. There are twelve committees of three members each appointed so that no Sister is required to help serve more than once a year. Each month the committee assigned furnishes and serves light refreshments, cream and cake being especially popular, and as we have our own cups, saucers, glasses, etc., it is a light and pleasant task to wait upon the merry assembly, and I am sure this hour of pleasant chat over the dainty refreshments helps wonderfully to cement the fraternal and kindly affection without which our Order is but a formal sham.

Besides the monthly social we indulged in two picnics this summer. The first given in honor of our popular visiting Brother and Sister John Culling, of Bluefield, was held at Riverside Park in August, and was voted by all a huge success from the swimming lessons to the bounteous supper, although the aforesaid swimming lessons were a source of much anxiety to one Brother's pretty little daughter.

The second picnic was participated in by the Auxiliary alone, and was partly a visit to an out-of-town Sister, who is too far away to meet with us often, but all who went reported it a pleasant outing.

We have bought a nice piano for the Division room, which adds so much to the ease and pleasure of our floor work. Sister Johnson's visit of inspection has given us so much enthusiasm and been so inspiring that we are trying to drill as near to perfection as we can in all of our beautiful ritual work.

To Sister Johnson's visit we can hardly do justice, for we feel that our pleasure in her instruction was equalled only by the knowledge imparted. And so kindly and gracious were her corrections that we forgot to blush for our errors in the drills given.

Sister Charles Hayes entertained Sister Johnson while here, but she was not allowed to monopolize her, for a social Thursday and Friday evenings gave all the Sisterhood a chance to participate, and we wound up the three days' work by an oyster supper at the Union Restaurant, which was served in very nice style to a large and jolly party at 9 o'clock Saturday evening.

We shall always look forward to inspection as a

pleasant feature while Sister Johnson is our Inspector, and are resolved to keep on in our efforts for advancement till we attain such familiarity with our work that we will not dread even the most rigid inspection.

SECRETARY 124.

It has been a long time since you all have heard from Div. 2, but I will say we are still in existence and doing as well as expected. Our attendance is not very good, but outside of this one fault we are getting along fine.

On the 11th of October our Division was inspected by Mrs. Frank Howard, of Newark, O., and I think you will find her report for us very good. We also enjoyed along with Mrs. Howard's visit that of Mrs. Lizzie Huffman, of Cambridge, O. She being a close friend of Mrs. Howard, accompanied her on her inspection tour. They stopped with Mrs. G. H. Swisher, President of Division, while in Grafton, and the Division enjoyed the ladies' visit very much and hope they may come to see us all some time again.

PRESIDENT OF DIV. 2.

MARVIN HUGHITT DIV., 74, Boone, Ia., decided to pay her indebtedness and at the same time make some new acquaintances so she issued invitations to six neighboring Divisions, namely: Belle Division, of Belle Plaine, Ia.; Mrs. Robt. Quayle, Clinton, Ia.; Mercy Division, Cedar Rapids, Ia.; Marechal Neil Division, Marshalltown, Ia.; Protection Division, Des Moines, Ia.; C. S. Vanderberg, Valley Junction, Ia. Also an invitation to our Grand President to meet with us October 20th, that being our regular meeting day. A goodly number responded from all the Divisions except Mercy Division, from which was sent a letter of regret. Sister Murdock was not able to be with us on account of another engagement, but wrote us a very sisterly letter which was read at the meeting.

The guests were conducted from the trains to our Division rooms. A cateress and her maids were hired for the day. Dinner was served at noon in our dining room. Meeting was called at 2:30. It was a very pretty sight to see the six Presidents and Grand Organizer and Inspectress, Sister McBride, of Valley Junction, seated on the rostrum and a double row of Sisters around the room, there being eighty-four in all. The officers were greatly cheered on their drill. They were all dressed in white. Our inspector tells us she never saw the balloting march done nicer by any Division. An early supper was served the Sisters from the south, who took their train at 5:20. The rest were served at 6:30. The evening was spent in a social way, the Sisters dancing the Virginia reel and Old Dan Tucker. A handkerchief was tied on the arm of some of the Sisters which transformed them into men, for when the dancing began we missed the sterner sex. The Sisters for the east departed at 10:10. The visiting Sisters all claimed they had had an enjoyable day and the members of 74 were more than pleased to entertain them. We were inspected Oct. 10.

CORRESPONDENT.

It was with joyous hearts that 16 ladies, members of Supreme Div. 344, G. I. A. to the B. of L. E., and 8 Brothers of J. T. Harahan Div. 602, B. of L. E., boarded the train for Chicago, Ill., Oct. 18, in response to an invitation from the ladies of Mrs. W. H. Willis Div. 5, of Burnside, to come and repay them a visit. Although the weather was very disagreeable, it having rained all night, and was still raining very hard when we left. Still we were all very brave, and not even a hard downpour of rain could keep us home. We arrived in Burnside at 10:40 a. m., being met at the depot by a committee composed of ladies from Div. 5, and several Brothers of Div. 10. They took us to their Division room where a most delicious lunch was served, and I am sure we all did it justice, being nearly famished after our long ride. At 2 p. m. we were called to order by the President, Sister Meldreim, of Div. 5, and we spent a very profitable afternoon, as the ladies of Div. 5 are very well drilled in their ritualistic work, and the ladies of Div. 344 were greatly benefited by the excellent manner in which the Sisters of Div. 5 exemplified the work.

In the evening we all met at the depot and took the cars to 66th street, where an elaborate reception was held at the beautiful home of Brother and Sister Sampsell. The ladies all looked lovely in their dainty evening gowns, and the Brothers, bless their dear hearts, looked most charming, all attired in regulation evening attire. Railroading was entirely forgotten, for once at least, and everyone enjoyed the evening immensely. During the evening Sister Davis treated the visitors with some excellent vocal selections, also to several instrumental duets, accompanied by her charming daughter. Miss Miller also charmed the visitors by her excellent playing. Brother and Sister Sampsell have a most beautiful home, and proved themselves a charming host and hostess. At a late hour we separated to spend the night as guests at the homes of the different ladies appointed by the committee to entertain us, and to meet again the following morning at 10 o'clock to take the cars to the city, where we were all to meet at Rothschild's at 12 o'clock for lunch. Precisely at 12 o'clock we sat down to an elaborate lunch to the number of 42. During lunch hour an orchestra of 10 pieces discoursed sweetest music, which we all enjoyed very much. When all had satisfied themselves we took our departure for the Olympic Theater, where seats had been engaged for the crowd. As we all sat together we enjoyed the entertainment immensely. When the last number was on we started for the depot, where we spent a half hour or more in handshaking and bidding good byes to our friends, and trying to express our thanks to the ladies of Div. 5, and also to the Brothers for the excellent way in which we were entertained while in their midst. Words cannot express our appreciation of their kindness, and we hope in time to be able to repay them. At 6:20 p. m. we boarded the train for "Home, Sweet Home," where we arrived at 9:45 p. m., all very tired but feeling we had been well repaid for our trip.

M. H.

The following are a few notes in regard to the charity bazaar held Oct. 19, 20 and 21, by Div. 29, Terre Haute, Ind. The work was divided among the following committees: Arrangement and advertising, supper, fancy work, apron, ice-cream, candy, domestic, fishing pond, doll booth, soliciting committee. The general committee was composed of the President, Secretary and Treasurer, Sisters Kingery, Viqueaney and Shea. The Brothers of Div. 25 assisted the ladies in arranging and decorating, and did not forget that supper would be served, also reminded their firemen and friends of the fact. The proceeds amounted to \$151.75, of which \$50 was voted to local charities as follows: Twenty-five dollars to Home for Friendless and \$25 to Day Nursery. The balance of proceeds will go to Division treasury, from which such appeals for charity or needs will be responded to as may come before the Division in their own order work.

Div. 29 has a membership of 58; of which 15 are out of the city; 10 have been taken into the order this year by initiation. We are nearing the close of a very prosperous year, both financially and in the interest manifested in the work, and it is the desire of the officers that these conditions may continue.

W. H. K.

AGAIN the Sisters of W. D. Robinson Div., 349, G. I. A. to the B. of L. E., at Washington, Ind., have distinguished themselves in a truly sisterly manner. "Actions speak louder than words." One of the most enthusiastic of their members, one who had spared neither time nor expense to make this little band just what it is—a grand success—is Sister Stump. She held the position of collector of insurance in Div. 349. A railroad man's wife's position is invariably one which is not certain where her abiding place may be for any length of time. So with dear Sister Stump. Her liege lord having located at Danville, Ill., Mrs. Stump has, much to the sorrow of the G. I. A. Sisters and a host of other friends, left this city for Danville. On Saturday afternoon, the 28th of October, the Division ladies determined to present Mrs. Stump with a remembrance of their friendship. A luncheon was given at the beautiful home of Brother and Sister Haag, where all the members of 349 met. Sister Waggoner was selected to make a presentation speech, and in a well modulated tone she addressed Sister Stump. The words and the manner of denunciation affected those present alternately to smiles and tears. In conclusion she presented Sister Stump with an elegant and costly souvenir spoon. Like the majority of the recipients of surprises Sister Stump was so overcome that she was not able to reply as her heart dictated, but those present understood her appreciation of their gift. Sister Stump has the best wishes of all her friends as she leaves for her new home. An elegant luncheon was then partaken of, after which games and other amusements which called for prizes were participated in. The first prize for the best cakewalk was won by Sister Hugh Sullivan, who certainly deserved the compliment as the gymnastics she performed were amazing. The prize consisted of a pair of

Maltese kittens. No other gift could have pleased Sister Sullivan half so well. Brother and Mrs. Sullivan spent three days creating a worthy receptacle for the repose of the pets, and then found the kits had grown so rapidly the basket was too small. I can testify that they (the kits I mean) are handsome, for I saw them myself. I expect the *kits* will be unusually big *kats* before I venture to see them again.

I made a very pleasant call on Brother and Sister Guth at their handsome residence a few days ago for the special purpose of seeing Mrs. Guth's lovely Mt. Mellick centerpiece. Space will not allow me (neither will my ability) to describe the beauty of this dear Sister's work, so I will refrain from any attempt.

Bro. By. Robinson and his estimable wife, President of G. I. A. 349, had for visitors a few weeks ago Mr. and Mrs. AL Snyder, of St. Louis. Mr. Snyder is a half brother of Mr. Robinson's, and by the way each and all dear and respected friends of the writer and family for over 25 years. How it makes the heart throb with joy to find that we are remembered by old friends after (in Mr. Snyder's case) an absence of 25 years. Faithful friends are hard to find; must be a back number, for my experience has been faithful friends are numerous.

On opening the cover of the *B. R. T. Journal* for November the smiling countenance of Engineer H. Baldwin, of Mt. Carmel, Ill., was the first object I gazed on. During the past 20 years so many of our dear railway boys have gone to the Great Beyond. I can recall so many whose smiling faces have looked up into mine, whose warm hand-clasp methinks I can feel again as I write, whose words of greeting, hearty and earnest, as no other boys on earth can exceed. They are gone but not forgotten. In memory I retain a fond vision of those departed whose last run has been made, whose last report has been sent in, and who I feel certain will welcome me on the other shore.

Now, dear Sister Cassell, some time I may have the pleasure of taking you to visit the lovely homes of all the dear Sisters of 349, and then you will not be surprised at the pride I take in writing of them.

MRS. HENRY B. JONES.

SYRACUSE Div. 292 is a prosperous one, and is constantly increasing its membership and have many pleasant gatherings. Early in the year the Sisters, accompanied by their husbands, surprised our Past President, Sister Bosley, at her home, after partaking of the bountiful supper prepared by the Sisters, our President, Sister Heiser, in behalf of the Sisters presented Sister Bosley with a beautiful cut glass fruit bowl.

March 21 we banqueted at the home of Sister W. Martin, it being our second anniversary. We were pleased to have as our guests Sisters Bailey, Grand Treasurer, who organized Div. 292, and Sister Tunkey, both of Buffalo, N. Y. All present enjoyed the music dispensed by the orchestra throughout the evening. Sister Bailey met with us again Sept. 26, for the purpose of inspecting our Division. The hall was prettily decorated with palms, smilax, carnations, roses and dahlias.

After the business of the day was over all adjourned to the St. Cloud Hotel, where a fine dinner was served.

COR. SEC.

WHAT 236 has been doing in the past few months. Our President, Sister Daniels, has proved a very competent person for that highest office, as our Division is in a most prosperous condition. As to increase in membership and financially, we have had several card parties and one lawn social, which have been a success in every sense of the word. This summer our President suggested we have ice-cream and cake. It has added to the pleasure of the meetings and increased the attendance during the summer months. A short time ago Div. 404, B. of L. E., and 236 gave a banquet to the new Div. 68g. The tables were beautifully decorated with flowers, and the supper that was served reflected a great deal of credit to those who so willingly prepared it.

We had our inspection Sept. 28. Our Inspector, Sister Balz, is the right woman in the right place; it was a pleasure to have her with us, she making us feel as though she was one of our own members. After the meeting we adjourned to the banquet hall, where a supper was served by three of the Sisters.

A MEMBER.

THE Sisters of Div. 96, of Chicago, Ill., decided to change their ways and means to replenish their treasury by some other attraction than the much worn social, the afternoon pink, green or black tea if you please, or the evening ball or party. We, after considerable coaxing and hesitating, thinking some of us too shy, and maybe some too bold, some of us too tiny, but not one of us too old to try our ability to play, "not in our own back yards" but upon the stage before the people. So under the very able instruction of our Sister, Musician Latshan, we presented "The Spinster's Return." There were on the stage 29 Sisters and their friends that so kindly helped us.

We repeated the play the second night by request; it was indeed a success in every way possible, social and financial, and filled our treasury to the amount of over \$100, which we have in bank awaiting for orders. We solicited advertisements from our local business men, and in that way paid all expense of printing tickets, bills, etc., also hall rent. The play is one continual round of fun, and everyone apparently enjoyed the evening. We would recommend Sister Divisions to try being actresses for "one night only," and if they enjoy the rehearsals and performance the way we did they will repeat I'm sure and never regret having the stage fever. If there are any divisions that would care to undertake the play anyone of Div. 96 would be glad to give any information that they might require.

TINY SHORT VANTELSEL,
Cor. Sec. Div. 96, Chicago, Ill.

P. S.—I had almost forgotten to say that Sweet, Orr & Co. kindly donated a suit of overclothes to the best actress; it was won by Sister H. Kuhn, who took the part of our Dutch woman. She certainly deserved it, but was inclined to refuse it on the grounds that she doesn't wear the breeches.

T. S. V.

G. I. A. Voluntary Relief Association.

TOLEDO, O., Dec. 1, 1905.

To Division Insurance Secretaries, V. R. A.

You are hereby notified of the death of the following members, and for the payment of the following claims you will collect 50 cents from each member carrying one certificate, and \$1.00 from each one carrying two; providing, however, that no one be assessed on a certificate, if the application for the same was dated later than October 31, 1905.

ASSESSMENT No. 238.

Died Oct. 9, 1905. Sister Mary Blanchard, aged 45, of Div. 59, Pittsburg, Pa. Cause of death, cerebral apoplexy. Carried one certificate, dated May, 1903, payable to Ward B. Blanchard, husband.

ASSESSMENT No. 239.

Died Oct. 14, 1905. Sister Margaret Fogarty, aged 46, of Div. 249, Syracuse, N. Y. Cause of death, pneumonia. Carried two certificates, dated February, 1903, payable to Harry and Ward Fogarty, sons.

ASSESSMENT No. 240.

Died Oct. 3, 1905. Sister Louisa O. Artist, aged 60, of Div. 144, Cheyenne, Wyo. Cause of death, cancer of throat. Carried one certificate, dated July, 1896, payable to A. S. Artist, husband.

ASSESSMENT No. 241.

Died Oct. 10, 1905. Sister Lucretia P. Draucher, aged 71, of Div. 137, Harrisburg, Pa. Cause of death, uræmia, followed by paralysis. Carried one certificate, dated September, 1896, payable to Hiram B. Draucher, husband.

ASSESSMENT No. 242.

Died Oct. 20, 1905. Sister John Funk, aged 61, of Div. 201, Jersey City, N. J. Cause of death, paralysis, superinduced by chronic nephritis. Carried one certificate, dated June, 1900, payable to John Funk, husband.

Assessments Nos. 240, 241 and 242 will be paid from the Assessment Fund.

Members will pay their Insurance Secretaries on or before Dec. 31, or be marked delinquent; and in order to reinstate must pay a fine of 10 cents on each certificate besides the delinquency. Insurance Secretaries must remit to General Secretary and Treasurer not later than Jan. 10, 1906, or stand delinquent till remittance is made.

Members in good standing Oct. 31, 1905, five thousand and eighty-one in the first class; and two thousand one hundred and thirty-two in the second class.

Slips for voting on age rating are being mailed to every Insurance Secretary. If not received by Dec. 10, please notify General Secretary and Treasurer.

MRS. GEO. WILSON, Pres. V. R. A.

MARY L. ROBERTSON, Gen'l Sec'y and Treas.

Runaways With Freight Trains.

BY R. H. BLACKALL.

A subject of general interest to railroad men is that of runaways, and a discussion of their most frequent causes and how to avoid them is of particular interest and value.

There are a great many causes for trouble in train handling; among the more important that may lead to a runaway are the following: Failure to inspect brakes properly before depending on them; allowing the speed of a train to become too great on a grade before the initial application; loss of air; loss of nerve; break-in-twos on grades and the non-use of hand brakes while repairing the damage; poor condition of brakes and the failure to obtain the necessary aid of hand brakes under these conditions; failure to recharge frequently; brake-pipe leakage that prevents a positive action of the triple valves to such an extent that the speed of the train is not materially reduced, this with the brakes applied.

Failure to inspect brakes: It is hardly necessary to call attention to the bad results which may follow this practice. If a crew is satisfied to leave, simply knowing that the hose are coupled, it is only a matter of time before the inevitable will follow. If the grades are light the evil day may not come so soon, but sooner or later the carelessness will be repaid by a price commensurate with the negligence. The brakes should never be depended upon except after careful inspection; the best in railroading is none too good.

Maximum speed before trying the brakes: There are many times when, in an effort to get over the road, sufficient care is not taken to insure safety. This is often seen at the summit of hills where the train is permitted to attain maximum speed before the initial application of the brakes is made. Not only is this done, but no

practical test of the holding power of the brakes is made on roads where places afford a means of this being done before the heavy grade is encountered. The initial application of the brakes should be made as soon as possible after the train has tipped over the summit, and in some cases before the rear end has reached the down grade. If this practice is followed and the brakes are poor, or an angle cock has become closed, or the brake pipe has been closed in any way, the crew will have an opportunity to obtain control with the hand brakes before the speed has attained such proportions that there is insufficient time for the crew to do their work before control of the train is lost. The first thing to do after passing over a summit is to try the brakes and to get the retaining valves in operation. With the retaining valves in operation, and holding 15 pounds, a comparatively light reduction will give a considerable return in the way of cylinder pressure.

Loss of air: This may be brought about in various ways; by making a series of light reductions, or permitting the air to gradually leak away, or by reducing the brake pipe pressure below the equalizing point between the auxiliary reservoir and the brake cylinder, thus, under the usual practical conditions, permitting a back flow of cylinder and reservoir pressure to the brake pipe with a consequent loss of braking power.

Fortunately, as the brakes come into more general use these practices become more rare.

Loss of nerve: This is a condition that scarcely needs enlarging upon. With the many and increasing duties of the engineer this characteristic is fatal; a cool head is an actual necessity to the safe handling of trains on heavy grades.

Break-in-twos and leakage: This is one of the most serious causes of runaways. It frequently happens that we figure on doing a certain piece of work in much less time than we can do it in actual practice. We never know what will turn up to increase the time necessary to accomplish a piece of work and, where there is danger involved, if our expecta-

tions are not fulfilled, it is best to be on the safe side and take the necessary precautions beforehand rather than to try to take them after it is too late. If a train is on a grade and a break-in-two occurs, the first thing to do is to apply a sufficient number of hand brakes to hold the train at rest, and this without the shadow of a doubt. Sometimes, thinking that the work will require but a few minutes, the crew depends upon the air brakes to hold the train. Leaky check valves are not a theory but a fact, and they will in many cases, where poor maintenance is the order, reduce the cylinder pressure very rapidly. Even if the train does not start, the pressure will be greatly depleted, and if a start is made immediately after coupling up it will be with such a pressure that maximum speed will be obtained before a recharge will have been completed. This puts a serious aspect on the case, and the engineer is confronted by too serious a condition, as the result of carelessness.

Poor condition of brakes, and the failure to call for the assistance of hand brakes: The poor condition of the brakes can usually be detected by the test, although some that will operate properly in a yard test will often do little work when the grade conditions are the controlling factors. Owing to the smallness of the feed groove some time is required to accomplish a recharge. While there is ample time in the yard for maximum pressure to be obtained, this may not be the case on the grade where the seconds between brake applications are all too short. With partially closed grooves on some of the cars they will not do their share of work; this may result in the amount of work performed by the brakes being insufficient to control the train without the aid of some hand brakes. The writer has known of several cases where the engineer has gotten into trouble simply because he looked upon the calling for hand brakes as a form of disgrace. It is no disgrace to be unable to control a train of cars which has not been properly cared for, but it is a disgrace not to call for aid when it is needed. The closed, or

partially closed, feed grooves can be detected by the "thermal wheel test," which test is used on many of the railroads having the heavy grades. When a wheel is found cold at the foot of a heavy grade it is a strong and indisputable evidence that the brake on this car, though reported working, is not doing its share of work.

A test is necessary, before using the brakes, to secure definite information as to how many are working, that all angle cocks are open and that everything is in such a condition that we are warranted in placing dependence in the brakes.

Failure to recharge frequently: It is a mistake to try to run a hill with recharges few and far between; this is a mistaken economy. Safety is of the first importance, and to obtain the greatest safety it is necessary to be able to stop in the least possible distance should occasion arise. To stop in the minimum distance it is necessary to have the maximum pressure allowable; to have this pressure it is necessary to keep the brake pipe pressure as nearly as possible to that carried as a maximum. This can only be done by making heavier initial reductions, thus "charging the retaining valves," and then accomplishing a recharge while the brake cylinder pressure is gradually reducing to that which the retaining valve is supposed to hold. This is the practice generally used in mountainous country and has been productive of very good results. The great trouble experienced when trying to run a train with too few recharges is that the train cannot be brought to rest within a practical distance upon being flagged. Owing to the greater time necessary in which to recharge, the variation in speed must necessarily be much greater, since the speed at release must be correspondingly slower to permit of a recharge being accomplished before the speed of the train becomes excessive.

Permitting brake pipe leakage to run the train after the initial reduction: One of the worst things to do is to permit the leakage in the brake pipe to run a train

after the initial reduction has been made. It is not uncommon to have a train where the leakage is sufficient to cause an amount of air to reach the brake cylinder such that it will merely compensate for the cylinder leakage; with this condition existing an even run will be made until such time as the air gauge tells the engineer that it is high time to recharge. If a signal should call for a stop at such a time, it is a question if the engineer would be able to bring the train to rest in a reasonable distance. If no call for a stop exists, the train will have attained an undesirable speed by the time a recharge has been accomplished. The steeper the grade the more objectionable will be these results, and the greater will be the necessity to observe the most approved rules of manipulating the brakes.

A brake pipe with a leak such as just described is very likely to lead an engineer into trouble, while one that leaks sufficiently to cause the breaks to creep on comparatively fast, after the initial reduction, will make it necessary for a recharge to be made frequently; the result is that the safety is something greater with a train having a fair amount of leakage than one in which the leakage is such as will permit the air to leak away without giving any warning to the engineer.

Frozen brake pipes: Another cause for runaways is frozen brake pipes, but even they will not necessarily lead to trouble if running tests are made and an early application of the brakes is made as a train is going over the summit of a hill.

The thing usually responsible for frozen brake pipes is improper cooling of the air. Until the last three years the importance of cooling the air properly was not generally understood. The air taken into the pump is accompanied with a certain amount of moisture. This moisture is given off as the air is cooled, hence it is essential that the cooling take place before the air passes into the brake pipe. On many of the old engines are found reservoirs of small capacity, which do not afford the proper radiating surface to per-

mit the air to become properly cooled before it passes the brake valve. This is especially true during such time as a recharge is being made on a long train. The longer the train the more the air that will have to be compressed, and owing to the small amount of air stored in the main reservoir for recharging purposes the faster the pump will have to operate, so that the auxiliaries will be recharged before the speed of the train becomes too great. As a result the tendency for heating is greater notwithstanding the fact that the radiating surface is too small. As a result of those improper conditions the water works back into the brake pipe where all that is necessary to cause trouble is some cold weather.

To get as far away from this trouble as possible the main reservoir should be not less than 50,000, and good results have been obtained with a reservoir capacity of 70,000 cubic inches. If the reservoir capacity is overdone no special gain is made, since the pump would be unable to pump up maximum pressure between the brake applications. If this condition existed the release of the brakes would not be as prompt and there would be a greater tendency for the brakes to stick.

The Interstate Commerce Commission reports an occasional case in which the engineer expects too much of the brakes. These cases would seem to indicate that an occasional engineer gets the idea that so long as the train is equipped with air brakes and all, or most of them, are coupled up and working, it is only necessary to apply the brakes to stop and they will do the rest. On a grade the speed of a train can be such that it is not within the power of the brakes to bring the train to rest. It is simply a case of work by the brake shoes overcoming a certain amount of energy. If the energy represented by the speed and weight of the train is greater than the friction between the shoes and the wheels the stopping of the train is out of the question. Due allowance should always be made for a high speed.

One of the first things which should be done when crossing the summit of a hill

is to overcharge the brake pipe so that if the brakes are not holding properly we will have something to fall back on until the crew has an opportunity to help out with some hand brakes. Hand in hand with the overcharge should go the early application of the brakes, and this before the speed of the train is such that, if the brakes are not holding properly, the brake pipe should be frozen shut, etc., the crew would have ample time to get control of the train before it was running away.

QUESTIONS AND ANSWERS.

Q.—F. D. W.—I had an engine the other day where the piston in the brake valve would open all right when I made a reduction and it would close all right. In two or three seconds it would lift of its own accord and finally seat. In a little while it would do it again. I couldn't find any leaks, and would like to know what would make it do this. Why didn't it do this in running position?

A.—You undoubtedly did not look in the right place for leaks, for there must have been a leak to produce this action.

A reduction above the piston is necessary to cause the piston to rise. If it was seated properly and then rose of its own accord, there must have been a leak above the piston. This could have been in the brake valve itself or it might have been in the pipe connections to the little drum, or in the little drum itself. We have also known of cases where this leakage was found in the tube of the gauge connected to little drum pressure, or in the pipe leading to the gauge.

The reason this defect did not manifest itself in running position was that in this position the leakage was being supplied by the air coming through the feed valve.

The action described would not result if the packing ring in the equalizing piston were worn so that the pressure above and below the piston could remain equal. This is usually sufficient to compensate for any slight leakage.

Q.—K. M.—Why is it that it is easier to handle passenger trains that have inside hung brakes than those where the cars have outside brakes? It may be there is

some reason for it or that I only think it is so, but it seems to me that the train stops smoother with the inside brakes and there is less lurching.

A.—Trains certainly can be handled more smoothly with inside hung brakes. The principal reason for this is that the brakes being hung so much closer to the center of the truck, the power acting to distort the truck is greatly reduced. The longer the lever the greater the amount of work that can be done by a given force. The lever arm in the one case is several feet while in the other it is but a few inches.

If you will imagine a car running in a certain direction and consider the direction of the rub of the wheel against the shoe, you will see that this direction of rubbing is just the opposite of that in the case of outside hung brakes. This being true, the tendency with the inside hung brake is for the rubbing of the wheel against the brake shoe to tilt the truck backward, while with the outside hung brake the tendency is to tilt truck in the direction of the motion of the car. In the one case there is considerable distortion, and very little in the other with the result that, as you say, the stop is much smoother with the inside hung brake. If the stop with either brake is made without making a release before the train comes to a stop the shock is much less severe with the inside than with the outside hung brake.

Q.—R. H. K.—Which has more braking power, wooden or steel cars? It seems to me the brakes take hold better when I have a string of empty steel cars than when there are mostly wooden cars in the train.

A.—It makes a difference to what part of the country you refer in answering this question.

Some roads apply the same percentage of braking power to both steel and wooden cars. If this is done there will be a higher percentage of braking power on the wooden cars after they have seasoned out. After this has occurred the braking power is very materially increased. If proper allowance is made for this the braking

power should be about the same in either case.

In equipment recently installed by some roads the percentage of braking power has been increased somewhat, especially on steel cars, so that in this case you may be correct. Your question can hardly be answered unless the conditions are given more in detail. The Westinghouse Air Brake Company now recommends a braking power of 85 per cent for steel cars and 80 per cent for wooden cars. In steel cars are included wooden cars with steel under frames.

Q.—W. F. B.—Can you tell why it is that there is less wheel sliding on passenger cars than there used to be? I have run passenger trains for a number of years and there aren't near as many wheels sliding on the trains I run, anyway as there used to be.

A.—One of the principal reasons for this is that the science of a good foundation brake gear is better understood, and the braking power on all the cars is more uniform than formerly. There was a time when the braking power on many cars was materially lower than it is now. When the higher braking power was resorted to on new cars these did more than their share of work, with the result that many were in favor of reducing the braking power to reduce the wheel sliding. Instead of reducing the power it was urged by many to raise the percentage of braking power on the old cars to what it was on the new cars. Almost invariably this practice was followed by a great reduction in flat wheels. This was because all of the cars were compelled to do their share of work.

Another thing that has helped to reduce the number of flat wheels was the introduction of the higher speed brake combined with the practice of making a heavy initial application of the brakes, followed by a release at a slow speed and a reapplication. The stop was thus made with a low cylinder pressure, the pressure being low at the time when the greatest danger of wheel sliding existed.

The heavy reduction when using the speed brake would cause the high speed reducing valve to blow slightly. When

it closed all cylinders had a pressure of 60 pounds regardless of the piston travel. It will thus be seen that the high speed reducing valve acts, in a way, as a slack adjuster tending to compel each vehicle to do its share of work.

The general introduction of inside hung brakes has also played an important part in the reduction of flat wheels. By the use of this style of foundation gear the tilting of the truck as well as the wedging action of the brake shoes has been greatly improved.

Good Engines vs. Disabled Enginemen.

J. W. READING.

[Continued from November JOURNAL.]

In my last contribution to the JOURNAL entitled "Good Engines vs. Disabled Enginemen," the moral must be obvious to all; however, there is more of the story, and if Brother Salmons does not "call time" on me I will tell the rest in future numbers of our magazine.

Before going further along the lines as depicted in the story, I deem it necessary that I digress for a time and call attention to a few matters which I consider of the utmost importance.

The subject upon which I wish to treat in this article has more or less bearing upon the theme of the story which I hope to continue later.

Every employee in the traffic department of our American railroads should familiarize himself with the laws governing the Interstate Commerce Commission, at least as far as the laws may apply to the conditions that surround and confront the engine and trainmen of our country.

It is not generally known to the class of employees named that there was a law enacted in 1901 making it obligatory upon all railway companies doing an interstate business to make, under oath, a monthly statement of all accidents occurring on their respective lines, giving full particulars regarding persons injured or killed, the amount of damage and the cause, if known. Accidents which do not

cause a monetary loss in excess of \$150, and only slight personal injuries, do not have to be reported. This law was approved March 3, 1901, and became operative July 1 the same year.

Since this statute went into effect, the Interstate Commerce Commission has been publishing quarterly a small pamphlet which they call an "Accident Bulletin." The first bulletin is called No. 1, and comprises the months of July, August and September of the year 1901. No. 2 comprises the months of October, November and December of the same year, and so on down to the present time. The last bulletin out, No. 16, brings the record down to June 30 of this year. These pamphlets are sent to the railway officials most directly concerned in the traffic departments of the lines they represent.

The commission goes into considerable detail in their report of some of the more prominent accidents, especially when there is great property damage, loss of life, and serious personal injuries. They, at times, comment quite freely and right to the point on causes given for some of the more distressing accidents. The Commissioners do not make known name of road, time, or place in their report of an accident, which is no more than just, as far as the corporations are concerned. These accident reports are, or should be, of great value to the progressive, thinking railway official.

We can learn a great deal in this life from the experience of the other fellow, profit through his mishaps and ape his proceedings when they are an improvement on our own; this applies to all affairs of life. These bulletins are certainly educational and, no doubt, have been very valuable in some respects.

My idea is, and has been for some time, that the commissioners' reports should not only be read by the man in authority, but also by the "man behind the gun." Every Division of the B. of L. E. and O. R. C. should be the recipient of a copy as soon as published and it should be a law of these orders that they be read and discussed in open meeting; the reading of the same should not be confined to

one meeting, but several of them, so as to reach as many of the Brothers as possible. These pamphlets should be on the tables of railway reading rooms so that all classes of employees could have access to their contents, and the officials most concerned on these lines where the train and enginemen have some comforts while off duty should, when a new report is published, post a notice to that effect and therein respectfully request that all employers read it.

I have compiled some statistics gleaned from the sixteen accident bulletins already published, and which comprise the four years ending June 30 last. I have also drawn a few comparisons, showing the increase in the number of accidents in the last quarter over first quarter four years ago. During the four years the total number of accidents were 42,193. This, of course, includes all kinds of road mishaps. The property loss reaches the enormous sum of \$36,281,829. The losses incurred through personal injury and death claims are not known, but must be of mammoth proportion which, if added to the figures given above, would make a sum total that would be astounding.

The greatest number of accidents reported during any single quarter occurred during the three months ending March 31, this year, and number 3,103. The greatest property damage for any single quarter is shown in Bulletin No. 9, which has a report of the number of accidents for the three months ending Sept. 30, 1903, and amounts to \$2,584,348.

During the first quarter ending Sept. 30, 1901, the property damage was \$1,842,224. During the sixteenth quarter ending June 30, last, the loss was \$2,410,671. The increase in property damage during the sixteenth quarter over the first amounts to \$568,447.

In the matter of personal injuries and death the first quarter shows a total of 11,212—725 killed, 10,487 injured. In the last quarter the total is 14,669—886 killed and 13,783 injured. These figures show an increase of 161 killed and 3,296 injured in last quarter over the first.

The above statement refers to passengers riding on trains, also getting on and off trains, and to engine, train and yardmen in the performance of their duties. The increase in number of passengers killed and injured in last quarter over first is 22 killed, 52 injured.

Out of 447 of the most prominent accidents reported for the four years, 279 are charged against the engine, train and yardmen, 73 to the train dispatchers, operators, block signal men and others in like calling, 125 to track men, defects in rolling stock and track, train wreckers, fires, and many causes unknown. Sixteen engineers are charged with being asleep on duty, and two with being intoxicated.

If the ratio of cause for these 477 prominent accidents were in evidence in the total number of 42,193 occurring in the four years there must have been 1,424 accidents caused by the engineman falling asleep, and 178 through intoxication.

The most serious accident of the four years is reported in Bulletin No. 10, and refers to the wreck that was caused by the timbers falling from a car in transit, said timbers obstructing track of trains in opposite directions.

I will quote in part from the report of the Commissioners:

"Derailment happened to an eastbound passenger train running about forty or forty-five miles an hour. It struck an obstruction consisting of heavy timbers 21 feet long, derailing the entire train except the two rear cars.

"The timbers had fallen from a car of a westbound train on the adjacent track by reason of stake ties parting and stakes breaking. . . . The cause of the accident is reported as carelessness on the part of the employees in the lumber yard not selecting stakes of good size and quality to make the load secure, and failure of car inspectors to detect this defect.

"The timbers were loaded by the shipper and the load was inspected by the agent of the railway company at the shipping station. It was also inspected by two successive conductors who were in charge of the train that hauled the car to the first division point, and by the

inspector of this division point. . . .

"The passengers who were killed were nearly all scalded by steam which escaped from the dome of the engine, which as a result of wreck was left in such a position as to emit steam into the leading passenger car, which was the smoking car, etc."

The record shows 65 killed and 4 injured in the unfortunate calamity.

The Commission reports further:

"It appears that only four other train accidents have occurred in this country which have caused as many as 65 deaths each. These four are recorded as follows:

"In 1856, Camp Hill, Pa., 66 killed; 1876, Ashtabula, O., 80 killed; 1887, Chatsworth, Ill., 85 killed; 1888, Mud Run, Pa., 66 killed.

"The total number of passengers killed on all roads during the tenth quarter, which ended Dec. 31, 1903, was 147, which was more than three times the average number killed during the nine preceding quarters which average 43 4-9."

My reasons for quoting so freely from the Interstate Commerce Commissioners' report on the last named disaster, is because it will have considerable bearing upon reading matter that I hope to contribute to future editions of the JOURNAL.

There are a great many serious charges made by officials of various railways against certain of their employees whom they, the officials, consider entirely to blame. In a large number of cases, the engineer, or both engineer and fireman, gave up their lives and the charge against them could not be refuted. In numerous instances, while the claim is not made that enginemen were asleep, yet the reading of the report is undoubtedly intended to convey that meaning.

I will take the liberty to quote again, this time from No. 7:

"Collision on long tangent; night; running very fast; disregarded distant and home block signals, also three red lanterns at different points. This engineman was killed. His eyesight was perfect one year before the accident."

Quoting again from Bulletin No. 12:

"Engineman (experienced) ran past three automatic stop block signals. Signals

were 6,410 feet, 8,890 feet, and 1,330 feet back from point of collision. Flagman back 1,000 feet."

Again I quote, this time from No. 15:

"Engineman running at high speed at night ran past distant signal without observing its position and then ran 900 feet past home signal, striking preceding train which had been stopped because of a hot journal."

You will note that in none of the three cases mentioned was the charge made that the engineer was asleep; yet the logical deduction taken from such reports conveys that meaning.

In the first collision mentioned, there were 23 killed and 85 injured. In the second case there were 9 killed and 21 injured. In the third affair 7 were killed and 142 injured.

There are other cases recorded very similar and the reader is left to draw his own conclusions. There are a great many things recorded in the accident bulletins that engineers should know, and I hope this article will create a desire among our Brothers to read future numbers as fast as published.

Engineers so desiring might possibly get the back numbers by writing to Mr. E. A. Moseley, Secretary Interstate Commerce Commission, Washington, D. C.

Broken Graduating Pin.

GARRETT, IND., NOV. 3, 1905.

EDITOR JOURNAL: In the October JOURNAL I read the answers of Bro. Ray C. Mead, Div. 297, Bro. Frank L. Davis, Bro. E. A. Lindsey, Div. 584, and Bro. A. H. Kelley, Div. 534, to Brother Dixon's question on broken graduating pin, and I would like to throw a new light on broken graduating pins.

If you have a broken graduating pin and operating brake in a short train, it will cause undesired emergency as stated, but if you have fifteen cars or more it will not cause brakes to go into emergency.

My reason for the above statement is the triple piston moves slowly until it strikes stem J. No air has passed from auxiliary to brake cylinder, but as brake pipe pressure reduces auxiliary, air will force triple piston toward emergency until removed portion of slide valve admits air to pass from auxiliary through port T to top of piston 8, which is not an air-tight fit; if auxiliary air will pass by piston 8 to chamber X and direct to brake cylinder as fast as brake pipe pressure is reduced, you will not get emergency application of your brakes. Have your air brake instructor try it for you.

WM. SHRIVER, Div. 452,

Air Brake Instructor B. & O. R. R.

Reply to Brother Mayall's Question.

ROCHESTER, N. Y., NOV. 10, 1905.

EDITOR JOURNAL: In reply to Brother Mayall's questions in the September number on train rules, will say:

Question No. 1—Upon returning from getting coal and water I would not ask for another work order, as my work order is good until 7 p. m.

Question No. 2—First No. 1 can flag to H on the orders of second No. 1. No. 2 having a positive meet order on second No. 1 at H, cannot leave H until that order is fulfilled, superseded or annulled.

To the same Brother's inquiry as to why engineers do not receive better treatment from railroad companies if it costs \$10,000 on an average to educate an engineer, I would say there are several reasons, among which may be mentioned jealousy (of some petty official), ignorance (note cases mentioned by the Brother for illustration) and "penny-wise and pound-foolish" ways of doing business.

In reply to Brother Lindsey, page 808, September issue, would say that engine numbers in train orders are simply for convenience and certainty in identifying the train. It used to be the practice to give the conductor's name. I got caught once in mistaking one conductor for another, although there were no serious results.

"Youngster," Div. 452, on page 811, asks if running an engine is a trade. It certainly is, and there is no more reason why enginemen should be required to commence work thirty minutes or any time before pay commences, than in any other trade. It has become an established rule, however, and it will be a hard thing to change it now. An engineer's responsibility commences when he steps onto the engine at the terminal and ceases when he makes out his report. If you do not believe it, let anything happen to the engine after you get on to her and see if you are not held responsible, even if you have not moved her. That is at the beginning of the trip. Now, at the end of the trip just neglect to report some necessary repairs and see if you don't hear about it.

Possibly they may hand you out a few days' "leave of absence." Then you must be held responsible until your reports are made out.

Our pay should commence at the time required to report for duty, and end a specified number of minutes after arrival on ash pit. The time allowed after actual time of arrival at ash pit should

be sufficient to allow of inspection of engine and making out reports.

Here are some problems. Northbound trains are ruling trains:

"Engine 200 will run extra G to F, to meet extra 201 south."

After extra 200 north arrives at F, she receives an order to run extra F to A, but says nothing about extra 201 south. Extra south engine 201 has not yet arrived at F.

Will extra 200 north await the arrival of extra 201 south, or proceed under the last order, regardless of extra 201 south?

"Engine 200 will run as No. 20 G to F, and will meet extra 201 south at F."

Upon arrival at F, engine 200 receives an order to run as No. 20 F to A, but says nothing about extra 201 south. Extra 201 south has not yet arrived at F.

What will you do under these circumstances? These problems have caused considerable discussion here.

Yours fraternally,

"B."

Grew Up Before He Got Home.

TRENTON, N. J., Nov. 7, 1905.

EDITOR JOURNAL: The "Hogbackers" who run from Morrisville to Jersey City and return will appreciate the following lines which describe how railroading used to be on the New York Division of the Pennsylvania R. R. before the opening of the freight yard at Greenville:

I run on the Pennsy and carry a grip,
Twenty hours overtime every trip;
I have a good job the people say,
For I work by the hour, and not by the day.

When I left home one trip the baby could creep,
When I went back he could walk;
I left again with three hours' sleep,
And when I returned he could talk.

Yours fraternally,

B. R. DIXON, Div. 373.

Troubles of the English Engineer.

The following selected from the correspondence columns of the *London Railway Review* will bring to the mind of many of our older members, their trials and tribulations in trying to burn bad coal, and to burn enough of good coal to handle trains much too heavy for the capacity of the heating surface to supply sufficient steam, and jemmies and hooks were many times used to force draft, even when it was a penal offense if caught at it. Increased load on the same old power is what our English consins are struggling with, and over there, as it was here, a lot of grief

must precede the official conviction that larger power with larger heating service must come with heavier work.—EDITOR.

JEMMIES ON THE L. & N. W.

SIR:—The last fine sheet exhibited in the different loco. departments on the L. & N. W. shows that men are again being suspended for using jemmies in their engines. Now, what are we enginemen going to do about this matter? It has become such a general practice to put a jemmy in an engine so that we could get along, that we had got an idea that the practice was winked at by our officials; and in some of the passenger engines at Crewe jemmies are knowingly used, and, if they can be used on Crewe engines with official cognisance, why can't the enginemen at other sheds be allowed to use them? The coal supplied to the engines at our different loco. departments is some of the worst stuff that can be possibly got. The tubes are not cleaned out and cannot be, because the engines are working all the time, with the exception of the time they are being washed out. The boilers of most of the engines at my shed are in a filthy condition. We generally have to go up to the coal stage to find our engine, and often have to get coal on before we start examining the engine, and all in half-an-hour. And yet, working under the disadvantages that I've already mentioned, we are supposed to get through our work as though we had good engines to do the work with.

To get through with our trains in any form at all we have to put a jemmy in the blast pipe of the engine, and then very often it is a struggle to get enough steam. We dare not go to work without our collection of jemmies; the engines are in such a state that if we didn't make sure of them before we started we should get suspended every day. Taking my shed as a fair example, I should say that 90 per cent of the train engines on the L. & N. W. have to be "jemmied" by the men, or else a ferrule is put in by the shed staff. If every engineman who is caught "jemmying" an engine is going to be suspended it is a serious matter, and the sooner we take action the better.

Let us refuse to again jemmy any engine, and if we can't get along stop and blow up. Let us report all engines which won't steam to our respective foreman, and he will be responsible if he refuses to have the engines made to steam more freely. Unfortunately, in the L. & N. W. loco. department, as in many other places, we have men hardly worthy of the name, who will do anything to keep in favour with the foreman, and it is to such men that we must look for the state of service in our department. For goodness sake let the loco. men of the L. & N. W. raise a little spirit to fight against the cutting of trip rates, lessening of the time to get our engines ready, keeping back advances in wages, and other things, which are making our lives a misery. We can only resist retrograde steps by united effort. We are worse off in our conditions of service than most other railways, and yet we are classed as the A1 company. May the loco. men soon wake up is my earnest wish.

Your, etc.,

A. JEMMY.

Railroad News Gleanings

Celebration of the Birth of the Erie R. R.

On Nov. 10 the Erie R. R. celebrated at Deposit, N. Y., its seventieth anniversary, by erecting a monument with appropriate exercises. The programme for the day included a chorus of 250 voices to sing selections, including the Erie anthem, especially composed for the occasion. Assemblyman J. B. Rogers, of Binghamton, delivered the address of welcome. Mr. John B. Stanchfield, of Elmira, replied on behalf of the Erie R. R. and Lieutenant Governor M. Linn Bruce, of New York, made the oration of the day. The monument is of native quarrying, being taken from the side of the railroad at Lanesboro, only a few miles away. It is practically a monolith. Upon its face it bears a plate reading: "Here, on the morning of November 7th, 1835, ground was broken for the construction of the Erie railroad, designed to connect the Atlantic ocean with the Great Lakes. Its completion to Lake Erie was publicly celebrated in the city of New York and along the route to Dunkirk May 14, 15 and 16, 1851." The first ground was broken for the New York & Erie R. R.—as the line was christened at the outset—at sunrise on the morning of Nov. 7, 1835, at the exact point where the monument has been placed. There were present at that time some thirty persons, among them President King of the railroad with his executive staff, which included Comptroller Samuel B. Ruggles and Treasurer Peter G. Stuyvesant; Lieutenant Governor Root, Judge Drake of Owego, Judge Pine of Deposit and many others. Colonel George D. Wheeler, whose father owned the farm adjoining the site, attended the celebration. He attended the dedication and told of some of his impressions of that eventful time. He is still in good health, though 87 years old. Recently he said: "President King, first official head of the Erie, spoke, saying: "What now appears a beautiful meadow will in a few years present a different aspect—a track of rails, with

cars passing and repassing, loaded with merchandise and the products of the country. The freight will amount to 200,000 tons within a few years.'" President King certainly made no wild guess for the future of the freight business.—*Railway and Engineering Review.*

Fast Run on the Pennsylvania R. R.

The possibilities of future exceptionally fast time on long runs are being shown by the trains now being operated on an 18-hour schedule between Chicago and New York, which lately seem to have formed the habit of breaking previous records for fast running over long distances. The latest performance of this kind occurred on Nov. 4 when the west-bound 18-hour train on the Pennsylvania R. R. left Harrisburg, Pa., two hours late and arrived in Chicago just on time. This section of the run includes the most difficult part of the whole trip, the mountain climbing between Altoona and Pittsburg, which makes it particularly creditable. The total distance of 717 miles was covered in 741 minutes, the average speed over different sections being as follows: From Harrisburg to Altoona, 132 miles, 67.8 miles per hour; from Altoona to Pittsburg, 117 miles, 48.15 miles per hour; from Pittsburg to Crestline, 55.5 miles per hour, and from Crestline to Chicago, 279 miles, 63.4 miles per hour.—*Rail'y and Engineering Review.*

Railway Mileage.

According to recent statistics, the length of the railroads of the world was 537,105 miles on December 31, 1904, of which 270,386 miles were in America, 187,776 in Europe, 46,592 miles in Asia, 15,649 miles in Africa, and 16,702 miles in Australasia. Of the mileage of European railroads, Germany stands first (34,016), followed in their order by Russia (33,286), France (28,266), Austria-Hungary (24,261), the United Kingdom (22,592), Italy (10,025), Spain (8,656), Sweden and Norway (7,730). The average cost of construction of the European railroads per mile is estimated at \$107.577, while for the remainder of the world the estimate is only \$59,680.

The total value of the railroads of the world, according to these statistics, is \$43,000,000,000, of which the European roads figure for \$23,000,000,000. The estimate for rolling stock is as follows, in numbers: Locomotives, 150,000; passenger coaches, 225,000; and freight cars, 3,000,000.—*Locomotive Engineering*.

A Year's Record of Train Accidents.

Accident Bulletin No. 16, just issued by the Interstate Commerce Commission, completes the records of accidents to employees and passengers upon the railroads of the United States for the year ending June 30. The total number of passengers killed in train accidents was 350; injured, 6,498. The total number of employees killed in train accidents was 798; injured, 7,062. There were 187 passengers killed in other than train accidents, and 3,542 injured; and 2,463 employees killed in other than train accidents, and 33,374 injured; making a total of all classes of 537 passengers killed and 10,040 injured, and 3,261 employees killed and 45,426 injured. This is an increase of 117 passengers killed and 1,963 injured; a decrease of 106 employees killed, and an increase of 2,160 employees injured.

There were 6,224 collisions during the year, with a money loss of \$1,849,054, and 5,371 derailments, with a money loss of \$4,862,602; a total of 11,595 collisions and derailments and a total money loss of \$9,711,656, being damage to cars, engines and roadway.—*Railway World*.

European Freight Rates and Wages.

Reports received from consular agents in Europe by the Bureau of Manufactures of the United States Department of Commerce and Labor, presents a basis for a comparison of foreign freight rates with those in the United States. It is shown that the freight rate in English roads is 1.93 cents a ton mile. A ton mile of merchandise or live stock in England costs 2.94, and on all commodities an average of 2.32. Against these figures for the United States are surprisingly small, being 0.58 cents. On German roads it is 1.42 cents; on French,

1.55; Austrian 1.16, and Hungarian 1.30. England's passenger rate per mile on the same classes was 4 cents, Germany's 3.8 cents. For the average day's wages workmen can travel as follows: American, 65 miles; British, 35; German, 54; French, 40; Belgian, 46; Italian, 33, and East Indian, 21. On American roads locomotive engineers average \$4 per day; English, \$1.62; Belgian, \$1.01. American firemen get \$2.28; British, 91 cents; Belgian, 72 cents. Railroad laborers in the United States get from two to four times as much as laborers on foreign roads. Forty per cent of the gross earnings of American railroads goes to labor, while only 25 per cent goes to capital. In England labor gets 27 per cent; capital 33 per cent; in Germany the division is equal.—*Brookfield, Mo., Gazette*.

Government Railroads in Canada.

We know that government ownership in Canada has not "taken the railroads out of politics;" that the employees are not "left free;" that administrations quite cheerfully and successfully "dare attempt to use them for political purposes," and that no administration has been "deluged under a tide of adverse votes," for doing that same. In fact, Canadian public opinion is so callous and indifferent on the subject that it has come to be regarded as quite natural and inevitable that the government railway system should be exploited for party advantage by the government in power.—*Hamilton, Can., Herald*.

Handling Trains Under Difficulties.

Officials of the Chicago & Northwestern are feeling justly proud of the manner in which their employees on the Peninsula division rose to an emergency during a recent storm which threw down practically every telegraph line on the division, leaving the 464 miles of line without telegraphic service for forty-eight hours. The ore movement has been especially heavy this year, more Lake Superior ore being transported on the Great Lakes than ever before in the history of the iron industry, and in this

emergency every mine would have to shut down on account of the shortage of railway cars to move their product unless the road was kept open in spite of the storm. The chief train dispatcher and the division superintendent were temporarily out of the game. There was no way in which to get orders for train movements, no means by which division headquarters could be kept advised of where their trains were, and to the on-looker no means existed by which the train crew could keep track of the whereabouts of trains in the opposite direction. It was an emergency of the gravest character, and was met with a splendid exhibition of good judgment and intelligent grasp of the science of railroad operation that is perhaps without an equal. They managed, on a single track line, without telegraphic lines, for two whole days and nights, to keep every iron and copper mine in the district supplied with equipment and moved all trains practically on time. On Friday and Saturday, Oct. 20 and 21, 4,971 cars were moved over the division, and 125 freight trains and no less than 84 passenger trains were taken care of upon the division, all handled on time on a single track, without accident, mishap or delay and without the help of a train dispatcher. It would be difficult to beat this record of loyalty to employers, and intelligent grasp of conditions.—*Railway Age*.

[The above would be good reading for those who think engineers are careless of the companies' interests and, who charge that the organization to which they belong is detrimental to discipline.—EDITOR.]

Elevated Collisions.

The painful frequency of collisions on the Elevated Railroad in New York since the introduction of electricity does not reflect much credit on the present management. These collisions, although insignificant in magnitude of disaster compared to the appalling catastrophe which occurred in September when a car full of passengers was dashed into the street, are nevertheless equally indicative of cheap methods and cheap men. In the early part of Oc-

tober a heavy laden flat car standing on the elevated track was struck by a motor car in the hands of a "green" motorman. The blow was of sufficient force to send the flat car away along the track at a speed that rapidly increased owing to a down grade. Fortunately a string of "empties" received the impact of the flying "flat," and while the damage was considerable, no one was hurt. A few days afterwards, while proceeding to the yard at 185th street, two other trains of "empties" collided, instantly killing Jacob Eury, motorman of the rear train. Doubtless the disaster would have been much greater, but it came out in the evidence before the coroner that the guards had all left their trains except two "green" men. This is a sad falling-off from the kindly discipline that existed during the management of the late Col. F. K. Hain. The economy of the present management is extravagance in the end. If they would pay better wages, there would be better service.—*Locomotive Engineering*.

English Figures.

According to official figures, 1,073 persons were killed and 6,889 injured on the railways of Great Britain and Ireland during the calendar year, 1904. Of the former number, 416 were employees, 115 passengers, 425 trespassers, 67 persons attempting to cross tracks, and 50 other persons. The deaths were thus above one-tenth of those (10,046) for the fiscal year 1904 in the United States. There are 297,997 miles of railroad, including duplicated tracks and sidings, in the United States, and 22,152 miles in Great Britain and Ireland. One person was killed for every 20.6 miles of trackage in Great Britain and Ireland and one for every 29.6 miles in the United States. The ratio of deaths of employees is one to every 53.2 miles in Great Britain and Ireland, and one to every 81.8 miles in the United States. The figures do not bear out the boastful claim of a greater protection of life in Great Britain. What were the relative numbers of passengers carried, and the distances they travel, we are not informed.—*Weekly Bulletin Clothing Trade*.

DECEMBER, 1905.

A Day of Rejoicing.

With the believers in Christianity the world over the celebration of the birth of Christ is the most important of any day in the year. His exemplary life as handed down to us, with its uplifting influence, is worthy of a day of gladness, but as we add the hope of a future life, it becomes of greatest import to the believer in Him; hence, it is the greatest of all days, and appeals to the best that is in us. We would at least on this day emulate the example of the great Nazarene in an effort to heal the wounded heart, hunt out the distressed, from whatever cause, relieve the poor, and above all, make all we love feel that love, and in doing so partake of the happiness so created. Thousands of deft fingers, guided by love of doing something to bring a smile of pleasure, are now at work on tokens to make Christmas glad some. As we near the day the interest deepens, and the minds of millions are at work thinking what they may do to bring gladness to some one. Many of the poor are denying themselves many comforts for the sake of

making the children happy on Christmas day. The very thought of Christmas seems to soften the heart and to exercise a Christianizing influence, which is uplifting to all humanity. Even the childish faith in Santa Claus has in it a lesson of higher power, morals and destiny. They are taught to be good if they are to be favored by this mystic personage, and to connect the source of his goodness with the goodness portrayed in the life of Christ is but a step.

So all we do in the direction of efforts for the happiness of others uplifts the giver and makes as much for their happiness as for those who receive. Through these instrumentalities many misunderstandings are swept away, and the hand of fellowship is extended and happiness restored. So we hope the whole family of our great Brotherhood may enter heartily into the celebration of the birthday of Him who taught us how to practice the Golden Rule, each imbued with the thought of doing something to bring a smile of happiness.

We are not unmindful that there are many whose hearts are heavy from sickness or death of loved ones, but we trust that there are none who have not felt the sympathy and helpful fellowship of those around them, and realize through it that whatever our station or condition mentally or financially, whatever we may do for others is doing equally for our own happiness. So we may all do something to make Christmas the greatest day of the year in the upbuilding of Christian fellowship, the very foundation of society, and especially such associations as the B. of L. E. and G. I. A.

May what we do tend to peace in every home, so that we may enter the New Year ready to "do unto others as we would they should do unto us," and in the peace and the strength it gives. May the B. of L. E. prosper in 1906 as never before.

Journal Subscribers.

This is the time for soliciting subscriptions for the JOURNAL, so they may start with the beginning of the volume, and

there ought to be some one in every subdivision willing to make an effort to increase the JOURNAL circulation and incidentally its earning power for the charity fund, whether their own pay be large or small. It is a commendable object, and the premiums offered are extraordinary in value for the work of securing them and the watches are guaranteed to be O.K. in every respect. We ought to have a large outside list of subscribers, and we regret to say that the Trainmen get fifteen times as many as our members do, simply because they will ask people to subscribe, and that is all that is necessary to succeed with the JOURNAL. Each subdivision should take this matter up and create an interest in this beneficial work in which every member ought to be interested. If they do we shall have a large list of outside subscribers, and many members will have a watch they will be proud of.

Semi-Annual Password.

The password taking effect January 1, 1906, will be sent to the O. E. printed in cipher. The key to the cipher alphabet will be mailed to the F. A. E. The key and the password should never be kept together, and under no circumstances should they be taken from the Division room. We recently had a case where the secret work was in the pocket of the Chief Engineer when injured on duty, and the entire work fell into the hands of outside parties. The password is an important factor in our association with those who are members in good standing, and every care should be exercised to keep it within the scope intended, hold rigidly to it, and there will be few impositions upon the membership.

Reports of the Grand Office.

No more important duty devolves upon the officers of subdivisions than prompt reports to the Grand Office, and at the close of the year too much stress cannot be put upon the necessity for prompt annual reports to the F. G. E. on blanks furnished for that purpose, stating the actual condition and numerical strength

of the subdivision. This report should be ready for completion at the close of the last meeting in December.

Another very important duty is to forward the name and address of the O. E., F. A. E., Sec'y of Insurance, and delegates for the ensuing term. The subdivision addresses will appear in the February number, which closes on the 15th of January, and all changes must be sent in prior to that date or be left out for the first six months of 1906. There can be no excuse for not having that list correct, as the time is ample between December 23rd and January 15th, and we shall expect prompt attention to these duties, and hope there will be no delinquents when we go to press.

A Pleasant Surprise.

Mr. Ray Allen, trainmaster Burlington Road, Brookfield, Mo., called at the headquarters of the B. of L. E. on Oct. 30, and gave the Editor a very pleasant surprise. Ray was a dispatcher at Brookfield when the Editor was an engineer in the service of the Q before the unpleasantness of 1888, and he was a first-class manipulator of the key. Our pleasant talk of old times brought to mind very many faces of old friends still living and some not now with the living. Having spent seventeen pleasant years in the interesting city of Brookfield, Ray's visit made us long for a few days among our old friends and acquaintances, and we hope to find time for that pleasure in the near future.

Madden's Magazine.

Bro. Edwin C. Madden, an active member of Detroit Div. 1, was formerly in active service on the Michigan Central; but eventually secured an appointment in the Detroit postoffice, in which position he demonstrated executive ability to such an extent as to attract public attention, and about six years ago, highly recommended by Bro. P. M. Arthur, Brother Madden was appointed Third Assistant Postmaster General, a position he has filled with great credit to himself and to the B. of

L. E., and great saving to the Postal Department. His association with the Postal Department drew his attention toward the publications it became his duty to classify, and with his large acquaintance with public men with literary tastes and ability, he concluded there was a field for a magazine of large diversity of thought, news of the world condensed for the busy man and the best stories for the family, and he is putting this thought into practice under the title of *Madden's Magazine*, something like *Munsey's* and *McClure's* in size, subscription price \$1.00 per year.

Under the postal laws and regulations magazine rates, which are necessary to the publication coming into existence, can not be secured without a good list of subscribers, and Brother Madden is depending upon the brothers in the railroad organization for support in this particular. Those who are inclined to give him their subscriptions need have no fear but that they will be repaid in the character of the magazine and the benefits it will confer, and all who desire good clean reading should send \$1.00 to *Madden's Magazine*, Washington, D. C., together with their own name and address.

Wood Craft.

A new monthly magazine for wood workers in all branches of that trade, comes to us dressed in a handsome cover in decided harmony with the subject matter within; the large number of fine half-tone illustrations, with some sixty pages of entertaining and instructive reading on a wide range of up-to-date topics, with enough spice interjected to relieve the possible monotony of facts and figures, is a great credit to its genial and resourceful Editor, Mr. R. I. Clegg, as the mechanical work is to the credit of the Gardner Publishing Co., from which it emanates. The superior quality of the magazine will surely commend itself, not only to wood workers and those interested in wood products, but to every one who delights in high class mechanical literature.

Cleveland, Ohio, Union Meeting.

A Union Meeting under the auspices of Divisions 3, 31, 167, 318 and 542, assisted by the local Divisions of the G. I. A. 62, 65 and 278, held in Cleveland on November 16 and 17, proved to be a success in every particular. Traffic demands kept many from coming, and in consequence the number in attendance was not as great as was hoped, yet the attendance at the secret meetings was fair, and the good accomplished in the two meetings on Thursday, and morning meeting on Friday in the Hollenden Hotel Assembly Room, with Bro. W. B. Prenter, F. G. E., presiding, will certainly bear good fruit, as many subjects within the scope of associated efforts were brought up, resulting in a correct understanding of the application of our law and our duty to each other as a fraternal body.

Before closing the meeting a committee on thanks was appointed, composed of Brothers W. T. Coulter, E. N. Brown, H. H. Rogers, G. T. Bell and F. H. Tucker, who presented resolutions thanking the Hollenden Hotel management, the Chamber of Commerce, and the railroads.

On the evening of the 16th the Chamber of Commerce tendered tickets to Keith's Opera House, which were generally accepted, and a very pleasant evening spent.

While the Brothers were in session the visiting ladies were being entertained by the ladies' committee representing the local Divisions of the G. I. A.

On Friday, at 2 p. m., the public exercises were held in the Chamber of Commerce Hall, which was well filled with an interested audience, and the occasion was made somewhat notable by the presence of Grand Officers of the B. of L. E., and particularly so by the presence of Grand Master Morrissey, Vice Grand Master Lee, and Secretary and Treasurer King of the Brotherhood of Railway Trainmen.

An excellent orchestra played an overture composed of southern melodies while the audience was being seated.

First Grand Engineer Bro. W. B. Prenter, who officiated as Chairman, called the meeting to order and requested Bro.

M. H. Shay, General Secretary Insurance Department, to open the meeting with prayer, and he responded most commendably.

The Chairman, after stating the object of the meeting, alluded to the fact that headquarters of the order had been in Cleveland over thirty years and that it had had a part in the growth of Cleveland, that our finance and expenditures had been of considerable magnitude, and that we desired better acquaintance with the citizens of Cleveland, and to have them have better acquaintance with the B. of L. E. and its objects, stating in a general way what the aims and objects were.

He then introduced City Solicitor Newton D. Baker who, because of the absence of Mayor Johnson, had been assigned the duty of extending a welcome to Cleveland. After expressing Mr. Johnson's regrets, he said he was reminded of a story of two explorers meeting in London and embracing though they had never seen each other before; that their common experience drew them together in a common bond of sympathy and brotherhood, "and so I conclude that a common life makes you friends;" told some good stories to illustrate the steady nerve of the engineer under difficulties, and evidence that men on the engine knew their business; complimented the various railroad organizations meeting together in a fraternal spirit, and work for the common good of all of the associations, closing his remarks by extending on behalf of the Mayor and the citizens of Cleveland a most hearty welcome.

After "Yankee Grit" was rendered by the orchestra, the Chairman introduced Bro. P. H. Morrissey, Grand Master of the Railway Trainmen, who delivered a short but very much appreciated address. After expressing his appreciation of the opportunity to mingle with and talk to members of our organization he said that he had heard Brother Arthur tell of the great struggle of the Brotherhood of Locomotive Engineers in their infancy, "and we not only concede them first place in organized effort, but will say no greater compliment could be paid the engineers

than to say that there are several other organizations that have taken the cue from them and have organized into great organizations;" told of the Trainmen's struggles and said they had a particularly friendly feeling for the engineers, from whom they took their first lessons, and 80,000 send greetings. He said these great organizations were models from a business point of view, and that they never break their word with contracts with officials. They may be criticised because they will not go out on every provocation, but cannot be criticised because they break faith with themselves or the employers. He told of accomplishments in the past and said they are meeting daily with need of organized effort. He discussed the age limit fad that drove men out of service when they were at their very best, and said that the fad had been carried to such an extreme that gray hairs had become a mark for the industrial scrap heap, that gray hairs and physical examinations had made more tramps and indigent men than all natural causes. "What we want," said he, "is that men be kept in service as long as they can render proper service, regardless of age or gray hairs." He said that wrecks did not come from these causes, but primarily from long hours. He declared that trainmen in all departments were compelled to work too many hours to insure safe traffic on the roads; that there was no doubt but that most of the accidents are attributable to exposure and overwork on the part of trainmen.

"There is no other occupation today in which men are forced to be more alert and active, and yet are expected to remain in service so many hours at a time," he said. "Laws should be enacted to protect the railroad man. We should work unitedly in an effort to procure the enactment of measures providing for the maintenance of the families of railroad men who meet with misfortune. If railroad companies can be forced by legislation to install safety appliances for the benefit of the patrons of the road, it would be no more than fair that the employees themselves and their families should be taken care of.

"We hear about the shipping rates and what benefits passengers should receive from the roads they patronize, but all the time the vast army of our dead and the train of mourners who follow the victim march past unheeded. There should be provided by law a compensation act forcing the railroad to provide an annuity for the family equal to the earning power of the injured man."

The speaker also deplored the introduction of cheap labor from Europe and Asia and said, "The standard of living is an economic factor in fixing wages, and to secure advance in the standard of living we must have better wages, and to do so we must work to head off undesirable foreign labor, and the railroad men's organizations should take a more active part in arousing public interest to the need of legislation against the evil;" and in closing said, "I come to congratulate the B. of L. E. and to bring greetings from the Railroad Trainmen, who extend to you best wishes and the fraternal spirit of fellowship."

After the orchestra rendered "Sambo's Delight," by Bro. D. Everett, the Chairman introduced the Hon. J. J. Sullivan, United States District Attorney, who is a noted orator, but was suffering from a cold, to the exclusion of an address, but by request of Brother Donovan, with whom he is acquainted and on whose train he rides every day, he gave a graphic word-picture of a live locomotive coupled to a train laden with precious lives of loved ones, youth and age waiting for the journey to their various destinations, with all confidence in the steady and skillful hand in the cab. He tells of the engineer's final inspection to see that everything is right, and then at the magic touch of the hand of the engineer, sees the engine leap and bound with her load of human freight out into the storm of the black night, with smoke and fire streaming from its throat. "Faster and faster she goes, among the hills and valleys, around curves, over bridges, and every minute screaming, 'Out of the way! Out of the way!' Yet, back yonder in the coaches, they all sleep peacefully, for they

all have with them on the flying train, God, the angels, and the engineer." The above is but a synopsis of the graphic picture he painted and which brought him a grand ovation from his auditors.

The Chairman, Bro. Prenter, then introduced Rev. H. F. Stillwell of the First Baptist Church, and we regret that we cannot give his address in full, but will have to be content with giving such synopsis as the impression made upon the Editor makes possible.

He began by saying that he was impressed with the situation, that he had never had an opportunity before of speaking with men with whom he could never catch up, owing to the length of the train. He said he could not describe graphically his conception of a train as he sees it speeding through space, but paid a high compliment in giving his conception of the character of the man at the throttle.

He said that two important elements entered into industrial life—transportation and communication—both creating a tendency toward brotherhood, and the tendency in our country in this direction is supreme and above all others in this respect. He then took up the trend of that which led to the brotherhood of man as we see it here, going back to the dark ages. He alluded to the invention of type, the discovery by Columbus, the printer and literature communicating ideas, creating religious and political differences, and religious sects, intolerance including the great sacrifice of hunting for liberty in the New World, and cited the obligation taken in the cabin of the "Mayflower" as the first compact of brotherhood which expanded over the continent, love of liberty created the tempest that resulted in constitutional liberty, the flag and the constitution, of which Gladstone said, "Never from the brain of man did such a good document emanate," that Lincoln stood for universal brotherhood, and the war with Spain for liberty and humanity; and so has grown the broader idea of brotherhood. Japan settles the war with Russia, not for indemnity, but for the sake of humanity, culminating in President

Roosevelt's square deal for every man, a universal law written because of the nature of things that will eventually govern between the two great forces, monumental capital and manhood; the man shall reign and the power of the toiler, and not the dollar, shall govern. Americans are teaching the world that man is the mightiest thing and counts for more than all else. He cited the life of Christ and said, "The man that will be greatest among you, let him be your master, and he that is greatest of all, let him be your servant." The inference we draw from this is that it is the greatest and broadest mind that can serve within the law for the best good of all. While he stood for the brotherhood of man in the broadest sense, he firmly believed that there can never be a condition where all men can be lifted up together. Skill must be up, and the best men must naturally be first, but all helpful to the weakest that none may suffer. He said he had read all the provisions in our constitution and believed in everything put into that constitution, and said there should be a revival, an agitation, until every man became a member of the order, and took his rightful part in it; that touching elbows and concentration is what wins, and that fair, honest arbitration means justice. The whole world is traveling toward a new order of the brotherhood of man.

Grand Chief W. S. Stone was then introduced and received an ovation as he arose from his seat. We give the following excerpt of his speech:

He opened his address by saying that the question of labor was as old as the world and that the struggle for rights had been on for ages, but each year labor is learning more of its natural and moral rights, learning right pathways to success and gaining numerical strength because of the benefits that have accrued from organized effort, and as 72 per cent of the votes are cast by laboring men there is nothing they deserve they could not obtain if they would only express their preferences in one voice. He said labor unions represent long years of struggle and study, a gradual evolution toward

better conditions, while they learn to avoid the errors of the past; touched upon the evils of child labor, called attention to the great factor employed by the railroads, 1,250,000 men, or with their dependents about 7,000,000 of the American people supported through service on the railroads, and discussed the conditions under which they serve and public interest in the quality of men in the train service; told of the inception of the organization and its gradual growth and benefits, and that we now had 691 subdivisions and 52,000 members, that the organization stood for better living and the upbuilding of character, that the order had contracts with 90 per cent of the railroads of the country and that these contracts were carried out to the letter. He said that strikes were sometimes necessary, but arbitration was one of our cardinal principles, and that living within our law was our creed, and asked, "Do you live up to your creed 365 days a year?"

He gave a history of the insurance department and said we had paid out \$14,747,000 and that if we had never done anything else than to scatter that sum in the homes of the widows and orphans, we would have erected a great monument to the order, and in closing paid a high and just compliment to the Ladies' Auxiliary.

Mrs. Mary E. Cassell, Grand Vice President of the G. I. A., was then introduced and said she had fixed up a speech, but that the speakers that had preceded her had stolen all the good things she had in mind so she would talk to them at random as the thoughts came to her, and she succeeded in making an excellent address in which she injected some plain truths good for those it did not hit, and good lessons for those it did. She told of the inception of the organization, the struggle for recognition and a place in the field of organized effort where they could encourage and help those who were in the line of battle, and at the same time practice that charity for which they were organized, made a strong plea for the Auxiliary insurance, and told the Sisters

how much they might do toward keeping their husbands from getting behind in dues and their duties to the B. of L. E. Her address was full of good points and at the close of her address the chairman of the committee of arrangements presented her with a handsome bouquet.

As Sister Cassell was the last on the program, the audience began to move, but the Chairman, Bro. Prenter, called for order and stated that Bro. Everett, T. G. E., wanted to have something to say to them and introduced him. Brother Everett said Brother Prenter was trying to have some fun at his expense, that he had invited him to speak, that he was not going to take much of their time, and told a hitting story, "Speeches hot and speeches cold." He then paid a splendid tribute to his long-time friend, the friend of all right-thinking men, and the master mind which gathered together the fragments of the B. of L. E. in 1874, and cemented them together into the great organization of today, Bro. P. M. Arthur, closing his address with a fine poem of his own, "What is Life?" and the audience was well pleased with their detention.

The Grand Ball in the evening was a splendid success; the great hall of the Chamber of Commerce was well filled, and the grand march was an imposing spectacle as they proceeded in columns of two, four and eight, finally spreading out into the whirl of a waltz. The music was excellent, and a large number danced out the day and well into the next, an evidence that they were enjoying the splendid entertainment arranged by the committee, who worked with a will, and with signal success.

The Committee of Arrangements were as follows:

Brothers W. B. Prenter, F. G. E., Div. 318, Chairman; C. F. Sipher, Div. 31, Secretary; Geo. Clemens, J. Wolff, W. H. Van Wie, Div. 3; D. Everett, O. Tyler, W. H. Bockius, Div. 31; B. Whalen, J. V. Reynolds, F. Green, Div. 167; W. T. Smith, A. W. Cotton, Div. 318; W. E. Futch, C. E. Richards and W. D. Ballard, of Div. 542.

A Model Meeting.

Among the many happy events that transpired during the month of October was the Union Meeting of the Delaware & Lackawanna System at Scranton, Pa., October 29. The reason for calling this a model gathering is that the *Scranton Tribune* in its issue of Monday, October 30, says that the B. of L. E. is the Model for the World, and furthermore says this particular assembly was a very unique affair. The following Divisions were represented: 31, 167, 263, 171, 276, 305, 468, 543, 272, 311, 434, 533, 673, 165, 367, 152, 403.

Total number of members present at the afternoon session, 110. The morning session was called to order at 10 o'clock, with Bro. Joseph Hobbs, Chief of Div. 276, as Chairman, and Bro. R. W. Cox as Secretary. Meeting opened with prayer by Bro. Deloss Everett, T. G. E., after which Bro. Joseph Hobbs in an appropriate speech welcomed the visiting Brothers to the great mining city of Scranton.

Bro. Patrick Fennell, of Div. 152, better known as "Shandy Maguire," our Immortal Bard of Oswego, was called upon to make the opening address, which he did, to the queen's taste, for he brought his old-time Irish wit and humor into play, and the shouts of applause that followed gave evidence of the fact that "Shandy" still holds his place as King of the Realm, where he has held sway for so many years in our history. After he had finished the Chairman introduced Bro. Warren S. Stone, our Grand Chief, who gave an address which covered the past and present history of our organization. In words which could not be misunderstood he pictured the needs of the present hour. Every word he uttered and every line of his speech was full and replete of what might be justly termed good common horse sense. He was frequently interrupted by applause that told he had a place in the hearts of his hearers, and at the close he received an ovation which would have compensated the most ambitious for an effort of like character. After this we adjourned for lunch.

Afternoon session called to order at 2:40 o'clock, when upon request the Grand Chief addressed the Brothers who were not present in the morning, and as he had a call at Richmond, Va., he bade the Brothers goodby and left Scranton at 3:15 p. m. for his Southern destination.

Brother Deloss Everett, T. G. E., was called upon and he delivered a very appropriate address on the friendship that should characterize our intercourse with each other as members of the Brotherhood. Then the following Brothers spoke on the good of the order: Brothers Joseph Davidson, M. A. Brophy and Joseph Nixon, of Div. 171; Brothers E. Rose, J. Hobbs, J. Troch, J. McAndrews, Chas. Reese and H. A. Tewksbury, of Div. 276; Bro. J. E. Clark, of Div. 311.

The evening meeting, which convened at 7:45 o'clock, can best be told by the following from the Scranton *Tribune* of Monday, October 30:

UNIQUE MEETING OF THE LACKAWANNA ENGINEERS.

A remarkable meeting took place yesterday in Guernsey Hall, when the members of the Brotherhood of Locomotive Engineers met with the officials of the Lackawanna railroad and one congratulated the other upon the splendid relations which existed between them.

The spirit of conciliation, so often desired between capital and labor, was more than exceeded.

The primary occasion of the gathering was the first visit of Grand Chief Stone to this city. Mr. Stone succeeded the late Grand Chief P. M. Arthur and the call yesterday was therefore more in the nature of a complimentary one to introduce himself to the local members of the Brotherhood.

The notable gathering of the day was held in the evening, the meeting being public, and was presided over by John R. Troch, the veteran engineer of Scranton. The meeting was opened with prayer by D. Everett, after which Chairman Troch welcomed the following officers of the Lackawanna to the meeting: Division Superintendent E. M. Rine, Master Mechanic Henry Shoemaker, Trainmaster John McCann, Superintendent of Air Brakes P. J. Langan, Master Car Builder Robert McKenna and Chief Agent J. E. Adamson.

In his opening address Chairman Troch said that he had been asked as to what trouble there was with the Lackawanna. He had made the reply "Nothing." He then invited the officials of the company to answer the same question.

Superintendent Rine responded by stating that it was a genuine pleasure for him to answer such an easy question by complimenting the engineers employed by the Lackawanna, as well as the company itself, upon the splendid relations which

existed between them. They were always ready to co-operate for the furtherance of the interests of the company and to give the patrons prompt, speedy and safe transportation. He could say that the company was proud of its engineers, as well as the men in the other departments. They all appreciated the onerous responsibilities of their positions and were careful and faithful in carrying them out.

Master Mechanic Shoemaker said that it was a pleasure for him to bear testimony to the courteous manner in which the engineers of the Lackawanna road assisted him in his duties. They were not only intelligent, but were honest in their care of the company's property and showed every determination of doing their best. No man could do more.

Chief Agent Adamson, who is a great favorite with the employees of the company owing to his jovial ways, was called upon for a few remarks and made one of his rousing speeches. He pointed out that if all bodies of men, united for their mutual interests, exercised the same common sense and honesty as shown by the engineers there would be no strife between capital and labor. The Brotherhood was a pattern for all labor bodies and was well worthy of emulation.

A. F. Duffy, inspector of safety appliances interstate commerce commission, who was in the employ of the Lackawanna Company for twenty-four years, dwelt upon the good feeling which existed between the company and trainmen whom he represented for many years, and referred to the splendid equipment of the Lackawanna road, which was second to none in the United States. Hon. John R. Farr in speaking of the duties of capital and labor congratulated the Lackawanna Company and its employees upon the good feeling which existed between them, and remarked that they presented a model to the employers and employees who were unable to settle their own difficulties in a businesslike way.

Remarks were also made by Trainmaster McCann, P. J. Langan, P. Fennell, E. T. Swartz, Art Loomis, Joseph Hobbs, D. E. Parmeter, E. Rose, C. P. Ashelman, D. Everett. Musical selections were given during the evening by the Watkins orchestra.

The closing address was made by Jas. E. Clarke, of Binghamton, General Chairman of the System, who stated that there were no differences on the entire system of the Lackawanna Railroad.

A VISITOR.

LINKS.

A UNION MEETING will be held in the Park theater, Broad and Fairmount ave., Philadelphia, Pa., December 17, 1905, under the auspices of Div. 71, B. of L. E., in commemoration of their fortieth birthday. A secret meeting will be held from 9 a. m. to 12 noon, and a public meeting at 2 p. m. G. O. E. Stone will be present,

and all are invited who can possibly attend. Hotel Hanover, 12th and Arch Streets, will be headquarters.

R. H. HARVISON, Sec'y of Meeting.

H. R. FULLER, who has been joint legislative representative of the B. of L. E., B. of L. F., O. R. C., and B. of R. T., at Washington, D. C., for some period, and having proven satisfactory, has again been chosen by the heads of these organizations as the legislative representative for the first session of the 59th Congress, with address at 206 Delaware Ave., N. E., Washington, D. C., where he should be addressed by anyone desiring to correspond with him.

HON. EDWIN C. MADDEN, Third Assistant Postmaster General, member of Div. 1, contemplates starting a new magazine, which I believe will be well patronized by our Brothers. Would it not be a good idea to subscribe for the Madden Magazine through Bro. B. F. Oliver, of Div. 407, our worthy Brother who is now in the magazine business? It would help Brother Oliver to health, Brother Madden to wealth, and give our members good cheap literature. Hoping the Brothers will consider this I am, Fraternaly yours,

D. W. McDONALD, Div. 581.

I WISH to say to the members of the order at large that the old and reliable Erie Railway is not going to be outdone in the matter of pensioning its old and faithful employees. On November 4 notice was received by the local officers in Meadville, Pa., to place Brothers John W. Wheeler and Wm. B. Dunbar on the pension list, which is very much appreciated by the two named Brothers, and by all other employees at this point. Brother Wheeler is now in his seventy-third year, and Brother Dunbar will be eighty his next birthday, and both have been in the service of the company forty-three years. They are both old members of Div. 43 and deserve the honor. The Erie has also had all mail cranes moved so they are out of reach of the enginemen in the cab, which certainly speaks well for all officials of the Erie. Yours fraternaly,

W. E. NICHOLS, C. E. Div. 43.

THE many friends of Bro. O. I. EVANS who for nine years filled the office of F. A. E. of Div. 517, Sedalia, Mo., will be pleased to learn of his appointment on Nov. 1, 1905, to the position of Traveling Engineer for the M., K. & T. Ry., with territory north of Denison, Tex., to St. Louis, Mo., except the Choctaw Division.

Brother Evans has served the following companies as engineer: Burlington prior to the strike, Jacksonville & Southwestern, living at Jacksonville, Ill., Oregon Short Line, living at Pocatello, Ida., and on almost every division of the M., K. & T. System. Brother Evans, although a young man in years, has had considerable experience as a locomotive engineer.

While Div. 517 is the loser of an honored officer and member, the M., K. & T. the winner in securing such a man for this responsible position.

This is the second time in the past two years that Div. 517 has had members taken from its ranks to fill the position of Traveling Engineer, and each time with satisfaction to both the engineers and the railroad company. Fraternaly yours,

F. D. JAMES, C. E. Div. 517.

Div. 156 is about to put up signals for 1906, proud of our glorious past record and abiding in our faith for the future. Div. 156 wishes to extend a happy and a prosperous New Year to all of our Brotherhood. Not only has our membership increased in goodly numbers, the character of our membership and its officers is cause for honest pride. We have our doors carefully guarded; only the truest and tried of our calling are admitted into our ranks. We stand in solid phalanx, fighting the evils of our times—intemperance, profanity and corruption in high and low, and the ills that affect our body and our fellow man.

Never since the first flag of our grand old Brotherhood was unfurled in Old Alabama have we so commanded the respect and confidence of all good men as we do this day. We hope to march through 1906 with a stately step to fulfill our obligations, defend our principles, and maintain the dignity and honor of our Brotherhood.

May every member of the order stand steadfastly for right duty and the perpetuation of our grand old ship, the B. of L. E., is the wish of
DIXIE.

On Saturday, Oct. 21, Wabash Valley Div. 364, G. I. A. to B. of L. E., was organized. We had with us Grand Vice President Sister Cassell, Grand Secretary Sister St. Clair, and Sister Simms, Grand Organizer. We also had sixteen Sisters from Cora Smith Div. 143, of Elkhart. A most enjoyable day and evening was spent. At 7 p. m. we marched to the banquet hall, where a sumptuous repast had been prepared. (This is where the Brothers of Div. 461 were conspicuous.)

Sister St. Clair spoke feelingly of the B. of L. E., and the struggle it was to attain the position we now hold. Sister Cassell also spoke interestingly.

The Brothers of Div. 461, and Sisters of Wabash Valley Div. 364, cannot at this time find suitable language to express their gratitude to the Sisters of Div. 143, and we extend to them a cordial invitation to meet with us in the near future.

Our new Auxiliary has started its career under the most favorable conditions, and though a small division, we have every reason to believe that it will be a banner division and a great help to Div. 461.

With the best wishes for the Sisters of Div. 143, and again thanking them for their valuable services, I am

Fraternally yours,

W. F. HOCKADAY, F. A. E. Div. 461.

THE Nashville, Chattanooga & St. Louis Railway is distributing a very beautiful lithograph, 18 x 25 inches, of the famous engine "General," which is now on exhibition in the Union Depot, Chattanooga, Tenn. The picture is handsomely embellished in colors and ready for framing and will be mailed to any address for 25 cents. The "General" was captured by the Andrews Raiders at Big Shanty (now Kennesaw), Ga., on the Western & Atlantic Railroad, April 12, 1862, and was recaptured by Conductor W. A. Fuller, Anthony Murphy and others, near Ringgold, Ga., after an exciting chase of about ninety miles. It was one of the most thrilling exploits of the Civil War. The object of the raid was to burn the bridges on the Western & Atlantic Railroad and cut off the Confederate Army from its base of supplies. A booklet, "The Story of the General," will be sent free upon application to W. L. Danley, G. P. A., N., O. & St. L. Ry., Nashville, Tenn.

BRO. FRANK MOYER, member of Div. 42, St. Louis, Mo., and an old and esteemed member of the order, was recently honored by the members of Div. 42, for valuable services rendered.

Brother Moyer was born at Lehighton, Pa., and spent his boyhood days among the hills of Pennsylvania. He decided to come west and seek his fortune and landed in Wisconsin, where he secured a position as fireman on the Old Mineral Point R. R., where he served three years. He then went to the N. P. where he fired about three months, when he was promoted to the position of engineer, in which capacity he served the N. P. about two years, when he came to the Iron Mountain in 1873, where he has remained in continuous service since.

BROTHER FRANK MOYER, DIV. 42.

During all these years among us, by his wise counsels and good example, he has endeared himself to his Brothers, and our respect and esteem culminated in a recent happy event when, after the business of the meeting, our worthy guide, Bro. Geo. Pendleton, said:

"Brother Moyer, we are glad indeed to honor a man who for five and thirty years responded so promptly, regularly and faithfully to duty's call, or in the meetings of the Brotherhood of Div. 42, where all have felt your influence and been benefited by your presence for thirty-two years of this time. Not long ago you refused the acceptance in money of a gift from your Brother members, who, however, were not in the least daunted by your sturdy refusal, but more firmly determined than ever to convince you that your services for the good

of the Division and the betterment of your fellow members are appreciated, and in grateful recognition of your excellent work as a Brother and a member, they present you this chain and charm; the charm in the form of a shield they hope will prove a guard against the many dangers which every railroad man encounters in his daily life.

"With this little gift they offer their heartiest good will, congratulations, best wishes, and hope Brother Moyer, you may live many years to enjoy and wear it at the meetings of Div. 42."

Brother Moyer feelingly replied to Brother Pendleton, and as the tears trickled down his cheeks, all who were there partook of his feeling and moist eyes were seen all about the room.

Many of the Brothers will remember Brother Moyer as delegate to the Milwaukee convention, and on committee of arrangements at the St. Louis convention. He was one of our first committee of adjustment, helping to secure the first contract between a railroad company and the Brotherhood.

THEO. NAGLE, Div. 42.

BOSTON Div., 61, held one of its most important and busy meetings Nov. 12, and owing to business being "on the boom," had a small attendance, about 110. In the routine of business after opening, several important matters were satisfactorily disposed of and four candidates initiated. Bro. William A. Kempton, Secretary of Insurance, gave a very interesting account of the receipts and expenditures by members of Div. 61 who are insured. It covered the period of his ten or eleven years of service as Insurance Secretary, and was actually a financial statement. Number of insured members, 255; amount received since 1894 by payments to holders of policies or their heirs, \$55,000; amount received by members or heirs over what they had actually paid out, \$18,170.25. He ably set forth the value of the insurance as an investment to the members of the Division who are physically able to take out policies, also that the returns are a good revenue from the investment made by the injured members of the Division.

The hour of noon having arrived, a recess was called, and all retired to the dining hall where we sat down to oysters in every style, furnished by the hall and entertainment committees.

The afternoon session was opened by a lecture on the air brake, it being one of a series given by Brothers Lorimer and Rickeman of the Air Brake Department of the B. & M. Railroad. Brother Rickeman, of Div. 64, Chief Air Brake In-

structor of the B. & M. R. R., gave us a good lecture on the nine and one-half inch pump, using colored drawings, dealing with it in all its details, its effects and defects, and the care and management for economy and efficiency. Eighty-five members were counted as attentive listeners, and during the lecture the speaker had the undivided attention of all present.

Returning to the inner hall, business matters were disposed of, and the nomination of officers for the coming year, resulting in the selection of nearly all the old board of officers, told of the interest and harmony in the work of our Division in the past year. Div. 61.

JARED C. THOMPSON, or "Yankee" Thompson, as he was commonly known,

BROTHER J. C. THOMPSON.

and one of the original pioneers of the B. of L. E., whose photograph is herewith reproduced, was an engineer of some years' standing on the Michigan Central prior to the organization of the Brotherhood of the Footboard, and Bro. McCurdy, still a member of Jackson Div. 2, says that he and Yankee Thompson, Thomas Nickson, Thomas Heywood, Henry Lathrop and H. D. Robinson, met at Yankee Thompson's house, Marshall, Mich., and organized a society which in

time became part of the B. of L. E. as Div. 2, the Division afterwards being moved to Jackson, following the movement of the shops to that place. Some time after the Jay Cook failure, Mr. A. P. Farrar, M. M. of the Michigan Central, received the appointment of superintendent of machinery of the Northern Pacific, and Yankee Thompson, with others, gravitated to that road, and ran between Brainard, Minn., and Fargo, N. D., for several years, and eventually was promoted to foreman at Dickinson. Being considerable of a politician, he secured the appointment as postmaster of Dickinson under President Harrison, and again under President McKinley's administration.

Mr. Thompson was of a vigorous nature, and was energetic in pushing whatever he undertook, and as one of the pioneers did good work in the infancy of organized effort, and earned a place in the history of the organization, now as broad as the continent in its ramifications, and the mother of benefits to engineers that he and his then colleagues could never have dreamed. Mr. Thompson lately responded to the last call, leaving behind very few who had part in the inception of the B. of L. E., and Brother McCurdy must be standing nearly alone among the original number.

We hope to present Brother McCurdy's picture, accompanied by a narrative of his long and eventful experience in railroad life.

EDITOR.

ON Sunday, Sept. 10, Div. 61 held their annual excursion to Old Orchard Beach, and by the courtesy of the officials of the B. & M. R. R., were furnished transportation for themselves and families from and to all the different engine headquarters, and many availed themselves of the opportunity to spend a day at the seashore. The Brothers and their families began to arrive at the beach just before noon and one of the first duties was to select a place to get a "shore" dinner, and of which there was variety and plenty. After dinner all enjoyed themselves by watching the crowds strolling on the sands and bathing in "Old Ocean," and all voted it one of the pleasantest "annuals" in 61's history, returning home about 6 p. m.

One little incident detracted somewhat from the pleasure of the outing, however, as some of the "light-fingered" gentlemen in the crowd relieved many of the visitors of pocketbooks and watches, etc., but all otherwise enjoyed the day immensely. Many thanks to our officials of the B. & M. for their kindness.

Speaking of "shore dinners," I might mention one which about thirty of the

Brothers and Sisters had at Salem Willows a few Sundays ago, and to which the writer gladly accepted an invitation. The arrangements had been made beforehand, and all sat down to one of the best that the Adams House, with its excellent chef, could furnish.

Before dinner the Brothers and Sisters enjoyed immensely having "Maude," the fortune teller, give a life reading for Brother and Sister Shackley and also of Brother and Sister Woodman, "on the quiet." After Brother Rose had taken group pictures of all, including "Maude," and the party had purchased souvenirs to take home, all voted the affair a grand success which should be repeated.

I might add that Brother Wardwell took first prize for eating fried lobster, the honors for eating clams being equally divided between Brothers Mitchell, Shackley and Woodman.

Another pleasant incident was the gathering at Brother and Sister Getchell's home in Somerville, on the evening of September 19, of about fifty of the Brothers and Sisters of Div. 61, it being the twentieth anniversary of their wedding day, and all enjoyed the surprise of Harry and Fannie as we filed into their pleasant home without notice. Light refreshments were served, and during the evening Bro. Wardwell, in a few words, presented on behalf of the friends present the happy couple with an elegant dinner set, and wished them all the happiness and prosperity possible through life. The evening until a late hour was spent in playing games and a general good time for all. Harry, for himself and also for Fannie, thanked the friends for their thought and kindness, and said the evening would always mark a beauty spot in their lives' history.

Brothers and Sisters Shackley and Woodman were the originators of the affair, and to them is due the success which attended the surprise.

Yours fraternally,
N. H. B. W.

I TAKE the liberty of writing you a few words about Waukesha, Wis. This is a beautiful, prosperous little city with a population of about 7,000, and is noted for its springs of wonderful health-giving water, numerous parks, hotels, sanitariums and amusements. It is visited each season by thousands of tourists from all parts of the world, most of them being afflicted with rheumatism, Bright's disease, diabetes and stomach troubles for which this water is especially beneficial.

I notice from reading the JOURNAL frequent deaths recorded from Bright's disease and diabetes, and for the benefit of those Brothers who may be suffering from

diabetes, I would say that I came here by the advice of friends last March suffering from diabetes mellitus, which was pronounced incurable by three prominent Wisconsin physicians, who stated that medicine could not give me any relief, and there was absolutely no hope. I drank Waukesha spring water and in less than two weeks my condition improved wonderfully. I stopped taking medicine when I came here and continued to diet myself and drank freely of the water. I am rapidly recovering my former good health and am satisfied it will be only a short time before it will be fully restored. Last fall my condition was such that I had to give up my engine and take lighter work, but this summer I am back on a steady run between Waukesha and Chicago.

Any Brother desiring to write me will receive a prompt reply, as I shall be glad to assist anyone with information that will save him from suffering as I have done. Yours fraternally,

JAS. LAFLEUR, 419 Caroline St.,
Member Div. 80, B. of L. E.

STAR OF 1900, Div. 188, G. I. A., sent out a call a few days ago for all B. of L. E. engineers, members of Div. 192, that were in El Paso to meet them and to bring their families with them on the night of Sept. 29th. As many of us had been there before, about every B. of L. E. man in town made it a point not to get left, and every road entering El Paso was represented. The ladies received no regrets, before or after.

They gave us a fine entertainment and closed it with a banquet where, as Sister McBean, past president, who made the address of welcome said, they appealed to our hearts through our stomachs, and the appeal was not in vain. After the opening address there followed the song (sung by all the Sisters of 188) of Sister Hines, written for a far away northern Division and published in the May JOURNAL:

"To the G. I. A. ever loyal,
To the B. of L. E. ever true,
Our colors will stand out forever,
The purple, the red, white and blue."

It was cheered to the echo, and was followed by songs, recitations and speeches by the children, in a program lasting over two hours and causing each and every one to forget the cares of tomorrow in the pleasures of today. I cannot do justice to the evening, nor can I pick any best where all was so good.

After the program came the supper, and if there was a Brother or Sister present who failed to do justice to that, I did not notice it. The Brothers made me

think they were trying to follow the old New York country saying—"If you clear the table, you kiss the cook." Well, some of them may have kissed the cooks, but not because they cleared the tables, for the ladies have evidently met the Brothers at the table before.

After an address of thanks by Bro. Arthur Fitzpatrick, F. A. I. of Div. 192, we slowly drifted toward home, feeling that other Divisions of the B. of L. E. may have as good an Auxiliary as 192, but you better not tell us they have any better. Till next time, Au revoir.

Fraternally yours,
M. N. GEDDES.

THE second system union meeting on the B. & O. S. W. was held in the Masonic Temple, Seymour, Ind., Oct. 24, 1905. Grand Chief W. S. Stone and representatives from the different Divisions on the system were present. The meeting was called to order at 1:30 p. m. by Bro. F. A. Evans, of Div. 89, who, after stating the object of the meeting, welcomed the visiting Brothers and introduced the principal speaker, Grand Chief Stone, to the assemblage.

Brother Stone spoke on the general conditions of the order, the increased membership, the financial standing, and the relations with kindred organizations, which included the question of dual membership, a reminder of the duties we owe to ourselves, those dependent on us, and our employers; also the evils of gambling and intoxication were made so clear that no member present could fail to understand the position of our Grand Chief on those questions.

Bro. Jas. Gabriel, of Div. 89, the next speaker, had for his subject, "Good of the Order," which was interesting and won for him hearty applause. In concluding his remarks, he spoke of the firm position taken by our Grand Chief on the question of jurisdiction relative to the handling of engineers' affairs on the Great Northern, and offered a resolution endorsing the action taken by our Grand Chief on this vital question, which was carried unanimously.

Bro. Frank Wilson, one of the pioneer members of the Brotherhood of the Footboard, and a staunch and zealous member of Div. 89 since 1870, was the next speaker; in his remarks he gave a brief and interesting review of the history of the B. of L. E. in its earlier struggle for recognition and existence, he having been a member of Div. 25 previous to joining Div. 89.

Several of the other members present made short addresses and a general expression was that these meetings were instructive and would bring the members

closer together and acquaint them with some of the great questions that affect us morally and materially as an organization.

Before closing the afternoon session, the Grand Chief exemplified the work and gave us some wholesome advice relative to the evils of non-attendance, the chronic kicker in the Division, and turntable controversies.

Brother Stone's address covered the vital questions that confront our organization, and the able and intelligent manner in which he explained to his audience convinced all present that the Los Angeles Convention made no error in placing him in the responsible position he now holds.

As Brother Stone had an engagement in Cleveland the following day, he could not be with us in the evening session, and he took leave of us at 6 p. m. for the East, carrying with him the wishes of all for a future visit.

The evening meeting was called to order for a general discussion of local conditions along the system. All members present were called on to make some remarks for the good of the order. This was very interesting and brought forth an exchange of ideas on questions which should be uniformly understood by the members.

At 11:30 p. m. Bro. O. Graessle, of Div. 39, asked to be admitted and announced that an invitation to a banquet was extended by Div. 39 to the visiting members present, and led the way to the banquet hall, where an elegant spread was served, which was enjoyed by all.

A general good feeling prevailed throughout the meeting, and an invitation from Div. 65 to hold the next system meeting in Chillicothe, O., was extended by Brother Thomas of that Division.

The meeting came to a happy termination with a recitation by Bro. J. B. Murphy, entitled "The Driver and His Dream."
J. ORMSBY, Sec'y.

WE are sorry to announce the departure from among us of our M. M., Mr. C. E. Slayton, who resigned his position with the A. C. Ry. at Sault Ste. Marie, Ont., to accept a more lucrative one with the Tidewater Railway of West Virginia.

On Thursday evening, Oct. 12, Mr. Slayton was entertained at a smoker in Union Hall, Queen street, by the engineers and firemen of the A. C. Ry., there being a large attendance present, among whom were Superintendent T. J. Kennedy, Trainmaster O. L. Vaughan, and our Locomotive Foreman T. Fraser. The evening was pleasantly spent, our Superintendent, Trainmaster and Locomotive Foreman, and others giving very pleasing

addresses, among which was the following:

"Mr. Slayton: It is with feelings of the deepest regret that we learned that it is your intention soon to sever your connection with the Algoma Central Railway, for which we are all working, and for which you have been our superior officer, and your employees feel that they could not allow you to depart without assuring you of the esteem and respect in which you are and have been held by your subordinates, and this is the reason for our asking you to meet us here this evening.

"As a master mechanic we have found you, while careful to the smallest detail of the interests of the company, at the same time always on the lookout for the welfare of your employees, endeavoring to treat us as you would wish to be treated yourself, and to rectify at once, if possible, any grievances which have been brought to your notice.

"As a man we have found you one in the truest sense of the word, treating us, though firmly, yet squarely and fairly, and ready at all times not only to sympathize with but to assist those of us who have had personal trouble and affliction.

"We feel that in your new position the ability which you have shown here will carry you forward to certain success, and we wish you to know that you carry with you our best wishes for your prosperity and the health and happiness of yourself and your family.

"In conclusion we would ask you to accept this mark of esteem as a reminder of your connection with us."

Mr. Slayton was formerly an engineer and will be remembered by his old associates in the construction of the C. P. Ry. in the West, out of Winnipeg, Man., enjoying the distinction of running the first passenger engine between Winnipeg and Brandon.

Mr. T. Fraser has been appointed his successor and enjoys the esteem and confidence of the men here.

Signed on behalf of the engineers and firemen.

W. A. WICKENDES,	S. QUANTZ,
ED. BAYLES,	W. FULCHER,
S. AUSTIN,	A. C. WAGNER,
Firemen.	Engineers.

THE members of Jerry C. Burley Div. 287, B. of L. E., and of Mrs. S. J. Cover, Div. 64, Ladies' Auxiliary, held memorial services in Christ Reformed church, Oct. 29. They met at the Sunday school room and proceeded to the auditorium in a body. There was a large attendance not only of members of the two organizations, but also of the congregation and

friends. Mr. William Cover presided and explained the principles of the order and the object of the meeting. Chaplain Ross led in prayer and read the list of those who died during the year.

The sermon was preached by the Rev. Warren J. Johnson, pastor of the church, who took for his text Revelation iii:12: "Him that overcometh will I make a pillar in the temple of my God." An abstract of the sermon follows:

The greatest contest is that waged on the battlefield of life. For life is a battle and we overcome or are overcome. But the true heart battles not alone. Christ is near—the greatest conqueror is death, the sepulchre is his throne—but death's scepter is broken. Faith has gained a great victory through the Christ.

"Lives again our glorious King
Where, O Death, is now thy sting?
Once He died our souls to save,
Where's thy victory, boasting grave?"

This reflection makes such a service as this deeply solemn, but the solemnity of a holy joy. Of your brethren and of your sisters who have departed during the year may be said:

"Now is done thy long day's work.
Fold thy hands across thy breast,
Fold thine arms, turn to thy rest."

You delight to pay tribute to the memory of your departed companions. It is prompted by one of the most hallowed sentiments.

The hope of life eternal is well founded. True, the mind of man even with its marvelousness of inventive skill, its royal reach of reason, its sublime daring of genius, can not demonstrate it. But faith surmounts every obstacle, as it devoutly embraces the declaration, "I am the resurrection and the life." This fact of immortality leaves in its passage through the mind of man such a rich phosphorescence of comfort. Only for a brief season are we separated from our loved ones, as they

"Flee far
To a summer strand,
And follow Love's guiding star
To the evening land."

But what mortification to us if we have not practiced the golden rule of your order, "Do unto others, etc., etc." toward our companions who have preceded us to the other world?"

A due respect for life makes each day an ascent. For life must not be like a treadmill where we seem to climb, but never get any higher. Our life and its duties must be steps upon a ladder set from earth to heaven. To speak of the

future life as an everlasting sleep is a poetic fallacy. Heaven is a place of occupation. Oh! let us learn the mystic lesson of perseverance. "Him that overcometh!" Your Grand Chief, Mr. Arthur, spoke true words when he said, "Take courage, do your work faithfully and honestly, and remember you will never succeed if you spend your leisure hours in saloons and gambling houses."

It is true, danger lurks on the rail, the night may be full of fog, heavy grades must be encountered, signals may be set wrong, ten thousand provocations will arise, but your Brotherhood will still exemplify these fair columns, "sobriety, truth, justice, and morality." With these attributes dominant you may rise to noblest things in and through the Christ.—*Altoona Tribune.*

SPECIAL NOTICES.

Will anyone knowing the whereabouts of Mr. E. F. Riley, who ran an engine on the Danville Division of the Southern Railroad in 1901, please correspond with Mr. R. L. Lawless, engineer S. R. E., Danville, Va., and oblige?

The traveling card of Bro. W. W. Christine, of Div. 48, was lost. If presented, please take up and forward to F. A. E. of Div. 48.

Wanted—To know the whereabouts of Bro. Vern Sturtevant, member of Div. 330, who when last heard from was in Los Angeles, Cal. Kindly communicate with Bro. J. E. Richardson, F. A. E. Div. 330.

Members of the following Divisions will correspond with the F. A. E. of their Divisions immediately:

<i>Division—</i>	<i>Division—</i>
242—W. C. Hannum.	240—R. H. Strickland.
10—John F. Powe s.	H. P. Thompson.

OBITUARIES.

[In accordance with the action of the Ottawa Convention, no resolutions of condolence, obituary letters or poems will be published in the JOURNAL. All deaths will be listed under obituary heading only, with cause and date of death.]

El Paso, Tex., Sept. 18, Bro. Harry Reating, member of Div. 262.

Lyons, N. Y., Oct. 16, Bright's disease, Bro. S. Watkins, Jr., member of Div. 169.

Beatrice, Neb., Oct. 15, typhoid fever, Bro. Henry Cox, member of Div. 397.

East Stroudsburg, Pa., Oct. 10, Bro. John Fisher, member of Div. 276.

Easton, Pa., Oct. 19, general debility, Bro. Hugh E. Major, member of Div. 259.

Escanaba, Mich., Oct. 19, paralysis, Bro. John Curran, member of Div. 116.

Oskaloosa, Ia., Oct. 15, injuries received in wreck, Bro. Geo. A. Cahal, member of Div. 146.

Pittsburg, Pa., Oct. 17, killed in wreck, Bro. Thos. P. Keating, member of Div. 472.

Fresno, Cal., Oct. 16, killed in wreck, Bro. Walter M. Cole, member of Div. 126.

Water Valley, Miss., Sept. 1905, drowned, Bro. C. Culligan, member of Div. 99.

Brockville, Ont., Oct. 23, heart failure, Bro. H. Bramley, member of Div. 118.

Philadelphia, Pa., Oct. 22, Bro. Chas. C. Murray, member of Div. 109.

Ensley, Ala., Bro. J. O. Reber, member of Div. 368.

San Luis Potosi, Mex., Aug. 10, bilious fever, Bro. J. R. Jones, member of Div. 453.

Roanoke, Va., Sept. 29, killed in collision, Bro. J. R. Kirby, member of Div. 301.

Middletown, N. Y., Oct. 17, typhoid fever, Bro. Lawrence Hoey, member of Div. 292.

Newton, N. J., Oct. 26, Bro. Wm. S. Davenport, member of Div. 171.

East Deerfield, Mass., Oct. 29, consumption, Bro. Byron V. Clark, member of Div. 112.

Pittsburg, Pa., Oct. 19, heart failure, Bro. John O'Rourke, member of Div. 464.

East Mauch Chunk, Pa., Oct. 28, killed in accident, Bro. Ephraim F. Walton, member of Div. 257.

Lawrenceburg, Ky., Oct. 10, injuries received from falling under train, Bro. Matthew Z. Hickey, member of Div. 165.

Kansas City, Kan., Oct. 18, killed in wreck, Bro. B. F. Young, member of Div. 491.

Bloomington, Ill., Oct. 14, Bro. Edward Ryan, member of Div. 19.

Bloomington, Ill., Oct. 24, Bro. Lee Harvey, member of Div. 19.

New Orleans, Aug. 28, kidney trouble, Bro. Wm. J. Thomas, member of Div. 426.

Selma, Ala., Oct. 25, killed in collision, Bro. G. E. Muun, member of Div. 223.

Huron, S. D., Oct. 11, Bro. L. L. Neibling, F. A. E. Div. 213.

Fort Smith, Ark., Nov. 1, killed by engine turning over, Bro. Mike Popp, member of Div. 445.

North Paterson, N. J., Nov. 3, killed by train, Bro. Stewart Williams, member of Div. 521.

Toledo, O., Oct. 21, heart failure, Mrs. L. E. Hofstetter, mother of Bros. J. G. and Wm. Hofstetter, members of Div. 4.

Richmond, P. O., Nov. 1, injuries received, Bro. W. J. Kelly, member of Div. 142.

Toledo, O., Nov. 6, killed in wreck, Bro. Frank J. Taubken, member of Div. 678.

Leeville, La., Nov. 3, abcess of the brain, Bro. S. A. Allis, member of Div. 599.

Tucson, Ariz., Oct. 27, killed by boiler explosion, Bro. J. W. McClain, member of Div. 28.

Philadelphia, Pa., Oct. 9, Bro. Frank Bird, member of Div. 71.

Eldon, Ia., Oct. 26, killed in a collision, Bro. Frank Milks, member of Div. 181.

Elko, B. C., Oct. 13, Bro. Thos. Bardsley, member of Div. 144.

Baltimore, Md., Sept. 24, Bro. Jno. B. Askew, member of Div. 51.

Spencer, N. C., Nov. 4, shot by man named Ruffy, Bro. J. M. McConnell, member of Div. 84.

Ft. Madison, Ia., Oct. 30, killed in wreck, Bro. John McGregor, member of Div. 391.

Ft. Wayne, Ind., Nov. 2, asthma and pneumonia, Bro. Geo. W. Telley, member of Div. 12.

Albany, N. Y., Oct. 31, pneumonia, Mrs. E. H. Kelly, wife of Bro. E. H. Kelly, member of Div. 46.

Roseburg, Oreg., Oct. 26, committed suicide by shooting himself, Bro. Everett T. Gray, member of Div. 476.

Bluefield, W. Va., Nov. 9, killed in collision, Bro. H. D. Floyd, member of Div. 448.

Allegheny, Pa., Oct. 22, Mr. C. H. Hukill, son of Bro. H. Hukill, member of Div. 293.

New Haven, Conn., Oct. 12, lockjaw, Bro. A. H. Dole, member of Div. 77.

Claremont, N. H., Nov. 13, heart disease, Bro. Sam C. Hoyt, member of Div. 106.

Ft. Worth, Tex., Nov. 12, scalded, Bro. L. C. Swick, member of Div. 187.

Pittsburg, Pa., Nov. 6, head-on collision, Bro. Joseph Keating, member of Div. 370.

Hamilton, O., Sept. 27, complication of diseases, Mrs. Anastasia Cahill, mother of Bros. Richard, Michael and John Cahill, of Div. 95, and James Cahill, of Div. 548.

Houston, Tex., Oct. 23, Bro. J. N. Ward, member of Div. 366.

Philadelphia, Pa., Nov. 16, paralysis, Bro. Joseph Brown, member of Div. 45.

Torreón, Coah., Mex., Nov. 2, gored by a bull, Bro. Wm. R. Cole, member of Div. 497.

Marshalltown, Ia., July 14, killed in wreck, Bro. C. K. Williams, member of Div. 146.

Scranton, Pa., Nov. 9, injuries received in wreck, Bro. Frank H. Poole, member of Div. 276.

Batavia, N. Y., Nov. 11, pneumonia, Bro. Wm. Gould, member of Div. 18.

Spokane, Wash., Nov. 17, struck by a bridge, Bro. Chas. F. Korth, member of Div. 576.

Cleveland, O., Nov. 17, of general exhaustion, James R. Knight, father of Bro. Graut D. Knight, member of Div. 31.

Aurora, Ill., Oct. 31, bronchial pneumonia, Bro. Cyrus K. Robinson, member of Div. 32. Brother Robinson was born in Massachusetts in 1829, and commenced his railroad career in the 50's. He moved to Aurora, Ill., in 1857, and ran a locomotive for the C., B. & Q. for many years. In 1888 he, with other loyal members, stepped off his engine, and being past the age to get work elsewhere was put on the pension roll. He was Secretary of Insurace and F. A. E. for many years, always having great interest in the welfare of the order. He was a loyal veteran who paid a large price for his loyalty because of his age, and he deserves to be honored as one of the Loyal Legion of the B. of L. E.—Editor.

Carnegie, Pa., Oct. 31, heart failure, Bro. James Conboy, member of Div. 416. Bro. Conboy commenced railroad life in 1874, had attended several conventions as delegate, and held an important place on Committee of Adjustment, and was always an earnest worker for the B. of L. E.

PREMIUMS FOR JOURNAL SUBSCRIPTIONS.

We have renewed our arrangement with the Webb C. Ball Watch Co., Cleveland, O., for an unlimited number of watches as premiums; watches that are guaranteed to be O. K. in every respect, and will be given as premiums under the following conditions:

LADIES' WATCH.—For 30 subscribers named and \$30.00, the Ladies' Queen Watch, 17 jewelled, 14 karat, gold filled case, retail price, \$20.00.

GENTLEMEN'S WATCH.—For 60 subscribers named and \$60.00, Gentlemen's B. of L. E. Standard, 17 jewelled, 14 karat, gold filled case, retail price, \$42.00.

19 AND 21 JEWELLED WATCH.—For 75 subscribers named and \$75.00, either the 19 or 21 jewelled watch, in 14 karat, gold filled case, retail price, \$50.00. All cases guaranteed for 25 years.

Mr. C. H. Salmons, Editor JOURNAL:

DEAR SIR AND BROTHER:—The 19-jewelled Webb C. Ball gentleman's watch has been received O.K. The case selected by you was perfectly satisfactory, as is the watch. I think some one in each Subdivision should work for one of these splendid premiums, as well as for the interest of the JOURNAL, and through it, the order. With many thanks for the watch, I remain
Yours fraternally,

C. K. TALIAFERRO, C. E. Div. 595.

A large number of Brothers can obtain one of these excellent watches if they make an effort, and will help the JOURNAL as well as themselves. EDITOR.

If your JOURNAL address is not correct, or you fail from any cause to receive it, fill out this form properly, cut it out and send it to 307 SOCIETY FOR SAVINGS BLDG., CLEVELAND, O.

The B. of L. E. Journal.

LOCOMOTIVE ENGINEERS' MUTUAL LIFE AND ACCIDENT INSURANCE ASSOCIATION

Official Notice of Assessments 208-211.

SERIES G.

OFFICE OF ASSOCIATION, ROOM 803, SOCIETY FOR SAVINGS BUILDING, }
CLEVELAND, OHIO, Dec. 1, 1905. }

To the Division Secretaries L. E. M. L. and A. I. A.:

DEAR SIRS AND BROS.:—You are hereby notified of the death or disability of the following members of the Association:

Four Assessments for payment of these claims are hereby levied and Secretaries ordered to collect \$1.00 from all who are insured for \$750, \$2.00 from all who are insured for \$1,500, \$4.00 from all who are insured for \$3,000, and \$6.00 from all members insured for \$4,500, and forward same to the General Secretary and Treasurer.

Members of the Insurance Association are required to remit to Division Secretaries within thirty days from date of this notice, and the Division Secretaries to the General Secretary and Treasurer within ten days thereafter, on penalty of forfeiting their membership. (See Section 25, page 80, of By-Laws.)

Secretaries in sending remittances will send same to and make all drafts, express money orders or postoffice money orders payable to M. H. SHAY, General Secretary and Treasurer. Secretaries located in Canada will please remit by draft or express money order. We will not accept packages of money sent by express, unless charges have been prepaid. The JOURNAL closes on the 18th of each month. Claims received after that day will lie over until the succeeding month.

Have Your Massage This Way—By Hand

This is the jar the barber buys.

This is the jar the druggist sells for home use.

Some barbers have "massage machines" with which a sort of grease must be used. When you get a massage in a barber shop, always tell the barber that you want a **hand-massage with Pompeian Massage Cream**. Machines cannot duplicate the movements of hand massage, nor can any greasy imitations duplicate the properties of the genuine

Pompeian Massage Cream

which contains no oil or grease of any kind. It takes away shaving soreness and removes susceptibility to it by strengthening the skin—every man who shaves needs Pompeian for that reason. Furthermore, it cleans the pores of all soap, grease, dirt, and other foreign matter, leaving the skin clean and glowing without a sacrifice of the manly lines and character. It is *not* a cosmetic. It takes out wrinkles and blackheads, and makes the face feel alive.

This trade mark is on every bottle of genuine

Your wife or sister will be glad to have a jar of Pompeian Massage Cream in the house. Most women recognise the value of this preparation in maintaining a clean, clear, healthy skin. It contains no grease, and makes the use of face powders unnecessary.

Send for Generous Sample, Free

Regular size jars sent by mail where dealer will not supply. Price 50c. and \$1.00 a jar.

POMPEIAN MFG. CO., 29 Prospect St., Cleveland, Ohio

Pompeian Massage Cream. Look for it.

CHRISTMAS DIAMONDS ON CREDIT

THE LOFTIS SYSTEM AT CHRISTMAS TIME

Is a Great and Timely Convenience to thousands, as it enables persons in all circumstances to make beautiful and appropriate Christmas Gifts. Everyone at Christmas time is anxious to give their loved ones handsome Christmas Presents, but it is not always convenient. THE LOFTIS SYSTEM of Credit MEANS CONVENIENCE. That is the only way in which it differs from a cash transaction. There is no delay, no security, no publicity. It simply means a matter of confidence and convenience to honorable people. Write for Our Handsome Christmas Catalogue.

Our Handsome Christmas Catalogue is replete with thousands of beautiful Jewelry suggestions for Xmas Gifts. Diamond Rings, Pins, Brooches and Barrings, Chatelaine Watches, Silverware, etc., for Wife, Sweetheart, Sister or Mother. Sparkling Diamond Studs, Scarf Pins and Cuff Buttons, Watches, Match Safes, Fobs, etc., for Husband, Father or Brother. With its aid you can select in the privacy of your own home, suitable Gifts for all both old and young. May we not have the pleasure of sending you a copy? Write today for Our Large Christmas Catalogue.

True Merit Wins! In competition with the entire world (both the United States and foreign countries) at the St. Louis World's Fair our Goods, Prices, Methods and Terms won the Gold Medal, The Highest Award. No stronger endorsement of THE LOFTIS SYSTEM could be given. Write for our Christmas Catalogue. This together with the fact that we are the largest and oldest established Jewelry House in the U. S., and that we refer you to any bank anywhere or any commercial agency as to our reliability and standing should interest you in our liberal offer to send you our Handsome Christmas Catalogue and to extend to you our most liberal terms as an aid to you in making Christmas a truly Happy Season. Write Today for a Copy of Our Large Christmas Catalogue.

Do Your Christmas Shopping Now. Let us suggest that you do your Christmas Shopping now, conveniently and leisurely in the privacy of your own home. Select from our Handsome Catalogue the articles you desire and we will send them to you for examination and approval. If satisfactory retain them, paying one-fifth the cost and the balance in eight equal monthly payments, if not return to us. We take all the risks and pay all express charges. Now is the time to secure the choice selections and have ample time to inspect the goods.

Cash Buyers are welcome too, and we have an equally attractive offer for them, as follows: Pay cash for any Diamond, and we will give you a written agreement to take it back at any time within one year, and give you spot cash for all you paid—less ten per cent. You might for instance, wear a fifty dollar Diamond for a year, then send it back to us and get forty-five dollars, making the cost of wearing the Diamond for the entire year, less than ten cents weekly. No other house makes this offer. Write Today for Our Handsome Christmas Catalogue.

There is no better investment than a Diamond, they have increased in value more than twenty per cent during the past twelve months and Diamond experts predict an even greater increase during the coming year. Write Today for Our Christmas Catalogue.

IVERS & POND PIANOS

Style 395.

Viewed either from an artistic or a mechanical standpoint, piano-building has never reached a higher standard than in the latest models of Ivers & Pond Pianos. We want seekers for the best in pianoforte construction to know how superlatively fine both musically and mechanically Ivers & Pond Pianos are, and to invite critical tests of tonal effects with the few other pianos in the first class, when the superiority of the Ivers & Pond will

be apparent. They stand in tune twice as long as the average piano.

RAILROAD MEN RECOMMEND THE IVERS & POND.

STANBERRY, Mo., June 4, 1902.

Dear Sirs. I have had my IVERS & POND piano now for over two years, and I have had perfect satisfaction with it. It stands in tune longer than any piano I know of, and the tone, if possible, is better than when new—full, rich and resonant. I am a member of the Brotherhood of Locomotive Firemen, No. 526, of Stanberry, Mo., and I wish to recommend the IVERS & POND piano to the members of the railroad fraternities in this and all other communities as one that they will find to be an honestly constructed piano, and one that is sold at a price that is as low as is consistent with first-class construction. Would be pleased to answer personal correspondence from my railroad brothers.

Respectfully yours,
A. M. WHITMAN.

VALLEY JUNCTION, IOWA, May 24, 1902.

Gentlemen. We are very much pleased with the IVERS & POND piano we purchased from you in February, 1902. Think the tone unsurpassed and we like it better the longer we use it. Would cheerfully recommend it to any one wishing a sweet, full-toned instrument.

Respectfully,
GEO. BLACKMAN, Cond'r C. R. I. & P. Ry.

SEND FOR OUR SPECIAL OFFER TO RAILROAD MEN.

Our unique method of selling may interest you. Where no dealer sells our pianos we sell direct; practically bring our large Boston establishment, Factory and Warerooms to your door. We will quote you our lowest prices, explain our Easy Pay System, as available in the most remote village in the United States as if you lived in Boston or New York. More than this, if our careful selection of a piano fails to please you, in other words, if you don't want it after seeing and trying it, it returns to us and we pay railroad freights both ways. We solicit correspondence.

IVERS & POND PIANO CO., 119 Boylston St., Boston, Mass.

"I'm Well

Because of Liquozone," is a Tale Told Every-where.

In almost every hamlet—every neighborhood—there are living examples of what Liquozone can do. Wherever you are, you need not go far to find some one who has been helped by it.

Talk to some of those cured ones; perhaps your own friends are among them. Ask if they advise you to try Liquozone. Or let us buy you a bottle, and learn its power for yourself. If you need help please don't wait longer; don't stay sick. Let us show to you—as we have to millions—what Liquozone can do.

What Liquozone Is.

The virtues of Liquozone are derived solely from gases. The formula is sent to each user. The process of making requires large apparatus, and from 8 to 14 days' time. It is directed by chemists of the highest class. The object is to so fix and combine the gases as to carry into the system a powerful tonic-germicide.

Contact with Liquozone kills any form of disease germ, because germs are of vegetable origin. Yet to the body Liquozone is not only harmless, but helpful in the extreme. That is its main distinction. Common germicides are poison when taken internally. That is why medicine has been so helpless in a germ disease. Liquozone is exhilarating, vitalizing, purifying; yet no disease germ can exist in it.

We purchased the American rights to Liquozone after thousands of tests had been made with it. Its power had been proved, again and again, in the most difficult germ diseases. Then we offered to supply the first bottle free in every disease that required it. And over one million dollars have been spent to announce and fulfill this offer.

The result is that 11,000,000 bottles have been used, mostly in the past two years. Today there are countless cured ones, scattered everywhere, to tell what Liquozone has done.

But so many others need it that this offer is published still. In late years, science has traced scores of diseases to germ attacks. Old remedies do not apply to them. We wish to show those sick ones—at our cost—what Liquozone can do.

Where It Applies.

These are the diseases in which Liquozone has been most employed. In these it has earned its widest reputation. In all of these troubles we supply the first bottle free. And in all—no matter how difficult—we offer each user a two months' further test without the risk of a penny.

Asthma	Goitre—Gout
Abscess—Anemia	Gonorrhoea—Gleet
Bronchitis	Hay Fever—Influenza
Blood Poison	La Grippe
Bowel Troubles	Leucorrhoea
Coughs—Colds	Malaria—Neuralgia
Consumption	Flies—Quincy
Contagious Diseases	Rheumatism
Cancer—Catarrh	Scrofula—Syphilis
Dysentery—Diarrhoea	Skin Diseases
Dyspepsia—Dandruff	Tuberculosis
Eczema—Erysipelas	Tumors—Ulcers
Fevers—Gall Stones	Throat Troubles

Also most forms of the following:
 Kidney Troubles Liver Troubles
 Stomach Troubles Women's Diseases
 Fever, inflammation or catarrh—impure or poisoned blood—usually indicate a germ attack.

In nervous debility Liquozone acts as a vitalizer, accomplishing remarkable results.

50c. Bottle Free.

If you need Liquozone, and have never tried it, please send us this coupon. We will then mail you an order on a local druggist for a full size bottle, and will pay the druggist ourselves for it. This is our free gift, made to convince you; to let the product itself show you what it can do. In justice to yourself, please accept it to-day, for it places you under no obligations whatever.

Liquozone costs 50c. and \$1.00.

CUT OUT THIS COUPON

Fill it out and mail it to The Liquozone Co., 458-464 Wabash Ave., Chicago.

My disease is
 I have never tried Liquozone, but if you will supply me a 50c. bottle free I will take it.

.....

M 3 Give full address—write plainly.

Note that this offer applies to new users only.
 Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

SANITARIUM for MEN

If you would have the Weariness of Years rolled off your shoulders
—if you would experience again the True Joy of Living—the Peace of
unracked Nerves—the Recuperation of unbroken, dreamless sleep—
READ THIS CAREFULLY

I have the ONLY Sanitarium for Men, and it has been established since 1895.

My Patients are solid, conservative men of affairs—men who are accustomed to deciding important questions for themselves—and the question of Health is a vital one to YOU.

The perfect appointments of my Sanitarium are adapted to those who require the best service.

I treat Diseases the result of Strains, Exposure, Accident or a Sedentary Occupation.

These Diseases are beyond the scope of the Regular practitioner and require the skilled care of a Specialist.

My Specialties are Varicocele, Hydrocele, Rupture and Associate Pelvic and Reflex-Nervous Diseases.

These diseases are *progressive* in their character and never *cure themselves*. Old time drugging and wide open cutting make them worse because such methods aim at the *effect* and do not remove the CAUSE.

My "Direct Method," discovered and exclusively used by me in my Sanitarium, is absolutely painless. It removes the CAUSE and assures a speedy and permanent cure. It only requires a few days of your time to remove your trouble forever.

Government Statistics tell us that *one man out of every TEN* suffers from VARICOCELE—a special stagnated condition of the blood.

I have discovered that this stagnant blood develops certain toxins (poisons) which permeate the whole system, causing nervous diseases, breaking down the constitution, and making SUCCESS impossible in any calling.

In Stagnant Blood the cells have begun to die. The toxins (poisons) which are formed are similar to those developed in any decaying animal matter. Every heart beat distributes this poison to the remotest parts of the body.

This means BLOOD POISONING of the entire system—Slowly but none the less surely. The effects of this auto-toxication or self-poisoning, will in time be the same as though festering animal matter had been taken into the system through a cut.

Such a condition results in the lowering of the vital, physical and nervous forces. You are always tired and depressed. Reserve force is used up and you become easily exhausted.

HEART, LIVER, STOMACH and KIDNEYS become affected, by this toxic poison, PARALYSIS and serious forms of RHEUMATISM are engendered, and often PROSTATIC and BLADDER troubles in addition.

Drugging for any of the above diseases affords no relief, for the CAUSE is still there—the Stagnant blood is still breeding the poisons of decay.

My "Direct Method" removes the cause quickly and painlessly. It eliminates the poison from the system. The organs of the body regain their normal healthy functions. You become in feelings and in fact a NEW MAN—with renewed Health, Spirits and Ambition—eager and able to stand shoulder to shoulder with the bravest and fight life's battle to WIN.

I will be pleased to have you visit my Sanitarium at any time and will gladly talk over your case with you.

Even if you cannot call on me at once, you would not only be interested in, but benefited by, a careful reading of my scientific publications.

Enclose ten cents if sealed package is desired.

My books are free, but will be sent only to the man who writes me a complete history of his case, giving every symptom that annoys him.

Feel perfectly free to ask any direct questions about your special case, and I will give you my professional advice.

Write me personally, in care of my Special Carrier.

Delmer D. Richardson, M. D.,

20 East Adams Street, Chicago.

Special Carrier 170

Hours—9 to 3 Daily, Sundays 10 to 1.

DIAMONDS

FOR
CHRISTMAS
There's Not a
Cent to Pay

for any stone in any style of setting which you may select from our **handsome free catalogue** until you have first held the Diamond in your *own hands* and examined it to your heart's content with your *own eyes*. Just ask us to send anything you admire, at *Our Expense*. We will not ask you for references—there is nothing to sign—you make no promise—are under no obligation to us

whatever.

If you don't like the stone when you have seen it—tested it—**PROVED** it Yourself, then simply send it back—the transaction is closed between us, and you are not out of pocket a penny. But if you **LIKE** the stone when you have seen its beauties for yourself, and (as you are almost certain to do) *wish* to keep it—

YOUR CREDIT IS GOOD

We will open an account with you on our books without any red-tape whatever.

You can afford to wear or give away one of these beautiful, sparkling, Pure White Diamonds, for you may *make your own terms* and **PAY AS YOU PLEASE**, on about any basis which suits your convenience or circumstances. If you like what we send you, pay us say a fifth of the price, and pay the balance monthly *without interest*. **Could anyone make a more liberal offer?**

Select one of these for

CHRISTMAS

Just think how delighted your sweetheart, wife, mother or daughter would be, and how happy it would make her if you presented her with one of these Beautiful Diamond Rings.

The stones are not common "store diamonds," but each one is a True GEM—scintillating, full of fire, with deep down in the heart of it a continual gleam of sparkling light.

There are very few of these pure, snow-white Diamonds in the United States—few in the World—only about one stone in a thousand taken from the mines is good enough for Our Customers. These **SELECTED DIAMONDS**—the pick of the mines—are the stones which are increasing in value so rapidly, you know.

Remember—there is nothing to pay until you are **FULLY PLEASED**—then make your own terms of payment, *without interest*. Our credit plan is open to all honest persons on a confidential, personal basis. We satisfy every customer. That is why we have more customers on our books who have bought from two to six times each than all other houses in the business combined.

Send for our Illustrated Diamond and Watch Catalogue today, and make a paying investment in a Diamond, something you can enjoy daily while you are paying for it, and which will increase in value every year. We sell watches on the same special terms.

Remember, we pledge ourselves to satisfy you in every way. We are the originators of the Diamond and Watch Mail-Order Credit Plan. We have pleased thousands and know we can please you. Write for catalogue today.

FREE—Beautiful Birth Stone Card—showing birthstones for every month in natural colors, sent free if you ask for it.

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save From \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

Anywhere **WE PAY FREIGHT**
No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange.

A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy MONTHLY Payments

SPECIAL TERMS TO RAILROAD MEN.

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of states, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo. The tones of any or all of these instruments may be reproduced perfectly by any ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

YOU NEED THIS BOOK

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 166 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information about Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

Send a Postal Today while you think of it, just giving your name and address, or send us the attached coupon and the valuable Book of Information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

New York City,
April 10, 1905

Brookland & Whitehill Co.
Newburgh N. Y.

Sirs:— Will you please send to me the address of your agent in New York City. I have been wearing your overalls for over twenty years until the fast-ting man I went to purchase two new suits, and I cannot get them where I formerly bought them, at Ludwells, 35th St. cor. 3rd Ave, and I am and 35th St. N. Y. City. They told me they could not get them for me any more.

I want your special make, because they are the best, your overalls have lasted me as long as a half as any other make.

Yours Truly,
Thomas Grimes

"The Engineer's CHRISTMAS PRESENT"

SEE FREE
OFFER BELOW

GRINNELL REINDEERE GLOVES

Do you expect to give any Christmas presents this year?

Then don't overlook the Grinnell Reindeere Glove—a gift that is useful and will be appreciated by the recipient.

If you are a little doubtful about what **you** will receive, why not present yourself with a pair

We tan our own leather, and thus get the pick of choice skins, which are cut after time-tried patterns.

The leather is pliable, yet tough enough to withstand hard wear, and the gloves may be washed if desired. Steam and heat-proof.

FREE

Ask your dealer for the "Grinnell Engineer's Gloves." If he does not sell them, send us his name, address and size of glove you wear; we will have him take a stock and will send a pair along for you free with first order to him, providing you are the first engineer to send in his name.

Address

Morrison, McIntosh & Co. MAKERS.
Grinnell, Iowa.

MANUFACTURING CO.,**

OSHKOSH, WIS.

IF MEN
COULD
SHOP
AROUND

as their wives do, looking for the biggest values for their money, we should have to increase the size of our manufacturing plant many times. Because "Signal" Overalls are so superior, so long-wearing, so good-fitting, so distinctly of the better sort in every way, that nearly every man who wears overalls would ask for

"SIGNAL" OVERALLS

UNION MADE

The Material.—Indigo-dyed denim, of absolute fast color. It costs us more, to be sure, but doesn't cost you one penny more.

The Cut.—The patterns are ours exclusively, and are designed for both comfort and style. Roomy enough without being too roomy; they have "style."

The Making.—This is the part that really counts most of all; and this is the point where "Signal" Overalls are strongest. Felled seams—no raw edges. Double-stitched in every seam. Reinforcements at places where stitching is not strong enough. Buckles that will not come off. Double thickness at the points of greatest wear. Plenty of pockets in the right places.

ONE DOLLAR will bring a pair of "Signal" Overalls right to you. If they are not satisfactory, return them at our expense, and we will refund your \$1.00. In ordering write your name and address distinctly, and give your waist and leg measurements very carefully.

The
Hilker-
Wiechers

GREAT WESTERN ENGINEERS' GLOVE

WE WANT TO GIVE AWAY MORE OF THESE GLOVES

Anyone can get a pair of Great Western Gloves free. They are the best gloves made and are designed especially for railroad purposes. To get a pair free, find a dealer who does not handle Great Western Gloves, induce him to send us a small trial order and for your trouble we will forward you a pair free with the shipment to him. Send for a free time book and Faber lead pencil. The time book illustrates the different styles. You take your choice.

GREAT WESTERN GLOVES

are strong where others are weak. No seams where they receive the hardest wear. The Patent Thumb used only by us is doubly reinforced and will not rip. The leather is specially tanned to resist steam, heat and cold. Perfect fit—soft and pliable as a street glove. Cost no more than others of inferior quality. Why not get the best? For sale by dealers.

ELLSWORTH & THAYER MFG. CO.

MILWAUKEE, WIS.

"The seamless double thumb is a special feature of the Great Western Glove. Read their advertisement carefully and if your dealer does not handle them there is an opportunity for you to secure a pair of these gloves free of charge."—Editor Locomotive Firemen's Mag., in Feb. issue.

Making Money

I was born on a Maine farm. I have made some great successes in business. My greatest through Co-operation.

I took \$1,500 capital, supplied by Farmers, Women, Physicians, Clerks, Clergymen, etc., in Belfast, Maine, and in an honest, but very profitable business, earned and paid them through BELFAST NATIONAL BANK, \$5,000 in Cash dividends in the first six months, \$25,000 in cash dividends within the next year, and in 18 months I paid them in round numbers \$330,000.00 CASH.

Every \$1 Earned \$220.00.

This is HISTORY. Reads like a fairy tale but it is TRUE. I made poor people rich. They helped me earn the riches. Just read that over again. I had \$1,500. I earned and paid my stockholders \$330,000 in cash in 18 months. Every stockholder got their share. That's my way of doing business. You must believe this statement is TRUE, for, if I were lying, I wouldn't tell you the place where I earned the money, and the BANK where it was paid.

I have learned the great value of the right kind of co-operation, learned how to make money fast in an honest, profitable business from which millions are made every year.

E. F. Hanson, Ex-Mayor of Belfast, Maine, Ex-Pres. B. & M. L. R. R.

ers everywhere who can give me information and lend their INFLUENCE. The dividends must be large.

I already have 4,000 stockholders in the U. S., Canada, England, Cuba, Mexico, Sandwich Islands, Gibraltar, etc. I want a few more. The shares are going fast. You can invest \$1 or \$100 monthly payments, if you wish. It will be safe and we will make it grow. This is no get-rich-quick scheme, no "Frenzied Finance." You will be met on the level and treated on the square. I place 30 years of untarnished business record behind that statement. I only ask you in your own interest to INVESTIGATE. You shall have all the Proof you want. References, Bankers, Business Men, Church and Public Officials, etc. Send your address on a postal card. I will send a 24-page book,

"A Guide to Full Peckets,"

FREE. I will pay the postage. Don't be "A Brother to the Ox." Stop pleading. Lift your head long enough to ask me to prove every statement in this ad. This is your opportunity, don't miss it. Don't wait if you want something better than you have got. E. F. Hanson, R 95 Wendell St., Chicago, Ill.

LAVA SOAP

is the ideal soap for trainmen's use. It quickly and easily removes all dirt, dust, smoke stains, soot or grease to which railroad life is particularly subject. It leaves your skin soft and smooth, and gives you a feeling of comfort. Its merits will readily appeal to those who appreciate a splendid soap for the bath.

Ask your grocer for Lava Soap or send us his name and address, and we will send you a sample cake free of charge.

WM. WALTKE & CO., ST. LOUIS, MO.

Before Buying Overalls Look for the Patent Spring

It stretches like rubber; is not affected by heat, age or perspiration and makes your work easy. It has been thoroughly tried and tested and has proven entirely satisfactory. It is the only washable "elastic" made. You can have it on any brand of overalls, if you insist. Those who have worn it couldn't be hired to use anything else. If you cannot find it on the overalls at your dealer's, write us, giving his name, and stating the brand of overalls you prefer, and we will send you a pair of suspenders fitted with the Patent Spring for only five two-cent stamps.

Metal-Elastic Mfg. Co.

FAT PEOPLE

his discovery. Most fat people lose their

I know you want to reduce your weight but probably you think it impossible, or are afraid of the remedy a worse than the disease. Now let me tell you that not only can Obesity be reduced in a short time, but your face, form and complexion will be improved and in health and strength you will be wonderfully benefited. My system of treatment is original. My method and cure is based on scientific principles and will convince you of the great power of his discovery. Most fat people lose their strength and vitality, grow feeble and prematurely old, because the fat clogs the vital organs of the body. The form of many a lovely and handsome woman is spoiled when she grows fat. Grace of movement and natural attractiveness are destroyed. Here is what I will do for you: First, I send you a blank to fill out; when it comes, I forward a five weeks' treatment. You make no radical change in your food but eat as much and as often as you please. No bandaging or tight lacing; no harmful drugs nor sickening pills. The treatment can be taken privately. You will lose from three to five pounds weekly, according to age and condition of body. At the end of five weeks you are to report to me and further treatment will be sent if necessary.

When you have reduced your flesh to the desired weight, you can retain it. You will not become stout again. Your face and figure will be well shaped; your skin will be clear and handsome; you will feel years younger. Ailments of the heart, weakness of the lungs, general depression of the nervous system, disorders of the kidneys, liver and other vital organs will be cured. Double or under-chin, flabby cheeks, heavy abdomen and other disagreeable evidences of Obesity are remedied speedily. Dull complexion is made clear and healthy, and as the fat is reduced the skin becomes close-fitting and free from wrinkles.

All patients receive careful, personal attention whether being treated by mail or in person. All correspondence is strictly confidential. Treatment for either sex, young or old. Plain sealed envelopes and packages sent; distance makes no difference; satisfaction guaranteed. Send today for the new book on "Obesity—Its Cause and Cure" It is interesting, convincing and instructive. Confidential correspondence invited from all—especially physicians.

Address plainly and mention this magazine.

DIAMONDS - ON - CREDIT

We want to do business with those who naturally shrink from dealing with an ordinary installment house.

Our plan will appeal to that better class of people who are thrifty and honest—but yet unwilling to put a large sum into a diamond in one payment. We find it possible to profitably sell diamonds on credit at practically cash prices—and we do it. That is the secret of our success.

Upon request, we will send subject to examination, express prepaid, a 1/2 carat diamond set mounting like cut or in any standard 14-kt. sol gold mounting. If ring proves to be in every way satisfactory, pay express agent \$14. If you prefer that goods be sent by registered mail or at our writing desire to show that you mean business send \$14 with order. Balance may be paid month or weekly.

Catalog No. J9 shows a wealth of diamonds from \$6.50 to \$1,347, also watches and a general line of jewelry. It's free.

BLOOD POISON

We have a Remedy unknown to the profession. We refund money if we do not cure. You can be treated at home for the same price as if you came to our office. We will give you a guaranty to cure or return money. For many years we have been curing patients in every country in the world. Our treatment is in every sense a home treatment. If you are exhausted the old methods of treatment and still have aches and pains, mucous patches in mouth, sore throat, pimples, copper-colored spots, ulcers on any parts of the body, hair or eyebrows falling out, it is this secondary blood poison we guarantee to cure. We solicit the most obstinate cases. This disease has always baffled the skill of the most eminent physicians. For many years we have made a specialty of treating this disease with our Magic Cure, and we have \$500,000 capital behind our unconditional guaranty.

WE CURE QUICKLY AND PERMANENTLY

Our patients cured years ago by our great Discovery, unknown to the profession, are today sound and well, and have healthy children since we cured them.

Deafness Cured at Home to Stay Cured

After years of patient study, research and experiments, I have discovered a Scientific and Radical cure for deafness and all head noises. The method is strictly my own, secured by letters patent, and cannot be obtained elsewhere. I cure where others fail. My treatment is guaranteed.

Certainty of cure is what you want, and what I have done for others I can certainly do for you.

Stubborn obstinate cases which have been abandoned by so-called specialists I am especially anxious to treat. Do not give up hope. It costs you nothing to investigate my methods.

I have yet to hear of a case of deafness that my method will not relieve in one treatment. Let me prove to you what I can do.

Do not delay because you think your case incurable. I am curing hundreds of such cases right now.

I am financially responsible, and any contract or promise I make will be strictly lived up to.

Write today. Explain your case fully; ask for my free book, "Deafness, Its Cause and Cure."

All letters have my personal attention.

GUY CLIFFORD POWELL, M. D.,

20 Bank Building, PEORIA, ILL.

The Pooling of Engines has had its day, and **REGULAR ENGINES** are coming back to stay, so we would suggest for Christmas an

ENGINEER'S LOCOMOTIVE CAB SEAT.

You can be sure this present will be appreciated, for it means more comfort and better health to the engineer. Prices are \$2.00 and up. All good seats, different kinds, for different styles of cabs. Send for our catalogue D; all about seats, 100 illustrations, free.

For 10c we will send you our Complete Campers Manual; practical pointers and valuable receipts.

Whether you want to quit or not, will you write me ?

If you use intoxicating liquors, and want to quit, write me; and if you don't want to quit, write me, as I have something of importance to say to you. I positively guarantee a perfect cure in every case, at your own home, without loss of time and without suffering. My treatment is of the greatest benefit to the general health of the patient. Write me for free advice and printed matter. All communications are considered confidential. I have cured more than 5,000 railroad men who have been reinstated and are holding their old positions. Don't delay as you may forget it, but write me today.

YOU CANNOT LOSE

Judging from present prospects if you buy KANSAS
CO-OPERATIVE REFINING CO. stock
now while it is selling

at 7 Cents Per Share.

PAR VALUE \$1.00. It will sell at 15 cents or higher within a very short time, with good prospects of its selling at 50 cents or \$1.00 and paying Big Dividends almost before you know it. This is a great independent oil refinery, strictly co-operative, and has great prospects. When the plant is in full operation it is estimated that the company can pay dividends of 30 to 40 per cent. Everybody knows there is an enormous profit in refining oil. ONLY A LIMITED AMOUNT OF STOCK FOR SALE AT PRESENT PRICE. BUY NOW, if you want to make good big money. Write for "Co-Operative Refining" PROSPECTUS. DON'T WAIT. Address,

GOLD MEDAL BELL RINGER

THE M. C. B. ASSOCIATION

RECOMMENDS A

KNUCKLE - OPENER

“Which will throw the knuckle completely open and operate under all conditions of wear and service.”

THIS RECOMMENDATION EXACTLY DESCRIBES THE OPERATION OF THE

PITT COUPLER

TO make the operation of opening the knuckle by means of a “Kicker” as safe as it has always been by hand it is essential that the “Kickers” should work every time. The failure to do so has been the cause of many serious accidents.

We find many switchmen who, taught by experience, disregard the presence of any “Knuckle-Opener” or “Kicker” and open the knuckle, always, by hand. Thus, in a very practical way is made manifest the necessity for a safe design in a “safety-appliance.”

The “Knuckle-Opener” in the Pitt Coupler is positive in its operation and pushes the knuckle open to its fullest range of movement either from a fully closed position or from any partially open position **regardless of rust.**

With the Pitt Coupler the switchmen will never be obliged to reach in—on sudden impulse—at the last moment and when the car is in motion to open the knuckle by hand.

MANUFACTURED ONLY BY

The McConway & Torley Co.

PITTSBURGH, PA.

Pardon Me, Sir:

What is your name? Veritas. Is that the truth? Yes, sir; my name stands for truth. Where were you born? In the ELGIN Watch factory. How many are in your family? Many thousand, and we are all working. Where do you work? Well, mostly in the pockets of Railroad men. Are you a favorite of Railroad men? Just ask the men. Where can you be purchased? Of all reliable dealers. What is your value? Ask the dealers, they will tell you.

The Elgin book "Time-makers and Timekeepers" gives an interesting illustrated history of the locomotive and the watch. Every railroad man is invited to send for this book. Free.

THE LATEST IMPROVED
PATENT ADJUSTABLE
DOUBLE SLIP SOCKET.

Artificial Leg
WITH
SPONGE RUBBER
MEXICAN FELT OR ENGLISH WILLOW
Foot

WARRANTED
NOT TO CHAFE THE STUMP.

Made from Measurements and Cast without Coming to Factory.

This cut shows leg for amputation six inches below the knee, with inside socket thrown out of its proper position in order to show its construction.

Durand Mich., Jan. 29, 1905.

Winkley Artificial Limb Co. :

Gentlemen:—Have worn your Double Slip Socket Leg for over nine years and find great comfort in your Limb, and would recommend it to anyone in need of a Limb. I am running a locomotive engine on the main line of the Grand Trunk. I am never bothered with my leg chafing or galling in any kind of weather. Yours truly,
Wm. Spillane.

Watervalley, Miss., Jan. 28, 1905.

The Winkley Artificial Limb Co. :

Gentlemen:—I have been wearing one of your Double Slip Socket Legs, now, for the past eight years, and it has given me entire satisfaction. For the first two years I wore your leg, I fired a locomotive and have been running one now for six years and I feel thankful for your Double Slip Socket Leg because it has enabled me to make a good living for myself and family during these past eight years. The leg is a perfect fit and has never chafed the stump. It is comfortable, strong and durable, and I can hardly see how that it is possible for a leg as light weight

as mine, to stand the hardships I have given it during these past years. I will always be glad to recommend your limb and will be pleased to answer any letters of inquiry from any of the boys needing artificial legs, for while wearing your Double Slip Socket Leg, it is impossible to chafe your stump even during the hottest weather. I am now a member of Div. 99 B. of L. E.
